AMERICA:
BEING THE LATEST, AND MOST
ACCURATE DESCRIPTION
OF THE
NEW WORLD:
CONTAINING
The Original of the Inhabitants, and the Remarkable Voyages thither.
THE CONQUEST OF THE VAST
EMPIRES OF
Mexico and Peru,
AND OTHER LARGE
PROVINCES and TERRITORIES,
WITH THE SEVERAL EUROPEAN
PLANTATIONS
IN THOSE PARTS.
ALSO
Their Cities, Fortresses, Towns, Temples,
Mountains, and Rivers.
Their Habits, Customs, Manners, and Religions.
Their Plants, Beasts, Birds, and Serpents.

An APPENDIX, containing, besides several other considerable Additions, a brief Survey of what hath been discover'd of the Unknown South-Land and the Arctic Region.

Collected from most Authentick Authors, Augmented with later Observations, and Adorn'd with Maps and Sculptures, by JOHN O'GILBY Esq; His Majesty's Censorographer, Geographick Printer, and Master of the Revels in the Kingdom of IRELAND.

LONDON,
Printed by the Author, and are to be had at his House in White Fryers, M. DC. LXXI.

THE CONTENTS
of the several CHAPTERS and SECTIONS.

The first Book.

AMerica unknown to the Ancients  Fol. 1
Of the Original of the Americans, whence they came, when, how, and from what People Planted 11
First Discoverers of America, with Christopher Columbus his Expedition 43
Pedro Alphonfo Nigno his Voyage 56
The Voyage of Vincent Agnes Pinzon 58
The Expedition of Americus Vespuitus 60
The Expedition of Alphonfo Fogeda, Diego Nicuesa, Anclius, and Roderick Colmenares 65
Peter Arias his Expedition, and the remarkable Passages of Valsus Nunnez 69
The Expedition of Francisco Fernandez, Lupo Caizedo, Chriftophero Morantes, Bernardo Igniguez, and Juan Grifalva 76
The Expedition of Ferdinand Magaglian, commonly call'd Magellan 79
Ferdinando Cortez his Voyage 81
Diego Gottierez his Expedition 92
The Expedition of Pedro Alvarado, Francisco and Gonzalvo Pizarro, and Diego de Almagro 95
The Expeditions of John Stade and Nicholas Durando Villegagnon 103
The Expedition of John Ribal, Renatus Laudonier, and Gurgie 105
Four English Expeditions, under the Command of our famous Sea-Captains, Martin Frobisher, Sir Francis Drake, Thomas Candifles, and John Smith 108
A Netherland Expedition, by Jaques Mau and Simon de Cordes 110
The Expedition of Oliver van Noord 113
The Expedition of George van Spielbergen 115
The Expedition of Cornelizoon Schouten and Jacob Le Maire 117
The Voyage of the Naflavian Fleet, under the Command of Jaques le Heremite and Hugo Schapenham 120
Henry Brewer his Voyage 122

The Second Book.

An Accurate Description of America.

Chap. I.

America, unknown to the Antients.

The Sea, that takes several Denominations from the Countreys which it washeth, and surrounding the dry Land, cuts out, and shapes so many winding Bays, Creeks, and Meandering In-lets, seems no where so much confin'd and penned into so narrow a Channel, as the Straights of Magellan: From whence again, soon expatiating, it spreads itself into two immense, and almost boundless Oceans, that which opens to the North, gives terminaries to the four Regions of the Earth; that to the South, onely to Asia and America; both which, indeed, are but one continu'd Sea, extending itself round the Universal Globe.

This watry part of the World, that almost through all Ages lay Fallow, hath in these later times been Furrow'd by several Expert and Stout Captains, who now by their Art and Industry, have given a good Account of, and made clear Discoveries from East to West, where-ever the Sun rises or sets.

The Northern Bound's under the Artick-Zone, have been hitherto so obstructed with Ice, that the undertakings of such as adventur'd either to find by the North-East or North-West a Passage to India, have been utterly frustrate. Of the Southern, no such pains hath as yet been taken in the Discovery, so that for the moft part it is yet unknown how far the Water, either deep or shallow, overspreads the Earth, onely thus much Experience hath made out, that the Antartick needs leffer Line to Fathom, than the Artick-Ocean.

The antient Greeks, Phenicians, and Romans, or whosoever that were Renown'd by Antiquity, and Lifted in the number of their famous Navigators, were not less Timorous than Ignorant concerning Maritim Affairs, and are not fit to stand in the least degree of competition with our later Voyagers.
Of old, by an inviolable Law, made by Custom, according to Pliny, Vegetius and others, the Sea was lock’d up, from the eleventh of October, to the tenth of March, no Ships daring to venture forth, dreading short Nights, and foul Weather, neither in Summer, did they so much as once offer, unless driven by Storms, to attempt the Offin, or loose sight of Land; yet there is no question, but that several Nations in former Ages, made it their business, spending their whole time, and wearying themselves in the Practical Art of Navigation.

The Sacred Scripture testifies, That the Kings of Judea, Solomon, Jehoshaphat, Ozius, and others, prepar’d several Fleets that Sail’d through remote Seas, freighting themselves with Gold from Ophir, and other Rarities, which were imported to supply and enrich the Holy-Land: And Strabo also tells us, That King Solomon being contemporary with Homer, then discover’d India. And Pliny relates, That the Romans, in the Reign of Augustus, passing the Straights of Gibraltar, and helighting the Ne plus ultra, Coafted Spain, France, and Belgium, leaving not at the Promontory of the Cimbrians (now call’d Shaper-Riff) but also ventur’d into the Northern Ocean, which washes Norway and Lapland: But long before this, as Athenaeus relates, Phileas Taurumites, a Grecian Captain, and several others pass’d the Heracleum-Pillars, penetrating the Northern Seas as far as Britain, and adventuring, made the first Discovery of Thule: And to the Southward the African Coasts without Gibraltar, and beyond Atlas, were now and then explor’d by several expert Captains. But more remarkable is the Voyage of Hanno a Carthaginian, who out-sail’d these, and inspected the Coasts of Africa, as far as the Gorgades: And Eudoxus Cyzicenus, flying from King Lathyrus, set Sail from the Arabian Gulph, and passing the Great-Cape, came to an Anchor at lath in the Mouth of Gibraltar, having discover’d all the Eastern, Southern, and Western parts of Africa.

Moreover, it deserves special observation, That an aient Swedish King, as Cornelius Nepos relates, sent as a Rarity and great Present to the Roman Consul Metellus Celer, some Indians, who loosing their course, hatter’d up and down with perpetual Storms and fritres of Weather, were at last driven into the Northern Ocean, where they suffer’d Shipwreck; yet saving themselves, Landed on his Coaft: Aristonicus Granaticus relates, That Menelius Sailing from the Sack of Troy, became so great a Voyager, that leaving the Straights, he surrounded Africa, and discovering India, after eight years re-measuring the same way he went, return’d with great Riches in safety to his own Kingdom: Which is consonant to Homer, who faith, Odyssey I. 4.

—None must compare
Manions with Jove, his Seats Celestial are:
But with me any may, who eight years oft
Through Worlds of Miseries from Coaft to Coaft,
Mongst unknown Seas, of my Return small hope,
Cyprus, Phcenicia, Egypt, (2) Ethiopia,
Sidon, Erembos found, and Lybia, where
Their Lambs are born’d, their Ews teem thrice a year.

—Hou ΄ναι ιβς βγαζαι αν ας κεφαλάι.
Ἄπυρηνα γαρ ποτα δεικα και θάλασσα κατερωπυρωπηκα
Ἄννας δ᾿ ἄνω ταὶς ἐκείναις μαραθίναις ζώοις·
Κυπριακῶν δ᾿ αγράματα πολλά πολλὰ γελανοῦσιν
Χλωρίου δ᾿ οἰκον χαλαραζόν, εἰς θάλασσαν
Κύπρου, φθαρόντως τι καὶ αγαπητὰ ἐκπαράχθηνεν.
Ἄριστονικοῦ τοι θάλασσαν καὶ θάλασσαν ἐξαυτίζειν
Καὶ λαχοῦν του θέου παρὰ πληρωθῇ πεπλησθον,·
Τὸς γὰρ πολὺς πολὺς πανταρρέον τοῖς οἰκουμένοις.

(2) The Commentators on Homer have been very insipitute to find out Athelianum Voyage into Ethiopia. Omer supposed that he pass’d out at the Straights, divided the Southern Cape, and by which thence. Strabo conjectures, that in the time of Homer the Straights Mouth was so famous, and the Egyptians Hither overflown by the Sea, which afforded him a severer pilage. But that is most probable which Strabo delivres, that he then went to the borders of Ethiopia, when he pass’d up Egypt to the City of Ithaca, the Borders of Ethiopia being not far distant from thence in Strabo’s time, probably very near it in Homer’s.
Chap. I.  

**A M E R I C A.**

That which the Grecian Geographers relate concerning *Ptolomy Euergetes,* King of Egypt, is not to be forgotten. That sending Pilots, Commission'd to take the Soundings, and settle the Land-marks in the Arabian Gulph, they found by chance a forsaken Vessel, only in it one Man half dead, lying among several other breathless Bodies, of whom, being refresh'd with convenient Cordials, they enquir'd his Fortune, but he being unable to give them any present satisfaction, neither understanding what the other said, they sent him to the Court, where soon having got a matter of Greeks, he inform'd *Euergetes,* that he was a Native Indian, driven from their course into the place where they found him by storms of Weather, and that his company were famish'd, all their Provision spent in their Wanderings from their intended Voyage. Thus being kindly entertain'd, he also promis'd the King to open his Passage (if so he pleas'd) into India. The King slept not upon this Intelligence, but immediately prepar'd a Fleet Freighted with such Commodities as were advis'd, with which setting forth by the Conduit of this their Indian Pilot, they Anchor'd in their desir'd Port, and brought the King in return from thence a rich Cargo of Silk, Spices, costly Drugs, and precious Gems. *Cleopatra,* about sixty years after, intending not to lose the advantages reap'd by the former discoveries, equip'd another and greater Navy; which pass'd through the Red-Sea, found the Stern of a Ship, on which was Present'd a Horse, whereby some of the more knowing Sea-men judg'd, that it had been a Gibralter Vessel, and Sailing about Africa, there by sad accident suffer'd a Wrack. This Stern was afterwards set up, and fix'd as a Memorial in the Market-place of Memphis.

In these later times, the first that endeavor'd to drive an European Trade in Africk, and held Commerce with India, was the State of Venice, who Sail'd from thence through the Adriatick, into the Mediterranean-Sea: So Steering for Alexandria, where unloading their Goods, from thence they carry'd them over Land; and Shipping again in the Arabian Gulph, Sail'd directly for India. Thus by Land and Water, were exchange'd several Commodities, and the Indian Growth and rich Products of the Oriental World plentifully Transport'd to Venice, and from thence, all Europe had ample Accommodation, until an Egyptian Sultan suffer'd the Way to be infested by Thieves and Murdering Robbers, that so they were enforce'd to remove thence, and Discharge their several Cargoes at Alexipp; from whence, on Mules and Camels, they carry'd their Goods to Babylon, so to Balsamum, and then to Ormus, where they Re-ship'd thence, directly standing for India.

Thus they enjoy'd the benefit of so great a Trade and Commerce, until the Portuguefe found a Passage by Sea, saving the Expence and trouble of carrying Goods so far by Land to India; Of which here we will a little enlarge.

*John,* the first King of Portugal, who took from the Moors, by force of Arms, *Sequa,* an African City, having five Sons; Henry his fourth behav'd himself so gallantly in the Leager of *Sequa,* that after he became Matter of the place, this Prince made many bold Excursions in several Parties against the Enemy, bringing in daily great store of Booty; so growing rich, he Rigg'd out two new Vessels to make farther Discoveries along the Coast of Africa. Yet this his Expedition went on but slowly, being much taken off in Building there a new City, then call'd *Toz-ganabala,* and since *Villa Infantis,* but being Admonish'd by a Dream, and Check'd for his laying thus aside his first Design of Navigation; he soon after, *Anno 1410.* set forth the Ships that he intended, which he the more accelerated, being inform'd by some of his Prisoners

B 2  

Natives,
Natives, that Africa spread from the Bais of Mount-Atlas, very far towards the South: This Mountain then was the Terminary of Navigation that way, because thereabouts a long Ridge or Shelf of Sands thrust its Point under Shallow Waters so far out into the Ocean, that none durst venture to Sail into the Offsin, being out of sight of Land to double this conceal'd Cape.

The first that attempted to find Deep Water, and get round about, discovering several unknown Coasts, and Uninhabited Isles belonging to that Region, were Joannes GonSalves, Tristan Varens, and Agulines Aminus; amongst which were the Maderas, and St. George de Pico, which Prince Henry first Planted with Portuguese, and others since with Netherlanders. He also obtain'd a Grant from Pope Martin the Fifth, of all the discover'd Territories Eastward from the Canaries, for ever to be the undoubt red Right, and belonging to the Crown of Portugal.

After Henry's Decease, Anno 1460. the business of Navigation and Discoveries of new Countreys lay neglected, because King Alphonso's turmoil'd in a Civil War, his Crown being at stake, had not leisure to think or look after uncertain improvements by Sea; yet at last having quell'd his Enemies, he ventur'd forth some Ships, who Sail'd as far as the River Zetaga, and came to Anchor before the City of Genny, famous for Trade, which gave its denomination to the Country and Coasts of Guinea, where they dealing, Barter'd for Ivory, Gold, Slaves, and also got so much footing into the Country, that they suddenly rais'd up a Fort, and Man'd it with a strong Garrison, Shipping their Slaves for Lisbon.

John the Second succeeding his Father Alphonso, had a great design upon Arabia and India, and if possible, was ambitious to open a Passage from the Atlantic, to the Oriental Seas. But the difficulty lay in Steering so often from sight of Land, venturing into the Main Ocean, obstructed by so many dangerous Shoals that lay so far out into the Offsin.

At that time flourish'd three famous Mathematician, Roderick Joseph, and Martin Bobenus, Pupils bred up by Joannes Montegius; with which the King consulting, periwaded, that they would by their Art invent some Instrument, that by Southern Constellations, the Pole being depress'd, the Navigator might know where he was, and in what height; so guessing what distance they were from this or that Country, they accordingly Club'd Learning, and by their great Study, found out what hence hav prov'd so useful and beneficial to Seamen, the Astrolabe; which help having obtain'd, the Sailors encourag'd, more frequently ventur'd into remote and unknown Seas.

After thef, King John of Portugal sent Jages Cano with a Fleet, who Sailing, found the River Zaires, where he erected a Pillar with an Inscription, Latin and Portuguese, signifying by whom, and in what Kings Reign these African Coasts were discover'd: Here he also met some of the Natives, who more civiliiz'd than the rest, told him, That they had a mighty King, who Raigning over them, kept his Court some few days Journey up in the Country, to whom Cano lending his Agents, detain'd four Africans as Pledges, which he carry'd with their free consent to Portugal, promising to bring them back in fifteen Months, who before that time having got some smatterings of their Tongue, inform'd them, that their Native Soyl was call'd Congo, whither returning by the appointed time, they were according to their agreement, exchange'd for the Portuguese, and Cano address'd himself with rich Presents to their King, whom he found sitting in their manner on an Ivory Throne, being from the middle upward.
ward Naked, his nether parts cover'd with long Silken Skirts, a Golden Arm-ler on his left Arm, athwart his Shoulders hung a Horses Tail, their Badge of Royal Dignity: Caso humbly laid the Prefents down at the Kings feet, amonggt which was a Gilded Flag, or Pennon with a Cross, which Pope Innocent the Eighth had Confederated with great Ceremony. After this, many of that Nation became Chriftians, and the King himself receiv'd Baptifm. But in short time, by the Inftigations of their Diabolical Priests; and others, Chriftiannity looking ground, grew out of countenance: Mean while, King John the Second vigorously Profecuted the business of Discovery, fending Jews and Chriftians by Land from Alexandria and other parts of Egypt to India, and from thence to explore the Coafts on the Eastern side of Africa, to the Great-Cape; if to a way might be found fit for Navigators, having doubled that Point, to Traffick with the Oriental parts of the World.

After this Princes Death the Work lay till a while, but in short time, King Emanuel his Successor frethly undertook the businefs once more, fending Vasques de Gama with four Ships, who paffing through many Dangers with great Difficulties, Anchor'd at lafte before Calcut, and was the firft of the Europeans that found a way to the East-Indies.

But Christopher Columbus, five Years before Gama's Expedition to the Eafi, had been employ'd in Western Discoveries, which prov'd fo very fucceful, that he found no lefs that another World; which foon after, from America Vefputius, was call'd America: So that the Division of the World by the Ancients, (concerning which they had fo long err'd, and were utterly miiftaken) was now made manifest by Experience, and undifputable Demonstration; for formerly the whole World was known by no other names than Asia, Africa, and Europe, but now, thofe three are found to make but one Part of what incircles the Univerfal Globe; because in the South lies a fecond, known no further than by its Coafts and Superficial Margents; the third part being the New-World, our America.

Here it will not feem amifs, having prov'd that Africa was more than Coafted by the Ancients, to inqage and search with some Scruftiny concerning this America; Firft, Whether at any time 'twas known by the Ancients? And next, by what People, and when first Inhabited? About the former, the Learned of these later times jangle amongft themselves, for some of them will needs acribe fo much Honor to Antiquity, declining the Worthy Pfrait of thofe that made fo wonderful a Discovery, as if they of old, and many Ages before, had done the fame, or at leaft, that this New-World to them was not unknown, maintaining this their bold Affertion from the Authority of what they find, both in Ancient Greek, and Latin Authors: Firft, efpccially in the Learned Plato, who, as you know at large, decribes a New Atlantis, lying beyond the Straights of Gibraltar; whole Coaft is furrounded with two vaft Seas that are Sow'd thick with Scatter'd Islands. By these Seas they understand the Atlantick and Southern-Sea, by the many Isles, Cuba, Hispaniola, Jamaica, California, and others, which lie sprinkled along the Coafts of America. But it cannot be made out, that Plato describes ought but a fancy, his own Idea, not a Countrey that ever was, or is, or shall be, though he lets it forth fo Accuratcly, and with fuch Judgment, as if he had taken a Survey of the place, and found fuch a Land indeed.

In like manner, Didoros Siculus undertakes to prove, That America was known to the Ancients; telling a Story, how the Phenicians were driven by a Storm from
from the Coasts of Africa west-ward, falling at last upon a great and altogether unknown island, which our late Explorers take for America; Must it therefore be so? Surely not, for it is only a bare Story, without any Proof or the least Testimony. They endeavor to make Aristotle bolster up their opinion that he had a knowledge of this New-World, which with no small pains they pump from these Words: "Beyond the Hercules Pillars, certain Carthaginian Merchants penetrated the Atlantic Ocean so far, that at last they found a vast, yet uninhabited Island, producing nothing but Herbage, Plants, and Wild-Beasts, yet interlac’d with many Meandering Rivers, abounding with several sorts of Fish, lying some days Sail from the Continent; they Landing, found a Soil so fertile, and Air so temperate, that there they settled, and were the first Planters of that Isle. But the Carthaginians having intelligence thereof, Prohibited all Persons whatsoever, upon Pain of Death, to go thither, fearing the place being so much commended, all the People would be ready to flock thither, and desert their own, and so utterly unfurnish and debilitate their then growing Common-wealth.

But how could the Carthaginians find America, without the use of the Compass? How happen’d it, that they were so taken with the fertility of this their New-found-Land, when the Adjacent Countreys and Fields about Carthage are every where Flourishing, and most Luxurious? So that it may better be supposed, that what Aristotle found so long since, may rather be the Canary-Isles, or Great-Britain, than America. The Greeks having then also made some Inspection into the Britsh-Isles. They would also make you believe, that Virgil the Prince of Latin Poets, had known the New-World in these Verses; \[ \text{Aeneid. lib. 6.} \]

There, there’s the Prince, oft promis’d us before, 
Divine Augustus Cæsar, who once more 
Shall Golden Days bring to th’ Aufonian Land, 
Kingdoms that once old Saturn did command, 
And shall His power to India extend, 
Beyond the Annual Circle, and beyond 
The Sun’s long Progress, where great Atlas bears, 
The Sun’s long Progress, where great Atlas bears, Laden with Golden Stars, the glittering Spears, 

Aem humero torquet stellis ardentibus aptum.

Hic vis, hic est, tibi quem promotis famius audis, 
Augustus Cæsar, divum genus, aurea condit 
Scula, qui ruribus Latio, regnata per arva 
Saturno quondam, iuper & Garamantas & Indos 
Proferet imperium. Jacet extra fidera tellus, 
Extra anni Solisque vias, ubi califer Atlas

But what of all this? Who finds in any of these Writings, any Marks of America, or the least Description thereof? Though we cannot deny that the Antient Sages and Wise Philosophers of former times might easily make out, and no question did, that the Earth and Sea made the perfect Figure of a Globe; first from the round Shadow of the Earth that Eclipses the Moon; the different Rifings and Settings of the Celestial Luminaries; and the still Variation of the Pole; so that the Earth and Sea making one Ball, they might easily conjecture, that the South-side of the Equinoctial might be Inhabited as well as the North: But all this was more grounded upon Natural Reason and Right Judgement, than any Experience of theirs, or the least certain knowledge thereof, which since these later times had the first happiness to obtain; so laying these Conjectures aside, there have been none more grossly erroneous, and so utterly mistaken in this Point, than some of the Antients, and especially the Fathers of the Church.

\[ \text{Lactantius Firmianus, and St. Austin, who strangely jear’d at as ridiculous,} \]
\[ \text{and not thinking fit for a Serious Answer the Foolish Opinion of Antipodes, or another} \]
another Habitable World beyond the Equator: At which, Laædanius Drolling, says, What, Forsooth, here is a fine Opinion broth'd indeed; an Antipodes! high-day! People whose Feet tread with ours, and walk Foot to Foot with us; their Heads downwards, and yet not into the Sky! There, yes, very likely, the Trees loaded with Fruit grow downwards, and it Rains, Hails, and Snows upwards; the Roofs and Spires of Cities, tops of Mountains, point at the Sky beneath them, and the Rivers revers'd tops-turvy, ready to flow into the Air out of their Channels! But these seeming witty Observations of Laædanius, though they may serve for a Joke, yet are not grounded on any serious Reasons; for the Earth and Sea being Globular, making one Universal Ball; all Materials whatever that belong to this great Body, link by a natural Propensity towards its Center; so that where-ever we Travel, our Feet are downwards, and our Heads upwards, the Sky above, and the Earth beneath; neither need they fear, that any where the Earth should Moulder and drop into the Clouds: But St. Austin Reasons better, admitting that the Earth and Sea make a Universal Globe; yet it no way follows, that inhabited Countries should lye opposite to our Northern, nay, altogether impossible, seeing that side which is our Antipodes is all nothing but Sea; and should we allow, that there were Land and Water mixt as ours is, who could prove, that they were Peopled? or how could any get thither, over such Vast and Immense Seas? or possibly pass the extreme heat of the Torrid Zone, not to be endur'd by any living Creature? And what then becomes of Sacred Scripture, which says positively, That all Men were deriv'd from Adam, and after the Flood, from Noah and his three Sons? Therefore the Nations of the Antipodes must be of another Abstrac't, there being no possibility (as they suppose'd) of passing from this World to that: But since the Discovery of the East and West-Indies, Experience, the best Mentres, hath taught, that in the South are mighty Lands and vast Territories, and that as far as they have been Penetrated, are found to be full of People, extending their Dominions from East to West. And though St. Austin deny'd this now well-known Truth, yet long before his time, Cicero, Pliny, and others amongst the Greeks and Romans, divided the Earth under five Zones; which Virgil describes thus:

Five Zones the heav'n's infold, but Sun-beams beat Always on one, and burns with raging heat. The two Extremes to this on each hand lies MuffLED with Storms, setter'd with cruel Ice. "Twixt Cold and Heat, two more there are, 'twixt the Abodes Assign'd poor Mortals by the Immortal Gods.

Quinque tenens caelum zonae quorum una cornuco Semper Sole rubens, & torrida semper ab igni: Quam circum extremae dextrae, aequaque trahuntur Cærulea glacie concretae, atque imbris acri. Has inter, mediamque, duæ mortalibus agris Munere convenisse divum: via fecta perambas, Obliquus quisque signorum veterem ordo.

With Virgil, Pliny, and the Prince of Latin Orators agree, who faith, "You see, that those that inhabit the Earth dwell in Countries so separated one from another, that it is impossible they should have any Commerce; some of them are our Antipodes, walking with their Heads downwards, some their Feet against our sides, others, as we, with their Heads upright. You see how the fame Earth seems to be Swath'd about with Rolls, of which, two separated by the other three, are at utmost distance one from the other, lying equi-distant under the Vertick Points of Heaven, always cover'd with Snow and Ice; but the middlemost and greatest is scorch'd by the violent "heats
AMERICA.

Chap. I.

"heats of the Sun: Two Tracts are Habitable, one to the South, our Antipo-des, the other North, which we Inhabit.

And Pliny also affirms, though against the Vulgar Opinion, this truth, "That the Earth is round about inhabited, and that people walk Foot to Foot "in most parts thereof; though every one be ready to ask why our Antipodes drop "not into the Sky, which question, our Antipodes may also ask concerning us.

But although the Ancients upon thee and the like Demonstrations well un-derstood, that there was a Habitable World towards the South under our Ha-rizon, yet they could not make out or believe, that there was any possibility to pass thither; And, according as St. Auffin conceiv'd, That the Earth produced nothing under either Pole, by reason of excessive cold, and that the Equinoxx or Middle-Zone, was not to be penetrated, because of the insufferable heat.

And Macrobus saith, "That the Equinollial Circle, the Artick and Antarctic Lines," bind the two Habitable Zones, and make Temperate by the excessive Neigh-boring Heats and Colds, and the Countreys onely give Animation, and "comfortable Enjoyment to all Living Creatures.

Moreover, St. Auffin in some places seems to clear his own Doubts, saying, "That People, if they could find a means to Sail those Vaft and Undivulcer'd "Seas, might make Land, raising new Stars under another Sky.

A Learned Father, searching after the Original of all sorts of Beasts which multiply by Generation, concludes, That they must derive themselves from those that were fay'd with Nobsb in the Ark. But how came they to the Isles? To theohe adjacent and near the Main Land, they might easily Swim; to the re-moter, they were Transported.

But this Doubt is not altogether clear'd, for the Domestick and other Create-ures fit for Humane ufe and Suffenance were thus brought thither: Yet how comes it to pafs, that Voracious and Wild Creatures are also found there, such as Wolves, Tigers, Lions, and other Beasts of Prey? This puzzle putting St. Auffin to a stand, he had no other means to get off, but by saying, that by God's Commands or Permission, the Angels convey'd them thither. If so, why might not God please to Plant Men there in like manner, and the rather, the Earth be-ing created for Humane ufe? But what needed this, when Men can in Ships Transport themselves, either of their own accord for curious Inquest, to find new Countreys, or else forcer'd by ftreis of Weather, to far remoter, and altogeth-er unknown Lands: Besides, though the Earth is here and there divided by large Bays and Vaft Seas, yet nevertheless, in other places it is all continu'd Land, or at leaft part'd by some narrow In-let or Sea; so that there was no difficulty for a crowded Plantation to go over, and fo eafe themselves in an-other Countrey, till then not Inhabited: therefore none need to queftion, but that from Adam, or nearer, from Noah's three Sons, Sem, Ham, and Japhet, those, as well as we, were extracted, that Inhabit this our other World.

But one queftion is to be obferve'd. How firft after the expiration of fo ma-ny Ages in these our later times, a New-World was discover'd, altogether unknown to the Ancients, when they in the greatness of their Parts and Under-taking, Prowes and Prudence, were no ways inferior to the Modern, and every way as fit for great Deigin's and grand Exploits? We need not fcruple or make the leaft doubt, but the Sea hath been Navigated of old, but the firft at-tempts fet forth unexperienced, in as pittiful and ill-contriv'd Veflels. The Heathens afcribe the Art of Navigation, firft to the Cretans, who under the Con-duct of Neptune, fet forth a Navy to explore Foreign Countreys. But Pliny long
long before gives the Invention of this Art to Erithra, King of Egypt, who upon Pieces of Timber, conjoin'd and brac'd together, crept along the Shores, and ventur'd to Discover the isles in the Red-Sea. But others give that honor to the Trojans, and Mecians, when with a Fleet by Sea, they Invaded Troas: Others, to the Britains, who made little Vessels of Leather, and were the first that by this Invention found how to Float upon the Waters: Some plead, that the Samothracians were first; Others, that Danaeus before all, found a way by Sea from Egypt to Greece. But without all Contradiction, Noah's Ark was the Pattern or Sample, that succeeding Ages imitating, built their Ships by; and the more probable, because his Offspring multiplying so fast, that they were enforced to enlarge their Colonies, by passing Seas, and other broad Rivers, to settle their Super-numeraries there.

So Jason Invented a Ship, which he call'd Argo, which Seafaris King of Egypt took as his Pattern. Next, the Biremis, a Galley with double Banks of Oars, was made by the Egebeans; with treble Banks, by the Corinthian Ameoles; the addition of the Quadruple, the Carthaginian boat; of the Liniugrennis Nachthorn, Alexander the Great, brought them to twelve Banks; Pelemy Soter, to fifteen; Demetrius, Antigonus Son, doubled them to thirty; Pelemy Philadephus, to forty; and last of all, Philopater rais'd them to fifty Banks of Oars. Hippas a Tiran, was the first that set Ships upon the Stocks; the Rhodians a Ketch, and the Batavian a Boat; the Cypes made the first Oar; Dedalus the Maff and Bolt-sprit; Pylus the Beak; the Tyrrhenians the Anchor; Tylph the Rudder; taking example from the motion of a Kites Stern; Icarus found Sails, fancy'd by the Poets for Wings, though some ascribe that honor to his Father Dedalus.

Minoa was the first that Inag'd in a Sea-Fight, whereby we may easily conjecture, that of old none adventured far into the Ocean, or to remote Countreys, not daring to trust their so leight contriv'd Vessels. But these latter times have strangely and suddenly improv'd this growing Art of Navigation, yet pitch'd not to that height at first, as boldly to adventure, and loose fight of Land.

The Tyrians first understood how to Steer their Course by the North-Star, and when dark and foul Weather had Clouded the Sky, that they could neither see Heaven or Earth, but only Sea, they directed their Course by the Wind; and if they doubted the change thereof, they let some Birds fly, whom they follow'd, supposing that they filed directly to the nearest Land. But these are but poor helps, and blind Guides to shew you Land from the middle of the boundless Ocean. It is certain, that the Romans in the time of Julius Cesar and Augustus, stretched the Bounds of that Empire Eastward to Euphrates, the Rhine, and the Danube, and Westward to the Ocean and Mount Atlas, Sailing up and down the Mediterranean, with great Fleets, which flou'rly endur'd the violence both of Waves and Weather; but all this made them not so hardy, as once to think or look after new Worlds. But after the Roman power decaus'd, by several Eruptions of the Goths, Vandals, Huns, Normans, Lombards, and other Northern Countreys, which swarm'd with People, that overflow'd all places like a Deluge, so that Europe was every where puzzell'd and Imbroyl'd; their whole busines confin'd in conjoining Forces to withstand such bold Invaders, and so vexatious an Enemy.

And farther East, Asia was at the same time little better, still trembling at the daily Alarms and Incursions of the Scythians, Persians, and Saracens; and afterwards the Turks growing upon them more than any of the former, expected no other than a sad Catastrophe, so that the known World had too much
work cut out for them by these Distractions and Alterations of Government, then to go in Quest of uncertainties, to find they know not where, another.

Here also is added by St. Jerome, what an ancient Writer faith, Great care hath been taken in Computing the Age of this World, and if there be another which Commenced not with ours, (as Clemens mentions in his Epistles) where are situate those Seas and Lands that make that second World? Or is it a part of that, in which Adam was Created? Or may it not rather Metaphorically be taken for Worldly Affairs, govern'd by the Prince of the Air, ruling in the Hearts of the Children of Disobedience?

But Pliny, Cicer, and Virgil, the best in their kind of Latin Writers, concur, That there may be a habitable World under our Horizon, in the temperate Southern Zone, beyond the extreme heat, and on this side of the Antarctic colds.

But what signifies all this to the Discovery of America, which lies not only under the Scorching Heats of the Equinox, but under the Frosts and Snows of the Artick and Antarctic Poles? Yet less probable is that which Lodowick Leo, an Augustine Friar takes out of Obadiah; as if that Prophet in the three last Verses of his Prophecy should speak of the Spaniards, which should not only discover and Conquer America, but also Convert the Inhabitants to the Christian Faith, because those that are in Sepharad, should Inherit and Possess the Cities of the South, and Saviours shall arise from the Mountains of Zion, to judge the Mount and Wealth of Eau.

But certainly, Obadiah meant no other than the Restoration of the Jews from the Captivity of Babylon, who after their return, shoul'd grow more powerful than ever, and they, led by their Mission, obtain the height of all felicity, who would send his Evangelists and Apostles to declare Salvation to the utmost Borders of the Earth. It is true, that the Rabbin Expound Sepharad to be Spain, and therefore he concludes, that Obadiah Prophefs'd of the Spaniards, and their Conquests in America; so they would prove, that America was long known before Christ.

And lastly, it signifies as little what Pineda and Levinus Lemnius drive at, that Solomon first finding the use of the Compass, Rig'd a Navy at Ezion-geber, which from the Red Sea had no indirect Course to the Straights of Magellan; from whence he might Lade his Vessels with the Gold of Peru. In whose Description it shall be manifested, that Peru is not Ophir, as some without any Shew of Reason or Truth would make us believe.

But as concerning King Solomon's finding out the use of the Magnet, it is soon said, but not easily prov'd; for though that Prince excelled all Man-kind in Wisdom and Learning, and was perfect in the Operations, and knew the Occultest Secrets of Nature, understanding what e're belong'd to Plants, from the Cedar of Libanus, to Hyphum, and the meaneft Shrub that grows upon the Wall, yet it nothing makes out, that he knew the Mystery of the Navigable use of the Load-Stone: But suppose he did know, there is no where any mention of it; and if this excellent thing, the Compass, had been found in Solomon's time, how came it afterwards so utterly to be lost?

Albertus Magnus mistaketh, when he ascribes the knowledge of the Compass to Aristotle, of which he himself makes not the least mention; neither Galen, Alexander Aphrodisius, Pliny, Lucertius, nor any of the Roman, Greek, Arabian, or other Country Writers whatsoever. Some give the honor thereof to an Indian, others to a Shepherd in Mount Ida, whose Clouted Shooes being full of Hob-Nails, the Iron flicking left to the Stones on which he rood, flopt his motion,
Chap. II.  

AMERICA.

motion. And although the Antients found out many Secrets of Nature, amongst which this of the Load-Stone, Attracting Iron, as being its proper Food; and the three sorts of the Magnet, of which some will not draw Steel, found by Theophrastus a Greek Author, and other fince, well known Properties: Yet they never attain'd that knowledge, that the Load-Stone would eafe Pain, and stop the effusion of Blood, though the edge piercing the Skin, open'd the Vein: as Hieronymus Cardanus experience'd on himself and others, which he had from Laurentius Guacenus, a great Chyrurgeon. Much lefs, that the Needle of the Compass being touch'd by the Load-Stone on the Northside of the Equinoxe, respects the North; but depressing the Arctic, and raising the Antarctic Pole; it looks as steadfastly towards the South: But far lefs dreamt they of its several variations, according to the Coasts that are nearest; as when you come from the Island del Cuerpo, the Point varies more Weft; but Sailing towards the Equinoxe, it varies Eastward; by which we may absolutely conclude, that without this use of the Load-Stone, first found by Flavins Melvius at Neapolitan, in the Year 1303. it was altogether impossible to reach America. So that Joseph de Acofla mistakes, who gives the honor of the finding so great a benefit to Navigation, to some Mahometan Sea-men which Volques de Gama met with near Mosambique, who had Sall'd those Seas by the use thereof; whereas Gama's Expedition was above a hundred years after Melfins, who liv'd in such a juncture of time for Mathematical Learning, that few Ages boated the like: For then flourish'd in England, and were Contemporaries, besides others abroad, Richard Wallingford, Nicolau de Lynn, John Halifax, Walter Britte, John Duns, and John de Lignarys, all eminent in Astronomical Arts, belonging to Navigation, and doubleless, no small helps to Melfins in this his happy Invention.

Lastly, We will relate what hath been held as a seeming Testimony, (that America was known to the Europeans before the Birth of our Saviour) by an antique Medall of the Emperor Augufins, digg'd out of the Ground in Peru, and sent to his Holines at Rome, which may well be reckon'd with the like Cheat contriv'd by Hermericus Cajudas, Anno 1505. near Syntra, a Town in Portugal, where three Marbles Ingraven with antient Characters, concerning a Prophecy of discovering the East-Indies by the Portuguese, in the Reign of King Emmanuel, were privately bury'd under Ground, and not long after, by a pretended accident digg'd out, which made such a bulle amongst the Learned, that several tired themselves about the explanation of the suppos'd Sibyline Prediction.

C H A P. II.

Of the Original of the Americans, whence, how, and from what People Planted.

About the Original of the Americans, the Learned Dispute so much, that they find nothing more difficult in Story, than to clear that Point; for whether inquiry be made after the time; when the Americans first settled themselves where they now inhabit, or after what manner they came thither, either by Shipping or by Land; on purpose, or accidentally, driven by Storm, or else forc'd by a more powerful People, to remove G's from
from their old Plantations, and seek for new? or if any one should be yet more curious, asking the way that directed them out of another Country to this New World? or else enquire for those People, from whom the Americans deriv'd themselves? He will find several Opinions, and the Learned still Jangling.

The first Doubt is concerning the time: Mr. Purchas, where-ever he had the Hint, endeavors to prove, that America hath been but lately Planted; for which he thus argues, "That if Asia, or Europe furnish'd America with People in Abra-

ham's time, or at least before the Birth of our Saviour; then it must upon

necessity, by the Explication of so many Ages, have been much more Popu-
lous, then the Spaniards found when first they discover'd it. Besides, the vast

Territories yet uninhabited (says he) are sufficient testimonies, that this New

World hath been Planted but scatteringly, and not many Ages since, else

the Country would have more abounded with Inhabitants, because the fer-
tility of the Soyl was able plentifully to maintain Millions more, then were

there when first discover'd: And what Marks are better to know a new Peo-

ple by, in any Country, than a rude Life and unsettled Government? juft

like a Family removing to another Housfe, which takes no short time to tillte

their Goods and Houshold-fluff in a handfome and convenient Order.

When Noe went out of the Ark on Mount Ararat, and not long after, law

his Seed spread over Armenia and Assyria; the new Generation of People con-

fifted in Shepherds and Husbandmen, that fedled themselves near Lakes and

Rivers. Villages, Cities (and much left) whole Kingdoms, were scarce found

on the Face of the Earth, and as little of Trade or Commerce, Riches, Division

of Lands, costly Garments and Furniture for Housfes, were not then in use, but

the works of long Setlements in happy Peace. To curb growing-Wickednefs,

and the Pride of Libertines, who incroach'd upon their weaker Neighbors,

Laws were invented, by which Bridle, the unbroke or wild World grew

tamer: And first, the Assyrians were brought to endure the Bit, and answer the

Reins of Government; then Egypt, next Greece, and after that the Romans, who

spreading their Power by Arms and Martial Discipline, first civiliz'd the

Gauls, Spain, Britain, and latly Germany.

But because a Country or Pastoral Life, knowing no Commerce, but mean

Hovels, and to dwell in Huts, priding in poor and no Habits, defpising all

greatness, unlimited by Laws, and all things else, (which the People obliery'd

presently after the Flood) is now found among the Americans, who will take

them for ought else, but new Comers to that Land, as themselves acknow-

ledge? For the Mexicans boast, that they are the eldest there, and that from

them, Peru, Chili, Chika, and other Countreys towards the South, had their

Colonies, and yet the eldest Chronicles of Mexico reckon not above a thou-

sand Years. Thus far Mr. Purchas.

But certainly, all this Matter of appearing Reafons, is not able to van-

quith fingle Truth; For, grant that America was not very Populous when the

Spaniards first arrived there; must this needs prove, that it was never well in-

habited before? Perhaps the Civil Wars, which have been always deftructive
to this Nation, have much hindered the increase of People; and the more, be-
caufe their Salvage Nature is fuch, that in feverals places they account Man's

Flefl Broil'd a very great Dainty. And fuppofe fuch Prodigious Excess of their

Humane Bankets were not us'd in America, as indeed they are, Is it wonder, that

fuch a great part of the World, not only exceeding Europe in bignefs, but Asia

also.
also should here and there have a Tract of Land uninhabited? These might, by reason of their Barrenness, be useless, as many such places are found in the midst of the most Populous and fertile Countreys. But above all this, it is certain, that America to this day (notwithstanding almost innumerable thousands of Indians formerly Slain and Maffacred by the Spaniards) is so well inhabited, that it may stand in Competition with either Asia or Europe. And how could such vast multitudes Plant the far-spreading Countrey of America, without the help of many Ages? Moreover, This truth is not without sufficient Testimonies; when any one looks on the Islands with which America lies incompass’d, he may suppose they did not willingly go from the Main Continent to the Iles, but were driven thither by Wars among themselves, or as most times it happens, because of the vast increase of the Natives, the Country must discharge its burden.

Hereof is added, the several Languages us’d in America, as in Europe or any other part of the known World; whereby we may easily guess, that America was Peopled presently after the Confusion of Tongues at Babel. Furthermore, If the Americans live a Rude Life, go mainly Habited, be without stately Houfes, such Customs are even among us observ’d by several People; as the Tartars, Numidians, and others, which made their Antiquity be call’d in question. He also must needs have no knowledge of the Arts and Mechanick Sciences us’d by the Americans, who concludes, that they settled but lately in America. One Argument at present will be sufficient to contradict them all; and in the further Description, the contrary will be more manifest.

Hieronymus Benfo relates, that he found armaz’d at the Gold and Silver Smiths in the Territory of Chito, who without any Iron Tools, made Images, and all manner of Vessels; Which work they perform’d thus: First, they made an Oval Crucible of a good Lock, round about Pafted with Earth, embody’d with the Powder of Wood Coals; which Crucible being Bak’d very hard in the Sun, they fill with Pieces of Gold or Silver, and put in the Fire; about which standing with five, fix, or more Pipes made of Canes, they blow the Fire so long, till the Metal melts, which others fitting on the ground, run it into Moulds of black Stone, and so with little trouble, Cast into what Shape they please.

Lastly, Though Mexico can reckon but a thousand years, must it therefore follow, that the Inhabitants are no older? How many famous Places (even among our selves) have no longer Register, and if they have, they are commonly Fabulous, few Nations boasting truly their own Original; which Argument, not only contradict (as we suppose) Mr. Purchas, but all others describing the Plantation of America to our later times.

Sect. I

In the next place, let us enquire, how the Americans were transmitted thither, whether by Sea, or Land? Both which are feasible two several ways; if they made an Expedition thither, as Discoverers, or were driven on those Coasts by stress of Weather.

The first is most unlikely, and not seeming possible, for how could they Steer thorrow fo vaft an Ocean, to Countreys they never heard of, without the Compsals, and other Necessaries for such a Voyage? for when first discover’d, their want of experience in Shipping for so long a Voyage, knowing no further than the use of small Boats or Canoes, plainly explode, that they willingly Steer’d
Steer'd from a known World, to an unknown, with no better accommodati-
on; but some probable reasons may be made out, to induce us to believe, that
they were rather driven thither by Storm.

But some will say, How liv'd the little Boats, and how indur'd they in such
a continual Tempest, and were not either swallow'd up amidst the Waves, or
starv'd for want of Provision, which their hollow Troughs could not con-
tain?

The first doubt is the least, for there are Examples enough by which appear,
that oftentimes great Ships Bulging, are over-set or sunk in the Sea by foul Wea-
ther when the Mariners escape in their Cock-Boat; and if they were but thinly
Vicual'd for so long a Voyage, questionless, that little which they had, they
spun out, and made it last, while the impetuous Storm shortned the
passage, which fair Weather would have made much longer.

Pliny tells us of Annius Plocquins, General of the Red-Sea, That one of his
Slaves being Enfranchiz'd, Sailing down towards the Arabian Gulf, was car-
ry'd by a violent Tempest from the North, beyond Caramania, and on the fif-
teenth day came to an Anchor in Hippurus, a Haven of Taprobane, which Orevillus
judges to be Sumatra; but Mercator and Cluverius, on better grounds, Zeylon,
which is no less than three thousand English Miles.

In like manner, Joseph de Acosta tells us, That in fifteen days time, he got
with a Northerly Wind from the Canaries to America, and his Voyage had been
shorter, durst he have born more Sails, which may partly clear the former
doubts.

Moreover, the Peruvians themselves give some small Testimony (in their an-
tient Records) of a few that Landed of old upon their Coasts, which were (as
they say) mighty and cruel Giants, committing much Bloodshed, Slaughtering
the Natives every where, and having subdu'd the whole Country, built Rately
Edifices, of which remain yet the Ruines of some Foundations, very Artificial
and Coffly. They also shew near Manta, and Puerto Viejo, many huge Bones (as
they
Chap. II.  

*AMERICA.*

they believe of Giants, three times longer and thicker than an ordinary Man.

They also tell us, that many Ages since, one Ica and Arica Sails’d Westward this

ther upon Sea Wolves Skins, blown up like Bladders: But however, without

contradiction, the *Americans* never knew, much less built any such Veils, or

wich which they durst venture to the Offin, out of sight of Land: their Balfas,

Perigas; and Canaus, will not all amount to the Bulk of one of our small Barques,

wherefore the Inhabitants of Tabnez, when they defery’d the Spanish Fleet, sent
to discover Peru, were amaz’d at the high Masts, spreading Sails, and bigships

of the Ships, judging them first to be Rocks, cast up out of the Sea; but ob-

serving them to approach their Coast, and that they were full of Bearded-Men,
thought the Gods were walking in them; by our Modern Poet, Mr. Dryden in

his Indian Emperor, thus Elegantly describ’d.

Guyomar to Montezuma.

I went in order, Sir, to your Command,

To view the utmost Limits of the Land:

To see that Shore, where no more World is found;

But Fanny Billows, breaking on the ground;

Where, for a while, my Eyes no Object met;

But distant Skies, that in the Ocean set:

And low-bung Clouds that dip themselves in Rain

To shake their Fleece on the Earth again.

At last, as far as I could cast my Eyes

Upon the Sea, somewhat, not thought did rise

Like Bluff Mists, which still appearing more,

Took dreadful Shapes, and mov’d towards the Shore.

Mont. What Forms did these new Wonders reprefent?

Guy. More strange than what your Wonder can invent.

The Object I could first distinctly view,

Was tall straight Trees, which on the Waters flew;

Wings on their sides, in stead of Leaves did grow;

Which gather’d all the Breath the Winds could blow;

And at their Roots grew floating Palaces,

Whose out-blown Belles out the yielding Seas.

Mont. What Divine Monfters, O ye Gods, were these,

That float in Air, and fly upon the Seas!

Came they alive or dead upon the Shore?

Guy. Alas, they liv’d too sure, I heard them roar.

All turn’d their sides, and to each other spoke,

I saw their Words break out in Fire and Smoke.

Sure, ’twas their Voice that Thunders from on high,

Or these, the younger Brothers of the Skies.

Deaf with the noise, I took my hasty Flight,

No Mortal Courage can support the Fright.

But the resolving these Doubts, starts a harder Question, viz: Grant that the

*Americans* were by Tempelt driven thither, How then came the Beasts thither?

It is certain, that tho’ which are beneficial for humane life, as Dogs for to

Hunt, great Cattel, Sleep, for Food, and other Necessaries, might easil’y be car-

ry’d thither, for to the Spaniards brought Cows, Horses, Swine, and other Cat-

tel; and also Poultry from Spain, to the new-discover’d Isles, Cuba, Hispaniola,

Jamaica, Margarita, and La Dominica, when at their arrival, formerly no four-

footed Beasts were found there, whose fertile Soyl hath so multiply’d their

increase, that the Dogs running Wilde, and breeding as fast, do great hurt to the Grazing Herds, which they onely flout for their Skins, leaving their

Fleth, the best of Meats, only to Manure the Ground on which they lie.

The Tranporting of tane and profitable Cattel might easil’y be allow’d of, but who would load their Ships with Lions, Tygers, Bears, Wolves, Foxes, and

other Serpents and Voracious Beasts? it is certain that some may be tam’d before they were Ship’d.

Laupridin relates, That Heliggabalus the Roman Emperor, took great pleasure

in Domelick Lions, and Leopards, to frighten his Guests withal; for with

the third Course, they were all brought in, and in the next interval, a Man

and
and a Beast. The great Cham, as Paulus Venetus an Eye-witness attests, Rides on Hunting, attended in couples with tame Leopards. The King of Cambogia in like manner is serv'd with Panthers: Scaliger adds also, That they went not unprovided of a Lamb or Goat, to give the Panther, left falling into his natural ferocity, provok'd by hunger, he should make the Huntsmen his Quarry, if he had no other Prey. But notwithstanding some wilde Beasts seem to forget their Voracious Nature, yet there ought great care to be taken in the Transporting of them, because they oftentimes grow wild again, which France can witness, where two Leopards, a Male and a Female being tam'd, presently after the death of King Francis, whether negligently or on purpose, let loose, ran into the Woods, and near Orleans devour'd a great number of People, and Cattel: Gesner faith, That some Womens bodies were found, who were un-touch'd, only their Beasts eaten by the Leopards, as if they took them for the daintieft part; which is not unlike the ancient Jere, who according to Saint Hieron, entertain'd their Guests as a moft delicious Dift, with Womens Beasts, and Mens Buttocks Roast'd. Besides, the devouring nature of these wilde Beasts, what profit could Tygers, Lions, Wolves, Bears, and the like advantage the Transporter? And how came Serpents, Adders, and other Reptiles, thither over the Ocean, that with no Art whatsoever can be made tame? Were the small Vessels just laden with fuch terrible Creatures, when againft their wills, they were by Storm driven on a new Coaft? By these impossibilities we may easily judge, that the Americans came thither by Land, and no other way, but how, and upon what occasion must be our next enquiry.

**Sect. II.**

Histories generally gives us only two accounts, Why People remov'd from one Country to another, either not, or thinly inhabited; whether driven by force, or of their own accord, to unburthen and give ease to their too Plethoric Countries.

Thus the banish'd Japawners forsook their Native Country, and settethemselves in a defolate Soyl, since a flourishing Empire, shining with Riches, and Crown'd with stately Cities: So the Bataviens took possession of the uninhabited Isle, lying between the Rhine, and the Weel, being driven out of Heffien by Civil-Wars, and preferv'd the memory of the place, from whence they had their Original on the utmost Point of the Island, in the Villages of Cattenwyck; for the Heffien formerly went by the name of Catti; others that remov'd did not only fall upon their Neighbours, but made a way by force of Arms, chosing their Habitations under a temperate Climate, and in a fruitful Soyl. After which manner the Franks enter'd Gaul, and afterwards the Normans set upon France; so that the Conquer'd Countries, have ever since from the Conquerors been call'd France and Normandy: But although it cannot punctually be said, how the Inhabitants of America remov'd, yet it is without contradiction, that they first found an empty Country. The Opinions which they have themselves concerning it, are full of idle Fancies: First, they question their Original from the Floud, which is so well rooted in the memory of all Nations, that the blindest and most ignorant know something of it, though deformedly alter'd and vary'd, tack'd up with additional fabulous Stories, the truth it self known onely to us, but to all others lost in Oblivion.

Who
Who hath not heard of Delucion's Flood, how his Wife Pyrrha, and he only eceae in a little Boat, and (as 'tis Fab'ld) landing on a Mountain, from thence People the World again, by throwing Stones backwards over their Heads? Some thing of this seems to hint the trule Story of Noah, his Wife, and Children, from whom the defolate World was replenih'd.

The same they relate of Prometheus, concerning whom, thus Diodorus Siculus: "They say that the Nile breaking through his Dams, and over-flowing his Banks, drowned all Egypt, especially that part where Prometheus Rul'd, where all the Inhabitants were swallow'd, by the Deluge. None can imagine but that Diodorus by this makes mention of a particular Flood, and not the general one in Noah's time; for as the Greeks, acrib'd all things to their Heroes, so the Egyptians in like manner did the same to theirs: Therefore they have of the general Flood, made a particular one in Egypt, though perhaps it never was: So that what is Fabled of Prometheus, is nothing but a Part of the Universal Deluge; which the Name Prometheus proves, because it signifies, Sprung from Heaven, and is the same with Noah, whom they hold to be the first Father of all Mankind since the Flood, born of, or regenerated from his Wife Asia; and Asia signifies Earth, or The Mother of all things; and so eipposing Noah, being sprung from God, to Acra, from whence descended the Generations of Mankind; and by degrees spread over the whole Surface of the Earth.

The Chinese, East-Indians, Japanners, and other People of Asia and Africa, have also some knowledge of a very ancient Flood; but hood-wink't under many idle Fancies, not unlike that which the Americans relate, from whom several learned Persons find no obscure Confessions of the Deluge, which thus mystically they have wrapp'd up. That one Viracocha came out of the great Lake Titicaca, and setteth his Residence upon Tiaguanaco, where yet remain the Ruines of ancient Walls, built after a wonderful manner: At length removing from Tiaguanaco to Cusco, he began to multiply the Generation of Mankind. They slew the foremention'd Lake a small Island, under which, the Americans say, the Sun fav'd him self from the Flood; wherefore in ancient Times they superstitiously observ'd that place, heightening their Bloody Sacrifices with Humane Slaughter. Others relate, That six Persons leap'd through a Hole out of a Window, from whence all Men were since Extracted; and from that new Inceafe, the place (after the Inhabitants of the Old World were all drown'd) got the Denomination of Pacari Tampo; and therefore they hold the Tampo's to be the most ancient Families: From hence Mangocapam deriv'd, being the Primogenitor of the Incas or Kings; from whom sprung two Generations, Hanon Cuzco, and Urin Cuzco. They tell us also, That their Incas, when they make War upon any People, say that the occasion, as they pretend, was, because all Territories are Tributary to them justly, from whom they were deriv'd and reflor'd, being the firt Planters of the New World; and wishal, That the true Religion was declar'd to them from Heaven.

This Relation, though mix'd with Fables, shews (but very darkly) that they have some knowledge of the Flood: For who are those fix'le that leap'd out of a Window to replenish the Generations of Mankind, but Shem, Ham, and Japheth, with their Wives?

The Americans can give but a little better Account of their first Original; and indeed it is no wonder, because for want of Books they can relate nothing certain, but only what they have Registered in their usial Quipocamagos, which is not above four hundred years old. Acosta asking what Original they judge'd 

D
AMERICA.

Chap. II.

they were of, and from what Countrey and People deriv’d? receiv’d no other Anfwier, but that America only was their native Countrey, and that they were deriv’d from no other elsewhere. But though the Peruvians are of this Opinion, yet the Mexican are of another mind, giving the Spaniards a far better Account when first they came thither, wherein we muft a little deviate, viz. How they were remov’d from some other place, as Robert Conténs relates, who with many Learned and seemingly true Arguments affirms, That the Original of the Americans must be sought for either among the Phenicians, Sydionians, Tyrians, or Carthaginians, being indeed all one People. Herodians faith thus of the Phenicians, "They liv’d formerly, according to their own Relation, along the Shore of the Red-Sea; from whence removing, they planted the Sea-Coaft of the Syrians. Festus Avemus the Latin Poet agrees with this Opinion, where he faith,

On the Phenicians Coasts the Ocean beats,
Who through the Red-Sea Sailing, chang’d their Seats.
They were the first that ventur’d through the Seas,
And freighted Ships with richer Merchandize:
Fair or foul Weather, They without contrue!
Sought Foreign Trade, directed by the Pole.

Aristotle from a Greek Word calls them Phenicians, from their being red or bloody with the Slaughter of all Strangers that Landed on their Coaft; but rather, and so indeed they are call’d Phenicians, or Erythreans, from Efin, or Edon, from whom they are deriv’d; for these two Words, or Denominations, signify in Greek, Red; the two last, the like in Hebrew. Phenix himself first planted all the Countrey lying between the River Eleutheres, and the Egyptian City Pelusium; and afterwards Damisus, wash’d by the Mediterrane: But since, these Boundaries are alter’d, on the North, by Judea; Westward, by the Mediterrane; Southerly, by Egypt; and towards the East, by the Distant Arabia.

The chiefest Cities are Ptolæmar, otherwise call’d Acon, Sidon, Arad, Great Caia, Sarepta, Biblia, Bothris, Berithus, and their Prince’s Tyre, formerly situate in an Isle, but since joynd to the Main-Land by Alexander the Great.

None can difown, but that the Phenicians have ever where been Admirals of the Sea: so that they were formidable to the greatest Princes. When the Persian King Cambyses came with a vast Army against the Carthaginians, he was forc’d to give over his Design, because the Phenicians refus’d to help him with their Fleet, being allied to, and the City founded by them: But they not only built Carthage, which strove with Rome to be the Empiffs of the World, but also the famous Cities Leptis, Utica, Hippo, and Adrumetum in Africa, with Cadiz and Tartessus in Spain; nay, they lent Plantations of People into the Heart of Iberia and Lybia. It will not be amiss to add Q. Curtius his Relation, who tells us,

Where-ever the Phenicians came with their Fleets, Landing their Men, they subdu’d whole Countreys, and by that means spread their Colonies over the known World; Carthage in Africa, Thebes in Boetia, and Cadiz near the Western Ocean. Aristotle relates, "That they made such rich Returns of their Merchandize, and chiefly of their Oyl, in Spain, that their Anchors, Pins, and all Iron Materials belonging to a Ship, in stead of that Metal, were Silver.

But to return to our Discourse, and disprove the former Testimony, That the Phenicians found America. The formention’d Conténs faith thus, "None can
can justly doubt, but that since the Phenicians took the Command of the Sea from the Rhodians, they more and more increas'd their Fleets, and growing expert in Navigation, passing the Gibraltar Northward, became Masts of Cadiz, and still prepar'd new Fleets, which searching beyond Atlas Southward, discover'd the Coasts of Africa, and the adjacent Isles, driving a great Trade to the Canaries, and to those which lay scatter'd along Cape de Verd, formerly call'd the Gorgades. This way of Trade also was not unknown to the Greeks, Iberians, and other People; but after the Phenicians affum'd it wholly to themselves, without any respect or difference of Countreys, they sunk all whomsoever they could catch. Curtius further adds, saying, "I believe that the Phenicians, failing into the Main Ocean, have discover'd unknown Countreys. And which are those? Not the Gorgades, or Canary Isles; for those were sufficiently known before, but a Main Land, far beyond. But though the Phenicians were most expert, yet not skilful enough to make out such Discoveries. They indeed were the first that before any other fail'd out of the Mid-land Sea; nay, they ventur'd a good way into the main Ocean, beyond the Straights of Gibraltar, or the Herculean Pillars: But how far? Not to the Gorgades, above half way between Spain and America; but to the Cafferides, or Flemis's Islands, which to the number of nine lie in sight of Spain. Strabo affirms this Truth, saying, "The Cafferides are ten, lying in order close by one another: One remains uninhabited; on the rest live a swarmy People. This way the Phenicians fail'd first, when they were in quest for Trade, from Cadiz. And though he reckons ten, there are indeed but nine, viz. St. Michael, St. Mary, St. George, Tercera, de Pico, or Tenariff, to call'd from the Mountain which vomits Fire, Fayal, Las Flores, Del Cuervo, and Gratiosa. Moreover, the same Strabo relates, "That the Carthaginians did not throw over-board the Traders on the remote Gorgades, but those especially that came from Sardinia or Cadiz.

Mean while, we cannot deny, but that the Gorgades that lye before Cape de Verd were frequented by the Carthaginians, long before the Birth of our Savior; but with so much admiration, that Hanno their Captain in that Expedition was lifted amongst the number of their Heroes, hapning thus: The Carthaginians failing for Cadiz, to assist the Phenicians against the Spaniards, made that the Seat of War, which soon drew on a greater Design; for Hamilco and Hamno being impow'r'd by the Senate at Carthage, manage'd the War in Spain. Both of them were ambitious to discover new Countreys. Hamilco sail'd along the Coast of Spain and Gaul, reaching to Batavia. Hamno fleet'd Southerly, carrying thirty thousand Men of all Trades in his Fleet, purposing to build a new City in some place or other, and got beyond the Promontory Ampelusinum, now call'd Cabo Spatil; the River Zibas, which washeth the City Arzilda; and the Stream Lix, now Laffo, where the Poets place the Gardens of the Hesperides, in the custody of a waking Dragon: From thence proceeding on his Voyage, he came to an Anchor in the Mouth of the River Subur, at this day call'd Subo; and afterwards before the City Salle, now call'd Salle, at that time made very dangerous by the voracious Beasts in the neighboring Woods: At last the Fleet reach'd the Foot of the heret Atlas, which ends at the Point Chavannah, by the Modern Navigators call'd Cabo Non, because it was judg'd, that none could scape with Life, that durst adventure to steer beyond Chavannah; yet Hamno fail'd between Palma, one of the Canary-Islands, and the Promontory Bojadoris, towards the pointed Coaft call'd then Cornu Hesperium, but now Cape Verd, in the River Afama, by Castaldus call'd Omirabi: Here he found horrible Crocco-

\[D 2\]
Chap. II.

diles, and Hippopotami or Sea-Horses, Afjama is held to flow from the same Fountain whence the Nile has its Original. In this Latitude Hanno descried those Islands which he call'd Gorgones (from the three deform'd Sisters Medusa, Stheno, and Euryale, whose Heads were Periwig'd with curl'd Serpents) because they found as illfavor'd Women on those Islands, which at this day the Hollanders call the Salt-Islands; amongst which, the chiefest is St. Jago, a Colony of The Portuguese; but the Mountains opposite to the Gorgones, on the main Coast of Africa, rising aloft with spiring tops near the River Magribolus, Hanno call'd the Charities of the Gods, now nam'd Sierra Liana, lying in eight Degrees Northern Latitude. When Hanno and his Armado, either provok'd by an undaunted Courage, or covetous of Fame, if they proceeded in their fo wonderful Adventure, went forward, where they reported, that they saw Rivers of Fire falling into the Ocean, the Countrey all about burning, and the tops of the Mountains dazzling their Eyes with continual Flashes of Lightning, intermix'd with terrible Thunder; adding further, That the Natives all the Summer shelter'd themselves from the excessive Heat, in Caves under Ground; and coming forth in the night, run abroad with lighted Torches over their Ground, so gathering in their Harvest, and Officiating all other Affairs of Husbandry: Yet Hanno no ways daunted at such strange Sights, fail'd from Sierra Liana Southerly to the Equinoxe, where he discover'd an Island not far from the African Coast, inhabited by a rough and hairy People, to take some of whom, he us'd all possible means, yet could not; only two Women, being compass'd by Soldiers, were taken, and carried aboard; but being very fmalige, and barbarously wild, could not be tamed, or brought to any Complacency, so they kill'd them, and carried their stuff'd-up Skins to Carthage, where they were a long time gaz'd upon with great admiration.

This Island which Hanno then found, can be no other but that which we call St. Thomas, and hath a very unhealthy Air for Strangers, but else very fruitful, and abounding with Sugar-Canes; and the hairy People which he makes mention of, were Baboons, or Baboons, which Africa in this place breeds large, to the amazement of the Beholders, in great abundance; because those deform'd Monsters, more than any other Beast whatsoever, represent Humane Shape.

Here Hanno stopp'd his Voyage, being hinder'd from going further for want of Provision. Five years he spent in this Expedition, before he Anchor'd again at Cadiz, from whence not long after he steer'd to his Native Countrey Carthage, where he was receiv'd with no less Wonder than State, in so much that none before or after him ever gain'd greater Honor, soe much as to oblige his Countrey with the hopes of future Profits from these new discover'd Regions: Nay, he receiv'd a Name, and was plac'd amongst their Gods in the Temples, which he being ambitious of, promoted after a strange manner, teaching several Birds to cry, The great God Hanno; which when they could speak perfect, they were let fly in the Air, where to the admiration of all People, they every where repeated their well-taught Lessons.

This the most remarkable Voyage which happen'd in the time of the Ancients, considering they wanted several Mathematical Instruments belonging to Navigation, and especially the use of the Compass; and also considering the length of the Voyage to Sierra Liana, whither never any durst venture before: Nay, in so many Ages after Hanno, the famous Navigators which were set out by the King of Portugal, fear'd a long time to cut their Passage through the .
Chap. II.  

**A M E R I C A.**

**Æquinocia-Line;** however in long Processes of time, divers Experiments were made, which have now so much improv'd the Art of Navigation.

**Hanno's Voyage** was four hundred years before the Birth of our Savior; therefore if none have been farther than **Hanno**, until the time the Portuguese fail'd beyond Cape de Bona Esperanza, how could **America** be discover'd by Sea? How did they steer from the Salt-Islands, or St. Thomas, out of sight of Land, through the Main Ocean, to an unknown World? **Hanno** himself, who was the scouer of all Ancient Navigators, not only crept along the **African Coaft**, which made him spend so much time; but not daring to crofs over those wide spreading Bays he found, left not his hold of the Shore, and search'd every winding Inlet and Creek: And if he found a New World, why was it not known? The more, because his Ambition carry'd him on to get a Name and Reputation by such Naval Discoveries. And how true the Relation of this Expedition is, **Pliny** tells us, saying, *The Journal-Books were then to be seen which **Hanno** writ in that his **African Expedition**: Though many of the Greeks, and also of our Moderns, following **Hanno**, have found several things contrary to his Observations, wherein he makes mention of several Cities built by him, which none ever since heard of, or any have seen, neither is there the leaft Marks of their Ruines to be found.*

This large Relation serves for nothing else, but to shew that they seek in vain herein to give the Honor of the Discovery of **America** to the Ancients; And as little do thofe Testimonies signify that are taken out of **Diodorus Sicius, Pliny, Pomponius Mela, and Ælian**. It will be worth our time to hear every one of them particularly.

First, **Diodorus** faith, "**Beyond Lybia**, in the Ocean, lies a very great **Iland**, several days failing in Circumference, having a very fruitful Soil, and pleasent Meadows, distinguiſh'd by Hills, and moistened by Navigable Rivers, unknown in Ancient Times, because it seems to be separatéd from the other World, and was thus found: The Phenicians failing along the Lybian Coaft, were several days and nights toſ'd with perpetual Tempefts, and at last driven to the formention'd Iland, where Anchoring, and observing the pleasent Scituation thereof, made it known to their Magiftrates. But how comes this nameleſs Iland to be **America**? What Man would take that for an Iland, which far exceeds the main Continent of **Afia**? And have the Phenicians ascrib'd the finding of this New World to any? Whence then proceeds such great silence amongſt all the Ancient Writers of a whole World, who otherwife us'd to give Denominations to the leaft remote Village, or Mountain, or River?

**Pliny** speaks after the fame manner, saying, "**The Writers make mention, that Atlas** rifes out of the middle of the Sands, with a Shrubby and Bushy top towards the Sky, on the Shore of the Ocean to which he gives his Denomination; That it is full of Woods, and water'd by several Fountains on that side towards **Africa**, by which means it bears all manner of Fruit. In the Day-time none of the Inhabitants appear, all things being in silence, as in the middle of a Dearth; the Approacher is struck with sudden amazement. And besides its eſcensive high Crown, reaching above the Clouds, and neighing, as they say, the Circle of the Moon, appears in the Night as if it were all in a Flame, refounding far and near with Pipes, Trumpets, and Cymbals; and the Journey up thither, very long and dangerous."

I cannot understand that **Pliny** can mean **America** by this, because himself, in the
the first Division of his Fifth Book, makes his beginning with the Description of Africa: And as to what further concerns the strange Relation and danger thereof, is a little before related in Flamo's Voyage; and it is but a light Argument to prove it America, because it seems to refound with those forts of Instruments which the Americans were obsey'd to use when discover'd.

Pompomus Meta being the third, hath no greater Arguments than the former.

"We hear (says he) that unmoft People towards the West, being the Atlanticians, are rather half Beasts than Men, cloven-footed, without Heads, their Faces upon their Breasts, and naked, with one great Foot, like Satyrs or Goblins, which range up and down, without any Artificial Shelters or Houses.

Lastly, Elian seems to say something, when he sets down the Discourse between Midas and Silenus, out of Theopompos, where Silenus relates, "That Europe, Asia, and Lybia are Islands; and that a vast Country lyeth beyond this his trife very divided World, mighty Populous, and abounding with all other Living Creatures, as big again as ours, and living twice as long: That they are wondrous rich; their Religions, Laws, and Customs, founded upon another Morality and Reason, quite different from ours. They boast especially of two great Cities, Machinus and Eufbes, the Inhabitants of the first maintaining themselves by driving altogether a Trade of War, muttering up, and filling their numerous Regiments with several valiant Nations. The Lifted Citizens amount in their Muster-Rolls, all bred to Soldiery, to two Millions, of whom few but from either dying bravely by Wounds receive'ld with Flint-edg'd Laths, and Staves, in flead of Spears, pointed with Stones, not knowing the use of Iron or Steel, but fo overstock'd with Gold and Silver, that they account it a Drug of less Value than our basest Metal. Some Years since they march'd into our World, a hundred thousand strong, as far as the Hyperborean Mountains, where being inform'd, that all the Nations of our World, compar'd with them, liv'd in a poor and desplicable condition; as not thinking them worth their Conquest, they return'd. But the second City Eufbes, deals altogether in Peace, and its Citizens are not rapacious, but exercife Justice, to much affecting Morality and Divine Worship, that they conquer Heaven by their Piety and Meekness, and the Gods themselves are pleas'd to descend, and advise with them concerning their Celestial Affairs.

Who observes not this to be a Poetical Relation, shewing how much better the Acquaintance of Peace are, than the of War; the one conquering only Men, the other, the Gods? Not can more be taken out of Elian's Discourse, but that the Ancients believed there was another Habitable World to be our Antipodes.

Thus far hath been disputed concerning the Original of the Americans, whose Plantations from Tyre or Carthage by Sea, are found altogether invalid: Yet we will search a little further, to see whether the People Analogize, either in their Religion, Policy, Oeconomy, or Customs.

It is certain, that the ancient Phcenicians liv'd in Tents, and sometimes exchang'd eaten-up Pastures for fresh, which the Americans to this day observe; by which it might appear, that they are of a Phcenian Extract. But why not as well deriv'd from Numidia, Tartary, or the ancient Patriarchs, who all liv'd such an unfeer'd wandering Life? Besides, the Phcenians had a long time given over Pastoral Business, for Maritime Affairs of greater consequence, not only Merchandizing through all the World, but sending great Colonies in Ships to
new Plantations: And moreover, the Americans could not so strangely degenerate from their Ancestors, but would have built great Cities like them; of which many were found in Phenicia, but none of Antiquity in America.

As to their Religion, if it agreed with the Phenicians, it was the same that all the World professed at that time, and therefore may as well be extracted from any other, as they: 'Tis true, we find them inclin’d to Sorcery, and dealing with Evil Spirits, as the Phenicians, in which they were not only guilty, but all other Nations at that time.

Nay, why not as well transported out of Asia or Europe, where were formerly many the like Tamperers, and those that dealt in such Diabolical Sciences? And why not from Salmantica, where, as Laurentius Ananias relates, Magick-Arts were publicly taught, and they commended Doctors, and took their Degrees according to their Learning? The Devil also hath publick Worship amongst the Americans, and so he had with the Phenicians: yet not only they, but the whole World had dedicated Temples to him. Here began Humane and Infernal Sacrifices, supposing that Evil Spirits were delighted, and so feated with the Steam of Humane Offerings, whose sweetnefs made them milder, and so intoxicating, lull’d them into lies and mischief.

How famous is Zarapher, and the whole School of the Eastern Magicians? In Moses's time this Wickedness had already took place: Nor can it be deny’d but that the Phenicians carry’d their Idols in their Ships, as Herodotus tells us, saying, "The Image of Vulcan much resembles the Phenicians Patavioi, which they plac’d on the Fore-castle of their Ships.

In like manner, the Americans when they go to Sea, carry their Idols with them, and the Ships took Name from the Image, which was either painted or carv’d on the Stern, or plac’d elsewhere upon the Deck.

The same Cautum the Chinese observe to this present: Francis Xavierius relates, "That he sail’d in a Chinese Vessel from Goa to Japan, which bore an Idol in its Stern, before which the Master lighted Candles, perfum’d it with Aloe-wood, and offer’d Birds and other Food, inquiring of it the Event of his Voyage. Sometimes he judg’d from the Statues immovable Looks, that it would fall out successfully; and other times, not.

Lajly, Porphyrius relates, "That the Phenicians upon any great Exigency, as War, excessive Heat, or Mortal Disabilities, by order select’d one of the most comely and beautiful of their Children, to be offer’d up to Saturn. And Eusebus faith also out of Porphyrius, "That Saturn, whom the Phenicians call Israel, the Learned Vossius and Hugo Grotius read II, or El (one of the ten Names of God in Hebrew) which they also give to the Planet Saturn, who when he Reign’d in Phenicia, having one only Son born by the Nymph Antiope, and was in danger to lose his Kingdom, being worrifed in an unlucky War, he depriv’d him in Royal Robes, and placing him on an Altar built for that purpose, sacrific’d him with his own Hands.

And although such like cruel Oblasions are us’d in America, must it therefore follow, that they are deriv’d from the Phenicians, when several other People are guilty of the same? Nay, there is scarce one Countrey, which hath not at some time or other perform’d such inhuman Acts, seeming to them Zeal in their Religion, for the most eminent of the Heathens,scrupled not at it, which certainly are held to be the Perisans, Greeks, and Romans; and yet they were not abhor’d, though committing Humane Slaughters.

This holy Butchery and Religious Slaughter of Mankind began in Rome in the
the Emperor Adrian's Reign, so continuing till the time of Tertullian, Latinius, and Eusebius. The Greeks which inhabited the utmost part of Italy, employ'd themselves daily in Sacrificing Strangers to Saturn, and sometimes one another. But at last this formal Cruelty became a ridiculous Custom; for the Romans by severe Edicts strictly forbid all such Humane Offerings: Yet that they might retain some memory of their former Sacrifices, they order'd thirty Images to be made of Rufthes, which every year on the fifteenth of April, were by the Roman Priests and Vestal Nuns, to be thrown from the Milvian Bridge into the Tyber.

Moreover, Manethon relates, "That the Egyptians in Heliopolis us'd to offer three Men at once to Juna; which Custom was observ'd till King Amasis order'd, That in stead of Men, they should serve her with Wax Candles. Am priest, Queen to the famous Xerxes, caus'd twelve Men to be burn'd alive, as an Oblation, to pacifie and oblige Pluto to maintain them, in their present Grandeur."

Propoios relates of the People about the Arabian Gulph, "That they often times Sacrific'd Men to the Sun.

"The Indians, faith Pomponius Mela, kill their nearest Relations and Parents, before they decay by Sickness or Age, and judge'd it fit and most Religious to Feast and Banquet themselves with the Entrails of the slain.

The Albanians, as Strabo relates, offer yearly one of their Priests to the Moon.

The same Mela relates of the Tauri, That they us'd to cut the Throats of Strangers, whenever they came near to the Place of their Sacrifice.

The Egyptian Idol Typhon, as you may read in Manethon, was daily made red-hot, and living People put in, and broyl'd to death.

But to pass by several other People guilty of such bloody Idolatry, How did the Altars erected in the Woods in Gaul and Germany, for Taran, Hefus, Tenates, and Woden, continually smoke with the Blood of Humane Expiations? Of which Caesar faith thus in his Commentaries, "The Gauls are a very Devout and Superstitious Nation; and therefore when any were dangerously sick, or likely to be work'd in Battel, they vow'd to feaft their Gods that fav'd them with Humane Fleth, and if need were, would make themselves a thankful Sacrifice to those that help'd them off in such an Exigence. Concerning these bloody Rites, they consult'd and implo'd the Druides, by whose advice they all believ'd that no Victim was so acceptable to the Nuns, as pour'd-out Humane Blood, but especially that of Malefactors; which Dainty, if they could not procure, their Gods must be treated with, the Lives of the Innocent."

Lastly, the Holy Scripture faith thus, When the King of Moab saw that the Battel was too sore for him, he took with him seven hundred Men that drew Swords, to break through even to the King of Edom; but they could not. Then he took his eldest Son, that should have reigned in his stead, and offered him for a burnt-offering on the Wall.

Thee Testimonies are sufficient Witnesses, That the Ancient Heathens express'd the height of their Devotion, and fury of mad Zeal, in such execrable Rites, as to this day the like is practis'd by the Indians, Chineses, Japanese, and others: Wherefore it can no ways be a sufficient ground to prove, that the Americans are deriv'd from the Phoenicians, because of their Humane Sacrifices, for that they were usual Customs in all Places.

The
Chap. II.

A M E R I C A.

The third Proof they offer us, is borrowed from the similitude and likeness of the Phenician and American Languages: Compare sets down some Words, viz., the Phenician call'd a Mountain, Abila; Blood, Edam; a Mother, Aneth; a Maid, Heliora; Water, Elen, and Jam; With the first agrees the American Anthla; with the second, Holodpect; with the third, Anum; with the fourth, Helote; with the fifth, Ame, and Iame. But those that will thus corrupt the Words, may as well make the unseemliest Comparisons. It is certain, that the Phenicians and some of the Americans call a Cup Afor, and Red Wine, Belifa; But does it therefore follow by this, that the one is extracted from the other? How many Names do signify all one, amongst People that never had any Conversation together? This proceeds only from meer accident; Or else if some Words of one, sound like the same Words us'd in a remote Country, and be of one signification, must they therefore be deriv'd from one another? Then upon necessity the Greeks, Latins, and Germans had their Original from the Hebrews, or the Latins from the Greeks, or the Germans from the Latins; or, on the contrary, the last owe their Extract to the first: I will as a Testimony, and to give you a Pattern, pick out a few from a greater number.

How little difference is there in many Words between the Greek and Hebrew? The Hebrews call a Church-Congregation Sabbathim, the Greeks, Συνεκκυδ; the Greeks for I advise, ufe uelès, the other μένει; the Hebrews call Wife-men Zophei, the other Ζωφός: And lest difference there is between Symphonia and Συμφωνία, A well-let Lefjon; or Pfanterin and Πανέριον, A Spiritual Hymn: And who also will not find a near resemblance in the confonating of divers Latin and Hebrew Words? For there is little difference between Mistorah and Menfura, a Measure; Shekar and Saccarus, a sweet Moisture; Leviya and Leana, a Lionfs, Sabecca and Sambeca, a Chopping-board; Pefa and Paffus, a Pace.

Then flattering over the Greek and Latin, the Testonicks would likewise produce many Words which have the fame sound and signification with the Hebrew; as Chobel, a Cable; Ethmol and Etmol, Watching; Sotim and Sotten, Fools; the Hebrew Arets, is in Dutch, Ardt; or as we in English, Ear'd Lands; Pheer and Peer, a Horse; Levah and Leenw, a Lion; Shal and Schades, Damages; Kaffe and Kussen, in our Dialect the very same, Kiffe, Shaken and Schenen, a giving, whence we derive our English Skinder, from serving of Drink; Bel and Beeld, an Image; for Bel properly signifies Lord, perhaps because the Images of Heroes or Lords were worshipp'd by them, or else because Ximn, first erected an Image for his Father Belus, or Bel, to be worshipp'd.

It would make a large Volume it self, to reckon up the Consonancies of the Hebrew, Greek, and Latin, and their scatterings among all Languages where ever their Empire spread, the one being indeed borrow'd from the other, as all Languages that deal or have any converse together: For not only the Words, with some small Alterations of Letters, signify the same in both Languages; but also without the least alteration. Both Greeks and Latins express I do, by Ayo; the Number Eight, by Οθος; an Arm, by Brachim or Brachion, in English, Branches, and Branches; I eat, by Edo; a Cup, by Phiale; a Curtain, by Cortina, or Cortine; Merry, by Hilarus, or Hilarus; a rating Noise or Sound, by Clange; a Camel, by Camelius, or Camelus; a Kace, by Cenn, or Cenm; a Bowl or Chalice, by Calix; a Mouse, by Mous; Deceit, by Dolus, or Dolos; a House, by Domus, or Domus; I carry, by Peso, or Phero; the Pronoun I, Ego; a Lantern, by Leo, or Lamo; Flax, by Linum, or Linon; a Mother, by Mater, or Meter; now, by Non; or nun;
the Night, by Nex, or Nox; a Rock-stone, by Petra; a Nick-name, by Scnmma, or Skonna; a Boat, by Scapha, or Skape; a Treasure, by Trefaurus, or Tefavros; Father, by Patér; I tremble, by Tremo; an Hour, by Hora; the Evening, by Velpera, or Hefera; and an innumerable many Words more, that are of one signification in both.

Now if there is not the hundredth part of the resemblance found between the American and Phenician Tongues, as there is between the Hebrew, Greek, Latin, and Dutch, according to the foremention'd Examples, which notwithstanding cannot be obler'd to be deriv'd from one another, what testimony can there be in five or six Words, which only have a few Letters that do not differ? But suppose that the agreeing of the Phenician and American Tongues could serve for a testimony, that these last People had their Original from the first, then there remains another doubt, viz. To know what Americans acknowledge the Phenicians for their Fathers; because their Countrey is so big, that it may almost stand in competition with all the other three parts of the Known World, being divided by so many Nations, which differ not only in their various Customs, but also in their several Languages, most of them not having the least likeness one with another: Nay, often times the Inhabitants of one Province differ so much in Dialect, that, according to Petrus de Cicca, the one cannot understand the other.

John de Latt observes out of Peter Martyr, and other Writers concerning the West-Indies, That there are several Languages and strange Words spoken among the divers Inhabitants of America, for the Hurones call a Head Sionta; the Mexicans, Tzontecel; the Inhabitants of New-Netherland, Amonyi; the Brazilians, Acanga; the Jews, Boppe: the Figures One, Two, Three, and Four, the Hurones tell thus, Efecap, Teni, Hacbin, Dac; the Mexicans, Ce, Ome, Te, Nabuy; the Sankihander, Cotte, Noffe, Nacba, Wyve; the Brazilians, Oyepe, Mocoq, Macapir, Orinda; the Jews, Tewyn, Tuge, Terrewaw, Tayne; the Natives of New-Netherland, Ofnť, Tuggari, Asi, Cayere. Moreover the Hurones call a Father Ayfan; the Mexicans, Tathli; the Canadeños, Notouvi; in New-Netherland, Regina; in Brazil, Tubá: And so it is generally with all other Words, which agree not in the least one with the other; so that every Territory hath not only a several Dialect, but in many Places they use besides two, three, or more distinct Speeches, not relating in the least one to another, in one Province, by which the People inhabiting Towns and Villages are distinguish'd. The Islanders discover'd by the Spaniards, and deftoy'd, have left few Words behind them; yet Peter Martyr sets down some of them, which were formerly us'd in Hispaniola: They call'd Heaven Tures; a House, Boba; Gold, Canu; a good Man, Tayno. It is worthy of observation, that they pronounce no H in their Language, but what is spoken with a Vowel, and then give it a strong Aspiration, like the warbling guttural Y in Fhebrews.

Our last and chiefest Testimony is Moses, who says thus in Genesis, Curfed be Canaan, a Servant of Servants shall he be unto his Brothers. Moreover be fed, Blessed be the Lord God of Shem, and Canaan shall be his Servant: God shall enlarge Japhet, and he shall dwell in the Tents of Shem; and Canaan shall be his Servant. And in the next Chapter, Canaan begat Sidon. These Scriptures are explain'd as a Testimony of the American Extract from the Phenician, which they ground on these following Reasons: The Phenicians are Canaan's Successors from Sidon, who gave name to their chief City. Tubal the Iffue of Japhet, whole Tents God promis'd to enlarge, and that Canaan should be his Servant, planted Spain. The
Chap. II. AMERICA.

The Phoenicians, descendants from Sydon, (say they) Peopled America; the Spaniards sprung from Tubal, of Japhet, have subjected the Americans, descended from Sydon, of Canaan; wherein is fulfilled that Prophecy of Moses, That Canaan should be Servant to Japhet; but it seems a great mistake, so to derive the Phoenicians from Canaan, for they are Extracated from Shem, Heber, Abraham, and Jefus, surnam'd Edom, from his faying, Adam, Adam, when he ask'd of Jacob, That Red, That Red, because he knew not how to call the prepared Potrage by its proper Name; And Edom feeling himself on Mount Ser, a part of the Stony Arabia, and on the Coast of the Red-Sea, gave denomination to it, because that Sea was much frequented and Navigated by his Successors. The Greeks call it Erythrem, from Erythros, who is the fame with Efus, and likewise signifies Red. Hereto is added, That Phoen and Erythrem have the fame signification in the Greek, So then, thefe Idumeans taking the name of Phoenicians, from the great Pho- nix, spread themselves far and near under mighty Kings, by Navigation in the Red-Sea, and from thence Planted several Coasts and Islands, removing at left to Syria.

The seventh King of Edom, Moses reckoneth to be Baa-banan, which name, by transposing the Syllables, the famous Carthaginian General Hamnibal bare. Moreover, it may easily be demonstrated, that the Phoenicians Extracated from Heber, have formerly Ipoke Hebrew, and fince Arabick; for they dwelt before their removing, in the Stony Arabia. St. Jervin faith, the Punick Tongue agrees for the most part with the Hebrew: And St. Auflin tells us, that many, nay, moft of the Carthaginian words are Hebrew. Elifa, Dido, the first Foundrels of Carthage proves this, for Elifa or Elifah, with the Hebrews, denotes A Lamb of my God; and Dido, A Lover. But who can find the leaf likenefs, between the Hebrew or Arabick Tongue with the Americans? Lastly, Since the Phoenicians acknowledge Efus for a Father, what then concerns the Americans, the curfe of Canaan, since they are no more Extracated from Canaan, than the Phoenicians? Thus much concerning the Phoenicians.

Some would derive the Americans from the Jews; others, from the ten Tribes of Israel, carry'd into captivity. The ground of which Opinions is, That the Jews and Ifrarites were scatter'd amongst all Nations; therefore they conclude, that America was also Peopled by them, the rather, because the ancient Jews and Americans were of one Complexion, and went a like Habited, both going before Shoes, onely wearing Sandals, and an upper Coat over a shorter Linnen Velt. Both are humble, quick of apprehenfion, and obliging, yet Valiant: But it is certain, they cannot be like the Jews, because the Americans change their Habit, according as they live in cold or hot Countreys, and go not in the leaf like one another.

Father Immanuel relates, That he saw a Brazilian, not onely floutly make his party good against three Portugal Soldiers, but had it not been by meer chance, worfed them.

Lastly, What Ceremonies of Religious Rites are observ'd by the Americans, which are used in Judaism? The Jews indeed have transplanted their Circumcision amongst divers Eastern People, and have they onely forgot the firft Ceremony and Signal Badge of their Religion in America, which yet not onely they, but those Mahumamans and other Sectaries punctually observe.

This makes evident their flatterings about the Face of the Earth, but will not bring them to reach America. The Sacred Text sets forth a two-fold de-scription of the Jews; The one before the Birth of our Saviour, when they liv'd
liv'd as strangers in Pontus, Galatia, Cappadocia, Asia, and Bithynia. Jerusalem was their Metropolis, although others had their chief residence in Babylon, and Alexandria; for there was an Asiatick and a European dispersion; those of Babylon for their chief City, and us'd in their Synagogues the Chaldean Translation of the Bible. The Europeans kept their Seat at Alexandria, where they had a Temple like that of Jerusalem; and whilst they employ'd themselves in the Greek Version of the Holy Scripture, by the seventy two Interpreters, under Ptolemy Philadelphus, they were call'd Wandering Greeks: Therefore, certainly the Americans are not deriv'd from these Jews, and with as little reason from those, which by Titus Vespasian, after the destruction of Jerusalem were driven into several Countreys, for they were never permitted (that I may borrow the words of St. Cyprian) to set forward one foot, though but as Pilgrims, towards their Native Countrey, but strictly forbidden not to assemble or meet together in any considerable number, which would have been necessary, if they intended to Plant a new World.

A small seeming Testimony is added, being taken out of the fourth Book of Esdras, that the ten Tribes of Israel that were carry'd away by Salmanasar with their King Hopha to Naholah, Habor, the River Gogau, and the Cities of the Medes, might be acknowledged for the first Planters of America: Concerning which, Esdras faith thus, The ten Tribes brought over into another Countrey, consulted that they should forsake the multitude of the Heathens, and travel to a remoter Countrey, where no Generation of Mankind had ever liv'd before, there they would maintain their Laws, which they had not observ'd in their Countrey: Whereupon they went thither through the narrow entrances of the River Euphrates, for the Almighty stopp'd the Vains of the River, till they were past over; for th'other the Countrey was a way of a year and half's Journay: Wherefore that Tract of Land is call'd Affreet, then they liv'd there till the last time.

But since these Books of Esdras were not Written by a Prophet, either in the Hebrew Tongue, or allow'd by the Jews to be the Word of God, or any where taken notice of in the New Testament; wherefore then is Affreet more America than any other remoter Countrey?

St. Hierom (who certainly had a peculiar knowledge of the condition of the ten Tribes of Israel, because he liv'd in Asia, and held Correspondence with the Jews, that he might perfectly learn the Hebrew Tongue,) relates, "That the ten Tribes (St. Hierome liv'd about the Year four hundred, under the Emperor Theodosius) underwent great slavery in the Cities of Medes and Persians, so that this strange Voyage to Affreet, which must have happen'd long before St. Hierom's time, may be Recorded amongst the other Legends of the Rabbies, concerning their Behemoth and Leviathan, who lock'd up the Souls of those that fleighted their Laws, in Caves under ground, as Esdras." And how little opportunity the Iserites had to remove since his time, may appear by the horrible Destruction that was made for several Ages together in Persia and Media; for although the Persians became Masters again of the Realm, Conquer'd by Alexander the Great, whilst Alexander's Successors invaded one another, yet they were continually in War, either against the Romans, or else the Indians, and other Eastern People; nay, the Saracens wrested the Scepter out of their hand, though but for a small time; for soon after, breaking out into Factions amongst themselves, Mahomet Subtilissimus, Imbros's Son, establish'd his Throne on their Ruines, and encourag'd by such Success, arm'd himself against the Indians, and made use of the Turks assistance, with which he subdue'd the Babylonian Arabsians: Aft which, the Turks, not without great slaughter
sl大声 set the Persian Crown on their Head, which immediately totter'd by bloody Commotions; for Tangrolip's being King of Persia, clashing with his Brother Cuthumoses, made Persia swim in the Blood of a Civil-War, till at last Zengis Chan brought from Tartary to great an Army, Anno 1200. that none durft stay to make opposition; for the Turks forlook Persia after a Conquest of six Ages, and made their own way for new Quarters into Carmania, Phrygia, and Bithynia, whence they made such incursions on the Greek Empire, that at last they became sole Masters thereof. Who cannot but easily judge by this, how little opportunity the ten Tribes had, to be assembled together from remote Countreys, and to go long Journeys through untrack'd ways, and full of Enmies, to travel to America?

Immanuel de Moras, who had gotten peculiar knowledge of the Americans by his long Conversation with them, judgeth that they are not deriv'd from one People, but from the Carthaginians and Jews, and that at several times, and places, they Landed in this New World; for the Carthaginians Sailing thither, found the Soyl so fertile, that many forsook their Native Countrey to dwell there: Whereupon, it was forbidden upon pain of Death, to send no more thither, lest if Carthage should be invaded by a foreign Enemy, it should want People for a Home-defence: From this occasion it happen'd, that those that were already Transported, became rude, and of a Salvage Disposition, and spreading their Families, planted thedefolate Countreys in a ranging manner, without acknowledging any Supreme Head or Governor.

Thus being scatter'd up and down, every one invented to himself a new Language, which should neither agree with the Carthaginians, or any other: But this Opinion is before at large contradicted.

Moreover, Moras endeavors to shew, that the Brazilians are of a Hebrew Extract, because that according to the example of the Jews, they might not Marry, but in their own Tribes, they also call their Unkles, Fathers, and their Aunts, Mothers; both mourn for the Dead a Moneth together, and wear long Garments down to their Ankles. But these Arguments seem to us of small consequence; for indeed the Brazilians differ in their Marriages from the Jews, for they not only Marry in their own Tribes, but frequently commix with their Sifters, and Daughters, or other their nearest Relations. Moreover, the Jews call'd them Fathers, from whose Loyns they sprang many Ages before, as well as their Unkles, which the Americans do not.

The Mourning for the Dead hath been an old Custom, and is not observ'd by many People, but the time of a Moneth was not settled amongst them, but was observ'd after a more unual manner, seventy days, as in the Fields of Mosh for Moses, and elsewhere for the Patriarch Jacob. Lastly, all people know, that the Romans and Persians girt themselves about with long Clothes.Besides, the Jews were strictly bound to observe Circumcision, without which they were not accounted Jews, which the Brazilians use not, as neither their Language or Letters. How is it possible, that in America they should at once have forgotten their Extract, Laws, Circumcision, Language, and other Ceremonies, when the rest of them observ'd nothing more strictly in all parts of the Earth?

The Learned Hugo Grotius, in his Enquiry after the original of the Americans, brings them with many Circumstances to belong to Panama, situate opposite to the Northern Parts of Norway, because something of their Languages agrees, and the Way thither easie and nearest to be found: for first they travel'd from Nor-
way to Yland, over which the Norwegians Rul’d above a thousand years since, to from Yland through Friesland to Greenland, and from thence to Efstiland, being a part of the Main Continent of America.

From Friesland some Fishers went thither (as he says) two Centuries before the Spaniards touch’d that Shore; which John de Lact contradicts. And indeed what Reasons can be given, Why the Americans of the Straights, between Panama and Nombre de Dios, lying Northerly, should have another original than those that live to the South, seeing the same Straights are neither divided by Mountains nor Rivers; and the Spaniards found no alteration in the Customs and Languages between them that liv’d above or below those Straights. And who will believe that Norway, which was but indifferently peopled, could afford such numerous Colonies as could plant the Northern America, which far exceeds the South, and chiefly, when the great Islands that lie near the East and West, are added to it? Moreover it is certain, (if the Ylander Agnir Jonas is to be credited) that some Families fled out of Norway from their enraged King to Yland in the Year 874, which at that time was but meanly inhabited.

Fifty years before, Lewis the Jut put the Ylanders under the protection of Pope Gregory the fourth, who gave the Government of the Yland Church to Anfag Archibishop of Hamburg. But how comes it that there is not the least spark of Christianity found amongst the Northern Americans, if they are deriv’d from the Yland Christians? and why did the Ylanders remove to colder Countries than Greenland and Friesland, or their own native Soil, and for the most part not inhabited?

Concerning Greenland and Friesland, it is known by our English Navigators, that they are joyn’d together, and both to the Northern America; but not without vast Bays and Inlets, which betwixt Greenland and America are obstrued with floating Castles of Ice, so that the Passage is very dangerous. And full as troublesome, if not altogether impossible, would the Journey be by Land, because the Earth lies so thick cover’d with Ice and Snow, especially the Valleys, that no Traveller is able to get through.

Moreover, that which Grotius says farther of the Fishers which first discover’d Efstiland, is grounded on the Relation of the Venetian Knights, Nicholas and Marcus Zeno, two Brothers. Anno 1580. Nicholas Zeno suffer’d Shipwreck on the Friesland Coast; Marcus inform’d thereof, steer’d his Galle thither; fourteen years they spent before they came to Efstiland: at last they return’d again to Friesland, where Nicholas died: But Marcus returning home publish’d his Journal; wherein he relates, That Efstiland is above a thousand Leagues distant from Friesland, and was discover’d by Friesland Fishermen, that were driven thither by Storm. But he hath set down many things that have little resemblance of Truth, according to what is since found by credible Navigators; and therefore we cannot depend on Zeno’s Discovery.

John de Lact accounts it a great mistake in Grotius, that as a testimony of the Americans original out of Norway, he compares their Languages. He reckons up some Places to be Northward of Panama, which end their words with the Yllable Law in stead of Land, because the Spaniards have left out the Letter D at the end thereof. It is certain, that in the Northern America lie Cinatlani, Cartlan, Guefolan, Artilan, Quacatlan, Jetalan, Tapatan, Cinacatlan, Tenschitlan, Comitlan, Metzitlan, Guatilan, Nectitlan, Quacatlan. Besides, that most of these Names are not of Countries, but of Towns and Villages, and therefore no ways fittibg to have the termination of Land: and it is well known that man-
ny American words end with Lan, which signifies nothing less than Land: for the Mexicans say Puertasitlan, which signifies At the Gate below; Ochaxitlantitlan, Yet lower; Tenaxitlant, (this City is also call’d from her Founder Mexis, Mexico) that is, Rocks on a Rock. Moreover, it may not without reason seem strange to any, that the Northern Americans have remembred but three Cities out of all the Teотochtik Tongue, viz. Lan in head Land.

Concerning Greenland, through which the Norwegians are thought to have travell’d to America, Esfander witnesses, That it was accidentally discouer’d by one Eric Rauder, Anno 987, and planted thirteen years after.

Olaus, King of Norway, plac’d two Bishops over the new Inhabitants, as Substitutes to the Archbishop of Drøthen. For four Ages they Sail’d frequently to Greenland; but since their King was impoverish’d by War, they left off that Trade.

We find not in any Author, that the Norwegians which liv’d along the Seashore, ever went to leck a Way over the inaccessible Snowy Mountains of Greenland, to this our New World.

Befides, Grotius stand’s for the Norwegians as Planters, upon testimony of the Mexicans themselves, who told the Spaniards, That their Ancestors which plant’d there came from the North, first settling themselves on Eoftiland, where to this day there are not improbable proofs by several remarks, that they were a Norwegian Colony.

In the American City Norumbega, live a People that speak the same Language, and observe the same Customs with the Mexicans.

In this by-Corner are found also some Alavards, or Longobards, or Lombards, as they say. Now the Spaniards call that New Mexico becaufe last discouer’d, though indeed the old, cramm’d with People eight hundred years since: for the Mexicans of New Mexico do not lie so far Northely, as to the North-west: for this Mexico lies in light of California, which is believ’d to border on Tartary, or at leaft separat’d from it by a narrow Channel. But Norumbega (if ever such a Place was) must, according to the West-Indian Records, have been situat’d where a part of New France lies, now plant’d by the English: between which and New Mexico lies an almost unmeasurable vast Tract of Land. Mean while here is not the least sign of this City Norumbega to be found: neither do the Inhabitants dwell in Cities, but live in Tents, or moveable Villages, which change their Names as oft as their Governors. Moreover, the Norwegians could not get to this Norumbega by Land through Island and Greenland to Eoftiland, becaufe of the vast Bays, and great North-east Sea, discover’d by the English in their North-western Discoveries; so that leaving Eoftiland, it was altogether impossible for them to come to Norumbega.

Hereto may be added what the Mexicans say of themselves, who acknowledge, That travelling from the North, they did not find an uninhabited Countrey before them, but were forc’d to make their Way by a long and bloody War with the Chichimecan, a salvafe People, that knew neither Laws or Religion.

The People also dwelling opposite to California, differ from the Customs of the Mexicans, being divided into severall People of contrary Constitutions, and as different Languages.

Grotius ferues up his Arguments from the likenes of the American Speech and Customs with the Norwegians: for (says he) there is little difference between Pagod and by God, or like God; Guaira and Wacijer, that is, A Feni; Hama and Lam,
A description of the
Orange Beall from in
Peru.

in English, Lamb ; Peko and Beke, a Brook or Rivulet. Both Customs and Constitutions have also great resemblance. The Mexicans relate, that their Predecessors only follow'd Hunting; that they divided and reckoned the Time, not by Days, but by Nights, and wash'd their Children as soon as they were born in cold Water.

They are so much inclin'd to Gaming, that they venture their Liberty at it. Every one is satisfi'd with one Wife, except some of the Nobility, which oftentimes have more. They throw up high Banks in several places to dam the Sea; believe the Immortality of the Soul; every one eats at a peculiar Table; most of them go naked, only cover their Pudenda with a Cloth; some sacrifice and eat Mans' flesh: all which, according to Tacitus, Pliny, Lucan, and other Roman Writers, was observ'd by the antient Germans; from whom those that inhabit between the Norwegian Mountains were extracted.

Th'fe Allegations, to make the Norwegians to be the Parents of the Northern Americans, John de Laet thus contradicts: "It no ways follows that one People take originall from the other, because here and there are several words found, that have the same signification and found in divers Countreys; much less when they must either add, change, or diminish several Letters. Moreover, there is no small mistake in the compar'd words: for Pagod is not us'd all over America; the East-Indians about the River Indus, call their Idol-Temples Pagod, or Pagode; the word Cuaira is no where us'd in America, but by the Peruvians, and with them not signifying a Fan, but a little Oven; neither is Llama a Lamb, (for before the coming of the Spaniards thither, neither Sheep nor Lambs were ever seen in Peru) but a Wool-bearing Beast, thus describ'd by Joseph de Acosta:

"Llama (says he) a four-footed Creature, furnishes its Master with Meat and Clothing, and supplies the office of a Beast for Burthens, and at no charge for Hay nor Provender, well satisfi'd with what he finds in the Ways or Mountains. But the Llama's are of two sorts, either woolly, or short-hair'd:
hair'd: the first go by the Name Pacos, the other Moromira, being not much less than a Calf, with a long Neck like a Camel, but of several colours; for some are white, some black, and others speckled, having an odd Look, especially when they are ty'd, and stand still without any motion, staring with goggle-eyes on their Owners: Sometimes in a moody humor, upon a sudden den taking a freak, they run up to the top of almost inaccesiffible Mountains, where both the frantick Beast and his Burchen are loft. The Pacos sometimes likewife takes sudden Pets, and suitian Fits, often doing the forward Superfalt, tumbling over and over with their Goods, and will not be rais'd, their moo-dins continuing, with beating, nay though they cut them to pieces: but the best way is to fic down by them, and wait some hours till their humor beingspent they rise again of their own accord. These Beasts are much in clin'd to a Diseafe call'd Caraffhe, or the Mangue, of which they generally die: and because the Diseafe is very catching, they straight bury the infected alive, so the better to preserve the rest.

Grotius also mistakes, when he compares the Mexican Peke, with the Dutch Beke; for though many Mexican Places, Mountains, and Rivers, terminate in Peke, yet it signifies not a Brook or Rivulet, for that they call Atlaubelt.

John de Lasa tells also, 'That with great diligence he found a Mexican Diction- nary, Printed by the Spaniards in Mexico, to find if there were any words in it which agreed with any of those European Languages that he understood, but found not one.

It is the same case with the Cuflooms and Constitutions between the Norwegians and Northern Americans: for what concerns Hunting, how many People have formerly liv'd by it? The antient Germans, and to this day the Tartars make it their whole busines, excelling in that Art all other Nations. Besides, that the more ferious fort of the Mexicans, many Ages since scorn'd to derive themselves from a Hunting Ancestry, but affirm that they found the Chichimecas in those Countries, who were great Venators.

The accounting of Time by the Nights, extracted from the Hebrews, is ob- serv'd by divers Eastern People: and although the Germans ditp and wash'd their Children in cold Rivers, or Brookes, so soon as they were born, yet the Mexicans never did it, but the Mother lays the Child on the fourth day after its Birth, in an open place of the House; in the middle whereof stands a Pot full of Water cover'd with Broom, in which they wash the Infant. Neither are the Americans so much addicted to the Vice of Gaming as other Nations; so that Grotius taxeth them too severely as to that point: as on the contrary, he too much clear of Polygamy, whereas the Mexican Marry as many Wives as they please, or are able to maintain. Father Martyn Perez relates the fame of the Cinaloans, and other Americans; as also Quarterius of the Natives in Nova Fran- cia, which lie nearest to Norway. And what need the Americans have the Germans their Teachers, to make Sams and Banks against Floods, since Nature and Necessity it self instructs it? and where are any People so ignorant, as to ascribe the fame event to Men and Beasts after death? 'Tis true, their manner of eating in America is several, because the People do not much converse together: but they did not go naked; for the Spaniards found them not only nearly Habited, but had a proper Name for every thing they wore. The Virginians us'd long Shirts; the Florida Skins of wild Beasts; and towards the North they cover'd themselves from Head to Foot in hairy and undress'd Hydes. The sacrificing of Men was in former Ages spreading far and near;
over the World, and how far it was practis'd here, hath been already declar'd at large. Lastly, all the Americans are not guilty of eating of Man's-flesh, but that salvageneis is confin'd to the Southern America.

Thus much we have said, to prove that the Norwegians had no hand in planting the Northern America, we shall now proceed to enquire who planted the Southern Parts, from the Straights between Panama and Nombre de Dios, to the Straits of Magellan.

The Peruvians, posessing a large Tract of Land along the Coast of the South Sea, Grotes would thus derive from China:

"The Peruvians, being of a subtle Wit, and quick of Apprehension, argue sufficiently that they are not extracted from the more Northern Americans, but rather from the Chinese, which the several Wrecks of Chinese Ships found on these Coasts sufficiently evidence: and no wonder, if curiosity or accident brought the Chinese expert Navigators to this Country, separated only by one Sea from them. To this we may add their Rites of Religion; for both worship the Sun, and call their King the Son of the Sun; they write no Letters, but make Characters downwards. Manocapac was a Chinese of strange Policy, who being inform'd that his Country-men inhabited fruitful Countries on the other side of the South Sea, but without Laws or Government, sail'd over thither, and gather'd the scatter'd Multitudes in a Body, and established an hereditary Kingdom after the Chinese manner, to him and his Successors.

To which John de Lact answers thus: "Though the Peruvians exceed the other Americans in Policy, and at the arrival of the Spaniards liv'd in a handsom Order of Government, yet they can no ways be compar'd to the sharp-witted, and noble-spirited Chinese; nay, there are in no Place of Peru found such Artificers as those of China, that bear the praise of all the World; no where such manner of Buildings or Cities, nor the least likeness of the Chinese Curiosities. As concerning the Wrecks found in Peru, I find no credible Author that gives an account thereof: for certainly the Chinese could much easier, and a nearer way have come through the Atlantick Sea to the Coasts of America, lying to the East of Peru, than steer along the vaft, and much greater South Sea, and endure the horrible Storms and vaft Waves, which the European Ships are scarce able to endure, much less the Chinese Vessells, which are not so good. The Spaniards which Sail yearly from Acapulco to the Philippines are sensible of the great danger which they endure, chiefly by the great gulfs of Wind near California. Besides, the Peruvians before the arrival of the Spaniards, were utterly ignorant of great Ships, and the use of Sails. How could they at once have forgotten that Art, which they brought with them thither, Moreover, it is easier to Sail from Peru to China, than from China to Peru, because the Winds under the Equinoctial Line commonly blow Eafterly. And it is the greater wonder, that the Chinese Jonks accidentally by Storm should be driven to Peru, because they were never flord with Provisions but for a short Voyage, whereas this ask'd nine Moneths. But if any one will suppose, that they purposely directed their Course thither, how came the Chinese to Sail just to Peru, and not to New Spain, which is much closer to China? Why were there no Merchandises of the Chinese found in Peru, since they went thither for Trade? how came they to neglect that Navigation they had once found? Nor is their Sun-worship (which was formerly practis'd in most Parts of the World) of any
any validity to derive them from China? But the contrary is most apparent, for the Persians worship for their chief God, Vracoa, that is, God Almighty, or The Creator of all things.

The Chinese, if Confutus an eye-witness may be credited, are divided into three Sects of Religion: The first follow the Learn’d Trigentius, and acknowledge a King of the Heavens, which must only be serv’d as the Chinese do. The second, to which purpose, two Temples are built in the Royal Cities, Nankin and Pekin, one Consecrate to Heaven, and the other to the Earth. The third nam’d Lama, impose themselves in Magick and Exorcisms, Conjuring up, and serving Evil-Spirits, whose horrid representations, when they have stuck upon the Walls, they make an artificial and dreadful noise, as if Hell were broke loose, and the House full of Devils; sometimes also force the Evil-Spirits to enter into Images, from whence they receive no impertinent answers to their questions: Therefore, who will compare this Superstition of the Persians worshipping of the Sun, to the Chinese Religion, which do no such things?

The Persians call’d their King, A Lord of the Realm, and not The Sun as in China: Though the Mexicans otherwise worship the Sun, and in their manner of adulation, they’d Hernando Cortez, their Conqueror, Sun of the Sun:

As to what concerns the manner of writing, it is very well known, that the Chinese words are all Monoyllables, so that they have as many Letters as Words, which they join together, that they reckon eighty thousand, but with ten thousand they are able to express themselves in most matters.

These Characters are contain’d in their Halpian or Dictionary. The ancient Chinese us’d seventeen several sorts of Characters in their writing, some signifying several things; others, of all sorts of agrestick Tools belonging to Husbandry; some Characters of the Feathers of the Bird Funhoa; others of Oysters and Worms, or of Roots, of Herbs, or Birds Claws, or of Turtles, or of Herbs and Birds Feathers mingled, or of Planets, and such like; but what manner of Writing or Hieroglyphick of theirs resembles thofe, who by their own testimony know neither Pen, Paper, Ink, nor any manner of Writing, but reckon the antiquity of time by strings Beads, which was observ’d many ages since among several Nations.

Hitherto we have discover’d the several Opinions concerning the Original of the Americans, or first Plantation of America, from all which, having receiv’d no clear or demonstrative satisfaction, we must open our way to a further inquiry: But first, we must needs confess, that contradiction is not difficult; but it is something of Work, when we have beaten down a well-forti’d Opinion, to set up somewhat in its stead thereof, to stand a permanent and undeniable truth, which will be the harder, in regard the Inhabitants of this new World have no old Chronologies concerning their Antiquities, and first settling there; yet if we cannot go so far absolutely to assert, yet some probabilities, grounded (as we suppose) upon better reasons, may give more satisfaction; for none will deny, but that the Generations of Mankind being strangely multiplied after the Flood, they then living five times our Ages, and Wars not beginning till the known part of the Earth was over-lock’d, jousting for Territories, and some thrift quite out, at last found America, which spreading it self to a vast extent, and now found almost every where well inhabited, may be guess’d,
that it was not onely Planted from the first, but several times replenish'd since by various Nations; Why may not several Planters, and at several times make room for their Colonies, incroaching one upon another, either by force or compact; as the French themselves upon the Gauls, the Normans upon them, the Goths among the Spaniards, and the Saxons among the Britains, and the Normans again upon them?

Several people may easilly Sail over thither, the Agores or the Canary Isles ly so, that they are ready (as if design'd) for Transportation to America; from whence Africa made a Voyage in fifteen days. Alfo Pliny gives us an account, that these Islands lay uninhabited in his time; yet is it well known, that after Pliny's time, Ruins of Buildings were found there, signifying, they had been formerly Planted; and why might not those ancient Inhabitants Sail thence to the neighboring America?

Tercera lying half way between Spain and America, was frequented by Navigators before the Birth of our Savior; and it seems as easie to Sail from thence to America, as from the Main Land of Spain thither: Add this, that necessity forc'd the Spaniards to look about them from other Countreys, for since they loft their Victorious Champion Baucius Gapetus, they were every where beaten, being tired out by the Phenician Forces, and that oppression over, suffer'd as much under the Roman Yoke: Wherefore it seems not strange, if a considerable number remov'd from thence, that they might live some where else in quiet, for which purpose they wanted no conveniencies to Rig and fit forth stout and sufficient Vessels, able to live in those Seas, having had long experience from the Phenician Voyagers, whose Fleets Sail'd daily to and again in several Expeditions, from Cadiz and Gibraltar towards these Western Countreys: Nay, Hanno himself that first Navigator that way, who gives an account of the Gorgaunt, or the Isles of Cape Verde, a good part of the way to America.

And though Britannia, Ireland, and the British Isles lay further from America, yet something may be said particularly to prove, That many Ages since, Expeditions had been made from thence to the New World; and that the Inhabitants of these our Isles, in former Ages, were peculiarly famous for their skill in Navigation; inomuch, that the Cretans and Phenicians emulous of their skill, and jealous of their danger, made several Attaques and Invasions upon these Isles, which is the more probable, many reports of the Phenician and Greek Language, remaining in the denominations of the Countrey: Of which, take first this account:

Anna 1179. When Owen Guyneth, Prince of Wales, having Raign'd long and happily in his settled Dominions, dying, left several Sons, who quarrelling, their elder Brother, as not contented with their shares of the Principalty, nor to be under him, having gotten no mean Interests and Claims to the whole by their Strugglings, so weakened one another, that they open'd a way to the loosing of all.

Amongst these Brothers, Madok, a Prince of a milder disposition, weary of such unnatural Diffentions, threw up his share, better contented to seek new Fortunes abroad; whereupon there were many soon perswaded to venture their lives with him, where ever he would pleafe to Transport: So Rigging a small Fleet, he Sailed Westward, far beyond Ireland, where at last he discovered an unknown and uninhabited Countrey, but wondrous pleasant, the Air being temperate, and the Soil most fertile: Glad of this good Success (as the Story says) he returning, spreading the Fame of this his New-Found-Land, which
Chap. II.  

America.

which they might exchange for a barren Soyl, harder'd and haras'd with an endless Civil-War.

No small number flock'd to these Summons, as a most acceptable Undertaking; so that soon after he was able to send forth ten good Ships, Freighted only with Men, Women, and Children, and all other Materials fit for a new Plantation; which not long after Landed in America, as Francis Lopez de Gomara believes, because there he only found some remaining Tracks of Christianty, a People that worshipp'd the Cross, but knew no reason why or wherfore they ador'd that Sign of our Redemption. Now, some will say, that this Worshipp of the Cross is no argument to prove, that the British Christians first Planted in the North of America, but what will not time and change of place do, where Transplanted People keep no Records, so they forget not onely Religion, Laws, and Customs, but who they were, and from whence they came, Oblivion first mutilating, and at last swallowing up all; of which, take this one late preffident.

Anno 1598. The Duke De La Roche obtain'd leave of the French King, to transport a Colony of Volunteers to New France, in his way he Landed fifty Men on the Island De Sable, to reft his Passengers, and that he might the better, and with more eafe explore the Countrey, and when refolv'd where to settle, then to fetch them off; who accordingly, as design'd, soon after, returning thither, was met with so violent a Storm, that not being able to Weather the ille of Sable, where he left his People, he loft his whole Expedition, and was driven back to a French Harbor, where no sooner arriv'd, he was so highly charg'd, that he was caft into Prison, when thefe he had left neglected upon the ille, were not once so much as thought of; in this interim, they never expecting to hear more of their Captain, liv'd in a wild and miserable condition, feeding upon Fift, and sometimes wild Swine, without Bread, Drink, or Salt.

When the Baron of Leri went with Letters Patent, to be Governor of Nova France, and by theirs of Weather in his Voyage, was forc'd to put in at Sable, where he found the remainder of La Roche People, who being from fifty reduced to twelve, having clad themselves in Sea-Wolves Skins, they had not onely loft their former French Civilities, but forgot in a manner their Religion, much of their Language, and what they were, being as if Metamorphos'd into Beftial Salvages.

And although we have already controverted the improbability of Peopling America, either by accident of Storm, or by force of Nature; yet it may be possible that it might happen, for as the several virtues of Plants, Herbs, Precious-Stones, and Minerals, though strangely occult, and altogether unknown, that what could never be found by Art, meer chance hath brought to light, and their wondrous qualities, some casual accident hath made apparent; so strange and remote Countreys never to be found in our Charts, or Maps, nor Registred in any Story, Seamen bound to their intended Harbors, have stumble'd on by chance, either Hood-wink'd by blind Milts, or forc'd upon by pertinacious Weather, of which America may be her own witnes, for how was Columbus stirr'd up, but by incitations of the Journals of a Sea-Captain, dying in his Houfe, driven on the American Islands by foul Weather.

Although from the foremention'd places, and after the same manner, America might be furnisht with Inhabitants; so it also gives us a more certain assurance, that the Planting of America was not onely soon after the Flood, but that they came also thither by Land: And how strangely would it be against the
the Majesty and Wisdom of Divine Providence, to leave half the Universal Globe, a World fully supply'd with all sorts of Creatures, fit for Food and Service, Plants, Herbs, and the richest Minerals, like a House new built, and well furnish'd, without a Master or any Inhabitant, viz. Man, who being of Celestial Extract, should be able to acknowledge and glorifie the Creator, by admiring the Creature in his great Works: Besides, the confus'd Notions and Fables of Giants, Perpetrators of all manner of Crimes, and wallowing in all kind of sensual Debaucheries, are always remembered among the Antiquities of the Americans, and that they had some slender hints of antient Truth, not only of the Giants before the Flood, but of those that soon after the rank fatneas of the Earth, produc'd and fed to that pitch of Arrogance, that the Covenanting Brethren def'd God, fortifying themselves to fight him by the advantage of that long congested Pile, Babel, which in a short time was transvert'd by the Heathen Poets into their Gigantomachia, heapings Hills on Hills, like the American Traditions: From which we may conjecture, that they came thither in the time of Noah; for why may not any believe, when Noah liv'd three hundred years after he Landed on Mount Ararat, that he took care to People the World? And who will make him ignorant of this New World, who living five hundred years before, might not improbably by his own industry and the help of the former long-liv'd Patriarchs, been well able to make a general Survey of the Old; and he could better furnish America, it being nearer Mount Ararat, than supply Italy, Spain, Germany, or any Northern Territories in Europe, so that America might be known to the first people after the Flood, nay, inhabit'd by them, though since that, the knowledge was lost.

Pliny complaining of the Supine negligence, and stupendous sloth which reign'd then and long before as he had oblerv'd, among all people, and in every place, who were so far from making inquiry after discoveries of Lands for new Plantations, that they left the old, when they had begun to settle, though under the greatest serenity of Peace; The Sea by that means lying open beyond what any juncture of former times could be proud of.

Yet the Fortunate, or Canary Islands were in the first ages after Noah, frequented with Vei'fels, which in later times were altogether neglected, till Guilleram Betancourt, a Gentleman of Picardy, brought them again to be taken notice of by a fresh Trade. The Fable of the Hesperian Gardens, and the Dragon that kept the Golden Fruit, with constant Vigils, is nothing but an allusion to the Sea, which with Serpentine Embraces, not onely secure these scatter'd Isles, but swallow'd up several Adventurers that too hardly made their unhappy approaches for discovery.

Another Allegation for the Planting of America by Land, both whose sides are wash'd on the East and West, by the South and Atlantic Ocean, may be thus probably made out: The Atlantick rows over with almost Fathomless Waters, three thousand Leagues of Ground; the South-Sea not much less, which well may be, being indeed but one continu'd Sea, encompassing, till meeting there, the Univeral Ball, whence springs a more likelihood, that America might be Planted from the Southern parts, from the Straights of Magellan, and Le-Mayr.

Peter Fernandes de Quij relates, That he and a Commander, Lodowick Paes le Torres saw a part of the South Countrey, and in it innumerable Inhabitants, Whites, Blacks, Sallows, with long, black, curl'd, Woolly, and yellow Hair. They know no Walls or Fortresses for Defence, Laws or Kings, but are divided into
into Tribes: They use indeed Bows, Arrows, Clubs, and a kind of Spears: Their Housels are cover'd with Palm-Tree-Leaves; their Housholdstuff consists onely of a few Earthen Pots, and such Trinkets: yet they have some little skill in Weaving, and though they gonaked, pride themselves in Neck-Laces and Bracelets, made of Mother of Pearl: But these for their Complexions and Constitution of Body, Culloms, and manners, are rather deriv'd from the Americans, than from them, and therefore we must seek for their Original from the North; from which are but two ways, one from Yland and Greenland, which Grotius endeavors to prove, but contradicted; the other out of Tartary, which certainly was the first Nurserie, from whence the Americans were Transplanted.

Tartary or Tartary, so call'd from the River Tatter, which runs throw the Countrey Mongul into the Northern Ocean, covers a great part of the Terrestrial Globe; the lefser Tartary makes out a considerable part of Europe; the greater is Asia.

This great Tartary, which is a thousand Leagues long, and six hundred broad, reckons five chief Provinces, viz. the wild Tartary, inhabited by Herdsmen; Sagatai, of which the Metropolis is Samarcand, famous for the mighty Tamerlane; next Turkistan; then Kitai, which the great Cham Command; and lastly, Old Tartary, according to Andreas Ciasarienfis, the habitation of Gog and Magog. Now we must enquire from what Tartars the Americans are Exctracted:

Mornanus, Pofellus, Genebrardus, Petorius, and others are of opinion, That the Tartars, which about the year 1228. under the Command of Zingis Cham overspread the Earth like a deluge, were the Succeffors of the ten Tribes of Israel, which were carry'd into captivity to Assyria by Salmanazar. The name Tartary, or rather Tartaria, seems to be some testimony thereof, because it signifies in the Syrian or Hebrew Tongue, Remnants or Remainers, as seemingly, because these Tartarians were remainders of the foremention'd Tribes; nay, the Northern Tartary Herdsmen preferre to this day the Names Dan, Zabulon, and Naphtali: Wherefore we need not to admire, why so many Jews are found in Rusia, Sarmatia, and Liefland; nay, the nearer to Tartary, the more Jews there are.

Circumcision hath a long time been observ'd among them, before Mahomet brought in his new Law; it seems, that Mahomet order'd the Circumcision and other Laws, according to Moses, to be observ'd by the Northern people, because that in his time, they began to Rebel, that so they might the better be kept in awe by their new Religion.

Joannes Leonclavium relates, That in Liefland near Riga, he heard the wilde Natives call'd Letti, not without great admiration, go crying along the High-Ways and Fields, with a doleful voice, Jeru, Jeru, Masco lon: It is believ'd that they mourn for Jerusalem and Damascus; but by their long continuance in the old Wilderness, they have forgot their Religion and Laws, and what else might enable to tell us who they were. Several learned Authors quest the removal of the Israelites out of Assyria to Tartary, though to our Judgement their Arguments are too weak, to take from them of the footing they have gotten there; yet nevertheless, the Israelites are not to be taken for the Planters of America, for why else is not Judaism as well found in America as in Tartary. But it is already shewn, that America was inhabited long before the dispersion of the Israelites.

Now to shut up all, it is evident, that the first Planters of America were not Europeans from the diffimitude of the People, both in their Complexions, Language,
AMERICA. Chap. II.

guage and Persons, not Africans, because that in all the far-spreading Country of America, not one Negro is to be found, except a few near the River Martha, in the little Territory Quarequ, which must by Storm be drove thither from the Guiny Coast: So that Asia, the Mother of all People, only remains to be Implanter of our America, whoze Western Coast, opposite to Asia, is more inhabited than to the East, where it respects Europe.

Moreover, Armenia, out of which, by Noah's Progeny, the whole Earth was re-peopled, borders on Scythia, now call'd Tartary, and Tartary faces America, separated only by the Straights of Anian; though some are of opinion, that out of the South into the Frozen Sea, there is no passage thorow these Straights, else (as we have already prov'd the contrary) how came all those Voracious and Poyfonous Beasts into America, if it be clearly separated from Asia by Sea?

It deserveth here to be related, what happen'd to Henric Cornelis Schaap, and William Blyveld, Sailing from Batavia to discover the Tartarick River Poltzanger, but were taken and carry'd Prisoners to the Japan Court at Jedo; being Commanded there by Order of the Council to give an account of a Japan Map or Card, which was laid before them, and contain'd the Provinces of Japan, Ambaima, the Molucca Islands, Manilla, the South-Sea, Borneo, Celebes, Malacca, Tartary, Formosa, Corea, and the vast and Mountainous Country or Defart of Jejfe, separated from Japan by the Straights of Singar; though toward the North, it joyns to Japan in the Province of Ochio; and beginning in forty seven degrees, run North-East towards America, but they could not possible find the Straights of Anian; but on the contrary, the Promontory of Tartary, viz. the Province Kataya or Katui lay in the same parallel with the Northern America.

Heretofore may be added, that Asia hath no Territory any where, which may more easily with numerous Colonies supply America than this part of Tartary, as well for the vaftness of the Countrey, to which no other can compare, as for the increasing of the Inhabitants: Who doth not admire, that according to Michalon Lithouer, there is scarce a City in Tartary that boasteth less than a thousand Temples; and to see Cangufit the first King of Tartary, about the Year 1200, in Arms; and his Suceefer Hocaca following his Fathers bloody Footsteps, whilith he prepar'd his Sons with three vast Armies? The eldest Son, Jacob, March'd Westward with thirty thousand Horse; Bartho drew with as great an Army towards the North; Tagladis being the youngest fell into the Moors Countrey above Egypt. Hocaca himself March'd victoriously into the North America, subdu'd great part of the Persian Kingdom, and beat the Turks, led by the General Goniata with a great Army, Anno 1241. as Jacob Planefis and Benediclus Sarmata, two Monks, sent by Pope Innocent to Hocaca, witnesse The great number of the Tartars or Scythians, may appear by the several people, spread far and near over Tartary; Pliny reckons some of them, viz. Aucetesi, Neuri, Goloni, Thustagetes, Budini, Bafilides, Agathyni, Nomades, Anthropophagi, Hyperborei, Arimpebi, Cimmeri, Cientanbi, Georgi, Saceres, and others: What number would the Inhabitants make up that live in America, in Tenenuef, Virginia, Florida, New Spain, Guadalaua, Guatemala, Terra firma, New Granada, Peru, Chili, Rio de la Plata, Brazil, Guiana, New Andalusia?

It will be worth our time, to compare the likenes between the Scythians and Northern Americans; both of them are difference'd with special Marks of a more than ordinary and natural distance between the Eyes, which much alters the whole Air of the Face, and the plumpness and swelling of their Cheeks sum-
mits above the Cheek-bone; most of these are of a middle stature, having downy Hair upon their Chin, like the Callow Feathers of an unfledg'd Bird. Lastly, as the Tartars, they differ amongst themselves in their Cullpans, yet in several things they agree one with another, according as they are governed by others, and yet other Princes, some powerful, and some weaker, according as every one power be more or less. The Inhabitants of Lucaja bear so great a respect, and fland so much in awe of their Governor, that if commanded to leap from a Rock, and break their Necks, they instantly obey.

The fame obser'ved by the Tartars; the first King Coatiga Commanded the seven Princes of his Realm to Murder their Sons with their own Hands, which they all readily perform'd.

In Popains they live to this day like some Tartars, without Laws or Lawgivers, who change their places by turns; from the great increase of the Tartars, the Americans no ways differ.

Bartholomew de las Casas write to Charles the Fifth, That the Spaniards in few years, only on the Islands Cuba, Hispaniola, Naco, Ebonaries, in Venezuela and New Spain, deftoy'd above 260000 Men, besides the slaughter that was made in Peru, Brazil, Rio de la Plata and other places, which far exceed the former mention'd numbers.

Polygamy is still in use; both among the Tartars and Americans; both acknowledge the Immortality of the Soul, both like Cannibals, Eating and Sacrificing Mans flesh. How famous amongst the Antients was the Altar of Diana in Taurica Chersonesus, where several Men were daily Sacrificed! How delicate, according to Sabinus, did the Tartars account their Dishes, Sate'd and serv'd with humane Gore?

Strabo relates, That the ancients People account it an honourable Death to be chop'd in pieces, and their flesh serv'd up in Commons. Those that die by Age, a natural death, are defpis'd like Malefactors, and as a punishment according to their Demerits, left in the open Fields, a prey to Birds and Beasts; some delight in that loathsome gorging themselves with Mans flesh, others on the contrary, not onely detest humane, but all manner of flesh: And just so the Americans are distinguish'd; for although the Caribes, Brazilians, the Inhabitants of New Spain, New Granada, St. Martha, and others, Sacrifice and eat Men, yet as many abhor and detest that odious Diet and abominable Custom.

Giles Fleisher, Queen Elizabeth's Agent in Muscovy relates, That anno 1588, Kinach Morfey, Grandson to the Governor of the Chirim Tartars, made his entrance there with a Retinue of three hundred Noblemen, and two Ladies, of which one was the Widow of his deceased Brother. The great Prince inform'd of their coming, sent him two slaughter'd Horses, whose sides and Hanches they feasted on, as we on Fallow Deer.

Most of the Tartars use no manner of Letters or Characters; in the Voyage made into Persia, they first learn'd to make Letters; just so it is in America, their bemoaning of the dead ends in one Moneth, both by the Tartars and Americans; with a Penion of Quality, the Tartars bury a live Servant; the fame Custom is observ'd by some of the Americans; and so much do they agree in a savage and rude life, that Merchandizing and Mechanicks are little regarded.

As for the American acknowledges the Tartars for a rude People in their Religion, Habits, and Dwellings, and yet in all thefe the Americans differ but very little. Lastly, How common is it amongst them to worship the Devil? Among the River Sagadahoc, the Inhabitants are every new Moon miserably tormented by
an Evil Spirit call'd Tanto. In the Temples in Virginia remain yet the horrible Images of the Devils Oka and Memetto. Not a House in Mexico, but hath a peculiar Chappel, set apart for this their suppos'd holy, but damnable Adoration of the Devil. Others in Virginia believe, That there is a great and supreme Deity, which is Everlasting, and for ever. The Tartars also are of the like persuasion.

But this Opinion Gratius hath laid a strong and dangerous Battery against; that America could not be Peopled by the Tartars, because the Americans before the Spaniards coming thither, had never seen any Horses; whereas the Tartars use no Beast more, either in Peace or War, nor can less want: For the Tartarick Forces do not only confit in Horses; but the Wealth of this Country is reckon'd up in the numerous Breeds of Horses, and several Sorts of Mares. Some of the Noblest keep a thousand Horses; none, though never so poor, but keep two or three; and Beggars there mounted crape Alms and Charity of the People. When they remove their Habitations, their Horses carry their Provisions and Tents: If Provisions grow short, they eat Mares Milk, high gust'd with Garlick, which satisfies Hunger and Thirst; and the red Liquor which they tap warm from their Veins, serves them to help Digestion, and heighten their Humor, instead of the Blood of the Grape, our sweet Wine. The twiftest Rivers, though raging and precipitated with Land-floods, they dare adventure swimming their Horses over, hanging naked by their Manes, and guiding them by a flipp'd Rein whither they please: To their Tails they tie their Saddles, and other Necessaries, bound up in Ruffles. When a Person of Quality prepares to cross any River, they tie two Horses Tail to Tail, and athwart both their Backs, fasten a Mat pleas'd of Ruffles, to sit on. When they are flipp'd at any broad River, or standing Lake, they kill and flea their worst Horses; then turn the Skins inside out, and well Liquoring, they stretch them open with the Ribs, which stand like the Bayles of a Tilted Wherry, and thus furnish'd, serves them for a Boat to carry eight Persons. When they take the Field, going to War, not any but multers three Horses; which makes their Armies, when drawn out in Campain, shew much bigger than indeed they are: And though many of them are kill'd in the War or slain for Food, yet the European Tartars pay yearly forty thousand Horses to the Russians; from whence Gratius thus argues, "If America joyts to Tartary, then the Horses which run wild at Grafs might easily have found America them-selves, seeking to improve their Pasture, and have gone from one Country into the other, as it appears, that since the Spaniards transported Horses to America, they are dispers'd over the highest Mountains, out of one Province into the other: Or if the Straights of Anian run between both, the Tartars never were Navigators; and suppose they had been, they would not have cross'd without Horses, without which they knew not how to subsist. To which we only say thus, That although Tartary now, and in former times, abounded in Horses, yet must we grant, that it hath been always so? or that the ancient Scythians, who we avouch first plantet America, had such frequent use of them as the Tartars now. This may be controverted, for that these Scythians planting there in the Non-age of Time, presently after the Flood, the use of Horses was unknown, which the Ancient Poets tell us by their Fiction of Centaurs, who when first seen, the Horse and Rider were taken for one Creature. The like mistake the Mexicans had, when they saw the mounted Spaniards, a thousand running away from one Cavalier."
As to their coming thither of themselves, it may easily be confused: Who knows not, that there is no Countrey a continu'd Pasture, but luxurious Vales separated with inaccessible Mountains, Lakes, and vast Wildernes. But David Ingram relates, "That he saw some Horles in the Northern America, which "the Mexicans, and other Conquests of the Spaniards never heard of: Whereupon we may conclude, and we suppose without all peradventure, That the Americans have absolutely their Original from Tartary, which bordering America, where Noah's Ark first refled, hath a convenient way, though beyond the Arctick Circle, through a temperate Climate betwixt Heat and Cold, to Cathay, in the same Parallel with the neighboring America.

CHAP. III.

First Discoverers of America. Christopher Columbus his Expedition.

Christopher Columbus, generally (though by mistake) call'd Columbus, was born in Arbizo, a Village in the Dominion of Genoa, near Savoya; his Father liv'd by Fishing in the Midland-Sea: So that Sebastian Brotcher, and others besides him, are mistaken, saying, Columbus was born in the City Cacemem, and descended of the Noble Family Pififrelli: For Peter Bazarnus, Columbus his Country-man, gives unquestionable Proofs of his mean Extract, and amongst other things, That the Common-wealth of Genoa refus'd to receive the great Legacy which Columbus left them in his Will, because they fondly thought it a derogation to their Honor, being so great a Republick, to take any thing of: Bequest from a Fishers Son: Yet his Majesty of Pafh thought otherwise, not only enriching him with Wealth, and a fair Revenue for his Discovery of the West-Indies: but also, though of a low derivation, raised him to great Honor, Ennobling him the first of his Family with Dignities, Titles, and Escutcheon, which rank'd him in place among his Prime Nobility.

Columbus, whom we shall henceforth call Columbus, spent his Youth near the Sea, where he was busie exploring the Winds, confidering their Natures, and the Quarters whence they rose, especially with the fetting of the Current from the Atlantick to the Mediterrane. The Western Winds, which often, as well as the Levant, blow several days together from the great Ocean, much amusing him, hinted at laft some Notions, that there might be another World, and new Places to be discover'd, beyond the setting of the Sun; and that the Ne plus ultra should not be, if he could help it, the commanding Terminy of the Earth that way. He also spent much time, being of a solid Judgment, in the Emendations of Charts and Maps, then very much improbable: And the Portuguefe, who at that time had got the Start in Navigation from all other People, being then busie to find a way by the South of Africa to the East-Indies, not contented to go by hearthly, he went himself, in Perfon a Voyage with them. Soon after Columbus settled himself in the Island Madeira, where an Accident hapned, which Francis Lopez de Gomera relates thus: "The Master of a Ship, whose Name and Country lies buried in Oblivion (though some would have him to be of Spain, some an Andaluan or Bifayer, and others a Portuguefe) Trading to the Canaries and Flemmysh-Isles, was surpris'd by a hideous Tempest..."
AMERICA.

Chap. III.

"from the East, which hurried him volens volens through dreadful Waves;
"where at last he found himself ingag'd upon a Western Coast, altogether un-
"known. The Storm ceasing, without making further Discoveries, he pick'd
"his way homeward, at last Landing in the Haven of Madera: All his Crew
"but three and himself, with hardship, want, and the long Voyage having pe-
"ritif'd, himself dangerously sick, was carried into Columbus his House; where
"lying on his Death-Bed, he bequeath'd to Columbus his Maps, Journals, and
"other Observations of this his unfortunate Voyage. Columbus being by these
Papers more confirm'd than ever in his Opinion of a New World in the West,
declare'd what he verily believ'd, to the States of Genoa; but they look'd upon
him as a vain and idle Fellow; yet Columbus full of his great Project, thus
slighted and scornfully rejected, late not so down, but address'd himself to
the King of Portugal, where they wearied him, spending long time with dilata-
tory Anfwers, to no effect; the Opinion of a whole Court of expert Naviga-
tors having caus'd his Declaration out, as a Chimera or mere Fancy. Soon after
Columbus sending his Brother into England, to move the Bufinefs to King Henry
the Seventh, he being taken Prisoner by the way, and lying long er'e his Re-
leafe, came too late to the English Court, prevented by the News of Christopher's
return with Succefs from his intended Voyage: For mean while Ferdinand and
Isabella King of Castile, having finifh'd his Wars with the Moors, had fur-
nifh'd him out for the Expedition; which he effect'd by the favor of Alfonso
Mendezio and Alfonso Quinatavila, both great Ministers of State under Ferdinand
and Isabella, and obtai'n'd so much at last, that he was fent with a hundred and
twenty Souldiers, besides Sea-men, in two Ships, and one Pinnacle. Thus sup-
plied, he set Sail from Cadiz upon the Kings account the fourth of August,
Anno 1492, and first reach'd the Canary Islands, and from thence steering
South-West, the Wind in thirty three days scarce varying one Point: But
though the Weather blew so conftant, yet the Sea-men chang'd their Minds,
and Storm'd quite contrary, crying, That Columbus was guilty of all their
Deaths: For (said they, after they had loft fight of the Canaries so many days,
nothing appearing but Sea and Sky) Who can hope for any Succefs or happy conclu-
sion of so desperate a Voyage; so rashly undertaken, and found now so full of eminent danger?
Yet Columbus bore bravely up, and weather'd all their Exclamations, although
they threatned no less than his Murder: At last Articling, they came to this
Agreement, That if after sailing forwards three days more, no Land were discov'd;
they should return: But about two a Clock the next Night, Columbus faw a glim-
mering like Fire in the Sky, and in the Morning found himself close aboard
a most pleafant Coaft, where Landing with twelve Men, he erect'd a Cross
and cut out of a Tree. Thence he sail'd over to Cuba, where the Sea was so rough,
that he was forc'd to land off, fearing Rocks and Shallow Water. Soon after
he got to the Northward of the Iland Hispaniola: Here
his boat-Ship was bulged upon a Rock, on which they had all fent forth, it had
not been flat on the top, so that the Soldiers and the whole Crew of Sea-men
were faw'd by the two Veflels. The Inhabitants stark naked, feting theee
Strangers, fled to the Woods; but the Spaniards overtaking a Woman, they en-
tertain'd her with Sweet-meats and Spanifh Wine, and putting her on a white
Shirt, fent her again to the rest of the Natives, where return'd, she told what
good Entertainment she had had to her Companions; whereupon divers of
the Ilanders came aboard of the Spaniards, in Boats made of one piece of
Wood, where they barter'd Gold for Beads, pieces of Glafs, Knives, Shells,
and other Trifles. The King of Guacamulli gave testimony of peculiar inclination to the Spaniards, helping them to Fish up the remaining Goods of the Wreck, and informing them, That some Rivers flowing from the tops of high Mountains, wash'd down the Gold amongst the Sand: notwithstanding a strange Prophecy had been told to these Islanders, namely, That Bearded Men out of remote Countries should destroy their Goods, take their Land, and massacre their Children. He also told them what made them fly, and betake them to their Heels at the arrival of the Spaniards, because they were oftentimes surpris'd by the Cannibals, who snatch'd up all they could lay hold on: Their Boys and Stragglings they gelded, cooping and cramping them up, as we our Capons, for Feasts: The young and well-grown Men they chop'd to pieces, salted, and Barrel'd up: Young Women they preferv'd for breed, and old ones they made Slaves. These Cannibals were so terrible to the Inhabitants of Haytin, that a thousand of them durst not venture to engage against ten, but would run every way, dispers'd like Flocks of Sheep before the Wolf.

Lastly, Their King permitted the Spaniards to build a Lodge or Hovel, wherein thirty or forty of them might shelter; but indeed so taking possession in right of the King of Spain.

Mean while Columbus return'd in safety to Spain, and was receiv'd with great joy, King Ferdinand making him Admiral of the Sea, and sending his Brother Bartholomew Governor to Haytin, now call'd Hispaniola. The Gold, Parrots, Maftick, Aloe, the Strange Bread juca, whose extracted Juice is rank Poyson, but the Body makes a good Meal, which kneaded and bak'd, yields a fine Manchet and wholesom Food, theylook'd upon with great delight and admiration, but two of the Natives being naked, with Gold Rings through their Nose and Ears, Ornaments with them of high esteem, and signifying their no mean Quality, the People old and young came in Throngs to wonder at, never weary of gazing upon them. But the King, encourag'd by this Success, took no dilatory Course, but suddenly, and before any could expect, built fourteen stout Carvels, and three Frigates, and as soon mann'd them with twelve hundred Soldiers, besides a great number of Artificers of all sorts, with their Wives and Children, freighting them with Horses, Swine, Goats, Cattel for Breed, all sorts of European Corn to sow, Fruit-Trees and Vines to plant, and some Priests to instruct and convert the Natives to their Religion.

The second of September, Anno 1493. they set sail from Cadiz, and Anchor'd before Ferro, the last and furthest of the Canary-Islands, where they could get no Water, but what dropp'd from the Dew hanging on Trees into Troughs. After that, Columbus came on the one and twentieth day amongst the Caribbean-Islands, where he dropp'd Anchor before one, which he call'd Dominico; but finding it defolate, set sail further, and discover'd several other Coasts, where he likewise found nothing but very great Porcupines or Hedg-hogs, and sweet-smelling Trees. Steering forward, he found the Coasts of the Cannibals, which inhabited along the Shore in little Huts or Hovels, built round of Wood, and flak'd about on the out-side with long Poles, like Pals'ado's: They have also Pots within, which are shorter, pleated and fastned together with Cotton, or long Ropes of Trees, plying like our Ofiers, over which they hang Cloths painted with horrible Figures and strange Representations: The Roofs rise like our Canopy'd Tents, highest in the middle, cover'd with Palm-Tree Leaves to keep off the Rain: At the Entrances hang two Hairy Images on Poles, not for Religion sake, but Ornament: Their Bed-heads being high from
from the Ground, are fill’d with a kind of Straw; and in long Hovels fitted
for that purpose they store their Sugar.

Columbus landing here, found all the Cannibals fled; but their Houses full of
Stone Vessels, Cruises, Pans, and Pots, boiling with Mens Flefl, Parrots, and
Wild-soul; the Hanches and Sides of young Men, on Spits roasting at the
Fire, with the Splinters of whole broken Bones they headed their Arrows.
This IlIand by the Inhabitants call’d Caracueria, Columbus charg’d to Guadalupe,
because the Mountains rise up with their tops not unlike Ef tremadura in Spain,
famous there for the wonderful Representativo of our Lady, as that of the
Lady of Loreto in Italy. Thirty Women which he had taken from the neigh-
boring Illes, he sent with Presents to the fled Cannibals, which the next day re-
turning, made a great appearance near the Shore; but when they had gaz’d a
while upon the Spaniards, looking steadfastly on one another, they suddenly ran
back again, sheltering themselves in the Covert of the Woods. Columbus think-
ing it not worth his while to expect their return, seeing their barbarous Life,
burnt and destroy’d all their Boats, and spoiling whatever he could, fail’d to
Matanino.

The releas’d Women in Guadalupe, that came back again, inform’d the Spani-
ards, That Matanino was an Ile only inhabited by Women, which at accutlom’d
times row’d over to these Cannibals, where a while they drove a Trade and
Commerce of Love, the Produce of which, if Girls, they kept; but the Boys
they sent over to their Fathers. They live in Caves, the Mouths and Entrances
of which they maintain and stoutly make good with their Bowe, shooting
Arrows as thick as Hail at the approach of Men, after their impregnating by,
the Cannibals.

From hence the Fleet pass’d by several other fruitful Islands, Columbus giving
them the Names of Monsferatto, Rodondo, St. Martin, Santa Cruz, formerly by the
Inhabitants call’d Ayaya. On this last Island he landed thirty Men, who took
four Women, which held out their Hands before them, as if Petitioners that
begg’d Quarter, or praying, and then conceal’d themselves in Ambuscade, the
better to surprize more; when by chance they spied an Indian Canoe at Sea,
with eight Men, and as many Women; whereupon those in Ambuscade made a Signal to the next Ship, which immediately sent off some Boats well
Mann’d; but before they drew near them, or expected an On-set, one of the
Spaniards was kill’d, and another wounded with their Arrows; amongst whom
a Woman, to whom all the rest shew’d greatest Respect and Reverence, aim’d
very exactly. Their barbed Shafts were poyson’d; whereupon the Spaniards
enrag’d, flemmed the Canoe, and overfetting, row’d quite over; which little or
nothing availl’d; for they all swam, and though separat’d, shot their Arrows
at them, as if the Boat had been a But. At laft the Indians got upon a blind
Rock, cover’d with Shole Water, which gave them fresh Courage; but the
Spaniards having more aid sent them from the Fleet, took them all Prisoners;
but the Queens Son being wounded in the Scull, and dying soon after, was
thrown overboard. The Prisoners being brought before Columbus, foun’d at the
Mouth for raging madness; and being afterwards carried to Capejile, to re-
tain’d their fierce and salvaging Nature, that they scar’d away and frighted the
safe Beholders.

Mean while the Spanish Fleet proceeded on their Voyage, between several
Illes to Espinola, of which some appear desolate and barren, others green
and Woody; the small Vessels failing close under the Shore, and the great ones
standing
standing further off at Sea, which was very turbulent, and beat exceedingly against the Shole Rocks. The Island Burichema, Columbus call'd St. Johns, to which belonged some of the Women sent forth in Guadalupe, who inform'd them, That Burichema was well inhabited by a kind and hospitable People, who, when the Cannibals landed there fought them, and if Conquerors, were so much exasperated with their inhumane Barbarisms, that they leiz'd on them like Maffiffs open-mouth'd, and tore them piece-meal with their Teeth; yet themselves abhorring the Custom of eating Men's Flesh. Here the Spaniards found onely a large House, surrounded with twelve lesser ones, all deftroy'd, for the Inhabitants, with their King Chiafichic were then retir'd into the cool and more sheltering Woods, from the mid-day Heat. All this the Indians told him, which he brought back with him from Spain. Coming to an Anchor at Hispaniola, he sent one of the Indians ashore, that he might tell what brave things he had seen in the Spanish Court; but the remaining three took the advantage of the following Night, and leaping overboard, swim to Shore. But this Accident he not much regarded, trusting to have a sufficient Account from his eight and thirty Spaniards which he had left in the Fort upon the Island; and the more, because King Guaccanarillo's brother, in sign of Friendship, had presented him with two Golden Images: But all these Conjectures fail'd him, so that hearing nothing, he landed, where he found the Spanish Garrison utterly destroy'd, and the Royal Fort burnt down to the Ground; and lying in a heap of Ashes. Then they fired several Guns, to give notice, that if any of them had conceal'd themselves, and lay sculking in the Woods, or otherwise, they should discover themselves, and come to the succour of their Friends; But all in vain, for none came; for as they were afterwards inform'd, the Inhabitants had flamin them, because of their infupportable behavior, inoffactly committing Robberies, Rapes, and Murders: Hereupon he sent Meningers to the King Guaccanarillo, to inquire why they had fired his Fort, and what they had done with his Men, who brought him this Return, That over that mighty Island were many Princes, of which two being provok'd by the reports of the Strangers that were entertain'd in the Island, came marching upon them, each with their Armies; but that he endeavor'd what he could, and came with a Power to afflit the Strangers; yet all he got for his kindness, was a Wound in his Leg, which had been so sore and troublesome, that for to keep his Bed, and no less than seven Concupines to attend him, and dress the Wound: But he told his Tale so ill, and feign'd his Lamenes worse, that Sibilis, one of the Meningers sent by Columbus, lifting up the Coverlet, saw that he add'd nothing, which soon confirm'd his doubt, that he was confederated with the rest, and alike guilty of the Slaughter. At last Guaccanarillo being desir'd, came in Perfon to Columbus, in whose presence he held a long Discourse with an Indian Woman, which they had brought from the Island of Santa Cruz, there christn'd by the Name of Catharine: At length Guaccanarillo was dissimil'd, and the Night following this Catharine, with seven more of the Indian Women, leap'd over-board, and went almost a League to Shore, so going thence directly to their King Guaccanarillo. This Accident gave more suspicion to Columbus, who thereupon sent three hundred Men, commanded by Melchior, Hoveda, and Corvadano, to march through the Island three several ways, and with special Commission to secure as their Prisoner Guaccanarillo. Melchior discover'd a wide River, full of Reaches and winding Bays, gliding between high Hills cover'd with Woods, refunding with the echoing noises of harmonious Birds,
Birds, and disemboguing his Waters, enlarg'd by two other Rivers; into the Sea, fo making a convenient Harbor for Ships. Here a hundred of the Islanders, well Arm'd after their manner, met them, crying aloud, *We are no Cannibals, but Taynos, that is, a People more civil than they are cruel.* The Spaniards marking Signs of Peace, the Taynos approach'd, and joynd their Forces in a friendly manner. Near the place of this Meeting appear'd a House built in an Oval fashion, being thirty two Paces in the Circumference, the Roof curiously pleated of divers colour'd Ruffles, round about which stood thirty leffer Dwellings. Mean while, in his March *Hoseda* discover'd a River that descended from a high Mountain, where the Inhabitants gather'd much Gold after this manner: They dig a Hole about two Foot deep; then taking up their left Hand full of Sand, with their right Hand they call out the precious Ingots, which little accounting of; as they gather'd, they dealt away to the Spaniards. Most of the Pieces were as big as Peaſe, yet some fo large, that they weigh'd nine Ounces. *Peter Martyr*, Councillor to the Emperor Charles, tells us, *That he hath ſeen of them in the Spanish Court, that were brought over thither by Columbus.* Moreover, *Hoseda was inform'd here, That this Gold-River took its Original in the Province belonging to Cacicus Canaboa, Signifying, The King of the Golden Palace.*

Mean time *Columbus* select'd a piece of Ground on a rising Hill, on the North part of the Isle, where he intended to build a City, because close by the Hill on one fide rifes a Mountain, pregnant with Stone and Chalk; on the other, a Plain, fo exceeding fruitful and pleasante, that the Sun scarce shines upon a more delightful and fertile Soil, which they found afterwards by experience. Here Melons are set and ripe in thirty fix days; Corn, in two Months; twice a Year the Trees and Plants bring forth their several Products; the Vines come to maturity, and are laden with Cluffs or Grapes, in two Years, and Sugar-Canes grow as thick as a Man's Arm in fifteen days. On this pleasante Soil, accommodated with a convenient Haven, *Columbus* afterwards built the City *Hosella*, fortified with Walls and Trenches against all Invasions, over which he made his Brother *Bartholomew Columbus* firft Governor.

Mean while the Admiral *Columbus* himself march'd up into the Country, with three hundred Men, in quest of the Gold Mines. Seventy two Leagues the Valley *Ciba* lies adjoining from *Hosella*, to which *Columbus* pass'd over swift Currents and high Mountains, where he built a Fort, which he call'd *St. Thomas*; and exchange'd with the Inhabitants Toys and Trifles, for Pieces and Ingots of Gold, which the Inhabitants, as before-mention'd, found in the Sand of their Rivers: And besides, they inform'd him, That about half a days Journey further, greater Quantities of Gold were to be found, in a brown colour'd Soil; Whereupon *Luxanus*, one of his Officers, was sent with a sufficient Party thither, who march'd through a delightful way, cool with shady Boughs, and pleasante with the prospect of spacious Meadows, where they mow'd Grass for their Horses, which in four days time grew up again higher than our tallest Wheat.

Mean time *Columbus*, being return'd with great Riches to his new City *Hosella*, went soon after by Sea, with three Vessels, to discover new Countreys more remote; which his Defign fell out also successfull; for he fell first upon *Jamaica*, where he found more stout Opposition than elsewhere, by the Natives, at his Landing; but finding themselves over-power'd, they came to Agreement, and accepting an amicable Composure, prefently struck up a Peace.
Peace. From thence putting to Sea, he next discover'd Cuba, which failing round about, he found also to be an Island, where Landing in a convenient Harbor, on each fide with a high and jutting Rock, he espied two little Hovels, wherein was abundance of Fish, besides two great Snakes or Serpents, each having eight Feet, spitted, and ready to be laid to the Fire to be roasted; but neither Man, Woman, nor Child to be seen, they being gone with part of the Fish they had dress'd, into the adjacent Woods, where the Spaniards following, saw hanging by small Strings, on the Branches of Trees, abundance of Snakes, some of which had their Mouths tied together, others their Tongue and Teeth pulled out. Hence marching on, a little beyond they saw a Company of the Natives, which they judged to be about seventy Men, covering the top or summit of a Hill, to whom the Spaniards made Signs, and to entice them near, shew'd several of their gawdy Trifles; but in vain, till at last one adventurer, descending from the Hill, to whom one of the Natives (who in the first Voyage that the Admiral made, was taken from the Island Guanahani near Cuba, carried to Spain, and there Christianized) called aloud, telling him they need not fear, they should have no harm done them; which said, they came down all together, and informed them, that they were sent by their King to catch Fish for another King, which was with him at Dinner, and if they had not eaten the Serpents, they gave them many thanks; for they were provided for the second Course, and very scarce to be got, being a greater Dainty than any Fish.

Columbus from hence proceeding on further Westward, discover'd a fruitful Coast, verging the Mouth of a River, whose Water runs boiling hot into the Sea. Somewhat further he saw very strange Fishes, especially the Guaican, not unlike an Eel, but with an extraordinary great Head, over which hangs a Skin like a Bag. This Fish is the Natives' Fish; for having a Line or hand-som Cord fastned about him, so soon as a Turtel, or any other of his Prey, comes above Water, they give him Line; whereupon the Guaican, like an Ar-
row out of a Bowe, shoots towards the other Firth, and then gathering the Mouth of the Bag on his Head like a Purée-net holds them so fast, that he lets not loose till hal'd up out of the Water.

Here the Spaniards having Din'd on delicate Firth, went on still Westward, and came to an uninhabited Isle, but well flor'd with Geese, Pelicans, and ugly Dogs that could not bark. Here they came amongst so many Shoals, that the Keels of their Ships raked upon the Ground almost forty Leagues together, the Water thick and white like Milk. Lastly, they came again into deep Water, and Landed at the Foot of a high Mountain, on the Island Cuba; where they found two Springs of very sweet Water. A Musqueeter going into the Woods whilst the rest fill'd their Vessels with Water and cut Wood, he spied a tall Man in a Coat like a white Fryer's Frock; behind whom came two more, and soon after thirty more follow'd, all alike Habited: the Musqueeter running away, theybeckned him to stay, but he march'd off; and informing Columbus of his Adventure, he sent a Party well Arm'd to see farther into the Country; but they neither saw nor heard any Men, only found on the other side of the Wood a great Plain, but so overgrown with deep Grasfs, that it was impossible to get through. The next day he sent out twenty five more, which found nothing else than the Prints of the Steps of great Beasts and Lyons, and also abundance of large Grapes, which hung on the Branches of Vines, clapping about the Bodies of the great Trees.

Hence Columbus again putting to Sea, and Sailing Wetterly, found a Shore overflow'd with Water, and abounding with Pearl-Musles, and after that the whole Country full of Mountains, whose tops fmoaked. By this time the Fleet was much dammified by the Shole-water, where, as we mention'd before, they often struck, and their Keels raked upon the Ground; sO that having sprung several Leaks, and their Provisions growing mouldy with the Damp, they were forc'd to return; and Tacking about they ran against Turtles, which lay as thick in the Sea as if they had been fow'n.

Columbus now on his return home, and Landing once more on Cuba, found an ancient Man stark naked, who speaking to him (Didacus interpreted, the Language in some part agreeing with that of Hispaniola) to this effect:

You have to all appearance come to see this Country from another World, my advice to you is, That you hurt none; for the Souls of evil-doers go to dark places: But on the contrary, they shall enjoy the heights of all Pleasures that are Friends to Peace.

Columbus reply'd, That he came a Scourge for the cruel Cannibals; but a Shield to protect the quiet and well-meaning Indians.

After this, returning to Hispaniola, much contrary to his expectation, he found all things which he had feeld there turn'd topifie-turvy: for first the Government at Isabella jangled, and were at private contentions amongst themselves, and the Benedictine Monk Boils and Peter Margarites were return'd to Spain; there to make their complaints at Court: and besides, the Spaniards had dealt very inhumanly with the Natives, by their frequent Rapes, Thefts, and Murders; wherefore the Indians, not unjustly incensed, destroy'd all the Spaniards they found stragling in any part without the Limits of their Fortification. Cannibals also lay about the Fort St. Thomas; and closely befieg'd Hovilla; but receiving intelligence of Columbus's arrival, he broke up his Siege, and march'd from thence, but soon after was taken Prisoner by the Spaniards. Mean while upon Design (a Plot none of the wise) the Natives of Hispaniola had neither Till'd or Sow'd the Ground; or us'd Agriculture the year before, contriving by
by want of Provisions (not considering themselves) to starve out the Spaniards; but the mischief fell upon the Contrivers: so great a Famine hapned, that spreading over the whole Country, in a few Moneths fifty thousand were starv'd to death; but the Spaniards made a saving, though hard shift with their own store, then, though too late, the Islanders repented of their folly, for they saw the Spaniards making an advantage of their misery, not onely built more Houses in their City Isabella, but prepar'd their Weather-beaten Vessels, with which Sailing to the Gold Mountains of Cipangy on the Hill, whence sprung several Fountains, they rais'd the Castle of the Conception. Great benefit they reap'd by this Fort, to which they carry'd daily abundance of Amber, Brimstone, mix'd Ore of Silver and Gold, and Brazil-wood, besides great store of Gold: and they might have gotten ten times more, had they not been so much inclin'd to slothfulness, and minding other vain pleasures: yet notwithstanding all, the Fleet carry'd that year above one thousand two hundred pound weight of Gold to Spain.

In the while the Natives complain'd to Columbus of the Spanijb Soldiers, which under pretence to seek for Gold, committed many inufferable Outrages; therefore they defir'd that they might be retain'd in their Forts, and not strangl'd so much abroad, and they would willingly bring them every three Moneths a certain weight of Cotton, Amber, Brazil-wood, and Gold, more than equivalent to what they snatch'd; but Columbus (whose Soldiers, notwithstanding his severity, and using Martial Law upon some of them for their Crimes, and proud with their success) yet prevail'd at last, that they confent'd thereto; but the Inhabitants never perform'd their promise, who being almost famish'd, had much to do to preserve themselves alive, spending their time in picking Sallads.

Whilest the Business remain'd in this ill posture, or rather confusion, Gibana, Brother to the imprison'd Cannabis, rais'd an Army of five thousand Men: the Spaniards, divided into five Companies, march'd to meet him, and their Enemies being naked, and having no other Arms than Bowes, Arrows, and Clubs, after some little resistance, were soon disipated and put to flight, but overthrown by the Spanish Horse, many of them were taken Prisoners, and others forc'd to skulk and hide themselves on the tops of Mountains.

Shortly after this Battel hapned a Huricane, mix'd with Thunder-claps, rent great pieces from the Rocks, and the Wind blowing out of the East, threw down Houses and Trees, some of which were carry'd a vast height into the Air; three Ships that rode in the Harbor, broke their new Cables, and split against the Rocks. The Spaniards expected nought else, but that with this execellent Tempest the Day of Judgment was at hand. And on the other side, the Islanders ascrib'd this raging of Heavens to the Spaniards' wickedness. This Storm past, and the Air feeld, Columbus gave order for the building of two new Ships there, with which in March, Anno 1495, he return'd to Spain; where in Medina del Campo he gave an account at the Court, about the discover'd Countreys; where also Sentence was pass'd on several Spaniards; and chiefly concerning the Benedijine Monk Bulnis, who out of meer malice pass'd by him at Ma's with the Hofl, while he gave it to others, without any distinction. Then he gave a further account, that his Brother Bartholomew had found, fifty Leagues beyond Isabella, several deep Pits, the uppermost Ground of which Sifted, produced abundance of Gold. Moreover, that he had built the Castle Aurea there in three Moneths time with little trouble: but because Provisions...
grew scarce there, he found himself necessitated to remove, but left ten Men in the Garrison, and had sent three hundred of the Islanders with their Governors to Spain. He also built the Castle Dominico, on the South-side of Hispaniola; from whence he had travel'd into the Country to the River Naiba; where, upon this Shore the King Bencho Anaconcho Encamp'd himself against the Nalbans; to bring them, besides several other People, under his subjection. That Bartholomew demanded Tribute of Anaconcho, which he immediately promised to pay, and disbanded his Forces, conducting Bartholomew above thirty Leagues on his Way, along a Path on both Sides sown with Hemp, and planted with Cotton-Trees, to his Palace Xaragua, in the West of Hispaniola, where he was received in great State: Thirty of the Kings Wives walk'd before, carrying in their Hands Boughs of Palm-trees, and both Sung and Dance'd very strangely; behind these came a considerable number of naked Virgins, very handsome; at last Bartholomew entering the Palace with the King, found a Table furnish'd with all manner of Dainties, and a very courteous Entertainment. The next day walking forth to a large Plain, and looking about he saw two Parties that deepely engag'd in Fight behind a Hill, with great slaughter on both sides, and had not he defir'd that they might be parted, there had been much more Blood shed. After he had been several days friendly entertain'd, he return'd to the Forts Isabella, Esperanca, Cathagina, St. Jago, Tarrita, Conception, and Dominico; where he found above three hundred Spaniards starv'd of hunger, besides many that were sick.

At that time Guarionexo having been oppress'd by the Spaniards, and a long time watching for an opportunity, now thinking he had found it, rais'd an Army of fifteen thousand Men, with which he was resolv'd to try his fortune against Columbus; who privately receiving Intelligence thereof, fell upon him so on a sudden and unexpectedly, that he spoil'd his Design, and took all his Commanders Prisoners: But to oblige the Inhabitants, who begg'd for their King, Columbus set him at Liberty, advising him to be careful of raising a War against
against him any more. But he not being able to endure the oppressions of 
Raidamus Ximenez, a Spanish Commander, fled to the wild Ciquano's, defended 
from the Canibals, and living on steep Mountains: Of these he desir'd aid 
against the Spaniards, and obtain'd not onely their Promise, but some Men; 
with which he robb'd and pillag'd the Country round about, and what Span-
niards he met with he kill'd, and with his Men did eat, as if at Venison Feast. 
Mean while Ximenez made himself Leader of seventy Rebels, which like raging 
blood-hounds fell upon the Natives after a terrible manner. 

Whilst all things were thus in disorder at Hispaniola; the Admiral Christopher 
Columbus let Sail a third time with eight Ships from the Haven Barrameda, in 
the Year 1498. To shun the French Pyrates, which watched for the Indian 
Treasures, he directed his Course to Madera, a fruitful Island of Corn, Wine, 
Sugar, Wax, and Cattel, desolate till Anno 1420. Here coming to an Anchor, 
he sent six Ships away to Hispaniola, which himself afterwards followed with the 
remaining two, steering by the Flemish Islands, or Acores, first so call'd 
from the Fleming, the first Planters: Here he drop't Anchor before the City 
Angra on the Ile Tercera, which is sixteen Leagues in circumference, and very 
Mountainous; the tops whereof are like Spires, and abound with Grapes: the 
Plain Country produces great flotre of Corn, but it will not keep above twelve 
Months. The Ground is oftentimes terribly shaken by Earthquakes, and 
between several sulphurous Places, both Flames and Smoke ascend up to the 
Sky. Near the City Angra is a Fountain which turns Wood into Stone. The 
Winds in this Place blow so fierce and strong, that they not onely beat down 
Houfes, but wear out Iron, and all manner of Stone-work: In Angra the chief 
Commander of all the Flemish Isles hath his Residence. The City, surround-
ed by steep Rocks, lies towards the Sea like a Crescent, or Half-Moon; for 
at both ends thereof the Mountains extend with deep Points into the 
Ocean. The uppermost part towards the Weft stands likewise forbid'd by a 
high Rock, as also by another on the East: on both are continual Watches 
kept; whereof those on the firft can discover Ships fifteen Leagues off at 
Sea, coming either from the East, or West-Indies; and on the other, all those 
that come from Europe: When they see above fifteen Sails, they put out the Kings 
great Flag upon the top of all the Rock. 

This City of Angra is divided into several Streets: the Governor and Arch-
bishop live each in a stately Palace; five handsom Churches are no small ornament 
to it; the Sea before it abounds with Fish, but are not to be taken in 
December, by reason of the turbulent Waves. 

Christopher Columbus having refresh'd at Angra, Sails along the African Coast 
between the Helperides: under the Equinoctial he was so immoderately tormented 
by the Heat, that his Vessels seem'd to burn, the Hoops shrunk from the 
Casks, so that the Water ran about the Hold; and they could expect nothing 
but death from the insufferable Heat, and want of Water: eight days they 
had endure'd this hardship, when they met with a fresh Gale out of the South-
East, so that they made great Way towards the Weft. On the last of July he dis-
cover'd three high Mountains; and approaching near the Shore, he findeth as in 
a Poifie, all the sweet breathings of fragrant Flowers commix'd, and at last saw 
a convenient Haven, where going ashore he found cultivated Grounds, and 
trees of Beasts, but not a Man appear'd: the next day they spy'd a Boat with 
twenty young Men coming rowing from the Shore into the Ocean. The Admi-
ral hal'd them in vain to come aboard, for they made the greater haste ashore,
still looking about continually with great admiration on the Ships: whereupon he commanded them to beat their Drums; and found their Trumpeters, that they might by that means entice them aboard; but they rather taking it as a sign of War, made themselves ready for resistance: mean while the Spaniards overtook the Indian Boat, into which they threw a Hat, and other trifles; the Ilanders amaz’d thereat, made signs to them to row ashore; but soon after they fled.

Columbus proceeding on his Journey came to Paria, where he found a Filibers Pink loaden with Oysters; which opening and taking out the Meat, were found full of Pearls, which because of their abundance were not regarded there; for a broken Dish and a rusty Knife, the Spaniards had four long Strings of Pearl,

From thence anchoring in the River of Cumana, several naked Men came aboard, adorn’d with Golden Armlets, and Strings of Pearl; These inform’d him, that they gather’d their Gold from the Mountains and Rivers, and caught their Pearl-oysters in the adjacent Seas. Some of the Spaniards were nobly entertain’d by the King and his Son, who leading them into their Palace, placed them on Benches of Ebony-wood, curiously wrought, and on a sudden several Servants came in with variety of Dainties, and well-tasted Wine. But because Provisions grew scarce amongst the Sea-men, and their Meat tainted, Columbus thought it convenient to leave the Pearl-trade till some better opportunity. Then setting forward, the farther he went, the shallower he found the Sea, insomuch that his Ship scarce had Water enough to swim. This inconvenience was followed by a second, for the Sea being full of Weeds and Grafs, scarce suffer’d any Passage. A River thirty Yards deep, and twenty Leagues broad, came rushing out betwixt two Shores into this Sea with such force, that the Waves went high like Mountains, which made Columbus judge himself in the greatest danger imaginable, and withall Tack about; so that he came on the eight and twentieth of August Anno 1498. to an Anchor before Hispaniola, where all things were still in a sad confusion, as we before related.

Roldanus Ximenes refus’d to follow Christopher Columbus’s, order and write Letters to the King of Spain, in which he exceedingly aperfed both the Admiral Columbus and his Brother; who were not backward in giving an account quite contrary by their Letters, of the horrid Villanies perpetrated by this Ximenes, and desir’d aid, that so great an Offender might receive condign punishment. Mean while the Conquero’s came marching down with six thousand Men, which Bartholomeu went to meet with eighty Foot and some few Horfe: The Indians which he was to encounter with, rather seeming like Fairies than Men, for all of them were daub’d over with black Smuts on their bare Skins from Head to Foot, and their hard Hair pleatred in terrible, not in Lovelocks, hung playing, or dangling over their Shoulders. When the Spaniards in their March drawing up to a River where it was left fordable, had no sooner left the Bank, and taken the Water, endeavoring to wade over, but the Salvages rush’d forth out of the Woods, and let fly a shouwre of Arrows, that had they not been provided with Shields and Targets, to keep off such a deadly Storm, so thick they flew, and so well aim’d, most of them had perish’d there; but having recover’d the opposite Bank, the Enemy play’d all hid, and in a thought shelter’d themselves under the protection of the Woods; where the Conqueror pursu’d, found the Service very difficult and dangerous, for their Armes, especially their Shields, stopping and intangling them as in a Net, among the shrub-
by and twining Branches; which they passing, riged themselves, and made their way, like questing Spaniels following their Game, and still gawling them with their Arrows: whereupon they left their vain pursuit, marching another way to intercept Mayobanexius, who with eight thousand Cipanas were then coming down against them; which prov'd a harder task than was expected: for ere he could reduce him and his Rubborn Party, he spent three Moneths in the Service.

SECT. III.

But the great and worthy Service of these two excellent Brothers deserving rather Statues and TROphies of everlasting Honor, Monuments never to be demolish'd, in their due praise, who had found out after so many baffled Ages, a new World, richer, and not much less than the old, by the aspersing calumnations of one malicious Person, lost his whole Interest and Credit in the Spanish Court, quite out of favour with his Prince, who by his insinuations had hinted so much the matter of Gain among the Courtiers, that every one studied no less than to get a Commission, and going a Commander to the Indies, make up his Mouth, and become suddenly rich. First Francisca Bombadilla prevailing, was sent with full Commission to succeed Columbus in Hispaniola; where no sooner Landing, but he exercis'd the extremity of his Authority, and feizing the Admiral and his Brother, fetter'd their Hands and Feet, and put them aboard on two severall Ships for Spain: where no sooner arriv'd, but the King, not altogether forgetting former Services, commanded them to be unmanacled, and waited on, not as Prisoners, with a civil Retinue to his Court; where they were well entertain'd three years. But they being active Persons, weary of so long repose, got a second Grant to make farther discoveries, and set forth the ninth of May, Anno 1504, with four Sail well appointed from Cadiz, and had a fair Paffage from thence to Hispaniola, where begun the Storm, for Bombadilla, who had by the Kings Commission fo evil treated Columbus and his Brother, as aforemention'd, would not suffer him, though reconciled to the King, so much as to Land, and there refresh themselves and their Men, so he was forc'd to fleer on to the Islands Guamixa and Veragua, where a Hurricane, or sudden Stroke of Weather ftruck two of his Vessels, the other two flanding of to Sea escap'd bilging, but so flatter'd and leaky, having all Ship'd abundance of Water, they were forc'd to put in at Jamaica, where weary with the long Voyage, and flatter'd with the Temperv, many of his Sea-Men, spent with sicknels, after their Landing, died. To these his sufferings from Wind and Weather, and his Enemies abroad, a greater and intellifent mischief happen'd: Francisco Pocoga, one of his chief Commanders, absolutely rebell'd, and deferting him, with another Party of his Sea-Men went into Hispaniola: which the Islanders observing, resolv'd to famish him, keeping from him both Water and all other Provisions; which had not Columbus flay'd off by a handsom Invention, they had compleated their Delign, which was this: He told them that he was the offspring of the Moon, and if they refus'd to supply his want, the Moon, in vindication of her Son, would famish them, by spoiling what e'er they had plant'd or Sow'd, and that this would prove true they should know by a sign that on such a Night, the rising in her full glory, should first look red, and afterwards by degrees lose a great part of her light; which indeed so happen'd, being Eclips'd, as he could well prognosticate; and after that, they being ignorant of the cause, supple'd him with all Necessities.
But Porto, not able to endure the Sea with his small Boats, resolv'd to surprize one of the Ships that lay before Jamaica; but Columbus so much prevented him, that meeting him in his return, after a hot dispute made him his Prisoner. But thus ended not his misfortunes; for the Vessels which he sought in soon after sunk, and no ship to be found in Jamaica to transport him thence. Last, he agreed with some Indian Fishermen, to carry Didaco Mendoza to St. Dominga, that there he might hire two Vessels to carry him back to Spain: which Design taking effect, he arrived there in safety: where after he had refresh'd himselt at the Spanifh Court, after his so long and unfortunate a Voyage he fell sick, and died on the eighth of May 1506.

Mean while, the Affairs of Hispaniola grew more out of order: for Bombadilla joining with Ximenes, resolv'd to hoard up a huge Treasure of Gold, though with the infinite oppression of the Natives: of which King Ferdinand having intelligence, sent Nicholas Olanda thither with thirty Sail; who being nominated Vice-Roy, anchor'd in forty days before Hispaniola. No sooner arriv'd, but Bombadilla and Ximenes fled, leaving their vast Treasure; amounting to ten hundred thousand Ducats; which guarded with four hundred Spaniards in twenty four Ships was sent to Spain: but so it hapned, that they were all swallowed up in the main Ocean, none knowing to this day in what Latitude they were lost.

Sect. VI.

Pietro Alfonso Nigo his Voyage.

Pietro Nigo, encourag'd by some of those that had been with Columbus at the Illes of Pearl, Rigg'd out a Ship at his own charge, with special order in his Commission, that he should not touch on any Coast within fifty Leagues of any Place Columbus had formerly discover'd. But he little observ'd his Orders; and what he was commanded, for Sailing into the Haven Curiana, he barter'd Shells; Needles, Glafs, and such like Trifles, for abundance of Pearls, which the Indians brought aboard, for he himself having but thirty Men, durst not venture afloat. Twenty days this bartering Trade continued, Orient Pearls for Toys; but finding at last, that they were a civil and hospitable People; he Landed, where they entertain'd him in Hovels built of Wood, and cover'd with Palm-Leaves; before their Doors lay great Hills of Oyster-shells, the Fifth being eaten, and the Pearls us'd for an ornament; Conies, Hares, Pheasants, Pigeons, Geefe, Ducks, Deer, and wild Swine; are their usual Food; and their Bread is made of the Roots of Trees. Moreover, Curiana abounds with thick and shady Woods, which refresh in the night with the cates and roarings of wild Beasts: but though they are terrible fierce and voracious, yet the Natives bravely venture in amongst the thickets of them, arm'd only with Bowes and Arrows. The Inhabitants are of Complexion tawny, their Hair long and curl'd; their Teeth they keep white with an Herb, which they continually hold between their Lips. The Women perform their business of Husbandry, Ploughing and Sowing. The Men are Soldiers, following the business of War: but in Peace their Exercises are Hunting and Dancing. They keep annual Fairs, where from all Parts of the Countrey they bring their Commodities to buy and barter. They have their Gold from Canchieta, six days Sail Westward from Curiana.

Thither
Thither Nengo next directed his course, and came to an Anchor there on the first of October, Anno 1500. The Inhabitants entered aboard without the least shinses, or fear of danger, and brought with them to barter, Gold, Goods, Cats, Parrots, and Cotton.

These People, though so civil, are extremly jealous of their Wives: for when a Spaniard made address to one of them, and coming something close, her Husband kept in suddenly between, and seem'd to forbid the Banns. But coasting onward along the Shore from thence to another isle, he found Natives far more wild and savage: for two thousand in a Body well Arm'd, stood ready to intercept their Landing; wherefore he thought it his safest course to Tack about, and return to Curiana whence he came.

In his Way not far from thence, he fell amongst eighteen of the Cannibals Boats, which according to their custom had been a Man-stealing, and now were so hardy, that setting upon the Spanish Ship, they suddenly clapt him aboard with their Canoes on all sides; but being beaten back by the terror of their Guns, they soon retract'd: yet the Spaniards took one of the Boats with two Men, all the rest faving themselves by swimming. One of the two Men lay bound Hand and Foot, who told them, that he was to have been kill'd the next day and eaten, as he saw his Companions, with whole Flesh they banquetting kept a jovial Feast. Nengo unbinding the Prifoner, gave him leave to do what he pleas'd with the taken Cannibal, who falling upon him, cudgel'd and whipp'd him to death.

Then Nengo in his Way to Curiana touch'd upon the Coast of Paris, where he found a strange kind of Salt, which the Sea in tempestuous Weather casts on the Shore, which afterwards hardens by the Sun. This Salt must be taken up before any Rain fall, else it melts and leaks away into the Ground; yet sometimes grows so hard as a Stone, insomuch that they make Pots and other Vessels of it, which the Parisians barter for foreign Commodities.

Nengo not making here any stay, return'd a second time to Curiana, where he spent twenty days in plesant Paftimes, being Lodg'd in a Noble-man's Houfe, at whose Door was fix'd a Cannibals Head, as a Trophy of his Victory. He saw there also the dead Bodies of divers eminent Perions set drying at a Fire, fo harden'd to be set amongst their Idols.

At length Nengo set Sail homewards, and carried with him an invaluable Treasure in Pearls to Spain: but by the way fell out with his Sea-men, because he kept moft of the Purchase to himself, and would not give them their shares, nay more than that, kept back the fifth part from the King; whereupon being complain'd of by Ferdinando de Vega, Governor of Galicia, he was put in Prifon, and at last sent to the Court, where the Pearls were declared free Prize, because Nengo had bartered for them at Curiana, contrary to the Kings Orders, not to touch at any Coaft, within fifty Leagues of what Columbus had discov'd. But since he had no way regarded thefe Commands to preserve that Pearl-Trade, King Ferdinand sent Governors to Curiana, who in his Name should look after, and employ Men for the catching the Pearl-Oysters. Thence, accompanied with a considerable number of Soldiers, besides fix Monks, forc'd the Inhabitants to furnish them with abundance of Pearl, which oppression grew to such a heighth, that one Morning a great Party of them conspiring together, fell suddenly upon them, most of them being massacred: after they had a while insultingly triumphed over the dead Bodies, and finish'd, as they thought, their good work (rafting on their Flesh at a joyful Banquet)
Banquet) those few that escap’d Sail’d to the Island Dominie, the Governor of which Didacus Columbus, Son to the famous Christoper, being incens’d immediately sent Captain Ocampo with three hundred Men to Curiana; where in his first fury, without distinction of Sex or Age, he slew all he met with. But because they themselves could not follow the rich Oyster-catching, he spair’d some for that purpose, whom he commanded to build twenty five little Houses, or Hovels, on the Shore, which he call’d New Toledo. After this they went on afresh in their Pearl-fishing.

**Sect. V.**

*The Voyage of Vincent Agnes Pinzon.*

He first of December, Anno 1499. Vincent Pinzon set Sail with four Vessels out of the Haven Palos: he had been Commander of a Ship under Columbus in his first Expedition, by which means he got great experience in Navigation. When he came a little beyond the Hebrides, he was surpris’d by a great Storm, which in three days drove him before a plain Coast; where Landing, he found nothing but the Footsteps of Men; and in the night he saw great Fires, such as are generally made in Camps; about day-break twenty Spaniards march’d thither, whom thirty two Men, arm’d with Bowes and Arrows, made ready to encounter; but as they approached, the Spaniards presented them Peace, but they refused all Composition; yet having faced one another a while, they retreated without fighting.

After this Pinzon discover’d a wide, but Shallow River; where Landing, on a Hill he met a great company of Americans: He, to invite them to Trade, threw them a Shell; in return for which they cast him a lump of Gold; which when the Spaniard went to take up they all fell upon him; and indeed he could not have defended himself long, had not some of his Company quickly come...
come in to his speedy rescue, which occasion'd a bloody Conflict, wherein several Spaniards were wounded, eight kill'd, and one of their small Boats sunk; for the Americans fought so valiantly, that they pursu'd the Spanish Ships into the Sea. Pinzon being at last freed of these Affairants, got into a fresh-water Sea, 'caus'd by the confluence of many Rivers falling in there: from hence he got sight of the Parian Coast, and with admiration beheld a Tree which sixteen Men could not compass: Between these Trees he saw as strange a Monster, the foremost part resembling a Fox, the hinder a Monkey, the Feet were like a Man's, with Ears like an Owl; under whose Belly hung a great Bag, in which it carry'd the Young, which they drop not, nor forfake till they can feed themselves. Pinzon caught one of them with three Young, which died in the Voyage, but the Dam he presented alive in Granada to the King.

This Captain having Sail'd six hundred Leagues along the Parian Coast, in a great Tempest two of his Carvils in his view were overflit, their Kears turn'd upward; the third driven from her Anchor, and the fourth so shaken, and full of Leaks, that ready to sink they ran her'ashore to save their lives; and though he escap'd himself the danger of drowning, then being 'ashore, yet he was no ways freed from far greater inconveniences; for he saw nothing but death either for want of Provisions, or barbarousnes of the Inhabitants: whereupon they reliev'd to free themselves of their miseries by self-slaughter, killing one another; but some better advis'd to spend their Lives like Christians upon the unbelieving Salvages: Whilst they were in this deprecate condition, the Storm ceas'd, and Providence preserv'd their safety, the Ship driving in before the Wind; at which every one taking fresh courage, they mended the two flatter'd Ships as well as they could; wherein venturing to Sea, and setting Sail, they came on the last of September, Auro 1500, into the Spanish Haven Palos.
AMERICA.

SECT. V.

The Expedition of Americus Vespucius.

Americus Vespucius, Commanded four Ships, fitted out at King Ferdinand’s Charge, set Sail the twentieth of May, Anno 1497. and refreshing at the Canaries, from thence he steer’d to Paria; where he so much gain’d upon the Inhabitants, that for Pins, Bells, Looking-glasses, and other Trifles, they daily brought aboard in Barter great store of Gold, the best of Merchandize.

These People, both Men and Women go stark naked, not so much as covering their pudenda; their Complexion swarth; they have off all their Hair, only some Women leave a Tuft on their Heads. From their Faces, being broad and flat, one may judge them to be deriv’d from Tartary; they much exceed the Europeans in Running and Swimming, inmonch that the Women oftentimes without any Boats, or floating pieces of Timber, venture two or three Leagues into the Sea; they have so great skill in Shooting, that they exceed almost all other Nations, having Arrows headed with sharp Fihbones; they also use Lances and Clubs. The Women follow the Men in the Wars, and serve in stead of Horses to carry Ammunition and other Necessaries; to which Labor they are so us’d, that they will bear on their Shoulers forty, nay fifty Leagues together, such Luggage, as three Spaniards are scarce able to lift from the Ground. They acknowledge no Commander or Superior either in Wars or Government; they keep up old Feuds, fighting with an inveterate hatred against their Neighbors, upon antient scores and revenges, still kept in memory of their Relations slain in former Battles; and also still creating fresh animosities upon their Losses in later Engagements. Their Language is smooth and pleasing, being spoken with a kind of lisping, and absolutely different from the neighboring Nations. When they eat they sit upon the Ground, and sleeping lie in Hammocks, each end whereof being fastned to a Post; underneath they kindle a Fire; over them they hang Fisli-nets and Hooks, Fisli-baskets and Calabashes. When they have occasion to eafe Nature by evacuation, they retire into some private Place; but the Women think it no immodesty to make Water, even in the presence of strange Men. They observe not single Matrimony; for every Man takes as many Women as he pleases, under bonds of Wedlock such and so fleight, that he turns them off at his pleasure: and Women take the same liberty in cattheering their Husbands when not pleasing them. They bring forth Children with little or no pain, and wash them in a River so soon as born; which done they return to their usual work and buffins. When they are incens’d against their Husbands, they revenge themselves by poysoning their Children. Their Housés are built in the fashion of a Houfe-clock, with a Roof rais’d from the Wall upon four Pillars like the Bell, and cover’d with Palm-Leaves; some of which are fo big, that they afford room for fix hundred Men: every seventh or eighth year they remove, because (as they say) the Air is oftentimes infected by Mens Breaths, by their long continuance in one place. Their Riches confift in Feathers of divers colours, Strings of Fisli-bones intermingled with green and white Beads, with which they adorn their Heads, Arms, Legs, Ears, and Cheeks: Gold and Pearls they make little account of; and as to Trade and Commerce with
Chap. III. A M E R I C A.

with other People, they know not what belongs to it. Their greatest Friend-
ship consists in prostituting their Daughters or Wives to one another. Their
Dead they bury in moist Grounds, and put with them both Meat and Drink
into the Graves: When any Person grows very weak by lingering Sicknefs,
they carry the Diseafed into a neighboring Wood, where they lay him in a Silk
Hammock, tied between two Trees; then dancing the whole day about him,
at night they fet Bread and Water enough by him to last four days, and then
departing look no more after him, who thus neglected seldom escape: but if so
it happen that one recover, all his Relations for the future honour him as a
god. When any one falls into a Fever, his Friends immediately bathe him in a
cold Water, and afterwards fet him before a great Fire, then drive him before
them till he falls down almost breathless, and at last put him to Bed. They
neither let blood in the Arms nor Feet, but in their Sides and Calves of their
Legs. Sometimes they fast four days together, which they suppose a great
means to preserve their Health. Their Bread consists of a fort of Fruit call’d
Jucba, Chambi, or Iguana. Lastly, no Lyon devours his Prey with more voraci-
ous eagerness, than they their taken Enemies.

Vefputius being fully inform’d concerning the Situation of Paris, weighed
Anchor, and on the fifth day after entred a convenient Harbor, where going
ashore, he found twenty Houfes built in the middle of a Lake on great Poles;
every Houfe had a Draw-bridge, over which they past’d from one to the other.
Sofoon as the Inhabitants fet eye on the Spaniards, they immediately drew up
their Bridges: yet some of them in twelve little Canoes came towards the Spa-
nish Ships, but amaz’d to fee their Looms fo big, durf’t nor, though hal’d with
signs, to come aboard, but halted away to a high Mountain; yet seem’d to sig-
ifie that they would return, as indeed they did, bringing sixteen Maids along
with them, of which they put four into a Spanish Boat, themselves in the in-
terim rowing between the Ships from one to another, shewing all tokens of
friendship, when on a sudden a Company of old Women came running to the
Shore, and tearing the Hair from their Heads, made a terrible noise and exclama-
tion, expressing the greateft forrow they could possibly: whereupon the four
Indian Maids suddenly leap’d over-board, and the Men shot abundance of
Arrows out of their Boats at the Ships; nay, some of them swimming under
Water, endeavor’d to sink the Cock-boats which were made fast behind their
Ships. Upon this sudden Onset the Spaniards making use of their Guns, quick-
ly leff’d the number of the Affiliants, insomuch that they fled to the Shore;
yet five of them being overtaken, were carry’d Prisoners aboard.

Vefputius observing thefe their midstemanding Carriages, judg’d it no way
convenient to stay any longer among fuch barbarous and deceitful Salvages:
but having weighed Anchor, and sail’d eighty Leagues along the Coaft, he
ran into another convenient Haven, whose Shore swarm’d with People, which
on a sudden running away, hid themselves in a neighboring Wood.

Here the Spaniards Landing were amazed, when in their Huts they saw
Snakes and Serpents roaling before a Fire, whereof one had Wings, and anoth-
er whose Mouth was tied together with a Rope, stared with open eyes in a
frightful manner.

Here they left several Triftles to entice the fled Natives to correpond with
them. And this their Design prov’d fuccefsful; for the next day the Amerifiins
came aboard without the leaft fear, and offer’d to shew their hofpitable kind-
ness to the Spaniards, if they pleas’d to travel three days Journey with them up

A view of a Village built on Poles.

Strange Fight.

Serials Brantlyy prepar’d for Food.
into the Countrey, telling them, they had onely rais'd those few Huts by the Sea-side for a small time whilst they first'd in those Parts.

About twenty of the Spaniards well Arm'd refolv'd to undertake the Journ'y; and travelling over Hills, Dales, and Rivers, they came at last into a Village consisting of nine of the forementioned Houses, but mightily peopled, where they were in a wonderful manner received by their glad welcomes, by Dancing, Singing, Hunting, and other joyful Acclamations, presenting their Wives and Daughters, as the chiefest part of their hospitality, to cares the Strangers at their pleasure. The news was no sooner spread, but the adjacent Villages came in through to gaze upon, and salute the Strangers, inviting them also to their Towns. The Spaniards taking it in good part, spent nine days among them, highly treated with all manner of jollities, but especially at their choice with the varieties of Venus: from thence then returning to their Fleet, accompanied with thousands of the Natives, every one carrying Presents to the Admiral Vesputius, of whom as many as they could at once receive, they entertaining aboard, then dismiss'd them, and admitted others; but the Guns going off, they suddenly leap'd from the Decks, and div'd like Ducks under Water: But afterwards being inform'd, that such thunder-claps were sent them from Heaven to destroy their Enemies, they were somewhat better satisfy'd, and call'd the Spaniards, Charabii, that is, Wise Men.

This Island lying in the Mexican Bay, in twenty Degrees of Northern Latitude, Vesputius left on his Starboard, and Sail'd along a Meandering Coast (which he always kept in sight) eight hundred and sixty Leagues, and as last entered a Haven, the like whereof he had not seen before. Here he spent a Month in repairing his Ships, to which the Inhabitants freely gave their assistance, and among other things claim'd, that a salvadge People came yearly thither from an Island about a hundred Leagues distant, who fell upon them with horrible rage, and whomsoever they took they eat, but first inflicted all manner of tortures upon them, sparing none, but together murthering aged People and sucking Infants; wherefore they crav'd assistance to be reveng'd, which if the Spaniards would grant, they would follow the Fleet with their Boats. Vesputius promis'd his aid to destroy such a blood-thirsty People; and to assure them that he would perform his Word, he order'd seven of them to go in Canoes before and shew them the Way. On the seventh day they came to an Anchor before the Island Hy, where the Shore was guarded with naked Men, whose Bodies being strong and brawny, were painted, and their Arms, Legs, and Head, adorn'd with divers colour'd Plumes, having not only offensive Weapons, as Bowes, Arrows, and Launces, but also defensive, huge Targets, and Square Shields. So soon as they judg'd the approaching Spaniards to be within reach, they shot a great flight of Arrows at them; but Vesputius lying close along the Shore with his Ships, fire'd upon them with Chain-shot, which did great execution: yet notwithstanding about forty Spaniards leaping a-shore out of their Boats, found themselves in no small danger; for the Cannibals upon the found of Horns flocking together, so press'd upon them that they were forc'd to lay aside their Guns, and fall to Blows, and had not timely assistance come to them, they had undoubtedly been all slain: two hours the Victory was doubtful on whose side it would fall; yet at last the Cannibals quitting the Field, left the Spaniards Victors, who the next day purf'd their gotten Victory with such success, that they drove their Enemies before them, burnt their Villages and Boats, and carry'd two hundred and two and twenty
of them Prisoners to Spain, where they safely arriv'd the 15. of November, Anno 1498.

This good success so encourag'd Vespuccius, that having flay'd scarce seven Moneths afoare, he obtaining the Command over six Ships, with which he fet Sail from Cadiz; and touching upon the Canaries, Scest from thence Southerly; and having Sail'd five hundred Leagues, he discover'd a Countrey overflow'd and made Marishly by great Rivers, and abounding with Trees, but far no sign of any Inhabitants; yet not long after, coming before an Iland, he took a Boat with two Prisoners, newly guilt, and feit as a Present to feaft the Cannibals, which refused to Treat on any other account whatfoever; wherefore he Sail'd eighty Leagues forward along the Shore of an unknown Iland, where he Barter'd for some Gold, and got five hundred Pearls for one single Shell; thefe Pearls, the Inhabitants said were not found there, but taken from their Neighbouring Enemies, which liv'd Weftward, and had abundance of them.

Nothing worthy of remark happen'd in this Voyage, only the strange conftitutions of a wild People, living on a barren Ile, deserve to be mention'd.

About their Necks hung two hollow Vessels, the one full of white flamp'd Wortts, and Herbs; and the other, full of Grafs, which they greedily cram'd into their Mouths, feeding like Cattel; then a Stick wetted with Spittle, they put into the bruis'd Herbs, taking upon the end of it, as upon the point of a Knife, some of the bruis'd to their Mouths, which (as if chawing the Cud) turning therein, then taking out again, and flowing more of the same Herbs out of the Vessel upon it, swallow'd it down. No fresh Water was to be had amongst them, but what they gather'd from the Dew in great Leaves: Neither had they any Houses, but dwelt under great Trees, and fed on dry'd Fift.

The next remark in this Voyage, was the discovery of an Iland not far from the former, where he found the Footsteps of a Gigantick People, upon which nine Spaniards went a League to search the Countrey, where they saw five great Huts, standing in a spacious Valley, and in them two old, and three young Women, each of them being twice as tall as an ordinary Man: The old ones invited the Spaniards to eat, who when they were far down, consulting how they might take and carry one of these Giantesses to Spain, there to fhou her for Money, thirty six Giants came in to them, (never did the Sun shine on a more terrible People) which so amaz'd the Spaniards, that their Hair seem'd to fland an end at the fear thereof: Every Giant was arm'd with a Bow and Arrows, and a Club: They wondering at the nine Strangers, flood talking very earnestly one to another, which gave the Spaniards time to think of making their escape: some judg'd it convenient to discharge their Guns upon them, and in the Smoke to run away; others thought, that it would be better to take a milder course, which they all agreed on; and taking their leave, went out of the Hut, but were follow'd by the Giants, who kept a Stones cast behind them, and went faster or flower, as the Spaniards slacken'd or mended their pace, who at last getting to the Shore, and from thence into their Boats, they suddenly put off; but the Giants then pursu'd them with eager speed, all of them leaping into the Water, and Swimming, shot abundance of Arrows after them; but frighted by the Thunder of two great Guns that were discharged from the Ships, return'd afoare, and fled into the neighboring Hills.
Veſputius at laſt began to conlider of returning home; his Provisions beginning to growſcare; and his Sea-men faint, having contiued in the Equinoctial Heat a whole year; wherefore he directed his course towards Spain, in his Voyage, driving along the Coaſt an advantageous Trade; by bartering Shells and Glafs for Pearls. The Inhabitants prefented him with Oylters, of which some incloſd one hundred and thirty Pearls, when they attain to their full growth; they fall out of the Shells themselves, but those that stick, decay. So upon the tenth of November, the Fleet came safe to an Anchor before Cadiz: After which, Veſputius retired to Sevil; with intent to settle himself there; but he had not long repos'd, when Emanuel King of Portugal lent for him to Lisbon, and gave him the Command of three Ships, to discover new Countreys; between the Canaries and Africa, they pass'd through fo many fifoes (not unlike a Bream) that in an hour's time they loaded their Boats with them; this Fifth hath a round thin Scale, ſharpe Teeth, Stones in their Brains or Foreheads, a ſharpe pointed Heart, a Bladder full of Wind, red Tail and Fins, feeds on Sea Weeds, Gurnets and Oylters, and is of a delicious Taffe.

From thence, five degrees Southward of the Equinoct, he found a naked People on the top of a high Rock, that beckon'd the Spaniards to come towards them; upon which, two of them resolv'd to venture thither, having order not to ſtay at the moſt above five days: The first encounter they had was of some Women, who offer'd their bodies to prostitution; but a Youth, as if aſtrighted with ſome sudden danger, came running amongst them, whom, whilst they ſtand gazings upon, and wondering at, an old Woman with a great Club, running down the Hill overtook, and ſtopp'd him down dead upon the ground; which done, the Women that were making Court to the Spaniards, took him by the Heels, and dragg'd up the Hill, where ſoon after they ſaw him chop'd in pieces, bro'y'd, and eaten: They also made Signs to the Spaniards, that they would devour them also in the ſame manner. The Shore was crept with Men, which ſhow'd upon them severall flights of Arrows; wherefore they thought it best to Weigh Anchor, so taking Aboard their two Men, and having Sail'd three Leagues, they got sight of the Coaſt of Brazil, along which he ſaw out Southerly to ſey two Degrees, where three Brazilians came Aboard of their own accord, and were easily perfwaded to go with him to Portugal; but the Weather growing very bad, and the Cold intolerable, the Storms swelling the Waves into the bignefs of Mountains, Veſputius left the Coaſt des Patagones, and the Straights, afterwards call'd Magellans, behind him, burnt one of his Ships before Cape Sierra Leona, and brought two safe to Lisbon.

His fourth Expedition happen'd, May 10. Anno 1503, at which time he ſee'd directly with fix Sail to Sierra Leona, and approaching the Coaſt, could not come to an Anchor, because of the ſtrong eddyng Currents: Three Degrees beyond the Equinoct appear'd a rifing Illand, two Leagues long, and one broad, deftitute of Inhabitants; his ſmall Ship being fix hundred Tun, flipt here againſt a Rock, and nothing of her was ſaved, but the Sea-men: But Veſputius Rowing awhile with a Boar, found a convenient Haven, with abundance of ſweet Water, high Trees, Sea-Spiders, and horrible Dragons, which have a ſharpe Head, round ſharpe Eyes, and wide Mouths, Wings not unlike a Bat, a ſpeckled Breast, curled Tail, blew Back, and two Bags like a drawn Satchel Triangular, were under their Bellies: No lefs strange are the Sea-Spiders, by their hard Feet, long upper Teeth, two long Sheers or Pinchers, and double Belly; between the Head and the Belly lies a black Skin, with
which they darken the Water; when any one goes to take them in the night, they make a great shadow; they feed on Fish, the Female lays little white Eggs, not unlike ordinary Hail-stones.

Vepputius having left this desolate Isle, three hundred Leagues a Stern, enter'd a Haven, to which he gave the name of St. Abdy, where he lay'd two Months, expecting the return of those which he had sent into the Countrey; but seeing it in vain to wait any longer, he proceeded on his Journey, and Sailing in between the Abreboes, in the River Carabobo, he built a strong Fort, Garrison'd it with twenty four Men, twelve pieces of Ordnance, and Provisions for six Months; five Moneths Vepputius had spent in the building this Castle; when he return'd home with one Ship, laden with Brazil Wood, where approaching Lisbon, beyond all expectation, the Inhabitants of the City ran to Congratulate his happy return. And from this Americus Vepputius, the New World is to this day call'd America.

Sect. VII.

The Expedition of Alphonso, Fogeda, Diego Nicuesa, Ancifus, and Roderick Colmenares.

A Mericus Vepputius was scarce fitted out in Lisbon, when Fogeda set Sail with three hundred Men from Beata, the chiefest Haven of Hispaniola, to the Island Cadega, inhabited by Naked People, but of comely Personage, and withal expert and most excellent Archers: Here he found a very strange Tree, which bears a Fruit not unpleasing to the Palate, yet deadly Poison, and besides, whoever chances to sleep under their shadow, loose both their understanding and Eye-sight, and never attain to their former Senses, except they take some Opiates, as dangerous, and so by long sleep, recover.

Here Fogeda set upon a poor Village near the Sea-side, where without mercy
he put them all to the Sword, except a few Youths which were only saved, that they might inform Fageda, what was become of the slain and taken Spaniards; Who told him, that according to their Custom, they had Roasted the dead, and also their living Prisoners, and feasted on their Flesh. Here having burnt the Houses, and sifting the Ashes, Nicuesa found some Gold. But now they began to be diffres’d for Provisions; for prevention of which, Nicuesa had given order to Ancifus, Marshal in Hispaniola, that he should follow with a Ship of Victual, for the Army to Codega. But he being kept back by inconveniences, most of the Spaniards were famish’d, so that the three hundred Men which Codega brought from Hispaniola, were reduced to sixty. And he was already under-Sail to Hispaniola, when Ancifus Anchor’d in the Haven of Codegos, and sent some Men ahaore to mend his Boat, and fetch fresh Water, which while they were doing, the Natives came flocking about them: Three days they fac’d one another, uting no Hostility, when at laft a Spaniard that under-flood the Cogean Tongue, adventuring to fetch Water, he was immediately encompassed; when speaking to them, and informing them in their own Lan-
guage, That he was none of Fagedas or Nicuesas People, which not long since had committed so great slaughter, they left him, and the rather, because he told them, that Ancifus would take revenge on them, if they did any wrong to him. Thus quieted, they brought all sorts of Provisions Aboard. Mean while, Ancifus Sail’d to the Main Continents Uraba, where in the Mouth of a Haven he ran his Vessel a-ground, which was bilg’d; the Sea-men taking some Arms along with them, fav’d their lives by swimming ahaore; where, their first suffenance they found was store of Peaches and Cherries, which was a great refreshment in those hot Countrieys, but yet had undoubtedly been starv’d, but that in searching the Wood for Fruits, they found Wild-Swine, which prefav’d their lives; yet they were not free from apparent danger, having to deal with a Salvage People, into whose hands they were so unfortunately cast by Shipwreck; however Ancifus set a good face on the business, marching with a hundred Men up into the Countrey, where some of the Urabamers from an ambuscade unawares, with their Arrows wounded severall of his Men, hereupon they retreated to the Shore of the River Daria, whither also they had brought the small Boats, fav’d from the Wreck; where whilst they were in consultation how to return to Hispaniola, the Inhabitants having musterd themselves, and making a Body of five hundred Men, set upon them, who after a sharp Confliet, made them retreat, and at laft to fie, whom Ancifus pursueth, found in a Thicket of Canes or Reeds a great Treasure of Gold. Mean while, Nicuesa Sail’d to the plentiful Golden Countrey Veragna with three Ships, of which he loth two, the one Commanded by Lups de Olana, and the other by Peter Humbria Olana, which was strafand in the River Veragna, which gives name to the whole Island, but he built a new Canvil, whereas that of Lups Olana was bilg’d among the Rocks. Little better Succes had Nicuesa, whose Ship over-turning with a Tempest, he with a few of his Men made land upon Veragna, where he rang’d up and down in a miserable condition, on a barren, and in a manner deplorable Shore seventy days: All that time, finding no other Food than Wild Roots, who wandring up and down, at laft met with Olana, a little before cast away on the same Ile, whom he Secure’d, because he presum’d to usurp the Title, and be prime Commander of that Countrey. Upon which, the Spaniards being divided, some for Ancifus, some for Olana, the difference more and more encreasing, would not be reconcil’d, till the Famine over-powering, master’d both, so that not being
able to handle their Arms, the Salvages flew them at their pleasure; by this means in a short time, of seven hundred eighty five, remain'd scarce ninety; yet did not all this misery work any thing upon the ambitious humor of Pafques Nu{mez}, who rebellion against Ancisus, split that small remainder of Men, and with the help of thofe he had drawn over to his Party, made himfelf Governor of Uraba, not po{fible to be long enjoy'd without speedy supply, which soon after they receiv'd, for Colmenares Sailing from Hispaniola with Provisions, arriv'd there the 15. of October, Anno 1510. having been to{f'd twenty three days at Sea; then making into the River Ga{na, to furnish himfelf with fresh Wa{ter, he loft forty seven Men; for whil{ft they were filling their Casks, seven hundred of the Salvages came down upon them, and with their Poy{fion'd Arrows wounded and kill'd moft of them. Colmenares came in a good time to the remainder under Ancisus Command, being in danger of death for want of Provisions, and finding the factions that were among them about Superiority, he thought it fit, con{ulting with some of the chief{t of them, to find out Nu{mes, who was indeed the Governor that had the Grant from the King: This agreed, Colmenares went to {earch, and at laft lighted upon him, building a Fortref{f against the affaults of the Enemies on the Promontory. Mormor, he was glad to find him, but griev'd to fee the misery and hard{hip they endur'd, moft of his Men being kill'd, partly by the ex{c{fve Healtes, partly by Famine, and partly by the cruelty of the Natives, fo that he had only ffty remaining, and thofe many of them also {ick and weak.

Colmenares having deliver'd his Message, Nu{fes broke up his Quar{ters, and fleighting the Fort, went with him, but both himfelf and his Men were op{pos'd from Landing by Nu{mes; wherefore Nu{mes was necessitated to Steer for Hispaniola, whom, or what became of him was never known.

Nu{mes, having thus quit'd himfelf of Nu{fes, and now, more than ever, wanting Provis{on, he resolv'd to take out his own Comminion at large, and fetting up for himfelf, make no discrimination of Perfons, Spaniards, or Natives, but to make out his Fortune.

And fir{fl, he fell upon Careta King of Co{ta, whom he took Prifoner, Plun{dering him of all his Treasure and Provisions; yet this sufficed not long, for foon after, King Pon{ha invadion Careta, Nu{mes took hold of that opportunity, and pretending to affift Careta, being well recruited with his Forces, fet upon Pon{ha, who immediately fled, and left all to the {poil of his Enemies.

This News fo amaz'd Comogrus, another King, that he proffer'd Peace; whereupon Nu{mes going thither, was nobly entertain'd in his Palace, being one hundred and fifty Paces long, and eighty broad, the Floors Pav'd with Stone, and the Roofs Vaul{ted, his Cellars were flor'd with Wine, made of the Root Jucca, Ages, and Mais; the Privy-Chamber was hung round with dead bodies, Mummy'd artificial{ly with Lent Fires, and were the Corp{les of Comogus Ance{flors, and others of the Royal Blood, and neareft Relations, of whom fome dy'd at laft four hundred years before; each of these fatten'd by Cordage made of Reeds, were Habited in Cotton, richly adorn'd with Pearls and Gold. Mean while, a Hurricane happening, terrible with Thunder and Lightning, and hideous Gulls, swel'd and fo engag'd the Sea, that breaking its bounds, over-running, drowns the whole Champain, thus the hopes of a fruitful Har{vet being utterly loft, they suffer'd under a great Famine.

The Spaniards which Encamp'd near the River Daria, on Uraba, perceiving this, and knowing they had no manner of supply from Hispaniola, and having already
already Pillag’d the Neighbouring Kings, that they had nothing left. Nunez, marching thirty Leagues up the River, Plunder’d the Village, of which Dair-baiba was King, where he found an unvaluable quantity of Gold, but little or no Provision. Here were many Flitter Mice, or Bars, bigger than Turtle Doves, whose biting was mortal, unless immediately washed with Salt Water, according to the information of the Prisoners.

Now as Nunez Hraba Pillag’d towards the South, so did Colmenares, setting up also for himself, make prize of all, to the East with sixty Men, Rowing against the Stream up the River Daria, above twelve Leagues, where he found in several Villages and Hamlets, and at King Turbi’s Palace, abundance, both of Provision and Gold; from thence he March’d to the mighty Province Abennachet, which though making some resistance, at last they subdu’d.

And the neighboring King Abibeiba narrowly elcap’d the like fortune, whose Palace was built on the tops of Trees, Plaff’d, and Pleited together, Timber Beams lying athwart; necessity forcing them to choose such high Habitations, partly to avoid the inundations of Rivers, swollen above their bounds by sudden and almost affidious Showres from the Mountains; and partly to be free from the excursions of roaring Robbers; also being better able to defend themselves in these Caffles in the Air, and also fear’d by their heighth from their Shot, being above the reach of their Indian Arrows: The bodies of the Trees downwards, upon which the Houses are built, are generally twenty four Fathom thick, so that they cannot easily be cut down, nor fired; but Colmenares against thefe, as they suppos’d, impregnable Forts, having made a Gallery with several great Hurdles, set his Men to work under that safeguard, with Axes on the Tree whereon Abibeiba’s House stood, who seeing his imminent danger, wondering at this new manner of Storming, came down, promising to furnish him with Gold out of the neighboring Mountains, notwithstanding it would be with the danger of his Life; because the Cannibals generally kill those that aduentur’d to dig in the Mines: To this promise, Colmenares hearken’d, and having set him at liberty, for the performance, he in stead thereof, on the contrary, flisse’d up, and joyn’d with all the Conquer’d Kings, to destroy him and his Men: Nor were they slack to have executed their design, five thousand of them being already drawn together at the Village Tiri-chi, the appointed place of Rendezvous, and so privately carry’d, that undoubtedly it had been effected, if not happily discover’d by this accident.

Nunez, amongst his other Slavefles, had one exceeding beautiful, on which he was much Enamourd, and she likewise seem’d to bear as great an affection towards him, which the manifiest, by declaring the secret to Nunez which her Brother had imparted to her, being an intended general Masacre the night following, that so she might the better make her escape the day before; yet so much she prefer’d the safety of her Lover, before the liberty of her Native Country, that she discover’d the Plot. Nunez not sleeping on this advice, on a sudden set so fiercely upon the Conspirators, that he utterly broke their design; yet the Feuds and Contests for Superiority still continu’d amongst them, which look’d with so bad a Face to the ruine of all, that news thereof arriving in Spain, it was judg’d fit to send for Colmenares, and John Quiceno to the Court, there to render an account of all their Transactions, both going Aboard a small Vessel, were by Storm driven on the Coast of Cuba, where they were inform’d from a Prisoner, that Valdivia and zamudio, driven ashore by Shipwrack, and not able to defend themselves, were surpriz’d by the
the Natives, kill'd and eaten; that Fogeda driven up and down along the Coast, had lost most of his People by hunger, and other hardship, and himself with much ado getting to Hispaniola, dy'd as soon as Land'd of the Wound which he receiv'd by a Poylonous Arrow, near the River Dari.

But much happier was Anchieta, who soon after Fogeda coming to Cuba, found a King, who suffer'd himself to be Christi'n'd, and call'd 'Comendador'; and building a Church, Confecrated it to the Virgin Mary; in it he erect'd an Image of Clay, resembing a Woman, which he clothed in a Cotton Garment; round about were plac'd Pots with Meat and Water, according to their old Idolatrous fashion, otherwise, they believ'd their Idols would devour the Souls of the Dead, and this, though Christians, they did not forget.

Nay further, when he went to War, he carry'd the Image of the Virgin Mary with him in the Front of his Army, often saying, Ave Maria; and this was the end of that Voyage: But afterwards Anchieta complain'd against Valcus Nunnez in the Spanish Court, where he receiv'd a Sentence very prejudicial to him. Cen- menures and Quiceno had also Audience there, whereupon matters being settled, a firm Government was establish'd in Yznaga.

Sect. VIII.

Peter Arias his Expedition, and remarkable Passages of Valcus Nunnez.

Peter Arias Knight, accompany'd with his Wife, Elizabeth Boodilla; set Sail June 1514, but surpriz'd by a violent Storm, lost two Ships, and return'd to Spain, yet not long after began his Voyage afeasf, notwithstanding he had lately had such bad Success, and heard of the great hardship which Nicuets suffer'd, having not onely kept himself alive a considerable time by feeding on flesh of Dogs, and other flesh like Creatures; a great Frog being told in Virginia for a lump of Gold.

But Valcus Nunneiz inform'd of Arias arrival, the chief Governor of Yznaga, afterwars call'd New Andalusia, minding to enrich himself before he should depose him, and hearing that several Gold Mines lay Southward from Yznaga, march'd thither with a hundred and ninety Men, thorow great Rivers, Thickets, and Woods full of Wild Beasts, deep Vallies, and bro'd Rivers, not with- out many hazards and difficulties. In the Mountainous Territory Quareguan, the Inhabitants ingag'd him valiantly, with Bows, Arrows, Clubs, Wooden Swords, Pikes and Lances, but frighted with the meer report of their Muskets, like flocks of wild Fowl, dissipat'd and fled, but not so fast, but that six hundred of them fell by the hands of the Spaniards, or were worry'd by their Dogs, train'd up on purpose for the American Wars. Soon after, coming into the Palace, there fate his Brother dress'd up in Women's Apparel, whom the King kept to abuse, as if a Concubine; whereof Nunnez being inform'd, in detestation of Sodomy, set the Dogs upon him, who suddenely tore him in pieces. Amongst the slain were found several Negroes, which suffering Shipwreck had been cast on the American Shore, and maintain'd a continual War with the Quaraquanes, so that it seem'd the Blacks which were found dead amongst them were their Slaves: Yet Nunnez was forc'd to leave a considerable number of his Men here, who being half starv'd, and quite tire'd out, were not able to follow him; but with the remaining party he march'd on, and at last came to the high Mountains, from whence he saw the great South Sea, and going thither
ther, was met by King Chiapes, leading an Army of thirty thousand Men, which great Body found not long to make resistance, being terrifi'd with the Volleys of Shot, whose Report the echoing Valleys presented to their Ears, double and treble: And that which most amaz'd and disanimated them in the rout, were the Dogs, who fiercely pursu'd and seiz'd the flyers, tearing away great morsels of Flesh. After the Battel, the Conqueror propos'd Peace, which was agreed on, upon the delivery of several great Presents of Gold. After that, Chiapes the King, accompany'd with Nunez the Spanish Commander, and March'd with him over a broad River to Coquera, where at first some Forces made resistance, but were routed; whereupon, they also suddenly struck up a Peace, upon conditions, that the Prince, nam'd also Coquera, should return him a great quantity of Gold. Here he found a handsome Bay running up in crooked Reaches, above sixty Leagues, which Nunez call'd St. Michael, being sprinkled with Islands, and treacherous with hidden Rocks. There Nunez, (though diswaded by Chiapes, because he knew the South-Sea at that time being the three last Moneths of the Year, was exceeding turbulent, that no Vessel could hardly live in it, yet) ventur'd with nine Indian Boats, and eighty Men from the Shore into the Offin; where, notwithstanding the high rolling of the Waves, he got to an uninhabited Island, on which, being necessitated to stay a night, the Tide flow'd so much, according to the property of the South-Sea, that the highest Ground thereon, lay almost cover'd with Water, every one of the Spaniards having enough to do to save themselves from being wash'd away. Day approaching, discover'd a second inconvenience, for the Indian Cannons either were extremely Leaky, or else so shatter'd, that they were unfit for service; yet notwithstanding all this, they ventur'd to return, rather choosing to be devour'd in the Waves, than die of that hunger, whose misery they had sufficiently tasted, during the small time they had been out. Not long after, Nunez Conquer'd the King Tamaccus in a Field Battel, who thereupon purchase'd his Peace with great Presents of Gold and Pearl. He also shew'd the Spaniards an Island
Chap. III.  

A M E R I C A.

Iland, whose spiring tops were seen from the Main Land, which so abounded in Pearls, that in no place were either more or fairer to be found: But the King who liv'd on it was exceeding powerful.

*Pacca,* a great Oppreffer of all his Neighbours, hearing of the approach of Nuñez, fled, but temporish'd with threats, return'd with three other Princes, which were all so Deform'd, that more horrible Monsters were never seen, scarce any part about them resembling those of a Man: The Guides which Teachha had provided for the Spaniards desir'd that he might be put to Death, for the Cruelties which he had long committed; whose Request being granted, he with the other three Princes, were given as a Breakfast to the Spanish Dogs. Mean while, the Spaniards were in danger to have perish'd for want of Water; yet at last, in a Thicket of Brambles, they found a small Brook, but none of the Indians durst venture to go to it, for fear of Tygers, and other Wild Beasts; relating, That the Tygers took many people in the nights out of their Huts, if they were not careful in making fast their Doors.

John Ledesma had himself eaten part of a Tyger, which for six Moneths together, had every night feasted on Mans flesh, or Beasts, which they caught in this manner: In the Path along which he pas'd, coming out of his Den to seek for Prey, a deep Pit was digg'd, and cover'd very sleekly on the top, into which the Tyger fell; yet though taken, so fiercely withfood the Pikes, Darts, and Stones thrown at him, that every one was amaz'd to see the fury of the Beast. After that they sought for the Female, but found only two young ones without a Dam, which taking along with them, they put Iron Collars about their Necks, intending to carry them to Spain; but seeing no likelihood of breeding them up, they brought them back again, purposing to fetch them away when grown somewhat older, and accordingly coming afterwards to look for them, they found the Den empty, so that it was suppos'd they had been devour'd by their Dam.

In the Province of Boweniana, the Spaniards enrich'd themselves with Chains, and Breast-Plates of Gold, which in great plenty hung on the Walls in every House: At the River Conigrnus, they discharg'd Teachha's Guides, and made use of Coqog and Curiza, two Governors of a barren Tract of Land, full of Hills and Mountains, which they left on their right Hand, and wandred three days over a Matshee, in which they often sunk to their Knees.

In all these Travels, Victual was so scarce that they were much weaken'd by their wants; and though they took fresh courage when they got footing on King Buckebua's Jurisdiction, yet they found nothing but empty Huts; and the like,
Chap. III.

like in the Country of Chiorijas, both having a little before been pillag'd by their more powerful neighboring Enemies. But although they could not furnish Nunez with Provisions, they presented him with weighty Ingots of Gold: but this rich Metal not able to purchase the least morsele of Bread, drove them into a great Strait; and indeed they had without doubt been all famished, had not Peter Arias, another King, fed them forty days together with Lamp'd Roots. Thus refreshed, and instigated by Peter Arias, they broke by night in Tabuanama's Palace, and took him Prisoner with eighty Concubines, who fearing to be put to death, gave an incredible Treasure of Gold to purchase his Ransom.

Nunez thus enriched came at last to his People which he had left on the River Darie, where two Ships sent from Hispanola rode at an Anchor.

Whilst things were thus carry'd in America, Peter Arias Sail'd with fifteen Ships, Mann'd with fifteen hundred Men, to New Andalusia, by the Islands Martinima, Guadalupe, and Galanta; all in America: a considerable time he Sail'd through the Sea overgrown with Weeds. Afterwards anchoring in the Haven St. Martha, he receiv'd a great repulfe from the Natives, who no ways daunted at the bignefs of the Ships, waded up to their Breasts in the Sea, and shot many great flights of poisonous Arrows at the Spaniards, of whom two being wounded immediately died. Arias sending some of his Men afhore, they found many Boats lying full of Nets, made of tough Weeds, and Ropes pleated of Ruffles.

In the Haven St. Martha, being three Leagues wide, are abundance of Fish; which may be seen under Water twenty Fathom deep.

But now the Spaniards that were afhore breaking into the Houses, and taking Women and Children Prisoners, the Americans prepar'd for another Fight, which at the beginning was very fierce; but at last they were forc'd to quit the Field.

Their Houses and Furniture in them are worthy of observation: their Cielings being cover'd with Shells string on small Thred, which make a pleasing noise, when mov'd by the least breath of Wind. The Walls are hung with fine Stuffs, woven full of Imagery, as Cranes, Lyons, Tygers, and some Figures of Men; the Floors are cover'd with parti-colour'd Mats, made of Sea-Reeds, and several tough Roots; and their Carpets belte with Pearl add also a great beauty to their Rooms.

In the Valleys the Spaniards found several precious Jems, as Saphires, Jasper, Emeralds, and great pieces of Amber; and in some Huts, Baskets, and Chefs full of dry'd Locuffs, and Crabs.

Here also grows the Root Ynca, as also on several other Weft-Indian Coasts, of which they make their beft Bread, and is call'd in Hispaniola and Angola, Tocbro; by the Brasilians, Mandiboka and Mandiboka; by the Mexicans, Quauhcamotli: it grows with a thick or midling Body, according to the fruitfulness or barrenness of the Soil; the Leaves are like thofe of a Tulip, and have small Flowers and Seed, but no ways useful; the Root, not unlike Horfe-Raddith, hath a milky Juice, which swells it exceedingly; the Sprigs, which in the eighth and tenth Moneth shoot out of the Root, ferve for new Plants; and if at any time it happen, that either by a moift Seafon, or by Worms, or Pifmires, the Plant is spoil'd, then it occafions such an inconvenience amongft the Inhabitants, that half of them in that year die of Famine.

The Leaves of the Mandiboka ferve them for Sallads. Out of the Root, which
which they lay soaking five days in Water, they make Meal, which the Portuguese call Farina fresca, but the Americans, Pipaba. Moreover, Mandiboka serves them to make Bread, which they bake over the Fire; and mix'd with Water, Pepper, and the Flour Nhambi, makes an excellent Pudding, by them call'd Mingade Carina, no less pleasing to the taste than wholesome Food: and with Orange-Flour, Water, and Sugar, it makes that excellent Julep Tipoca. The Powder of Mandiboka put into a Wound, cures very speedily. It is very pleasant to see the Americans eat this Bread; for they toss it by handfuls at a pretty distance from their Mouthes without letting fall the least Crumb. Lastly, it requires great art and trouble to make the Mandiboka fit for Bread: first they must peel off the Shell, then put into a Mill turn'd by two Indians it falls, being Ground, into a square Trough. The Juice proceeding from it is mortal, if eaten when raw, but wholesome if boil'd: the Meal they put in a Press, and when all the moisture is drawn from it, they throw it in an Oven to dry. But the wild Mandiboka, by those that live on the Sea-shore call'd Cuacu Mandhiba, and up in the Countriey, Cuacuacuacuacu, differs both in shape and goodness from the first.

But to return to our matter: Arias coming to an Anchor in the River Daria, was cheerfully receiv'd by Numecz, his first Business which he undertook was the building of three Forts, to secure the Passages to the South Sea; to which purpose Joannes Aiora received the Command over four hundred Workmen. Moreover, Arias took great dislike in the Place call'd Maria Antiqua, which the Spaniards were forc'd by necessity first to Plant in: it lay in a deep Valley between high Mountains, so that it not onely wanted the benefit of the rising and setting of the Sun, but when in or near the Meridian, it shin'd down upon them, and scorched all their Plants, and the tepid Morally Grounds about the same infected the Air, and the Water which they took up to wash their Houses, immediately bred Frogs, the River Daria overflow'd the Grounds with his muddy Water three Leagues distance from the Sea; the Passage thither...
also was very troublesome, because of the uneven Ways; and besides, the Tigers and Lyons devour'd many People and Cattel.

The first Night that Arians lay in Maria Antiqua, the House wherein his Chirurgeon Lodged was fir'd with Lightning, who running out with his Wife, being both scorched by the Flames, saw a very great Crocodile, which snatching up his Dog ran away with him towards the River.

The neighboring Territory Coiba produced Trees, whose Timber us'd for Shipping never breeds Worms, because of its acerbity; whereas on the contrary, all other Vessels in that Country are very subject to that inconvenience. Here also grow those famous Plague-Trees, whose very Leaves, if but falling upon one, are like Gods Arrows, mortal, and immediately kill, unless the Place whereon they light be straightway anointed with falling Spittle: and the Cai- benfers say, that they know another poyonous Wood, which they use to destroy their Enemies withall.

Whilst Arians was consulting about the beforemention'd Affairs, he sent several Commanders to divers Places, to take a survey, and give him an account of their Return of all their Discoveries. Amongst others Capher Moralis was order'd to march towards the South Sea, to confirm the Peace which Nunnez had begun with the Kings Chiasper and Tamacou; and chiefly to go to the Pearl-Island with sixty Men, which Nunnez was forc'd to leave, being strefs'd by tempestuous Weather. Chiasper and Tamacou were according to their promise, to prepare an Army ready for his assistance against his coming; which indeed they perform'd, so that they wanted nothing but Vessels, for the biggest of theirs could not carry above three or four Men; yet they undertaking their Enterprise, Landed seventy Men on the Island, upon which the Inhabitants under their Kings Conduct ran to meet the new Landed Forces, and crying out aloud Guazzavara, Guazzavara, they ran in amongst the Mulqueteers with their woodden Swords; but the report of the Guns, mix'd with Fire, Smoak, and Bullets, soon amaz'd them: the King flying, thought by alarm to raise all the Ilanders; but they being inform'd, that no People whatsoever could withstand the fire-spitting People, made Articles of agreement with Moralis, and Condition'd to deliver a hundred pound weight of the choicest Pearls to the use of the King of Coifique; and as a testimony of his Friendhip he was Christen'd Peter Arians, from the Governor's Name of New Andalufia.

How great the Treasure was which Moralis brought from the Pearl Island may appear by one of the Pearls, for which Pope Leo the tenth gave forty, four thousand Ducats to a Venetian Merchant.

Amongst the Commanders which were sent out by Arians, was also Johannes Solfsius, who Sailing fix hundred Leagues Southerly, along the Coast of the Caribibes, beyond Cape St. Augustine, he found the Inhabitants of Pernambuck to be no less cruel than subtle; for being invited ashore, he with some of his Men Row'd thither, where no sooner Landing, but were all kill'd and eaten in the fight of the other Sea-men aboard; at which being amaz'd they weighed Anchor, and Sail'd away, Freighted only with Bramble Wood, to Cadiz.

Afo in an unhappy hour did Johannes Pontus put some of his Laundresses ashore on the Island Guadalupae, to wash some Linnen for him; for the Ilanders coming on a sudden out of the Woods surpriz'd them, and forthwith killing without mercy, cut them in pieces, and carbonadoing, eat their broil'd Flesh hot from the Coals, while Confinus Budaocin Sail'd with eighty Men Wetterly,
Chap. III.

AMERICA.

Westerly, and having gone sixty Leagues he went ashore, and spent some days in vain, to Court the Americans to a friendly correspondence; which whilst he was doing, he was recruited with fifty Men from Daria, Commanded by Lodowick Mercado: so both agreed together to travel over the Mountains to the South Sea.

The Governor, whose Jurisdictions abound in Gold, flying with most part of his Treasure, was never heard of; only they took some of his Slaves, whose Faces were strangely Carv'd with sharp Filth-bones, the Wounds fill'd with red and black Powder, which so discoulour'd the Flesh that it could never be got out. After that they travell'd through the Wilderness five days together, being only met by some Indians carrying Maiz, who signifi'd to them, that King Periguette live'd along the Sea-shore, and up into the Country the blind Totonoga; of both which they got an unvaluable Treasure of Gold. Amongst other Pieces of that rich Metal was one which weighed two pound.

Taracura rais'd in this Expedition eighteen thousand weight of Gold: and little less did they take out of the Territories belonging to the Princess Panama, Tabor, Chera, and Scoria: The Prisoners serv'd them in stead of Horses, they not being able to carry all the Gold themselves, the meanest Soldier having above three thousand Pounds Sterling for his share.

They were now got to Panama's Kingdom, not without leaving sad remarks of their avarice and cruelties. When Panama surrounding this Party thus loaden with Gold, Charg'd so fiercely, that at the first Assault seventy of them were slain; tho' few that escap'd brought the tidings of their sad misfortune to Peter Arias. Amongst those that escaping return'd, was Franciscus Delapenne, whose observations concerning catching Parrots and wild Fowl, we will briefly relate, the digression being but short.

The Indian where the Parrots are most frequent climbs into a Tree, and chattering like them, with his Voice imitating their Notes, allureth his fellow-prater to draw near, and suffer him to take them in his Hands. But more belongs to the taking of wild Fowl, as Geese, Ducks, Swans, and the like: From the bottom of their standing Pools and Lakes in that Countrey grow Weeds, which spreading upon the Water ripen, and rotting breed Water-Flies, Spiders, and Frogs, upon which the Fowls feed. Near these Pools in the Gardens grow Cabbages as high as Trees, which often dropping into the Water serve the Birds both for Nests and Food: but the skilful Fowler finds it his best way to take one of these Cabbages, and making it hollow in the middle, claps it on his Head like a Helmet, then going into the Water up to his Chin, and passing softly along in such manner, that nothing is seen but the floating Cabbage, and coming near the Birds, he takes them one after another by the Legs, and puts them into a Bag ty'd about his middle for that purpose.

But what is more worthy observation is the American Bird Toucan Xochitena-chare, having a flethy Bill, like a Mouth full of Teeth, which continually opens and shuts to draw Breath, having no Nostrils; the Back, Neck, and Wings, are black, the Breast yellow like Gold, the Belly and end of the Tail of a Vermillion colour.

This Bird Toucan feeds for the most part on Pepper, which carries not long with them, but muted almost as soon as swallowed: which Pepper thus evacuated the Natives value above their common, because the unpleasing sharp acidity, or biting quality is thereby much mitigated.

But to return: Whilst the Expeditions under the Command of Peter Arias had such bad success, Arias himself and Vafebus Nunnez hapned to claff: Nau-

nes, who since his discovery of the South Sea was held in some repute at the Spanish Court, had built four Ships on the Shore of the same Ocean, to make farther inspections along the Coasts thereof: but being commanded to come to Arias the Governor, he was committed to Prison, and accused of high Treason, as if he had intentions to settle himself in Peru, and absolutely to have left Darien: all which though he disown'd, and utterly deny'd with great protestations when brought to a Trial, and no witness to affirm the contrary, yet was by Arias's Special Order Beheaded.

Not long after which Lupus Sofia, Governor of the Canary Islands, was sent to succeed Arias in New Andalusia.

S E C T. IX.

The Expeditions of Francisco Fernandez, Lupus Caizedus, Christophero Morantes, Bernardo Igniguez, and Juan Grisalva.

Fernandez, Caizedus, and Morantes, ancient Planters in Cuba, obtain'd a Licence from the Governor Diego Velasques, to Rig out three Ships with a hundred and ten Men to discover new Lands: Velasques thought fit to add one more to their number upon the Kings account, which Trust he committed to Igniguez: all of them consulted with the experienced Navigator Antonio Alaminos.

Six days the Fleet had been at Sea, when they discover'd Land, which by a mislike was call'd Jucatan, because the Inhabitants being ask'd what was the Name of the Coast, answer'd Jucatan; which, as the Spaniards were afterwards inform'd, signifying, We understand you not.

Upon the Shore they found a City, whose Stone Buildings, with stately Fronts and high Turrets, shew'd most magnificently. Fernandez call'd this City for its wonderful bigness, Cairo, from the Egyptian Metropolis, famous through the World.

The Spaniards coming to Land were courteously receiv'd, and conducted into the City: the neatness of whole Market-places, and exactness of their Streets, they beheld with admiration; as also the costly Stuff Garments both of Men and Women: but their wonder increas'd when they beheld very artificial Croffes, concerning which upon inquiry they related, That a Man more glorious than the Sun, being bulif in erecting the Croffes, died. But these People, though so courteous and civil at first, seem'd in few days to be weary of their company; which the Spaniards observing founded a Retreat, and Sailing Wefterly, proceeded on their intended Defign, and soon after anchor'd before Canchebium, the King of which conducted Fernandez and Morantes, with some others, into the City, consisting of three thousand Houses. In his Palace they were entertain'd with all manner of Fowl roasted: After which refreshment they survey'd the City; in which, among other curious Buildings, was a high, but square Theatre of Marble, on which flowed the Image of a Man, on all corners assaulted by four wild Beasts, which were of a no lefs stranger than horrible Shape. Not far from this Image they saw a Serpent fashioned up of Chalk and little Stones, whose coyl'd up Tail was forty seven Foot long, and of a proportionable thickness. This Serpent, sprinkled with Mens Blood yet warm, seem'd to prey upon a Marble Lyon: both these were inclos'd with a Stone Rail, within which Malefactors were daily executed. Bloody Bows and Arrows broke in small pieces lay between the Bones and dead Bodies. Igniguez call'd
call'd the King Lazarus, because he discover'd his Country on St. Lazarus's Day.

Making no long stay here, they return'd to their Ship, and weighing Anchor Sail'd fifty Leagues more Westerly, the Fleet got sight of Moscobo, in the Territory Avaran, whose King assaulted the Spaniards with so much fury, that two and twenty of them were slain, and scarce one escap'd which was not wounded: wherefore they return'd, with bad success, to Cuba. Yet Velasques no ways discourag'd thereat, not long after fitted out four Vessels, Manning them with three hundred Men under the Command of Juan Grifalva and Alaminos; who having Sail'd seventy Leagues, discover'd the fruitful Island Cofumella; along whose Shore stood fair Stone Edifices, intermix'd with Temples, whose Steeples appear'd above the Houses. Grifalva being led up into one of these Steeples by a Priest, saw at a distance off at Sea the Territory Jucatan: and in the Place where they were, there were spacious Halls, full of Marble and Stone Images of deformed Men and Beasts, which with a murmuring noise, and burning of Incense they religioufly worship. The Spaniards call'd this Island Santa Cruz.

Sailing from hence they directed their Course to Campechium, where the year before they had been so civilly treat'd; where arriving, and without any fear coming ashore, they found the Campechiums quite of another humor than they were the former year, telling them, They would not suffer any Strangers to be amongst them; and placing a burning Torch between theirs and the Spanish Forces, threatened, That if they did not depart in quiet, they would force them: which accordingly they endeavor'd, making a fierce Onset upon the Spaniards; who being now come under their Battlements, when they saw their advantage, pour'd what they had kept as a reserve, whole Volleys of small Shot amongst them, which struck so much terror, that they all ran away, shifting for themselves, and crowding into the City.

The Spaniards found afterwards Jucatan to be but a Peninsula, and came before
Strange passages on Tabaico.

Exceeding horrible Sacrifices.

Fore a River which fell with so strong a Current into the Mexican Sea, that it retain'd its sweetness for the space of two Leagues.

This River, flowing out of the Province Tabasco, was call'd Grisalva: upon whose Banks floated above six thousand Americans; and in the Water appeared a hundred Boats with Armed Men, which row'd aboard the Spanish Ships. The Interpreters of Cuba, whose Language agrees for the most part with the Tabфеers, prevail'd so much, that the King himself came to the chief Commander Grisalva, and bartering with him, gave him as much Gold as his Iron Helmet, Breastplate, and other Armor weighed.

Soon after they landed on the Island of Sacrifice, so call'd from the horrid Sacrifices which the Inhabitants made daily.

Amongst other strange Images, there floated a great Lyon of Marble, seeming almost decollated with a great gash; into which Wound they pour'd humane Blood warm, which was receiv'd into a Stone Trough set for that purpose underneath; then the Figure of a Man Carv'd in Alabaster, bowing forward, as if looking into the Trough upon the Blood. Those which were sacrificed were Prisoners taken on the neighboring Coasts, whom bringing before their Idols, they ripping open made no farther inspection, but onely to whip out the Heart; with which having smear'd the Lips of their Idols, they throw it into the Fire: the Heads and Corps they let lie unburi'd; whose fleshy parts, especially their Cheeks, they feast upon.

The next Island is inhabited by Women, to which Annually their Neighbors go, pretending merry kindnes, but upon amorous inclinations: and Plough and Till their Ground, and Weed their Gardens.

The chief City of Tabasco is Pontenchiuam, and contains above fifteen hundred Houses, all built of Stone hardend with baking after their manner; which in some Places, besides their Turrets and Temples, yield a pleasant Prospect at a great distance. Fourteen eminent Towns more did the Spaniards also see in Tabasco.
When in conversing with them they observ'd their strange manner of Sealing their Bargains and Contracts one with another, they were amaz'd, for not using Wax, they usually Seal'd their Compacts with their own Blood, commonly drawn with a Stone Knife, either from their Tongue, Hand, or Arms.

Their Priests live single, and if found to be Unchast, are punifht with Death. An Adulterer is sold for a Slave: Unmarry'd People may not frequently convert with Matry'd: Thirty five days in the year makes their Lent, in which they abstain not only from Flesh, but Fish also, feeding only upon Roots and Herbs. In this place the Spaniards were receiv'd in great State, Canopy'd with green Palm-Tree-Banches, and in like manner conducted aboard again, not without many Preeents, viz. the Effigies of a Man curiously wrought in Gold, wherewith they return'd to Cuba.

Sect. IX.

The Expedition of Ferdinand Magallan, commonly call'd Magellane.

The Bishop Bartholomew de Cafis, living a considerable time in Hispaniola, in the City Dominic, being inform'd of the abundance of Pearls which were caught before Cabagua, and the unsupportable cruelty of the Spaniards there under Ocampo, us'd against the Inhabitants, went to Spain, with a design to obtain of the Emperor Charles the Fifth, the Government over Cumana and Cabagua, under pretence, to draw the ignorant Natives from their Idolatry, to Christianity; which his request was especially promoted by William of Nassau, the Emperors prime Favorite; so that having his Letters Patents granted to that purpose, he took Ship, and arriv'd with three hundred Spanish Gentlemen of Quality in Cumana: And that they might have the greater respect shown to them there, they had each a Red Cross given them, such as the Knights of Calatrava generally wear. Yet little did Ocampo, the old Governor of Cumana, regard either them or their Authority; for in stead of receiving and submitting, he kept the Bishop de Cafis out by force of Arms; who then made complaint to the Vice-Roy of the West-Indies in Hispaniola, and in the mean time, put his Cargo into a new Store-house.

But whilst he made his Address, Ocampo having sufficiently inrich'd himself departed, which encourag'd the Cumanez, who already were incens'd, and weary of their former sufferings, to venture on a design, whereby they might revenge themselves of the Spaniards, which their undertaking prov'd so successful, that very few escap'd the Maligne: Of which, de Cafis being inform'd, and much disconcerted thereat, betook himself to a Dominican Cloyfter in Hispaniola.

Yet not long after, the Cumanez paid dear for that slaughter, for one Castellio; though not without several Engagements, with various success, lasting forty days together, having at last utterly vanquish'd them, put to an ignominious Death, Hanging up levity of their Princes, and to them of meater quality, shewing as little mercy.

As little success had Lodowick Lampagna, sent out by some Spanish Merchants, with Letters Patents from the Emperor to Fifth for Pearl, before the same Cabagua, to which purpose he carry'd peculiar Nets and other necessaries with him. But the Cabagon Spaniards unanimously withstood him; so that not being able to effect his design, over-power'd with a Melancholly Distemper that broke his Heart, he dy'd.
In the interim, while these scarce considerable Voyages turn'd to so small account, Ferdinand Magellanus (for so Peter Martyr calls him, and not Magellanus, which herein deferves to be credited, because they were intimately acquainted, and great friendship between them,) undertook to Sail round about the World; the occasion of which we will here relate at large:

This Magellanus, or Magellanus, a Gentleman of Portugal, having perform'd things of great importance for his King, in Africa, although with no less trouble than Charge, desir'd an addition of half a Dukett a Moneth added to his Annual Penfion; an inconsiderable Sum to make a Request for, yet though so little, was as niggardly deny'd: Whereupon, highly incensed, he study'd no little revenge; to which effect, soon after an opportunity was present'd, by means of Francisca Serranus, who writ from Termata to him, that he should speedily come thither, which he soon after did upon this account:

Pope Alexander the Sixth, having fixt Terminaries between the Kings of Caftile and Portugal, both bufe at that time in discovering new Countreys, Order'd, That Caftile should possess all the Coasts lying to the West of the chief Meridian, and Portugal to the East: By virtue of this partition, the rich Spicy Molucca Illands fell absolutely to the Portugese: Now Magellanus persuad'd Charles the Fifth, that they might be Sail'd to with a Welterly Conve, and therefore belong'd to Caftile; Which advice, Charles the Fifth considering, and approving, Rigg'd out five Ships, with which Magellanus fet Sail from Sevil, the tenth of August, Anno 1519. five Moneths he ply'd up and down the Coast inhabit'd by the Patagones, where he found none but one single Person, or rather a Monfer, a Giant ten Foot high, who coming Aboard his Ship, devour'd a great Hamper full of Biskets, and at one Draught drunk up nine Pottels of Water. He also saw several Trees which had been Hewn with Axes, and Croffes made on the tops of them. Whilft he lay in that Harbor, which was call'd St. Julian, he Call'd his Vice-Admiral, John Carthagenæ, with his Father Confeffor, and立ping their lives, let them aholo; and there left them to seek their Fortunes, though they had Confir'd to Murther him.

Magellanus from thence Sailing afterwards Southerly along America, to forty two Degrees Southern Latitude, was engag'd with the eddying's of a very strong Current, which driving one of the Ships into a Bay, split against a blind Rock, but the Men being sav'd in their Boat, were driven farther and farther into a Channel, between high and Snowy Mountains; whereupon he immediately judg'd (as the famous Negromancer Roderick Talrus had often told him) that there was the Passage, through which the Northern Ocean flow'd into the Southern; wherefore he resolutely adventur'd to Sail into thofe Straights, which in some places narrow, and in others broad, is an hundred and twenty Leagues long, and full of small Isles and dangerous Rocks. Whilft he still Sail'd on, the Ship call'd Antonio, Tacking about, return'd to Cadiz.

But Magellanus enter'd the great South-Sea with three Sail, on the 25. of October, where the Sea-men suffer'd extremely by excessive Heat, Drought, and Famine, three Moneths and twenty Days, without sight of Land: And now, their Shooes, and the Leather which cover'd their Shields, began also to grow scarce (which before had been count'd a Dainty) when they discover'd two Illands lying two hundred Leagues distance one from another, yet both Defolate and Barren, wherefore they were call'd the Unfortunate Illes: After that, they came amongst a great number of Illands, whose Inhabitants were much inclin'd
inclin'd to Thievery; for which cause they Denominated them Ladrones, the chiefest Island call'd Borneo, hath two hundred fifty four Leagues in Circumference, whereon a Tree grows, whose Leaves when fall off, seem to be alive and creep like Worms. The King of this Island entertain'd the Spaniards very courteously, two Elephants bringing his Presents to them on the Shore, out of a City consisting of twenty thousand Houses.

Near Borneo are two lesser Islands, call'd, Zuto and Matan; The King of Zuto freely submitted himself to the Spaniards, and Magellanus leaving his Fleet at Anchor in the Haven, went with his own and other Indian Boats, and attended with some of the Zuteniers to Matan, where setting a Village on Fire, he carry'd great Riches from thence; This not satisfying, he resolve'd within eight days to set upon the Royal Head-City; but the King in his own Defence, Encountering with *Magellanus, slew him, and seven Spaniards more, besides twenty two dangerously wounded; those which escap'd by flight, got to Zuto, where being invited to Dinner by the King, they were all of them (in stead of a second Course) Murder'd at Table. The occasion of this was out of Revenge, because the Spaniards had fall'n too foul upon their Women and Maids, Devirginizing, and forcing them to their Pleasure, than which rudeness nothing was among them more Detestable. The Sea-men weakned by these Misfortunes, were necessitated to burn their third Ship, call'd, Sr. Fogo; but Sailing to the Molucco Islands with the other two, they Freighted them both with Cloves, with which the Ship *Triunfas Sall'd to New-Spain through the South-Sea, and the *Victoria, Commanded by John Sebastian de Lugo went the same way which the Portuguse us'd, and so to St. Lucar de Barramedes near Styile, where he came to Anchor with his Ship and eighteen Men.

**S E C T. X.**

*Ferdinando Cortez his Voyage.*

Levough several Expeditions of the Spaniards to America prov'd very unsuccessful at the first, yet they still undertook them afield, and with renewing Courage: *Ferdinando Sottus,* though he Landed five hundred Men in Florida, yet brought no Treasure from thence, only he cut off the Hands of fifteen Princes, because they would not discover their Mines of Gold.

Yet far worse success had *Ramphius Narvaez,* who lost both his Fleet and Men, having only ten out of six hundred, in the River Palma, and they also afterwards dy'd there, or eat one another to satisfy their raging Hunger.

But much better was the fortune of *Ferdinando Cortez,* Sailing from Spain to America, in the Year 1519. who having the Command given him over ten Rour Ships, and three Frigats with five hundred Foot, and an additional Force of sixteen Horse, rais'd by the new Spanish Inhabitants on Caba, with which Forces Landing on the Island Cozumella, he prohibited Humane Sacrifice to their Idols, and Erected a Cross with the Image of the Virgin Mary, in one of their Temples, and releas'd *Hieronimus Aquilarius,* after a seven years Slavery, having suffer'd Shipwrack with Paddiva; at which time some that lave'd themselves in the Boat, were by the Current in thirty days driven to *Jucetas,* in which time seven dy'd of Hunger; the rest going ashore, were no sooner Landed, but Sacrific'd by the Natives to their Gods or Zemes. Among the six that remain'd, yet left alive, and to be offer'd after the same manner the next day, was this *Aquilarius,* who with his Companions, breaking Prison, in the following night fled
to a Neighboring Prince their Enemy, and one that maintain'd a continual War against these Cannibals.

Here Cortez sent Articles of Peace to Taxmarus the King of the Countrey, but he fleighting his profpect, came down upon him into the Field with forty thousand Men, drawn from the City Potanchamun, which contain'd above twenty thousand Houfes, all built of Stone: And indeed the Spaniards had here feen their last day, had not Cortez drawn by a feeming advantage the Enemies under his Canon, and sent his small Party of Horse to attend the motion of the Rear; when so soon as they had fir'd their Canon, making great Execution, the Front routed, and the Rear terrifi'd with the noise and fmoke of the Guns, they also broke, being at the fame instant Charg'd with the Horse, which were fo terrible to them that never faw Horses, nor fuch Service on Horseback before, that in a short time the whole Body of fo great an Army was utterly difflipated, and the triumphant Conquerors took poffeifion of the empty City Potanchamun, where Solacing, they laid a whole Moneth. Then from hence they Sail'd to Calvaca, where, upon the request of the Natives, they fettled a Colony. Amongft the Prefents which were there given to the Spaniards, were fome of their own Volumes, Books, whose Leaves were made of the innermoft Kind of a Tree, and a kind of Paffe, made of their Meal, grew'd together; the Characters ftood at fome distance one after another, rang'd like our Chrifl-Crofs Row, or A, B, C.

Here Cortez was amaz'd to behold their flately Temples, the Floors whereof were cover'd with Embroyder'd Tapeftry, befit with Precious Stones, to which great multitudes flock'd, being very zealous to perform their Devotions.

When their Seed is put into the Ground, or come to its full growth, they offer young Children to their Zemez, richly Cloth'd, having been fatten'd fome Weeks before: When they want Children they kill their Slaves, and in default of them, they pacifice them with Dogs.

The Victims that go to be Sacrific'd, they Worship with all Adoration, Bowing and Congying before them.

Their Zeal in this their Idol-Worship may appear from a strange Custom, observing'd by them when they enter their Temple, viz. they either draw Blood out of their Tongues, Lips, Ears, Breast, Knees, or Palm of their Hands, which they throw into the Air, supposing thereby to be pardon'd by their indulgent Gods.

In the City Zempoul, Cortez found five Slaves, who being kept clofe Prisoners, were to be Sacrific'd the next day; but he releasing them, did upon the importunate request of the Quines, or Priests, and promises of great ransoms, and their telling of him that the Zemez would spoil all their Seed and Plants that year, if they did not go on with their Offerings, refcr'd the Prisoners again; who, though the enjoyments of all happineffes in the other World were promis'd them by their Priest, and great afferdance given thereof; yet they were not forward, but return'd, unwilling to suffcr, though by fo gainful a Sacrifice.

At the Zemez Feet hung abundance of Mens Bones bundled up together, and under them were Written the Names of their Enemies, whose Flefh had been either Sacrific'd or eaten.

Twelve Leagues beyond Zempoul, Cortez built a new City near the River Crifalva, and call'd it Vera Crucc, which Diego Velasques refent'd fo ill, it being done
done without his knowledge, that he petition'd the Council of Cuba to give Sentence of Death against the Founder: But whilst Cortez expected an answer from the Embassadors (which were sent to the Spanish Court to give account of the necessity of building a City there) he travel'd eighty Leagues Westerly. The Zempotlebieros accompanied him in great Troops, hoping by that means to shake off the yoke of the mighty King Montezuma, against whom they were then desir'd. Cortez coming into the Territory of Sinuchimalar, was in the Name of Montezuma, by one of his Princes, courteously entertain'd in a great Village, situate on a steep Mountain, without any Path or Way leading to it, but by two high Ladders. Sinuchimalar lies surrounded with Hills, whose tops seem to touch the Clouds. Coming down from the Village, they travel'd through a barren and cold Valley, where they suffer'd much great Inconveniences by want of Provisions and Water, and exceeding coldness of the Weather, that many of them perish'd. After that, they ascended a pleasant Hill, on whose summit flow'd a Chappel, with a handsom Steeple, and hedge'd about with great heaps of Wood, brought thither by the Inhabitants for the use of their Sacrifices. At the foot of this Mountain was a fruitful Valley water'd by a pleasant River, on whose banks a certain Prince nam'd Cacatamnus had a Palace, built of Stone, and containing many Rooms, and convenient Lodgings. Somewhat higher to the Land, appear'd more of the like Structures, which were all under Montezuma's Jurisdiction; but the neighboring Country Tlaxcalla, whose Inhabitants were famous for their Valor, would never receive any Laws from Montezuma.

Cortez no sooner set footing in this Country, but he was set upon by a thousand of the Inhabitants, who at the first Assault kill'd two of the Spanish Horse, yet after this bold Charge, the Assailants fled, and on the next day desir'd Peace, whereupon the Spaniards march'd quietly into the Country, when a confus'd Company, or Forlorn-Hope, making a horrible Noise, set upon them, but after a short Skirmish, they fled to their Main Body, which immediately drawing up, being at least a hundred thousand, hemm'd in the handful of Spaniards, and so were ready to swallow them, leaving them no Angle to escape at. Thus environ'd, they were affailed on every side, fighting till Sun-set, and had undoubtedly been utterly destroy'd, had not Cortez ply'd his six Pieces of Cannon, discharging continually a Volley after Volley upon them; and though the Execution was very much, yet the Sound and report of their Ordinance was more terrible to them that were out of the reach of the Bullet, and made more to the gaining so great a Victory, Fear conquering more than Slaughter, so that by the Evening, despairing either of their Safety or better Fortune, the whole Army disbanding fled: But the pursuing Conquerors firing five of their Villages, remain'd Masters of the Field; yet they, though thus totally routed, taking fresh Courage (a wonderful thing!) reinforce'd them, and set upon the Spanish Camp, with no less than 15000 Fighting Men: Yet notwithstanding so vast an Army, Cortez so well order'd his small parcel of Men, and so valiantly led on upon all Advantages, that he in like manner defeated this, as they thought, Invincible Preparation. Thus fresh'd with so much Blood of the Natives, he raged every where, giving no Quarter where-ever he went.

Mean while Queztangal, a neighboring Prince, having also raise'd an Army with which he design'd, being affil'red by darkness, craftily to fall into the Spanish Quarters by Night, furtrilly dissimbling, sent Embassadors the day before,
fore, with several Prefents, and Overtures of Peace, which indeed were only Spies, to take notice where they might best break in upon them; which Cortez mistrusting, and soon being inform'd of the whole Design, he cut off the Spies Hands, fo fending them back to Queftionable with Defiance. Hereupon the Indians immediately setting forward, took advantage of the ensuing Night, and with great fury fell upon the Spaniards, who preacquainted with the Design, were in so good a posture to receive them, that not able to endure such hot Service, they quickly retreated, and utterly gave over the Enterprize; But Cortez as much encourag'd by these Victories, pursu'd them, and the fame Night Storm'd Tlascalca, a City containing above twenty thousand Housés, which in few Hours he carried. This City was curiously built, of bak'd Stones, and a place of great Trade; infomuch that the Market-places swarm'd with Buyers and Sellers, bartering one with another all manner of Provision, as Fift, Flesh, and Bread, also Plumes of Feathers, Pearls, imbroder'd Tapeftry, Chalk, Stones, Timber, and Herbs.

Twenty days Cortez flaid here to refresh his Army, and then march'd to the neighboring City Chiruteal, with the Auxiliary Forces of the Tlascalans, to the number of above a hundred thousand; they told him, That the People of Chiruteal had barricado'd up their Streets, laid upon the tops of their Housés great heaps of Stones, that their upper Rooms were cram'd with Archers, and all things made ready both for Offence and Defence; which Advertifement he not much hearknd to, becaufe he was conducted into the City with all their State-Formalities of Singing and Tabering upon their Tambores, and every where courteously entertain'd.

Mean while Montezuma had rais'd a great Army, which were in their advance, not only to the defence of his Border, but to surprize them them while they flaid in that City, the Townsmen having invited him thither to their rescue and his own defence, had not the Plot been accidentally discover'd by a Chirucan Woman, who giving advice to one of her Friends that follow'd Cortez, that he should immediately make his escape, becaufe that all the Strangers would be destroy'd within few Hours, who came and inform'd Cortez thereof; whereupon he defir'd all the Magiftrates of the City to come and speak with him, who no sooner entered the Hall where he was, but his Men by Command immediately flot them to death, which terrible Rumor spreading, and alarm'd with the report of the Executing Mufquers, the City was suddenly in an Uproar; gathering thither Arm'd from all Places, and began a sharp Conflict, which lafted five Hours; but then wearied out, and defpairing of Success, looting their Courage, they defir'd a Ceftation, and at last concluded Peace with the Spaniards.

This News of his discover'd Intention, so flartld Montezuma, that he suppos'd it better to defect, and procure the Favor of Cortez by Prefents; wherefore he sent him 15000 Cotton Habits, trim'd up very richly, ten great Charges of Gold, and fome Vefsels of Wine, defiring him for a while to forbear his Intentions of marching to Teufiitan his Chief City, and that he would in the mean while treat with him for an Accommodation. But Cortez, though he accepted of the Prefents, yet nevertheless held his Resolution of marching on.

Eight Leagues from Teufiitan he faw the double-spired Mountain Popocatepeque, fo call'd from the Smoke which continually ascends from its top; for Popoç signifies A Smoke, and Tepoque, A Mountain. The Smoke rifes upright, and
with so much strength, that by the greatest Wind it deviates not one jot from mounting upwards in a direct Line, to whose forked Head ten Spaniardsresolved to climb; but having got scarce half way up, they were forc'd to return, the Alyes lying knee-deep; yet at last two more resolute conquer'd all those Difficulties, and got to the top, where the mouth of the Cave, as they guessed, measured four Miles in Circumference: The shaking of the Mountain, and roaring of the Flames, frequently bursting forth, so much terrified them, that they flaid not long there; for, as we said, the Ground not only trembled under them, but the Fiery Gulph ejected great Stones, which falling down on all sides of the Mountain, rolled to the bottom; and without doubt they had there perish'd, had they not speedily run to a hollow neighboring Hill, from whence they came at length to the rest of their Company, where they were admir'd by the Indians for their undaunted Resolution, and presented with several rich Gifts. These Indians had a Tradition, That for wicked Princes, and such as had not govern'd the People well, this was the Tophet appointed for their Torments.

Cortez being got through the poor Territory of the Guazazingers, and having suffer'd great Cold upon the Mountains, discover'd Amaguameca, the chief City of the Province Chidaco, seated in a great Lake, to which he row'd in a kind of Boats, by the Inhabitants call'd Acales. Passing from thence, he was courteously receiv'd in Iztapalapa, another City, which boasts above eight thousand Stone Buildings, besides admirable Palaces, with spacious Rooms, delightful Gardens, and Ponds full of Fish; and almost cover'd with Fowl; from whence a Wall or Cause-way of a great breadth, that cross'd over both Land and Water, led from Iztapalapa to Tenochtitan. This Cause-way hath many Bridges, which are drawn up in time of War, under which the Water runs out of a Salt Lake into a Fresh, that ebbs and flows, although lying between high Mountains, and seventy Leagues from the Sea.

On both sides this Wall, being ten Leagues in length, appears three great Towns,
How they make Salt.

Colfmaca is supplied by the Salt Lake, to its no small benefit and enriching; for the Water being by Pipes convey’d into the City, in all the Places and Cisterns for its reception makes a Scum, which being coagulated by the Sun, and after boy’d, becomes Salt, with which they drive a great Trade; for no Salt being to be had in any place but here, all Foreign Merchants come thither for Supply.

Cortez being in his March within a League and a half of Tenufitan, Montezuma, preceded with a thousand of his Nobles, came to meet and salute him, all of them rather like Pilgrims, bare-footed, and conging, kisfing their right Hands, with which they first kiss’d the Ground: After them appear’d Montezuma himself, who put a Chain of Gold, imbo’d with Pearls, about Cortez’s Neck, and immediately conducted him to the City, where having entred, and being come into the Palace, Montezuma plac’d Cortez on a Golden Throne, and putrend up his Right to his Catholic Majesty of Spain, in the presence of all his Peers, to their no small amazement.

But whilst all things had a good face, and went on thus fairly beyond their expectations, Cortez was inform’d, That King Coaleopoca had a Design on the new City Vera Cruz, and had treacherously murder’d two of the Garrison, and wounded two more: Whereupon Cortez having such fair beginnings, who had swallow’d already in his Hopes the whole Empire and Wealth belonging to Montezuma, laid hold of this Occasion, pretending Treason, and breach of Contract; wherefore he put Montezuma under Custody, notwithstanding he had clear’d himself of the Conspiracy, by bringing Coaleopoca, with his Sons, and fifteen of his Peers, Prisoners to Tenufitan, who by the command of Cortez suffer’d a lingering death, being all burnt with Green Wood. But in vain did Montezuma think to reconcile himself with Cortez, since all he did could render no manner of satisfaction; however he continu’d to oblige him by fresh Favors, whole Relation we will be more particular in, as merits the same.

Montezuma’s Grandees seem’d to be much discontented, because he had without the least resistance or consideration fetted a handful of Strangers to dominer over his whole Dominions, by which his weakness and pusillanimity, he was now a Prisoner, like a common Malefactor, who had formerly govern’d so mighty Territories. Amongst several Princes which seem’d thus to be concern’d, was Catumaquin Governor of the Province Hacolypan, who had he not been surpriz’d and attacked the Night before by the information and discovery of Montezuma himself, he would have hazarded the ruine of all Cortez’s Successes: But now Fortune still daily more smileth, giving wonderful Advantages to the Spaniards; Silver and Gold continually flowing like Rivers from all Quarters, that their only trouble and puzzle was where and how to dispose it: but yet for all this, they were not free from jealousy, that Montezuma’s Forces might swallow theirs, though he was secours’d; of which you may judge by the vaistness of his Imperial City Tenufitan, feated in the Province of Mexico, where a Salt Lake mixes its Waters with a fresh River, both which in circumference contain, as we said, sev’nty Leagues, and distant from the Main Land five or six Miles; the Water about it continually cover’d with small Boats rowing up and down. It hath four Stones: besides Draw-Bridges in several Places, and strengthened with Gates
AMERICA.

Chapter III.

Gates no less artificial than costly, which lead from the City to the Main Land. The Fresh Water is conveyed through the Salt in a Wall'd Channel, out of which none may take up Water, except they pay Excise to the Kings Farmers. This City boasts above sixty thousand Houses, all divided into Islands, but joyn'd with great Wooden Bridges: The Market-place surrounded with Galleries, drives a quick and constant Trade, being always full of Buyers and Sellers. In every Street they have a public Inn, in each of which they keep Ordinaries, wherein the Tables are furnish'd with well-dress'd Flesh and Fish, not wanting plenty of Wine. Their Trades are divided into several Companies, and they have their peculiar Places to dwell in. They deal very much in Cacao, a Fruit not unlike an Almond, which beaten to Powder, and prepar'd with several other Ingredients, gives name to that excellent Drink now in use with us, call'd Chocolate: They grow onely on moist and warm Grounds, and are us'd so currently in Trade, that they go in stead of Money. Amongst many beautiful Edifices, their Guild is very magnificent, wherein twelve Judges, attended by a considerable number of Officers and Servants, sit daily, hearing and determining all manner of Causes. The next is their Chief Temple or Miniter, built quadrangular, all of Free-Stone, having four Portals, opening into the four principal Streets or Triumphs, that end at the four Stone Bridges. On the Walls, being of an exceeding height, stand several Turrets, so high, that they seem to hide their Spires in the Clouds; and have Apartments, wherein the Priests Diet, Lodge, and Study, which are ascended by Marble Steps. These Religious Persons are generally of Noble Extractions, which at seven years old are carried thither, where leading a very strict Life, they never come forth to see the World, till they enter the State of Matrimony. The famous Colossus, that stood over the Rhodian Haven, between whose Legs all Ships did Sail, that came in or went out of the Harbor, cannot stand in competition with the stupendous Idol Puichialbichichi, whose Head touches the Arch'd Ceiling of the high Temple. Near his stand several lesser Images, made of Meal and all sorts of Herbs bake'd together, and kneaded with Men's Blood. Along the Walls are exceeding dark Vaults, in which the Priests once walk'd; over them are large Halls, full of Presentations of their Gods, which serve for the burying-places of their Kings.

Whilst Cortez and Montezuma were viewing the Temple, two Spaniards rush'd suddenly into one of the Cells, where they found abundance of Lamps and Torches burning, and the Walls daub'd two Inches thick with Humane Gore: Over-head hung vast numbers of their Sacrificing Knives; and the Stench of the place was intolerable.

But Cortez going on, Montezuma and his Attendants refented it very haughty, that he pull'd down some of their Idols, and durst presume to look in the Kings Face; for those People bear so great Reverence to their Kings, that none dares so much as once look up in their Presence: His Council stand bare-footed, strewing with their Faces bow'd almost to the Ground before him: Four times a day they change their Apparel; and a Suit which they have once worn, is put to no other use, but present'd to such Soldiers as have done some eminent Service. Whatever manner of Chargers, Dishes, Pots, Cups, and other Vessels the Emperor is serv'd in at his Table, are every Meal new. The King hath in Tenochtitlan three great Structures, whose Magnificence, for Cost and rare Architecture, can hardly be parallel'd. The first is the Residence for all deform'd People: The second, an Aviary for all manner of Birds and Fowl, being
being a spacious open place, Roof'd with Nets, and surrounded with Marble Galleries. The third, being a Den for Wild Beasts, was divided into several Rooms, wherein were kept Lions, Tygers, Wolves, Foxes, and all manner of Four-footed Animals.

But whilst Cortez having stayed waiting eight Months in Tenujiitan, for the return of the Messengers sent to the Spanish Court, receiv'd Tidings, That Pamphilo Narvaez, by order of Felafques, was come with eighteen Sail, Mann'd with eight hundred Foot, and eighty Horse, from Cuba, and now riding before the Mexican Coast; from whence soon after he receiv'd unexpected Command, to come presently aboard unarm'd, and resign up his Authority: But he in stead of submission, compell'd Narvaez in a short time to relinquish his Title, and own him for Superior. Mean while the Spaniards which remain'd in possession of Tenujiitan, ran the hazard of a general Maffacre, for the Citizens much from making the Oppressions of the Spaniards, who grew very insolent, inflicting their King, bringing their inveterate Enemies the Tlaxcallans and Guayziingans into their City, exacting them to pay Tributes, pulling down their Gods, and demolishing their ancient Idols, they brake out from all Parts in a tumultuous manner, ran to Arms, and besieged them Day and Night in their Fort, although Montezuma endeavor'd to perfwade the contrary. Cortez hearing of it, came to their relief with the New Forces Landed from Cuba; but he fighting his way ere he could get in, was so roughly entertain'd by the Mexicans, that they kill'd him forty Men, wounding as many more; and notwithstanding fifteen Field-pieces with continual Shot made foul Breaches, lessening the number of the Assailants, yet they suddently fill'd up their Vacancies again with fresh Men, which clamber'd over the Heaps of those that lay slain. Three Days the Battel had continu'd very fierce, when Montezuma being with the Spaniards in the Cattle, went to a low Window, to see if he could command his Subjects to retreat; but a continual Cry so deafned their Ears, and show'ds of Arrows and Stones so took away their sight, that he did nothing: Then
Then Montezuma, thinking to be more easily either heard or seen, went to a higher Window, where looking out, he was unfortunately hit with a Stone, of which he died three days after. Besides their Enemies, the Spaniards suffer'd extremely by Famine; and though they had beaten down a Tower, which had done the Castle great mischief, and set five hundred Horses on fire, yet they could discern no likely issue thereof, but judgment best to make their escape by Night over the nearest Bridge. Cortez therefore dividing his gotten Treasures, which amounted to above seven hundred thousand Ducats, amongst his Soldiers, carried Montezuma's Son, and two Daughters, Prisoners with him, though not without infinite danger and loss; for the Tenochtitlans affidavit him on both sides, and falling in also upon his Rear, spare'd not to kill Montezuma's own Children. In this last Fight the Service was too hot, that Cortez lost forty-two Horses, a hundred and fifty Spaniards, and two thousand Auxiliaries; and although gotten over the Lake, they were still purs'd by the Mexicans, who would then undoubtedly have made a general Slaughter, had not Cortez annu'd the Enemies, by leaving in the Night great Fires in several Places, his suppos'd Camps, whilst he silently stole away: Yet the Tenochtitlans would have purs'd the Spaniards, had they not wanted Provisions: But Cortez sending his Treasure before him, through the Countrey Calva, to Vera Cruz, with a Convoy of five Horses, and forty-four Foot, were all cut off by the Colons, and feaftled upon in a Thanksgiving Sacrifice. The fame misfortune befell twelve Spaniards in Tepetec, which great City surrendered it self up to Cortez, being affil'd by a mighty Army of Tlaxcallans and others. But after all these Losses, he took Guaccachicalla, and Iauca, both fortify'd with strong Walls and Gates; in which last he burnt above a hundred Temples, built for Human Sacrifices. All the Countrey through which he thus ravage'd, he call'd New Spain. From the City Iauca, which he had newly taken, intending to besiege Tenochtitlan, he digg'd through the Lakes a broad Trench, of above three Leagues in length, to bring up thirteen new Ships to Tenochtitlan; and the neighboring People envying, that that City should not be conquer'd, as well as theirs, rais'd an Army of above a hundred and fifty thousand Men, making Cortez their General; Him self incamp'd on one corner of the City, appointing the other two sides to be invest'd by Gonzales Sandovalo, and Pedro Aparado; but the besieged resolutely broke out, and made a fierce Sally with five thousand Boats, setting upon the thirteen Ships; but the great Guns made such execution and havoc amongst them, that they retreated with great damage: Whoever were taken Prisoners in this Fight by the Spaniards, the Tlaxcallans, being Confiscation'd by Cortez, feaftled upon. On the seventh day the City was taken, but not without great Slaughter, and the new King imprison'd.

After this mighty Conquest, Cortez resolve'd to discover those Territories that lay Southward; and whilst he was making all things ready for the Voyage, he sent two Ships with an invaluable Treasure to Spain, who fearing to be taken by the French Pyrates, ran in at Tercera, where a miserable Accident hapned to the Seamen of the biggest Ship, wherein were carried two Tygers, which though taken young, and bred up amongst men, yet had not so quite forgotten their natural ferocity, but that one breaking loose in the Night, tore seven of them in pieces, hurting a far greater number, of which some had the Brawns of their Arms, the Calves of their Legs, and fleshy parts of their Thighs bit out.

Several Places in America breed Tygers, that far exceed Lyons in fierceness;
so that where any considerable number of them frequents, though the Soil be never fo fruitful, yet it is left defolate and forfaken. But the Baboons that frequent the Woods are more pleafant, and lefs dangerous. Peter Aris relates, That his whole Army encountered with thefe Beasts, which climb’d from one Tree to the other, thrieking, and making very strange Gesticulations to thofe that were gone before, and gathering their Mouths and Hands full of Stones, which they threw as exact and strongly as a Man. When one of thefe Baboons, shot by a Musquet, fell to the Ground, the rest gave fuch a horrible fhriek, that the Woods resounding with the noife, froke a terror into the Spaniards. Amongft feveral things that hapned in this Counter-feffe, take this one: A Spaniard taking aim with his Musquet at an old Baboon, which fate perch’d up in a Tree, and being now juft ready to give Fire, the Baboon Soldier, at the very infant, to break the Shot, taking a Stone out of his Mouth, threw it exactly into the Mans Mouth, with fuch force as beat out some of his Teeth; with which fudden blow surpris’d, he loft his Mark; and the proud Foe, fhewing figns of Triumph, went his way.

But whileft Cortez flaid in the Country of Tenifitan (now call’d Mexico) Francis gentle Garajus fail’d out of the Haven of Jamaica, with eleven Ships, to the River Panicus, there, according to the Command of the Emperor Charles, to plant a Colony: Whereupon he went afore, ordering his Fleet to fail along in flight of Land: So wading through the River Montaltus, which glides between high Mountains, he came to a Morally Ground, in which he and they often funk almoft up to the Middle, and loft his way in a Thicket of young Trees; yet at laft being come to the River Panicus, he found feveral high Walls, being the Ruines of Forreffes, Temples, and Towers, deftoy’d by Cortez: So that the City lay quite defolate. Twenty Leagues further, upon the Banks of the fame River, Cortez had in like manner fack’d and deftoy’d Chigla, a Town which before its burning reckon’d above twenty thoufand Houfes, besides many fair Palaces, Walls, Towers, and Temples; Which Cruelies and Spoil had bred fo great an Ordin in the Inhabitants againft the Spaniards, that they immediately fent an Army againft Garajus, who had only a few half-starv’d Men with him; yet he receiv’d the Enemy twice in his Retreat to the new Colony St. Steven, rais’d out of Chigla’s Ruines; but finding no Provisions where-ever he came, he judg’d it fufficient to fend his Horfe into the Country to Forage; which Cortez meeting, took Prisoners, under pretence that Garajus came to take Posseflion, where he had neither Authority nor Right. Cortez also made himfelf Mafter of Garajus Ship and Fleet, commanding him withal to appear in Tenifitan, which not knowing how to avoid, he obey’d: His People mean time ranging up and down without a Head or Commander, either died by famine, or were murthert and eaten by the Natives; for at one time the Americans made a general Fefl with two hundred and fifty rofted Spaniards: But their days of Triumph lafted not long; for Sandvalus, one of Cortez his Prime Officers, fet with fo much fury upon thofe Cimbiafts, that he kill’d feveral thousands of them, and burn’d fiftty Perions of Prime Quality, all Commanders, in the field of their Friends and Relations. But Garajus, whose Son was married to Cortez his Daughter, liv’d not long after the Wedding, which occasion’d a murmur as if Cortez had poyfon’d him, to rid himfelf of a Partner in his Government; for it had been generally obferv’d, that his Ambition fuffer’d no Equal. The Americans fell all down before him; all were Servants alike: The Court which he kept fwarm’d with Attendance, on which he spent vaft
Chap. III. AMERICA.

Yet his Incomes were able to bear such excessive Difbursements. He kept in constant Pay five thousand Soldiers, and several Ships ready rigg'd and prepar'd on all occasions, to hold in awe the enslav'd People, or else for the Discovery of New Countries: Yet after all these extraordinary Charges defray'd, to shew his Wealth and Greatness, he caus'd a Piece of Cannon to be cast all of malle Gold: for the Kings which formerly acknowledged Montezuma for their Sovereign, gave him a yearly Revenue, most of which were valued to be worth twenty three Tun of Gold; for so much the King of Tefcuens, a flately City, paid, whose Houses Plaister'd with White-Lime, seem'd afar off to be rather a Chalky Hill or Mountain, cover'd with Snow: Full as much did the King pay which reigned in Otumba, notwithstanding he had receiv'd with his Christianity the Name of Ferdinand Cortez; yet others gave less: The King Guacimalgo, with his Mother, and some Slaves, bringing Gold, came to present it to Cortez; and entering the Palace, through a Guard of five hundred Horse and four Hundred Foot, which were always ready Arm'd for fear of Insurrections, he fell down prostrate on the Ground. Thus all things even out-went whatever he could desire, hope for, or imagine. And Alvarado, one of his Commanders, being sent Eaftwardly, brought great Treasures back with him, which the conquer'd Kings were forc'd to raise.

But Fortune, who seldom continues her Favors long, at last began to frown; for Cortez having sent an invaluable Treasure of Gold and Pearls to the Emperor Charles the Fifth, Floryn the French Pyrate met with and took it, which went so much to his Heart, that for a considerable time he sent no Advice to the Spanish Court, which made them grow jealous of him, doubting that he intended to make himself King over New-Spain, and this Suspicion was not a little augmented by his Enemies.

In the Neck of thefe, follow'd another Misfortune; for Christopher Olitus, sent out by Cortez to discover new Countries, rebelling, took up Arms against him, being then in the Haven Figneras, five hundred Leagues beyond. Notwithstanding the Spaniards, although amongst a new-conquer'd People, which without doubt long'd for Revenge, were not to take notice of their danger, but to go on with undaunted Resolution; whereupon Cortez drawing out a strong Party, march'd a long and troublesome way to meet Olitus, making great Slaughters where-ever he came. Francisco de las Cajas was commanded to go upon the same Account by Sea, and arriving first, found him setting his new Colony, which he nam'd Triumph de SanÈta Cruz; and notwithstanding the Water with a Northerly Wind was very rough and boyesterous in the Haven Figneras (which the Spaniards call'd So, because they found Trees there, which growing at the Foot of the Mountains, bore a Fruit not unlike a Fig,) yet they came to a present Engagement, wherein Cajas worifying Olitus, having funk one of his Ships, took out again to Sea, but surpris'd by a violent Storm, and driven on the Shore, fell into Olitus's Hands, who had a little before also taken Egidias or Giles Gonfales. These two Prisoners consult'd together how they might poisn or murder Olitus, which fell out according to their desires, because the Servants of the Houle where they lodg'd sided with them; so taking hold of the first opportunity, as they were at Supper together, they stabb'd him with their Knives in several places; yet the Wounds were not so great or mortal, but that he retain'd strength to escape in the dark to a neighboring Hut, but the Assassinates immediately sent out Messengers, publishing, That he who did not, knowing where Olitus was immediately bring him to them, should receive
receive condign punishment; which terrifying Olitus, he discover'd himself, and was immediately beheaded.

During the time that the Spanifh Officers had these Civil Broysl one against another, Lodowick Pontaeus, a Man well experienced in the Law, came from Spain to America, there in the Emperor's Name to settle all things in good order; having also particular Instructions, to shew great kindness to Cortez, and to make him a Knight of the Order of St. James, that by that means the Emperor might be the more esteem'd for his Noble Subjects and Servants, amongst the Mexicans, who are themselves of a proud and ambitious spirit, and chiefly the Nobility, which doth manifestly appear by their Apparel, more gorgeous than the meaner sort of Americans; and though the Slaves go stark naked (having only a Cloth tied about their Privities) and with a Bowe and Arrows walk before their Lords, yet the Better Sort go very costly Habited; for about their Necks they wear Strings of Pearl; on their Heads, a Cap, from whence hang down two Scarfs, one longer than the other; then a party-colour'd Cotton Coat covers their whole Bodies to their Knees, under which they wear a Vext girt about their Middle.

But at last, after all these Services, Cortez disagreeing with the Vice-Roy Don Antonio Mendoza, being about that time sent over, went male-contented into Spain.

\textit{Sect. XI.} 

\textit{Diego Gottierez his Expedition.}

\textbf{Ann. 1540.} Gottierez being chosen Governor of New Carthage, weigh'd Anchor from Cadiz, and failing to Nombre de Dios, upon his Landing clasht with Roderick Contreras, in whose Place he was sent to succeed. Two Years he spent without effecting any thing; but at last coming to Agreement with Contreras, he took the Governorship upon him, having first forewarn'd him not to depend
pend too much upon his Authority; for the Countrey being full of Woods and Mountains, might hide many of his Enemies: But he not regarding the Advice, went a Journey from New Granada, and having march'd fifty Leagues to the North, he crois'd into the River Sucre, with sixty Spaniards, and was present'd by the Princes of the Countrey with as much Gold as amounted to seven thousand Ducquets. Here he spent some Weeks, effecting little; but now all things growing scarce, though he was very earnest with the Natives for Provisions, yet he could get little; which kind of Life the Soldiers dilikking, and growing weary of, went away in the Night to Nicaragua. Gottières thus left alone, got in a Boat, with intent to follow them; and being just put off from the Shore, was met by Captain Barjanto, who brought new Forces and fresh Provisions with him: This wrought upon him to stay there. Not long after Alphonso de Pisa went with twenty seven Men from Nombre de Dios to the same River Sucre; but it being then very rough at the Entrance, he was necessitate to pass on to a small uninhabited Ile, where whilst he lay at an Anchor, the Weather began to grow worse and worse; the Gufths of Wind, mix'd with Showers of Rain, Thunder, and Lightning, seem'd to threaten a general Destruction; for in the Ship two Spaniards and one Moor were kill'd by the Lightning: In seventy two Days, the Sun did not shine four Hours: At last weighing Anchor, he sail'd over to the Main Land, where he saw nothing but vast Mountains and Wilderness. Here for a time they liv'd upon Cockles found on the Shore, and wild Fruits in the Woods: At length coming to Gottières, he sent him with his People in five Boats to fetch new Forces from Nombre de Dios. In his way thither he saw a House built of Canes, cover'd with Palm-leaves, forty five Paces long, and built after an Oval fashion: Round about it flood several leffer Hovels, all which making up a Village, the Spaniards nam'd Francisco, because they came thither on St. Francis Day. About half way they met with the Lords of Sucre and Chiappa, going to attend Gottières, to whom being admitted, and sitting with him at Table, he gave them, as a Damey, rost Chickens and fresh Pork; but they gave it to their Servants, not delighting in the taste of such Victuals. Gottières, by means of an Interpreter, told them concerning the Christian Religion, at which they bow'd their Heads, without making any Answer: But how little mind they had to embrace it, quickly appeard; for not long after, they set their Villages on fire, and all the Provisions which they could not carry with them, they spoil'd, and so returing, hid themselves upon inaccessible Mountains. Another Incentive leading them to this Fight, was, because the Governor Camachiren, and his Deputy (notwithstanding he had given Gottières as much Gold, when he came first into the Countrey, as amounted to seven thousand Ducquets, as we mention'd before) yet was put in Prison by his Order, contrary to all Promises: Nay, Gottières threatened to burn him (not regarding, that he had besides received of him several Pieces of Gold, resembling all manner of Beasts, as Turtles, and others; and also Fifties and Fowls curiously wrought, which were valued at two Tun of Gold; yet this Present seemed too little for him, whereupon bringing the Prisoner to a Cheft, he swore that he would rost him by degrees, if in four days time he did not furnish him with four times as much more Gold as that Cheft would hold: Whereupon Camachiren's Servants went away to get the requir'd Gold; but he, through carelesness of the Watch, made his escape in the Night, so that Gottières 'lost his Booty. But the other Prisoners, though threatened to be torn asunder with Dogs, remain'd firm, difowing
disowning that they had any Gold; and among the rest, one speaking boldly
to the Spanish Officer said, That he stood amaz'd at his treacherous dealings, why did he
keep him Chain'd against Law and Promise, and often threaten'd him with death, but yet
would not kill him; for he, saith he, had rather choose to die, than live so miserable
a life.

Gottierre's Conscience troubling him, he would willingly have releas'd the
Indian, and the rather, because he promis'd to procure a great ranforme of
Gold; but the inferior Commanders would not consent to it. After this they
march'd six days through great Wildernefles, and over high Mountains, finding
no Footsteps of any People. Lastly, They came down a very dangerous
and steep Mountain, where had not the Shrubs and jutting Stones lerv'd them
to hold by, they had all broken their Necks.

Fifteen Leagues, the hanging of this Mountain spread it self along a sweet
River, on whose opposite Shore stood strange Huts full of dead Tygers, Deers
Heads, and Legs; here they lab'd two days to rett themselves, where the Trees
Mawe and the Cazabi Plants yielded them good Food.

Travelling forward, Gottierre ask'd an Indian which was the nearest way to a
Village, but he pretending not to know any near hand, had his Head immedi-
dately cut off. In like manner, and for the fame reason the Indian Prince
should also have been Executed, had not Gottierre given order to the contrary;
seeing his resolution, that with no less Patience than undaunted Courage,
stretch'd forth his Neck to the Executioners. Mean while, their Provisions de-
creasing, they suffer'd extreme hunger; insomuch, that some faint'd quite
away. The Souldiers also rebelling against Gottierre for Food, he commanded
them to kill their Dogs, and stamp the Barks of Trees; two days they tra-
vell'd much discontented in this manner, and at last came to the entrance of a
Wood, where they efpy'd an Indian standing behind a Tree, which on a sud-
den ran away with incredible Swiftness: early the next morning, above four
thousand Indians came Marching against the faint Spaniards, making a terrible
noife with Horns and Drums; they were all except their Princes Painted black
and red; some wore Plumes of Feathers on their Heads, and Collars of the
fame about their Necks; the fight began very fiercely, by casting abundance
of Stones, and shooting of Arrows, wherein, though Gottierre was at first
Wounded, yet after half an hour the Affailants fled, but recruited with fresh
Forces renew'd the fight, breaking into their Ranks, and making fo great
slaughter amongst them with Woorden Swords, and Palm-Tree Clubs,
knocking down, and dealing such deadly Wounds, that of the Spaniards, three
only efcape'd, saving themselves by flight, who two hours after, much
amaz'd and terrify'd, came to their refervice, confiting onely of twenty four
Men, which Alphonfo de Rifa Commanded; the insulting Enemy at their
Heels, waving over their Heads the Swords, Shields, and Crofs-Bows
which they had gotten from the slain Spaniards; and some withal crying in the
Spanish Tongue, Come Christians, come, and take Gold. But de Rifa, for all their pride,
let them going with some Volleys of Shot; after this, efcapeing innumerable
other dangers, he came to Nombre de Dios, without having effected any thing of
Note.

Chap. III.

A M E R I C A.

SECT. XI.

The Expeditions of Peter Alvarado, Francisco and Gonzalvo Pizarro, and Diego de Almagro.

In the City of Panama, in New Spain, liv'd three eminent Spaniards, call'd Francisco Pizarro, Diego de Almagro, and Ferdinand de Luque a Priest, which joyfully design'd to discover farther Southerly along the rich Gold and Pearl Coast, and inspect the Southern Ocean. De Luque was to look to home-affairs, and Pizarro set Sail first with a Ship Man'd with one hundred and fourteen Men, which Almagro follow'd with twenty more, yet both were valiantly repuls'd by the Peruvians; but although they return'd the first time with bad success, yet they undertook their business once more, but with no better fortune; whereupon discouraged, the undertaking seem'd to be totally laid aside, and the American Vice-Roy, Peter de Rios forbade any to attempts a farther Discovery concerning Peru.

The former difficulties with this Edict easily wrought upon Pizarro's men, all but twelve, to leave him, for the rest went over with the Ship fitted out by Rios with succors to the Island Callao, where Pizarro refused, having also fail'd in his second Expedition. But although he had made two bad Voyages, yet having an inclination to a third attempt, he went to Spain, desiring of the Emperor to be Governor of Peru, which he had discover'd; for besides his Plea of Merits he had taken possession of the Country twice by Landing there, intended for the use of his Imperial Majesty; one of his Sea-men to that purpose flourishing his two-handed Sword over his Head, the glittering of which Sword so frighted the Natives, that none of them durst come near him.

His request being consulted upon, was at last granted, the Government of Peru being conferred upon him; but Almagro took it very ill, that Pizarro went to the Emperor on such a design for himself; yet by the mediation of his friends the difference was reconciled, then Pizarro setting Sail with one hundred and fifty Foot besides Horse, and Landing at the Island Puna, at first was courteously entertain'd; but the Spaniards by extravagant hunting and searching every where their Houlies for Gold, and committing several other outrages, incensing, chang'd the humor of the Inhabitants so much, that they fell upon them. In stead of Ensigns, Standards, and Warlike Trophies, they used long Canes, at the end whereof were ty'd the Bones of their ancient Hero's, honor'd by them after their death: But these Reliques sav'd not the Indians from slaughter, so well as the coverts of a neighboring Wood.

From this Ille, lying three degrees Southward of the Equinoctial, Pizarro pass'd over to the Main Continent, where they were all in a great confusion, upon the report of the Spaniards cruelties committed in Puna; yet all the preparations of the Indians to withstand, stop'd not Pizarro from his intended course; for first, having the Success to master Lampa, thence he made nothing to march his Forces over the River Ambato, there building a Temple Dedicated to the Sun. The Portico flood towards the East, the rising of their God, before which hung a Curtain of their fine Corron Stuff, within flood the presentations of two Golden Rams, shad'd with Black, and as many Dragons, before which the Fire never went out, continually supply'd with Offerings of burnt Incense, on...
on the Pillars hung several Men head, their Flesh kept firm, and free from all Putrefaction, with the infusion of a sharp Juice.

Here Almagro coming to Pizarro with fresh Forces, they made no little penetration into Peru, satisfying every where their thirst of Gold, and slaughtering the Toothless Tombezes, a people who having offended their King, had by his order the upper Teeth of the whole Nation beaten out.

Peter Alvarado inform'd concerning the Riches of Peru, and well knowing how to insinuate with the Emperor in his fawning Letters, at last by his Friends so prevail'd, that he also got leave to go thither; in pursuance of which, Anno 1534. he Weigh'd Anchor with seven Ships from Guatimala, a City built by him between two Mountains. But Landing at Puerto Viage, and Marching Easterly over Snowy Mountains, he was met by Almagro, between whom a bloody encounter was like to have happen'd, but after some time, a Treaty being let a Foot, they came to a Composition on these Articles: That Alvarado upon the receipt of a hundred thousand Duckers, should leave his Men with Almagro, and depart from Peru; with which sum, being enriched, he soon after fitted out fourteen Sail to discover new Countreys to the West; but being busy in his preparations, was sent for to Mexico by Don Antonio Mendoza the Vice-Roy, to undertake a Voyage with him to the new-discover'd Countrey of Guatimala, abounding in Gold and Saffron, according to the report of four Dominican Monks, and having already rais'd four hundred Men, news came to Mexico, that Peter Zunica had receiv'd an overthow by the Indians of Saffron, to whose assistance Alvarado March'd with all speed, and found the Indians incamp'd on a high Mountain, fortifi'd with conjoin'd Trees, and great Stones ty'd together with Rushes, behind which they were secure from Shot. The Spaniards climbing up the Mountain, approach'd their Works, when on a sudden the Defendants giving a great Shout, cut the Cords which held their Fortification together, whereupon the Stones and Trees tumbled down with such force, that they kill'd both Men and Horses, few escaping alive: In this conflict Alvarado himself was lost. His Wife Beatriz Cuova made a flately Funeral for her Husband, and caus'd her House to be Painted black, refusing either to Eat or Drink for a set time, yet notwithstanding, all her pretence of sorrow, she so mended her business, that the took the Government of Guatimala into her own hands; but her Dominion lasted not long, for on the eighteenth of September, Anno 1541. happen'd a hideous Tempelt of Wind and Rain, mixt with continual Lightning, and horrible claps of Thunder, and what was more terrible, was anfwer'd with roars and horrid bellowings from the caverns of the Mountain, at whole foot Guatimala flood. About midnight the Mountain was deliver'd, whose Birth was the irruption of an Inundating River, a precipitate torrent tumbling down full of Rocks and Stones, which carry'd all before it, so that in few minutes Guatimala was utterly swept away, not the least mark remaining, nor any left alive except Alvarado's Bastard Daughter by an Indian; and in the adjacent Fields, some few, and they main'd, with broken Arms or Legs; after this utter destruction, they re-built another Guatimala, three Leagues more Easterly. But though Alvarado was lost in this Enterprize, yet the Voyage to Guatimala was not laid aside, for Francisco Pefafques March'd thither with eight hundred Men, of which most were Horses, but found nought else but Snowy Mountains and barren Plains, infomuch, that his Men and Horses were starv'd for want of Provision, wherefore he return'd without success to Mexico, having only burnt some Villages, and had several Rencounters with the Natives.
But Attabaliba a Peruan Prince, inform'd of Pizarro and Almagro's coming, commanded them both to depart out of his Kingdom; but they not regarding it, march'd directly to Caxamalca, where Attabaliba kept his Court, who again sent other Messengers to them with command to leave his Dominions. Pizarro made answer, that he could not obey any Commands but those of his Master the Emperor, who had order'd him to speak with the King himself at his own Palace.

Attabaliba hearing that Pizarro resolv'd to come forward, sent him a pair of Painted Shoes and Armlets, that he might put them on when he appear'd before his Throne: Captain Ferdinand Sotto march'd before with twenty Horse, passing close on the Flank of Attabaliba's Army: The Indians amaz'd at the prancing of their Horset's, retreated into their Fortifications, but were for their cowardize immediately slain by the King's Order.

Sotto sent a Message to Attabaliba, That the Spaniards desir'd peaceably to Treat with him, to which he receiv'd answer, That no Peace could be made, unleas they restor'd the Gold and Silver to the Owners, which they had Plunder'd from them, and forsook his Territories; which so doing, they should have Audience the next day: Hereupon the Bishop Vincent de Villa Viridi was conducted into the Royal Palace, in the City of Caxamalca, and brought before Attabaliba, who came thither in great State; with a Guard of twenty five thousand Men; he was carry'd on the Shoulders of his prime Nobles in a Sedan, about which hung Garlands of Gold, and divers colour'd Feathers; himself was cloth'd in a white loose Velt, without Sleeves; his Temples were bound with a red Ribbon, with a long Taffel on his left Cheek; on his Fore-head stuck three curious Feathers; before him March'd three hundred of his Life-Guard, all in one Livery, who clear'd the way through which the King was to pass. The before-mention'd Bishop carry'd in one Hand a Cross, in the other a Book, discourting with the King to this effect; That God is the Trinity, Adam the first Man; Christ Born of a Virgin, dy'd on the Cross; the Pope God's Vice-Governor, who according to the Power he had from Heaven, had given Peru to the Emperor Charles, as also all other Countries in America; and if he should prove obstinate, and resist, he must expect nothing less than utter ruine. Attabaliba reply'd, That he serv'd Pachamaca, being the Creator of all things; and next to him the Sun and Moon: How glorious do they appear (said he) in comparison of a Crucif'd God? To make Peace and Alliance with mighty Princes, was the true Foundation of wise Government: But the Pope must needs be fainless, despoy'd of all reason, and withal highly unjust, to give away what was none of his own, viz. other mens Kingdoms, in which he never had the least or smallles concern. Moreover, he would not desert that Religion which he and his Ancestors had maintained so many Ages, and the rather, because there are no apparent or sufficient Testimony of the truth of Christianity. The latter clause was thus answer'd, saying, This Book, O King, which I hold in my hand, proves and declares all that you question. Attabaliba looking upon it, turn'd it over Leaf by Leaf, then look'd more intently upon the Print, which done he clap'd it to either Ear, and at last as altogether unfinish'd, in dildainful manner throw it away.

But Pizarro gaining time while the King and Bishop thus discours'd, had drawn his Men in Battel-Array, his sixty Horse he divided into three Wings, Commanded by his three Brothers, Ferdinand, John, and Gonzalvo Pizarro, left the Captains Sotto and Bevalcar in an Ambuscade; Peter de Canada march'd in the Van, and he himself in the main Body, leaving Sotto in the Rear.

So soon as the Bishop could acquaint them in what forcful manner Attabaliba
baliba had thrown his Holy Book, *The Word of God*, upon the ground; both armies were engaged, whilst their Trumpets sounded, their Drums beat, their Canons roar’d, the Horses neigh’d, and the Dogs bark’d, they made a speedy march up against the Walls of Taxamala, which dreadful mixture of terrible noises struck such a Pannick fear into the hearts of the Indians, that they all presently broke, in their flight crowding one another to death at the Gates of the City, which being too narrow to receive them, they themselves made breaches in their own Walls to enter; which opportunity the Spaniards no ways neglected, but entering with them, shot and kill’d all they could reach; their Dogs also having no little share in the slaughter, whole companies of Indians were trode under the Horses feet, yet near Attabaliba’s Chair was the greatest resistance, for no sooner fell one of the Bearers, but immediately another supply’d the place; so that the King was surrounded with heaps of his own slain Subjects, to whom Pizarro himself Charg’d up so close, that having seiz’d him by his long Hair, he pull’d him out of his Throne, and having gotten him under him, secour’d immediately in Fetters, whereupon all his Life-Guard forsook him, and fled: But the lofs of the Battel, which was Attabaliba’s utter ruine, was laid upon Ruminagui, a Captain appointed to lie in Ambush, so to fall in the Rear of the Spaniards with five thouland men; but was so far from performing his Orders, that terrifi’d at the uncouth noife of the Guns, and the refl, that he fled one hundred and fifty Leagues Southerly, before he flops, or scarce ever look’d behind him in so long a flight. Mean while, Attabaliba compounded with Pizarro for his Ransom, viz. to pay him as much Gold as that Hall in his Court (where they made the Agreement) could hold to the top; they first measur’d the heighth, then the length, which was found to be fifty four Foot, and the breadth nine: In pursuance of this composition, Gold was brought thither from all places, according to Attabaliba’s order; yet he could not raise so much as would perform his bargain, which made the Spaniards to grumble: But Attabaliba desiring some longer time to perform it, telling Pi-
that most of the Gold was brought on Slaves Shoulders, a long and troublesome way, of two hundred Leagues long, from the City Cufco, and if this would not satisfy, Pizarro might send some of his own people thither, to inform him, that he need not fear the least danger, as long as he was Prisoner with his Wife and Children.

The two Captains, Sotto, and Peter del Baro being sent away to that purpose, met after some days Journey with one of Attabaliba’s Leaders, who was bringing the King’s Brother Guafcar with a Party, Prisoner to Taxamalca.

Guafcar had now a fair opportunity to crave assistance of the Spaniards, telling them, that he and Attabaliba were the Sons of Guaymaca, so that the Kingdom was to be divided betwixt both. But Attabaliba had by force made himself Matter of all, whereas he being the youngest, ought to be satis’d with that share which Guafcar, being the eldest, would assign him; for the right of Inheritance belonging justly to him, and yet he was carry’d away bound to slaughter: But if Pizarro would do justice in delivering him out of his Brothers bloody Hands, he would raise him thrice as much Gold as Attabaliba had promis’d: To which purpose he defir’d Soto and Baro to put off their Journey to Cufco; which they not daring to do, went on their way; and Guafcar descending the Valley Suctubhansa, was burn’d alive by Attabaliba’s Soldiers.

Mean while, Aimagro came with fresh Forces to Taxamalca, which occasion’d no small trouble in Pizarro, who was only thirsty after Gold: On the other side, Aimagro as greedy; grew jealous that Pizarro should keep the promis’d Hall full of Gold for himself; and he should have no share, because Attabaliba was his Prisoner; therefore he earnestly defir’d that Attabaliba might privately be made away, and that the Booty might be divided to one as well as the other.

Pizarro to prevent all inconveniencies that might happen from his dissembling, gave in the presence of the King to every private Soldier a thousand Ducets in Gold, and six thousand five hundred twenty five Silver Crowns; the inferior Officers receiv’d four and thirty thousand Crowns, and the others sixty thousand; the fifth part of the Booty he reserv’d for the Emperor: And notwithstanding Attabaliba perform’d his promis’d in filling the Hall full of Gold, yet he had the sentence of Death pronounc’d against him; neither would his excuse of Innocency serve, or his Reques’ts to be sent to Spain, there to clear himself before the Emperor; but figthing, and lamenting his misfortunes, was ty’d to a Post, and strangled in the presence of Pizarro. For whose Death, though a Heathen, Divine Vengeance purf’d these cruel and unjust Arbitrators that thus made their Will a Law, none of them dying a natural Death.

Moreover it was obser’d, that a few days before this Execution a blazing Star appeare’d, which Attabaliba seeing, presaging badly of himself said, That a great Prince would die in a short time: but Pizarro’s chief pretences for the King’s just sufferings was, that he had cruelly murder’d his Brother Guafcar: But this was a meer blin’d, for that that incens’d them against Attabaliba, was, that he knowing where the unvalu’ble Treasure lay, which Guafcar had bury’d, would not discover it to them.

Attabaliba, before his death, defir’d that he might be bury’d in the Territory Quito, by his Father Guaymaca, whom the Peruvians for his great Justice and Prudence in Government, believed that he would arise, and settle the World so troubled and full of disorder in peace and quiet: The Corps was accordingly carry’d
Thus ended his unhappy journey, when he against thither in great State after their manner, attended by his Brother, whom Illfeas Raminui, which ran from Attabali, in the Battel, where he lay in ambush when he might have done them good service; in the way to his entertainment, receiv'd with all fheows of forrow; but when they were feated to excess, bury'd in sleep and Wine, he Maffacred and fled Illfeas the Kings Brother alive, and made a Taber of his Skin. Whilst Attabali's Funeral was thus bloodily solemniz'd, his General Quixniz raised a great Army, which Pizarro encountering after a valiant refiftance, totally routed; then marching victorious to Cufco, he faw great Fires in the City, and the Citizens fighting with the Spaniards, sent before; but the Horfe breaking in upon them, moft of them fled the next morning to the Mountains: Thus the Spaniards became Masters of the City, where they inflicted the moft cruel tortures on all Sexes, by that means to force them to discover, if they knew of any hidden Treasures, being not fatisfi'd with what they found there, although they had gotten a greater Treasure in Cufco than that that they had extor'd from Attabali before: Nay, they gave those that were murther'd for Food to their Dogs: Among the reft, Didacus Salazar having a very fierce Dog call'd Bexrril, had alfo an old Indian Woman his Prisoner, to whom he gave a Letter to deliver to the General Pizarro; the Woman had not gone many Paces before she was fet upon by Bexrril, whom Salazar let loose, that he might delight himself in feting the Dog near the poor Woman; but the observing him come running at her with fo great fercenes, fell down upon her Knees, and holding forth the Letter, cry'd, Good my Lord, good my Lord Dog, I muft carry this Letter to General Pizarro, whereupon the furious Curr having more compaffion than the Spaniard, stood still a little, and at laft lifted up his Leg in a scornful manner, Urin'd upon her, and return'd fatisfi'd, at which fportive behavior of the Cur and the Chrone, Salazar laughing, was fo well pleas'd, that he gave the Woman her life.

After Cufco had been sufficiently Plunder'd, Pizarro made Almagro Governor thereof, with the Territories belonging to it, and built near the River Lima a Town, which they call'd Las Reves. Mean while, Almagro receiv'd Letters Patent from the Emperor, in which he was nominated Marshal of Peru; encourag'd by that honor, he took a great design in hand, for the Pervianians had reported, that the Golden Chilli lay to the South; and Almagro being encourag'd, and affifted by Pizarro, March'd inquiet thereof with two Troops of Horfe, and five hundred Foot: But mean while there happen'd fo great Rains, and such foul Weather, that the Ways were almost unfupportable, fo that the Expedition grew very troublesome; yet however he went on, in which hard March he loft both Horfe and Men.

Whilft Almagro was upon this undertaking, Francisco Pizarro receiv'd Letters Patent from the Emperor, in which he was Intitul'd Duke of Peru, but with a Salvo for the honor before given to Almagro; yet these balance'd honors bred great diffention between the Duke and Marshall, which Mango Inga another of Attabali's Brothers observing, laid hold of the opportunity, and setting upon the Spanish Garrifon in Cufco, took the City. Whereupon Pizarro immediately sent his Horfe thither, under the Command of Alphonfo Alvarado, and Gomez de Tofoga, against whom the Indians fought very valiantly, infomuch, that the Battel was a long time doubfual; yet at laft the Spaniards got a bloody Victory, and regain'd Cufco; thither after some time, Almagro returning with ill success, having effected nothing, was kept out by Ferdinand Pizarro, under pre-
Chap. III.  

AMERICA.

tence that he could not open the Gate without Order from his Brother the Duke. Almagro much offended thereat, yet saying little, was to privately lie into the City, that he surpriz'd the Governor Ferdinand Pizarro, and his Brother Gonzalo, with Alphonso Alvarado Prisoners, swearing that he would not rest before he had rooted all the Pizarro's out of Peru. But whilst he was passing the intended Sentence of Death upon them, Gonzalo and Alvarado broke Prison; and got away to the Duke, who troubled for his Brother Ferdinand there in Custody, and in danger of his life, came to Composition; whereupon Ferdinand was also releas'd: But this was no sooner done, and he had got his Brother safe there, but the Duke regarding nothing less than the keeping of the new-made Peace, sent to Almagro, that the Emperor having given him the prime Command over Peru, he requir'd him to leave Cusco, or else he would force him. Almagro sent answer, That if he could see the Emperor's Hand, he would immediately obey, otherwise not; whereupon both Parties prepar'd for War, wherein they had many sharp bickerings in a short time: But Almagro being too weak fell into the Duke's hands, who order'd him to be strangl'd in the Gaol, and his body afterwards to be drawn to the Market-place, and there publicly Beheaded.

Ferdinand Pizarro being not long after sent to Spain, with the fiths of the gotten Treasure for the Emperor, was Imprison'd in the Caftle Moto, for Almagro's Death: But what further happen'd to him there, or became of him, hath never been Recorded by any Pen.

But young Almagro, intigated by his Guardian John Rada, resolving, to be reveng'd for his Fathers Death; to that purpofe he went to Los Reyes, where by the help of some hir'd Male-contents, he design'd to Murder the Duke upon St. John's day, in the Church at high Service: But this business was not so clofely carry'd, but the Duke had fome inkling thereof, who therefore stay'd at home, and went not to Mafi that day. The Conspirators doubting the event, hearing that their Plot was discover'd, though defeated in their purpofe, yet not fail'd in their Courage, ran at noon day to the Palace, crying, Kill the Tyrant, kill the Tyrant. But Pizarro being fo much forewarn'd, had lock'd up the Gates, and arm'd himself, which when they could not enter, yet they went back through the City, and waving a bloody Sword, cry'd, Pizarro is flain; this being believ'd, above two hundred private Friends to Almagro appear'd, who all ran to the Palace, eafing about the Gates: And Francisco de Chares coming out at a private Door, hoping to pacifie the Mutineers, was immediately Stab'd; but they rushing in the way he came, found fome ftrong Opposition, for seven Halberdiers of his Guard fought till they were all kill'd in the Duke's prefence, but Pizarro was taken alive, and being brought before Almagro, he Savagely Butcher'd him with his own hands; which done, they ran crying along the Streets, Long live the Emperor, and Didacus Almagro.

But after all this, Pizarro's Party joyning together, valiantly withflood the Conspirators, fo that a confiderable number were flain on both fides, yet Almagro at laft getting the better, confifcated the Goods of all tho'fe that were againft him; and now every one fliw'd him the refpe'c't of Chief Governor, till the Emperor should either fend him, or fend another.

From hence Marching to Cusco, he had like to have paid for all, but prevented by private intelligence thereof, which happen'd thus,

Garcia Alvarado and Christopher Setello were Joynt-Governors of Cusco, but quarrelling, and coming to Blows in like manner, Setello was flain: This
Almagro took very hainously, as being his intimate Friend, giving forth threatening Speeches of Revenge: which Alvarado inform'd of, and intending some way or other to prevent all Dangers, and fave himself, he invited Almagro to a Feast, but privately resoluing to make it a Bloody Banquet, by his Death at the Table. Of this he being inform'd, as we mention'd before, flaid at home, and privately sent for some Soldiers that had belong'd to Sotello, sending word that he was indispos'd: Alvarado, under a shew of Kindness, goes to Almagro, hoping to perfwade him to come to his prepar'd Treat; but so soon as he was enter'd the Hall, they clapp'd to the Gate, and the Soldiers falling upon Alvarado, slew him: But soon after Almagro was call'd in question, and not long enjoy'd this his usurp'd Authority, for the Emperor Charles sending the Learned Vacca de Castro with full Authority to Peru, to settle that disturb'd Kingdom, Almagro now us'd to Govern, had no Ears to become a Subject: therefore he march'd with an Army to meet Castro, by whom, after a bloody Fight, being beaten and put to Flight, having four thousand Men, he fell into the Victors Hands near Cuzco, where he was treated very severely; for shortly after he was condemn'd to be Beheaded; others were strangled, and some torn in pieces with Horses.

Not long after this great Execution, Blasco Nuñez Vela came to Peru, and being appointed Vice-Roy, had four Councillors assign'd him, with whom he was to consult in all Affairs; and especially to set the Indians at liberty, which till then had suffer'd much misery under the Spanish Tyranny: To perform which, the Emperor had given an Order under his Great Seal, which was to be publish'd and proclaim'd in all Places. Vela at his arrival faithfully perform'd all his Commands, feiz'd upon Vacca de Castro, because he had Executed Almagro without any Examination or Tryal; yet by this means he got the hatred of all, so that most of the Spaniards chose Blasco Pizarro for their Chief, whereby Affairs grew daily more and more out of Order. Nuñez Vela laid all the blame thereof upon William Xuarez Governor of Lima, whom he sent for in the Night, and correcting over-fierely, gave him also two mortal Wounds, of which he presently died: The Body was in the Morning drawn along the Streets, which caus'd so great a murmuring amongst the Inhabitants, that soon after they seem'd to make a general Insurrection: Wherefore Nuñez Vela fearing the worst, resolv'd to convey himself from hence incognito, and pass to Truxillo: But his four Councillors advis'd him to the contrary; yet he took his own way, caus'd all his Treasure to be sent aboard, and having made ready his Horses to depart, the Common People in a tumultuous manner set upon the Palace, catching, catching up, and carrying away all the Silver they could find, and meeting the Vice-Roy, seiz'd, and thrust him into a Dungeon; which done, they fell at variance amongst themselves; for some would have him executed, but others insist'd to have him sent Prisoner to Spain; which last being the more moderate, getting the upper Hand, Vela was put aboard, and committed to the custody of Didacus Alvarez, who Anchoring in the Mouth of the River Tumbex (kindness growing betwixt them) releas'd the Vice-Roy his Prisoner, and set him ahoire, who not long after got some Forces together.

Mean while Pizarro was every where acknowledged for Supreme Governor, who having Intelligence of the Vice-Roys Design, sent Francisco Carvajales ther, between whom and Vela was a sharp Encounter; but at last being worsted, and retaken by Carvajales, he was soon after executed, and his Head plac'd on a Pole near the Gallows.
The Emperor Charles turmoil'd with Wars at home, saw no likelyhood to settle the confus'd Affairs of Peru; yet at last he thought it convenient to send one Peter Gafca thither, an Ecclesiastick, of a subtile and ingenious Wit, who landing Anno 1546. in Lima, with no other Title than Chief Councillor to the Emperor, took quite another course than Veda, perfwading them all, that Affairs should be settled in order; according to their own desires, and former Miscarriages never be remembr'd, being utterly deleted by an Act of Oblivion.

The News of this General Pardon spreading it self far and near, wrought a great change; for Pizarro's Intimates, and those nearest of Concern, shrunck daily from him; which Gafca observing, march'd against him; and that they might make the more haste, they loaded several Peruvians, chain'd, with their Arms, whom when they lagg'd, they switch'd and whipp'd before them. And now both Armies being met, and discharging their Cannons at one another, with considerable loss to each side, whole Regiments came running over to Gafca; so that Pizarro being quite forsaken, yielded himself to the mercy of the Conqueror, who accus'd him of High Treason, and caus'd him to be strangl'd in a Dungeon, and fix'd his Head on a Marble Pillar in Lima, environ'd with Iron Rails, and inscrib'd with a brief Account of all his Offences. But Gafca not thus satisfied, hang'd up several Commanders, and whipping and stigmatizing others, condemn'd them after to the Gallies: But his greatest spight was against the Field-Marshal Carvajales, a Person of the Age of fourscore years, whom tying to a Horfes Tail, he caus'd a whole Hour to be drawn up and down the Market-place, scorn'd and derided of all People; which done, he was quarter'd alive.

Not long after Gafca surrender'd the Command of Peru to the Learned Gafca, and carried an invaluable Treasure to Germany, for the Emperor Charles, who gave him in requital for his faithful Service, the Bilhoprick of Valentia.

Sect. XII.

The Expeditions of John Stade, and Nicholas Durando Villegagnon.

About the same time that Gafca arriv'd in Spain, John Stade had the Command over a small Fort rais'd of Stone and Earth, on the Island Maro, adjacent to Brazil, because the Salvage People of Tupin Imba sail'd twice a year from the Countrey of Brikioka, to Maro, at the time when the Plant Akhata was ripe, of which they made the Liquor that they generally drink at their Humane Banquets: They also landed on Maro about the Bratti-Fishing. This Bratti is a Fish of a very delicious taste, either caught in Nets, or shot by the Tupin Imba, and carried to their several Habitations. Against these People Stade kept a continual Guard, when Heliodorus Hesse, Son to Eobanus Hesse, the famous Latin Poet in Germany, came to visit him. Stade to entertain his Guest the better, went into the Woods to hunt for Venison, where he was taken by the Tupin Imba, of which the King march'd in the Rear with a great Palm-Tree Club, and carried him towards the Sea side, that he, with others that waited on the Shore, might make up a Kauwimpiche (that is, A Feast of Roasted Men). But because Stade being a German of a large Body, well-skimm'd, young, plump and fat, they all concluded to spare this Dainty, and carry him alive to Brikioka, that with such a Banquet they might highly carest their Wives: But the Journey being long, and a just melancholy possessing him with fear, and the terror of
of certain death, and to be Food for such ravenous Cannibals, so macerated and confum'd him, that he was almost dwindled away to Skin and Bone; whereupon thinking him thus lean to make but few savory Morfels, they chang'd their Resolutions, and growing better acquainted, he having learn'd their Tongue, and being able to discourse with them, they lik'd his company so well, that they let him live amongst them. Nine years Stade had been a Slave amongst these Man-eaters, when the French coming thither, bought him for a few Trifles, and carried him to Normandy, where landing Anno 1555. he went from thence to Hamburg, being his Native Country.

Nicholas Durande a Frenchman set sail from Havre de Grace, at the same time when Stade came thither. This Durande having loft a Castle in Brittain, to the great prejudice of the French, out of a pretence of advancing their Affairs, and to fill up their almost exhausted Treasury, reported, That the Spanish and Portuguese Forces were driven out of India, where they had gather'd so much Wealth; and it would certainly redound to the Honor and Profit of France, if they could become Masters of the Gold and Silver Mines. King Henry the Second approving of the Proposal, and the more because the Admiral Gaspier Coligni was also very earneft, looking upon it as a safe Retreat for the Protestants, at that time cruelly persecuted: and Durande, sensible of the Admirals thoughts, privately inform'd him, That in his American Design he chiefly aim'd to plant a True Church of God in America, where the Profeffors might enjoy themselves peaceably. This Report being spread amongst those that call'd themselves Protestants, (fled from Switzerland in great numbers to France) made many of them venture upon the Design; who having fitted themselves, and setting sail with three Ships, after some time arriv'd on the Coast of Brazil, and landed on the Rock-Island, in the Haven Janario: Here Durande built several Watch-houses, and the Fort Coligni, which he fortified with a considerable number of Guns: Not long after he writ to John Calvin, That he would please to furnish this new Plantation in Brazil with good and able Teachers of the Gospel; which Request being immediately taken into serious Consideration by the Claftes, one Philip Coguileray, a Gentleman near Geneva, set sail out of the Haven Honfleurs, with three Ships, freighted with some Provisions, several Persons of divers Trades, and two Minifters, Peter Richer, and William Chartier: But he had scarce made Africa, when they began to have a scarcity of Victuals; wherefore they turn'd their Design of teaching the Gospel in America, to Pyracy, where they made small Scruple or Difference, whether Friends or Foes, but made Prize of all they could light upon, though indeed their Minifters both preach'd and perswaded the contrary, amongst whom a Controversie happening, put other Buffnels into their Heads; for one John Cointak, formerly a Parisian Sorbonist, was also amongst those that remov'd from Geneva, who pretend'd that Coligni had promis'd him a Minifters place, so soon as he landed at Brazil; but Richer and Chartier, not satisfied, that there was any such Promife, and consequently thinking themselves not obliged by his bare Affertion, told him, That themselves being able, under God, to perform the Work, they needed no such Coadjuтор: This bred so great a Rancor between them, that Cointak acus'd them for teaching false Doctrine, and chiefly that they did not mix the Wine at their Sacraments with Water, which Father Clement had strictly commanded. Durande, being prevail'd on by the Cardinal of Lorein, join'd with Cointak, and thereupon so sharply persecuted the Protestants, that he starv'd several of them, which others to escape fled to the Brailsians: Nay, he took John Du
Du Bordes, Matthias Verneil, and Peter Bourdon, out of their Sick-Beds, and tying their Hands and Feet, threw them headlong from a Rock into the Sea: Soon after which, the bloody Persecutor return’d with ill success to France, where he wrote a Book against the Reform’d Religion; but all the Honor which he gain’d was, that all Parties on both sides accounted him a distracted Person.

Sect. XIII.

The Expeditions of John Ribald, Renatus Laudonier, and Gurgie.

Florida being upon the Continent of America, and so call’d by John Ponteus, who landed there upon Palm-Sunday, though Sebastian Caboto a Venetian, employ’d by Henry the Seventh King of England, landed there before, may well be term’d the Europeans Bloody Stage, Ponteus being slain here: But Ferdinand Soto exercis’d against the Inhabitants inhuman Cruelty five years together; yet at last died of a deep discontent, because he could not reach his Aims, having condemn’d so many Floridans fruitlessly to dig for Gold in the Mines. However, since that, Julian Sumanus and Peter Ahumada undertook the Work anew, but with the like bad Success. Anno 1545: one Lodowick Cancellio, a Dominican, thought to effect great things with four of his Associates; but landing on Florida, was destroyed by the Natives. But Gaspar Coligni the Marshal, neither discourag’d by these miserable Proceedings, nor the former Treachery of Durande, prepare’d for a new Expedition thither; and accordingly John Ribald was fitted with two Ships from Diep, at the Charge of Charles the Ninth King of France, wherewith having sail’d thirty Degrees Northern Latitude, he came before the Promontory of Francisco, where he ran up into the Mouth of a wide River, to which he gave the denomination of Dolphin, upon whose Banks were whole Mulberry-Woods, which nourish’d Silk-Worms in strange abundance. From hence he sail’d by the Wolves Head (a Point so call’d, because great numbers of Wolves breed there) and leaving the Cedar-Island, landed on Florida, where he built a Triangular Fort, and having furnish’d it with Men, Guns, and Provisions, sail’d back for more Supplies to France; but coming thither, found all things in disorder, occasion’d by a War amongst themselves; so that the French which guarded and dwelt in the Fort, waited in vain for Relief, and their Provisions growing scant, thought it fittest and their best way to build a Vessel, and sail from thence; which having effected, and being gone about the third part of their Voyage there happen’d such a Calm for twenty Days, that they made not the least way, which drove them to so great extremity, their Provisions being spent, that they drank their own Urine, and fed upon their old Shoes, which also in a short time failing, they agreed amongst themselves to kill and eat one of their Sea-men, call’d Henry Lachet, on whose Flesh they liv’d some days; but being again driven to the greatest want imaginable, in this extremity of Desperation, their Condition being altogether hopeless, an English Frigate discovering them, and observing by their manner of Sailing that they were in some great want, drawing near, sent their Long-boat aboard, and found them so weak, that they were not able to handle their Tack; whereupon generously taking pity of them, they reliev’d them, and conducted them to the Coast of England, and then brought them to Queen Elizabeth, who had formerly design’d to rig a Fleet for Florida.

Mean while, no News having been heard of the formention’d French Plantation.
tation in Brazil, and Coligny's Difference with the King, being decided, he prevail'd so much, that Renatus Landorier should with three Ships fail to relieve the Garrison in the late deferted Fort. Landorier landing in Nova Francia, found a Stone with a French Inscription, plac'd on the Shore by Ribald, and hung full of Laurel Garland: Then he visited the King Saturnia, whose Son Attucus had several Children by his own Mother, according to a Salvage Custom observ'd in that Country. Whilft they stay'd here, a Fiery Meteor appear'd in the Sky, with such fervor, that some Rivers boy'd with the heat of it, and the Fifth parboyl'd, died; nay more, it scorched all the Plants far and near: The Natives ascrib'd this Plague to the French Cannons, by which means they flood in great fear of the French, who might have done great things had not they differ'd amongst themselves; For a Sea-man nam'd Rubel Patracen, pretending to have skill in Necromancy, would undertake to shew the Places where the Gold and Silver Mines were, which the rest of the Sea-men believing, rebel'd against Landorier, and though sick, imprison'd him, forcing him to sign a Writing to this effect, That the two Ships, of which the Rebels made Vaffar and Trincant Commanders, should with his leave and permittance fail to New Spain for Provisions. Whilft they were preparing for their Voyage, Rubisferr having been sent to the King Utina, came back with many rich Presents, and withal brought Information of the Gold and Silver Mines Apalatica; but Vaffar and Trincant taking no notice thereof, set forth, and took a Spaniush Carvel, richly laden before Havane, whose Commander they agreed to release on the payment of a great Ransom; but the Masters Son being sent afoore to fetch the Money which they had agreed for, in stead thereof, made his Fathers Mischance known: whereupon two great Frigats and a Galley were the next Morning very early sent to attack the French, between whom was a sharp Encounter; but in a short time the two Pyratts were funk, and the Prisoners fold for Slaves, excepting a few that escap'd in their Long-boat.

In this interim Landorier receiving no Supply from France, was brought to great extremity; for the Rebels had carried great part of his Store with them. In these straits he was forc'd by those that flaid with him, contrary to the Articles of Peace lately made with King Utina, to take him Prisoner, in hopes that for his Liberty he would procure them some Provisions; but the Inhabitants incens'd at the baseness of so unexpected an Action, could not be wrought upon by any means to give them Relief; but grown more perverse than before, appointed a general Meeting to elect another King, so that out of all hopes, they utterly gave themselves over for lost. In this desperate condition, John Hawkins, a great Sea-Captain, came thither with four English Ships, who pitying their miseries, furnish'd them with Necessaries, and having onely four Vessels, lent them one, because Landorier was at that time too weak to endure the Sea; but not long after recovering strength, and all things ready to set Sail, Ribald came to an Anchor before Charles-Fort, with seven Ships from Diep: Within few days after, the Spaniush Admiral Peter Melandez arriv'd with eight Frigats, whereof the French having Intelligence, cut their Cables, and found out to Sea, whom the Spaniards chac'd, but could not reach; whereupon leaving them, they landed in the Mouth of the River Dolphin, where by help of the Mourish Slaves they began to intrench themselves; of which Ribald having notice, immediately sail'd thither, as least to disturb; if not abolutely drive them from their Work; but surpriz'd in the way by a great Storm, lost most of his Fleet, ingag'd among the Rocks; yet the Men were most of them
them fav'd. In this Storm the Spaniards also suffered great damage, yet made an Advancement of the Frenchmen's Misfortune, marching with all Speed to Charles-Fort, in which were only two hundred weak Men, Ribald having taken the primeffe Soldiers along with him. In the Morning before Sun-rise the Spaniards made a fierce Affault, and in a short time became Masters of the Place, which Landonier seeing, fled in a Boat; others leapimg from the Walls into the Moat, fav'd themselves by swimming: Whoever fell into the Victors Hands, was without mercy slain; nay, such was the Spaniards inveterate malice to the French, that wanting living Bodies, they exercis'd their Cruelty upon the dead, pulling out their Eyes, and cutting off their Members, carrying them in Triumph on the Points of their Swords. In the interim, the Storm ceasing, Ribald approach'd Charles-Fort, with his shattered Fleet, but was so amaz'd when he saw the Spanish Flag set upon the Walls, and Vallemund marching towards him with a Squadron of Spaniards, that although a River lay between them, yet he presently came to a Treaty, and deliver'd up all his Men, being above four hundred, upon promise of good Quarter; but the Spaniards in stead of keeping their Agreement, bound them, leading them all to the Castle, where, both against their Articles, and the Law of Arms, they maffacred them, and burnt their Bodies; but Ribald being quarter'd, they fix'd his Limbs upon Poles about the Walls, sending his Head to Sevil. When Charles the Ninth, King of France, receiv'd notice hereof, he was not in the least concern'd at the Spanish Cruelty us'd to his Subjects, out of a particular hatred to Coligni, the first Promoter of the Voyage. But though the French Crown so little regard'd the inhumane Usage committed by the Spaniards in Charles-Fort, yet Dominicus Gurgie shew'd himself so highly concern'd thereat, that turning all his Goods into Money, he levied two hundred Soldiers, and fourscore Sea-men, which he put aboard three small Ships, pretending that he would onely touch at Brasile; but failing beyond Cuba, he floof directly for Florida, where after his Landing he was kindly receiv'd by Saturiona the King, who complaning much against the Spaniards Oppressions, sent to joyn with him his Kinman Obstocara, having the Command of a great Army.

The Spaniards by this time had not onely strengthen'd Charles-Fort, but also rais'd two others on each side of the River Mayo, in which three Holds lay Garrison'd above four hundred choice Soldiers. Those in the new Forts made little resistance, but quitting the same, and flying into a neighboring Wood, fell into an Ambuscade of Indians, who slew thirty of them, and preserve'd ninety for a Publick Execution. Thus they march'd on victoriously to Charles-Fort, where by the way sixty Spaniards falling out, were every one cut off, which much facilitated the Frenchmen's Work. The Governor Melandes, seeing a certain ruine attend him, fled into the Woods; but met there by the Florida's, return'd to the French, of whom he begg'd Life for himself, and some of his People: Yet Gurgie deaf to all treatises, would hear nothing, but press-ing on, took them all Prisoners, and as a just Reward of their Cruelty to his Country-men, hang'd them on the next Trees: After which Execution, it can scarce be expre's'd how kindly the Natives entertain'd the French, because they had freed the Countrey from the Spanish Oppressions. Thus having accomplisht his Design, and returning home, he was nobly receiv'd at Rachel, but had not the least Countenance for all his trouble from the King; the Cardinal of Lorein telling him, That for his good Service he ought to suffer death, because he had fitted out three Ships upon his own Account, without Authority.
Four English Expeditions, under the Conduct of our Famous Sea-Captains Martin Forbishe, Sir Francis Drake, Thomas Candilis, and John Smith.

Captain Forbishe sailing to the Northern Parts of America, Anno 1576. chusing a bad time, the Year being too much spent, and the Ocean so full of Ice, that it forc'd him to return to England: Not many Months after, he renew'd his Voyage; Queen Elizabeth having rigg'd out, and sent under his Command one Frigat and two Ketches, Mann'd with a hundred and forty Men: The twenty sixth of May he weigh'd Anchor, and sail'd to the Orkneys, lying to the North of Scotland, where landing, he found the poor Islanders fled out of their Huts, into Caves and Dens among the Rocks. From thence he steer'd North-North-West, through abundance of floating Pieces of Timber, which ofentimes gave him great flops. The fourth of July he made Friesland, where he met with a great Storm of Hail, mix'd with Snow: Before the Shore lay a great Ridge of Ice, which hindred for a while their Landing: Here he saw several Wild People, but could not come to speake with them; for upon the leaft approach they fled; yet when they saw any advantage, made resistance: At laft, three of them came unarmed to the Shore, beckoning Forbishe to come to them; which he had done, had not great numbers of the Natives appear'd too soon from an Ambuscade in a Wood, and behind a Hill, who seeing themselves discover'd, march'd up into the Countrey, three onely staying on the Shore, of whom the middlemost signifying to be lame, at laft fell down, whom his Companions took up, and carried a little way, but then forsook, by which the English observing their Design, shot that the Sand flew all about him; whereupon forgetting his Lameness, he ran as swift as a Deer up a Hill.

Forbishe's Men had by this time fill'd two Barrels with a Mineral not unlike Gold, but was afterwards found to be of little value. Nothing else of Remark did he find here, except great long-hair'd Men, who being exceeding salvage, subtly plot nothing else but to murder, lurking for Men, like Wild Beasts for their Prey, whom, when caught, they tear in pieces. Cloe fitted to their Bodies, they wore the Skins of several Wild Beasts, priding in the Tails which hung down betwixt their Legs. Their Tents are of conjoynd Whalebones, cover'd over with the like Skins, the Entrance always facing the South. They use Bowes, Arrows, Slings, and two forts of Boats: In the biggest they can carry seventeen Men, which are made of several Wooden Planks clinch'd together, and cased on both sides with Leather: The smallet ones are cover'd just in the same manner, much resembling a Weavers Shuttle, having in the middle a Hole, wherein a Man sits, who drawing the Cover of the Boat about his Waist by Strings, with one Oar makes swift Passage.

The Countrey it self is barren, yet seeds abundance of Deer, Hares, Wolves, Bears, and Dogs like Wolves, whose Flesh serves the Inhabitants for Food.

This Countrey seems to be exceedingly troubled with great Earthquakes, because several pieces of Rocks, and whole Mountains rent asunder, may be seen in divers places.

The fourth of August, Forbishe having elevated the Pole to sixty eight Degrees, beyond what Sebastian Cabot, the first Discoverer of those Parts, and set out by Henry the Seventh, had done (for America Northward never before had been
been so far penetrated) and laden with a sort of shining Sand, which he believe'd might contain much of a Golden Oar, having with him three of the Natives, viz. a Man, a Woman, and a Child, set Sail for England, and the seventh of September came to Milford-Haven, and not long after arriv'd in London, where in short time the Salvages died.

At the same time when Foresifer fail'd Northerly, Sir Francis Drake also, fitted out by Queen Elizabeth, steer'd another Course, failing by Cape Blanko and Cape Verde, along the African Coast, to Bra:isle, where he caught several Sea-Wolves; and Anchoring in the River La Plata, furnish'd himself with Fresh Water: Then proceeding on his Voyage through the crooked Straights of Magellan, he came to an Anchor before Moucha, waft'd by the South Sea. The Islanders receiv'd him very courteously, because they were inform'd that the English were at great Wars with the Spaniards, to avoid whose Cruelties, they had deferted the main Continent, and feled on Moucha. One of these Mouchansers going aboard, serv'd them for a Pilot to the Haven Valparize, where Drake burnt the St. Jago, a small Village, and plundering all the Country about it, got together a great Treasure of Gold and Silver. Before Arica he took three Spanish Ships, richly laden; and before Lima, four more, having an unvaluablc Treasure of Pearls and Gold aboard them. Thus enrich'd, he steer'd his Course Northerly to forty-two Degrees; but the Cold forcing him to fall four Degrees to the Southward, he discover'd a very pleasant and inhabited Coast, the People whereof shew'd him great kindnefs: The King himself coming aboard with a great Train, set a Crown of Gold upon Drakes Head, and gave him a Golden Scepter, and an Ivory Chain. After this he inspected the Islands Tidor, Ternata, Java, Zeilon, and Cape de Bona Esperanza, from whence, after a three Years Voyage, having encompass'd the World, he came safe to London, where he rest'd not long; for failing Anno 1585. to America, he took great Prizes from the Cities St. Jago, St. Domingo, St. Augulf, and Cartagena, setting them all on Fire. Thus again returning home victoriously, and after the famous defeat of the
Spanish Armada, he rigg'd out a new Fleet, having for his Vice-Admiral Captain Hawkins: Their Design was to have sail'd to Panama; but both dying, and so the Commission ceasing, the expected great and golden Project allo died with them.

A Year after the death of these famous Navigators, Captain Thomas Candish Mann'd with a hundred and twenty Men, and Provisions for two Years, setting sail in a lucky Hour, a second time encompass'd the World, passing the Straights of Magellan; in which Voyage having got above ten times the value of his Charge, by taking the Spanish Carrack St. Anna, valued at twenty Tun of Gold; and at last freighted with a Mafs of Treasure, he came safe into the River of Thames.

But much worse success had Captain John Smith, who weigh'd Anchor Anno 1614. with two Ships, fited out by several Merchants in London, for New-England, and on the Island Minachigga to load Copper, Gold, and other Minerals that were to be had there, and also to fish for Whales: But there were no such Minerals to be found there, nor any Whales to be taken on the Coast, because the time of the Year was past; so that he return'd home without Success. However, not long after, they undertook the fame Expedition a second time, but with worse Fortune; for being gotten in sight of Virginia, he was treacherously fet upon, and taken by the French, who accus'd him, that he had destroy'd the Plantations in Nova Franicia, and unless he would make satisfaction for the Damage, they threatened him with death. He was carried Prisoner to Rochef, in a French Ship; but nor far from thence surpris'd by a mighty Storm, Smith finding an opportunity, leap'd into the Boat, and driving betwixt the Waves, at last, half dead, was thrown upon the Island of Oleron, whom afterwards, having loft all, an English Ship took in, and brought to his Native Countrey.

Sect. XV.

Netherland Expedition by Jaques Mahu, and Simon de Cordes.

Five Ships being fitted out at Rotterdam, the Command of them was given to Jaques Mahu and Simon de Cordes, who on the twenty seventh of June, Anno 1598. weigh'd Anchor from the Green, and sail'd on an immense Voyage; at last landing at the Island St. Jago, they won a strong Castle there, and took two Barques; but at last Articled with the Portuguefe, that they might undisputedly supply themselves with Fresh Water, yet they, as if they minded no Agreements, whilst the Dutch were filling their Casks, came down upon them with two hundred Horse, each having a Foot-Soldier behind him; but the Hollander made so stout resistance, that they put them all to flight.

The City of St. Jago, which gives Denomination to the whole Island, is built long-wise, having a convenient Haven, like a Crescent: Through the City glides a River, on both sides of which, beyond the Town, arife several high Mountains: That part which faces the Sea, hath Fortifications, defended with strong Bulwarks. The Portuguefe had brought all their Guns to bear towards the Sea, to sink the Holland Ships, which they invited thither under pretence of kindness; but a great Storm hindered the Fleet, that they could not Anchor at the appointed place; only two of the Ships fall'd pretty near, but not within Shot.

From
From hence steering to the Desolate Island Brava, they saw nothing but five ruin'd Houses, the Door of one flopp'd up with great Stones, which being taken away, was found full of Turkish Wheat, which prov'd a great kindness to the Sea-men.

Mean while the Admiral Mahn died, and his Body put into a Chest fill'd up with Stones, was thrown over-board; so that Simon des Cordes carrying the Flag, steer'd his Course to Guinea; there to refresh himself, for most of his Men were so weakened by the Scurvey, that they were scarce able to hand the Sails.

Arriving at their intended Port, the Sick were carried ashore; and the Vice-Admiral Beuningen, being conducted by a French Guide, went to the Vice-Roy of that Countrey, who sat on a low Bench, with a Sheeps-skin under his Feet, in a Violet-colour'd Cloth Suit, without any Linnen, Shirt, Shoes, or Stockins; on his Head a Cap made of yellow, red, and blue Eastern Cloth; his Face whitened with Ashes, shew'd in several places its natural blackness, appearing through the Colours; about his Neck a Collar or Chain of Glafs Beads: Behind him sat his Nobles, with Cocks Feathers on their Heads, and their Skins painted Red.

Beuningen plac'd by the King on a Mat, complain'd to him, That the Guineans fled from him where'er he came, though in Friendship, to barter European Commodities with them, against Fruits, Poultrie, Sheep, and other Provisions; Whereupon the King promis'd to furnish him therewith, and invited Beuningen to Dinner. After some stay, the Kings Wives entred the Palace, a very mean and ill-favour'd Building, more like a great Barn than a Kings House, and plac'd a kind of nasty Trough on the Ground, in which lay nothing but some wild Herbs, and a piece of a smoak'd Sea-Calf; and though he was a Person of the largest Size, and corpulent, yet he eat sparingly. Beuningen, though exceeding hungry, found little relief in such kind of Meats, wherefore spreading a Napkin, his Attendants brought him some Bisket and
Spanish Wine, whereof after the King had tasted, he lik'd so well the relish, that it rock'd him asleep, whilst Benuingen walk'd to the Sea-side to refresh himself; but the Guineans coming about him, he was forc'd to return to the King, who waking at the noise, appeas'd highly incensed at his People, and took Benuingen into his House: However the Subjects, notwithstanding the Kings Commands, when Benuingen was sent into a neighboring Hut, kept Watch about it all Night: The next Morning early an old Woman entred, muttering to her self, and went out and in to Benuingen three times one after another, knocking on a Box not unlike a Pair of Bellows, out of which flew abundance of Dust about Benuingen, which caus'd a great Laughter amongst the Guineans. The King also coming to him, presented him with two Goats, and four Hens, and so conducted him back to the Ships.

Benuingen seeing that there was no good to be done, set sail from hence, and coming before the River La Plata in America, it appeas'd Blood-red. Out of the Water which was taken up in Buckets, start'd a sort of Insects like Fleas, which caus'd a strange and sad Distemper amongst the Sea-men, that when any Meat was offer'd to them, to soon as ever they put it to their Mouths, they would fall down backwards in a swoon, foaming and frothing at the Mouth, and turning up the White of their Eyes, die distracted. Suffering under this Disaster, they hasted from thence with all speed, and falling into the Straights of Magellan they kill'd above fourteen hundred Penguins, which is a Bird that preys on Fish, and lives in Holes under Ground; they somewhat resemble a Goose, only they stand more upright, and are double-crested, with two plumy Combs. Coming to an Anchor in the Green-Sea, there arose a great Storm, which continued several Days, so that they were forc'd to moor their Vessels with four Anchors, extremely afflicted both with Hunger and Cold, preferring themselves alive by eating young Grout, at that time not above a Span high from the Ground; but this course Food bred an incurable Dropie, that posseted them on to a sudden death. Afterwards, when the Weather grew more pleasant, the Inhabitants being Gyants, most of them eleven Foot high, grew more troublesome, oftentimes affailing them, and throwing Darts pointed like Harping-Irons, at which they were very expert. Their Salvage Natures may appear by their Dealings with the dead Hollanders, cutting off their Heads, and bruising them to pieces, flitting Darts through their Hearts, and cutting off their Privities.

At last the Fleet getting into the South Sea, were by stres of Weather separated one from another: Two Ships, being the Faith, and the Good Tidings, were driven back into the Straights of Magellan, where they suffer'd the utmost extremity of Hunger: Here they took a wild Woman, and two Children, who being of a fallow Complexion, had a great hanging Belly, a wide Mouth, crooked Legs, long Heels, and Breasts like Cows Udders; about her Neck a String of Snail-shells, and upon her Back a Beasts Skin, fastned about her Neck with the Sinews of it; her Food nought else but live Fowls: The same Diet the Children fed upon: The youngest being but six Months old, had his Mouth full of Teeth, and ran without any help: The eldest they carried to Amsterdam; but having kept the Woman aboard two Nights, they gave her several Trifles, and set her afloat. Here they found old Lee in the middle of Summer, four Foot thick. 

Benuingen linger'd in the Straights of Magellan, and being tired out with Hunger, Cold, and Storms, return'd home; and had they not by accident taken
taken abundance of Coney's, they had all perish'd. Above two Years had this unhappy Voyage last'd, when they arriv'd at their Native Country, with six and thirty Men, being all that remain'd alive of a hundred and five.

Sect. XVI.

The Expedition of Oliver van Noord.

Two Months after Moby, Oliver van Noord set sail with four Ships, and two hundred forty eight Men, from the Masts. Having reach'd the Prince Island, he left seven of his Men by the Treachery of the Portuguese; and Anchoring before the City Javeiro, he was no better entertain'd by the fame Nation: Here having a Rencounter, and both Sides receiving considerable Losses, he steer'd for St. Sebastian, a fruitful Island, producing an Herb very wholesome against the Sweate: Here the Sea-men found great store of Sea-Mews, and Parrots, besides several sorts of delicious Fish. The approaching Winter advis'd them from entering the Straights of Magellan so late; wherefore they judg'd it best to seek a convenient Harbor, to put their Sick aboard to refresh themselves. The Island St. Helen, for its fruitfulness, seem'd to be the most convenient for this purpose; but a great Storm preventing them, they came to St. Clara, where taking in Fresh Water, they cast Anchor in Porto Deire. In this Haven they saw a kind of Sea-Dogs, whose fore-parts being overgrown with long Hair, seem'd like a Lyon, and the Feet like Mens Hands; over their Eyes and Upper-lips grew black and white Hair, which in Stormy Weather stands flaring upright, but in Calm, lies flat and smooth; they Urine backwards, sleep very soundly, and cast their Young every Month: Their Flesh well-boyld prov'd a savoury Dishes.

Van Noord going ashore here, saw not a Man; but only Burying-places on high Rocks, built of red Stones, and adorn'd both within and without with Bowes, Arrows, and other strange things: Under the Heads of the Dead lay four-square Shells, and other things artificially carv'd. Curiosity made them desirous to make a further search into the Country; wherefore he rowed during a whole Tide up a River; and when their Boat ran aground at the time of Ebb, he walk'd several Leagues up into the Country, where he saw nothing but Deer, Buffalos, and Ostriches: and because he saw no People, he judg'd the Coast to be uninhabited; but returning again, he found it otherwise, for the Sea-men, though commanded to stay in the Boat, which lay in the middle of the River, went ashore, where they were so fiercely let upon by thirty of the Natives, that three of them were kill'd, and another wounded in the Leg. These People are very strong and Salvage, with painted Faces, and long Hair; but after this Encounter, they saw no more of them.

But van Noord having spent fourteen Months in search, and lost a hundred Men, set sail again with three Ships; for one of them, being the Unity, he burnt at the Island Clara, where he Winter'd, because of a great Leak which could not be stopp'd. Here they brought five thousand Fowls aboard, which much increased their Stock of Provisions.

From hence passing the Wide Ocean, into the Straights of Magellan, four times the Fleet attempted to go into the South-Sea, and was as often driven back by crofs Weather into the Straights; but the fifth time prov'd more successful for having got through, and left the Straights a hand'som way after, they discover'd
detect'd two Islands, from one of which the Sea-men going aland, brought four Boys and two Girls; who afterward instructed in their Tongue, inform'd them concerning the situation of the Countreys thereabout.

After that, the Fleet Sail'd into Hangers Haven, where they found the ruins of the defeterd Philip-Stadt, which Captain Thomas Candish had seen fourteen years before, fortis'd with four Bulwarks; but now onely some Houfes, a Church, and a Gibbet were standing: Four hundred Spaniards built that City, as a Key to the Straights of Magellan. But all their Provisions being spent in three years time, and no relief coming from Spain, and what they Sow'd expeeting the hopes of a Harvest, the Salvages coming down by night defray'd; which caus'd so great a Famine to rage amongst them, that many dy'd, not so much as putting off their Clothes, who lying in the Houfes unbury'd, occasion'd such a stench in the City, that the remainder fled into the Field, where they liv'd a whole year by the Fruits of the Trees, Herbs, and Roots: At last, three and twenty of them, amongst which were two Women remaining yet alive, resolv'd to travel to the River La Plata, and accordingly set forward, but what became of them could never yet be heard, only one Ferdinando that was of that company, accidentally wandering from the rest, happen'd to light upon Candish's Fleet.

Here Van Noord fet on Shore the Vice-Admiral Jacob Claeszoon Ilpendam, for some crimes which he had committed; and leaving him behind, Sail'd from thence thorow the South-Sea along the Coast of Chili and Mocha; which Island, of a considerable bigness, rises in the middle with a forked Mountain, from which a convenient River comes flowing down into the Country.

The Inhabitants conducted the Hollanders to their Village, consisting of about fifty Houfes built of Straw, but were forbid to go into their Huts: Upon the Mens call the Women appear'd, which being divided into three parties, humbly kneeld down before them; and soon after an old Woman brought an Earthen Can full of Cica, a Liquor made of Mays, whose extracted Juice, boy'd and put into Tubs, ferments like our Beer or Ale, with a cap of Barm, with which they treated the Hollanders, who drinking moderately, were well refresh'd; but the Natives will ply this Liquor, till they make themselves Drunk, and are mad drunk.

From hence Van Noord steer'd his course to Santa Maria, where in his way he took a Spanijs Ship, call'd Buen Jefus, that is, Good Jefus, and receiv'd intelligence from the Prisoners, that the Admiral Simon de Cordés, with twenty three Men was kill'd by the Americans on the Promontory Laupia, being the head Land or Point opposite to St. Maria's; that a year since, taydings were brought to Lima of his Fleet; so that they had made all things ready to witheld him. But Van Noord hinder'd by strong contrary Winds, not able to reach Santa Maria, stood directly for St. Jago, in whose Haven lay a great Spanijs Ship full of Indian Merchandize, and two other going in, which two he fet on Fire, and the third he Tow'd towards his Fleet; repeating extremely that he had given liberty, and fet Francisco de Ivarro Commander of the Buen Jefus a-shore; because he afterwards understood from the Spanijs Pilot, that Ivarro threw ten thousand two hundred pound weight of Gold, pack'd in fifty two Cates, over-board, when he obferv'd that he was like to loose his Ship.

The Fleet Sailing forward came to an Anchor before the Thieves-Island, whose Inhabitants are very light Finger'd, go stark naked, and are of great strength; they found the Women much Disguis'd, their Nofes, Lips, and Cheek-bones eaten by the French Pox.
In the Bay La Baya, the Dutch Admiral, with a Spanish Flag on his top-Mast, sent one of his Sea-men in a Fryers garb afloat, if possible under that disguise, to get Provisions; which falling out according to their Design, they were supply'd with all manner of Victuals: After that, the Hollanders burnt five Villages on the Island Capul; took a Chiney Vessel, one Spanish Barque, and a Carvel Laden with Brandy from Cocos; and after a great and bloody Fight sunk the Admiral of the Manilla's, and so at last with various fortunes arriv'd at Rotterdam, having in three years encompass'd the World.

Sect. XVI.

The Expedition of George Van Spilbergen.

Anno 1614, the eighth of August, the East-India Company of the United Netherlands set out seven Ships under the Command of George Spilbergen, who coming to Cape St. Vincent, and engaging with the Portuguese, took one of their Ships, and so proceeded on his Voyage to the Straights of Magellan, but by a huge Storm, the Fleet was separated. Amongst those that were scatter'd was the good Ship call'd Meramo, in which some of the crew had conspire'd to have kill'd the Master, and seiz'd the Vessel, but he having some inking thereof, set so stoutly upon two of the chief Contrivers with his drawn Hanger, that he forc'd them to leap over-board, and as stoutly ordering the rest, set all to rights.

But Spilbergen Landing on one of the Pengusn Islands, found two Dead Bodies just cover'd with Earth, about their Necks was a Chain of glittering Snail Shells neatly strung; the Grave full of Bowes and Arrows, was plesant to look upon, between several high Mountains, whose tops lay bury'd in Snow: The Fleet came out of the Straights of Magellan, but not without great danger, for the South-Sea much disturb'd by tempestuous Weather, seem'd to raise its Waves
Waves up to the Sky, so that they had enough to do, from being engag’d among the Rocks: But at last with great difficulty, wonderfully escaping all danger, they Anchor’d before La Macha, an Island which on the North side lies low, and on the South defended by Rocks.

Spilbergen seeing abundance of Men standing on the Shore, Row’d thither to Barter for Merchandise, amongst them was a Sheep with a long Neck, bunch-Back’d like a Camel, a little Mouth, and long Legs; which Beast serves them in stead of Horfes, to carry their burthens, and perform their Tillage. The Americans breed up these Sheep every where, by reason of the extraordinary benefit they receive from them; some of them keeping no less than eighteen hundred. Their Shepherds ride upon a Beast almost like an Ox, and carry in their hands Copper-Plates, hung round about with Bells, which they make, making a different noise when their Sheep shall go in or out; and on their Heads wear Feathers like Coronets, standing upright.

From thence, Spilbergen departing, Landed at last on the Island of St. Mary, where he burnt all the Spanish Villages; as he did also in Val Paryla.

After going ashore, in the Haven Quintero, he saw abundance of Wild Horfes drinking out of a Rivulet, supply’d with fresh Water from an adjoining steep Mountain; so soon as they elpy’d Men, they instantly running away, were seen no more.

Having left Quintero, and spent a Moneth in Sailing farther, they disco-y’d eight great Ships; whereupon the Prifoners informed that, it was the Spanish Fleet, of which Rodrigo de Mendoza was Admiral, fitted out on purpose to fight Spilbergen, whose coming (as we said) was known a year before.

At midnight Mendoza Boarded Spilbergen, but was so roughly receiv’d, that he was forc’d to Retreat with the los of the Ship St. Francisco. At Day-break, the Holland Admiral fir’d at Mendoza, who answer’d with equal courage, occasion’d a smart Engagement, wherein the Spaniards were so hard belter, that they put forth a White Flag; but it was immediately taken in again by the Commanders afoard, choosing rather to die, than surrender, because they had mock’d at Mendoza, when he hinted the difficulty of the Enterprize in the Grand Peruwan Council, saying, They went out, only to take a few disabled Hollanders, and tying them hand and foot, carry them to Execution. Yet their high and proud Stomachs prov’d very fatal to them, for afterwards totally routed and put to flight, most of them sunk by the way.

This done, the Hollanders victoriously Sail’d to Calzon de Lima, having a convenient Haven: The City adorn’d with curious Houses and Temples, is strengthen’d by a Platform, Planted with great Guns towards the Sea, and the Shore was guarded by eight Troops of Horfe, and four thousand Foot; where-upon Spilbergen, who was yet to go go great a Voyage, judg’d it no way convenient to adventure the los of all on the good or bad event of a Battel, especially being so much over-power’d by the number of the Enemy: Wherefore seeing no hopes of Victory, setting forward to Guarma, he got some fresh Provisions.

Against the City Pêts, he play’d his Cannon with such fury, that the Townsmen deferted the place, which he observing, set it on fire, and Sail’d to Amapalque, where from the Fort at firft the Spaniards fired some Guns at them; but soon after changing humor, they came to an Accommodation, furnifhing the Hollanders with convenient Provisions. Paffing on, and coming to Stelques, both Natives and Spaniards having suffer’d some of the Hollanders to Land; after
Chap. III.  

**AMERICA.**

set upon them treacherously in a Thicket, but to their little advantage, for they made so good a Defence; that the Affilants not able to bear the brunt, fled with great loss.

Spitbergen Sailing from hence to the Manilla's, waited there for the Spanish Admiral Juan de Silva, who had made (as was reported) great preparations for him long since; but seeing it was in vain, at last he return'd to Zealand, where he came to an Anchor, laden with Riches, in the middle of Summer, Anno 1617.

**Sect. XVII.**

The Expedition of William Cornelizzon Schouten, and Jacob Le Maire.

Some Merchants that were call'd the Austrian Company, fitted out one Ship with fifty five, and a Ketch with two and twenty Sea-men, giving the Command thereof to the Captains Schouten and Le Maire: Anno 1615 they Weigh'd Anchor from the Texel; the first took a view of one of the three Islands, call'd Mabramboma, lying before Cape Sierra Leon. This Island appearing a great height out of the Sea, was not inhabited, they seeing only three Wild Buffles, many Wild Cats, Birds which bark'd like Dogs, Wild Palm-Trees, Lemon-Trees, Turtles, Crocodiles, Partridges, and Stocks: From hence, passing by the dangerous Shelf Abralhos, they ran into Porto Delfire, where on the Rocks they found abundance of Eggs, and Spierings, or Smelts, and Spier-grafs sixteen Inches long, wherefore they call'd that Inlet Spierings-Bay. Their Sloop also brought two Sea-Lions, and one hundred and fifty Penguins from the Penguin Isles, having Sall'd two Leagues up the River; in the interim, the ground being meer Stone, and their Anchors coming home, the great Ship drove against a Rock, and at Ebbing Water, broke off the outermost Planks and Iron-Work, and the Ketch also striking on a high Shelf, was at low Ebb two Fathom with her Keel above the Water, and had without peradventure been overset, and bilg'd, but a fresh North-West Wind kept her upright, yet at last, the Weather growing calm, the lean'd, but the Tide coming in very fast, set her afloat, so that she was miraculously sav'd; then setting Sall again to King's Island, they found so many Eggs of black Mews, that one without firing from his place, might reach above fifty Nefts, and in each of them at least three Eggs, which they carry'd aboard by thousands. Their Boat Rowing Southerly down the River, found some Ostriches, and Beasts not unlike Stags, but with exceeding long Necks. On the Hills lay Stones heap'd one upon another, which removing, they found Dead Bodies of eleven Foot long; here they spent their time in cleansing their Ships, and new Sheathing the Ketch, but as they were Tallowing, the Flame accidentally got between the Crevell's which immediately taking Fire, in a short time consumed it to Ashes: The great Ship had gotten a Horn in her Bow, seven Foot under Water; this Horn being firm without any hollowness, and not unlike a great Elephants Tooth, struck thorough two Athen and one Oaken Plank, sticking in a Rib of the like Wood, and yet above half a Foot remain'd out to be seen.

At length Schouten Weighing Anchor from Porto Delfire, and Sailing to four and fifty Degrees Southern Latitude, met whole Shoals of Whales, insomuch, that he was fain to Tacque to and again to flun them. Sea-Pies, bigger than Swans, came flying in great numbers aboard, suffering themselves to be taken with
with the hand. On the North-side they spy'd a high and scraggy Coast spreading it itself to the East South-East, which they call'd, The States Country, that which lay to the Westward of it, Maurice of Nassau, the Islands in fifty seven Degrees Barmstield's Isles, and the sharp Point in which lay the Snowy Mountains, Southward of the Magellan Straights end, the Cape of Horn.

Schouten had now gotten the height of fifty nine Degrees, when he enter'd the South-Sea, through the new passage between Mauritius and the States-Country, which was call'd from his Partner, The Straights of Le Maire.

Near the two Isles Juan Fernandez, they found great store of Fith, after that they view'd these Islands, that lay scatter'd up and down the South-Sea, each of them they nam'd according to their severall occasions, calling the first, The Isle of Dogs, because they have abundance of Dogs there that could not bark: Another, The Bottomless Island, because the Sea was so deep about it, that they could not come to an Anchor. The Inhabitants who go naked, with their Skins pounced full of strange shapes, of blue Snakes, Dragons, and such like Creatures, Sall'd out of the Woods upon the Hollanders with great Clubs, to which was fasten'd the Sword or Snout of a Sword-Fifth, and also with Slings.

Somewhat further they came to Water-Land, and Fyss-Island, the first so nam'd, because the Shore round about was planted with Trees, but in the middle all lay cover'd with Salt-Water; the other from the Fyss, which with incredible numbers troubled the Sea-men four days together.

Moreover, the Reception or Entertainment which Schouten was welcome'd withal, at the Hoorn-Islands, being very remarkable, we will in brief relate:

Anchoring in nine Fathom Water, Shelly ground, before a fresh Rivuler, three Hollanders sent to the King were by him courteously entertain'd, who with strange humility, not bow'd, but kisst their Feet fell flat on the ground, and put the Hollanders Feet upon his Neck; and after this manner of Salutation, waited upon them aboard: Yet although this King fawn'd so much, and seem'd so humble, yet he was very severe over his Subjects, for finding one that had filch'd a Sword, he not onely brought and restor'd it, but immediately executed the Thief before their Faces.

Le Maire and Arias Claeszoon were much honor'd here, for the old and young King put their Crowns on their Heads, curiously Wrought of fine White Feathers, and the end adorn'd with small Red and Green Feathers; they gave also to each of them a Pigeon, White to their Wings, the hinder part Black, and under their Bellies Red.

In the interim, the King of Water-Island visited the other, by whom Le Maire was treat'd: When they met, they made strange shews of Honor to each other, but at last shew'd their Salvagens by eating raw Fith, and rudely Dancing before the Hollanders. Le Maire going into the Countrie, and climbing up a high Mountain, saw nothing but Morafs Wilds, and Vallies, lying under Water: The King and his Retinue here kept him company, during his stay there, when weary with walking, they fay down together under Coco-Nut Trees; the young King tying a String about his Leg, climb'd with exceeding dexterity up a high Tree, bringing several Coco-Nuts down with him, which he open'd very expeditiously.

Arias Claeszoon, Rowing a-shore one night, found the King sitting under a Roof, refting on four Pillars, where severall Naked Women Dance'd before him according to their Muffick, which was Taboring upon a hollow Piece of Wood,
Wood, which yielded a murmuring sound without any distinct Tune.

But the two Kings meeting again, the next day Complemented one another with more antic and ridiculous Postures, sitting side by side under the Roof, imploring their God, with their Hands folded, and their Heads bow'd to the ground: At this interview, four Holland Trumpeters and Drummers stood playing before the King, to the great admiration and amazement of the Islanders, which were near ten thousand gather'd together upon the News of the Strangers to attend the two Kings. Soon after a great Company of Ruficks came running thither, which had a green Herb call'd Cava, ry'd about their middle; on a sudden they began all to chaw this Cava, throwing that which they had chaw'd into a large Wooden Trough, then putting Water to it, they kneaded it together, which done, brought the Liquor on their Heads to the two Kings, before whom they kneel'd when they gave them any: Yet notwithstanding they receiv'd such honor from their Subjects, they shew'd fervile respects to the Hollanders, for every King present'd them with a Pig, which they first laid on their Heads, then kneeling, put it down at Le Maires Feet, and bowing their Heads to the ground, rose again. They wear their Hair long, which Brayded, hung on the left side of their Heads down to their Hips, ty'd at the end with two Knots; but the Nobility had two such Locks: All of them went naked, their Privities only cover'd. The Smallest of the Men exceeded the biggest of the Hollanders in tallness. The Women had long Breasts, hanging like Satchels down to their Bellies, and so unshamefac'd, that they prostituted themselves to any, in sight of all Men; and still at low Water, their business was to catch Fish, which they greedily eat raw.

After all this Entertainment, Weighing from hence, Schouten Sail'd along the Coast of New Guiny, where three Boats full of Negro's came Rowing towards them, Slinging very fiercely Stones at them, and hovering about, attended their motion all night. Next morning, seven Boats more coming to their assistance, they set upon the Hollanders, but soon fled from their Bullets; yet
yet two of the Negro's were taken, that in each Nostril wore a Ring. Sailing further, several Boats came aboard of them, whereof those that Row'd, breaking their Affagogs or Launces over their Heads, enter'd the Ship; the Hair of their Heads and Beards bedaw'd with Lime, flew about, whilst they Dance'd on the Decks, after they had eaten a good Meal: But they endeavor'd to reward this their kind Entertainment with Treachery; for going ashore, they soon after return'd in greater numbers, and sat upon the Anchors which lay over the Bows of the Ship, and there being a great calm, endeavor'd to Towe the Ship towards the Shore, whilst others threw Stones and Arrows. But fo soon as the Hollanders firing their Guns Wounded several of them, they all fled, except some which they took Prisoners, whereof one whom they afterwards call'd Moses, did them great service.

But Le Mair was amaz'd at nothing more, than when on the next Coast he saw several little Houses built about nine Foot high, out of which many People Issu'd, which were all deformed, either having Wry Nostrils, Bow Legs, Squint Eyes, or crooked Backs, and all in one part or another mis-shapen.

At last, Anchoring before Jacatra, the Ship was flote there by order of the East-India Company, and the Men divided and put aboard th'ose Ships that Sail'd from India to Holland, and arriv'd in safety at Flushing, after they had Sail'd about the World, in two years and eighteen days.

**Sect. XVIII.**

_Voyage of the Naflavian Fleet, under the Command of Jaques L' Heremite, and Geen Huigo Schapenham._

_The United Netherlands, to abate the Spanish Greatnes, set out a considerable Fleet, which they sent to try their fortune, in making Prize of what ever they could light upon in any of their Havens wath'd by the South-Sea._

_Jaques L' Heremite had ten Ships under his Command, Mann'd with sixteen hundred thirty seven Men, and two hundred ninety four Brafs and Iron Guns, with which he set Sail from Goree, Anno 1623. and coming before Cape Vincent, he discover'd eleven Turkish Pirates, whom fighting, he beat, and re-took the Holland Ships they had made Prize of._

_At Rosents Head, L' Heremite gave chase to fifteen Spanish Ships, and coming up with them, sunk eleven, and took four laden with Sugar. Afterwards Anchoring at Safia, he sent the Ship Over-ysfel, and a Frigat call'd the Gray-Hound, to Convoy home the Prizes; afterward being inform'd, that thirty Spanish Ships were making to them, Sailing into the Haven St. Vincent, the Spring Water that he supply'd his empty Cask with being brakkish, caus'd an excoration of the Guts, which brought the Bloody-Flux, whereby he lost many of his Sea-men; being well entertain'd by the Salvages of Antonio, they went on to Sierra Leone, a Mountainous Point full of Lime-Trees, here they found the Names of Sr. Francis Drake, and other English cut in a Rock._

_After that he put in at the fruitful Illand Annakon, where he caus'd his Chirurgeon to be Beheaded._

_This wicked Man being brought to the Torture, would confess nothing concerning the Crimes objected against him, but being strip'd for Execution, they found a small Bag hanging on his Breast, in which lay a Serpents Skin and_
Chap. III.  

**AMERICA.**

and Tongue, with which he had Poyson'd several Men, but he confess'd nothing.

The first of February, the Fleet came to Cape de Pemias, which they know at a great distance, by its high Mountains cover'd with Snow.

In short time after, Sailing by the Mouth of the Straights of La Maire, they met with very tempestuous Weather, and seventeen of their Men going a-shore, were devour'd by the Cannibals of Terra del Fuego. These People being all Whites, and of a large Stature, Paint themselves Red, and go stark naked, except some of highest quality who tie a Deer Skin about their Necks; and the Women cover their Nakedness with a piece of Leather: They live in Bowers made of the Branches of Trees, Stak'd three Foot deep, in a round at bottom, and above like our Tents, Canopy'd, the top of which open, to carry out the Smoke like a Chimney; and have no other Household-stuff than some Baskets, in which they lay their few Fishing Implements. They go continually Arm'd with Clubs, Arrows, Slings, and Stone-Knives: Their Boats being only the Trunk of a Tree made hollow, rise up before and behind like a Half-Moon, and are fourteen, and some sixteen Foot long, and two broad, and Row swifter than a Pinnace with many Oars. Lately, they are so Salvage, that they seem rather to be Beasts than Men, knowing no Religion, ill Natur'd, cruel and Treacherous.

From hence, passing on, L'Eermite refresh'd at the desolate Isle Fernando, and so Steer'd his Course to Calla de Lima, on whose Coast, taking a Spanish Vessel, the Prisoners told him, that their Plate-Fleet had Weigh'd Anchor, and were gone to Panama; only the Admiral which carry'd forty Bra's Guns, with fifty Merchant-Men, lay close under the Shore, Guarded by three Stone Bulwarks, Fortifi'd with fifty Guns.

L'Eermite having a design upon these, took three Spanish Vessels that were going thither, and at midnight, sent Captain Adrian Tol, Peter Slobbe, and Meindert Egberifzon, with twelve well Mann'd Boats, furnish'd with Bra's Drakes, and Hand-Granado's, to Attaque the Spanish Fleet that lay hard by; and whilest some gave a false Alarm on the North of Callao, the Boats Rowing from Ship to Ship, in short time fir'd forty of them; although the Spaniards from the Shore endeavor'd by their Shot to drive back the Enemy, neither the Fort or Admiral sparing Powder nor Ball.

In this valiant Exploit the Hollander's had only seven Men kill'd, and fifteen Wounded: About break of day, seven of the Spanish Ships floated, burning towards the Dutch Fleet, which were as terrible as now Fire-ships, which force'd them to Weigh Anchor to shun them.

After that, L'Eermite took two Ships laden with Wine, a third full of Wood, and a fourth with Wheat: One of these Prizes he fisted and prepar'd for a Fire-ship, and sending her to Board the Spanish Admiral, it ran aground within shot of him; whereupon being batter'd by the Admirals Guns, and those from the Bulwarks, and at last taking Fire gave but a small blow, because most part of the Powder had taken Wet.

In this interim, while thus their design went prosperously on, their Admiral L'Eermite dy'd, whom they Bur'd on the Island Lima, and Schapenham, in defiance of the Vice-Roy in Callao, caus'd one and twenty Spaniards to be hang'd at the Yard-Arm, because he had sent him a scornful Answer on the Proposals concerning the delivery of the Prisoners.

**Cornelius Jacobszon Sailing to Pića with four Sail from the Fleet, could do no
no good there, for he not only found the City to be surrounded with a Wall of fifteen Foot high, but having also many Earthen Redoubts, behind which lay above two thousand arm'd Men, wherefore he deferred the same. After some Rencounters: But the Rear-Admiral, John Williams, soon very cheerfully, who was sent to Gaining, had much better luck; for he not only took that Metropolis, but also burnt a new Royal Gallion, and two lesser Vessels; carry'd a conquer'd Vessel to Lima; flew above a hundred Spaniards, and threw seventeen overboard, because they had shot Poyson'd Bullets against the Law of Arms; of which Conquest Captain Engelbert Shutté had the greatest honor: But the Seamen grew weaker and weaker by the Scurvy, and all of them would have perished, had they not found a sovereign Herb on the highest Mountains of Lima. Schapenham being chose Admiral in L'Ecrenites place, Weigh'd Anchor from Callao, and ran into the Inlet Piscadores, where on the shore he rais'd a Sconce; yet not long after departed from thence without any effect, but left twenty-eight Men, through the bad Conduct of their Commanders; the like number he left also at Aquapulque, on the side of which City stands a Castle with four strong Bulwarks; the Holland Fire-ship lay just without the reach of the shot, the rest lay along the shore in a row, there to seize upon the Vessels expected thither from the Manillas: But because the Scurvy raged amongst the Seamen, and disabled them, they waited in vain, Schapenham sail'd through the South-Sea to the Ladrones, where he found store of Provisions. Ann. 1625. In March, he drop'd Anchor before Malaga, and from thence went with Hermann Spijke, the Governor for the East-India Company in Ambonias, to Ceram, where they Conquer'd the Fort Loco't, and soon after Cambella; then the Fleet being divided, Schapenham carry'd home two Ships from Batavia, and the remainder return'd at several times, they being hire'd to serve the East-India Company to Surat, Malaca, Coromandel, and the Molucco Isles: Schapenham Deceiving near Bantam, and being Bury'd on Tulo Bafok, the Ships arriv'd at the Texel in July, Ann. 1626.

Henry Brewer his Voyage.

Ann. 1643. Brewer set Sail with four Ships from Recifio, and ran close along the States-Isle, so dangerous and Rocky, that he durst not put in to the Land; from which he saw great abundance of Party-colour'd Ducks, with sharp Bills, about the Ships, and under the Keels swim all Whales.

On the West side of the Straights Le Maire, Brown ran into Valentine's Inlet, where he was much troubled by the Winds which came whistling through the hollow Mountains with great and sudden guls: The shore afforded red and black Strawberries, Caryle and Mucles, so the great refreshment of the Seamen, who daily saw Sea-Lions, but could not come to shoot one of them; for no sooner they perceived any body, but they Diving under Water, swim away, and though they saw Mens Foot-steps of eighteen inches long, yet they never found any Men. Thence Sailing into the South-Sea, along the Coast of Chili, they enter'd a Bay which they nam'd Brewer's Haven; where Landing, they walk'd towards a great Smoke which they saw afar off, but coming near it, found only two Houses within a large Plain, full of Sheep, Oxen, and Horses; before the Houses stood Wooden Crosses.

The Dolphin Pink and a great Boat being sent to the Inlet, lay the following Night at an Anchor near a high Mountain; from whence, in the Night, two great Guns were fir'd, whereupon, Lieutenant William Ter Bergen Landed with sixteen
sixteen Musketeers, and climbing up the Mountain, found a Village behind the same, where all things were in Alarm, Drums beating, Trumpets sounding, Bells ringing; the Villagers suddenly firing their Guns on Ter Bergen, who being supp'd with thirty four Men, Encountered the Enemy so Valiantly, that he fled into the Woods, not without the los of Men and Horses: The Guns with which they had shot in the Night lay onely on a Redoubt: Ter Bergen pursuing this Victory, March'd into the Woods, and shot the Spanish Commander Andreas Munés Ferrera from his Horse, got great Store of Treasure which lay hid under the Tree, being brought out of Carelmapa, which Village he set on, and kill'd all the Horses, and Weigh'd Anchor with the Admiral Brewer to Michael de Cabaco, where not being able to Land, because of the many obscure Rocks and Shoals, they set Sail to Castro, which they conquer'd and burnt without the least resistance: This City situate on a Mountain is stately built among Flowry Meadows, delightful Orchards, and brave Fountains; the Sea before it flows daily fourteen Foot. Brewer also burnt a Spanish Ship, and set some Houfes on fire, took three Spaniards Prisoners on Las Bahias, who inform'd him, that the Winter Season was almost over, but that it was never known by any to pass over so mildly, ill Weather generally uping to blow down Houfes, Trees, and rend Rocks aunder; that there was much Gold in Oflorno and Baldavia; which last they had some years since deferted for hunger, but it was since Garrifon'd by three hundred Caffians, that none could get at the Fort Conception (which lay a League Wefterly from thence) but in a small Boat, that there were on the place near two thousand Inhabitants. Moreover, an ancient Matron call'd Lady a Pizarra, from Qunian, one of the Illes in the Chilean Inland-Sea, being fetched from thence, gave information, that forty years since, before the Indians took up Arms, the Spaniards were quietly settled in Oflorno, and in so good a condition, that an ordinary Planter had at least three hundred Slaves, of which, every one was to procure a certain quantity of Gold; that the Illes Chiloes were divided into above a hundred Colonies or Plantations, the Chiloes serving the Caffians as their true Government; tho' that do good Service, the King of the Colony makes them Commanders; and that the Chiloes had Rebell'd in several places. Brewer on the Chiloes request took some of them, with their Wives and Children into his Ship, furnish'd with Arms, he digg'd a Cheft of Silver and a Brass Gun out of the Earth, and soon after being sick, dy'd. His Successor Elias Herkman profecuting tho' Publick Affairs, sent the Pilot of the Huity out of Brewer's Haven, and some Sea-men, with two Chilean Caftines with a Boat to Carelmapa; but being surpriz'd by a violent Storm, flood in for Horse-Island, where he and the Caftines Landing, he order'd even Sea-men to carry the Boat to a safer Harbor; but being driven from the Shore by strong Winds, it took in so much Water as fill'd and sunk it, so that all of them were drown'd. Horse-Island being deftitute of Provision and Lodgings, tho' that were Landed expected nothing but Death, till they found out a small Hut, and in the fame fix brave Sheep, and a good quantity of Potatoe Roots, which serv'd for Bread: But when this their new-found Store was almost spent, they happily were fetch'd off by the Boat belonging to the Ship Amsterdam, and with the whole Fleet came to an Anchor before Baldavia. This City built by the Caffians, consist'd formerly of five hundred and fifty fair Houfes, and was divided into Streets and crosf Ways, with two large Markets, and as many coffly Churches.

The Chiloes unsufferably oppress'd, flew all the Spanish Garrison, and into
the Governor's Mouth and Ears pour'd melted Gold; of his Skull they made a Drinking-cup, and of his Shin-bones, Trumpets; after this, the City fell almost to decay; onely a great part of the Wall remain'd yet standing: The Chileans hereupon flock'd hither by thousands, some on Horses, others on Foot, all Arm'd with Lances of a Foot long: Herkman hereupon informing them by an Interpreter, that they being mortal Enemies of the Spaniards, would join with the Chileans against that common Foe; and desir'd, that they might build a Fort on the Market-place in Baldivia, for a defence against all Invasions, and that they might be supply'd with Provisions which the Fleet wanted; all which the Chileans granted, and accordingly brought in store of Sheep, Hogs, and Cattle: But so soon as Herkman began to make the least mention of Gold, they were all abash'd, and said, that they knew of no Gold Mines, nay, their Hair flood an end, when they heard the name of Gold; so horribly the Spaniards had dealt with their Parents: After this, the Chileans growing more and more strange, did not in the least countenance the building of the Fort, and the longer the Fleet stay'd, the less Provisions they brought aboard; upon which, the Ships were necessitated, without any remarkable Exploits, to set sail and return to Recife.
The Second Book,
CONTAINING
A DESCRIPTION
OF
NORTHERN AMERICA.

CHAP. I.

Of the Bounds of America, and of the Division of the Mexican or Northern part thereof.
the narrowest place. Of these two grand Peninsula's the Northern is generally call'd America Mexicana, from Mexico the chief City of the Province, properly call'd Mexico; which was heretofore without doubt the most potent, rich, and flourishing of all the Kingdoms of the Indies, at least on the North-fide of the Isthmus. In the division of the several Provinces of America, as well those of the Northern as of the Southern Continent, we find so various an account among the several Geographers that have written of them (not any two of them agreeing in one and the same order) that to reconcile the differing methods of so many disagreeing Authors would be an endless work: wherefore we shall pitch upon the safest course, and not omitting the mention of any of the Provinces taken notice of by the said Authors, hereby endeavor to take in whatsoever material hath been observ'd by all of them, and by the way take occasion to shew how one differs from another in the distribution of them. Those therefore of the Northern America (that as near as can be we may the design of many into one) seem most fitly describ'd in this following order: 1. Esotiland; 2. Terra Laboratoris, or Nova Britannia; 3. Canada, or Nova Francia; 4. Nova Scotia; 5. New England; 6. New Netherland, now call'd New York, as being in the possession of the English; 7. New Holland; 8. New Swede-land; 9. Apalchen, now call'd Virginia; 10. Florida; 11. Jucatan; 12. Honduras; 13. Nicaragua; 14. Veragua; 15. Costa Rica; 16. Anien; 17. Nova Hispania; 18. Guatamalata; 19. Nova Georgia; 20. Nova Bifcaia; 21. Nova Mexico; 22. Cibola; 23. Nova Granata; 24. Toumontec; 25. Quivira; 26. Nova Albion; to which by most Authors is added California, which bring an Island we thought fit to reserve to be spoken of amongst the Islands, as also Terra Nova, or New-found Land; which last lies utmost West, as the other East of Northern America. Some there are also (and particularly Monifnor de Martinis) who among the above-mention'd Provinces have inferred Greenland, though doubtles with little reason, since though it be granted that it is not divided by any Sea, yet it is evident, if any credit may be given to all modern Maps and Globes, that the greatest part of Greenland lies in the Hemisphire of the known World; and therefore we have judg'd it most convenient to refer the particular mention thereof to the Description of the Arctic Region.

The length of the West-Indies is generally computed to be from the utmost South of Terra Magellanica, to the farthest North of Esotiland, about six thousand English Miles, reaching from six Degrees of Northern, to fifty three of Southern Latitude; the breadth from St. Michael or Pira Weltward, to Parabagas, a Town on the Coast of Brasial Eastward, three thousand nine hundred Miles, and the whole compass thirty thousand.

Sect. II.

Esotiland.

That the English have been very great Undertakers of Voyages and Discoveries toward the North-West, appears by the denomination of divers places, both from the Persons which have Sail'd thitherward, and also from such of our own Country Names as were thought fit to be there fix'd, as beyond the Arctic Circle are Sir James Lancaster's Sound, Sir Dudley Digge's Cape, Queens Anne Foreland,
Chap. I.  

**A M E R I C A.**

Portland, Cumberland Isles, Davis's Straight, &c. on this side toward the **Artick Circle**, Button's and Briggs's Bay, Hudson's Sea, otherwise term'd **Mare Christianum**, out of which more Wecterly runs a narrow Sea call'd **Hudson's Straight**: beyond Hudson's Sea toward the Artick Circle is a place call'd **New North-Wales**; and on this side answerable to it, between Button's Bay and the Christian Sea, lies **New South-Wales**; all which places we find generally set down in the American Hemisphere, but in the Geographical Discourses thereof little is said of them, if so much as nam'd. The farthest part of Land Northward, between Hudson's Gulf and Hudson's Straight, betwixt fifty seven and sixty Degrees of Northern Latitude, goes generally by the Name of **Efrotland**, I mean that properly so call'd (for Esrotland is by some as largely taken as Canada, by Clavertius, Colontzius, Peter du Vul; and others, namely for all that Tract of Land extending from that supposed Straight of Aswan, which divides America from Artick Tartary, as far as the utmost point of Land that shoots toward the Atlantic Ocean) which Southerly towards Terra Laboratoris is bounded with a River vulgarly call'd Rio Nevada, or The Snowy River. Esrotland seems to have deriv'd its Name from its lying more Easterly than the rest of the Provinces, and, according as Nova Britannia is plac'd in some Charts, might very well be taken for the fame, though it hath not been so term'd by any Author, but rather Terra Laboratoris, Cortecealt, and Nova Britannia are generally receiv'd to be all one.

This Province is affirm'd by Matthias Quadus, and J. Antonius Magnus, to have been the first discover'd Countrey of the new World, and that by Antonius Zone, a Patrician of Venice, in the Year of our Lord 1590. which was long before the Expedition of Columbus, through the encouragement of Zemius, King of the Isle of Friezland; but by whomsoever found out, or at whatsoever time, it is commonly affirm'd to be not ill furnish'd with Provisions of all sorts, as Beasts, Birds, Fish, Fowl, and Fruits, having a Soil indifferent fertile, in respect of the coldness of the Climate. The People in general (for some there are that live wild and savage up and down the Woods, and go naked, whereas the Clothing of the Country is the Skins of Beasts and of Sea-Calves, call'd Morfs) are reported not only tolerably civil, but also ingenious and expert both in mechanic Arts, and other necessary Fidelities, so much that the first Voyagers to this place are said to have observ'd of them upon this first Discovery, That they sow'd Corn, brew'd Beer and Ale, and Traded by Sea to Greenland, Friezland, and other places, to the distance of fifteen hundred Miles; and that they were not altogether void of the use of Letters, but that their Character was only proper to themselves and not intelligible by any other Nation: Moreover, there is a certain Tradition, that there was here and there some little knowledge of the Latine Tongue amongst them, and that there were found divers Latine Books in a Library of one of their Kings; the reason of which, if true, is conceiv'd to be from certain Europeans who understand that Language, having in Ages past suffer'd shipwreck upon those Coasts, where chanceing to abide either through constraint or choice, they might happily at their Decease lie behind them some Books and other Monuments of the Latine Tongue. They were observ'd to use such a kind of Javelin or Short Dart, as was known to be us'd by the People of Java, and some other Islands of the East-Indies; whereupon it seems not wholly improbable, that they might for a long time have entertain'd Traffic and Correspondence with them.

The Morfs, or Sea-Calves before mention'd, are about the bigness of a young Heifer, the Hunting of which by the Natives, who take them in great numbers, is to them in the stead of Whale-filling, which is not there so good, for they draw a great quantity of Train-Oyl out of them. On each side of the Jaw of this amphibia

**Fifth difference of Esrotland.**
bious Creature (for it is said to live very much on the Land, as well as in the Water) there sticks out a crooked Tusk, winding downward like an Elephants Probocis, above a Cubit in length, and as white and hard as Ivory: It is esteem'd of great vertue, at least it passes for such among those who take it for other than what it is, for it is frequently vended for Unicorns-horn; of which impoturce Dr. Brown takes notice, and gives a Caution against in his Vulgar Errors.

This Countrey is suppso'd, and that probably enough, to have store of Bras and Iron Mines, but for the Mines of Gold and Silver, which some have imagin'd there, the Northerly Situation of the Countrey, and by consequence the coldness of the Climate, give sufficient caufe to question the truth of any such affertion. What chief Towns, Cities, Rivers and Mountains there are in this Province, is not yet deliver'd by any, only Magnus and Quadyus make mention of four principal Rivers, which disperse themselves through the Countrey, and take their source out of a great Mountain in the midst thereof.

**SECTION III.**

**Terra Laboratoris.**

Terra Laboratoris, by some call'd Nova Britannia, by others Corterealis, (though there are some who make Laboratoris and Corterealis two distinct Countreys, comprehended, according to Peter du Val, under Nova Britannia, as the more general Province; or, according to Cluverius, under Canada) lies from about fifty four to fifty seven Degrees of Northern Latitude, between Effortiland and the River Canada, which Magnus and some others, though for what reason is not express'd, name Fretum trium Fratrum, The Bay of the three Brethren; others, The River of St. Lawrence, and is, according to the said Author, of so vast a bigness, that the Mouth of it extends it itself thirty five Italian Miles wide; like-wise of such a length, as to have been navigated a continu'd Voyage of eight hundred Miles. The denomination of Terra de Laborador, or Laboratoris, seems probably enough conjectur'd to be from the cultivability (if one may so term it) of the Soil, or its aptness for Cultivation or Tillage; that is, because by the painful Hand of the Labourer or Husband-man it may be rend fo fertile, as to yield all sorts of Grain and Fruits; haply in allusion to that fruitful Countrey of Campania in Italy, vulgarly known by the Name of Terrae Lavora. As for the Appellation of Terra Corterealis, it need not be question'd, but that it derives it itself from Gaspar Corterealis, a Portuguese Gentleman, who about the Year of our Lord 1500, is thought by some to have made the first discovery of these Parts; though Sir Sebastian Cabot a Venetian, is more generally belief'd to have been the Man that (under the favour and countenance of Henry the Seventh, King of England) first discover'd them, at least the adjoining Island Terra Nova, or New-found Land; but just oneely discover'd, being hinder'd the farther prosecution of that Design, by the important Affairs in which the said King was about that time involv'd; neither did Corterealis, whether he was the first, or came after, do any more, for returning within a year after his first setting out, he was never heard of; nor, as Oforius a Portuguese Historian writes, any of his Company, being all suppos'd to have been drown'd by Shipwreck, and in like manner Michael Corterealis, who the year following set forth with two Ships in quest of his Brother Gaspar. Upon which series of Misfortunes the Portuguese being wholly discourag'd, and giving over this Design, the French of Armorica or Bretany succeed them in it with somewhat better success about the Year 1504, whereupon it came to be
be term'd Nova Brittanía, or New Britain: The ancient Inhabitants of this place were formerly of a Nature, like the generality of the American People, somewhat brutish and savage, but by long conversation with the French, are said to have cast off their original wildness, and become more civilly manner'd: they are very jealous of their Wives, by report much addicted to Soothsaying, though otherwise having little of Religion; or of any other kind of Learning; they dwell for the most part in Caves under Ground, feed chiefly upon Fish, and are accounted most expert Archers. Whatever places the French have built here besides, those of chiefest note are St. Maries, Cape Nuxga, and Brefi.

Sect. IV.

Canada, or New France.

Canada, as it is taken for one and the same Province with New France, contains New France, properly so call'd, Nova Scotia, Norumbega, and some adjoyning Islands, as the Canada of Cluverius, lying more North-Westerly, comprehends (as we have already intimated) Eftatiland, Labradoris, and Corterealis, and, according to the most modern Division (for that of Cluverius neither consents with the lastest Authors, nor agrees with exact Survey; it being nam'd Canada, in respect the River Canada runs through it) hath on the North Terra Corterealis, on the South New England, and on the East the Ocean, and hath between forty five and fifty two or fifty three Degrees of Northern Latitude. The River Canada is judg'd to be the largest of all the Rivers of America, as those Rivers generally the largest of all in the World besides; it riles in the Western parts of this Province which remain yet undiscover'd, and in some places spreads itself into huge Lakes, some of them a hundred Miles in compass, with many little Islands dispersed up and down in them, and so running from the West about a hundred Leagues, falls at last into the North part of St. Lawrence Bay, being that wide Embouchure of thirty five Miles breadth already mention'd. This River is extraordinary full of Fish, among which there is one sort more remarkable than the rest, call'd by the Inhabitants Cabltobius, having Heads resembling the Heads of Hares, and Bodies as white as Snow; they are taken for the most part before the Isle de Lievres. The Country on both sides of the River is pleasant and indifferently fertile, especially towards the South-West, where upwards from the River the Ground rises into many little Hills, invested most of them with Vines, with which and several other sorts of Trees this Country abounds, being well water'd with a great many lesser Streams, all of them falling into the River Canada.

That this Country is term'd New France, from having been discover'd by the French, at least more fully than before, there needs no question to be made; but whether famem Verazanus, under Francis the First of France, or Sebastian Cabot before spoken of, were the first in this Discovery, may admit of something of dispute: the Cabots indeed, (for John the Father is by some mention'd to have accompanied his Son) who by all are own'd the first Discovers of New-found-Land and Terra de Bascadoes, are also commonly reputed to have first found out the Province of New France, together with some parts adjacent, though perhaps it might be upon this Ground that Terra de Nova, or New-found-Land, not being known at first to be an Island, New France and that might be taken for one continu'd Province; and it appears so much the more probable, because Canada, or Nova Franca, is by some call'd Terra Nova; however it be, or whoever were the first Adventurers, Quarteri and Champlain.
Champlain are the two French-men that have gain'd so much fame by making a more ample and particular search into these parts, that this Province may seem from thence to have sufficient claim to the Title of New France, whereof that part more especially so call'd, lies on the North-side of the River Canada, and Southward to Terra Cittereallis. The Winter is here very long, and so much the more severe by reason of a cold North-West Wind which blows most part of the Winter Season, and brings with it so thick a Snow, that it continues upon the Ground most commonly till after May. The Countrey is for the most part woody, but in the Champain parts thereof very fruitful of Corn, and all sorts of Grain, especially Pulse: It hath also Fowl, Fowl, wild Deer, Bears, Marterns, and Foxes in abundance, and of Hares such plenty, that one of the little Islands belonging to this Province, is by the French nam'd L'Isle des Lievres, or The Island of Hares: But the most peculiar Commodity belonging to this Countrey is the Esurgny, a kind of Shell-Fifth, extraordinary white, and approv'd of singular vertue for theanchoring of Blood; to which purpose they make Bracelets of them, not only for their own use, but also to vend them to others; but John de Laet and others have observed no other than a superstitious use of them amongst the Salvages, in their Funeral Rites for the Dead: the manner of their taking it is very remarkable, for when any one is condemn'd to die, or taken Prisoner, they cut off all his fleshly parts in long slices, and then throw him into the River, where they let him lie twelve hours, and at last pulling him out again find his Wounds full of Esurgny. Quadus and Magnus make mention of three ancient Towns, namely Canada (denominated as the Province, from the River) Hochelai and Hochelaga, giving Name to a Territory about it, which Geographers either take no notice of, or make some question of the being of such Towns; however, a late Describer of the West-Indies, not mentioning the other two, gives this description of the last, viz. Hochelaga:

"This City (faith he) said to be the Seat and Residence of a King of this Country whom the Natives, at least some of them, acknowledge and reverence, carrying him sometimes in great pomp upon their Shoulders sitting upon a Carpet of Beasts Skins, is situat'd far within Land, at a distance of six or seven Leagues from the River Canada, and is a kind of fortifi'd place, encompass'd about with a three fold Range of Timber Ramps one within another, of about two Rods high from the Ground, with cross Planks, or pieces of Timber jutting out, on purpose to hinder an Enemy's Scaling or getting up; towards the top there is as it were a Scaffold or Gallery fram'd, from whence they may throw down Stones (of which there is always good store ready, or what else to annoy the Affallants: It hath one onely Gate for Entrance, and that likewise well fortifi'd after their manner: There are gates'd to be in it fifty or sixty great Houses, built (as the manner of the Americans that live in House usuallly is) in a square Figure, each side being about fifty Foot long, or more, and sixteen or twenty broad, but not many Stories high; and in the midst of the Court or void space, a place to make their Fire, and do other necessary work about it. Moreover the Territory round about this Town is both rich in Soil, and pleasant in Prospect.

Besides these three above-mention'd Towns there are several others, which are not untaken notice of in the most modern Descriptions and Maps, viz. 1. Stadaic, or Stadacone, somewhat Westward of a small Isle call'd The Isle d'Orleance; 2. Quebec, which being made a Colony of the French, and the Natives expell'd, came to be Entituled St. Croix; 3. Tadoussac, which lies in that part of the Countrey denominated from the River Saguenay, and by some call'd at this day Nouvelle Biscaye, a delightful place, and full of lately Trees, and hath likewise a good and safe Haven, capable
capable of receiving twenty Ships; 4. Trois Riviers, or three Rivers; 5. Mor-real; 6. Sillery; 7. Richelieu; besides two strong Castles or Forts, Francey and St. Lewis; the first built by Monsieur Rébeval at his Landing here, about the Year 1540. the other design'd for a Colony, in the Year 1611. by Monsieur Champlany, but hinder'd by the Invasion of the Iroquois. The smaller Rivers that run out of the Gulph of St. Lawrence, and the grand River Canada towards the North, on which side chiefly lies this Province, are, 1.chiefsedere, 2. St. Margerit, 3. Lesqueuin, 4. Saquenay, before-mention'd, 5. Montoune; and on the South side, the River Mary. The principal Tribes of the ancient Natives of this Country were, on the North side of Canada the Canadiens, the Beffianites, the Hurons, the Algonquins, the Quenangebins, the Algonquins, the Attogoffants, the Atticamques, the Nipisirmens; and on the South side, the Etchemins, and the chief Heads or Princes of these Tribes were call'd Sagamores.

Jacques Quartier Complementing their King Agousanna, took up his Quarters a whole Winter at St. Croix, a Sandy Promontory, overflow'd by the River Canada, into which falls the Lake de Champlain, grown round about with Cheechum Trees; in it breeds the strange Fifth call'd Chou-Maron, generally ten Foot long, with Heads like Sharks, and two rows of Teeth in their Mouths, their Skins full of Strong Scales, which are sufficient Shields against Swords and Lances, are great devourers of other Fifth and Fowls, which they take after this manner, viz. they swim amongst Reeds or Canes, and lie still with their Mouths open; whereat the Birds sitting down upon them, are immediately swallow'd.

The Natives of Nova Francia anoint their bodies with Oil; in the Summer they go naked, and in the Winter mantle themselves in Furs. Their Warlike Accoutrements are Darts and Clubs, but chiefly great Shields. They are revengeful, cruel, and fraudulent; their Women common to all Men, from fifteen to twenty, after which, Marrying, they become very Chaste. Their Diet is Indian Corn, fresh and salt Fifth, Venison, Buffalos and Beavers flesh; wiping their Fingers (when greasy) on their Heads, or their Dogs backs, which wait for the Scraps.

At that season when the Corn covers the ground, to any height, they eat Cockles, Dogs, dead Carion, and the Skins wherewith they Clothe themselves. When they have eaten their fill, they tabering on their Bellies, cry, Tapous Miskipous, that is, Fearly I am sati'd. They give their Sick a speedy Cure, either immediately killing them, or inhumanely exposing them to the Woods, to be devour'd by ravenous Beasts, but if they die suddenly, they in howling tone pronounce One, One, thereby to chafe the Souls of the Deceas'd out of their Huts, they tick the bodies on Wooden Prongs, cover them with Bark, and lay their Clothes and Arms by them; all what remains of the Funeral Feasts is burnt, whereas at other times, what e're is brought on their Table they eat, though ready to burst. They make the first Proofs of their Valour by undergoing a most prodigious Torment, in this manner; Two by consent tie their naked Arms together, on which they suffer burning Sulphur to be pour'd, till the flesh starts from the bone; if either of them shrink, or pull back his Arm, he is accounted by them ever after as an ignominious and base Coward. They call God Arabcan, and believe that one Meshou first drowning the world by a general Deluge, relord it again after a wonderful manner, viz. Meshou hunting with Wolves, they scent'd a Deer which being closely pursu'd, leap'd into a neighboring Pool, the Wolves following it, were drown'd; Meshou coming thither, stood amazed as a Bird, which inform'd him, that the Wolves were pluck'd down, and held fast in the bottom by horrible Monsters, whereupon he diving, the Pool immediately began to swell, and at last the whole sur-
face of the Earth to be overflow'd. Meffon afterwards let a Raven fly to fetch a Clod of Earth, but in vain, for all the Land lay drownd'd in Water; at last a Rat diving to the bottom, brought a lump of Earth, out of which Meffon reford'd the World; shot Arrows into Trees, which became fruitful Branches. Here also re-
side an innumerable many Sorcerers, call'd Pillato's, which sometimes being poff-
s'd with a Frenzy, scourge themselves in a terrible manner, incomuch that the Blood runs down by their fides: These People are held in great esteem, for they boast themselves to have their Original from Heaven upon this occasion, viz.,
Ataenfic, a certain great Queen or Goddess, residing above the Stars, had a fick Hub-
band, who Dreamt that he should be reford'd to his former health to soon as he could but taste of the Fruits which grew on a Tree, whereby the Family of Hea-
ven were kept alive, but that the Tree must needs be cut down, which Ataenfic obeying, gave onely two blows, when the Tree, to her great amazement, fell out of Heaven down to the Earth; there being by this means nothing more left to eat in Heaven: Ataenfic follow'd the fallen Tree, and being big with Child, bare a Daugh-
ter, which growing up to years, was Deliver'd of two Daughters, viz. Taovitaron and Joukeba; the eldest of which flew the youngest: By thefe Fables we may discern their obscure knowledge of Noah's Flood, Eve's Fall, and Cain's Mur-
der. No lefs ridiculous is that which they believe concerning the Creation, viz.
That the Waters were inclos'd within a Frog, which Joukeba caufing to be cut open, all Streams and Rivers infuing out, had their Original from thence: This done, Joukeba open'd a Pit, out of which came all forts of Beasts; they affirbe a Bodily
shape to the Soul, as also Immortality, but that they live together in a great
Village towards the West; from which removing sometimes, they knock at the
Doors of their former Friends in the Night, and low deferted Grounds: That the
Journey towards the Village in which the Souls reside is very strange; the High-
way thither beginning at a Rock nam'd Ecaregundi, where they fliff Paint their
Faces, which done, they go to a Hut inhabited by an old Man, nam'd Oftrach,
who takes the Brains out of the Souls Head; after which they walk to a broad Ri-
vers, which they cross on a narrow Plank or Bridge, on which a Dog encountering,
forces them to leap into the Water, which carries them down to the foremention'd
Village. They acknowledge one Oki for the Governor of the Sea, and fasons of the Year: They also Religionfully Worship the Rock Tjankebi dreafja, which they
believe fome ages ago was once a Man, but afterward Transform'd into a Rock,
in which a Demon resides, who can make their Journies either fuccesful or dan-
gerous, wherefore they offer him Tobacco. Their opinion of Thunder is like-
wife very ridiculous, for they fay that the Devil endeavoring to vomit a horrible
Serpent, by straining to evacuate the fame, rents the Clouds, and occasions Thunder. Lastfly, They relate of a Dwarf call'd Thakabeb, who climb'd on the top of a
Tree, which by his blowing thereon grew fo high, that it touch'd the Clouds, and Thakabeb easily leap't into them, where he found all forts of delight and plea-
sure; but having a Sister on Earth, descended again along the Tree, and fetching
his Sister, conducted her above the Stars; mean while, Thakabeb going in the
Night to fee if he had taken any thing in his Net which he had pitch'd, found it full of Fire, and observing the fame very narrowly, faw that he had taken the Sun, but durft not approach the fame, by reafon of its great heat; but making a Moufe, fent her to gnaw the Net in pieces, and let the Sun at liberty. Every
twelfh year they keep an extraordinary great Funeral-Feast; for on the Set-time
they flock from all parts to the appointed place, every one carrying chither the Bo-
dies or Bones of their Deceas'd Friends, wrap't up in Clothes, and hang them over
their Meat, which they eat singing; such fond and Superstitious Conceits make up the Religion of these poor deluded People.

Sect. V.

Accadia, or Nova Scotia.

Nova Scotia, or New Scotland, formerly call'd Accadia, is commonly accounted a part of New France, (viz. that part which lying on the South side of the River Canada, and shooting South-Eastery into a bosom of the Sea, forms itself into a Peninsula, between the Gulph of St. Lawrence, and the Bay Francois) nevertheless, because of the different concerns of this part of the Country, in regard the right of claim to several places in this district, most especially of all Nova France besides, hath been long in dispute between Us and the French, it will be most convenient to Treat of it apart; and because the Series of Affairs, from its first discovery, till of late years, appears faithfully represented on the English part, in a Remonstrance Address'd to the King and Council by Sir Lewis Kirk, and his Brother John Kirk Esquire; it will not be amiss (only adding some few things upon occasion) to follow exactly the Narration of Affairs, deliver'd in the said Remonstrance to this effect.

1. The whole Tract or Space of Land in America, lying on either side of the River Canada, which a long time since were known by the Names of Nova Francia, and Nova Scotia, were at first discover'd and found out by the English, in the time of Henry the Seventh, King of England; which Expedition was first undertaken at the Command and Charges of that King; afterwards further'd and carry'd on by the favorable Aspect of Queen Elizabeth; so that in process of time, for many years together, the said Tract of Ground, with absolute Privilege of free Commerce, fell under the Jurisdiction and Power of the Crown of England: Neither was it unto any other Christian Princes, or their Subjects more clearly known or discover'd, until about the year 1600. Some of the French understanding the benefit arising by Traffique in the River of St. Lawrence, having formerly seiz'd upon that Tract of Land, situate on the North side of the said Floud or River Canada, did afterwards, in Anno 1604. (under the Command of Peter de Gua, Lord of Monts, who in the year 1606. was follow'd by Monfieur de Pourtrincourt) Possess themselves of L'Accadie, lying on the South side of the said River, naming the whole Nova Francia, challenging to themselves for many years, at least de facto, the Possession thereof, with sole liberty of Commerce there.

2. In Anno 1611. King James of England looking upon the Possession gotten there by the French, as upon an Invasion, did by his Letters Patents Grant unto Sir William Alexander a Scotchman (Created afterwards Earl of Sterling, by King Charles the First) L'Accadie, by the Name of Nova Scotia; who in the year 1622, and 1623. after Sir Samuel Argal had driven out Biard and Maffe, and demolishing their Fort, carry'd them Prisoners to Virginia; having obtain'd the Possession thereof, they Planted a Colony therein, and kept Possession for about two years after, until such time, as upon the Marriage of his Majesty King Charles the First, with the Lady Henrietta Maria, the said L'Accadie, or Nova Scotia, was by Order of the King of England return'd into the Possession of the French.

3. Afterwards a War arising between his Majesty King Charles the First, and
"Lewis the XIII. Anno 1627, and 1628. Sir David Kirk and his Brethren and Relations of England, did by virtue of his Majestie's Commission, fend to Sea (at their great charge) first three, afterwards nine Ships, with Warlike Preparations for recovering of the Possession of the said Lands, lying on either side of the said River Canada, and to expel and eject all the French Trading in those Parts, wherein they had good Success; and in Anno 1627, did there seize upon about eighteen of the French Ships, wherein were found a hundred thirty five Pieces of Ordnance, design'd for relief of the Royal Fort in L'Accadie, and Quebeck in Nova France, under the Command of Monfieur de Rocmand, and Monfieur de la Tour, Father of de la Tour, Governor of the said Royal Fort, whom, together with the said Ships and Guns, they brought into England; and in the year 1628. they Possess'd themselves of the whole Region of Canada or Nova Francia, situate on the North side of the River, together with the Fort or Caftle of Quebeck, Sir Lewis Kirk being then constituted Governor of the place, the French being then either expell'd or convey'd into England, and the Arms of the King of England being publicly there erected, and every where plac'd; and before the year 1628. it was brought to pass by the said Sir William Alexander, (affifted both by the advice and charge of the said Kirk) that in the parts of L'Accadie, or Nova Scotia, on the South side of the River Canada, the whole place, with the Forts thereon built, being by him fubdu'd, presently came under the Power of the King of England; that Region on the South side falling into the Possession of the said Sir William Alexander, and that on the North side, into the Possession of the Kirk's.

4. On March 29. 1632. a Peace being concluded between King Charles the Fifth, and Lewis the XIII. it was amongst other things on the part of the King of England agreed, That all the Forts, as well in L'Accadie as in Nova Francia, should be retor'd into the Possession of the Subjects of the French King, which was exactly perform'd on the part of the English, though to the great damage of the Kirks; but on the part of the French, although it was agreed, as in the fourth and fifth Articles of Peace is fet down, (to which reference is had) yet nothing was ever perform'd of their parts; so that the Kirks did thereupon suffer loss, to the value of five thousand Pounds Sterling which were to be paid them by Monfieur de Cane a Frenchman, but remain unpaid to this day.

5. Anno 1633. the King of England taking notice, that although the Forts and Caftles, according to the League, were deliver'd up into the Possession of the French, (especially such as had been erected during their Possession thereof) yet that his English Subjects were not to be excluded from Trade or free Commerce, in those Regions that were first Discover'd and Possess'd by his Subjects, did, with the advice of his Council, by his Letters Patents, Dated May 11. 1633. upon consideration had of the Expences, which the said Kirks had laid out upon the reducing of that Country with the Fort of Quebeck, to the value of 50000l.; and also of their ready obedience in resigning up the fame on his Royal Command, Grant unto Sir Lewis Kirk, and his Brother John Kirk and his Associates, for the term of thirty one years (not yet expir'd) full Privilege, not only of Trade and Commerce in the River Canada, and places on either side adjacent, but also to Plant Colonies, and build Forts and Bulwarks where they should think fit.

6. By virtue of which Commission, Sir Lewis Kirk and his Brother John Kirk, and his Associates, in the Moneth of February next following, viz. in 1633. set forth a Ship call'd The Merry Fortune, Laden with Goods of a considerable value, confign'd to those parts, where during her Trading there, without any just offence given; and in time of Peace, she was by the French forcibley seiz'd on, and
and carri'ed into France, and her Lading, as if she had been lawful Prize, Confis-
cated; whereupon the Kirks suffer'd los'd, to the value of twelve thousand Pounds.
And although the Lord Scudamore, Ambaffador in France, by the King of England:
'special Command, and the said John Kirk being there in Person, by the King's
Command, did often earnestly urge, that the Moneys due to the said Kirks, and
the said Ship, with her Lading, might be restor'd, which for no other cause had
been feiz'd upon and fold, but only for that by the King's Commission the was
found Trading at Canada; yet he could obtain nothing, but after some years
fruitlefs endeavours return'd into England without accomplishing his desires.

7. In the year 1654. Cromwel, although an unjust Usurper of the Government,
yet upon confeideration of the Premises, taking a just occasion for requiring the
Possession of L'Acadie, sends forth several Ships under the Command of one
Sedgwick, who by verfe of the Authority granted him by Cromwel, assaulted and
subdu'd the aforefaid Forts in Nova Scotia, and restor'd them into the Possession
of the English: And although in the year 1655. a League of firm Peace and Amity
being concluded between Cromwel and the French King, the French Ambaffador
did often urge the Restitutio of the Possession of the French; yet for the fame cau-
ses aforesaid, which had mov'd Cromwel to feize upon them, it was thought fit still
to retain the Possession of them; and although according to the purport of the
twenty fifth Article of the Peace, Commissioners on both fides were to be ap-
pointed for the deciding and determining that Controversie; yet nothing was
done therein, neither did the Commissioners ever meet within three Moneths, as
in the twenty fourth Article of the Treaty was provided and agreed: So that
now the cafe is very clear, that the Possession to the English remains firm and juft,
and that the Forts and Bulwarks before specified, are without all peradventure
under the Power and Jurifcriptio of the King of England.

Since the Restauration of his present Maiesty, the French Ambaffador reprefen-
ting unto the King the Pretentions of the French unto the several Forts and other
places in Acadie, and urging the non-performance of the Articles of Agreement
between Oliver Cromwel and the French King, mov'd the King of England, *As a pro-
spect'd Enemy to all Violence, for a Restitution of all the Forts and other places which
were then in the poftedion of the English: Not long after which, whether upon the
Ambaffadors request, or upon other important Affairs intervening, or upon what
other ground forever it were, the French were suffer'd to re-enter on the foresaid
places, and do yet keep Possession of them, till such time as the English claim under
the just Title of the Kirks, shall meet with some fit occasion of being reviv'd.

That which we suppofe gives the French so much the more confidence in their
claim of this Country, is their presumptio upon the Expedition of James Quartier,
whom they will have to be the first Discoverer, if not Poifessor, not onely of the
Ile of Affumption, but also of this Coast of Nova Francia, not taking notice it seems
of Sebastian Cabot, under Henry the Seventh.

The chief places of Note in this Country, are, 1. Port Royal, a Colony of French,
said to have been Planted there by Monfieur de Montz in 1604. by report, capable of
receiving a thousand Ships; and in 1613. (the French being driven out by Sir Sa-
muel Argal, Governor of Virginia, who took Prisoners Biard and Maffes, and de-
monit'd the Fort at Port Royal) given by Patent, as aforesaid, to Sir William Alex-
ander; afterwards by him fold again to the French; then in the time of Oliver Crom-
wel re-taken by Major Sedgwick; lastly, re-poifessor'd by the French. 2. St. Luke's Bay,
or Portua Mouton. 3. Gaffe, or Gachepe. 4. The Haven of Poffipay. 5. The Bay de Toutes

Isles. 6. The Fort de la Hère. 7. The Cape of Sable. Within the Southern Point Forchu, lies the île Longue, which boaths of a Silver Mine.

The most noted People of the ancient Inhabitants of Acadie were the Iroquois, lying most South-Westery upon the Sea Coast, who us'd to drive a great Trade in Beavers and other Commodities.

Westery before the River Chovacoet lies Bacchus Isle, full of Vineyards.

The Inhabitants thereof differ very much from other Salvages, for they have all the Hair from the Crown of their Head, wear long Locks behind, pleated together, and fluck full of Feathers; Paint their Faces black and red, go arm'd with Clubs, Bows, Pikes, and Arrows pointed with Fifth-bones: They Till their Ground very handomly, and divide their Fields with Hedges; they Plant Tobacco, Vines, Cabbage, Maiz, and divers Colour'd Beans; the stalks of the Maiz serve in stead of Poles for their Beans to run up upon.

Beyond Cape de Rocke lies the brave Harbor Beauport, which is fecur'd from all Winds by an Isle which lies in the midst of it. The Countrie Manur'd in most places, and Fruitful, feeds Store of Men and Cattle.

The Haven of Malabar is surrounded in a manner with little Huts, cover'd with Mats, which in the Middle of the Room have a hole for the Smoke to go out at. The Southern shore is Sandy, and very dangerous.

For the more full exemplification of what concerns this part of Nova Francis, we shall conclude with an account of all Material Passages relating to the French, from their own Narrations as followeth.

The first discoverer of this Coast was Jacques Quartier, sent out Anno 1534, by the French King, Francis the First, in which Expedition he spent five Months; and going from thence to St. Male, discover'd the Inlet Lawrence, Terrenent, and Natificote.

The following year prosecuting his Voyage, he Sail'd into the great River Canada, and Winter'd near St. Croix, where he loth divers of his Men by the Scurvy, a Diffemper till that time altogether unknown; and such was his condition, that none of his Men had escap'd with life, had not the Inhabitants taught him to cure the same with the Bark and Leaves of the Tree Anneda; with which many recovering, Quartier Weigh'd Anchor, and treacherously carry'd the King Donnacota with many of his Nobles, Prisoners to France; but most of them dying, Quartier brought only a few of them back with him in his third Voyage, six years after the first, when arriving in the Haven St. Croix, he calt up a strong Fort, which he nam'd Charlesbourg Royal, where he Staid a whole Winter. Joan de la Roque, whom the French King had made Governor of Quartier's new-discover'd Countries, Sailing thither with three Ships, met with Quartier's Fleet near Terrenent; from whence he was then going home, because he now no hopes of subduing the Salvages with so small a Force as he had brought with him from France. But de la Roque endeavoring to make a further discovery of Canada, Sail'd up the River Saguenay, where spending both time and Money, he was Commanded home by the French King, and the Fruitles|s Expeditions lay dead till about 1604.

When Peter de Monts obtaining Letters Patents to Trade for Furs in the foremention'd Countries, Sail'd with two Ships beyond Acadie, up St. Lawrence Bay, where he Landed on the île St. Croix, where of ninety seven Men, with which he Staid there a whole Winter, he loth thirty five; but having fresh Supplies sent him from France, he remov'd to Port Royal, where leaving forty Men, he return'd home; thence forty being reduc'd to twenty three, and in great want, walking along the Sea-shore in a despairing condition, elpy'd a Ship coming up with full Sail,
A M E R I C A.

Sail, which upon nearer approach, prov'd a French Vessel, of which Poutrincourt was Commander, who receiving his wretched Country-men with great joy, took them with him to Port Royal, being sent thither on purpose to settle a Plantation in Acadia: Meanwhile the Letters Patent granted to Mons, being call'd in, the first Planters in Port Royal were forc'd to desert the same, and return home; and also Poutrincourt returning, came back again three years after to Port Royal, where finding the Houses standing as he had left them, he Manur'd the Country all about, and endeavoring to Plant Christianity among the Natives, Christen'd among others an Accadian Lord, who was above a hundred years old, all which Poutrincourt Sailing back to France, related at the Court.

The Jesuits being also inform'd thereof, obtain'd leave of the Queen to send Peter Biard and Eusmond Maffé thither, on pretence, that Henry the Fourth had himself promis'd them the same Privilege in his Life time. But the Merchants at Diep, which were concern'd in the new Plantations with Poutrincourt, opposing the going over of the foremention'd Jesuits, express'd themselves very violent against them; and laid to their charge the Blood of the late King, which they said was yet reaking in Paris: What assurance (alleadg'd they) had their Goods which were in the Custody of Men inclin'd to the Spaniards? Must the Christian Religion be promulgated? There are so many Orders of Monks which may easily produce two Men; but if the Queen was resolv'd to send Jesuits thither, they defir'd restitution of the Monies which they had disburs'd: To which Biard and Maffe harkening, gather'd up the demanded Monies, under pretence of being requir'd towards the Preaching of the Christian Religion amongst these remote Heathens; by this means getting great Sums, they bought out the foremention'd Merchants, so that the new Plantations fell half to the Jesuits, who setting Sail, and arriving at Port Royal, turn'd all things topsy-turvy, and so thwarted Poutrincourt in his designs, that he was forc'd to complain to the French Court of the Jesuits oppression, whose aim it was to get all things into their own Possession; whereupon they Excommunicated Poutrincourt's Son (who serv'd in his Father's place at Court, and gain'd the Duke Guercheville in France to be of their Party, by promising him, that he should share in the new Plantations for a contracted Sum of Money: After this they receiv'd all sorts of Arms and Ammunition, with several Bras Guns, of the then King Lewis the XIII. and other gifts Collected and gather'd out of their several Societies, for two new Accadian Applicants, Gilbert du Thet, a subtle man of the same Order, transported their Necessaries.

At this time all things going favorably with the Jesuits, they made themselves Masters of Port Royal, and began to raise a Fort on the River Pentagovet; but there their happy Proceedings were stopp'd, for Captain Argal before-mention'd, Sailing thither in vindication of the English, was encounter'd by du Thet, (who firing the first Gun on Argal, was by him taken off with Chain-shot) and taking Biard and Maffe, carry'd them Prisoners to Virginia, and dismantled the Fort built at Port Royal, after which it was by King James given by Patent to Sir William Alexander, as hath been already related, together with what of most remarkable hath happen'd since.

Q 3 S E C T.
Norumbega, lying between Nova Scotia Northward, and New England Southward, is so utterly not taken notice of by many as a distinct Province, that it might seem to be swallowed up and lost in the two Counteys between which it lies, or at least to be thought a part of Virginia or New England (for Virginia largely taken is said to contain New England, Novaum Belgum, and Virginia; especially so called) and that so much the rather, because the Beaufort, accounted by Sanfoni d' Abbeville an ancient People of New England, are written to have lived near the River Penobscot, which is reckoned to be the same with Penmegove; or, (as some will have it) Norumbega, from which, or from a certain great City of that Name, the Country for fancy's sake must needs be denominated; but since most commonly we find it namin'd and treated of apart, it will not be improper to follow that method, carrying the Bounds of New England no farther Northward than the River Quinnebequique or Sagadabec, and so determining the main part of this Country to that space between the aforesaid River and Penmegove, excepting a small Southern portion upon the Banks of the River Chovecove; so that it appears chiefly situate under the forty third Degree of Northern Latitude.

As for the Towns or Cities of this Province, there is but a very uncertain account to be given, forasmuch as the pretended great City Norumbega, from whence the Province should take its Appellation, is not acknowledged by any of the most authentic modern Writers, nor in any late Voyage or Discovery any mention made of any other considerable Town or City. Dr. Heylin fuppofeth it to be no other than Agguncia, a poor little Village, that seems composed of a company of Huts or Sheaves, covered with the Skins of Beasts, or the Barks of Trees. But the most favourable conjecture is, that it might haply be the Ruines of an ancient Town, which the Natives call'd Arumbeck, and had probably defended it long before the arrival of the Europeans in those parts; however, it is not very probable that the Name of the Country should be deriv'd from this City, if ever there were any such, or from the River, which appears to have been term'd Norumbega on purpose to make way for this derivation, whereas Penmegove is the ancient Appellation that properly belongs to it; nor hath any modern one been apply'd to it but that of Rio Grande, by Buno in his Comment upon Philip Claverius; upon what ground is hard to tell, since it is observ'd by Heylin and others, to be neither large, nor otherwise much to be commended, being Navigable not above twenty or thirty Miles, in respect of its many great Cataracts and Falls of Water, an Inconvenience with which many other Rivers of America are prejudic'd, and render impassable.

Before and about the Mouth of this River, which is judged to be about eight or nine Miles broad, lie many small Islands, or rather Hills, environ'd with Water, the chiefest of which is by the French call'd La Haute Isle, from the high and Mountainous appearance of it to those that see it from afar off at Sea.

The aforesaid Buno, though he names, as belonging to Norumbega, these several places, viz. Porto del Refugio, Porto Reale, Paradiso, Flora, and Angolema, from some obscure French testimonies, without particularizing any Author, yet he afterwards confesses, that the Names given by the French, and those apply'd by the Spaniards, are so various and disagreeing, and breed such a confusion, that no Charts or Descriptions had concluded upon either.
As for those who will have Norumbega deriv'd from Norway, in respect of a Colony brought thither from Norway, if the Etymologie be not a little too much forc'd, the Invention may pass well enough till a better be found out.

In this Countrey the temperature of the Air is not bad, nor the Soil unfruitful, if it were well cultivated, chiefly towards the Rivers, and where it is not either overgrown with Woods, or craggy with Hills and mountainous Rocks: neither are the Woods unprofitable, for they afford good Timber, and all kind of necessary and useful Wood, especially Beeches, Fir-trees, Walnut-trees, and other Nuts: The Plains are very pleasant, and yield good Pasturage, only the Maritime Coasts are so shallow and full of Sands, that the Sailing near them is accounted somewhat dangerous, and this may be imagin'd to be the reason that no Authors have yet met with any Ports or Havens belonging to this Countrey, which they have thought worthy their notice.

**NEW ENGLAND**

As Canada is by some accounted a general Province, containing New France, L'Acadie, Norumbega, and other places, so under Virginia largely taken, are comprehended New England, New Netherlands, and Virginia properly so call'd; however, since that part which vulgarly goes under the Name of Virginia and New England were possess'd, if not discover'd, at several times, and their Plantations promoted and propagated upon several occasions, and by distinct Interests, and since New England hath been look'd upon as a place considerable enough for Persons of very eminent quality to concern themselves in it, we rather are induc'd to consider this Countrey as a principal part, than as any way depending on, or being any Branch or Portion of Virginia.

It lies between Norumbega, which it hath Northward, and New Netherlands Southward, from forty one to forty five Degrees of Northern Latitude, in the midst of the temperate Zone, and parallel to France and some part of Italy in the Western Hemisphere, so that one would think it should enjoy the same temperature of Air; but the contrary is found, for that part which borders upon the Sea is colder, partly by reason that the Sea-waves break the reflexion of the Sun-beams, partly by reason of the abundance of Vapors, which mounting upward, abate the ardor of them; but the more Inland parts of the Countrey are indifferently warm: Moreover it hath been found by certain experience, that those Countries which look towards the East, or Sun-rising, are colder than those which lie towards the West, or Sun-setting, and those that have the Evening Winds on them, warmer than those which have the Morning Winds; which being so, it should follow, that the temperature of the Air in those Regions is peculiar to the Bodies of those of our Nation, who being accustomed to a Climate somewhat temperate, are neither able to endure extremity of Cold, nor immoderate Heat: Yet there are who affirm, that New England, though situate in the midst of the temperate Zone, nevertheless feels both extremities of the two opposite Zones, in the Summer the heat of the Torrid, and in the Winter the cold of the Frigid.

As for the first discovery of this Countrey, it is not to be expected otherwise than very.
than that of the discovery of those other Countreys hitherto discovred of, that is to say very uncertain; but because the French boat of Joannes Verrazanus (whothough an Italian, was employ'd by the French King Francis the First) as the first Discoverer, not only of Nova Francia, as hath been already intimated, but also of this Country and the adjoyning Coast and Regions, we shall not think it impertinent to give from their own Relations, a brief view of his Voyage, and afterwards a particular Description of the English Plantations there, and of their Transactions, both one with another, and between them and the Nations. The Narration of Verrazanus's Voyage is as followeth:

"On command of the French King Francis the First, John Verrazanus, Anno 1524, setting Sail Westward from the Canary Isles, discover'd a low American Coast, in thirty four Degrees North Latitude, inhabited by naked People, which behind the sandy Hills facing the Sea, Manur'd many fruitful Plains. Then Sailing a hundred Leagues along the Shore Northerly, he view'd a Countrey full of Vines, which grew up amongst the Boughs of high Trees; and Sailing up a pleasant River, Landed on the Island Clandias, full of woody Mountains: thence he stood for the main Continent; where after having visited a King, Clad in 'trought Deer-skin, he Sail'd by a Bay, at whose Mouth appear'd a Rock in an Inlet, twenty Leagues; where appear'd five small Isles, all of them exceeding fruitful. After this (being got a hundred and fifty Leagues to the Northward) he found very Salvage People, whose Heads appear'd through Bear-skins and Sea-Calves. By this time having Terreneuf on his Starboard, he return'd back to Diepe.

Thus far Verrazanus made some discovery of the Coast, which hath since not once been farther inspected by the English, but also by them Planted and call'd New England.

This Country, whether first discover'd by the said Verrazanus, or together with the rest of largely-taken Virginia, by Sir Walter Raleigh, or, as some say, by Captain Gofnald, in the Year 1602. was so well known to the English in the beginning of King James's Reign here, that the feeling and carrying on of Plantations in this part of America, was vigorously promoted by many of the most eminent Persons in England: whereupon it was about the Year 1606. being the fourth Year of the said King, granted by Patent to several Lords, Knights, Gentlemen and Merchants, under the denomination of The Plymouth Company, both in favour of those generous Spirits, who studied and endeavor'd the good of the Publick by foreign Plantations, and indulgence to those, who not well farish'd with the Government of Church and State, and willingly transporting themselves and Families thither, as to their Asylum, could more conveniently be far'd than the better affected part of the People: And although the Colonies at first sent over succeeded not according to expectation, yet in a short time there Plantations were brought to very great perfection. Captain Weimuth, who had been employ'd there by the Lord Arundel of Warder, for the discovery of the North-West Passage, falling short of his Course, hapned into a River on the Coast of America, call'd Pemquaid; from whence he brought five of the Natives for England, three of whose Names were Mannida, Sketwaroes, and Tisquantum, and Landing at Plymouth, presented them to Sir Ferdinando Gorges, whom he made use of as Instruments for the farther advancement of these Plantations: they were all of one Nation, but of several parts, and several Families; he kept them with him three years, and observing in them an inclination to vertuous Designs, and Spirits above the Vulgar, he gain'd information from them
them what great Rivers ran up into the Land, what Men of note were seated on them, what Power they were of, how Ally’d, what Enemies they had, and the like; and taking some light from thence, sent away a Ship, furnish’d with Men, and all kind of Necessaries convenient for the Service intended, under the Command of Captain Henry Chaloung, a Gentleman of a good Family, and very capable for Undertakings of this nature; and giving him sufficient Instructions what to do, sent along with him two of the said Natives for his better Conduct and Direction, ordering him by all means to keep the Northerly Gage as high as Cape Breton, till they had discover’d the Main, and then to beat it up to the Southward as the Coast tended, till they found by the Natives they were near the place to which they were assign’d. By that time they were about a hundred Leagues off the Island of Cañara, the Captain fell sick of a Feaver; and the Winds being Wefterly, his Company shap’d their Cours for the Indies, and coming to St. John de Porto Rico, the Captain went ashore for the recovery of his Health, whilst the Company made themselves a house, and other Provisions as they had present need of, and spent some time in Hunting, and other Receptions; after which steering their intended Course, they were met with by the Spanijh Fleet that came from the Havana, taken Prisoners and carried into Spain; the Ship and Goods being confiscat’d, the Voyage overthrown, and the Natives lost.

Not long after the setting out of Chaloung, Thomas Haman was sent by Sir John Popham, Lord Chief Justice of England, towards the River of Sagadabeoc, to the succour of Chaloung, if need were; but not finding him, after he had count’d the Coast all about, he return’d back into England.

Captain Prime was likewise sent from Bristol, who arriving happily in those Parts, brought back with him at his return the most exact Discovery of that Coast that ever had been gain’d till then.

A while after, at the Charge of the said Sir John Popham, a hundred Men were sent to fettle a Colony at Sagadabeoc, under the Command of George Popham, Raleigh Gilbert, Master of the Ship, who seated themselves in a Peninsula, at the Mouth of this River; which attempting to discover, they met with a Wood near to an Island, distant from the Line about forty five Degrees, and some odd Seconds, where they easily went on Shore. In the Year 1608. the Commander of the Colony deceas’d, and not long after him the Lord Chief Justice, who had been the chief that had furnish’d them with refresh Supplies, they return’d for England in those Ships that had been sent them with Succours: At which unexpected return, the Patrons of the Design were so offended, that for a certain time they deft’d from their Enterprises. In the mean while the French making use of this occasion, Planted Colonies in divers places, when Sir Samuel Argall from Virginia disturb’d their Designs, and brought away Prisoners all he could lay hold on.

Suddenly after Captain Hobson and divers others were set out with very great Preparations, and with them two of the Natives which had been detain’d for some time in England, whom they thought to have made use of, the better to draw the rest of the Natives to their Commerce; but because a little before twenty four of them had been treacherously dealt with by one Hunt, they contract’d from thence so great an Animosity towards the English, that Captain Hobson was constrain’d to return without effecting any thing.

In the Year 1614. Captain John Smith being sent to Fith for Whales, and seek after Mines of Gold and Silver, Landed upon the Island of Monadiggin, where he found some store of Whales, but not such as those by whose Oyl they use to make so much profit.
About the same time (two of the Natives being recover'd, one of them had escap'd from Captain Hobfon, and another of Pennaquit, one of those that had been taken Prisoners with (Chalowy) Captain Harly, with necessaries convenient for such a Voyage, was dispatch'd away by Sir Ferdinando Gorges, the Earl of Southampton favouring the Design, and furnishing him with some Land-Soldiers under the Command of Captain Hobfon, who not discourag'd with his former ill Success, resolv'd upon a second Adventure.

In the Year 1615, Sir Richard Hakings undertook a Voyage into those Parts by authority of the Council of the second Colony, but by reason of the great Wars among the Natives, his Observations could not be such as might give any farther light than what had been already receiv'd.

Soon after which Captain Dormer coming for England from New-found-Land, and Landing at Plymouth, apply'd himself to the Governor, by whom he was dispatch'd away, with Direction to meet Captain Rوبرt Gorges, sent away a little before; but Robert Gorges being dead by that time Dormer could come after him to Virginia, where he heard he was, he returning to Capawick, was there set upon by Erpenow, the foremost of Salvage, and other Indians that were Conspirators with him; and within a short while after at Virginia, whither he went to be cur'd of the Wounds he receiv'd in that Affraction, he fell sick and died.

About the Year 1623, Captain Robert Gorges, newly come out of the Venetian War, was employ'd by the Council of New England's Affairs as the Lieutenant-General, to regulate the Abuses of divers Fifer-men and other Interlopers, who without Licence frequented those Coasts: for which Service he had assign'd to him all that part of the main Land situate upon the North-East side of the Bay of the Massachusetts.

By these several Colonies sent so thick one after another, both a full Discovery of the Country came to be made, and a large gap open'd to the free possession thereof; yet in regard of the many disappointments and misfortunes the several Companies sent over met with, and counting the vast Charges their setting forth cost the Undertakers, which would have been still increas'd by the need of continual Supplies, in all probability New England would have been but thinly peopled to this day, had not a great Tide of People, pollet's with an aversion to the Church-Government of England, and fled into Holland for Liberty of Conscience, eagerly taken hold of this opportunity to make themselves Masters of their own Opinions, and of a Place where they might erect a Government suitable thereunto: and though at first there were some Exceptions taken, as if this Country was to be made a Receptacle of Sectaries, and such as condemn'd the Ecclesiastical Government of the Nation, insomuch that Sir Ferdinando Gorges, to whom they apply'd themselves, desiring him to mediate for them to the Council of New England's Affairs, when they perceiv'd the Authority they had from the Virginia Company, could not warrant their abode there, had enough to do (notwithstanding his Apology, That these things happen contrary to his expectation) to wipe away the jealousy which was entertain'd of him, it being Order'd, that no more should be suffer'd to pass into New England, but such as should take the Oaths of Allegiance and Supremacy: yet at last there was little notice taken who went, perhaps upon consideration, that the vast resort of People thither would be of greater advantage to the Plantations; than their different Opinions, at so remote a distance, could be prejudicial, so long as they acknowledg'd Obedience to the King and Civil Power; However, Sir Ferdinando, to clear himself the better, mov'd those Lords that were the chief Actors in the Business, to resign their Grand Patent to the King, and pafs particular
particular Patents to themselves of such part of the Country along the Sea-Coast, as might be sufficient for them: To this Motion there being a general Assent given by the Lords, and a Day appointed for the conclusion thereof, an Act was made for the Reification of the Patent, allowing to each Man their several Bounds. From the uttermost parts began the Limits of the Lord Mongrave, and ended at Hudson’s River. To the Eastward of which River, for the space of sixty Miles in length, was plac’d the Duke of Richmond’s Assignment: Next to him was settled the Earl of Carlisle: Next him the Lord Edward Gorges: Next the Marquefs of Hamilton: Then Captain John Mason: And lastly his own, which extended to the great River Sagadeboec, being fifty Miles, and so up into the Main Land a hundred and twenty Miles, which he was pleas’d to call by the Name of The Province of Main.

The Landing of the English in Plymouth Plantation was very much facilitated by the great Mortality that hapned amongst the Indians about that time, amongst the Pequots, Narragansetts, Nianticks, Taranines, Wpanaps, and those of Abargini, Agiffawang, and Pockanick, their Powwows, or Doctors, seeing with amazement their Wigwams, or Streets, lie full of dead Bodies, and in vain expecting help from Squantum their good, or Abbanoch their bad God. Not long before, that blazing Comet, so much talk’d of in Europe, appeare’d after Sun-setting in their Horizon South-West for the space of thirty Sleeps, (for so they reckon their Days). They Landed at first with little or no refistance, a handful of Men only being sent before to keep possession for their Companions, who arriv’d eight days after; when the Natives appearing with their Bows and Arrows, let flie their long Shafts amongst them; whereupon one Captain Miles Standish with his Fowling-piece shot the routest Sachem amongst the Indians, as he was reaching an Arrow from his Quiver; which the reft seeing, fled into the Woods and Thickets.

The same Year the Merchant-Adventurers in England sent forth flore of Servants to provide against the Wants of that place; amongst whom came over a mix’d Multitude, who settled themselves in the Bofom of the Cape now call’d Gloucefter.

About the Year 1631 there flied to the English at Water-town the Indians that dwelt thereabouts, for protection against the Tarratines, a fort of cruel and Salvage Cannibals, by whom near the Town of Saugus, in the very dead time of the Night, one Lieutenant Walker being on a sudden alarm’d, was shot through his Coat and Buff Jacket with two Indian Arrows. That Night the English stood upon their Guard, and the next Morning sent word to other parts; who gather’d together, and taking counsel how to quit themselves of these Indians, agreed to discharge their great Guns; whose redoubled noife, rattling in the Rocks, struck terror into the Indians, and caus’d them to betake themselves to flight. The Autumn following, others of the Indians, who till then had held a good correspondence with the Planters, began to quarrel about the Bounds of their Land; but a great Mortality, by the raging of the Small-Pox, breaking out amongst them, put an end to that Controversie: There died amongst the reft one of the chief of the Sagamores of the Mattachufetts, call’d Sagamore John, who before his Death had been instrufted in the Chris- tian Faith, and took care that his two Sons should be nur’tur’d therein.

In the Year 1635, there arriv’d several Ships with great plenty of Provisions, and many Perfons of good Quality, and amongst the reft Sir Henry Vane.

The same Year the People of Cambridge, otherwise call’d New-Town, hearing of a fertile Place upon the River Canetico, remov’d thither, and erected a new Corpora- tion by the Name of Banketico, being encourag’d thereunto by the Lord Say and the Lord Brookes; and planting a Forrest at the mouth of the River, call’d it Saybrook Forrest.

About the Year 1638, the Pequods, a fruitful and Warlike Nation, lying to the South-
South-West of the Massachusetts, were discover'd upon their March within some few Miles of Hartford: Their coming very much terrif'd all that inhabited thereabouts; but they took only three Women and return'd; one of whom making a violent resistance, had her Brains beaten out; the other two they carried away with them, without abusing their Persons, as it was suppos'd they would, for they esteem'd their own Shawns, being black, beyond our Women. Their chief Design was to learn to make Gunpowder; which seeing they could not effect, they look'd upon their Prize as nothing so precious as they imagin'd.

A little after another Indian War threatening the English, they resolv'd together to send an Ambassador to Cannonicus, chief Sachem of the Narragansets, endeavoring to prevent him from confederating with the Pequods, who (as they had Intelligence) were about sending him to join with them: Cannonicus being grown old, had resign'd the Government to his Nephew Mantineo, a stern Man, and of a cruel Nature. The Ambassadors arriving at his Court, which was about eighty Miles from Boston, the Indian Prince assembled his chief Councillors, and having Entertain'd the Ambassadors Magnificently, and Feasted them Royally, gave them Audience in his State-house; where the Sachem, to manifest his greater State, lay along upon the Ground, with all his Nobility sitting about him, with their Legs doubled up, and their Knees touching their Chin: The English Interpreter having made his Speech in the Name of the ref, both Cannonicus and the young King gave directe Anfwers, signifying their Resolutions to keep a fair Correspondence with the English, and yet not to fall out with the Pequods: Who a little after making allo their Addresses to the same King, he dissuaded them by many Reasons from making War with the English, and to deliver into their hands those Persons that had murder'd any of them. The Pequods nevertheless, though they seem'd inclinable to his Counsel, yet they acted as Enemies; for when the English sent a Company of Soldiers into their Country to treat with them about delivering up the Murderers, they made shew of willingness, but laying their advantage, betook themselves to their Heels; and whomsoever they took treat'd by surprize, they revil'd and insulted over in a most cruel manner, vilifying the Christian Religion, and uttering all the Blasphemies they could invent. Whereupon they rais'd fresh Souldiers for the War, to the number of fourscore, out of the several Towns in the Massachusetts, and with some Indian Guides came to their Fort, within which they had pitch'd their Wigwams, the Entrance being on two sides, with intricate Meanders to enter; at which were plac'd Indian Bowe-men, who shot the foremost of the English; yet they had little to boast of in the end, for the English rushing in through the winding Ways, and placing themselves round the Wigwams, made a very prosperous Shot, by directing the Muzzles of their Musquets against the Indians which lay sleeping on the Ground: In the midst of whichrouzing terror and confusion they were defeated with little ado, most of them being either wounded, kill'd, or taken. The English thus animated with the first Victory, send their Prisoners to the Pinacles, and prosecute the War in Hand, marching against the next Body of the Indians, which lay Encamp'd on a Hill about two Miles distant, where they gave them a second Overthrow, slaying many more than in the first Engagement; the rest flying to a very thick inaccessible Swamp or Bog, were there believ'd by the English; and skulking up and down, as they saw their opportunity they would Shoot at them with their Arrows, and then suddenly fall flat along in the Water; at last the English finding out a Passage into the Swamp, utterly defeated them, and put an end to the War with the los'd of few Mens Lives, and not many wounded.

In the Year 1640, there came over a fresh Supply of People into New England, and finding
finding no place to settle in within any of the former erected Colonies, they repair'd to a place call'd Long Island, sever'd from the Continent of New-Haven, about sixty Miles off the Sea.

The Year following the four Colonies, namely the Massachusetts, Plymouth, Connecticut, and New-Haven, taking into consideration the many Nations that were on all sides of them, as the French, Dutch, Jews, and native Indians; as also how the three first went to lay claim to Lands they never had any right to, and the last to be continually quarrelling and contending, where they saw any hopes of prevailing, by Commissioners chosen from the respective Colonies, concluded a firm Confederation to assist each other in all just and lawful Wars; upon which there came in certain Indian Sachems, as Pompam, Miantonomo, Squanno, and Uncas, who not only submitted to the English Government, but also, if occasion were, in matters of Controvertie submitted to their Arbitration: But the Contents between Miantonomo and Uncas was too hot to be appeas'd, (though the English were not wishing to interpose) unless by the Blood of one of them, as will appear by the Consequence: Uncas was a Prince of Tor, whose Life Miantonomo, though a much more potent Prince, fought to take away by treachery, hiring a young Man of the Pequot Nation to murder him, as the following Story renders suspected; for one dark Evening this Sachem passing from one Woman another, was Shot through the Arm with an Arrow; but recovering the Palace, had the Arrow pull'd out, and his Arm cur'd: the young Man that was suspected being examin'd, how he came by that great Store of Wampompeage which was found about him, and being able to give no good account, it increas'd the suspicion, and induc'd Uncas to complain to the English at a General Court held at Boston: Whereupon the young Man was Examin'd in the presence of Miantonomo, who came thither with his Attendants; but the young Man tutor'd, as suppos'd, by Miantonomo, pretended that Uncas had enjoy'd him to feign that he was hire'd by Miantonomo to kill him: To which Tale of his little belief being given, it was concluded upon farther Examination of him in private that he had done the Fact: nevertheless they let him depart with Miantonomo, advising him to send him home to Uncas; but he in stead of returning him cut off his Head, and forthwith gather'd an Army of a thousand Men to fight with Uncas; who met him with half the Men: the Battle being joy'd, the Narragansetts, though the far greater multitude, were beaten by the Wamiggsins, through the Valour of Uncas their Prince; who perfecuted his Victory by possessing himself of the Perion of Miantonomo, whom, having put his Life-guard to flight, he carried away with him in triumph to the Town of Hartford, desiring to have the advice of the United Colonies what to do with his Prisoner: Whereupon the Commissioners having had sufficient proof of Miantonomo's treachery towards this Prince, advis'd Uncas to put him to death, but not to exercise that barbarous kind of cruelty which is usual amongst them in these Cases. The Sachem, upon this advice, not long after pretended to remove him to a safer place, but by the Way caus'd him to be Executed: His Subjects and Kindred were troubled at his Death, but the little Princes his Neighbours, over whom he had tyranniz'd, rather rejoic'd.

In the Year 1645. the Sons of old Canonicus, their Father being dead, began to fall into hot Contentions with their Neighbours, and being forbidden by the United Colonies, they did not think to threaten Wars to the English also. Whereupon the Commissioners rais'd an Army of Horse and Foot, and made Major General Edward Gibbons Commander in Chief over them. But the Indians hearing of this Preparation, sent some of their chief Nobility to the Commissioners of the United Colonies, who were assembled at Boston, to Treat about Peace; to which the
Commissioners agreed, upon condition they should pay a part of the Charges of the War; and that they should send four of their Sons for Hostages till the Sum was paid; and the Hostages being sent back before the Wapen was all paid, the two Princes, Peficus and Mexamnos, upon the sending a Company of Armed Men to demand it, sent the remainder of the Money.

In the Year 1647, divers Persons of Quality ventur'd their Estates upon an Iron Mill, which they began at Brain tree, but it profited the Owners little, rather wafting their Stock, the price of Labor in matters of that nature, being double or treble to what it is in England.

There are the most material Transactions we find deliver'd by any one which hapned from the first discovery till the Year before mention'd: what hath hapned from that time to this, chiefly relates to the several Revolutions that have been in England, and shall be therefore taken notice of when we come to speak of the Government of these Plantations.

Though there are, who having remain'd some time, and been concern'd in those Parts, affirm the Soil of New England to be nothing so fruitful as it is believ'd and commonly deliver'd to be, yet we think it not improper to give a brief account of the Trees and other Plants; also the Beasts, Birds, Fishes, and other Commodities which most Writers will have to be the production of this Country, especially since we find them compactly fummd up by an unknown Writer in the Language of the Muses. The recital of the Plants and Trees, which (excepting the Cedar, Sassafras, and Dyers Sumach) are all of the same kind with those that grow in Europe, only differing in nature, according to the Epithets of many of them declare, is as follows:

*Trees both in Hills and Plains in plenty be;*

*The long-liv'd Oak, and mornful Cypress Tree;*

*Skie-covering Pines, and Chestnuts coated rough;*

*The lasting Cedar, with the Walnut tough;*

*The hewen-dropping Fir, for Maff in use; (Sprue);*

*The Boat-men seek for, Oars light, neat grown;*

*The brittle Ash, the ever-trembling Alp;*

*The breed-spread Elm, whose Concave barker*

*The Water-fumnge Alder, good for nought; (Wop);*

*Small Eldern by the Indian Fletchers sought;*

*The knotty Maple, pallid Birch, Hawthorns;*

*The Horn-bound Tree, that to be cloven scorns;*

*Which from the tender Vine oft takes his Spouse, Who twines embracing Arms about his Boughs;*

*Within this Indian Orchard Fruits be some;*

*The ruddy Cherry, and the jetty Plum;*

*Snake-murthering Hazle, with sweet Saxafrage;*

*Wofe Leaves in Beer alay but Feavers rage;*

*The Dyers Sumach, with more Trees there be;*

*That are both good to use, and rare to see.*

**Beasts:**

*The Beasts peculiar to this Countrey are the Moose, the Rackoon, and the Muffa HH; the two first Land-Animals, the last Amphibious, which with others common to them with us, are thus verified by the above said Author:

*The Kingly Lyon, and the strong-arm'd Bear;*

*Left red-eye'd Ferrets; wily Foxes would, The large limb'd Moose, with the tripping Deer; Them undermine, if Ramper'd but with Mold;*  

*Quill-darting Porcupines, that Rackoons be;*  

*The grim-fac'd Ounce, and rave'ns bowling Wolf;*  

*Capled its' hollow of an aged Tree;*  

*Whole meagre Pelope sucks like a smalling Gulph;*  

*The skipping Squirrel, Rabbits, parblind Hare;*  

*Black glittering Otters, and rich Coxed Beaver;*  

*Immured in the self-same Castle are;*  

*The Givet-scented Mulquash smelling ever.*

Of such of these as are altogether unknown to us, take the short brief Descriptions.

The Beast call'd a Moose, is not much unlike red Deer, and is as big as an Ox, flow of Foot, Headed like a Buck, with a broad Beam, some being two Yards wide.
The Princely Eagle, and the soaring Hawk,
Whom in their unknown Ways there's none can chancing.
The Humbird for some Queen's rich Cage more fit,
Than in the vacant Wildernes to fit.
The swift-wing'd Swallow sweeping to and fro,
As swift as Arrow from Tartarian Bowe.
When as Aurora's Infant day new springs,
There th' morning mounting Lark her sweet lays sings.
The harmonious Thrush, swift Pigeon, Turtle-dove,
Who to her Mate doth ever constant prove:
The Tucky-Pheasant, Heath-cock, Partridge rare,
The Carrier-tearing Crow, and hurtful Stare,
The long-lo'd Raven, th'ominous Scretch Owl,
Who tells, as old Wives say, disasters foul.

The drowsie Madge that leaves her day-lov'd Nest,
And loves to rove, when Day-birds be at rest:
The Eel-murthuring Etern, and greedy Cormorant,
That near the Creeks in marshy Marshes haunt.
The bellowing Bittern, with the long-leg'd Crane,
Prefaging Winters hard, and death of Grain.
The Silver Swan that tunes her mournful breath,
To sing the Dirge of her approaching death.
The tattering Oldwives, and the cackling Geese,
The fearful Gull that shuns the murthuring Peco.
The strong-wing'd Mallard, with the nimble Teal,
And ill-shape't Loon, who his harsh Notes doth squall.
There Widgeons, Sheldrakes and Humilitets,
Sneiers, Doppers, Sea-Lark, in whole million flees.

Of thee the Humbird, Loon, and Humility are not to be pass'd by without particular observation.

The Humbird is one of the wonders of the Countrey, being no bigger than a Robin, yet hath all the Dimensions of a Bird, as Bill, and Wings with Quills, Spider-like Legs, small Claws: for Colour, she is as glorious as the Rain-bow; as for flies, she makes a little humming noise like a Humble-bee, wherefore she is call'd the Humbird.

The Loon is an ill-shap'd thing like a Cormorant, but that he can neither go nor fly; he maketh a noise sometimes like Sowgelders Horn. The Humilities or Simplicies (as we may rather call them) are of two sorts, the biggest being as large as a great Plover; the other as big as Birds we call Knots in England. Such is the simplicity of the smaller sorts of these Birds, that one may drive them on a heap like many Sheep, and seeing a fit time shoot them; the living seeing the dead, Little themselves on the same place again, amongst which the Fowler discharges again: These Birds are to be had upon Sandy Brakes, at the latter end of Summer before the Geese come in.

No less Poetical a Bill of Fare is brought of the Fish on the Sea-Coasts, and in the Rivers of New England in these Subsequent Verifies.
The King of Waters, the Sea-shoultering Whale,
The fluent Grampus, with the Oily Seal,
The storm preying Porpus, Herring-Flag,
Line-fearing Shark, the Catfish, and Sea Dog,
The Scale-ferd Sturgeon, wry-mouth'd Hound, bollihout,
The slumbering Salmon, Codfish, Greedigut:
Cole, Haddock, Hake, the Thornback, and the Scate,
Whose sling outside makes him fly'd in date,
The flatty Bass, old Neptune's fleeting Poft,
That Tides it out and in from Sea to Coft.
Conforting Herrings, and the homy Shad,
Big-belly'd Alewives, Mackrills richly clad

To speak of the most usuall of these forts of Fift; First the Seal, which is
call'd the Sea-Calf, his Skin is good for divers ufe, his Body being between Fift and Fift, it is not very delectable to the Palate, or congruent with the Stomack; his Oil is very good to burn in Lamps, of which he affords a great deal.

The Shark is a kind of Fift as big as a Man, some as big as a Horse, with three rows of Teeth within his Mouth, with which he snaps alunder the Fishermand Lines, if he be not very circumfpect: This Fift will leap at a Mans hand if it be over board, and with his Teeth snap off a Mans Leg or Hand if he be Swimming; there are often taken, being good for nothing but Manuring of Land.

The Hollibout is not much unlike a Pleace or Turbut, some being two yards long, and one wide, a Foot thick; the plenty of better Fift makes thefe of little efteem, except the Head and Finns, which Stew'd or Baked is very good; these Hollibous be little fet by while Baffe is in season.

The Baffe is one of the beft Fifhes in the Countrey, and though Men are foon weary'd with other Fift, yet are they never with Baffe; it is a delicate, fine, fat, fat Fift, having a Bone in his Head which contains a Sawcerefull of Marrow, sweet and good, pleasant to the Palate, and wholesome to the Stomack: When there be great forte of them, we only eat the Heads, and Salt up the Bodies for Winter, which exceeds Ling or Haberdine: Of these Fifhes some are three, and some four Foot long, some bigger, some lefser; at some Tides a Man may catch a dozen or twenty of these in three hours; the way to catch them is with Hook and Line: The Fisherman taking a great Cod-Line, to which he fafteneth a piece of Lobifter, throws it into the Sea, the Fifh biting at it, he pulls her to him, and knocks her on the head with a Stick.

Alewives are a kind of Fifh which is much like a Herring, which in the later end of April come up to the fresh Rivers to Spawn, in such multitudes as is almost incredible, preffing up in such shallow Waters as will scarce permit them to Swim, having likewise such longing desire after the fresh Water Ponds, that no beaings with Poles, or torrefive agitations by other devices, will cause them to return to the Sea, till they have caft their Spawn.

Clams or Clamps, are a Shell-fift not much unlike a Cockle, they lie under the Sand, and have every one of them a round hole to take Air, and receive Water at. When the Tide ebbs and flows, a Man running over these Clamms banks will prefently be made all wet, by their Spouting of Water out of thole small hole: These Fifhes are in great plenty in molt places of the Countrey, which is a great Commodity for the feeding of Swine, both in Winter and Summer; for being

With Rainbow colours, Froffish and the Smelt,
As good as ever Lady Gyntus felt.
The flapped Lampreys, Eels, the Lampriers,
That seek fresh Water-Brooks with Argus Eyes,
The weary Villagers, with thongs and more,
Do pafs and repafs near the verdant Shore.
Kinds of Shell-fift.
The Infeccus Lobster, with the Grassish raw,
The brumish Otter, Muffe, Periwigge,
And Tortoife fought for by the Indian Squaw,
Which to the Flats dance many a Winters Vigge,
To dive for Coles, and to dig for Clams,
Whereby her lazy Husband gats she crams.
once us'd to those places, they will repair to them as duly every Ebb, as if they were driven to them by Keepers: In some places of the Country there be Clamons as big as a Peeny white Loaf, which are great Dainties amongst the Natives, and would be in great esteem amongst the English, were it not for better Fishe.

Other Commodities which this Country is said to yield, are, in down-right Profe, Fruits, Flax, Linnen, Iron, Pitch, Mafts, Cables, and some quantity of Amber; so that if what many Authors have consented to affert concerning New England be not a meer Fiction, what e're hath been affirm'd of the unfruitfulness of the Country will demonftrably be found invalid.

There are also to be found here some hurtful Creatures, of which, that which is most injurious to the Perfon and Life of a Man is the Rattle-Snake, which is generally a yard and a half long, as thick in the middle as the small of a Mans Leg, she hath a yellow Belly, her Back being spotted with black, ruflet, yellow, and green colours, plac'd like Scales, at her Tail is a Rattle, with which she makes a noise when she is molested, or when she seeth any approach near her, her Neck seems to be no thicker than a Mans Thumb, yet she can swallow a Squirrel, having a great wide Mouth, with Teeth as sharp as Needles, wherewith the biteeth such as tread upon her, her Poyfon Lyeth in her Teeth, for she hath no Sting. When any Man is bitten by any of these Creatures, the Poyfon spreads so suddenly through the Veins, and so runs to the Heart, that in one hour it causeth Death, unless he hath the Antidote to expel the Poyfon, which is a Root call'd Snake-weed, which must be champ'd, the Spittle swallow'd, and the Root apply'd to the Sore; this is present Cure against that which would be present death without it: This Weed is rank Poyfon, if it be taken by any man that is not bitten; whatsoever is bitten by these Snakes, his flesh becomes as spotted as a Leopard, until he be perfectly cur'd. It is reported, that if the Party live that is bitten, the Snake will die, and if the Party die, the Snake will live. This is a most Poyfonous and dangerous Animal, yet nothing so bad as the report goes of it in England; for whereas it is said to kill a Man with its breath, and that it can bite, there is no such matter, for it is naturally the most feepy and unnimbile Creature that lives, never offering to leap or bite any Man, if it be not trodden on first; and it is their desire in hot weather to lie in Paths, where the Sun may shine on them, where they will sleep so soundly, that I have known four Men ride over one of them, and never awake it; five or six Men have been bitten by them, which by using of Snake-weed were all cur'd, never any yet losing his life by them. Cows have been bitten, but being cut in divers places, and this Weed thrust into their flesh, were cur'd; A small Switch will easily kill one of these Snakes. In many places of the Country there be none of them, as at Plymouth, New-town, Igwanme, Nahant, &c. In some places they will live on one side of the River, and swimming but over the Water, as soon as they are come into the Woods, they turn up their yellow Bellies and die. Up into the Country, Westward from the Plantations, is a high Hill, which is call'd Rattle Snake-Hill, where there are great Store of these Poyfonous Creatures.

There are likewise troublesome Flies.

First there is a wild Bee or Wasp, which commonly guards the Grape, building by Cobweb habituation amongst the Leaves: Secondly a great green Flie, not much unlike our Horse-Flies in England; they will nip so sore, that they will fetch Blood either of Man or Beast, and are most troublesome where most Cattel are, which brings them from out of the Woods to the Housés; this Flie continues but for the Moneth of June. The third is Garnipper; which is a small black Flie, no bigger than a Flea; her biting causeth an itching upon the Hands or Face, which

provoketh
provoketh scratching, which is troublesome to some; this Flie is bufie but in clofe Mornings or Evenings, and continues not above three Weeks; the leaft Wind or heat expels them. The fourth is a Murtheror, which is not unlike to our Gnats in England; in places where there is no thick Woods or Swamps, there are none or very few. In the new Plantations they are troublesome for the first year, but the Wood decaying they vanish: These Flies cannot endure Wind, heat or cold, so that they are only troublesome in clofe thick Weather, and against Rain, many that are bitten will fall a scratching, whereupon their Faces and Hands swell.

As touching the Nature of the ancient Inhabitants, they are to be consider’d according to their several Shires or Divisions; those that inhabit to the East and North-East bore the name of Churches and Tarrentens; those in the Southern parts were call’d Pequods, and Narraganssets; those Westward, Connecticuts and Mowbacks; to the North-West, of whom were the Abergaines.

The Mowbacks were ever accounted a cruel bloody People, which were wont to come down upon their poor Neighbors, with more than brutifh Savagenefs, spoil- ing their Corn, burning their Houses, slaying Men, ravifhing Women, yea very Canibals they were, sometimes eating on a Man one part after another before his Face, and while yet living; infomuch, that the very Name of a Mowback would strike the Heart of a poor Abergian dead, till they had the English on their fides to succor them; for these inhumane Homicides confefs that they dare not meddle with a white Fac’d Man, accompany’d with his hot-mouth’d Weapon.

These Indians are a People of tall Stature, long grim Visages, slender Wafted, and having exceeding great Arms and Thighs, wherein they lay their Strength lieth; which is such, that one of them hath been known to kill a Dog with a flippof his Finger, and afterwards to have flead and sod him, and eat him to his Dinner. They are fo hardy, that they can eat fuch things as would make other Indians sick to look upon; being deftitute of Fish and Flefh, they fufcine Hunger and maintain Nature with theufe of Vegetatives; but that which they most hunt after, is the flefh of Man: Their cuftom is, if they get a stranger near their Habitations, not to Butcher him immediately, but keep him in as good plight as they can, feeding him with the beft Victualls they have.

These Indians are more desperate in Wars than the other Indians, which proceeds not only from the fiercenes of their Natures, but also in that they know themfelves to be better Arm’d and Weapon’d; all of them wearing Sea Horfe Skins and Barks of Trees, made by their Art as impenetrable, it is thought, as Steel, wearing Head-Pieces of the fame, under which they March fecurely and undatedly, running, and fiercely crying out, Hadree Hadree success come success, We come we come to fuck your Blood, not fearing the feather’d shafts of the strong-arm’d Bow-men, but like unruly headstrong Stallions, beat them down with their right-hand Tamahawks, and lefhand Javelins, being all the Weapons which they ufe, counting Bowes a cowardly fight. Tamahawks are Staves of two Foot and a half long, with knobs at one end as round and big as a Foot-ball; a Javelin is a short Spear, headed with sharp Sea-Horse Teeth; one blow or thrust with these sharp Weapons, will not need a second to haften death from a Mowbacks arm.

The Tarrentens saying that they eat not Mans flefh, are little les Salvage and cruel than thefe Canibals; our Indians do fear them as their deadly Enemies, for so many of them as they meet, they kill. Take these Indians in their own proper and na-tural disposition, and they are reported to be wife, lofty-spirited, constant in friendship to one another, true in their promise, and more induflrious than many others.
The Pequants are a frately Warlike People, just and equal in their dealings; not treacherous either to their Country-men, or English, to whom (except in time of War) they were not any ways uncivil. Their next Neighbors the Narragansets, are the most numerous People in those Parts, the most rich also, and the most industrious; being the Store-house of all such kind of wild Merchandize as is amongst them. These Men are the most curious Minters of their Wampompage and Musk-hates, which they form out of the inmost Wreaths of Periwinkle-shells. The Northern, Eastern, and Western Indians fetch all their Coyn from these Southern Mint-Masters. From hence they have most of their curious Pendants and Bracelets, from hence they have their great Stone Pipes, which will hold a quarter of an Ounce of Tobacco, which they make with Steel Drills and other Instruments; such is their Ingenuity and dexterity, that they can imitate the English Mold so accurately, that were it not for matter and colour, it were hard to distinguish them; they make them of green, and sometimes of black Stone; they are much defir'd of our English Tobacco-nifts, for their rarity, strength, handfomness, and coolness. Hence likewise our Indians had their Pots, wherein they us'd to feeth their Virtualls before they knew the ufe of Brash. Since the English came, they have employ'd most of their time in catching of Beavers, Otters, and Mijquashes, which they bring down into the Bay, returning back laden with English Commodities, of which they make double profit, by selling them to more remote Indians, who are ignorant at what cheap rates they obtain them, in comparison of what they make them pay, so making their Neighbors ignorance their enrichment: They were never known to be desirous to take in hand any Martial Enterprize, or expose themselves to the uncertain events of War; wherefore the Pequants call them Women-like Men, refting secure under the conceit of their popularity, and seeking rather to grow rich by industry, than famous by deeds of Chivalry.

Most of these Northward Indians are between five and fix Foot high, straight Body'd, strongly compos'd, smooth Skin'd, merry Countenance'd, of Complexion more swarthv than the Spaniards, black Hair'd, high Forehead'd, black Ey'd, outside, broad Shoulder'd, brawny Arm'd, long and slender Hande'd, out Breathed, small Waist'd, lank Belly'd, well Thigh'd, flat Kneed, with handesome grown Legs, and small Feet: In a word, take them when the Blood skips in their Veins, when the Flefh is on their Backs, and Marrow in their Bones, when they frolick in their antique Deportments and Indian Postures, they are more amiable to behold (though only in Adam's Livery) than many a trim Gallant in the newest Mode; and though their Houses are but mean, their Lodging as homely, Commons scant, their Drink Water, and Nature their belte Clothing, yet they all are healthful and lusty. Their finomous Skins proceed from the often anointing of their Bodies with the Oyl of Fishes, and the fat of Eagles, with the greese of Raccoons, which they hold in Summer the beft Antidote to keep their Skin from bliffering with the scorching Sun; it is their beft Armor against the Musktoes, and the sureft abraflour of the hairy Excrement, and fops the Pores of their Bodies against the nipping Winters cold. Their black Hair is natural, yet is brought to a more Jetty colour by Oyling, Dying, and daily dressing; sometimes they wear it very long, hanging down in a loose difhevel'd Womanish manner, otherwife ty'd up hard and short like a Horse Tail, bound clofe with a Fillet, which they lay makes it grow the fatte, they are not a little Phantastical in this particular; their Boys being not permitted to wear their Hair long till fifteen years of Age, and then they must come to it by degrees; some being cut with a long forctop, a long lock on the Crown, one of each side of his Head, the rest of his Hair being cut even with the Scalp; the

young
young Men and Soldiers wear their Hair long on the one side, the other being cut short like a Screw; other cuts they have as their Fancy leads them, which would torture the Wits of the most exact Barber to imitate. But though they are thus proud of the Hair of their Head, you cannot wooe them to wear it on their Chins, where it no sooner grows, but it is stubb'd up by the roots, for they count it as an unuseful, cumbersome, and opprobrious excrement, insomuch as they call him an English Man Baffard that hath but the appearance of a Beard.

The Cloathing of the Indians is only a pair of Indian Breeches to cover their secret Parts, which is but a piece of Cloth a yard and a half long, but between their Groins, ty'd with a Snakes Skin about their middles, one end hanging down with a flap before, the other like a tail behind. In the Winter time, the more Aged of them wear Leather Drawers, in form like Irish Trousers, fasten'd under their Girdle with Buttons: They wear Shoos like wise of their own making, cut out of a Moose Hide; many of them wear Skins about them, in form of an Irish Mantle, and of these some are Bears Skins, Moose Skins, and Beaver Skins few'd together, others Otter Skins, and Racoon Skins; most of them in the Winter having his deep Furr'd Cat Skin, like a large Muff, which he shifts so to that Arm which lieth most expos'd to the Wind. Although they are poor, yet is there in them the sparks of natural Pride, which appears in their longing desire after many kind of Ornaments, wearing Pendants in their Ears, in form of Birds, Beasts, and Fishes, Carv'd out of Bone, Shells, and Stone, with long Bracelets of their curious wrought Wampompege and Mowhacks, which they put about their Necks and Loins; these they count a rare kind of Decking; many of the better sort bearing upon their Cheeks certain Pourtraitures of Beasts, as Bears, Deers, Moose, Wolves, &c. Some of Fowls, as of Eagles, Hawks, &c. which is not a superficial Painting, but a certain Incision, or else a raising of their Skin by a small sharp Ingrum, under which they convey a certain kind of black unchangeable Ink, which makes the desir'd form apparent and permanent. Others have certain round Impressions down the outside of their Arms and Breasts, in form of Mullets or Spur-rowels, which they imprint by searing Irons: Whether these be Foils to illuhrate their unparallel'd Beauty (as they deem it) or Arms to blazon their antique Gentility, cannot easily be determin'd: But a Segamore with a Humbird in his Ear for a Pendant, a black Hawk on his Head for his Plume, Mowhacks for his Gold Chain, good store of Wampompege begirt his Loins, his Bowe in his Hand, his Quiver at his Back, with six naked Indian Lacquies at his Heels for his Guard, thinks himself little Inferior to the great

Cham.

In Winter time they have all manner of Fowls and Beasts of the Land and Water, Pond-fifh, with Cathaires and other Roots, Indian Beans and Clamms; in the Summer they have all manner of Sea-fifh, with all sorts of Berries. For the ordering of their Victuals, they Boil or Roast them, having large Kettles which they Traded for with the French long since, and do fill buy of the English as their need requires, before they had substantial Earthen Pots of their own making. Their Spits are no other than cloven Sticks, sharpen'd at one end to thrust into the ground; into these cloven Sticks they thrust the Fleish or Fish they would have Roasted, beheming a round fire with a dozen of Spits at a time, turning them as they see occasion. They seldom or never make Bread of their Indian Corn, but seethe it whole like Beans, eating three or four Corns with a mouthful of Fifh or Fleish, sometimes eating Meat first, and Corns after, filling the Chinks with their Broth. In Summer, when their Corn is spent, Squashes is their best Bread, a Fruit like a young Pumppion: But as all are fellows at Foot-ball, so they all meet Friends at the Kettle.
tle, lying their Wives, that Dance a Spaniel-like attendance at their Backs for their Fragments. If their occasions caufe them to Travel, the best of their Vituals for their Journey is Nozake, (as they call it) which is nothing but Indian Corn parch’d in hot Ashes; the Ashes being sifted from it, it is afterwards beaten to Powder, and put into a long Leathern Bag, trufs’d at their Back like a Knapfack, out of which they take thrice three Spoonfuls a day, dividing it into three Meals. If it be Winter, and Snow be on the ground, they can eat when they please, making use of Snow for their Drink; in Summer, they must lay till they meet with a Spring or Brook; with this handle rotaticum they will travel four or five days together. They keep no Set-Meals, their Store being spent, they champ on the Bit, till they meet with freth Supplies, either from their own endeavors, or their Wives industry, who trudge to the Clam-banks when all other means fail. Though they are sometimes feanted, yet are they as free as Emperors, both to their Countrymen and English, be he stranger, or near acquaintance; counting it a great discourte, not to eat of their high-conceited Delicates.

Their hardihood is much to be admir’d, no ordinary pains making them so much as alter their countenance; beat them, whip them, punch them, if they put on a resolution, they will not winch for it; whether it be their benumb’d insensibleness of smart, or their hardy resolutions, is hard to resolve; It might be a Perillus his Bull, or the Rack might force an out-cry from them, but a Turkish drubbing would not move them, the unexpected approach of a mortal Wound by a Bullet, Arrow, or Sword, striking no more terror, nor causing no more exclamation in them, than if it had been a shot into the body of a Tree; such Wounds as would be sudden death to an English Man, would be nothing to them; whether it be, that by their rare skill in the use of Vegetatives, or by Diabolical Charms, they cure them; nevertheless, the very name and thoughts of death is so hideous to them, or any thing that presents it so terrible, that a hundred of them will run from two or three arm’d with Guns. In the Night they need not to be feared, for they will not budge from their own Dwellings, for fear of their Abamacho (the Devil) whom they much fear, specially in evil enterprizes, they will rather lie by an English fire than go a quarter of a Mile in the dark to their own Dwellings; but they are well freed from this Scare-crow since the coming of the English, and let’s care for his delusions.

Now for the matter of Government amongst them; it is the custom of their Kings to inherit, the Son always taking the Kingdom after his Fathers death. If there be no Son, then the Queen rules; if no Queen, the next to the Blood-Royal, who comes in otherwife, is but counted an usurping Intruder, if his fair carriage bear him not out the better, they will soon Unseet him. Some lay the chief Powuke is next in Dignity and Authority to the King, and when he dies, Marries the Squaschem, or Queen.

The Kings have no Laws to Command by, nor have they any annual Revenues, yet commonly are they so either fear’d or belov’d, that half their Subjects efface is at their Service, and their Perfons at his Command, by which Command he is better known than by any thing else; for though he hath no Kingly Robes to make him glorious in the view of his Subjects, nor daily Guards to succor his Person, nor Court-like attendance, nor sumptuous Palaces; yet do they yield all submissive subjection to him, accounting him their Soveraign; going at his Command, and coming at his Beck, not so much as expostulating the cause, though it be in matters thwarting their wills; he being accounted a diabolical Subject that will not effect what his Prince Commands. Whosoever is known to Plot Treson, or to lay violent
violent hands on his lawful King, is presently Executed. Once a Year he takes his Progrees, accompanied with a dozen of his chief Subjects, to view his Country, to recreate himself, and establish good Orders. When he enters into any of their Houses, without any more Complement, he is desir’d to sit down on the Ground, (for they use neither Stools nor Cushions) and after a little reprieve all that are present come in, and sit down by him, one of his Seniors pronouncing an Oration gratulatory to his Majesty for love, and the many good things they enjoy under his peacefull Government. A King of large Dominions hath his Vice-Roys, or inferior Kings under him, to agitate his State Affairs, and keep his Subjects in good Decorum. Other Officers there are, but how to distinguish them by Name is something difficult. For their Laws, as their Vices come short of many other Nations, so they have not so many Laws, though they are not without some, which they inflict upon notorious Malefactors; as Traitors to their Prince, inhumane Murthers, and, some say, Adulterers: for Theft, as they have nothing to steal worth the Life of a Man, therefore they have no Law to Execute for Trivialls, a Subject being more precious in the Eye of his Prince, than, where Men are so scarce, to be cast away upon so slight a matter. A Malefactor having deserved Death, and being apprehended, is brought before the King, and some other of the wisest Men, where they enquire out the original of the thing, after proceeding by aggravation of Circumstances he is found Guilty, and Caft by the Jury of their strict Inquisition, he is Condemned and Executed in the following manner: The Executioner comes in, who blind-folds the Party, lets him in the publick view, and Brains him with a Tamahauke, or Club; which done, his Friends bury him.

Now to speak something of their Marriages, the Kings and the Powwows, or great Doctors, may have two or three Wives, but seldom use it, Men of ordinary Rank having but one; which disproves the report, that they had eight or ten Wives apiece. When a Man hath a desire to Marry, he first gets the good will of the Maid or Widow, after, the consent of her Friends for her part; and for himself, if he be at his own disposing, and if the King will, the Match is made, her Dowry of Wampomague paid, the Sagamore or King (who for every Marriage hath a Fathom of Wampomague, which is about the value of seven or eight shillings) joynts their Hands, never to part till Death, unless she prove a Whore, for which they may put away their Wives.

As it is natural to all Mortals to worship something, so do these People, but exactly to describe to whom their Worship is chiefly bent, is very difficult: They acknowledge especially two, Ketan, some say Tantum, their good God, and Hobamocco, some say Squantum, their evil God; to Ketan they Sacrifice (as the ancient Heathens did to Ceres) after their Garners be full with a good Crop. They likewise Invocate this God for fair Weather, for Rain in time of Drought, and for the recovery of their Sick; but if they do not hear them, then they verifie the old Verse, Flethere si nequeo Supras Acherontia movebo, their Powwows betaking themselves to their Exorcisms and Necromantick Charms, by which they bring to pass strange things, if we may believe the Indians, who report of one Pissacannow, that he could make the Water burn, the Rocks move, the Trees dance, and metamorphose himself into a flaming Man. In Winter, when there is no green Leaves to be got, he would out of the Ashes of an old Leaf, calcin’d and put into the Water, produce a new green Leaf: And of a dead Snakes Skin, a living Snake, both to be seen, felt and heard. The manner of their action in their Conjuration is thus: The Parties that are sick or lame being brought before them, the Powwow sitting down, the rest of the Indians giving attentive audience to his Imprecations and Invocations,
vocations, and after the violent expression of many a hideous bellowing and groaning he makes a stop, and then all the Auditors with one voice utter a short Canto; which done, the Powlows still proceeds in his Invocations, sometimes roaring like a Bear, other times groaning like a dying Horse, foaming at the Mouth like a chafed Boar, smiting on his naked Breast and Thighs with such violence, as if he were mad: Thus will he continue sometimes half a day, spending his Lungs, sweating out his Fat, and tormenting his Body in this diabolical Worship. Sometimes the Devil, for requital of their Worship, recovers the Party, to muzzle them up in their devilish Religion. But since the English (upon whom, and in whose presence it is said the Powlows could never work their Witchcrafts) frequented those Parts, they daily fall from their Colours, relinquishing their former Fopperies, and acknowledge the Power of the English-man’s God, as they call him. And it is reported of them, that at the very first they were so tractable to the Christian Religion, that they would say King James was good, and his God good; but their Tauto nought, though of their two Gods he was accounted the good one.

They use no other Weapons in War than Bowes and Arrows, saving that their Captains have long Spears, on which, if they return Conquerors, they carry the Heads of their chief Enemies that they slay in the Wars, it being the Custom to cut off their Heads, Hands and Feet, to bear home to their Wives and Children, as true tokens of their renowned Victory. When they go to their Wars, it is their Custom to paint their Faces with diversity of Colours, some being all black as Jet, some red, some half red and half black, some black and white, others spotted with divers kinds of Colours, being all disguised to their Enemies, to make them more terrible to their Foes, putting on likewise their rich Jewels, Pendants, and Wampompage, to put them in mind that they Fight not only for their Children, Wives and Lives, but likewise for their Goods, Lands and Liberties. Being thus Arm’d with this Warlike Paint, the antique Warriors make towards their Enemies in a disorder’d manner, without any Soldier-like Marching, or Warlike Postures, being deaf to any word of Command, ignorant of falling off or on, of doubling Ranks or Files, but let fly their winged Shaftsmen without either fear or wit: Their Artillery being spent, he that hath no Arms to Fight, finds Legs to run away.

They have two sorts of Games, one call’d Paim, the other Hubbub, not much unlike Cards and Dice, being no other than Lottery. Paim is fifty or sixty small Bents of a Foot long, which they divide to the number of their Gamesters, thuffling them first between the Palms of their Hands; he that hath more than his Fellow, is so much the forwarder in his Game: Many other Whimfies be in this Game, which would be too long to commit to Paper. He that is a noted Gamester hath a Hole in his Ear, wherein he carries his Paims in defiance of his Antagonists. Hubbub is fifty small Bones in a small smooth Tray; the Bones be like a Die, but something flatter, black on the one side and white on the other, which they place on the Ground, against which violently thumping the Platter, the Bones mount, changing colours with the windy whishting of their Hands to and fro; which action in that sport they much use, limiting themselves on the Breast and Thighs, crying out Hubbub, Hubbub, they may be heard play at this Game a quarter of a Mile off: The Bones being all black or white make a double Game; if three of one colour, and two of another, then they afford but a single Game; four of a colour, and one differing, is nothing; so long as the Man wins he keeps the Tray, but if he lose the next Man takes it. They are so bewitch’d with these two Games, that they will lose sometimes all they have; Beaver, Moose-skins, Kettles, Wampompage, Mowbacks, Hatchets, Knives, all is consignate by these two Games. For their Sports of action
action they have commonly but three or four, as Football, Shooting, Running, and Swimming; when they play Country against Country, there are rich Goals; all behung with Wampompage, Muskacks, Beaver Skins, and black Otter Skins: Their Goals are a Mile long plac'd on the Sands, which are as even as a Board; their Ball is no bigger than a Hand-ball, which sometimes they mount in the Air with their naked Feer, sometimes it is fway'd by the multitude, sometime aflo it is two days before they get a Goal, then they mark the Ground they win, and begin there the next day. Before they come to this Sport they paint themselves, even as when they go to War, in policy to prevent future mischief, because no man should know him that mov'd his patience, or accidentally hurt his Person, taking away the occasion of studying revenge. Before they begin, their Arms are put off, and hung upon some neighboring Tree, after which they make a long ferowl on the Sand, over which they shake Hands, and with loving Hearts scuffle for Victory. While the Men Play, the Boys Pipe, and the Women Dance and Sing. Trophies of their Husbands Conquests; all being done, a Feast summons their departure.

Such is their dexterity in Shooting, that they can hit a running Hind, or flying Pigeon, without a standing paufe or left-e'y'd blinking; they draw their Arrows between their Fingers and the Thumb, their Bowes are quick, but not very strong, not killing at above fix or even score distance: Shooting at one another, they have a trick with swift conveyance to slum the Arrow; this do they make to them expert against time of War. They are train'd up to their Bowes even from their Childhood; for little Boys with Bowes made of little Sticks, and Arrows made of great Bents; will hit down a piece of Tobacco-pipe every time a good way off. As these Indians are good Marks-men, so are they well experienced where the very Life of every Creature lieth, and know where to extirp him to make him die presently. Their Swimming is not after our English fashion, of spread Arms and Legs, which they hold too tiresom, but like Dogs, their Arms before them, cutting through the Liquids with their right Shoulder: In this manner they will Swim very swift and far, either in rough or smooth Waters, sometimes for their captivity as still as a Log; sometimes they will play the Divo-doppers, and come up in unexpected places.

For their Hunting, it is to be noted, that they have no swift-footed Greyhounds to let slip at the sight of the Deer, no deep-mouth'd Hounds, or scenting Beagles, to find out their desired Prey; themselves are all this, who in that time of the year when the Deer comes down, having certain Hunting-houses in such places where they know the Deer doth usually frequent, in which they keep their Rendezvous, their Snares, and all their Accoutrements for that Employment: when they get sight of a Deer, Mofes, or Bear, they study how to get the Wind of him, and approaching within shot, stab their Mark quite through, if the Bones hinder not. The chief thing they Hunt after is Deer, Mofes and Bears: It grieves them more to see an Englishman take one Deer, than a thoufand Acres of Land. They Hunt likewise after Wolves, wild Cats, Raccoons, Otters, Beavers, and Myquakers, Trading both their Skins and Flesh to the English. Befide this Artillery they have other devices to kill their Game, as sometimes Hedges, a Mile or two Miles long, being a Mile wide at one end, and made narrower and narrower by degrees, leaving only a Gap of fix Foot long; over against which in the day-time they lie lurking, to shoot the Deer which come through that narrow passage; so many as come within the circumference of that Hedge, seldom return back to leap over, unless they be forc'd by the chafing of some ravenous Wolf, or sight of some accidental Passenger: In the Night, at the Gap of this Hedge, they let Deer-traps, which
Chap. II.   **AMERICA.**

which are Springes made of young Trees, and smooth wrougth Cords, so strong, that it will roll a Horse if he be caught in it.

In the Trade of Fishing they are very expert, being experienced in the knowledge of all Baits for several Fishes, and divers Seasons; being not ignorant like wise of the removal of Fishes, knowing when to Fish in Rivers, and when at Rocks, when in Bays, and when at Seas: Since the English came they are furnished with English Hooks and Lines, for before they made them of Hemp, being more curiously wrougth of stronger Materials than ours, and hook'd with Bone-Hooks; but laziness drives them to buy, more than profit or commendations wins them to make of their own. They make likewise very strong Sturgeon-nets, with which they catch Sturgeons of twelve, fourteen, and sixteen, and some eighteen Foot long in the day-time, and in the night-time they betake themselves to their Birch Canoes, in which they carry a forty-fathom Line, with a sharp-bearded Dart fastned at the end thereof; then lighting a Torch made of Birch Rinds, they wave it to and again by their Canoe side, which the Sturgeon much delighted with, comes to them tumbling and playing, turning up his white Belly, into which they thrust their Lance, his Back being impenetrable; which done, they hale to the Shore their Struggling Prize. They have often recourse into the Rocks whereupon the Sea beats, in warm Weather, to look out for sleepy Seals, whose Oyl they much esteem, using it for divers things. In Summer they Fish any where, but in Winter in the fresh Water only, and Ponds; in frosty Weather they cut round Holes in the Ice, about which they will fit like so many Apes with their naked Breeches upon the cold Ice, catching of Pikes, Pearches, Breams, and other sorts of fresh-Water Fish.

Their Arts and Manufactures are divers, as first their dressing of all manner of Skins, which they do by scraping and rubbing, afterwards painting them with antique Embroiderings in unchangeable Colours; sometimes they take off the Hair, especially if it be not kill'd in season. Their Bows they make of a handsom shape, frung commonly with the Sinews of Mooses; their Arrows of young Elder, feather'd with Feathers of Eagles Wings and Tails, headed with Brafs in shape of a Heart or Triangle, fastned in a slender piece of Wood fix or eight Inches long, which is fram'd to put loose in the pithy Elder, afterwards bound fast for riving: Their Arrows are made in this manner, because it might shake from his Head, and be left behind for their finding, and the Pile onely remain to gaul the wounded Beast. Their Cordage is so even, soft, and smooth, that it looks more like Silk than Hemp. Their Sturgeon Nets are not deep, nor above thirty or forty Foot long, which in ebbing low Waters they shake fast to the Ground where they are sure the Sturgeon will come, never looking more at it till the next low Water. Their Canoes are made either of Pine-trees, which before they were acquainted with English Tools, they burn'd hollow, scraping them smooth with Clam-shells and Oyster-shells, cutting their outsides with Stone Hatchets. These Boats are not above a Foot and a half, or two Foot wide, and twenty Foot long. Their other Canoes be made of thin Birch Rinds, close Ribb'd, and on the in-side with broad thin Hoops, like the Hoops of a Tub; these are made very light, a Man may carry one of them a Mile, being made purposely to carry from River to River, and from Bay to Bay, to shorten Land-passages. In these cockling Fly-boats, wherein an English-man can scarce fit without a fearful tottering, they will venture to Sea, when an English Shallop dare not bear a Knot of Sail, scudding over the over-grown Waves as fast as a wind-driven Ship, being driven by their Paddles, being much like Battle-doors; if a crofs Wave (which is seldom) turn her Keel up-side down, they by swimming free her, and scramble into her again.
Their Language, is only peculiar to themselves, not inclining to any of the more refined Tongues. Some have thought they might be of the dispersed Jews, because some of their words are near unto the Hebrew; but by the same rule they may conclude them to be some of the gleanings of all Nations, because they have words which found after the Greek, Latine, French, and other Tongues. Their Language is hard to learn, few of the English being able to speak any of it, or capable of the right pronunciation, which is the chief grace of their Tongue: They pronounce much after the Diphthongs, excluding L and R, which in our English Tongue they pronounce with as much difficulty, as most of the Dutch do T and H, calling a Lobster a Nohflann. Every Country doth something differ in their Speech, even as our Northern People do from the Southern, and Western from them; especially the Tarrentine, whose Tongue runs so much upon R, that they whistle much in pronunciation. When any Ships come near the Shore, they demand whether they are King Charles's Torries, with such a rumbling found, as if one were beating on an unbrac'd Drum. In serious Discourse our Southern Indians use seldom any short Colloquies, but speak their minds at large, without any interjected Discourses from any, the reft giving diligent audience to his utterance; which done, some or other returns him as long an Answer: They love not to speak multa, fed multum; seldom are their words and their deeds strangers. According to the matter of their discourse, so are their acting Gestures in their Expressions.

The Indians are of lusty and healthful Bodies, not experimentally knowing those Diseases which are incident to other Country, as Feavers, Pleurisy, Calenties, Agues, Consumptions, Convulsions, Appoplexies, Dropfies, Gouts, Pox, Measles, or the like, but spin out the thred of their Days to a fair length, numbering sixty, eighty, some a hundred years: But when any one lies a dying, the doleful cries, and throbbing sighs of the Friends and Relations, express unspakeable sorrow; and when the Party is dead and laid in the Ground, they not only weep and howl for a good space over the Grave, but also keep Annual Solemnities of Mourning, rubbing their Faces with black Lead all about the Eye-brows, and part of their Cheeks; yet do they hold the Immortality of the Soul, in which their Indian Faith jumps much with the Turkish Alchoran, dreaming of a certain Paradise, or South-Well Elyfium, wherein they shall everlastingly abide, folacing themselves in odoriferous Gardens, fruitful Corn-fields, green Meadows, bathing their tawny Hides in the cool Streams of pleafant Rivers, and sheltering themselves from Heat and Cold in the sumptuous Palaces fram'd by Nature, concluding, that neither care nor pain shall molest them, but that Natures bounty will administer all things with a voluntary contribution from the Store-houfe of their Elyfium; at the Portal whereof, they lay, lies a great Dog, whose churlifh snarlings deny admission to unworthy Intruders: wherefore it is their custom to bury with them their Bowes and Arrows, and good Store of their Wangpompeage and Mowbacks, the one to affright that affronting Cerberus, the other to purchase more immense Praeventives in their Paradise. For their Enemies and loose Livers, whom they account unworthy of this imaginary Happiness, they lay that they pass to the infernal Dwellings of Abancho, to be tortured according to the Fictions of the ancient Heathen.

The drudgery of all laborious sorts of Work, and the management of all dome-stick Affairs, lies wholly upon the Indian Women, who are made meer Slaves by their Husbands; they build the Houses, sow and reap the Corn, provide Lobsters for their Husbands to bait their Hooks when they go a Fishing for Baff or God; and for these Lobsters they are many times forc'd to dive in the extremefth Weather, then lug home a great weight of them upon their Backs, as also all the Fish which
which their Husbands catch for pleasure, from the places where they were caught: They dress all the Meat, serve it up to their Husbands, and waiting till they have fill'd their Bellies, are glad of their leavings. In Summer they gather Flags, of which they make Mats for Houses, and Hemp and Rushes, with Dying Stuff, of which they make curious Baskets, with intermixed Colours and Portraits of antique Imagery. These Baskets are of all sizes from a Quart to a Quarter, in which they carry their Luggage. In Winter they are their Husbands Caterers, trudging to the Clam-banks for their Belly-timber, and their Porters to lug it home. They likewise few their Husbands Shoes, and weave Coats of Turky Feathers, besides all their ordinary Houifhold drudgery which daily lies upon them, in which they have a great Belly hindered no business, not doth a Child-birth take much time, but the young Infant being greas'd and footed, wrap'd in a Beavers Skin, bound with his Feet up to his Bum, upon a Board two Foot long and one Foot broad, and his Face expos'd to all nipping Weather, his little Pappo's travels about with his bare-footed Mother to paddle in the low Clam-banks, after three or four days of Age have confirm'd her recovery. For their Carriage, it is very civil, Smiles being the greatest grace of their Mirth. Their Musick is Lullabies in Rocking their Children, who generally are as quiet as if they had neither Spleen or Lungs. Their Voices are generally both sweet and well order'd, so far as pure Nature teacheth them. Their Modelly drives them to wear more Clothes than the Men, having always a Coat of Cloth or Skins, wrap'd like a Blanket about their Loys, reaching down to their Hams, which they never put off in Company.

There are to be reckon'd up forty five chief Towns, besides what others there may be of less note, built or made habitable by the English since their first arrival in New England, till about the Year 1650.

First, St. Georges Fort, where the first Plantation was settled, at the Mouth of the River Sagadebock, in a kind of Peninsula, or half Island.

The second, New Plymouth, seated no less commodiously upon a large Bay, call'd by the Natives Panuaticed; where they first settled that went over out of dissatisfaction to the Church-Government of England.

The third, Salem, call'd by the Indians, Mahumbeak; which stands on the middle of a Neck of Land very pleasantly, having a South River on the one side, and a North River on the other side. This Town seems to have been built in the Year 1638. by a part of that Company, who, being sent over by the Merchants, Adventurers, settled themselves in this Cape.

The fourth Mafcoomi, or Charles-town, situate on a Neck of Land on the North side of the River Charles. The form of this Town, in the Frontispiece of it; resembleth the Head, Neck, and Shoulders of a Man; through the right Shoulder whereof runs the Navigable River Musick, which by its near approach to Charles River in one place, makes the chief part of the Town a Peninsula: It conflits of a hundred and fifty Dwelling-Houses, many of them beautified with pleasant Gardens and Orchards: Near the Water-side is a large Market-place, for which it hath two fair Streets; and in it stands a large and well built Church.

The fifth, Matapigon, or Derchefcher, a Fronteer Town, standing over against the Island near the Sea-side: It is water'd with two small Rivers, and is built in the form of a Serpent turning its Head Northward; it hath Orchards and Gardens full of Fruit-trees.

The sixth is Boston, anciently Acconmonicus, the Center and Metropolis of the rest, built in the form of a Heart, and fortifi'd with two Hills on the Front-part thereof, the one having great Store of Artillery mounted thereon, the other having
a strong Battery, built of whole Timber, and fill'd with Earth: At the Defcent of the Hill lies a large Cave or Bay, on which the chief part of this Town is built, over-topp'd with a third Hill, all three like over-topping Towers, keeping a con-stant Watch to foresee the approach of foreign Dangers. The chiefest part of this City-like Town is crowded upon the Sea Banks, and whar'd out with great Industry and Cost, the Edifices large and beautiful, whose continual enlargement pre-
fageh some fabulous City.

The seventh, Roxbury, situated between Boston and Dorchester, water'd with cool and peafant Springs ifluing from the Rocky Hills, and with small Freshets watering the Valleys of this fertile Town: The form of it resembles a Wedge double pointed, entryng between the two above-mention'd Towns, and in the room of those Swamps, or tearing Bushes which were there before, they have now gladly Fruit-trees, fruitful Fields and Gardens.

The eighth is Lynn, or (according to the Indian Name, Saugus) situated between Salem and Charles-town, near a River, whose strong Frefht at the end of Winter fills all her Banks, and with a violent Torrent vents it felf into the Sea. This Town is almoft square, confifting many years ago of above a hundred Dwelling-houfes, having alfo an Iron Mill in conftant ufe: The Church being on a level Land, unde-
heads from the North-West Wind, is made with Steps defcending into the Earth.

The ninth is call'd Watertown, anciently Newton, situated upon one of the Branches of Charles-River, water'd with many peafant Springs and small Rivulets, running like Veins throughout her Body. This Town began by occasion of Sir Richard Saltinghall, who arriving with ftore of Cartel and Servants, Winter'd in thefe Parts.

In the Year 1633, there was erected between Charles-town and Watertown, a Place call'd Newtown, and by the Indians, Amongcanen, sife nam'd Cambridge, being the tenth in order: It is in form like a Lift of Broad-cloth, reaching to the moft Sou-
therly part of Merrimac River; it hath comely and well order'd Streets, and two fair Colledges; the firft call'd Harverd Colledge, from Mr. John Harverd, who at his Death gave a thousand Pounds to it; to the other Mr. John Harvies was the chief Be-
fefalor. This Town was appointed to be the Seat of the Government, but it continu'd not long.

The eleventh call'd Ipswich, or Sawacânec by the Indians, is situated on a fair and delightful River, ifluing forth from a very peafant Pond, and afterwards breaking its Gourse through a hideous Swamp of large extent; it lies in the Sagamoreship, or Earldom of Agawaun, now by the English call'd Eflax.

Twelve Miles from Ipswich, near upon the Streams of Merrimac River, is situ-
ted the twelfth, call'd Newbury.

The People of Newton, or Cambridge, upon their removal of the Plantation of Camelia, passing up the River, built a Town, which they call'd Hartford, the thir-
teenth in number, divers others coming in the room of those that departed from Cambridge.

The fourteenth, seat'd upon a fair fresh River (whose Rivulets are fill'd with fresh Marsh, and her Streams with Fift, it being a Branch of that large River of Merr-
imac Allwifes) is built in the Inland Countryle, and call'd Concord: It confisted at first of above fifty Families: Their Buildings are for the most part conveniently plac'd on one freight Stream under a Sunny Bank, in a low Level. The People that first fett forth to build this Town, fustain'd great Hardhip and mifery, by rea-
son of the uncouth Ways, and extremity of the Weather, it being the firft Inland Town that was built.

South-
South-East of Charles-River, upon the Sea-Coast, is situated the fifteenth Town Hingham; the form whereof is somewhat intricate to describe, by reason of the Sea-wafting Crooks, where it beats upon a moultring Shore; yet in some places the Streets are compleat: It consisted at first of about sixty Families.

The sixteenth is in Plymouth Government, situate upon the Sea-Coast, first nam'd Dukesbury, afterwards Sandwich.

About the year 1617, a new Supply coming over into these Parts, and not finding in the Massachusetts Government any commodious place to settle in, they after much search took up a place somewhat more Southerly, near the Shalles of Cape Cod, where they found a commodious Harbor for Shipping, and a fit place to erect a Town in, which they built in a short time, with very fair Houses and compleat Streets; and shortly after several others: Amongst which they erected a new Government, which from their first Frontier Town, being the seventeenth, was call'd Newhaven.

The eighteenth is in the Government of the Massachusetts, and call'd Dedham, being an Inland Town, situate about ten Miles from Boston in the County of Suffolk, well water'd with many pleasant Streams, and abounding with Gardens and Fruit-Trees: It consisted at first of about a hundred Families, being generally given to Husbandry.

The nineteenth being also in this Government is call'd Wymouth, batter'd on the East with the Sea Waves; on the South-West Rocks and Swamps make it delightful to the Deer, as the ploughable Meadow-Lands to the Inhabitants.

About the Year 1638. Printing was brought over into New England.

About six Miles from Ipswich, North-Eastward, was erected another Town called Rowley, being the twentieth.

About the Year 1639. began the one and twentieth Town Hampton, in the County of Norfolk, to be built: It is situate near the Sea-Coast, not far from the River of Merrimack: The great store of salt Marsh did entice the People to set down their Habitations there.

Not far from this Town of Hampton, was erected the two and twentieth, call'd Salisbury, seated upon the broad swift Torrent of Merrimack-River: It lieth on the Northern side, over against the Town of Newbury, the River between them being about half a Mile broad, but hath an Iland in the midst thereof, which makes it the more easily passable. The situation of this Town is very pleasant, the Skirts thereof abounding in fair and goodly Meadows, with good store of fatly Timely in many places upon the Uplands.

About the Year 1640. by a fresh Supply of People that settled in Long-Island, was there erected the twenty third Town, call'd Southampton, by the Indians, Agawom.

The same Year also the Town of Sudbury, being the twenty fourth, began to be built in the Inland Country: It is furnish'd with great store of fresh Marsh, but lying very low, it is much endammag'd with Land-floods.

About this time there was built at Mount Wollaston, by some old Planters and certain Farmers of the great Town of Boston, a Town nam'd Braintree, being the twenty fifth, within the Massachusetts Government: It is well peopled, and hath great store of Land in Tillage.

In the Year 1641. Mr. Richard Blindman coming from Green Harbour, a Place in Plymouth Patent, with some few People of his acquaintance, setled in Cape Anne, where they built the twenty sixth Town, and nam'd it Gloucester.

There is also situate upon Piscataqua River, to the North-East of Boston, a Town call'd Dover, being the twenty seventh, the People by voluntary resignation being under the Massachusetts Government.
In the Year 1642. was erected the eight and twentieth Town, call'd Wooburn.

In the Year 1644. Reading the nine and twentieth Town was built, being in the Government of the Mattacubsets; it is well water'd and situated about a great Pond, having two Mills, a Saw-Mill, and a Corn-Mill, which stand upon two several Streams.

A little after was built the thirtieth Town in this Colony, call'd Wenham, situate between Salem and Ipswich; it is very well water'd, as most Inland Towns are, and the People live altogether on Husbandry.

About the Year 1645. one Mr. Pinchon, having out of desire to improve his Estate by Trading with the Indians, settled himself in a place very remote from any of the Towns of the Mattacubsets Colony, yet under their Government, and great store of People still resorting to him, they at last erected a Town upon the River Canellico, calling it Spring-field, being the one and thirtieth Town; it is very fitly seated for a Beaver Trade with the Indians, in regard it is situate upon this large Navigable River, and upon some Rivulets of the same.

In the Year 1648. was founded the Town of Haverhill, being the two and thirteenth, about a Mile or two from the place where the River Merrimeck receives into it itself the River Shawshin, which is one of her three chief Heads.

Not long after, the Town of Malden, being the three and thirtieth Town, was built by certain People that came out of Charles-Town; these two Towns being fewer the one from the other by the large River of Mstitick.

The chief Rivers of New England are, Pafcataway, Sagadahoc, Penmaquid, Agamentico, Merrimeck, Tachobacco, Mstitick, Narraganet, Mjhuwin, Connecnuc, Newtownwauoch, Kynogaug.

The Indian Natives are now become to weak in number, and in some measure reduc'd to a dread of the growth of the English, that of late years they have not practis'd any thing against them, or at leaft, not justifiz'd them by numbers in open Hostility, willing rather to purchase their Peace and buy off Injuries committed by them at the Price of their Lands and Possessions.

And although care and expence hath been many years apply'd to the Conversion of Indians to the Faith, however inclinable they seem'd at first to the imbracing thereof, not then so well discerning the insincerity of its Professors; yet there are so few of Late who do imbrace it or persevere in it (wanting a good Foundation for instruction in Moral honesty, and perhaps the example of it in those that undertake to instruct them in Religion;) that Christianity to them seems a Chimera, Religion a design to draw them from the libidinous Pleasures of a lazy Life; however, some there are who make Profession of Christianity, and some who are educated in the Schools of New Cambridge, to entitle them to Preach the Gospel in their own Language.

One great hindrance to the Propagation of the Faith amongst those Heathens, is the diversity of their Languages; for it is commonly known, that the Natives themselves do not understand one another, if their Habitations are but at forty Miles distance.

Their Church-Government and Discipline is Congregational and Independent, yet in some places more rigid than others, for in many Towns there yet remains some leaven of Presbytery, from which Septs our Indepency had its Original; infor...
much, that one of the most remarkable Opposers of Episcopal Government, Doctor Bajfwick (who, fpoil'd so much Paper in railing at the Church Government of England, and crying up Liberty of Conftence) finding the Apoftacy of his own Brethren of Boston from their first Principles, and his generally prevail over them, even to the denying that liberty to others, which they fem'd only to aim at, did write a large and vehement Dehoratory Epifle to them from their New Lights or Paths, laying, That according to their present Tenets, they could not pretend to be better, or other than a Christian Synagogue.

Their Laws and Methods of Government are wholly of their own framing, each Colony for themselves, makes an Annual choice of Governor, Deputy Governor, and a certain number of Assistants, by the plurality of Suffrages collected from their several Towns, the Electors are only Free-men and Church-Members; for he that is not a Member of their Church, can neither chufe, nor be chosen a Magistrate, nor have his Children Baptiz'd, besides the los of many other Privileges, and liable moreover to frequent, if not conftant Mulcts for abenting themselves from Divine Worship (so call'd) in their Meeting-houses.

Since the transmittting of the Patent in New England, the Election is not by Voices, nor election of Hands as formerly, but by Papers, thus:

The general Court-electory fitting, where are present in the Church, or Meeting-houfe at Boston, the old Governor, Deputy, and all the Magiftrates, and two Deputies or Burgeltes for every Town, or at least one; all the Freeman are bid to come in at one Door, and bring their Votes in Paper for the new Governor, and deliver them down upon the Table, before the Court, and be pass'd for at another Door; those that are abfent, fend their Votes by Proxies. All being deliver'd in, the Votes are counted, and according to the major part, the old Governor pronounceth, That such an one is chosen Governor for the year ensuing. Then the Freeman, in like manner, bring their Votes for the Deputy Governor, who being also chosen, the Governor propoundeth the Assistants one after another. New Assistants are, of late, put in nomination, by an Order of general Court, beforehand to be consider'd of: If a Freeman give in a Blank, that rejects the Man nam'd; if the Freeman makes any mark with a Pen upon the Paper which he brings, that elects the Man nam'd: Then the Blanks and mark'd Papers are number'd, and according to the major part of either, the Man in Nomination stands elected or rejected, and so for all the Assistants. And after every new Election, which is, by their Patent, to be upon the laft Wednesday in Easter Term, the new Governor and Officers are all new Sworn. The Governor and Assistants chife the Secretary. And all the Court confitting of Governor, Deputy, Assistants, and Deputies of Towns, give their Votes as well as the reft; and the Ministers and Elders, and all Church-Officers, have their Votes also in all these Elections of chief Magiftrates: Constables, and all other inferior Officers, are sworn in the general, quarter, or other Courts, or before any Assistant.

Every Free-man when he is admitted, takes a strict Oath, to be true to the Society or Jurifdiction.

There are two general Courts, one every half year, wherein they make Laws or Ordinances: The Ministers advise in making of Laws, especially Ecclesiatical, and are present in Courts; and advise in some special Causes Criminal, and in framing of Fundamental Laws.

There are besides four Quarter-Courts for the whole Jurifdiction, besides other petty Courts, one every quarter at Boston, Salem, and Ipswich, with their several Jurifdictions; besides every Town, almost, hath a petty Court for small Debts and Trefpaffes, under twenty Shillings.
In the general Court, or great quarter Courts, before the Civil Magistrates, are try'd all Actions and Causes Civil and Criminal, and also Ecclesiastical, especially touching Non-members: And they themselves say, that in the general and quarter Courts, they have the Power of Parliament, Kings-Bench, Common-Pleas, Chancery, High-Commission, and Star-Chamber, and all other Courts of England, and in divers Cases have exercis'd that Power upon the Kings Subjects there, as is not difficult to prove. They have put to death, banifi'd, fin'd Men, cut off Mens Ears, whip'd, imprison'd Men, and all these for Ecclesiastical and Civil Offences, and without sufficient Record. In the lesser quarter Courts are try'd, in some, Actions under ten Pounds, in Boston, under twenty, and all Criminal Causes not touching Life or Member. From the petty quarter Courts, or other Courts, the parties may appeal to the great quarter Courts, from thence to the general Court, from which there is no Repeal.

Twice a year, in the said quarter Courts held before the general Courts, are two Grand-Juries sworn for the Jurisdiction, one for one Court, and the other for the other; and they are charg'd to enquire and Present Offences reduc'd by the Governor who gives the Charge.

Matters of Debt, Trespasses, and upon the Cafe, and Equity, yea and of Heresie also, are try'd by a Jury.

The Parties are warn'd to challenge any Jury-man before he be sworn; but because there is but one Jury in a Court for trial of Causes; and all Parties not present at their Swearing, the liberty of challenge is much hinder'd, and some inconveniences do happen thereby. Jurors are return'd by the Marshal, he was at first call'd The Beadle of the Society.

The Parties in all Causes, speak themselves for the most part, and some of the Magistrates where they think cause requireth, do the part of Advocates without Fee or Reward.

Though among the several Colonies which were founded here by the confluence of dissenting Zealots, this Government is exercis'd, differing from that of the Church and State of England; yet in those Provinces which are granted by particular Persons, the Government is much more conformable to that of England; but as the Massachusetts or Bostoners were from the beginning the most Potent and Preeminent of all the rest of the Colonies, (infomuch, that Boston may well be accounted the Metropolis of all New England,) so of late years they have still usurp'd more and more Power and Authority over the rest; and especially have not stuck to give Laws to the foresaid Provinces allotted to particular Persons, and have gone about wholly to subjugate those Places to themselves, intrenching upon the rights of the true Proprietors; and that, even contrary to the Kings express Commands by his Officers, there, and as it were in open defiance of his Majelly and Government, as is evident from this following Narration, of their behavior upon a busines of this nature.

In the Year of our Lord 1665, his Majesties Commissioners for the Affairs of New England, being in the Province of Maine, the People being much unsettled in Point of Government, by reason the Massachusetts Colony, or Boston Government, did usurp compellively a Power over them contrary to their wills, and the right of Sir Ferdinando Gorges Heir, who had his Commission then in the place, did unanimously Petition to his Majesties Commissioners to settle the Government; upon which the said Commissioners examin'd the Bounds and Right of Mr. Gorges Patent, with all the Allegations and Pretensions on both sides, and so according to
to their Instruction from his Majesty, did settle a temporary Government under his Majesty's immediate Authority, until such time as his Majesty should give his final determination thereof; and for that end did institute Justices of the Peace to govern the Province according to the true Laws of England. Also his Majesty was pleas'd by his Mandamus in April 1666, to the Governors of Boston, to signify that it was his will and pleasure, That the Province of Maine should stand good as his Commissioners had feeld it, until he had more leisure to determine it; yet notwithstanding, after three years quiet possession, and exercising of Government by the Kings Justices, according to their Commission granted by his Majesty's Commissioners, the Bostoners, without any Conference with the said Justices, did in a hostile manner oppose the King's Power, July 1668. which was as followeth:

The General Court of Boston sent their Warrants to keep Court at York under their Authority, and for that purpose Commissioned Magistrates by their own Authority, namely Major General John Leveret, Mr. Edward Ting, Captain Richard Walden, and Captain Robert Pike: Whereupon the King's Justices did oppose their Warrants, and sent Poff to New York, with an Address to General Nicholas, for Advice what to do therein; who forthwith dispatch'd away to the Governors of Boston, informing them of the danger of their Proceeding, it being an open breach of Duty, to subvert the Government established by his Majesty's Power; also sent the King's Mandamus, April 1666. that will'd to the contrary. Notwithstanding the Boston Magistrates in July 1668. in order to their Boston Commission, came to York Town in the said Province, with several Armed Men, Horse and Foot, to keep Court under their Authority; Opposition was made by the King's Justices, and his Majesty's Power was urg'd, but little regard thereunto shown; his Majesties Mandamus was likewise much infifted upon, and produced by the Justices, who ask'd the Bostoners what they thought of it? and how they durst act in contrary to the King's Will and Pleasure? Major General Leveret told them, That he believ'd it might be the King's Hand, but he had a Commission from the general Court at Boston, which he would follow and observe by the help of God. The same day in the Afternoon the said Major General Leveret, with the rest of the Boston Magistrates, seiz'd and imprison'd the Province Marshal in doing his Office, and then forthwith went in warlike posture to the Court-house, where the King's Justices sat in Judicature, and putting them from their Seats, sat down themselves in their Places, and Executed their Boston Commission. The King's Justices drew a Protest against their Proceedings, and so left the Decision to God's Providence, and his Majesty's good Pleasure. Then they turn'd out all Officers, both Military and Civil, and Swore others in their Places under their Authority; they force'd the whole Record of the Province out of the Recorders House contrary to his Will, by virtue of a Special Warrant from that Court. They imprison'd the Mayor of the said Province about three weeks, forcing him to give in five hundred Pound Bonds, not to act according to his Commission; which with some Reservations he was forc'd to deny for the securit[y of his Estate.

These riotous Proceedings thus acted with such a precipitate fury, so incens'd his Majesty, that speedy care had been taken to reduce them to reason, had they not upon mature consideration bethought themselves afterwards to yield Obedience to his Majesties Orders.

Having treated at large of all that concerns New England in general, both in reference to the Natives and the English Planters, we shall conclude with a brief view of the Provinces of Laconia and Maine, as they are truly Describ'd (among other ingenious Collections and Observations of the Affairs of America, and especially thes
these Parts) by Ferdinando Gorges Esq; Heir to the above-mention'd Sir Ferdinando, and thereby folc Lord of the said Provinces, only contracting what hath been by him deliver'd more at large.

Among divers Plantations of the English happily Founded in New England, is a Province to the Landward, nam'd Laconia, so call'd by reason of the great Lakes therein, but by the ancient Inhabitants thereof it is call'd The Country of the Troquis: It lies between the Latitude of forty four and forty five Degrees, having the Rivers of Sagadebock and Merrimeck on the Sea-Coast of New England, Southerly from it; into each of which Rivers there is a short Passage, frequented by the Salvages inhabiting near the Lakes. Also it hath the great Lakes which tend towards California in the South Sea on the West thereof: On the North thereof is the great River of Canada, into which the said River digorgeth itself by a fair large River, well replenish'd with many fruitful Islands: The Air thereof is pure and wholesome, the Country pleasant, having some high Hills, full of goodly Forests, and fair Valleys and Plains, fruitful in Corn, Vines, Chefsnuts, Wallnuts, and infinite sorts of other Fruits, large Rivers well stor'd with Fish, and environ'd with goodly Meadows full of Timber-trees.

One of the great Lakes is call'd The Lake of Troquis, which together with a River of the same Name, running into the River of Canada, is sixty or seventy Leagues in length.

In the Lake are four fair Islands, which are low and full of goodly Woods and Meadows, having store of Game for Hunting, as Stags, Fallow-Deer, Elks, Roe-Bucks, Beavers, and other sorts of Beasts which come from the Main Land to the said Islands.

The Rivers which fall into the Lakes have in them good store of Beavers; of which Beasts, as also of the Elks, the Salvages make their chiefest Traffick.

The said Islands have been inhabited hertefore by the Salvages, but are now abandon'd by reason of their late Wars one with another: They contain twelve or fifteen Leagues in length, and are seated commodiously for Habitation in the midst of the Lake, which abounds with divers kinds of wholesome Fish.

From this Lake run two Rivers Southward, which fall into the Eastern and Southern Sea-Coast of New England.

Into this Lake there went many years since certain French of Quebec, who sied with the Aggoinings, with the help of their Canoes, which they carried the space of five Miles over the Impossible Falls, to Fight a Battle in revenge of some former Injuries done by the Troquis to the Aggoinings, who had the Victory; for which cause the French have been so hated ever since by the Nation of the Troquis, that none of them durst ever appear in any part of that Lake. But their Trade, fail'd to be sixteen thousand Beavers yearly, is partly fold to the Dutch, who Trade with the West-end of the said Lake over Land by Horses, from their Plantation upon Hudson's River: and another part is conceiv'd to be purchase'd by the Hirons, who being Neuters, are Friends both to the one and the other; and these Hirons bring down the greatest part of all by the River of Canada.

The Way over Land to this great Lake, from the Plantation of Pofcataway, hath been attempted by Captain Walter Neale, once Governor, at the Charges of Sir Ferdinando Gorges, Captain Mofan, and some Merchants of London, and the Discovery wanted but one days Journey of finishing, because their Victuals was spent, which, for want of Horses, they were enforce'd to carry with their Arms, and their Clothes, upon their Backs: They intended to have made a fettlement for Trade by Pinnaces upon the said Lake, which they reckon to be about ninety or a hundred Miles from the Plantation over Land.
The People of the Countrey are given to Hunting of wild Beast, which is their chiefest Food.

Their Arms are Bowes and Arrows. Their Armor is made partly of Wood, and partly of a kind of twisted Stuff like Cotton-Wool.

Their Meat is Flour of Indian Corn, of that Countreys growth, todden to Pap, which they preferve for times of Necessity when they cannot Hunt.

This Province of Acadia, however known by a different Name, is included within the Province of Maine, which offers it felf next to our consideration.

All that part of the Continient of New England, which was allotted by Patent to Sir Ferdinando Gorges and to his Heirs, he thought fit to call by the Name of The Province of Maine. It takes it beginning at the entrance of Pascarotbay Harbor, and so palfeth up the fame into the River of Newickwacch, and through the fame unto the farthest Head thereof; and from thence North-Westwards for the space of a hundred and twenty Miles; and from the Mouth of Pascarotbay Harbor aforesaid, North-Eastward along the Sea-Coast, to Sagadebock; and up the River thereof to Kimequay River, even as far as the Head thereof; and into the Land North-Westwards, for the space of a hundred and twenty Miles.

To thefe Territories are also adjoynd the North half of the isles of Sholes, together with the isles of Capawick and Nauicjan, as also all the little islands lying within five Leagues of the Main, all along the Sea-Coast, between the aforesaid Rivers of Pascarotbay and Sagadebock.

He no sooner had this Province settled upon him, but he gave publick notice, That if any one would undertake by himself and his Associates, to Transporca competent number of Inhabitants, to Plant in any part of his Limits, he would assign unto him or them such a proportion of Land, as should in reason fatisfe them, referring onely to himself some small High-Rent, as 2s. or 3s. 6d. for a hundred Acres per Annum: and if they went about to build any Town or City, he would Endow them with fuch Libertyes and Immunities, as should make them capable to Govern themfelves within their own Limits, according to the Libertyes granted to any Town or Corporation within this Realm of England. And as for others of the manner fort who went as Tenants, that they should have fuch quantities of Land assignd them as they were able to manage, at the Rate of 4d. or 6d. an Acre, according to the nature or situation of the Place they settle in.

And for the Division of the Province, and the Form of Government which he intended to Establish, he first divided the Province into several Parts; and those again he subdivided into different Regiments, as Eaft, Weft, North, and South; those again into several Hundreds, Parifhes and Tythings, and these to have their several Officers to Govern, according to such Laws as should be agreed upon by publick Affent of the Freeholders, with the approbation of himself or Deputy, and the principal Officers of the publick State.

The settled Government for the general State, to whom all Appeals were to be made, and from whom all Instructions for the welfare of the Publick were to issue, were to confift of himself or his Deputy, who was to be chosen every three year by himself, with the advice of his Council: Next a Chancellor for the determination of all Caufes; A Treasurer, to whom the care of the publick Revenue was to be committed; A Marshal, whose Office was to oversee the Regiments, and to provide Men for publick Service; An Admiral, to take care of all Maritime Affairs, to whom a Judge of the Admiralty was to be joyned to determine all Maritime Caufes; A Master of the Ordnance, to look to the publick Arms and Ammunition; A Secretary, to receive Intelligence, and to acquaint himself or Deputy there.
Chap. II.

New Netherland, now call'd New York.

That Tract of Land formerly call'd The New Netherland, doth contain all that Land which lieth in the North parts of America, betwixt New England and Maryland; the length of which Northward into the Country, as it hath not been fully discover'd, so it is not certainly known: The breadth of it is about two hundred Miles. The principal Rivers within this Tract, are Hudson's-River, Raritan-River, Delaware-Bay-River. The chief Islands are the Manhattan-Island, Long-Island, and Staten-Island.

The first which discover'd this Country was Henry Hudson, who being his'd by the East-India Company to seek a Passage in the Northern America to China, set Sail Anno 1609, in the Half-Moon Frigat; coming before Terre-neuf, he found about towards the South-West, where Sailing up a great River, he found two Men Clad in in Ruffel's Skins; and from thence arriv'd safe at Amsterdam.

New Netherland thus discover'd, invited many Merchants to settle a firm Plantation there; to which purpose they obtain'd Letters Patents in 1614, granted them by the States in the Hague, That they might only Traffick to New Netherland; whereupon they earnestly prosecuting the Design, sent out Adrian Block and Oody, who discover'd several Coasts, Isles, Havens, and Rivers.

The Countrey, as they said, being then void, was therefore free for any body that would take possession of it: Notwithstanding which pretence, they were scarce warm in their Quarsters, when Sir Samuel Argall, Governor of Virginia, having first spoil'd the French in Acadie, as we said, disputed the Possession with thealio. And although they pleaded Hudson's Right (who by Commission from King James, and upon an English Account, had lately discover'd those Parts) and pretended they had not only bought all his Cards and Maps of the Country, but all his Interest and Right also, and had fully contented him for all his Pains and Charges in the Discovery; yet the said Hudson being an English-man, and acting all that he did by Commission from the King of England, upon Debate it was concluded, That the Land could not be alienated after Discovery without the King of England's consent, especially it being but a part of the Province of Virginia, already possess'd by the Subjects of England: So that they were forc'd to wave that Title, and the Dutch Governor submitted his Plantation to His Majesty of England, and to the Governor of Virginia, for and under him: Upon which Terms for a good while they held it. Afterwards, upon confidence it seems, of a new Governor sent from Amsterdam, they not only fail'd to pay the promis'd Contribution and Tribute, but fell to fortify themselves, and to entitle the Merchants of Amsterdam to an absolute Propriety and Dominion of the Country, independent of any other; building Towns, as New Amsterdam; raising Forts, as Orange Fort, near the Branch of the North River, which they call Hell-Gate. Complaint whereof being made to King Charles, and by his Ambassador
baffadore represented to the States, they design'd the business, and declare by Publick Instrument, that it was only a private undertaking, viz. of the West-India Company of Amsterdam. Whereupon a Commission was granted to Sir George Calvert, made Lord Baltimore in Ireland, to Possess and Plant the Southern parts thereof, lying towards Virginia, by the name of Maryland; and to Sir Edmund Layden, to Plant the Northern parts towards New England, by the name of Nova Albion: Which makes the Dutch the second time seem willing to compound; and for the Sum of two thouzand and five hundred Pounds, they offer to be gone, and leave all they had there. But taking advantage of the troubles in England, which then began to appear, and soon after follow'd, they not only go back from their first Propositions, and make higher Demands, but also most mischievously (as some report) furnish the Natives with Arms, and teach them the use of them, as it may be thought, expecting to use their help upon occasion, against the English.

After His Majesties Restoration, His Majesty being truly inform'd of his just Pretences to all that Ufurd Territory call'd New Netherland, (the same having been formerly part of New England) and of how great prejudice to the Act of Navigation, and how dangerous Intruders the Dutchmen are generally upon other Princes Dominions, what mischief might ensue to all our English Plantations in time of War, if the Dutch were permitted to strengthen themselves in the very heart of His Majesties Dominions, being Maf ters of one of the most commodious Ports and Rivers in America: His Majesty revolv'd to seize upon the same, as his undoubted Right, and in May 1664, having design'd four Commissioners to the perfecting of Affairs in New England, Colonel Richard Nichols, Sir Robert Carr, George Cartwright, and Samuel Mawrwick Esquires, with three Ships of War to convey them to Boston: The matter was so order'd, that the same Ships serv'd for the reducing of the Town and Fort of New Amsterdam, upon conditions, advantageous to His Majesty, and cafe to the Dutch.

Now begins New Netherland to lose the Name, for His Majesty having conferr'd by Patent upon his Royal Highness the Duke of York and Albany, all the Acquisitions made upon Foraigners, together with Long-Island, the Weft end whereof was wholly feeld and People by Dutch-men; his Royal Highness impower'd, by Commission as his Deputy-Governor, Colonel Nichols, Groom of his Bed-chamber, to take the Charge and Direction of Reducing and Governing all those Territories; it was by him thought fit, to change some principal denominations of Places, viz. New Netherland into York-shire; New Amsterdam into New York, Fort-Amsel into Fort-James, Fort-Orange into Fort-Albany; and withal, to change Burgomasters, Schepen, and Schouts, into Mayor, Aldermen, and Sheriff, with Justices of the Peace; so that all the Civil Policy is conformable to the Methods and Practice of England, whereas New England retains only the name of Constable in their whole Rolls of Civil Officers.

It is plac'd upon the neck of the Island Manhattan, looking towards the Sea; encompass'd with Hudson's River, which is six Miles broad; the Town is compact and oval, with very fair Streets and several good Houses; the rest are built much after the manner of Holland, to the number of about four hundred Houses, which in those parts are held considerable: Upon one side of the Town is James-Fort, capable to lodge three hundred Soldierrs and Officers; it hath four Battions, forty Pieces of Cannon mounted; the Walls of Stone, in'd with a thick Rampart of Earth; well accommodated with a Spring of fresh Water, always furnish'd with Arms and Ammunition, against Accidents: Distant from the Sea seven Leagues, it affords a safe Entrance, even to unskilful Pilots; under the Town side, Ships of
any Burthen may Ride securely against any Storms, the Current of the River being broken by the interposition of a small Island, which lies a Mile distant from the Town.

About ten Miles from New York is a Place call'd Hell-Gate, which being a narrow Passage, there runneth a violent Stream both upon Flood and Ebb; and in the middle lie some Rocky Islands, which the Current sets so violently upon, that it threatens present Shipwreck; and upon the Flood is a large Whirlwind, which continually lends forth a hideous roaring, enough to affright any Stranger from passing farther, and to wait for some Charon to conduct him through; yet to those that are well acquainted, little or no danger: It is a place of great Defence against any Enemy coming in that way, which a small Fortification would absolutely prevent, and necessitate them to come in at the West end of Long-Island by Sandy Hook, where Nutten Island forces them within the Command of the Fort at New York, which is one of the best Pieces of Defence in the North parts of America. It is built most of Brick and Stone, and cover'd with red and black Tyle, and the Land being high, it gives at a distance a pleasing prospect to the Spectators. The Inhabitants confit most of English and Dutch, and have a considerable Trade with Indians for Beaver, Otter, and Racoon-Skins, with other Furs; as also for Bear, Deer and Elk-Skins; and are supply'd with Venison and Fowl in the Winter, and Fish in the Summer by the Indians, which they buy at an easie Rate; and having the Country round about them, they are continually furnish'd with all such Provisions as is needful for the Life of Man, not only by the English and Dutch within their own, but likewise by the adjacent Colonies.

The Manhattan, or Great River, being the chiefest, having with two wide Mouths wash'd the mighty Island Watowakins, falls into the Ocean. The Southern Mouth is call'd Port May, or Gudyns Bay. In the middle thereof lies an Island call'd The States Island; and a little higher the Mannhattan, so call'd from the Natives, which on the East side of the River dwell on the Main Continent. They are a cruel People, and Enemies to the Hollanders, as also of the Sanhikan, which reside on the Western Shore. Farther up are the Makwes and Mahikan, which continually War one against another. In like manner all the Inhabitants on the West side of the River Manhattan are commonly at Enmity with those that possess the Eastern Shore; who also us'd to be at variance with the Hollanders, when as the other People Westward kept good Correspondency with them.

On a small Island near the Shore of the Makwas, lay formerly a Fort, provided with two Drakes and eleven Stone Guns, yet was at last deferred.

This Countrey hath many removable Water-falls, descennding from steep Rocks, large Creeks and Harbors, fresh Lakes and Rivulets, pleasant Fountains and Springs, some of which boil in the Winter, and are cold and delightful to drink in Summer. The Inhabitants never receive any damage by Deluges; neither from the Sea, because the Water rises not above a Foot; nor by the swelling Rivers, which sometimes, for a few days covering the Plains, at their departing them, leave them fat and fruitful. The Sea-Coast is Hilly, and of a sandy and clayey Soil, which produces abundance of Herbs and Trees.

The Oak grows there generally sixty or seventy Foot high, and for the most part free from Knots, which makes it the better fit for Shipping.

The Nut-trees afford good Fuel, and a strange Prospect when the Wood is set on fire, either to hunt out a Deer, or to clear the Ground fit to be Till'd.

Some Plants brought hither, grow better than in Holland it self, as Apples, Pears, Cherries, Peaches, Apricocks, Strawberries, and the like. Their
Their Vines grow wild in most places; and bear abundance of blue, white, and Muskadine Grapes: Sometimes since the Inhabitants made a considerable advantage by the Wine of them, which is not inferior to either Rheinish or French.

All manner of Plants known in Europe grow in their Gardens: The Water-Lemons, no less pleasing to the Palate than healthful when grown ripe; they are about the bigness of an indifferent Cabbage: the English press a Juice out of them, which if it did not turn sour in a short time, might well be compar'd with Spasmodic Wine.

The Calabashes which grow there, made hollow, serve for Water-cups.

Pumpions are also there in great abundance.

Their Wheat though Set six Foot deep, grows very speedily: Kidney-Beans being planted amongst it, they will wind about the Stalks thereof.

Gray Pease grow here so fast, that they gather them twice a year.

In one Field Physicall Herbs and Indigo grow wild in great abundance; and Barley springs above a Man's height.

Moreover, there are divers sorts of sweet-smelling Flowers.

The Hills are most of a fat and clayie Soil, fit to make Pots, Tobacco-pipes, or any other sort of Earthen Ware.

In some places also is store of Mountain Crystal, and that sort of Mineral which we call Muscovia Glass: Others afford Marble, Serpentine Stone, and other sorts of hard Stone. And though the Natives did not think it worth their while, or were not in a capacity to dig for Minerals themselves, yet it remains without contradiction, that the Mountains inclose both Gold and Silver.

When Captain William Jeuff, Anno 1645, us'd the Indian Interpreter Agbromaese (to decide the Differences which arose between the West-India Company and the wild People call'd Makwaes,) he observ'd him to paint his Face with a yellow glittering colour, which he judg'd to be of some rich Mineral: whereupon buying some of the said Agbromaese, he put it into a Crucible, and gain'd two small pieces of Gold out of the same, valu'd at six Shillings; but keeping it private, and purchasing a
great quantity of the said Mineral from Ageronfie (who had shew’d him the Mountain which produced the same) extracted good store of Gold out of it; which possesses Cliffe with a belief of having found out a business of great consequence, he sent Areut Casfen of New-haven with the fore-mention’d Mineral to Holland, but the Ship being never heard of afterwards, and the Princefs Pink, in which Captain Cliffe was himself, with store of the new-found Mineral, being cast away, the Business came to nothing.

The Inhabitants, though divided into several Nations, yet agree in many things, as in painting their Bodies, Shields, Clubs, and other Utensils in their Houses. The Colours wherewith they paint themselves they pres out of Plants, or make them of certain Stones ground into very fine Powder. The chiefest Plant is not unlike the Myrtle, only it hath more Boughs, and bears red Berries; the Juice of which being dry’d in the Sun, is afterwards preferv’d in little Bags. The Natives temper their Colours with Water, and paint their Bodies with the same: It is as good a Purple as can be found. They also draw Ships, Trees, and Beasts after a very rough manner: In flead of Feathers they wear pleated Hair, which being colour’d red, hath an excellent gloss, which never fades though it Rain on the same.

The Horfes bred in this Country, being either brought thither from England or Utrecht, far exceed thofe of English breed; but are both of them subject to a strange Disease, of which many die in few hours. The fame Disease also feizes on Cattel if they go into Forrest Pature: But the onely thing to cure the fame, is Hay from falt Marfhly Grounds.

The Oaken Woods have store of Hogs, which if taken and fattened with Turkish Wheat, are moft delicious Meat.

The Sheep, though they breed well there, yet are very scarce, because the Planters not being able to spare Men to watch them, they are often devour’d by Wolves.

There are also abundance of Deer, all sorts of Fowls, Turkeys, Geefe, Ducks, Pigeons, and the like.

The Lyons, whose Skins the Indian bring to Market, are taken on a high Mountain fifteen days Journey South-West from thence.

There are likewise many black Bears, fearful of humane kind, but if Hunted, they run direct on thofe that pursue them: they sleep all the Winter, lying fix Weeks on one Side, and fix on the other, and sucking their Feet all the time: They generally lurk among Brambles, or in the Concavities of some hollow Mountain.

On the Borders of Canada there is seen sometimes a kind of Beast which hath some reafmblance with a Horfe, having cloven Feet, shaggy Mayn, one Horn just on their Forehead, a Tail like that of a wild Hog, black Eyes, and a Deers Neck: it feeds in the nearest Wildernefles: the Males never come amongst the Females except at the time when they Couple, after which they grow fo ravenous, that they not onely devour other Beasts, but alfo one another.

Towards the South of New York are many Buffles, Beasts which (according to Erasmus Stella) are bewixt a Horfe and a Stag: though they are of a strong Constitution, yet they die of the Smallest Wound, and are subject to the Falling-Sicknes: they have broad branchy Horns like a Stag, short Tail, rough Neck, Hair colour’d according to the several Seasons of the Year, broad and long Ears, hanging Lips, little Teeth, and Skin so thick, as not eafe to be pierced: The Females differ from the Males, for they have no Horns; both may eafeily be made tame: when Hunted, they vomit out a sort of scalding Liquor on the Dogs: they have great
great force in their Claws, for they can kill a Wolf with the same at one blow: their Flesh, either fresh or salted, is a good Diet: their Claws also cure the Falling-sicknes.

But no Beasts are more plentiful here than Harts and Stags, which feed up and down in great Herds: when they are Hunted by Wolves or Men, they immediately take the next River, where they are caught several together, by being cross'd in their Swimming, and affrighted by the Echo which comes from the Mountains, made by the Hunters hollowing on the other Shore, which makes them fearful of Landing: whilst the Huntsmen, joyning several pieces of Wood together get up on them, and Rowing towards these Deer, intercept them, being tir'd and out of breath.

Moreover, this Country breeds many Musk Cats, especially in Marshy Grounds. These Beasts are beautiful to the Eye, having black speckled Skins, their Mouths, full of sharp Teeth, and their Tails being long trail after them.

Many of the Learned maintain a Dispute concerning Civet, Whether it be the Seed of the Civet-Cat: the Affirmative, which Cardanus maintain'd, is contradicted by Julius Scaliger. Matthias, an Author of no little credit, supposes that Civet is the Sweat of the Cat, because it is most chiefly taken when these Beasts are exceedingly vex'd and wearied: But since the Sweat runs from all parts of the Body, which nevertheless do not all produce Civet, it is impossible that Sweat should be Civet. Others account Civet to be the Dung of the Cats; which last seems to come nearest to truth: for certainly it is nothing else but an Excrement in the fleshly parts about their Pizzle, or near the Fundament. The Cats being in pain to be discharg'd of this Civet, free themselves from it by rubbing a Tree; and also fawn on those which take it from them with a Spoon.

Besides all other wild Creatures, the Country, according to Adrian Vander Donk, produces yearly eighty thousand Beavers. Pliny relates, that these Beasts bite off their Pizzles and throw them to the Hunter, which are an exceeding good Medicine to help Abortion, stop the Monethly Flowers, Giddines in the Head,
Gout, Lameness, Belly and Tooth-ach, Rhumes, Poyfon, and the Evil. But Pliny makes a great mistake herein, for the Beavers have a small Piffer fatten'd to their Back-bone, in such a manner, that they cannot loose them but with hazard of their lives: They live in the Water, and on the Shore, in great companies together, in Nefts built of Wood, which deferve no small admiration, being made after this manner: The Beavers first gather all the loofe Wood, which they find along the Banks of the Rivers, of which, if there be not enough, they bite the Bark off from the Trees in the neighboring Woods, then with their Tusks, of which two grow above, and two below in their Mouths, they gnaw the main body of the Tree so long, till it drops afunder: Their Nefts very artificial, are fix Stories high, cover'd on the top with Clay to keep out Rain; in the middle is a paffage which goes to the River, into which they run so soon as they perceive a Man; to which purpose one of them stands Sentinel, and in the Winter keeps open the Water from freezing, by continual moving of his Tail, which is flat without Hair, and the most delicious Meat that can be had. The Beavers go big fixteen Weeks, and once a year bring forth four young, which fuck and cry like young Children, for the Dam of them ifes on her hinder Feet, and gives her Teats, which grow between the fore-legs to two of her young, each of them one: the foremost legs of a Beaver re semble those of a Dog, the hindermost those of a Goose; on each side of the vent are two swellings within two thin Skins; out of their vent runs generally an Oily moi flure, with which they anoint all the parts of their body which they can reach, to keep them from being wet; within they are like a cut-up Hog; they live on the Leaves and Barks of Trees; they love their young ones exceedingly; the long Hairs, which flinning, flit out on the back, fall off in Summer, and grow again against Harvest; they have short Necks, strong Sinews and Legs, and move very swiftly in the Water, and on the Land; if incompas'd by Men or Dogs, they bite most severely; the right Castor um, so highly esteem'd by Physicians, is a long Pefca, not unlike a Pear, within the body of the female Beaver, the Indians mince the Cods of the Male Beavers amongst their Tobacco, because they produce no Castor um.

This Country abounds alfo with Fowls; for besides Hawks, Kites, and other Birds of Prey, there are abundance of Cranes, of several sorts, some grey, some brown, others quite white; all of them have firm Bodies, and Bones without Marrow, Claws of a finger long, Strong and crooked Bills, their Brains dry, their Eyes little and hollow, hard Features, the left Foot lefier than the right, both deform'd, their Blood thick, and the Excrements of a horrid smell; they breed moft in old Woods, whose ground is without Brambles, and alfo near the Water, for they feed on Fift, and devour alfo Fowls, nay, snatch up Hares, Rabbits, Tortels, and sever al other sorts of Animals, which they carry away with them in the Air; nay, when hungry, they feize on one another; some of them fly abroad for their prey about noon, others at Sun-rifing; they fall like Lightning on what e're they pursue; they drink little, except the Blood of those Creatures which they devour; they are very libidinous, coupling above thirty times a day; not only with their like, but alfo with the Hens of Hawks, and other Birds; they lay their biggest Eggs in thirty days, and the leffer in twenty days; they generally bring forth three young; thofe of them that cannot endure to look full against the Sun, are thrown out of their Nefts; the young ones when they begin to be fledge'd, are by the old carry'd into the Air, and let flic, but supported by them; their flight is wonderful quick; for though they flic as high as ever they are able to be dicern'd, yet they can fee the laft Fifth that is in the Water, and a Hare lying in the Buffles: their Breath finks horribly, wherefore their Carcaces suddenly rot; though they
Chap. II.  

**AMERICA.**

are libidinous, yet they live long; most of them die of hunger, because their Bills when they grow old, grow so crooked, that they cannot open the same, wherefor they fly up into the Air against the Sun, and falling into the coldest Rivers, loose their Feathers and die.

Besides the foremention'd Birds of prey, there are abundance of Storks, Ravens, Crows, Owls, Swallows, Gold-finches, Ice-birds, Kites, Quails, Pheasants, and Winter Kites, and which are most remarkable for their rich Feathers, the Specters, they pick great holes in Trees, and make a noife as if a Man were cutting down a Tree. The Pigeons fly in such flocks, that the Indians remove with them to the place where they make their Nefts, where the young ones being taken by hundreds, serve them for a Moneths Provision.

Moreover, New York breeds a strange Bird about a Thumb long, all of glittering Feathers; it lives by sucking of Flowers like a Bee, and is so tender, that it immediately dies if water be spirited upon it; the Carcasse being dry'd, is kept for a Rarity.

But this Country abounds chiefly in Turkies, whose plenty deserveth no less admiration than their bulk, and the delicious taste of their Flesh, for they go feeding forty or fifty in a flock, and weigh sometime forty or fifty pound apiece; the Natives either shoot them, or take them with a Bait stuck on an Angle: In March and Harvest the Waters swarm with Gefe, Teal, Snites, Ducks, and Pelicans, besides many strange forts of Fowls not known in Europe.

The Rivers and Lakes produce Sturgeon, Salmon, Carps, Pearch, Barbils, all sorts of Eels, and many other Fish which are taken near Water-falls: The Sea affords Crabs with and without Shells, Sea-cocks, and Horsies, Cod, Whitings, Ling, Herrings, Mackrel, Flounders, Tar-buts, Tortels, and Oyfters, of which some are a Foot long, and have Pearl, but are a little brownish.

Amongst the Poysonous Creatures which infest New York, the chiefest and most dangerous is the Rattle-Snake, whose description we have already had at large in New England.

The Inhabitants have their Hair black as Jet, harsh like Horse-hair; they are broad Shoulder'd, small Wafted, brown Ey'd, their Teeth exceeding white; with Water they chiefly quench their Thirst: Their general Food is Flesh, Fish, and Indian Wheat, which ramp'd, is boy'd to a Pap, by them call'd Sappaen: They observe no fet time to Eat, but when they have an Appetite their Meals begin. Beavers Tails are amongst them accounted a great Dainty: When they go to Hunt, they live several days on parch'd Corn, which they carry in little Bags ty'd about their middle; a little of that laid Corn thrown into Water swells exceedingly.

Henry Hudson relates, That Sailing in the River Montains, in forty Degrees, he saw the Indians make strange Gestures in their Dancing and Singing; he obfer'ved farther, that they carry'd Darts pointed with Sharp Stones, Sadder'd to the Wood, that they flipt under the Sky on Mats or Leaves; took much Tobacco, and very strong; and that though courteous and friendly, they were very Thieves. He Sailing thirty Leagues further, went in his Boat to an old Indian Commander of forty Men and seventeen Women, who conduced him to the Shore, where they all dwelt in one House, artificially built of the Barks of Oak-trees; round about it lay above three Ships load of Corn, and Indian Beans to dry, besides the Plants which grew in the Fields. No sooner had Hudson enter'd the House, but he was receiv'd on two Mats spread on the ground; and two Men immediately were sent out to shoo Venifon or Fowls; and instantly returning, brought two Pigeons; a fat Dog, whom they nimbly fleas'd with shells, was also laid down to the fire;

They
They also made other Preparations for Hudsons Entertainment, but not willing to venture himself amongst them, that Night, rafted not of it, notwithstanding the Indians breaking their Dares, threw them into the fire, that thereby they might drive away all fears and jealousies from him.

The Habits of the Natives, especially of the Men, are few; the Women go more near than the Men; and though the Winter pinches them with excessive cold, yet they go naked till their thirteenth year: Both Men and Women wear a Girdle of Whale-fins and Sea-fells; the Men put a piece of Cloth, half an Ell long, and three quarters broad, between their Legs, so that a square piece hangs behind below his Back, and another before over his Belly. The Women wear a Coat which comes half way down their Legs, so curiously wrought with Sea-fells, that one Coat sometimes costs thirty Pounds. Moreover, their Bodies are cover'd with Deer-skins, the lappets or ends of which hang full of Points; a large Skin button'd on the right Shoulder; and ty'd about the middle, serves for an upper Garment, and in the Night for a Blanket: Both Men and Women go for the most part bare-headed; the Women tie their Hair behind in a tuft, over which they wear a square Cap wrought with Sea-fells, with which they adorn their Foreheads, and also wear the same about their Neck and Hands, and some also about their middle. Before the Hollanders were Planted here, they wore Shoes and Stockings of Buffel's-skins; some likewise made Shoes of Wheaten-fraw, but of late they come nearer to our Fashions: The Men Paint their Faces with several Colours; the Women only put here and there a black Spot; both of them are very refered.

Their Houses are most of them built of one fashion, only differing in length; all of them agree in breadth of twenty Foot: They build after this manner, they set Peel'd Boughs of Nut-Trees in the ground, according to the bigness of the place which they intend to build; then joining the tops of the Boughs together, they cover the Walls and top with the Bark of Cypress, Ashen, and Chestnut-Trees, which are laid one upon another, the smallest side being turn'd inwards: according to the bigness of the Houses, several Families, to the number of fifteen dwell
dwell together, every one having his Apartment. Their Fortifications are most of them built on steep Hills, near Rivers; the access to them is only at one place, they are built after this manner: They set great Poles in the Ground, with Oaken \textit{Pallisadoes} on each side, cross-ways one amongst another; between the crosses they set other Trees, to strengthen the Work: Within this inclos'd they generally build twenty or thirty Houses, of which some are a hundred and eighty Foot long, and some less, all of them full of People: In the Summer they pitch Tents along by the River side to Fifh; against Winter they remove into the Woods, to be near their Game of Hunting, and also Fuel.

To take many Women is not customary here, only amongst Military Officers, who Marry three or four Wives, which so well agree, that there is never any difference betwixt them; those that are not of Age, never Marry but with the consent and advice of their Parents: Widows and unmarry'd Men follow their own opinion and choice; only they take Cognizance of their Estates and Extraction: The Bridegroom always presents the Bride; for the least offence, the Man after having soundly beaten his Wife, turns her out of Doors, and Marries another, infomuch, that some of them have every year a new Wife: On breach of Marriage, the Children follow the Mother, from whom they account their Generation: They account Adultery, if committed under the bare Canopy of Heaven, a great Sin: Whoring is Licence'd to single Women, if they receive Money for it, and no Man scruples to Marry them; nay, those that are Marry'd, boast how many they have enjoy'd before their Marriage: She that is inclin'd to Marry, covers her whole body, and lets her self wrap up in the middle of the way, where a Bachelors passing by sees her, and makes up the Match blindfold: When impregnated, they take great care that their Fruit receives no hindrance nor prejudice: When the time of their Delivery approaches, (which they know exactly) they go to a Melancholy place in the Woods, though in the coldest Weather, where they raise up a Hut of Mats, and bring the Child into the World without any help or Company, wash the Child in cold Water, and wrap it up in Mats; then a few days after going home, they bring up the Infant with great care, none putting them out to Nurse: So long as a Woman gives suck, or is quick with Child, she will not admit of Copulation; one who hath the Flowers, never comes abroad: In time of sickness they faithfully assist one another: When any die, the nearest Relations shut their Eyes; and after having watch'd them some days, they are Inter'd after this manner: The Corps is plac'd fitting with a Stone under its Head, near it they set a Pot, Kettle, Dishes, Spoons, Money, and Provisions to use in the other World; then they pile Wood round about it, and cover it over with Planks, on which throwing Earth and Stones, they set \textit{Pallisadoes}, and make the Grave like a House, to which they shew Veneration, wherefore they account it a great piece of villany to deface any thing of it: The Men make no shew of sorrow over the Dead, but the Women mourn exceedingly, and carry themselves very strangely, beating their Breasts, scratching their Faces, and calling night and day on the name of the Deceased: The Mothers make great Lamentation at the Death of their Children, especially Sons, for they have off the Hair of their Heads, which at the Funeral is burnt in the presence of all their Relations; which is also perform'd by the Women when their Husbands die; besides, they black all their Faces, and putting on a Hart-skin Shirt, mourn a whole year, notwithstanding they liv'd very contentiously together.

On some occasions they go a Worshipping of the Devil, to a certain place where the Sorcerers shew strange Feats of Activity, tumbling over and over, beating
themselves, and not without great noise leaping in and about a great Fire: at last they make a great Cry all together: upon which (as they say) the Devil appears to them in the shape either of a tame or wild Beast: the first signifies bad, and the other good fortune: both inform them of future Events, though darkly: and if the business fall out contrary, they affirm that they have not rightly understood the Devil’s meaning. Moreover they bewitch some in such a manner, that they foam at the Mouth, throw themselves into the Fire, and beat themselves severely: and so soon as they whisper in the Ear of those whom they have bewitch’d, they immediately recover their former health.

The Language of this Country is very various, yet it is divided into only four principal Tongues, as the Manhattans, Wappanoo, Siawanoo, and Minqua’s, which are very difficult for Strangers to learn, because they are spoken without any Grounds or Rules.

Their Money is made of the innermost Shells of a certain Shell-fish, cast up twice a year by the Sea: These Shells they grind smooth, and make a Hole in the middle, cutting them of an exact bigness, and so put them on Strings, which then serve in stead of Gold, Silver, and Copper Coin.

Now to say something of the Vices and Virtues of the Inhabitants. They are in the first place very slovenly and nasty, stubborn, covetous, revengeful, and much addicted to filching and stealing. Some appear refer’d, using few words, which they utter after serious consideration, and remember a long time. Their understandings being improv’d by the Hollanders, they are quick of apprehension, to distinguish good from bad: they will not endure any Oppression, but are very patient of Heat, Cold, Hunger and Thirst. They have a strange way of using Stoves, which are set in the Ground, and cover’d with Earth, into which they go through a little Door. A sick Person coming into the same, sits himself down, and places hot Stones round about him; which done, and having sweated a considerable time, he leaps into cold Water, by which he finds ease of all his Distempers.

Though these People know no great distinction between Man and Man, as other Nations, yet they have noble and ignoble Families amongst them: superior and inferior Offices, which they enjoy by Inheritance; but sometimes the Martial Offices are bestowed according to the Valour of the Persons: Their Generals seldom give their Enemies a Field-Battle, by drawing or dividing their Men into Regiments or Companies, but make it their whole Design to defeat their Enemies by sudden Sallies from Ambuscado’s; for they never stand out a close Fight, unless compell’d to it, but if encompass’d round, they fight to the last Man. When any danger threatens, the Women and Children are convey’d to a secure place. Their Arms formerly were Bows and Arrows, and Battel-axes, but now they use Muskquets, which they have learn’d to handle with great dexterity. Their square Shields cover all their Bodies and Shoulders. About their Heads they tie a Snakes Skin, in the middle of which sticks either a Fox’s or Bear’s Tail. They cannot be known by their Faces, they are all over so besmeard with Paint of divers colours. They seldom give Quarter to their Enemies, except Women and Children, which the Conquerors use as their own, that by that means they may increase and strengthen themselves: and if any Prisoner is not kill’d presently after the Battel, but falls into the Hands of one whole Relations have formerly been slain by his Party, he is Roasted three days by degrees before he gives up the Ghost. It deserves no small admiration, that the Sufferer during the whole time of his Torture, Sings till he breathes his last. They have few or no Punishments for any Offence, committing few Crimes which are by them accounted Capital. If any one steal,
and the Goods be found in his custody, the Governor of the place where he resides commands him only to restore the same to the Owner. If any one murther or kill the other, the Relations of the slain, if they can take the Malefactor in twenty four hours, may without Examination or delay put him to death also; but that time being once expir'd, the Revenger is liable to be kill'd in the same time by his Relations whom he slew. All Obligations have their power and virtue from certain Presents delivered upon the making of a Contract, which is done thus: They dry as many Sticks as they have Articles, which if they agree upon, every Man on the concluding of the Discourse lays a Present before the others Feet. Sometimes they hang up the Presents, because they are often three days in Consultation before they resolve; after which if the Presents be taken down, it is a certain sign of their Agreement; but if not, they proceed no farther, unless the Articles and Presents are alter'd. On Business of consequence the Commonalty repair to their Governor's House, there to hear and inquire what the Nobility there assembled have concluded or refoly'd on; at which the best Orator standing up, tells them their Intentions. It happens sometimes that a turbulent Person making a Mutiny, and refusing to hearken to reason, is immediately beheaded by one of the Nobility, in contradiction of which none dare presume to speak the least word.

There is scarce any steps of Religion found amongst these People, oney they suppose the Moon to have great influence on Plants. The Sun, which over-looks all things, is call'd to witness where're they Swear. They bear great respect, and stand much in fear of Satan, because they are often plagued by him when they go a Hunting or Filling: wherefore the first of what they take is burnt in honor of him, that he to whom they ascribe all wickedness might not hurt them. When they feel pain in any part of their Body, they say that the Devil sits in the same. They acknowledge that there resides a God above the Stars, but troubles not himself with what the Devil doth on Earth, because he continually recreates himself with a most beautiful Goddess, whose original is unknown. She on a certain time (say they) descended from Heaven into the Water, (for before the Creation all things were Water) into which she had instantly-funk, had not the Earth arose under her Feet, which grew immediately to such a bigness, that there appeared a World of Earth, which produc'd all sorts of Herbs and Trees; whilst the Goddess taking to her self a Hart, Bear, and Wolf, and Conceiving by them, she was not long after deliver'd of severall Beasts at one time: and from thence proceeded not only the diversity of Beasts, but also Men, of which some are black, white, or fallow; in nature fearful like a Hart, or cruel and valiant like a Bear, or deceitful like Wolves: after this the Mother of all things ascended up to Heaven again, and sported there with the Supreme Lord, whom they say they know not, because they never saw him: wherefore they shall have least to answer for than Christian's, which pretend to know him to be the Punisher of things both good and bad, which are daily committed by them: and for this ridiculous Opinion they can hardly be brought to embrace the Christian Faith.

Concerning the Souls of the Deceased, they believe, that thoso which have been good in their life-time, live Southward in a temperate Country, where they enjoy all manner of pleasure and delight; when as the Wicked wander up and down in a miserable Condition. The Echo which refounds from the Cries of wild Beasts in the Night, they suppose to be the Spirits of Souls transmigrated into wicked Bodies.

At their Cantic's, or Dancing-Matches, where all Persons that come are freely Entertain'd, it being a Festival time. Their Custom is when they Dance, for the Spectator
Spectators have short Sticks in their Hands, and to knock the Ground and Sing altogether, whilst they that Dance sometimes act Warlike postures, and then they come in painted for War with their Faces black and red, or some all black, some all red, with some streaks of white under their Eyes, and so jump and leap up and down without any order, uttering many Expressions of their intended Valour. For other Dances they only shew what antick Tricks their ignorance will lead them to, wringing of their Bodies and Faces after a strange manner, sometimes jumping into the Fire, sometimes catching up a Firebrand, and biting off a live Coal, with many such tricks, that will affright rather than please an English-man to look upon them, resembling rather a company of infernal Furies than Men.

When their King or Suchen sits in Council, he hath a Company of Arm’d Men to guard his Person, great respect being shewn him by the People, which is principally manifested by their silence. After he hath declared the cause of their Convention, he demands their Opinion, ordering who shall begin: The Person order’d to speak, after he hath declar’d his mind, tells them he hath done: no Man ever interrupting any Perfon in his Speech, nor offering to speak, though he make never so many long Rrops, till he says he hath no more to say. The Council having all declar’d their Opinions, the King after some pause gives the definitive Sentence, which is commonly seconded with a Shout from the People, every one seeming to applaud and manifest their Assent to what is determin’d.

If any Person be condemn’d to die, which is seldom, unless for Murther or Inceft, the King himself goes out in Person (for you must understand they have no Prisons, and the guilty Person flies into the Woods) where they go in quest of him, and having found him, the King shoots first, though at never such a distance, and then happy is the Man that can shoot him down; for he hath the fortune to be Executioner, is for his pains made some Captain, or other Military Officer.

They grease their Bodies and Hair very often, and paint their Faces with several Colours, as black, white, red, yellow, blue, &c. which they take great pride in, every one being painted in a different manner.

Within two Leagues of New York lieth Staten-Island, it bears from New York West something Southerly: It is about twenty Miles long, and four or five broad, most of it very good Land, full of Timber, and producing all such Commodities as Long-Island doth, besides Tin and store of Iron Oar; and the Calamine Stone is said likewise to be found there: There is but one Town upon it, consisting of English and French, but it is capable of entertaining more Inhabitants.

Betwixt this and Long-Island is a large Bay, which is the coming in for all Ships and Vessels out of the Sea.

On the North-side of this Island After-skull River puts into the Main Land, on the West-side whereof there are two or three Towns, but on the East-side but one. There are very great Marthers or Meadows on both sides of it, excellent good Land, and good convenience for the fishing of several Towns. There grows black Walnut and Locust, as there doth in Virginia, with mighty tall, straight Timbers, as good as any in the North of America: It produceth any Commodity which Long-Island doth.

Hadfon’s River runs by New York Northward into the Countrey, towards the Head of which is feated New Albany, a Place of great Trade with the Indians, betwixt which and New York, being above a hundred Miles, is as good Corn-Land as the World affords, enough to entertain hundreds of Families, which in the time of the Dutch Government of these Parts could not be settled by reason of the Indians, excepting
cepting one Place, call'd the Sopers, which was kept by a Garrison, but since the Reduction of these Parts under His Majesties Obedience, and a Patent granted to his Royal Highnes the Duke of York, which is about fix years, by the care and diligence of the Honorable Colonneel Nicholls, sent thither as Deputy to his Highnes, such a League of Peace was made, and Friendship concluded betwixt that Colony, and the Indians, that they have not reflifted or disturb'd any Christians there, in the feeling or peaceable posfelfing of any Lands within that Government, but every Man hath fat under his own Vine, and hath peaceably reap'd and enjoy'd the Fruits of their own Labors, which God continue.

Weftward of After-skull River before mention'd, about eighteen or twenty Miles, runs in Raritan River Northward into the Countrey some fcores of Miles, both fides of which River are adorn'd with spacious Meadows, enough to feed thousands of Cattel: The Wood-Land is very good for Corn, and for'd with wild Beafis, as Deer, Elks, and an innumerable multitude of Fowl, as in other parts of the Countrey. This River is thought very capable for the erecting of feveral Towns and Villages on each fide of it, no place in the North of America having better convenience for the maintaining of all forts of Cattel for Winter and Summer Food.

Upon this River is no Town fetled, only one at the Mouth of it; but next to it, Weftward, is a Place call'd Newfons; where are two or three Towns and Villages fetled upon the Sea-fide, but none betwixt that and Delware-Bay, which is about fixty Miles, all which is a rich Champain Countrey, free from Stones, and indifferent level, having fcore of excellent good Timber, and very well water'd, having Brooks or Rivers ordinarily, one or more in every Miles travel. This Countrey is peopled onely with wild Beafis, as Deer, Elks, Bears, and other Creatures, fo that in a whole days Journey you shall meet with no Inhabitants except a few Indians. It is also full of bately Oaks, whole broad-branch'd tops serve for no other use, but to keep off the Suns heat from the wild Beafis of the Wilderness, where is Gras as high as a Man's Middle, which serves for no other end, except to maintain the Elks and Deer, who never devour a hundredth part of it, than to be burnt every Spring to make way for new. How many poor People in the World would think themselves happy, had they an Acre or two of Land, whilf here is hundreds, or thoufands of Acres that would invite Inhabitants.

Delware-Bay, the Mouth of the River, lieth about the mid way betwixt New York and the Capes of Virginia.

The beft Commodities for any to carry with them to this Countrey is Clothing, the Countrey being full of all forts of Cattel, which they may furnish themselves withal at an ease Rate, for any fort of English Goods, as likewise Instruments for Husbandry and Building, with Nails, Hinges, Glas, and the like. They get a Living principally by Corn and Cattel, which will there fetch them any Commodities: Likewise they Sowe fcore of Flax, which they make every one Cloth of for their own wearing, as also Woollen Cloth, and Linfey-woolfey; and had they more Tradefmen amongst them, they would in a little time live without the help of any other Countrey for their Clothing; for Tradefmen there are none but live happily there, as Carpenters, Blacksmiths, Mafons, Taylors, Weavers, Shoemakers, Tanners, Brickmakers, and fo any other Trade: Them that have no Trade betake themselves to Husbandry, get Land of their own, and live exceeding well.

We shall conclude our Discourse of this Countrey with a notable Character given thence by a late Writer, as to the great advantage of happy living in all respects, for whofeover shall be pleas'd to betake himself thither to live.
If there be any terrestrial happiness (faith he) to be had by any People, especially of an inferior rank, it must certainly be here. Here any one may furnish himself with Land, and live Rent-free, yea, with such a quantity of Land, that he may weary himself with walking over his Fields of Corn, and all sorts of Grain, and let his Stock amount to some hundreds; he needs not fear there want of Pasture in the Summer, or Fodder in the Winter, the Woods affording sufficient supply, where you have Grass as high as a Man's Knees, nay, as high as his Waffe, interlac'd with Pea-Vines, and other Weeds that Cattel much delight in, as much as a Man can pass through: And these Woods also every Mile or half-Mile are furnish'd with fresh Ponds, Brooks, or Rivers, where all sorts of Cattel, during the heat of the day, do quench their thirst, and cool themselves. These Brooks and Rivers being iniron'd of each side with several forts of Trees and Grape-Vines, Arbor-like interchanging places, and crossing these Rivers, do shade and shelter them from the scorching beams of the Sun. Such as by their utmost Labors can scarcely get a Living, may here procure Inheritances of Lands and Possessions, Rock themselves with all sorts of Cattel, enjoy the benefit of them whilst they live, and leave them to their Children when they die. Here you need not trouble the Shambles for Meat, nor Bakers and Brewers for Beer and Bread, nor run to a Linnen-Draper for a supply, every one making their own Linnen, and a great part of their woollen Cloth for their ordinary wearing. And how prodigal (if I may so say) hath Nature been to furnish this Country with all sorts of wild Beasts and Fowl, which every one hath an interest in, and may Hunt at his pleasure, where, besides the pleasure in Hunting, he may furnish his Houfe with excellent fat Venison, Turkeys, Geese, Heath-hens, Cranes, Swans, Ducks, Pigeons, and the like; and with that, he may go a Fishing, where the Rivers are so furnish'd, that he may supply himself with Fish before he can leave off the Recreation. Here one may travel by Land upon the same Continent hundreds of Miles, and pass through Towns and Villages, and never hear the least complaint for want, nor hear any ask him for a Farthing. Here one may lodge in the Fields and Woods, travel from one end of the Country to another, with as much security as if he were lock'd within his own Chamber: And if one chance to meet with an Indian Town, they shall give him the best Entertainment they have, and upon his desire direct him on his Way. But that which adds happiness to all the rest, is the healthfulness of the Place, where many People in twenty years time never know what Sickness is; where they look upon it as a great Mortality, if two or three die out of a Town in a years time. Besides the sweetness of the Air, the Country it self sends forth such a fragrant smell, that it may be perceive'd at Sea before they can make the Land: No evil Fog or Vapor doth any sooner appear, but a North-Wind or Westerly Wind immediately diffolves it, and drives it away. Moreover, you shall scarce see a House, but the South-side is begirt with Hives of Bees, which increase after an incredible manner: So that if there be any terrestrial Canaan, 'tis surely here, where the Land floweth with Milk and Honey.
The Northern part of Virginia the limits whereof extend farther Southwardly, are here inserted, for the better description of the entrance into the Bay of Chesapeake.
A NEW DESCRIPTION OF MARYLAND.

SECT. III.

Before we proceed to the Description of this Country, it will be first requisite to relate the true occasion and means, whereby this part of America came to be erected into a Province, and call'd Maryland.

In the Year of our Lord 1631, George Lord Baltimore obtained of King Charles the First, of Great Britain, &c. a Grant of that part of America, (first discover'd by the English) which lies between the Degrees of thirty seven and fifty Minutes; or thereabouts, and forty of Northerly Latitude; which is bounded on the South by Virginia; on the North, by New England, and New Jersey, part of New York, lying on the East side of Delaware Bay; on the East, by the Ocean; and on the West, by that part of the Continent which lies in the Longitude of the first Fountains of the River call'd Patomuck.

In pursuance of this Grant to his said Lordship, a Bill was prepar'd, and brought to His Majesty to Sign, who first ask'd his Lordship, what he should call it, there being a Blank in the Bill design'dly left for the Name, which his Lordship intend'd should have been Crefcentia; but his Lordship leaving it to His Majesty to give it a Name, the King propos'd to have it call'd Terra-Maria, in English, Mary-land, in honor of his Queen, whose Name was Mary; which was concluded on, and inserted into the Bill, which the King then Sign'd; and thereby the said Tract of Land was erected into a Province by that Name.

His Lordship somewhat delaying the speedy passing of it under the Great Seal of England, dy'd in the interim, before the said Patent was perfected; whereupon a Patent
Patent of the said Province was shortly afterwards paid'd to his Son and Heir, (who was Chriften'd by the Name of Cecil, but afterwards confirm'd by the Name of Ciccilus,) the now Lord Baltimore, under the Great Seal of England, bearing Date June 20, 1632, in the eighth Year of His faid Majeftey Reign, with all Royal Jurifdictions and Prerogatives, both Military and Civil in the faid Province, as Power to Enact Laws, Power of pardoning all manner of Offences, Power to confer Honors, &c. to be held of His faid Majeftey, His Heirs and Succeffors, Kings of England in common Soccage, as of His Majeftey Honor of Winfhor in the Countty of Berks in England; yielding and paying yearly for the fame to His Majeftey and to His Heirs and Succeffors for ever, two Indian Arrows of thofe parts, at the Call of Winfhor aforefaid, on Tuesday in Easter Week, and the fifth part of all Gold and Silver Oar, which fhall happen to be found in the faid Province.

"By the faid Patent is Granted to his Lordfhip, his Heirs and Affigns, all that part of a Peninsula, lying in the parts of America, between the Ocean on the Eaft, and the Bay of Chofapeack on the West; and divided from the other part thereof by a right Line drawn from the Promontory, or Cape of Land call'd Watkin's Point, ifuate in the aforefaid Bay, near the River of Wigebo on the West, unto the main Ocean on the Eaft, and between that bound on the South, unto that part of Delaware Bay on the North, which lies under the fourtie Degree of Northerly Latitude from the Equinoctial, where New England ends; and all that Tract of Land between the bounds aforefaid, that is to fay, paffing from the aforefaid Bay call'd Delaware Bay, in a right Line by the Degree aforefaid, unto the true Meridian of the firft Fountains of the River of Patamack; and from thence stretch'ing towards the South, unto the utterfeft Bank of the faid River, and following the West and South fide thereof, unto a certain place call'd Cinqueack, near the Mouth of the faid River, where it falls into the Bay of Chofapeack, and from thence by a ftreight Line unto the aforefaid Promontory, or place call'd Watkin's-Point, which lies in thirtie feven Degrees and fifty Minutes, or threemsbouts, of Northern Latitude.

"By this Patent his Lordfhip and his Heirs and Affigns are Created the true and absolute Lords and Proprietary of the faid Province, having the Allegiance and Sovereign Dominion due to His Majeftey, His Heirs, and Succeffors, fo that he hath thereby a Sovereignty Granted to him and his Heirs, dependant upon the Sovereignty of the Crown of England.

"His Lordfhip, in the Year 1633, sent his fecth Broth'r Mr. Leonard Calvert, and his third Broth'r Mr. George Calvert; with divers other Gentlemen of Quality, and Servants to the number of two hundred Peftons at leaft, to settle a Plantation there, who fce Salt from the Cores in the Ifle of Wight in England, on Novembr. 22. in the fame Year; having made some fay by the way, at the Barbadoes and St. Chris- tianers in America, they arrived at Point Comfort in Virginia, on February 24. following; from whence thence after they Sall'd up the Bay of Chofapeack, and Patamack River; and having review'd the Country, and given Names to feveral places, they pitch'd upon a Town of the Indians for their firft Seat, call'd Toacomac, (now Saint Mary's) which the then Governor Mr. Leonard Calvert, freely Purchas'd of the Natives there, for the Lord Proprietaries use, with Commodities brought from England.

"That which facilitated the Treaty and Purchase of the faid place from the Indians, was a resolution which tho' Indians had then before taken, to remove higher into the Country where it was more Populous, for fear of the Savagehainocks, (another, and more Warlike People of the Indians, who were their too near Neigh-
bors, and inhabit between the Bays of Chesapeake and Delaware there being then actual Wars between them, infomuch, that many of them were gone thither before the English arriv'd: And it hath been the general practice of his Lordship, and those who were employ'd by him in the Planting of the said Province, rather to purchase the Natives Interest, (who will agree for the same at easie rates) than to take from them by force, which they seem to call their Right and Inheritance, to the end all disputes might be remov'd touching the forcible Incroachment upon others, against the Laws of Nature or Nations.

Thus this Province at the vast Charges, and by the unwearied Industry and endeavor of the present Lord Baltimore, the now absolute Lord and Proprietary of the same was at first planted, and hath since been supply'd with People and other necessaries, so effectually, that in this present Year 1671. the number of English there amounts to fifteen or twenty thousand inhabitants, for whose encouragement there is a Fundamental Law established there by his Lordship, whereby Liberty of Conscience is allow'd to all that profess to believe in Jesus Christ, so that no man who is a Christian is in danger of being disturb'd for his Religion; and all persons being satisfied touching his Lordships Right, as Granted by his Superior Sovereign, the King of Great Britain, and possessed by the consent and agreement of the first Indian Owners, every Person who repairith thither, intending to become an Inhabitant, finds himself secure, as well in the quiet enjoyment of his Property, as of his Conscience.

Mr. Charles Calvert, his Lordships only Son and Heir, was in the Year 1661. sent thither by his Lordship to Govern this Province and People, who hath hitherto continu'd that Charge of his Lordships Lieutenant there, to the general satisfaction and encouragement of all Persons under his Government, or otherwise concern'd in the Province.

The precedent discourse having given you a short Description of this Province from its Infancy to this day, together with an account of his Lordships Patent and Right, by which he holds the same; we will here speak something of the Nature of the Country in general, and of the Commodities that are either naturally afforded there, or may be procur'd by Industry.

The Climate is very healthful, and agreeable with English Constitutions, but New-comers have most of them heretofore had the first year of their Planting there in July and August, a Sickness, which is call'd there A Seasoning, but is indeed no other than an Ague, with cold and hot Fits, whereof many heretofore us'd to die for want of good Medicines, and accommodations of Diet and Lodging, and by drinking too much Wine and Strong-waters, though many, even in those times, who were more temperate, and that were better accommodated, never had any Seasons at all; but of late years, since the Country hath been more open'd by the cutting down of the Woods, and that there is more plenty of English Diet, there are very few die of those Agues, and many have no Seasons at all, especially those that live in the higher parts of the Country, and not near to the Marshes and Salt-water.

In Summer, the heats are equal to those of Spain, but qualify'd daily about Noon; at that time of the Year, either with some gentle Breezes, or small Showres of Rain: In Winter there is Frost and Snow, and sometimes it is extremely cold, infomuch, that the Rivers and the Northely part of the Bay of Chesapeake are Frozen, but it seldom lasts long; and some Winters are so warm, that People have gone in half Shirts and Drawers only at Christmas: But in the Spring and Autumn, (viz.) in March, April, and May, September, October, and November, there is generally

\[\text{most}\]
most plesant temperate Weather: The Winds there are variable, from the South comes Heat, Gufts, and Thunder; from the North or North-West, cold Weather; and in Winter, Frost and Snow, from the East and South-East, Rain.

The Soyl is very fertile, and furnifh'd with many plesant and commodious Rivers, Creeks, and Harbors.

The Country is generally plain and even, and yet diftinguifh'd with some pretty small Hills and Rifings, with variety of Springs and Rivuletts: The Woods are for the most part free from Underwood, so that a Man may Travel or Hunt for his Recreation.

The ordinary entrance by Sea into this Country is between two Capes, distant each from the other about seven or eight Leagues; the South Cape is call'd Cape Henry; the North, Cape Charles; within the Capes you enter into a fair Bay, Navigable for at leaft two hundred Miles, and is call'd Chesapeack Bay, stretching itelf Northerly through the heart of the Country, which adds much to its Fame and Value: Into this Bay fall many flately Rivers, the chief whereof is Patomeck, which is Navigable for at leaft a hundred and forty Miles: The next Northward, is Patuxent, at its entrance distant from the other about twenty Miles, a River yielding great Profit as well as Pleasure to the Inhabitants; and by reafon of the Islands and other places of advantage that may Command it, both fit for Habitation and Defence: Passing hence to the Head of the Bay, you meet with several plesant and commodious Rivers, which for brevity we here omit to give any particular account of: On the Eastern Shore are several commodious Rivers, Harbors, Creeks, and Islands; to the Northward whereof you enter into another fair Bay, call'd Delaware Bay, wide at its entrance about eight Leagues, and into which falls a very fair Navigable River.

This Countrey yields the Inhabitants many excellent things for Physick and Chyrurgy; they have several Herbs and Roots which are great Preparatives against Poylon, as Snake-Root, which prefently cures the bitings of the Rattle-Snake, which are very Venomous, and are bred in the Countrey; others that cure all manner of Wounds, they have Saxafra, Sarafarilla, Gums and Balfoms, which Experience (the Mother of Art) hath taught them the perfect use of.

An Indian seeing one of the English much troubled with the Tooth-ach, fetch'd a Root out of a Tree, which apply'd to the Tooth, gave eafe immediately to the Party; other Roots they have fit for Dyers, wherewith the Indians Paint themselves as Pacock (a deep red.) &c.

The Timber of these parts is good and useful for Building of Houses and Ships, the white Oak for Pipe-flaves, the red for Wainscot, there is likewise black Wall-Nut, Cedar, Pine, and Cypref, Cheff-nut, Elme, Ash, and Poplar, all which are for Building and Husbandry: Fruit-trees, as Mulberries, Persimmon, with several kind of Plumbs, and Vines in great abundance.

Of Strawberries there is plenty, which are ripe in April, Mulberries in May, Raspberries in June, and the Marasch, which is something like a Lemon, is ripe in August. In Spring time there are several forts of Herbs, as Corn-fallet, Violets, Sorrel, Purslane, and others which are of great use to the English there.

In the upper parts of the Country are Buffeloes, Elks, Tygers, Bears, Wolves, and great Store of Deer; as also Beavers, Foxes, Otees, Flying-Squirrels, Raccoons, and many other forts of Beasts.

Of Birds, there is the Eagle, Gofhawk, Falcon, Lanner, Sparrow-hawk, and Martin; alfo wild Turfies in great abundance, whereof many weigh fifty Pounds in weight and upwards, and of Partridge great plenty: There are likewise fundry forts
forts of singing Birds, whereof one is call'd a Mock-Bird, because it imitates all other Birds; some are red, which sing like Nightingales, but much louder; others black and yellow, which last fort excels more in Beauty than tune, and is by the English there call'd the Baltimore-Bird, because the Colours of his Lordships Coat of Arms are black and yellow: Others there are that resemble most of the Birds in England, but not of the same kind, for which we have no names: In Winter there are great plenty of Swans, Cranes, Geese, Herons, Duck, Teal, Widgeons, Brants, and Pidgeons, with other sorts, whereof there are none in England.

The Sea, the Bays of Chesapeake and Delaware, and generally all the Rivers, do abound with Fift of several sorts; as Whales, Sturgeon, Thorn-back, Grampus, Porpuses, Mullets, Trouts, Soules, Plaice, Mackrel, Perch, Eels, Roach, Shadd, Herrings, Crabs, Oyfters, Cockles, Muffels, &c. but above all these, the Fift whereof there are none in England, as Drums, Sheep-head, Cat-fish, &c. are best, except Sturgeon, which there are found in great abundance, not inferior to any in Europe for largeness and goodness.

The Minerals may in time prove of very great consequence, though no rich Mines are yet discover'd there; but there is Oar of several sorts, viz. of Tin, Iron, and Copper, whereof several trials have been made by curious Persons there with good success.

The Soyl is generally very rich, the Mould in many places black and rank, in so much, that it is necessary to Plant it first with Indian Corn, Tobacco, or Hemp, before it is fit for English Grain; under that is found good Loam, whereof has been made as good Brick as any in Europe: There are store of Marsh-grounds for Meadows; great plenty of Marle, both blue and white; excellent Clay for Pots and Tiles: To conclude, there is nothing that can be reasonably expected, in a place lying in the same Latitude with this, but what is either there found naturally, or may be procur'd by Industry, as Oranges, Lemons, and Olives, &c.

We need not here mention Indian Corn, (call'd May) Pease and Beans of several sorts, being the peculiar Products Plant'd by the Indians of that part of America.

All sorts of English Grain are now common there, and yield a great encrease; as Wheat, Rye, Barley, Oats, Pease, Beans, &c. good Beer of Wheat or Barley Malt, after the English Mode, is made, even in the meanest Families there; Some drink Beer of Indian Corn, others of the Stalks thereof, or of the Chippes of the Pockyerry-Tree, all which make a-fort of fresh and pleasant Drink; but the general Diet of the Country is now English, as most agreeable to their Constitutions.

There are few able Planters there at present; but what are plentifully supply'd with all sorts of Summer and Winter Fruits; as also of Roots and Herbs, of all sorts out of their Gardens and Orchards, which they have Plant'd for their Profit as well as Pleasure: They have Pears, Apples, Plumbs, Peaches, &c. in great abundance, and as good as tho' of Italy; so are their Melons, Pumplings, Aprickocks, Cherries, Figs, Pomegranates, &c. In fine, there is scarce any Fruit or Root that grows in England, France, Spain, or Italy, but hath been try'd there, and prospers well.

You may have there also Hemp, Flax, Pitch, and Tar, with little labor; the Soyl is apt for Hops, Rape-feed, Annice-feed, Woad, Madder, Saffron, &c. there may be had Silk-worms, the Country being fow'd with Mulberry-trees, and the superfluity of the Wood will produce Pot-ashes.

There is a great quantity of Syder made there at present, and as good as in any other Countrey; good Perry and Quince-drink is there likewise made in great plenty: The Ground doth naturally bring forth Vines in great quantities, the quality
ty whereof being something corrected by Industry, (as there have been several trials thereof already made there) may no doubt produce good Wine, to the great encouragement and advantage of the Undertakers.

Brave Ships may be built there with little charge, Clab-board, Wainscot, Pipe-staves, and Mats for Ships, the Woods will afford plentifully; some small Vessels have been already built there: In fine, Beef, Furs, Hides, Butter, Cheese, Pork, and Bacon, to Transport to other Countries, are no small Commodities, which by Industry, are, and may be had there in great plenty; the English being already plentifully stock'd with all sorts of Cattel and Horses; and were there no other Staple-Commodities to be hop'd for, but Silk and Linnen (the materials of which apparently will grow there) it were sufficient to enrich the Inhabitants.

But the general Trade of Mary-land at present depends chiefly upon Tobacco, it being the Planters greatest concern and study to flore himself betimes with that Commodity, wherewith he buys and sells, and after which Standard all other Commodities receive their Price there; they have of late vented such quantities of that and other Commodities; that a hundred Sail of Ships from England, Barbadoes, and other English Plantations, have been usually known to Trade thither in one Year; infomuch, that by Cuffom and Excize paid in England for Tobacco and other Commodities Imported from thence, Mary-land alone at this present, hath by his Lordships vast Ex pense, Industry, and Hazard for many years, without any charge to the Crown, improv'd His Majesties, the King of Englands Revenues, to the value of Forty thousand Pounds Sterling per annum at least.

The general way of Traffick and Commerce there is chiefly by Barter, or Exchange of one Commodity for another; yet there wants not, besides English and other foreign Coyns, some of his Lordships own Coyn, as Greats, Sixpences, and Shillings, which his Lordship at his own Charge caus'd to be Coyn'd and dispers'd throughout that Province; 'tis equal in finenes of Silver to English Sterling, being of the same Standard, but of somewhat less weight, and hath on the one side his Lordships Coat of Arms stamp'd, with this Motto circumscrib'd, Crefcite & Multiplicamini, and on the other side his Lordships Effigies, circumscrib'd thus, 

Cecilius Dominus Terra-Maritae, &c.

The Order of Government and settled Laws of this Province, is by the Prudence and endeavor of the present Lord Proprietary, brought to great Perfection; and as his Dominion there is absolute (as may appear by the Charter aforementioned) to all Patents, Warrants, Writs, Licences, Actions Criminal, &c. Illegit forth there in his Name: Wars, Peace, Courts, Offices, &c. all in his Name made, held, and appointed.

Laws are there Enacted by him, with the advice and consent of the General Assembly, which consists of two Estates, namely, the first is made up by the Chancellor, Secretary, and others of his Lordships Privy-Council, and such Lords of Mannors, and others as shall be call'd by particular Writs for that purpose, to be Illegit by his Lordship: The second Estate consists of the Deputies and Delegates of the respective Counties of the said Province, elected and chosen by the free voice and approbation of the Free-men of the said respective Counties.

The Names of the Governor and Council in this present Year 1671. are as followeth, Mr. Charles Calvert, his Lordships Son and Heir, Governor; Mr. Philip Calvert, his Lordships Brother, Chancellor; Sir William Talbot Baronet, his Lordships Nephew, Secretary; Mr. William Calvert, his Lordships Nephew, Master-Master-General; Mr. Jerome White, Surveyor-General; Mr. Baker Brooke, his Lordships Nephew; Mr. Edward Lloyd, Mr. Henry Courfey, Mr. Thomas Trueman, Major Edward Fitr-Herbert, Samuel Chew Esq.
His Lordship, or his Lieutenant there for the time being, upon due occasion, Convenes, Prorogues, and Dissolves this Assembly; but whatsoever is by his Lordships Lieutenant there, with the consent of both the said Estates Enacted, is there of the fame Force and Nature as an Act of Parliament is in England, until his Lordship declares his disaffent; but such Laws as his Lordship doth assent unto, are not afterwards to be Alter'd or Repeal'd but by his Lordship, with the consent of both the said Estates.

Their chief Court of Judicature is held at St. Marys Quarterly every Year, to which all Persons concern'd reftor for Justice, and is call'd The Provincial Court, whereof the Governor and Council are Judges: To the Court there doth belong several sworn Attorneys, who constantly are present there, and act both as Barristers and Attorneys; there are likewise chief Clerks, Bayliffs, and other Officers; which duly attend the Court in their respective places.

The Province is divided at present, so far as it is inhabited by English, into Counties, whereof there be ten, viz. St. Marys, Charles, Calvert, Anne Arundel, and Baltimore Counties, which first five lie on the West side of the Bay of Chesapeack; on the Eastern side whereof, commonly call'd The Eastern Shore, lies Somerset, Dorchester, Talbot, Cecil, and Kent Counties; which last is an Island lying near the Eastern shore of the said Bay.

Besides the Provincial Court aforesaid, there are other inferior Courts, appointed to be held in every one of the Counties fix times in the year, for the dispatch of all Causes, not relating to Life or Member, and not exceeding the value of three thousand weight of Tobacco; the decision of all other Causes being refer'd to the Provincial or higher Court before mention'd, and there lies Appeals from the County-Courts, to the Provincial Court.

There are Sheriffs, Justices of the Peace, and other Officers appointed by the Lord and Proprietary, or his Lordships Lieutenant for the time being, in the said respective Counties; and without four Justices, of which one to be of the Quorum, none of the said respective County-Courts can be held; any of his Lordships Privy Council may sit as Judge, in any of the said County-Courts, by virtue of his place.

These Courts are appointed to be held at convenient Houses in the said Counties, which commonly are not far distant from some Inn, or other House of Entertainment, for accommodation of Strangers; one of the said fix County Courts in each County is held for settling of Widows and Orphans Estates.

There are Foundations laid of Towns, more or less, in each County, according to his Lordships Proclamation, to that effect Issu'd forth in the year 1668. In Calvert County, about the River of Patuxent, and the adjacent Cliffs, are the Bounds of three Towns laid out, one over against Point Patience, call'd Harby Town, another in Battel-Creek, call'd Calvertown, and a third upon the Cliffs, call'd Harrington, and HOUSES already built in them, all uniform, and pleasant with Streets, and Keys on the Water side. In the County of St. Marys, on the East side of St. Georges River, is the principal and original Seat of this Province, where the general Assembly, and Provincial Courts are held, and is call'd St. Marys, being erected into a City by that Name, where divers Houses are already built: The Governor hath a House there call'd St. John's; the Chancellor Mr. Philip Calvert, his Lordship's Brother, hath another, and in this place is built and kept the Secretaries Office, where all the Records are kept, all Proces, Grants, for Lands, Probates of Wills, Letters of Administration are Issu'd out: the Plat of a Fort and Prison is lately laid there, upon a point of Land, term'd Windmill-Point, from a Windmill which formerly stood there;
the situation is proper, for that it commands the breadth of the said River of Saint George; so that when it is finisht, all Shipping may safely Ride before the Town, without the least fear of any sudden Assails, or Attempt of Pirates or other Enemy whatsoever. This City has formerly been the usual place of abode for his Lordships Lieutenants, and their Retinue; but of late years the present Governor, Mr. Charles Calvert, hath built himself a fair House of Brick and Timber, with all Out-houses, and other Offices thereto belonging, at a place call’d Mattapany, near the River of Patuxent before-mention’d, where he and his Family reside, being a pleasant, healthful, and commodious Seat, about eight Miles by Land distant from St. Marys.

The Indians in Maryland are a People generally of freight, able, and well proportion’d Bodies, something exceeding the ordinary pitch of the English, their Complexion Swathy, their Hair naturally long and black, without Curle, which generally they cut after some strange Fantastical Mode; nay, sometimes they Dye it with red and other prepollent Colours: They Liquor their Skins with Bears Grease, and other Oyls, which renders them more tawny, and les apt to receive injury from the Weather: They are subtile from their Infancy, and prone to learn any thing their Fancy inclines them to, in other things slothful.

There are as many distinct Nations among them as there are Indian Towns, (which are like Country-Villages in England, but not so good House) dispers’d throughout the Province: Each Town hath its King (by them term’d Werowance) and every forty or fifty Miles distance differs much from its Neighbors in Speech and Disposition. The Safquahanocks, though but few in number, yet much exceed the rest in Valor, and Fidelity to the English; the rest being generally of a more Treacherous Spirit, and not so florid, and the number of the English do already exceed all the Indians in the Province.

The Werowance is assifted by Councillors, call’d Wifes, who are commonly of the same Family, and are chosen at the pleasure of the Werowance. They have Captains in time of War which they term Cockroaches.

Most of their Governments are Monarchical, (except the Safquahanocks, which is a Re-publick) but for succession they have a peculiar Custom, that the Iffue of the Males never succeed, but the Iffue-Male of the Female succeed in Government, as the fitter side: They all submit to, and are protected by the Lord Proprieter’s Government; and in case of any Assault or Murder, committed on any English, the Party offending is try’d by the Laws of the Province; and in case of any new Election of King or Emperor among them, they present the Person so Elected to the Governor for the time being, who as he sees caufe, either alters or confirms their Choice.

In the Year 1663, at the Indians Request, the present Governor Mr. Charles Calvert, and some others of his Lordships Privy-Council there, went to Patcatoway, in this Province, to be present at the Election of a new Emperor for that Nation: They presented a Youth nam’d Nattamoffo, and humbly Requested to have him confirmed Emperor of Patcatoway, by the Name of Wahocoffo; which after some charge given them in general, to be good and faithful Subjects to him, the Governor accordingly did, and receiv’d him into his Protection.

They pay great Respect and Obedience to their Kings and Superiors, whose Commands they immediately Execute, though with an apparent hazard of their Lives.

The Mens chief employment is Hunting, and the Wars, in both which they commonly use Bowes and Arrows; some of late have Guns and other Weapons, by a private Trade with some English Neighboring Plantations: They are excellent
lent Marks-men, it being the only thing they breed their Youth to: The Women Plant and look after the Corn, make their Bread, and dress what Provisions their Husbands bring home. Their way of Marriage is by agreement with the Women's Parents or Friends, who for a certain Sum of their Money, or other Goods, deliver her to the Man at a day appointed, which is commonly spent in jollity.

There are two sorts of Indian Money, Wampompeage and Roanocock, thefe serve among them as Gold and Silver do in Europe; both are made of Fifth-shells, which they finge like Beads; Wampompeage is the largest Bead, fixe whereof countervails an Arms length of Roanocock, which is valued at fix Pence Sterling; with this they purchase Commodities of the English, as Trading-Cloth, &c. of which they make themselves Mantles, which is something flagggy, and is call'd Dutch Daffels; this is their Winter Habit; in Summer they onely wear a narrow fip of the fame to cover thofe parts, which natural modesty teaches them to conceal; the better fort have Stockings made thereof, and pieces of Deer-Skin, fitch'd together about their Feet in ftead of Shooes: The Womens Apparel is the fame, but thofe of the better Quality among them bedeck themselves with Wampompeage or Roanocock, or fome other toy.

Their Houses are rais'd about the height of a large Arbor, and cover'd with Barks of Trees very tite, in the middle whereof is the Fire-place, they lie generally upon Mats of their own making, plac'd round the Fire, a Woodden-bowl or two, an Earthen Pot, and a Mortar and Pefeule, is their chiefef Houflhold-uffe, he that hath his Bowe and Arrows, or Gun, a Hatcher, and a Canoe, (a term they ufe for Boats) is in their minds rarely well provided for; each House contains a distinct Family, each Family hath its peculiar Field about the Town, where they Plant their Corn, and other forts of Grain afore-mention'd.

They are courteous to the Englifh, if they chance to fee any of them coming towards their Houses, they immediately meet him half-way, conduct him in, and bid him welcome with the beft Cates they have: The Englifh giving them in like manner civil Entertainment, according to their Quality.

The WeroWance of Patowcent having been Treated for fome days at St. Mary's, by the then Governor, Mr. Leonard Calvert, his Lordships Brother, at his firft coming thither to fettle that Colony, took his leave of him with this Expreffion, _I love the Englifh fo well, that if they fhould go aboad to kill me, if I had fo much breath as to fpeak, I would Command my People not to revenge my death; for I know they would not do fuch a thing, except it were through my own defaults._

In Affairs of concern, they are very confiderate, and ufe few words in declaring their intentions; for at Mr. Leonard Calvert's firft arrival there, the WeroWance of Patocatowa being ask'd by him, Whether he would be content, that the Englifh fhould fett down in his Country? return'd this answer, _That he would not bid him go, neither would he bid him fay, but that he might ufe his own difcretion._ These were their expreffions to the Governor at his firft entrance into Mary-land, whom then they were jealous of, whether he might prove a Friend or a Neighbor, but by his difcreet Demeanor towards them at firft, and friendly ufage of them afterwards, they are now become, not only civil, but serviceable to the Englifh there upon all occasions.

The Indians of the Eastern shore are moft numerous, and were formerly very refractory, whom Mr. Leonard Calvert some few years after his firft fettling the Colony, was forc'd to reduce, and of late the Emperor of Nanticoke, and his Men were deferably defeated by the preffent Governor, Mr. Charles Calvert, who reduce'd him about the year 1668, which has since tam'd the ruder fort of the neighboring Indians, who now by experience, find it better to submit and be protected by the Lord Proprietaries.
Proprietaries Government, than to make any vain attempt against his Power.

These People live under no Law, but that of Nature and Reason, which notwithstanding leads them to the acknowledgement of a Deity, whom they own to be the Giver of all good things, wherewith their Life is maintain'd, and to him they Sacrifice the first Fruits of the Earth, and of that which they acquire by Hunting and Fisthing: The Sacrifice is perform'd by their Priests, who are commonly ancient Men, and profess themselves Conjurors; they first make a Speech to their God, then burn part, and eat and distribute the rest among them that are present; until this Ceremony be ended, they will not touch one bit thereof; they hold the Immortality of the Soul, and that there is a place of Joy, and another of Torment after Death, prepar'd for every one according to their Merits.

They bury their Dead with strange expessions of Sorrow (the better part upon a Scaffold, erected for that end) whom they leave cover'd with Mats, and return when his flesh is consum'd to Interr his Bones; the common part are committed to the Earth without that Ceremony; but they never omit to bury some part of their Wealth, Arms, and Household-stuff with the Corps.

SECT. IV.

Virginia.

The most Southerly part of Virginia (for all that Tract of Land, reaching from Norumbega to Florida), and containing New-England, New-York, Maryland, and this part we are now about to Treat of, was by Sir Walter Raleigh term'd Virginia, in Honor of our Virgin-Queen Elizabeth) lies between Maryland, which it hath on the North, and Carolina, which it hath on the South, from thirty six, near thirty eight Degrees of Northern Latitude, and with the rest of those Countries which were comprehended under the same Denomination, was by the Encouragement, and at the Expence of the said Sir Walter Raleigh, first Discover'd (as some say) by Captain Francis Drake, for his many notable and bold Exploits, afterwards Knighted by the Queen: But upon examination we find little reason to ascribe the first Discovery thereof to Sir Francis Drake, whose chief performances, from the time he first made himself Eminent at Sea, were against the Spaniards, and for the most part in the Spanish-Indies; as his taking of Nombre de Dios, and Puerto Princesa, with an infinite mass of Treasure; his taking of Santo Domingo in Hispaniola, and of Carthagena in Castilla Anna; and that which seems to have given occasion of attributing to him the first Discovery of these parts, was his touching upon the North part of the Isle of California, where being nobly Entertain'd by Hob, a King of that Country, and having a Surrend'r thereof made to him, in behalf of the Queen of England, he upon a Pillar erected, Inscrib'd the Arms of England, with the Queens Name and his own, and call'd the place Nova Albion: Certain indeed it is, that Sir Walter Raleigh was the first Promoter of this Discovery; for, after Mr. Martin Frobisher had been sent by Queen Elizabeth to search for the North-West Passage, which was in the year 1576. and for which he also was by the Queen advance'd to Knight-hood, and nobly rewarded; and Sir Humphry Gilbert obtaining the Queens Letters Patents, for attempting a Plantation, had reach'd New-found-land (though perishing in his return) he upon the Relations and Inducements undertook by others (for his employments would not permit him to go in Person) to gain Discoveries to the Southward; and accordingly in the year of our Lord 1584. obtain'd a Comission from the Queen, to discover and Plant new
new Lands in America, not actually possess'd by any Christian, who, with the assistance of Sir Richard Greenvil and others, provided two small Barques, under the Command of Captain Philip Amida, and Captain Arthur Barlow, who setting Sail the 27. of April, fell the 21st of July following with the Coast of Florida, and made Discovery of the Isle of Wokokon, Roanoack, and the Continent of Wingandacoa, which they left, and arriving in England about the midst of September following, Her Majesty upon the relation of their Discoveries, was pleased to call this Country Virginia.

April 9. 1585. Sir Richard Greenvil, with seven Sail, and several Gentlemen, left Plymouth; and on May 26. Anchor'd at Wokokon, but made their first Seat at Roanoack on August 17. following, which lies in thirty six Degrees of Northern Latitude, or thereabouts, where they continued till June 1586. during which time they made several Discoveries in the Continent and adjacent Islands; and being endanger'd by the treachery of the Salvages, return'd for England, and Landed at Portsmouth on July 27. following.

Sir Walter Raleigh and his Associates, in the year 1586. sent a Ship to relieve that Colony, which had deserted the Country some while before, and were all return'd for England as is before-mention'd.

Some few days after they were gone, Sir Richard Greenvil, with three Ships, arriv'd at the Plantation at Roanoack, which he found deserted, and leaving fifty Men there to keep Possession of that Country, return'd for England.

The year following, Mr. John White, with three Ships, came to search for the fifty English at Roanoack, but found them not, they having been set upon by the Natives, and dipp'd so, as no News could be heard of them, and in their room left a hundred and fifty more to continue that Plantation.

In August 1589. Mr. John White went thither again, to search for the last Colony which he had left there, but not finding them, return'd for England in Sept. 6. 1590.

This ill Success made all further Discoveries to be laid aside, till Captain Gosnold on March 26. 1602. set Sail from Dartmouth, and on May 11. following, made Land at a place, where some Biscaners, as he guess'd by the Natives information, had formerly lodg'd, being about the Latitude of forty eight Degrees Northern Latitude, from hence putting to Sea, he made Discovery of an Island which he call'd Matthias Vineyard, and shortly after of Elizabeth's Isle, and so return'd for England, June 18. following.

In the Year 1603. the City of Bristol rais'd a Stock, and furnish'd out two Barques for Discovery, under the Command of Captain Martin Pring, who about June 7. fell with the North of Virginia in the three and fortieth Degree, found plenty of good Fish, nam'd a place Whifon-Bay, and so return'd.

In the Year 1605. the Right Honorable Thomas Arundel the first, Baron of Warder, and Count of the Roman Empire, set out Captain George Wawaymouth, with twenty nine Sea-men, and necessary Provisions, to make what Discoveries he could; who by contrary Winds, fell Northward about one and forty Degrees and twenty Minutes of Northern Latitude, where they found plenty of good Fish, and Sailing further, discover'd an Island, where they nam'd a Harbor, Pentecost-Harbor; and on July 18. following, came back for England.

In the Year 1606. by the Solicitation of Captain Gosnold, and several Gentlemen, a Commission was granted by King James of Great Britain, &c. for establishing a Council, to direct those new Discoveries; Captain Newport (a well practis'd Mariner) was intrusted with the Transportation of the Adventurers in two Ships, and
and a Pinace, who on December 19. 1606. set sail from Blackwall, and were by
Storm, contrary to expectation, cast upon the first Land, which they call’d Cape
Henry, at the Mouth of the Bay of Chesapeake, lying in thirty seven Degrees, or
thereabouts, of Northerly Latitude: Here their Orders were open’d and read, and
eight declar’d of the Council, and impower’d to chuse a President for a year, who
with the Council should Govern that Colony: Till May 13. they sought a place
to Plant in, Mr. Winkfield was chuse the first President, who caus’d a Fort to be
rais’d at Powhatan, now call’d James-Town: In June following, Captain Newport re-
turn’d for England, leaving a hundred Men behind him; since which time they have
been sufficiently supply’d from England, and by the indefatigable Industry and Cou-
rage of Captain John Smith, (one of the Council at that time, and afterward Presi-
dent of the Colony) they made several Discoveries on the Eastern shore, and up to
the Head of the Bay of Chesapeake, and of the principal Rivers which fall into the
said Bay.

Virginia being thus Discover’d and Planted, King James by his Letters Patent
bearing Date April 10. in the fourth year of his Reign, 1607. Granted Licence to
Sir Thomas Gates, Sir George Summers, and others, to divide themselves into two fe-
veral Colonies, for the more speedy Planting of that Country, then call’d Vir-
ginia, between the Degrees of thirty four and forty five of North Latitude, that is to
say, taken in that large extent, mention’d in the beginning: The first Colony to be
undertaken by certain Knights, Gentlemen, and Merchants, in, and about the
City of London: The second to be undertaken, and advance’d by certain Knights,
Gentlemen, and Merchants, and their Associates, in, or about the City of Bristol,
Exon, Plymouth; and other parts.

At the first Colonies Request, in the seventh year of the same King, a second
Patent was Granted to several Noblemen and Gentlemen, (including Sir Thomas
Gates, and some of his former Fellow-Patentees) bearing Date May 23. 1610. where-
by they were made a Corporation, and Body Politique, and still’d, The Treasurer,
and Company of Adventurers and Planters of the City of London, for the first Colony of Vir-
ginia: And by this Patent, there was Granted to them, their Successors and As-
signs, two hundred Miles to the Southward, from a Cape of Land in Virginia, call’d
Point Comfort; and two hundred Miles to the Northward of the said Cape along the
Sea-shore, and into the Land from Sea to Sea.

And on March 12. 1612. the said King, in the ninth year of his Reign, Grants
them a third Patent, of all Islands lying in the Sea, within two hundred Miles of
the Shore of that Tract of Land on the Continent, granted to them by the said for-
mer Patent, Jan. 7.

In the Year 1615. Captain Smith procur’d by his Interest at Court, and the
King’s Favor, a Recommendation from His Majesty, and divers of the Nobility,
to all Cities and Corporations, to Adventure in a Plantation Lottery, which was
erect’d for the benefit of this Plantation, which was contriv’d in such a manner,
that of 100000. Pounds which was to be put in, 50000. only, or one half was to
return to the Adventurers, according as the Prizes fell out; and the other half to
be dispose’d of for the Promotion of the Affairs of Virginia, in which, though it were
three years before it was fully accomplish’d, he had in the end no bad Success.

In the eighteenth Year of the said King’s Reign, at the Request of the second
Colony, a Patent was Granted to several Noblemen and Gentlemen, of all that
Tract of Land lying in the parts of America, between the Degrees of forty and for-
ty eight of Northerly Latitude, and into the Land from Sea to Sea, which was
call’d by the Patent New England in America: For the better Government whereof,
Chap. II.

**AMERICA.**

one Body-Politick and Corporate was thereby appointed and ordain'd in Plymouth, consisting of the said Noblemen, Gentlemen, and others, to the number of forty Persons, by the Name of The Council established at Plymouth in the County of Devon, for the Planting, Ruling, Ordering, and Governing of New England in America.

The Miscarriages and Misdemeanors of the aforesaid Corporation for the first Colony of Virginia, were so many and so great, that His said Majesty was forc'd, in or about October 1622, to direct a Quo Warranto, for the calling in of that former Patent, which in Trinity Term following was legally Evin'd, Condemn'd, and made Void, by Judgment in the Court of the then Kings-Bench; as also all other Patents, by which the said Corporation claim'd any Interest in Virginia. Thus this Corporation of the first Colony of Virginia was dissolv'd, and that Plantation hath been since Govern'd and Dispos'd of by Persons Constituted and Impower'd for that purpose from time to time, by immediate Commissions from the Kings of England.

In the Year of our Lord 1631. the Right Honorable George Lord Baltimore obtain'd a Grant of King Charles the First of Great Britain, &c. of part of that Land to the Northward, which is now call'd Maryland; but this Patent of Maryland was not perfected till 1632, as you may understand more fully by the precedent Discourse of Maryland, which by express words in the said Patent is separat'd from, and thereby declar'd not to be reputed for the future, any part of Virginia.

And in the fifteenth Year of the Reign of King Charles the Second of Great Britain, &c. on March 24. 1663, Edward Earl of Clarendon, then High-Chancellor of England, George Duke of Albemarle, William, now Earl of Craven, John Lord Berkeley, Anthony Lord Ashley, Sir George Carteret Knight and Baronet, Sir William Berkeley Knight, and Sir John Colleton Knight and Baronet, obtain'd a Patent from His Majesty, of the Province of Carolina, which lies to the Southward of Virginia, in which is included some part of that Land which formerly belong'd to the said dissolv'd Company of Virginia. So that Virginia at present extendeth itself alone, and is situated between thirty fix and thirty seven Degrees and fifty Minutes, or thereabouts, of Northern Latitude, and is bounded on the North, by Maryland; on the South, by Carolina; on the East, by the Ocean; and on the West, by the South-Sea.

The Entrance by Sea into this Country is the same with that of Maryland, between Cape Henry and Cape Charles, plac'd on each side of the Mouth of the Bay of Chesapeak, on the West side whereof you first meet with a pleasant and commodious River call'd James-River, about three Miles wide at its Entrance, and Navigable a hundred and fifty.

Fourteen Miles from this River Northward lies York-River, which is Navigable sixty or seventy Miles, but with Ketches and small Barques thirty or forty Miles farther.

Passing hence to the North you discover a third stately River, call'd Rappahannock, which is Navigable about a hundred and thirty Miles - from whence following the Shore to the North you enter into Patomeck-River, which is already describ'd in the precedent Discourse of Maryland, to which Province this River belongs, whose Southerly Bank gives Bounds to that part of Virginia and Maryland.

To these Rivers many other Inland Branches and Rivulets are reduc'd, the chief of which are hereafter specifi'd.

The Countrey is generally even, the Soil fruitful, the Climate healthful, and agreeable with English Constitutions, especially since the increase of Inhabitants, and accommodation of good Diet and Lodging, which the first Planters found great want of heretofore. For many years, till of late, most New-comers had the

X 2

first
first Year in July and August, a Difeafe which is call'd A Seafoning, whereof many died, like to what is mention'd before in the Description of Mary-land, though more mortal and common than in Mary-land; because Virginia is a lower Country, and somewhat hotter, infomuch that formerly divers ill of that DifeTemper have come purposely from Virginia to Mary-land, to recover their Health; but now, since the Country is more open and clear from Wood, few die of it, and many have no Seafonings at all.

This Country affordeth generally all fuch Roots, Herbs, Gums, and Balloms, as are expreff'd before in the Relation of Mary-land.

Trees.

All forts of Trees for Building and Husbandry, Fruit-Trees, Vines, &c. are found in both Countreys, equal in goodness and quantity, onely in fuch things as require more Sun, and that may be produc'd by Industry; there may be fome little difference, but Virginia is somewhat more to the Southward of Mary-land, as in Vines, Oranges, Lemmons, Olives, Silk, &c.

Silk-Grafts.

There is a Plant grows naturally in this Country, and in Mary-land, call'd Silk-Grafts, which will make a fine Stuff with a filly Glos, and better Cordage than Hemp or Flax, both for Strength and durance.

The wild Beasts, Birds, and Fift, are much the fame also in this Country as are before defcrib'd in the precedent Description of Mary-land: Nevertheless we fhall think it proper not to omit fome Fruits, Plants, Beasts, &c. mention'd by the moft authentick Describers of New England; as peculiar to that Country. The Fruits are, their Punthaminis, which are a kind of Damfons; Meffamints, a kind of Grapes; Chesbinuangins, a fort of Fruits refeembling a Cheinfut; Rawcomens, a Fruit refeembling a Goofe-berry; Macouer, a kind of Apple; Mammafum, a fort of Fruits refeembling Indian Figs; Moreokaits, refeembling a Straw-berrie, besides a Berry which they call Ooughtanaminis, somewhat like to Capers.

Their peculiar Roots are Tocswaugh, good to eat; Wobfauan, of great vertue in healing of Wounds; Poones, good to affwage Swellings and Aches; Musquofen, wherein they Paint their Targets and Masts. Alfo they have in great requeft a Pulfe call'd Affentamen, and the Plant MattOnna, of which they make Bread.

Their peculiar Beasts are, the Arrughona, refeembling a Badger; the Affanick, or Flying-Squirrel; Oppafum, a certain Beaf under her Belly, wherein the carrieth and suckleth her Young; Musfocmis, which efembling strong of Musk, refeemleth a Water-Rat; Hichonqua, a kind of wild Cat.

Their peculiar Fift are Stingraif.

On the Weft fide of the Bay of Chefpoke, between Cape Henry and the Southerly Bank of the River of Patamuck, are three fair Navigable Rivers, as is before mention'd, into which the other small Rivuletts fall, which here we will give some account of, as also of the Indian, or antient Names by which thefe three principal Rivers were formerly known. The firft whereof is Powhatan (now call'd James-River) according to the Name of a large and considerable Territory that lieth upon it. The Rivers that fall into this Southward, are Apanautaick; Eaftward, Quiyuncobanur, Nanfanum, and Chefpoke; and Northward, Chickamahania.

The second Navigable River is Pamaunkee, by the English now term'd York-River. The Rivulet that falls into this is Powanukataick.

The third (which is before describ'd, and ufually known by the Name of Rapibahouo) was formerly term'd Tappahamoc.

This we thought fit here to infert, to the end no colour of mfateke might remain to after Ages concerning the derivation or original change of fuch proper Names, especially being Places of great advantage to the Colony.
Chap. II.  

A M E R I C A.

The chiefest of those Tribes or Divisions of People among the Indians, that were by Name known to the English at their first arrival, were upon the River Pouhantun the Recountani, the Paffabegrs, (on whole Land is feated James-Town) the Weanocks, Arrohatsacks, the Appanock, the Neansamunds, the Chefsapecks, &c. On the River Pamawnee, are the Youngstaunds, the Mattapamems, &c. On the River Toppanoee, the Manahockes, the Moraghtamonds, and the Cuttawomens. On the River Patanomek, the Winboconomek, the Orangehants, and the Moynanances. On the River Pawtwtsun, the Aquinnahs, the Pawtwtsun, and the Matapamems. On the River Efor, the Sussquehannahs; Southward from the Bay, the Chawonocks, the Mangoacks, the Monacans, the Mainahocks, the Masawomeks, the Atciunabucks, and the Kuscarawocks, besides a number not material to be nam'd, as having had little of Trade, that we hear of with the Planters.

The number of English Inhabitants in this Country are in this present Year 1671 about thirty or forty thousand, who are plentifully stock'd with all sorts of tame Cattel, as Cows, Sheep, Horses, Swine, &c. and all sorts of English Grain; great store of brave Orchards for Fruit; whereas they make great quantities of Cyder and Perry.

They have been much oblig'd by that worthy Gentleman Mr. Edward Digger, Son of Sir Dudley Digger, who was Master of the Rolls, a Privy Councillor to King Charles the First, of Great Britain, &c. For the said Mr. Digges at his great Charge and Industry, hath very much advanced the making of Silk in this Country, for which purpose he hath sent for several Persons out of Armenia to teach them that Art, and how to wind it off the Cores of the Silk-worms; and hath made at his own Plantation in this Colony for some years past, considerable quantities of Silk, which is found to be as good Silk as any in the World, which hath encourag'd divers others to prosecute that Work.

Though this Country be capable of producing many other good Commodities, yet the Planters have hitherto employ'd themselves for the most part in Planting of Tobacco, as they do in Mary-Land, whereof there are two sorts, one which is call'd Sweet-scented, and the other call'd Orange, Bright and Large, which is much more in quantity, but of lesser price than the former; and the Plantations upon York River are esteem'd to produce the best of that sort of Sweet-scented. There is so much of this Commodity Planted in Virginia, and Imported from thence into England, that the Custom and Excise paid in England for it, yields the King about fifty or threescore thousand Pounds Sterling, per annum. With this Commodity the Planters buy of the Ships that come thither for it (which are above a hundred Sailing yearly from England; and other English Plantations) all Necessaries of Clothing, and other Utensils of Household Stuff, &c. which they want, though they make some Shoes, and Linnen and Woollen Cloth in some Parts of Virginia, of the growth and Manufacture of the Country; and if they would Plant less Tobacco (as it is probable they will ere long find it convenient for them to do, it being now grown a Drug of
of very low value, by reason of the vast quantities planted of it; they might in time provide themselves all Necessaries of Livelyhood; and produce richer and more Staple-Commodities for their Advantage.

Their usual way of Traffique in buying and selling is by exchange of one Commodity for another; and Tobacco is the general Standard, by which all other Commodities receive their value; but they have some English and foreign Coysns, which serve them upon many occasions.

The Government is by a Governor and Council, Appointed and Authoriz'd from time to time, by immediate Commission from the King of Great Brittain: And Laws are made by the Governor, with the consent of a General Assembly, which consists of two Houles, an Upper and a Lower; the first consists of the Council, and the latter of the Burgesses chosen by the Freemen of the Countrey; and Laws so made are in Force till His Majesty thinks fit to alter them.

The chief Court of Judicature is call'd The Quarter-Court, because it is held every quarter of a Year, where all Causes Criminal and Civil are heard and determin'd, and the Judges of this Court are the Governor and Council: The present Governor in this Year 1679, is Sir William Berkeley, who was made Governor by King Charles the First, of Great Brittain, &c. in the Year 1640. And those of the Council are Sir Henry Chichele, who is one of the greatest and most considerable Planters there, and Mr. Edward Diggs, before-mention'd, Mr. Thomas Ludwell, Secretary, Major-General Robert Smith, and divers other worthy Gentlemen.

That Part of the Country where the English are Planted, is divided into nineteen Counties, viz. Northampton, in Acomack, on the Eastern shore; and on the Western shore, Coratuck, Lower Norfolk, Nansemond, Isle of Wight, Surry, Warwick, Henrico, James, Charles, York, New-Kent, Gloucester, Middlesex, Lancaster, Northumberland, Westmoreland, Rappahannock, and Harford Counties.

In every one of these Counties there are inferior County-Courts kept every Month; these take no Cognizance of Causes relating to Life or Member, or exceeding a certain limited Value, such being refer'd to the Quarter-Courts only, to which likewise there lie Appeals from their Inferior Courts.

There are Sheriffs, Justices of the Peace, and other Officers in every respective County, appointed by the Governor, for the Administration of Justice, who sit there according to his Order, and whereof these County-Courts are chiefly compos'd.

There are few Towns as yet erected in this Colony; the Principal Seat of the English there, is at a Place call'd James-City, in Honor of King James of Great Brittain, &c. This is situated in a Peninsula, on the North-side of James River, and has in it many fair Brick and other good Houles: In this place are held the Quarter-Courts, General Assemblies, the Secretaries Office, and all other Affairs and greatest Concerns of the Colony are here dispatch'd. On the same side, nearer the Mouth of this River, stands Elizabeth-City, containing also several good Houles of Brick and Timber.
Chap. II. **A M E R I C A.**

Sir William Berkley, the present Governor resides at a place somewhat distant from James-City, call'd Green-spring, a fair Brick House, which he himself caus'd to be Built.

The other Towns of Note belonging to the English are only Henricopolis, or Henry's Town (so nam'd from Prince Henry then living, built in a very convenient place, more within Land, about eighty Miles distant from James-City) and Dale's-Gift, so nam'd from Sir Thomas Dale Deputy-Governor of the Country, about the Year 1616.

The Indians of Virginia far exceed those of Maryland, in Treachery and Cruelty to the English there, as will appear by this following Relation of their Proceedings towards them, since the first Seating of that Colony, wherein nevertheless the Civility of some particular Persons at their first Landing is not to be omitted.

Upon the first Arrival of Captain Amidas and Captain Barlow in Wingina, now Virginia, they were accosted by Granganimeo (the King's Brother of that Country) who, attended with a Train of forty or fifty Men, came in a very civil manner to Treat about a Commerce of Trade and Traffique, which immediately began between them, and several Barter was made: Granganimeo, who was very just of his word, and always kept his Promise'd Day of meeting; fancying most a Pewter Dish, gave twenty Deer-skins for it, and boring a Hole therein, hung it about his Neck for a Breast-plate; afterwards he, with his whole Company, and his Wife and Children, frequently and familiarly did eat and drink aboard the English Ships, the King himself call'd Wingina, lying sick at his chief Town, six Journies off, of a dangerous Wound which he had receiv'd from a neighboring King his mortal Enemy. Some of the English going to Land upon the Isle of Roanoke, were met by Granganimeo's Wife, who, her Husband being absent, commanded her Servants some to draw their Boat aforesome to carry them on their Backs to Land, others to carry their Oars into the Houfe for fear of stealing; and having caus'd a great Fire to be made to warm them, and to dry those that had been wet in their Voyage, the afterwards entertain'd them with a plentiful Feast or Banquet after that Country Fashion; and when they took alarm at the coming of two or three of her Men with Bows and Arrows, she caus'd the Bows to be broken, and the Men to be beaten out of the Houfe, besides several other demonstrations of extraordinary Civility; and when not withstanding all this they could not be perswad'd to Lodg any where but in their Boat, she us'd all means imaginable to make them quit their Jealousy, and accept of a Lodging in the Houfe.

In the Year 1587. a Company that went over with Sir Richard Greenvil, burnt the Town of Aquascogoc, for a Silver Cup that was stol'n by some of the Indians, took Prisoner Menatonon, King of Chowonoc, who gave Relation of a King about three days Journey off, who posses'd an Island rich in Pearl, which was taken in a deep Water that environ'd it. Going towards the Countrey of the Mangoack (among whom in the Province of Chawis Tenason, they heard of a Mine of strange Copper call'd Waffador, with Skico, the King of Chowonock's Son, and

Manteo.
Mamoom, a faithful Salvage, for their Guide they were treacherously dealt with by Virginia, alias Pemissipan (for so his Brother Granamom, being lately dead, he had altered his Name) who endeavor'd to stir up a Confederacy of the Chawnoock, Moravocks, and Mungoocks against them; yet by the urgent persuasions of Enfenore his Father, the true Friend, the English had, after the death of Granamom, and seeing them safe return'd from their Journey, wherein he thought they had all perished, and especially upon Menomet's sending Messengers to them with Pearl, and Othico King of Weppanock to yield himself Vassal to the Queen of England, his Hatred was somewhat cooled; but Enfenore deceasing soon after, he return'd to his old treacherous Prac'cles again, and in the end, while he was contriving Mischief against the Plaisters, he himself was shot, taken Prisoner, and beheaded.

After the Company left upon Virginia by Sir Richard Greenwell, (for he himself was return'd) tir'd out with hunger, hardship, and the many extremities they were at last reduc'd to, had deserted the Place, and obtain'd passage for England; through the civility of Sir Francis Drake, pitying their distress, fifty Men more were Landed upon Roanock-Isle, by the fame Person, who how they were surpris'd and destroy'd by the Natives, was discover'd at large to the Supply that was sent over in the Year 1587, by Mr. White.

A small Party under Captain Smith going down the River to Kecongbean, were very fiercely assaulted by sixty or seventy Indians; but their Mufquet-shot did such Execution amongst them, that they fled into the Woods and left behind them the Image of their God, which had been carry'd before them as their Standard, and not long after sent one of their Queongofocks to offer Peace, and to redeem their Okee; which Smith granting, on condition fix onely of them would come unarmed and load his Boat with Provisions, and promising more over to become their Friend, and furnish them with Beads, Copper, and Hatchets: They accepted the Condition, and brought him Venison, Turkeys, wild Fowl, Bread, and what else they had, Singing and Dancing in sign of Friendship till they departed.

In his next Voyage for the discovery of the Head of Chickamabania River, he was, through the neglect of his Sea-men who were sent to watch the Booty, taken Prisoner, in which condition he was kept a whole Month; then being releas'd, he got Provisions for the People in James-town, which had they not timely receiv'd, they had all abandon'd the Place, and return'd to England.

While Affairs stood thus in a mean condition, Captain Newport arriving there with a Ship and sixty Men to strengthen the Plantations, he went to Weronomocomoco, where King Powhatan kept his Court, and found him sitting on a Bed of Mats, and an Embroider'd Leather Cushion, Cloth'd in Deer-skins; at his Feet sat a young Maiden, and on each side of the House twenty Concubines; his Head and Shoulders painted red, and a Chain of white Beads about his Neck. Newport, to oblige him, gave him an English Youth; for which he receiv'd Powhatan's Friend Mamontak, with whom returning, he found a sad accident, for
for the Fire had not onely burnt the Houfes of the new Planters, but alfo the Pal-
Jamestown.

| who | but | after |

| Z | Englifh | |

| he | by | Smith |

| forty | age | Pamaunke, |

| Cruiser, | cover | of | Smith's |

| no Porto, a Bay with freth and hot Water, and at laft he met with two Virgi-

| nians, which conducted the Englifh along a Creek to Onawmement, where some hun-

| dreds of them lay in Ambufcade, according to Powhatan's appointment, to cut off |

| Smith: who leaping forth on a sudden appear'd like Devils, all painted; but the |

| Bullets flying about made them all run away. Smith, whofe Defign was onely to dis-

| cover the Countrfy, and the Silver Mine of Patowomeck, ten Leagues up into the |

| Countrfy, found the Metal to be of little value, fo that he return'd with little Suc-

| cess, being newly cur'd of a poilonous Wound in the Arm, which was given him by a |

| Fife not unlike a Shark, whilst he lay a grond near Toppanoak. |

| A while after being inform'd of Powhatan's Defign to destroy the Englifh, (though |

| he had been lately Prefented by Newport with a Silver Basin, a rich Chair, Bed, and |

| Furniture belonging to it, with other things of value) he, to prevent him, chose |

| forty eight out of two hundred Men which were Garrifon'd in James-Town, then |

| going to Werowomeco, Landed with much trouble, the River being frozen above |

| half a Mile from the Shore. |

| A German Soldier amongst Smith's Company giving private notice to Powhatan |

| of the Defign of the Englifh, made his Ecape by flight: But Smith, going on to |

| Pamauke, found King Opehancansoogh with feven hundred Men in Arms, threaten-

| ing a fierce Battel; but Smith making directly up to him, fet his Pirot on his |

| Breast, and forc'd him to lay down his Arms. Powhatan by this time provided |

| with Swords and Musquets by two Dutch-men, alo began to betir himself after |

| and his Intentions being too fon known, he was again quited, and forc'd a second |

| time to fend Smith a String of Pearl; after which a Peace was concluded between |

| all the Natives and the Englifh. |

| Many other Quarrels and Encounters there were in the Infancy of the Plantation |

| between the Indians and the Englifh, wherein it would be endless to recount all |

| the Treacheries and Ambufcades of the Salvages, some of which had prov'd very |

| pernicious to the Planters, had they not been betray'd to Captain Smith by Paca-

| hona, King Powhatan's Daughter, who upon all occasions shew'd her felf a great |

| Friend to the Englifh, having fav'd the Captain's Life, when, being her Father's |

| Prisoner, he was juft brought to Execution. |

| This Lady was afterwards brought into England, Chriftned by the Name of |

| Rebekah, and Married to one Mr. Reif, and died at Gravensend in an intended Voy-

| age back to her own Countrfy. |

| Nor did their Cruelties and Treacheries end when the Plantation came to be |

| more felced, for on the two and twentieth of March about the Year 1621, in the |

| time of Sir Francis Wyatt's Government, they generally combind to defroy all the |

| Englifh there; and carried on this devilifh Defign with fuch diffmulation and dex-

| terity, that in one day they cut off feven hundred Men, Women, and Children, |

| there being at that time nor above fifteen hundred in the Countrfy. |

| Since which time, in the Year of our Lord 1643, there hapned another bloody |

| Massacre,
Massacre, wherein near five hundred English were in one Night miserably butcher'd by those barbarous and perfidious Salvages: whose Blood the present Governor, Sir William Berkley, nobly and juftly reveng'd the Year following, utterly destroying most of them, and taking Prisoner their chief Emperor, Opichanouco, who did not long after in Prison.

Having given but a small hint, in its proper place, of the Story of Captain Smith's Imprisonment by Powhatan, and his deliverance from Death by Pocahontas; we have thought not improper to reserve the Story of it, being very remarkable for a particular Relation, before we conclude our Description of Virginia, since otherwife we should have interrupted the Series of our former Discourse.

The Relation of Captain Smith's being taken Prisoner by Powhatan, and of his being deliver'd from Death by his Daughter Pocahontas.

The Salvages having drawn from one George Caffon, whether Captain Smith was gone, prosecuting that opportunity, they follow'd him with three hundred Bowe-Men, conducted by the King of Pamunke, who in divisions, searching the turnings of the River, found two of his Men by the fire side, whom they shot full of Arrows, and slew. Then finding the Captain, who, as is said, us'd the Salvage that was his Guide as his Shield, (three of them being fain, and others fore gall'd) the rest would not come near him: Thinking thus to have return'd to his Boat, regarding them as he march'd, more than his way, he flipp'd up to the middle in an Ofer-Creek, and his Salvage with him, yet durft they not come to him, till being near dead with cold, he threw away his Arms: Then according to their composition, they drew him forth, and led him to the Fire, where his Men were fain; diligent-ly they chaf'd his benumm'd Limbs, he demanding for their Captain, they shew'd him Opechankanough, King of Pamunke, to whom he gave a round Ivory double compass Dial. Much they marvel'd at the playing of the Fly and Needle, which they could fee so plainly, and yet not touch it, because of the Glafs that cover'd them; but when he demonstrated by that Globe-like Jewel, the roundnefs of the Earth, and Skies; the Sphere of the Sun, Moon, and Stars, and how the Sun did chafe the Night round about the World continually; the greatnefs of the Land and Sea; the diversity of Nations, variety of Complexions, and how we were to them Antipodes, and many other fuch like matters, they all flood as amaz'd with admiration: Notwithstanding, within an hour after they ty'd him to a Tree, and as many as could f tand about him prepar'd to f hoote him; but the King holding up the Compass in his Hand, they all laid down their Bowes and Arrows, and in a triumphant manner led him to Orapats, where he was after their manner kindly Feafled, and well us'd.

Their order in conducting him was thus: Drawing themselves all in Fyle, the King in the midft had all their Bowes and Swords borne before him. Captain Smith was led after him by three great Salvages, holding him faft by each Arm; and on each fide six went in Fyle with their Arrows nocked. But arriving at the Town (which was but onely thirty or forty Hunting Houfes made of Mats, which they remove as they pleafe, as we our Tents) all the Women and Children flaring and gazing at him, the Souldiers firft all in Fyle-wheel'd off to the Rear in good Order; on each Flank were Officers, like Sergeantes to fee them keep their Postures: A good time they continu'd this Exercife, and then caft themfelves in a Ring, Dancing in fuch leveral Postures, and finging and yelling out fuch hellifh Notes and
and Screecbes; being strangely Painted, every one his Quiver of Arrows, and at
his Back a Club, on his Arm a Fox or an Otters-skin, or some such matter for his
vambr ce; their Heads and Shoulders Painted red, with Oy 1 and Pocovs mingled
together, which Scarlet-like colour, made an exceeding handsone show, his Bowe
in his Hand, and the Skin of a Bird with her Wings abroad dry’d, ty’d on his Head,
a piece of Copper, a white Shell, a long Feather, with a small Rattle growing at
the Tails of their Snakes ty’d to it, or some such like Toy. All this while Smith
and the King flood in the midst, guarded, as before is said, and after three Dances they
all departed. Smith they conducted to a long Houfe, where thirty or forty tall Fellows
did guard him, and e’re long, more Bread and Venifon was brought him
than would have fed twenty Men. I think his Stomack at that time was not very
good; what he left, they put in Baskets and ty’d over his Head. About midnight
they let the Meat again before him; all this time none of them would eat a
bit with him, till the next Morning they brought him as much more, and then
did they eat all the old, and referv’d the new as they had done the other, which
made him think they would feed him for Slaufter: Yet in this desperate eflate to
fend him from the cold, one Macaffater brought him his Gown, in requital of some
Beads and Toys Smith had given him at his first arrival in Virginia.

Two days after a man would have flain him (but that the Guard prevented it)
for the death of his Son, to whom they conducted him to recover the poor man
then breathing his left. Smith told them, that at James-Town he had a Water would
do it, if they would let him fetch it, but they would not permit that; but made all
the preparations they could to assault James-Town, craving his advice, and for res-
compence he should have Life, Libya, Land, and Women. In part of a Table-
book he write his mind to them at the Fort, what was intended, how they should
follow that direction to affright the infeffengers, and without fail fend him such
thing as he write for, and an Inventory with them. The difficulty and danger, he
told the Salvages, of the Mines, great Guns, and other Engines, exceedingly a-
frighted them; yet according to his Request they went to James-Town, in as bitter
weather as could be of Froft and Snow, and within three days return’d with an An-
swer.

But when they came to James-Town, seeing Men sally out as he had told them
they would, they fled; yet in the night they came again to the fame place where
he had told them they should receive answer, and such things as he had promis’d
them, which they found accordingly, and with which they return’d with no small
expedition, to the wonder of them all, supposing that he could either Divine, or
the Paper could speak: then they led him to the Southcanunds, the Mattaponiefs, the
Paiyankataunks, the Nantangitacunds, and Onapamunuits upon the Rivers of Rapahonek,
and Patawomeck, through intricate ways, and back again by divers other several Na-
tions, to the Kings Habitation at Pamauke, where they entertain’d him with most
strange and fearful Conjurations. Not long after, early in the Morning, a great fire
was made in a long Houfe, and a Mat spread on each side thereof; on the one
they caus’d him to fit, and all the Guard went out of the Houfe, and presently
there came skipping in a great grim Fellow, all Painted over with Coal, mingled
with Oyl; and many Snakes and Well-skins flipp’d with Mosf; and all their
Tails ty’d together, so as they met on the Crown of his Head in a Taffel; and
round about the Taffel was a Coronet of Feathers, the Skins hanging round
about his Head, Back, and Shoulders, and in a manner cover’d his Face; with a
hells voice, and a Rattle in his Hand. With most strange gestures and pasions
he began his Invocation, and environ’d the fire with a Circle of Meal; which
done,
done, three more such like Devils came rushing in with the like antique Tricks, Painted half black, half red; but all their Eyes were Painted white, and some red strokes like Mutchato's, along their Cheeks: round about him those Fiends Danc'd a pretty while, and then came in three more as ugly as the reft, with red Eyes, and white strokes over their black Faces; at last they all sate down right against him, three of them on the one hand of the chief Priest, and three on the other; then all with their Rattles began a Song, which lasted, the chief Priest laid down five Wheat Corns, then stretching his Arms and Hands with such violence, that he swear, and his Veins swell'd, he began a short Oration: at the conclusion, they all gave a short groan, and then laid down three Grains more; after that, began their Song again, and then another Oration, ever laying down so many Corns as before, till they had twice incircled the Fire; that done, they took a bunch of little Sticks, prepared for that purpose, continuing still their Devotion, and at the end of every Song and Oration, they laid down a Stick between the Divisions of Corns till night, neither he nor they did either eat or drink, and then they feasted merrily, with the best Provisions they could make: Three days they us'd this Ceremony, the meaning whereof they told him, was to know if he intended them well, or no. The Circle of Mealfigh'd their Country, the Circles of Corn the bounds of the Sea, and the Sticks his Country. They imagin'd the World to be flat and round, like a Trencher, and they in the midst. After this they brought him a Bag of Gun-powder, which they carefully preferv'd till the next Spring, to Plant as they did their Corn, because they would be acquainted with the nature of that Seed. Opichapam, the King's Brother, invited him to his Houfe, where, with as many Platters of Bread, Fowl, and wild Beasts, as did environ him, he bid him wellcome, but not any of them would eat a bit with him, but put up all the remainder in Baskets. At his return to Opechancanoughs, all the Kings Women, and their Children, flock'd about him for their Parts, as a due by Cuffom, to be merry with such Fragments.

At laft, they brought him to Meronomoco, where was Powhatan their Emperor. Here more than two hundred of those grim Couriers flock'd wondering at him, as he had been a Monifter; till Powhatan and his Train had put themselves in their greatest Braveries. Before a Fire, upon a feast like a Bedfet, he fitt cover'd with a great Robe, made of Raccoon-Skins, and all the Tails hanging by. On either hand did fite a young Maid, of sixteen or eighteen years of Age, and along on each fide the Houfe, two rows of Men, and behind them as many Women, with all their Heads and Shoulders Painted red; many of their Heads bedeck'd with the white Doun of Birds: but every one with something, and a great Chain of white Beads about their Necks. At his entrance before the Emperor, all the People gave a great louf: The Queen of Appamatuck was appointed to bring him Water to waft his Hands, and another brought him a bunch of Feathers, in head of a Towel to dry them: Having Feasted him after their barbarous manner as well as they could, a long Confultation was held, but in conclusion, two great Stones being brought before Powhatan, as many as could, laid Hands on him, dragg'd him to them, and thereon laid his Head, when being ready with their Clubs, to beat out his Brains, Pocobontas, the Emperors deareft Daughter, seeing no intresty could prevail, got his Head in her Arms, and laid her own upon his to save him from death; whereat, the Emperor was contented he should live to make him Hatchets, and her Bells, Beads, and Copper; for they thought him a Man of all Occupations like themselves; for the King himself will make his own Robes, Shoes, Bowes, Arrows, Pots, Plant, Hunt, or do any thing as well as the reft.

Two
Two days after, Powhatan having disguised himself in the most fearful manner he could, caus'd Captain Smith to be brought forth to a great House in the Woods, and there upon a Mat by the Fire to be left alone. Not long after, from behind a Mat that divided the House, was made the most doleful noise he ever heard; then Powhatan, more like a Devil than a Man, with about two hundred more as black as himself, came unto him, and told him, That now they were Friends, and presently he should go to James-Town, to lend him two great Guns and a Grindstone, for which he would give him the Countrey of Capowcafock, and for ever esteem him as his Son Nantsquod. So to James-Town with twelve Guides Powhatan sent him. That Night they Quarter'd in the Woods, he still expecting (as he had done all this long time of his Imprisonment) every hour to be put to one Death or other, for all their Feasting: but Almighty God (by his Divine Providence) had mollified the Hearts of those stern Barbarians with compassion. The next Morning betimes they came to the Fort, where Smith having us'd the Salvages with what kindness he could, he shew'd Rawbunt, Powhatan's truly Servant, two Demi-Culverins and a Miltone, to carry to Powhatan: they found them somewhat too heavy; but when they saw him Discharge them, they being loaded with Stones, amongst the Boughs of a great Tree loaded with Sickles, the Ice and Branches came so tumbling down, that the poor Salvages ran away half dead with Fear. But at last we gained some Conference with them, and gave them some Toys, and sent to Powhatan's Women and Children such Presents, as gave them in general, full content.

SECT. V.

Carolina.

Carolina is that part of Florida which lies between twenty nine and thirty six Degrees and thirty Minutes of Northern Latitude: It is wash'd on the East and South, with the Atlantic Ocean; on the West with the Pacific, or the South Sea; and on the North, bounds on Virginia. A Countrey wherein Nature shews how bountiful she can be without the assistance of Art, the Inhabitants (excepting a little Maiz which their old Men and Women Plant) depending meerly on the natural and spontaneous Growth of the Soil for their Provisions, the Woods furnishing them with Stock of Fruit and Venison, and the Rivers with plenty of several sorts of wholfsom and savoury Fishe.

This Maintenance, which without force or toil they receive from the natural fruitfulness of the Countrey, will, if we consider either the largeness of their Growth, or the duration of their Lives, be thought neither scanty nor unhealthy, their Stature being of a larger size than that of Englishmen, their Make strong and well proportion'd, a crooked or mis-shapen Person being not to be found in the whole Countrey; and (where the chance of War, which they are almost continually engag'd in one against another in their little Governments, spares any of them) they live to an incredible old age, so that when the English came there, they found some of their Kings, who faw descend from them the sixth Generation.

The Soil is very rich and fertile, producing naturally Walnuts, Grapes (of which the English who are there Planted have made very good Wine) Apricocks, Bullys, with a multitude of others; besides the Woods also are full of very good Peaches, and all the Seafon of the Year trew'd all over with Strawberries. Mulberry-Trees are the common growth of the Woods; and to assure you they are the natural Offspring of the Place, and grow to an incredible bigness, one whereof the
English (who are new Planted at Albemarle Point on Ashley River) made use to fasten the Gate of their Pallisado to, was so large, that all who came from thence say, they never saw any Oak in England bigger, which is but the ordinary size of the Mulberry-Trees of this Countrey, which is so sure an Argument of the Richness of the Soil, that the Inhabitants of Virginia enquiring of the Seamen who came from thence, concerning the Quality and Product of the Countrey, when they were informed of the large Mulberry-Trees it produc’d, were so well satisfied with it, that they made no farther Enquiry. There are also other Trees, as Ash, Poplar, and Bay, with several sorts unknown to us of Europe; but those which make it almost all one general Forrest of large Timber-Trees, are Oak, both red and white, and Cedar. There are also here and there large Groves of Pine-Trees, some a hundred Foot high, which afford a better sort of Maft than are to be had either in Maryland or Norway. These larger Trees weaving their luxuriant Branches into a clofe Shade, suffer no Under-wood to grow between them, either by their Drippings, or else the Heads of Deer which loofening all the tender Shoots, quite destroy it; so that a great part of the Countrey is as it were a vast Forrest of fine Walks, free from the heat of the Sun, or the incumbrance of Shrubs and Bushes, and so clear and open, that a Man may easily ride a Hunting amongst the Trees, yielding a Prospect very pleasant and surprizing. On the Skirts of these Woods grow Letter Trees and Shrubs of several sorts; amongst them are sundry Dying Materials, which how well the Inhabitants know how to make use of, appears in the Deer-Skins that the chief of them wear, which are Painted, or rather Dy’d, with several lively Colours. But amongst their Shrubs, one of most note and use is that whose Leaves make their Caffir, a Drink they frequently use, and affirm to be very advantageous for the preservation of Health; which, by the description our English give of the size, colour, and shape of the Leaf, the sort of Tree it grows on, and the taste, colour, and effects of the Drink, which is nothing but the Decoction of the Leaf, seems to be the very same with the East-India TREE, and by those who have seen and tasted both, affirm’d to be no other, and may very probably be a Spontaneous and native Plant of this Place, since those who give us an account of it, tell us, that this so much valued Leaf grows most plentifully in Nanking, a Province in China under the very same Latitude, and very much agreeing in Soil and Situation with this of Carolina.

What Herbs else the Countrey produces, the English Enquirers (who by minding their Plantations and Settlement there, have been taken off from such unprofitable Actions) give us but little account, only they say, that those Plats of Ground which have been formerly clear’d off by the Indians for the Planting their Corn, they found thick cover’d with three-leaf’d Grafs and Dazies, which the fertility of the Soil thrifts forth, whenever the Natives remove their Tillage to some other place, and leave the Earth to its own production; and in other parts they found plenty of Garden Herbs growing wild. The low and Moorish Grounds are for the most part overgrown with Sedge and Reeds, and such other Traffic, which usually incumbers rich and uncultivated Lands; those they call Swamps, which with a little Husbandry would prove very good Meadows. There are also some large and pleasant Savannah, or grassy Plains.

These are a part of the Trees and Plants best known to us, that Nature of her self produces, in a Soil which contrives and nourisheth any thing. The English who are now Planted in the most Northern parts of it, at Albemarle, bordering on Virginia, have Apples, Pears, Cherries, Apricocks, Plumbs, and Water-Melons, equaling, and if you will believe the Inhabitants, both in largeness of size and goodnes of taste, exceeding any in Europe. And they who are Setled farther South on Ashley River,
River, have found that the Oranges, Lemmons, Pomegranates, Limes, Pome-
citrons, &c. which they Planted there, have thiven beyond expectation; and
there is nothing which they have put into the Earth, that through any defect in the
Soil, hath fail'd to prosp'er.

Besides those things which do serve to satifie Hunger, or provoke it, the Land
both with great return produce Indigo, Ginger, Tobacco, Cotton, and other Com-
modities fit to lend abroad, and furnish foreign Marketers; and when a little time
shall have brought those kind of Plants to maturity, and given the Inhabitants
leisure to furnish themselves with Conveniences for ordering those things atight,
the Trials that they have already made of the Soil and its fitness for such Plant-
tations, assure you, that besides Silk, enough to store Europe, and a great many
other considerable Commodities, they shall have as great plenty of good Wine
and Oyl, as any part of the World.

The Mould is generally black, mellow, and upon handling feels soft, and (to use
their Expression who have been there) foapy, and is generally all over the Coun-
trey just like the fine Mould of our well order'd Gardens. Under this black
Earth, which is of a good thickness in most places that they have try'd, there lies a
Bed of Marle, and in some parts Clay.

The Rivers are fill'd with plenty of excellent Fish of several sorts, which are ta-
ken with great ease in abundance, and are one great part of the Natives Provision,
who are never like to want this Recruit, in a Country so abounding in large Ri-
vers, there being in that one small Tract between Port Royal and Cape Carteret,
which are not one Degree distant, five or six great Navigable Rivers, that empty
themselves into the Sea. These Rivers are also cover'd with Flocks of Ducks and
Mallard, whereof millions are seen together, besides Cranes, Herons, Geese, Cur-
lews, and other Water-Fowl, who are so easy to be kill'd, that, onely rising at the
discharge and noise of a Gun, they instantly light again in the same place, and pre-
fently offer a fresh Mark to the Fowler. At the Mouths of the Rivers, and along
the Sea-Coast, are Beds of Oysters, which are of a longer Make than those in Europe,
but very well tafted, wherein are often found good large Pearls, which though the
unskilful Indians by washing the Oysters do commonly discolour, and spoil their
lustre, yet 'tis not to be doubted, but if rightly order'd, there will be found many
of value, and the Fishing for them turn to some account.

Besides the easy Provisions which the Rivers and Sea afford, their Woods are
well flock'd with Deer, Rabbees, Harres, Turtles Dove's, Peffants, Partridges, and
an infinite number of Wood-Pigeons and wild Turkies, which are the ordinary
Dishes of the Indians, whose House-keeping depends on their Fising and Hunting,
and who have found it no ill way of Living in so fertile a Country, to truft them-
selves without any labor or forecast, to the Supplies which are there provided to
their hands, without the continual trouble of Tillage and Husbandry. Besides,
these Woods are fill'd with innumerable variety of smaller Birds, as different in their
Notes as Kinds.

The Temperature of this Province is agreeable to a Country, whose Position
is on the warmer side of the temperate Zone, but yet the Heat is not so fultry nor
offensive, as in Places under the same Latitude in the Old World; to which moder-
ation of Heat, as well as the healthiness of it, the vast Atlan'tick Ocean, lying to the
East and South of it, may perhaps not a little contribute, an instance whereof
some think China to be, to which deservedly admisser'd Country Carolina exactly an-
swers in its Position and Latitude, the treading from North-East to South-West
of its Coaft, and the lowness of its Shore, and wants nothing but Inhabitants, to
make
make it equal, if not excell, in all conveniences of Life, as it doth in richness of Soil, that flourishing Empire. The healthiness of the Air is such, that it is not only benign and favorable to the home-bred Indians, and Constitutions accustomed to it, but the English-men who first Planted on Ashley River, though for some other Conveniences they Planted on the side, or almost middle of a Morass, and were encompass’d with a salt Marsh, where the Air, pent up with Woods that surrounded them, had not that freedom it hath in open and cultivated Countrie, yet loft not in a whole years time, of a considerable number, any one Person, of any Disease to be imputed to the Countrie, those few that dy’d in that time sinking under lingering Diftempers which they brought with them, and had almost worn them out before they came thither. The Bermudians (who being accustomed to the pure Air of their own Island, cannot without hazard of their Lives put themselves into any other Place) afford’d of the healthinesse of this Place, which is the next Land to them, and under the same Latitude, venture hither. And generally all the English Plantoing in the West-Indies, are so taken with the Conveniences of this Countrie, which, as some of the most considerable of the English in those Parts say of it, promises all that the Heart of Man can wish, that they send the overplus of their People hither, to which the Inhabitants of Barbados, a skilful and savage sort of Planters, well knowing in all the parts of the West-Indies, have been found to remove the Hands they could spare. As the Summer is not intolerably not offensive hot, so the Winter is not troublesome nor pinching, but enough to correct the Humors of Mens Bodies, the better to strengthen them, and preserve their Healths, and so far to check the growth of Plants, that by this stop they may put out more regularly, and the Corn and other Fruits the better ripen together, and be ready seasonably at the Harvest, the want whereof in some Countrie’s hinders the beneficial Growth of several valuable Commodities, the continual Spring all the year long making that their Crops are never ready, their Trees being laden with green and ripe Fruit at the same time, which is to be seen in the Vines growing between the Tropic’s, where, though they bear excellent Grapes, yet they cannot make any Wine, whilest the mixture of ripe and fowre Grapes upon the same Branch, renders them unfit for the Press, which from Grapes so blended, though of a good kind, would squeeze out a very crude and useless Liquor. This also is the reason why many Parts where our Wheat will grow very well, do yet lofe the benefit of it, whilest the several Ears ripening unequally, never make the Crop fit for the Sickle. But this Countrie hath Winter enough to remove that Inconvenience, and to put such a stop to the Rife of the Sap, and the Budding of Plants, as to make the several kinds of Fruits Bud and Blossom in their distinct Seafons, and keep even pace till they are fit to be gather’d.

To this happy Climate the native Inhabitants are very well suited, a strong, lusty, and well shap’d People, who to their well knit and active Bodies, want not stout and vigorous Minds; they are a People of a good Understanding, well Humor’d, and generally so just and Honest, that they may seem to have no notice of, as their Language hath no word for, Dishonesty and Cheating; and the worst Name they have for ill Men is, that they are not good. They are a stout and valiant People, which appears in the constant Wars they are engag’d in, not out of covetousness, and a desire of usurping others Possessions, or to enrich themselves by the Spoils of their Neighbours, but upon a pitch of Honor, and for the glory of Victory, which is their greatest joy, there being no parts of their Lives wherein they enjoy so much satisfaction, and give themselves so wholly to Jollity, as in their Triumphs after Victory. Valor therefore is the Virtue they most esteem and reward,
Chap. II. A M E R I C A.

reward, and he which hath behav'd himself well in the Wars, is suffer'd to wear the Badges of Honor, and is advance'd beyond others with some Marks of his Courage; which amongst some is blacking the Skin below his Eyes with black Lead, in fashion something of an Half-Moon; which Mark of Courage is not suffer'd to be worn by any, but those who by some brave Action, as killing the Enemy's Leader, &c. hath signaliz'd himself in their Encounters. They are faithful to their Promises, fair and candid in their Dealings, and so far from Dishonesty, that they want even the Seeds of it, viz. Forecask and Covetousness; and he will be very little apt to deceive you to Day, who troubles not himself much about to Morrow, and trusts for the Provisions of the Day to the Day it self, which proceeds not in them for want of Wit, but desire of Content and Quiet, or by the help of their natural Reason they enjoy that Happiness which the Philosophers could not by their Study and Reading attain to, whilst these Men cut off those Desires which Learning could never help the other to Govern, and which if once permitted to run out beyond the present, are capable of no Rest nor Bounds. In their Conversation they are courteous and civil, and in their Visits make Presents to one another; when they meet, their way of Salutation is stroaking on the Shoulders, and flicking in their Breath; and if he be a great Man whom they Salute, they stroak his Thighs too; as civil an Address, as those Patterns of good Breeding, the Hero's, us'd to their Princess, who in their greatest Courtships, we are told, embrac'd their Knees: After their Salutation they sit down; and it is usual with them to sit still almost a quarter of an hour before they speak, which is not an effect of Stupidity or Fulleness, but the custom'd Gravity of their Country; for they are in their Tempers a merry, frolick, gay People, and so given to Jollity, that they will Dance whole Nights together, the Women sitting by and Singing, whilst the Men Dance to their Ayres, which though not like ours, are not harsh or unpleasing, but are something like the Tunes of the Irish: So that if we will not let our selves too fondly admire onely the Customs we have been bred up in, nor think Men are to be valu'd for making Legs after our Mode, or the Cloaths they wear, which, the finer and gayer they are, always the more to be suspected of Luxury and Effeminateness; if we will allow but these Men to follow the Garbs of their own Country, and think them fine enough in a shape onely to hide their Nakedness before, or a Deer's skin hanging loosely on their Shoulders, and their Women not ill dress'd in Garments of Mo's, and Necklaces of Beads, whilst the Fashion of their Courts require no other Ornaments; if, I say, a long and pleasant Life, without Distemper or Care, be to be valu'd, without the incumbrance of unecessary Trinkets; if Men are to be esteem'd for Valor, Honesty, Friendship, Humanity and good Nature, though Strangers to the ceremonious Troubles we are accus'tom'd to, the Natives of Carolina will as little, or perhaps less, deserve the Name of Miserable, or Savage, as those that give it them. 'Tis true, the French and Spaniards who have Planted amongst them, or with little Armies travell'd their Country, have been ill handled by them; but yet the Indians never did them any harm, or treated them otherwise than Friends, till those Europeans by their breach of Faith and several Outrages, had provok'd their just Revenge; and they did nothing but what most virtuous and generous sort of Men are apt to do, to revenge those Affronts, which did not agree with their Tempers tamely to endure. That this did not proceed from treachery and inconstancy in their Natures, is apparent in the contrary Correspondence they have had with the English Settled amongst them, to whom they have been all along very kind, as they were at first very covetous of their Company; for after that some of their King's Relation had been at Barbades
Barbados, and had seen and admired the Temper, Fashions, and Strength of the English there; and had been very civilly treated in that Island, they were so well satisfied with them, that at the coming of the English to settle there, the several little Kingdoms strove with all the Arts and Arguments they could use, each of them to draw the English to Plant in their Dominions, by commending the richness of their Soil, convenience of their Rivers, the healthiness of their Country, the dispassagement of their Neighbours, and whatever else they judged might allure the English to their Neighborhood. Nor was this only the first heat of Men fond of Novelties, and as soon weary of them again, but ever since the English first Planted at Albemarle Point, on Ashley River, they have continued to do them all manner of friendly Offices, ready on all occasions to supply them with any thing they have oblied them to want, nor making use of our Mens necessities, as an opportunity to enhance the Price of their Commodities, a sort of fair Dealing we could scarce have promised them amongst civiliz'd, well bred, and religious Inhabitants of any part of Europe; and though they are much frightened with our Guns, both small and great, yet like innocent and well-meaning People, they do not at all distrust our Power, but freely, without suspicion, trust themselves, both Men and Women, even their Kings themselves, in our Town, Lodging and Dancing there frequently whole Nights together, upon no other Pledges but the bare confidence of our mutual Friendship; nor do our Men use any greater caution in Conversing with them, stragling up and down, and travelling singly and unarmed through their Woods for many Miles about, and are so far from receiving any injury or ill treatment from them, that on the contrary they are kindly us'd and Entertain'd, and guided by them in their Way whenever they desire it; and when any of our Men meet them in their Walks, the Indians all stand still till they are gone by, civilly Saluting them as they pass. Nor doth this Assurance of theirs bound it self within their own Homes, they of their own accord venturing themselves aboard our Ships, have gone voluntarily with our Men to Virginia and Barbados. Nor have the English been wanting on their parts in any thing that may preferves this Amity, being very cautious of doing them any injury, bartering with them for those things they receive of them, and buying of them even the waste Land they make no use of.

Besides the simplicity of the Indian Diet, it is very remarkable, that they have a general aversion to those two things which are most acceptable to our Palates, and without which few of us either eat or drink with any delight; for in their Meats they cannot endure the least mixture or relish of Salt; and for their Drink, they utterly abominate all manner of strong Liquor; to the latter whereof, their large Growth and constant Health, is perhaps not a little owing.

Every little Town is a distinct Principality, Govern'd by an Hereditary King, who in some places is not Son, but Sister's Son to the precedent King; the Succession of the Blood-Royal being continu'd by the fatter side. The great Business of those Princes is to lead their Men out against their Enemies in War, or against the Beasts in Hunting; for unless it be to appoint them where to Hunt, or else to Consult about making some Attempt upon their Enemy, he hath but small trouble in the Government of his Subjects, who either through their own Honesty, or the few occasions they have for Controversies in their extempore way of Living, need few Laws, and little Severity to keep them in order; but yet they Govern their People without Contráct, and fail not of a ready Obedience to their Commands; so that when some of them have bought things of such of the English, who by the Orders made amongst our selves were not to Traffick with the Indians, they have, upon Complaint made to their Chiefs, been resolv'd again, though in strict Rules
of Law they were neither bound by, nor oblig'd to take notice of the Rules which were made only to Govern our own People, and had at just Prices bought what they carry'd away; such is the Honesty of Men, whose Principles not being corrupted with Learning and Diffinition, are contented to follow the Dictates of right Reason, which Nature has sufficiently taught all Men for the well ordering of their Actions, and enjoyment and preservation of humane Society, who do not give themselves up to be amus'd and deceiv'd by insignificant Terms, and minding what is just and right, seek not Evasions in the Niceties and Fallacies of Words.

The fame is to be paid of the first Discovery of this Countrey, as hath been formerly said of Virginia and Florida, of both which it partakes; but as to the present Interest and Propriety, the English, besides all Virginia entirely, have also so much of Florida as makes up this considerable Province of Carolina, which soon after the happy Reformation of his present Majesty King Charles II. from whom it receives Denomination, was granted by Patent to Edward Earl of Clarendon, L. Chancellor of England, George Duke of Albemarle, William Earl of Craven, John Lord Berkley, Anthony Lord Ashley, Sir George Carteret, Vice-Chamberlain of his Majesty's Houfhold, Sir William Berkley, Knight and Baronet, and Sir John Collett, Knight and Baronet.

The Lords-Proprietors of this Countrey, for the better Settlement of it according to their Patent granted unto them by His Majesty, and for the enlargement of the King's Dominions in those parts of America, have been at great Charge to secure this so rich and advantageous a Countrey to the Crown of England, to whom of ancient Right, by the Discovery of Sir Sebastian Cabot in the time of Henry the Seventh, it doth belong, and for its Situation, Fertility, Neighborhood to our other Plantations and several other Conveniences, of too valuable consideration to be negligently lost: By the Care therefore and Endeavors of those Great Men, it hath now two considerable Colonies Planted in it, the one of Albemarle, on the North side, bordering on Virginia, where are some hundreds of English Families removed thither from New England, and some of our other Plantations in the West-Indies; and another towards the middle of the Countrey, at Charles-Town, or Ashley-River, a Settlement so hopeful, for the healthiness of the Land, and convenience of access by a large deep Navigable River, and so promising in its very Infancy, that many of the rich Inhabitants of Barbados and Bermudas, who are now crowded up in those flourishing Islands, and many in our other American Plantations, are turning their Eyes and Thoughts this way, and have already removed part of their Stock and Servants thither. Nor is it to be doubted, but that many, following the Example of those who went to Albemarle, will be drawn to this better Plantation at Ashley-River, from New-England, where the heat of their Zeal, and the coldness of the Air, doth not agree with every Man's Constitution; and therefore it is to be thought, that many well temper'd Men, who are not much at ease under such Extremities, will be forward to remove thither.

The Lords-Proprietors, for the comfortable subsistence, and future enrichment of all those who shall this Year 1671. Transport themselves and Servants thither, allow every Man a hundred Acres per Head, for himself, his Wife, Children and Servants, he carries thither, to him and his Heirs for ever, paying only one Penny an Acre, as a Chief-Rent; which Penny an Acre is not to be paid these nineteen years; and those Servants who go along thither with their Masters, shall each also have a hundred Acres upon the same Terms, when he is out of his Time. But though these Conditions are very advantageous, and the Countrey promises to the Planter Health, Plenty and Riches at a cheap Rate, yet there is one thing that makes this Plantation more valuable than all these, and that is the secure possession of all these things,
things with as great certainty as the Rate of humane Affairs, and the transient things of this Life are capable of, in a well contrived Form of Government, wherein it is made every Man's Interest to preserve the Rights of his Neighbor with his own; and those who have the greatest Power, have it limited to the Service of the Country. the Good and Welfare whereof whilst they preserve and promote, they cannot miss of their own, the Lords Proprietors having no other aim, than to be the greatest Men in a Country where every one may be happy if it be not his own fault, it being almost as uncomfortable, and much more unsafe, to be Lord over, than Companion of a miserable, unhAPPY, and disconsolated Society of Men.

With this Design the Lords-Proprietors, who are at great Charge for carrying on this Plantation, have put the framing of a Government into the Hands of one, whose Parts and Experience in Affairs of State are universally agreed on, and who is by all Men allow'd to know what is convenient for the right ordering Men in Society, and setting a Government upon such Foundations, as may be equal, just, and lasting; and to this hath a Soul large enough to wish well to mankind, and to desire all the People where he hath to do might be happy. My Lord Ashley, therefore, by the consent of his Brother, the rest of the Lords Proprietors, hath drawn up, to their general satisfaction, some fundamental Constitutions, which are, by their joint approbation, confirm'd to be the Model and Form of Government in the Province of Carolina; the main Design and Balance thereof (according to the best of my memory, having had a Copy thereof) in short is as follows:

1. Ever County into a conflit of forty square Plots, each containing twelve thousand Acres. Of these square Plots each of the Proprietors is to have one, which is to be call'd a Signory.

Eight more of these square Plots are to be divided amongst the three Noble-men of that Country, viz.: the Lords Proprietors, who are to have four of them; and two Captains, who are to have each of them two square plots; and these square Plots belonging to the Nobility, are to be call'd Barones. The other twenty-four square Plots, call'd Colonies, are to be the Possessions of the People: And this Method is to be observe'd in the Planting and Setting out the whole Country; so that one Fifth of the Land is to be in the Proprietors, one Fifth in the Nobility, and three Fifths in the People.

2. The Signories and Barones, that is, the hereditary Lands belonging to the Proprietors and Nobility, are all entirely to descend to their Heirs, with the Dignity, without power of alienation, more than for three Lives, or one and twenty years, or two Thirds of their Signories and Barones, and the rest to be Dower.

3. There will be gole some Mannors in the Colonies, but none less than three thousand Acres in a Piece, which, like the rest of the Colony Lands, will be alienable, only with this difference, that it cannot be parcel'd out, but if sold, it must be altogether.

4. There is to be a Biennial Parliament, consisting of the eight Proprietors, the Lords and Barons, and one out of every Person, that is the fix neighboring Colonies, for the People, chosen by the Freeholders; these are to sit and Vote together for the making of Laws, which shall be in force no longer than fifty years after their Enacting, the great mischief of mod Governments, by which not only the People are mighty entangled by multiplicity of Rules and Penalties, and thereby laid open to the Malice and Designs of troublesome Men and cunning Proprietors; but, which is far worse, the whole frame of the Government in craft of time comes to be remove'd from its original Foundation, and thereby becomes more weak and tottering.

5. There are eight Supreme Courts for the dispatch of all publick Affairs, the first consits of the Judges, who is the eldest of the Proprietors; and hath power to call Parliaments, and dispose of publick Offices. The other seven Supreme Courts, 1. The chief Justices for the determining of Controversies of State and Treason, 2. The Chancellors, for passing of Charters, and managing the State Matters of the Province. 3. The High-Justices, for Military Affairs. 4. The Admirs. for Maritime Affairs. 5. The High-Stewards, for Trade. 6. The Treasurers, for the publick Stocks and 7. The Chamberlains, for Ceremonies, Fashions, Marriages, Burials, &c. These are the seven Supreme Courts, to whom lies the ultimate Appeal in all Cases belonging to them. Each of the seven Courts consist of one Proprietor, and six other Counsellors, whereof two are chosen by the Nobility, and the other by the People. All the number of these seven Courts joynd together make the Grand Council, which are in the nature of a Council of State, and are entrusted with the management of Affairs of greatest concernment. There is also in every County a Court, and in every Precinct another; from the Precinct Court there lies an Appeal to the County Court, and from the County Court to the Proprietors Court, to which the Matter in question belongs, and there is the last decision and determination thereof, without any further Appeal. And to keep the People from the Charges and vexation of long Suits, to the enriching of Men cunning in Words, care is taken, that no Cause shall be Try'd more than once in any one Court, and that prefer'd Pleaders for Money shall not be allow'd.

Liberty of Conscience is here also allow'd in the greatest latitude, but yet so, that neither Atheists, or Men of no Religion, are permitted; Atheism, Irreligion, and various Livers being condemn'd, as disagreeable to humane Nature, inconsistent with Government and Society, and destructive to all that is useful, or becoming of Mankind; on the other hand, rigorous Imposing of, and hot Contentions about the Ceremonies and Circumstances of Religion, is an occasion of perpetual Strife, Faction and Divisive, keeps Men from sedate and temperate Enquiries after Truth, eats out the great Cement of humane Conversation, Charity, and cannot be found in any one, who hath but moderately enough to think himself left than a rope, and short of Infolence.

There is also to be a Regifter of all Grants and Conveyances of Land, to prevent even the occasions of Controversies and Law-Suits.

There are several other leaves considerable Particulars in this Government, all contriv'd and design'd for the good and welfare of the People; all which are so well, put together, and in such equal proportion balance each other, that it's impossible Men who have seen it, say, it is the best and fairest Frame, for the well-being of those who shall live under it, of any they have seen or read of.

C H A P.
CHAP. III.

Florida.

South-West of Virginia lieth the spacious Country of Florida, remarkable hither to rather by the great pains which the Spaniards have taken, and the ill Successes they have met with in the discovery and search of this Province, than by any thing else they have discover'd in it answerable to their desire. On the East it hath the Atlantic Ocean, or Mare del Nord; on the South, and South-West, the Gulph of Mexico and Mare Virgininum; and full West, part of New Galicia, and some other Countries, not yet perfectly known.

This Country is also one of those, said to have been first of all discover'd by Sir Sebastian Cabot, at the Charges of the King of England, about the Year 1497, but afterwards more thoroughly search'd into by John Ponce de Leon, a Spaniard, who in the Year 1512, set sail with three Ships out of the Haven St. German in Porto Rico, North-West to the Isles Del Vino, Caycos, Taguna, Amaguar, Managua, and Guanabani, first discover'd by Christopher Columbus, and call'd St. Salvador: After that steer'd North-West by a Coast, which (because of its pleasant prospect) was call'd Florida, or (according to the more common Opinion) because it was on Palm-Sunday, which the Spaniards call Pachafa de Flores, or Pachafa Florida that he landed here: And to find out a Haven he kept sight of the Shore, which appear'd South-West from him. Here the Ships met with so strong a Tide, that notwithstanding they had a fresh Gale of Wind, yet could they not stem it; one of the Ships was driven to Sea out of sight; the other two casting Anchor, which taking, drove toward the Shore; whither, being beaked by the Indians, they immediately went; when no sooner he landed, but they ran in great Companies to make themselves Masters of the Vessels, kill'd one Spaniard, and wounded two more: the Night approaching put an end to the Fight. From hence Sailing to the River La Cruix for Wood and Water, they were resifted by sixty Natives, which they put to flight with their Guns, and took one Prifoner; after which they erected a Stone Cross. The Promontory, by which glides the strong Current, lies in twenty Degrees North-Latitude, and call'd Cabo de Corrientes, as the Row of Isles, before the Main Land Los Martires, because the Cliffs at a distance appear like Men flanding on Poles. Lastly, after some small Encounters with the Floridians, Ponce return'd home, being only inform'd fallly by the Indians, that in Florida was a River, and on the Isle Bimini a Fountain, whose Waters made old People young.

But after this Florida remained not unvisited, for eight years after the forementioned Voyage, Lucas Vasquez de Ayllon weighed Anchor with two Ships from Hispaniola, to fetch Slaves from the adjacent Isles for the Gold-Mines, which Labor the Natives were not able to perform: therefore steering his Course Northwardly, he sail'd along the Coast of Chacao and Ginallape, by them call'd Cabo de St. Helena, and Rio Jordan, where the Natives look'd upon the Ships as Sea-Monsters, and seeing Bearded Men in them, fled: the Spaniards pursu'ing them, overtook one Man and a Woman, who being well Entertain'd, and clad in Spanish Habits, made the Strangers so acceptable to their Country-men, that their King sent fifty Men Aboard of them with Provisions, and to invite the Sea-men to his Dominions. The King fzt
with a great Cloth about him, made fast on his Shoulders, covering his Belly; Breast and Back with the Lappet thereof, and being long, was held up by one of his Servants; over one of his Shoulders hung a String of Pearl that came three times about, and reach'd down to his Thighs; on his Head he wore a Cap full of Ribbons; his Arms and Legs were also surrounded with a double Chain of Pearl; in his right Hand he held a very rich Staff: But the Queen went almost naked, one only a piece of a wild Beast Skin hung down before her from her left Shoulder to her mid-Leg, and a double String of Pearl about her Neck hung down between her Breasts, and her Hair Comb'd behind reach'd down to the Calves of her Legs; about her Wrists and Ankles hung also Strings of Pearl.

On the King's Command, the Spaniards were permitted to make Inspection into the Countrey, in which they were every where courteously Entertain'd, and not without Gold and Silver Presents. Returning Aboard, Vafquez invited the Indians to go with him, under pretence of returning them thanks for the Favours which they had bestowed upon him; but no sooner had he gotten a considerable number in his Ships, but he set Sail, and losing one Ship, arriv'd with the other Safe at Hispaniola with a few Indians, for most of them with grief and hunger died at Sea, and those that remain'd alive, liv'd on dead Carrion.

Some few years after, Vafquez, receiving Letters Patent from the Court of Spain for the Government of Florida, fitted out a Ship thither in 1610. which brought a good Return of Gold, Silver, and Pearls; whereupon he himself went not long after, and coming into the River Jordan, lost one of his Ships, which prov'd not the worst Accident; for Landing two hundred Men, they were all of them either slain or wounded by the Inhabitants; so that Vafquez was forc'd to ound a Retreat: And after that the Spaniards were less willingly drawn to that Coast, and the rather, because the Inhabitants seem'd poor, and had little Gold but what they procur'd from the Orapales and Olagatomo's, sixty Leagues Northward up in the Countrey.

Notwithstanding these unsuccessful Expeditions, Pamphilus Narvaz retain'd so much Courage, that obtaining Letters Patents from the Emperor Charles the Fifth, he
he fitted out four Sail and a Brigantine, weigh'd Anchor from Cuba with six hundred Men and eighty Horse, in the Year 1528. On Florida he Landed three hundred Foot and forty two Hor's; they found many empty Huts, but in a great House a golden Bell hid amongst the Nuts, Chefs full of Merchandise; and in each a dead Body cover'd with Beak Skins, and painted; Pieces of Linnen Cloth, and Wedges of Gold, which they had from the remote Countrey Apalache. Narvaez, though against the Opinion of Nu nez Cabeca, march'd up into the Countrey, whilst the Fleet was to land along the Shore; and travelling fifteen days saw neither House nor Man, only here and there some Palmito-Trees: Cross'ing a River on Floats, they were Encount'ring by two hundred of the Natives; of which the Spaniards, having routed them, took six Prisoners, who furnish'd them plentifully with Indian Wheat. After this they march'd fifteen days farther, without discentring the least footstep of a Man; but at last they met an Indian Lord with a considera'ble Train, before whom March'd severall Pipers; being told by Narvaez that his Journey was for Apalache, he conducted the Spaniards with a Canoe over a River, and Landing again, walk'd with them to his Village, where he Entertain'd them with great civility. Narvaez, after a long and troublous Journey, came at last in sight of Apalache, a Village which contained two hundred and forty Straw Houses, built between the Mountains, on a Moorth, Soyl, full of Nut, Pine, and Savi'ne-Trees, Oaks, Laurel, and shore Palmito's; besides the Trees, which blown down in several places by a strong Wind from between the Hills, and lying crofs, cumber' the High-ways: There are many deep Pools, and also Bears, Lyons, and other ravenous Creatures, which make the Ways very dangerous. Narvaez falling suddely on the Village, took the Casique Prisoner, as also store of Wheat, Mortars to pound it, Hides, and Threddpun Cloaks. Here he refell twenty five days, during which time some of his Men Journey'd farther into the Countrey, yet found none but poor People, troublous Ways; and an unfruitful Soyl: twice they were set upon by the Natives, who kill'd some of the Horses and Men: They being a very strong People run stark naked, and as swift as a Deer; Diving under Water from the Spaniards Bullets; which not a little amazing Narvaez, he thought it convenient to set upon the Village next, lying on the Shore: Nine days he was in a miserable condition before he got any Wheat, Peale, or other Provisions from this Village; the getting whereof cost him very dear, for the Villagers behav'd themselves so valiantly, that they kill'd many Spaniards, and some of their Horses, which since they left the Haven of St. Cruise had travel'd two hundred and eighty Leagues; so that being tire'd and out of heart, they could not carry the Sick and Wounded, who not able to go, fell down dead in the Way: whereupon it was judg'd convenient to make five Barques, in which they made their Shires serve for Sails, the Horses Tails and Mayns for Ropes, their Skins to hold freth Water; with which putting out to Sea, they saw no Land in seven days, and running through the Straights of St. Miguel, Steerd'along the Coast of Rio del Palme, where they suffer'd great Drought, inform'd them, that some drinking salt Water, died thereof: at last Landing, they were in the Night set upon by a Casique, who having given Narvaez a great Wound in the Face, fled, leaving behind him a Sable Cloak, scent'd with Amber; three days they rang'd again along the Sea-shore, when the Barque of Nu nez, Cabeca being behind, was by Storm driven on the Shore, where a hundred Indians waited to cut them off, but were pacify'd with some Trifles: Thus being bereav'd of Arms, Provision; and all manner of Necessaries, they found themselves on an Ille, by the Inhabitants call'd Mathado, where they were lodg'd and maintain'd so long as they had any thing left; but Famine grew as laft to lich a height, that they devour'd
one another, and in a short time of eighty Men there remain’d only four alive, viz. Nuænez Cabeca, Castillo, Orantes, and Efllevantes, who at last by Land reach’d to New Galicia, and soon after to Mexico, having escap’d a thousand Dangers. Of Pamphilius Narvaez never any tydings being heard, it is suppos’d he was drown’d.

After this miserable Adventure, the Busines of Florida lay dead for eleven years, till Ferdinandus Sottus, chosen Governor of Cuba, obtain’d so much of the Emperor Charles the Fifth, that he ventur’d one Expedition more for Florida: Besides Sea-men he carried five hundred Foot, and three hundred and fifty Horse; with which Landing in the Bay Del Espirito Santo, he march’d against the Cofachiqui, Viscach, whom he took Prisoner, with a thousand of the Natives, whom he either put to the Sword, or caus’d them to be torn in pieces by Dogs; and staying all the Winter in Apalache, fortify’d that place, and furnish’d himself with Provisions; he was inform’d, that thirteen days Journey from thence lay the Kingdom of Cofachiqui, abounding with Gold, Silver, and Pearls, which made every one of the Spaniards very defirous to go thither, notwithstanding the Way was very dangerous; for the valiant Floridians lying in Ambuscade in the Corn-Fields, wounded and kill’d many of them by Shooting from thence. Sottus, so soon as March approach’d, set forward on his Way. In the poor Province of Acalaquii he found a few young People, and the old moft of them blind. From Cofachiqui he was follow’d by four thousand Natives, who carried the Spaniards Luggage, and serv’d them as Guides through Woods and Wildernes. The seventh day they flopp’d at a great River, whither Sottus sent four Companies to seek out a Passage over, whereof three return’d without any effect, but the fourth, Commanded by Captain Amafoo, and a Colonel of a thousand Cofachiqui, came to a Village built along the River; in which they made a miserable Rout, killing all they lighted on, and hanging the Sculls of the Dead by their fides: this done, they march’d back. Sottus at last espying a Village on the other side of the River, becknet to the Natives to come over to him; whereupon fix came immediately; who understanding that he desire’d their friendly Assistance and Trade, promis’d to acquaint their Governors, being a young Maiden: who soon after came over to Sottus, and presented him with a String of Pearl: he complain’d to her for Provisions, which the promis’d in part to bore him with. Cross’ing the River he found a brave Countrey, where were Pearls as big as gray Peafe, Copper of a golden colour, but no Gold. Out of the Tombs of their Princes the Spaniards Officers, with the leave of the fore-mention’d Maid their Governors, got an incredible Treasure in Pearls. In the Village Tolomeco they did the like. But here their Provisions growing scarce, the Army was divided into two Bodies, Balthasar de Gallegos leading one; and Sottus the other; yet the Design of them both was on the Province of Chalaguir; whither marching, they were surpris’d by such a violent Storm, that few would have been left to relate their Adventures, had not the Trees bore it off from them; for it not only Thunbred and Lightned as if Heaven and Earth would have met, but also Hail-stones fell down as big as Eggs, which beat down the Boughs of Trees. In the pleasant Valley Xuna, belonging to the King-dome of Cofachiqui, they rest’d fifteen days, and then march’d through Countreys of Guasacale, Acopys, and Zetz, where above a thousand Indians, adorn’d with Plumes of Feathers and rich Furr Cloaks, came to meet and welcome them, and to defire them from the Cofague to stay there all the Winter; but Sottus resolving to go to the Haven Achni, refus’d the fame. After this he view’d Talispe, fortify’d with woodden and earthen Bulwarks; where the Cofague Tafecas, a Man as big again as an ordinary Spaniard, receiv’d Sottus with great civility, and conducted him to Maxilla, lying in a pleasant place. The City, surround’d with double Pallisado’s, fild’d up with Earth
Chap. III. 

Earth between, (where also at eighty Paces distant from one another, stands a Tower to contain eighty Soldiers) hath two Gates, eighty Houses, in every one of which dwell a thousand Men, and a large Market-place in the middle; where whilst the Spaniards were in the midst of their Mirth, they on a sudden heard a great cry of Arms; the first Assaulte was made by seven thousand, which still increased by freth Supplies; but the Spaniards at last tetting the City on fire, broke through them, and left above eleven thousand slain, either by the Smoak and Flame, or by their Bullets, Swords, Horses Heels and Dogs; the Spaniards also lost eighty three Men and forty three Horses. Thence going to Chicona they were hope by the Natives before a deep River with high Banks, which at laft crosting, not without great trouble and blood-foeding, they Winter'd in the Village Chicona, where the Inhabitants let them rest very quietly for two Moneths; at the end of which, joying together in the Night, they shot fire into the Straw Roofs, and maintain'd a Fight of two hours long, in which the Spaniards lost forty Men, fifty Horses, and all their Hogs, which were burnt in the Houses. From thence going to Chicona they were refisst in most places, and in the Fort Albano Engag'd by four thousand Floridans, who waited for their coming; but those were so wittely handle'd, that half of them were slain, and Sottus became Master of the Fort, as also of Chicona, which he Storm'd and took unawares. With no less trouble and danger did he get over the River El Grande, where he discover'd a Village that contain'd above four hundred Houses, and many delightful Fruit-Trees. The Caisque Caffin, maintain'd the Spanish Army six days in this place, and taking five thousand of his Subjects, march'd with them to Capaba, which hath a deep and broad Moat on three sides thereof: the fourth was for'thin'd with strong Pallisado's, through which the Spaniards breaking, made way for Caffin, who put all to the Sword, the Governor only escaping in a Canoe to a neighboring Isle. The Entrance being thus taken by the Spaniards, Ceffin return'd home. After which Sottus concluded a Peace with Capaba the Governor, and took up his Quarters in the Village Vitangue, where he receive'd continual Sallies; but taking fifteen Caisques Prisoners, threatened to burn them alive, unless they would procure them some Gold; yet not being able to get any, they had only their Hands cut off and were sent away. Moreover, Sottus help'd the Gauchacoya's, to ruin those of Antico, which Design prov'd successful, yet not according to Sottus's desiring, for he found not the Gold-Mines which he expected, but spent in this five years Progress the great Treasure which he took out of Atiliba's Palace; and the Pearls which he got in Florida, for the Oylters being open'd against the Fire, and the Pearls drill'd through with a hot Iron, loft much of their luftre, neither would his People consent to build a City in the Haven Achnufi. In the midst of thefe Transtactions Sottus died of the Bloody-flux, and his Body was Inter'd in the River El Grande. After which his Successor Ludovicus de Alvarado had worse Successes, for half of the Army being wadst by the excessive heat, the rest resolve'd to desert Florida, utterly despairing to be ever able to refit the valiant Natives. In the Province of Achnufi, they procur'd a Guide, whom, because he mis-led them in their Way, they caus'd to be torn in pieces by their Dogs: after which they march'd without a Guide through such bad Ways, that they lost a hundred of their Men and eighty Horses, besides many Floridans that carried their Luggage: At laft coming to the River El Grande they conquer'd two Villages; which fortifying, they took up their Winter Quarters in them. But this being the fourteenth year, in which the River us'd generally to overflow and drown all the adjacent Countreys, on a sudden, to their great amazement, the Wood which they had gather'd for the building of Barques to carry them home, was wash'd away, their Provisions spoil'd,
and their Habitations drown'd: and to this Inconvenience was added another yet greater; for the Governors round about rais'd all the Forces they could possibly, to revenge themselves on the Spaniards, for their great oppression. But Ávaredo being inform'd of this Design by the Caifique Anico, caus'd thirty of the Abettors of the Plot, to have their Hands cut off. Not long after this the Spaniards set Sail, when a thousand Canos that came to Engage them lay sixteen days amongst them, killing and wounding several of the Seamen, and sunk a Barque with forty eight Men, and also kill'd many Horfes which were yet on the Shore; the Prisoners they took were strappado'd to death, and the Horfes shot: yet some of them got safe from Panama to Mexico.

These above-mention'd Expeditions to Florida, notwithstanding they fell out unfortunately, nevertheless by the permission of Philip the Second, King of Spain, Peter Abunada and Julius Samana, with five Dominican Monks, made another Attempt, and Landed with several great Croffes, that thereby they might reduce the Florida, whose Language they understood; not, to their Faith: But they fearing treachery, releif'd them, and kill'd the Monks with Clubs, flay'd them, and hung their Skins in their Temples.

Notwithstanding these and many worse Accidents that hapned, yet the Spaniards, King ventur'd once more, and sent Peter Menendez to Florida; whether he was follow'd by three Suits from Rome, viz. Peter Martinus, Joan Roger, and Francis Villaregius: The Master of the Ship in which they went being ignorant where he was, judg'd it convenient to Land; whereupon nine Netherlanders and four Spaniards, amongst which was Martinus; went ashore on Florida, whilst a Storm arising drove the Ship to Cuba; by which means those that were Landed were left in a miserable condition, having no Food but wild Herbs, on which they fed twelve days: so that this Expedition also came to nothing.

At laft the French following the foot-steps of the Spaniards, John Ribald and Rene Landonier having Sail'd severall times to Florida, discover'd severall Coasts; but their Men were often let upon by the Spaniards, and cut off.

Anno 1567: Dominicus Gurgius set Sail thither with three Ships, which carried two hundred Soldiers and eighty Sea-men; with which entring the River Tucatoucou he Landed, and found a Youth call'd Peter du Bre, who escap'd when the Spaniards cruelly massacred the French in the Garrison Carolina; after which du Bre ranging up and down, at laft serv'd Saurinins, Governor of Florida; whom defeating, and now meeting with the French his Countrey-men, he brought several Cafiques to joy with them against the Spaniards, whom they drove out of three Forts, which were all by the Command of Gurgius dismanteled.

Florida is call'd by the Natives, Arquaia. The Spaniards have built two Forts on the same, the one erect'd on the Promontory Helena, is Confecrated to the Apostle Matthew. The City and the Fort Angofine lies near the River May. Both City and Fort stand on a Hill, which is pleasant and well fett with Trees. Between the Foreland is a deep and wide Channel, which washes the City and Fort; it is eight-square, at each corner there stands a round Tower, in which the Soldiers keep Guard; the Countrey is water'd by two Rivers, which gliding between the Main and the Foreland, are great Safeguards to the Fort. The City is almost square, onely against the Fort it is much closer built than in any other place, and divided into four Streets. The Church stands without the City, and before it the Angofine Cloyster.

The Inhabitants of Florida are an Olive colour, tall, and without any deformity; their Skins generally painted, and their Bodies naked, onely a Deer's Skin about their middle, their Hair long and black, hanging down to their Hams, but mott
Pagus Hispanicorum in Florida
most of them tie it in a Knot on the top of their Heads; two small Boards cover their Breasts, and six Leffers hang on their Arms, two Bells at each Ear, and a Cap on their Head, with a Feather: Their Quivers, which are always full of Arrows, sharpened with Fihth Bones, hang by their Sides; In their left-Hand they hold a great Bowe, with which they go to War, the King walking before with a Club. They Consult daily about warlike Affairs in the King's Palace, where he himself sits on a high Seat; the Grandees falue him firft with their Hands lifted over their Head, crying Ha, Ha, Ha, at which the rest cry Ha, Ha; then every one sits down on a Stool round about the Room. If they have any Buisines of Consequence to debate, then the King fends for the ancienst Persons and Priests, call'd jawas; this done, they give a Cup of Cafme (which is a hot Drink made of Herbs) to the King; after which every one drinks in order out of the fame Cup. This Liquor occasions Sweat, quenches Thirst, and satisfies the Appetite for twenty four hours. When they March against their Enemies they live on Indian Wheat, Honey, smok'd Fith, and divers forts of wild Roots, amongst which they mix Sand and Cinders, to preserve them the longer. No sooner are the two Armies come within sight one of another, but the Kings of both Parties roll their Eyes about in their Heads, mutter something to themselves, and make strange Gestures and Exclamations; which is answer'd by a general Cry of the whole Army: then each King turning himfelf with great Reverence to the Sun, takes a wooden Platter with Water, which he throws over his Army so far as he is able, and begs of the Sun to grant him, that he may spill his Enemies Blood in like manner; then throws another Dish full into the Fire, willing that his Soldiers may thus Offer the Bodies of their Foes to the Flames; then step forth the Priests, who are always skill'd in the Art of Necromancy, and feating themselves on a Shield in the midft of the Army, draw a Circle, in which they make many Strange Gestures, not without muttering to themselves, and seemingly fay a Prayer of a quarter of an hour long; during which they deport themselves so strangely, that they rather seem to be Devils themselves, than Charmers of the Devil: They turn their Eyes quite round, and their Bodies
Bodies as if without Joynts; and length being wearied they leap out of the Circle, and inform the King of the number and condition of the Enemies Army. Those whom they take Prisoners they flay alive, and drying their Skins at the Fire, tie them to long Poles, and carry them home as Trophies of their Victory, and afterwards set them up in some Field or spacious place, putting both Men and Women to watch them; then comes the Priest with a woorden Image, and utters Excavations against the plain Enemies; at a corner of the Fields kneel three Men, one of which striking with great force on a Stone, gives as many Blows as the Priest pronounces Curses, whilst the other two shake their Calabashes fill'd with Stones, and Sing many strange Songs: No sooner is this ended, but the Women whose Husbands are slain in the Battel, walking to the King, cover their Faces with their Hands, make many strange Gestures, and desire liberty to take what revenge they can, and licence alfo to Marry at the limited time; all which the King permitting, they return thus compensated home crying. Not long after they go to the place where their Husbands lie buried, where they crop their Hair up to their Ears, and throw it on the Grave, as also the Arms and Drinking-Cups which the Deceased us'd in their life-time; after which they may not Marry before their Hair be grown again to their Shoulders. The fame Custom is alfo observ'd when their King is buried; but then alfo all his Subjects Fall and Howl three days together, flay his Grave full of Arrows, and burn his Houfe and all his Goods.

The Florida's differ amongft themselves very much, for those that inhabit the Province Panama, which borders upon New Spain, are valiant and cruel People, offering their Prisoners to their Idols, and eating them. The Men pluck up the Hair of their Beards by the Root, make holes through their Nose and Ears, and Marry not till their fortieth Year.

Next to these follow the Realms of Aranaris and Albaranda, inhabited by a People, which exceed all others in subtilty.

The Natives of Jauguzia run fatter than a Deer, and tire not though they travel a whole day.

The beft Swimmers are found in Alpachia, Anthia, and Someria, where the Women Swim through deep and great Rivers with their Children in their Arms. Here also are many Hermophrodites, which carry all the Luggage when an Army is upon a March.

We find mention'd alfo two other Provinces of note, viz. Colas (which lies near the Point call'd Cape Florida) and Tegistra, or Florida properly so call'd, being that long Peninsula, which pointing upon the Ille Cuba, by the Cape Los Martyes, stretcheth it self North and South about a hundred Leagues in length, but not above thirty in breadth where it is largest. In this Province is the Rio de lo Spiritu Santo. The Soyl, though it produces Indian Wheat twice a year, yet it is never Dung'd, but when the Corn (which is planted in March and June) is in, they burn the Weeds; the Ashes of which ferves them in stead of Soil. The King divides the Corn according to every Mans Family. In the Winter they dwell four Months in the Woods, where they build small Huts of Palm-boughs, feed on Venison, some of Fift, and Crocodiles, which have pure white Flefh, and are caught after this manner: On the Shore of the Rivers they build little Houfes full of round Holes, in which they place a Watch, who is to give notice to ten or twelve Associates, cover'd all over with Boughs full of little sharp Prickles, which they thrust into the Crocodiles Throat, who with open Mouth comes running at them, and throwing him on his Back, flay his Belly full of Arrows, and kill him with Clubs. But with more subtilty and art they take their Deer, viz. They hide themselves under
a Stags Skin, so cunningly, that it seems as if living, which they place near the Rivers where the Deer generally come to drink, when on a sudden they flock them.

Their Priests serve in stead of Chirurgeons, wherefore they always carry a Bag full of Herbs about with them, which are chiefly good against venereal Diseases; for these People are exceeding libidinous, nay, Sodomy and defiling of young Children is accounted no sin: Yet though they are much inclin'd to Women, they attain to a great Age.

Rene Lalandier Landing not far from the City Augufine, situate on the Banks of the River May, met with the Florida Governor Saturions, who conducted him to the French King's Court of Arms, erected two years before, which Saturions, as a testimon'y of his zeal to the French, had Crown'd with Laurel and Flowers. Saturions had with him also his Son Aureus, who had begotten divers Children on his Mother, whom his Father after that time no more acknowledging, reign'd her up wholly to him: At which time also his great Grandfather being then living, was above a hundred and fifty years old, and saw his Children Children to the fifth Generation.

The Religion in Florida is abominable, wicked, and cruel: When they return Conquerors from a Battel, the old Women take off the dry'd Hair from the fore-mention'd Poles, hold it aloft, and thank the Sun for their Victory. But the Offerings of their first-born Sons are terrible, for they knock out their Brains with a Club in the presence of the King. Their annual worshipping of the Sun is also very ridiculous: for filling the Skin of a Stag full of sweet-smelling Herbs, they hang the Horns and Neck with Garlands, and carry it with the noise of their kind of Vocal and Instrumental Music, to a high Trunk or hollow Body of a Tree, on which they place the stuff'd Stag, with his Head towards the Sun; which done, they falling down, desire that he would please to afford them plenty of all such Fruit as they Offer, to him; after which taking their leave, they set the fore-mention'd Skin remain there till the following Year.

The Spanish since their Defeat in the Fort Carolinas, and their Engagement with Sir Francis Drake, Anno 1585, have had little disturbance on Florida.

Drake having burnt and plunder'd Domingo and Carthagena, steer'd along the Coast of Florida, and discover'd a Beacon on the fame; whereupon he sent out Spies, who fail'd a League up a River, on whose Banks they saw a Fort, and somewhat higher the Town Augufine, built full of wooded Houses; all which being related to him, he steer'd thither, fir'd his Guns twice against the Fort St. John; which the Spaniards anfwering only with one Volley, fled, with their Commander Peter Menendez; when the English prepar'd to Storm a Prisoner, being a French-man, came in a Boat from them to Drake, and inform'd him that the Spaniards had left the City Augufine and Fort St. John; to which Drake going, found there Pallifado's ofpleated Boughs, cover'd with Earth, and a Chef with two thousand Pound, for the payment of the Soldiers, and fourteen Bras Guns, with which he set Sail from thence.

The Mountains of this Countrey are only the Apalachi, suppos'd by the Natives to have rich Mines of Gold in them, and which the Spaniards saw, but had not time, nor other accommodation to stay and search them, by reason they were so much wearied and waited with a long March before they got thither, and found the People so stout and obstinate thereabouts, that in stead of entertaining them with their Hens and Fowl, as other places had done, they were welcome'd with Blows, and made to return, leaving not a few of their best Soldiers behind.

Rivers there are many, and those very large and commodious, as is Rio Seco,
or The Dry River, so call'd by the Spaniards (as some think) because they could find no Gold in it. 2. Rio Grande, or The Great River. 3. Ligeris. 4. Garuma. 5. Sequana, &c. Thefe left, so nam'd by the French, who, after the Spaniards, for some time had, but never held any long posfession of the Countrey. There are also Rio de Flores, Rio de Nieves, and Rio de Spiritu Santo, lffer Streams, yet all of them, with the reft, falling at several places into the great Lake of Mexico; and some of them not a little haunted by the Caymans or West-Indian Crocodiles, a Creature, as hath been faid before, dangerous both at Sea and Land.

The Natives, who as yet hold Possession and Command of it for the moft part, are themfelves generally fortbed into certain Tribes or great Families; all which are Govern'd severally by Chiefs of their own, whom they call Paracoufli, and by reafon thereof are almoft continually in Feud and War one with another.

The Towns and Places moft known in this Province, are 1. St. Helens, feated on or near unto a Promontory of the fame Name, where this Countrey bordereth on Virginia. 2. Fort Charles, or Arc Carolina, built and fo nam'd by the French King, but afterwards ruin'd by the Spaniards. 3. Port Royal, a well frequented Haven, at the Mouth of a River which bearth the fame Name. More within Land there is, 1. Apalache, an old Town of the Natives, formerly a Place of great refort, but now a poor thing of about forty or fifty Cottages; and yet as poor as it is, Pamphilius Narvaez, as before related, when he search'd the Countrey, found the Natives not willing to part with it: for though he took it from them, it was not without some refiftance, and they quickly recover'd it again: and at the 2. nam'd Auto, another old Town of theirs, nine days March from the other, they overtook him, and fell fo reluclantly upon him, that he left not a few of his best Soldiers dead upon the place, and was content himself to march quietly away with the reft. 3. Ochus, a Town confifting of about five or fix hundred Sheds and Cottages likewife of the Natives. 4. Vitacouche, a Burrough of two hundred Houses.

There is also on the the Eastern Shore of this Peninsula, St. Matthew, a Place pos-

S E C T. II.

Jucatan.

Jucatan is a Peninsula, or half-Ifand, being encompass'd with the Sea on all fides, fave one ly to the South-West, where it is joyn'd to Guazata, the farther and more Eafterly Point looking towards Cuba. The knowledge of, when, and by whom this Province was discover'd, is included in that of New Spain, of which some will have it to be a part. The whole Province contains in compafs nine hundred Miles or more, and lies between eighteen and twenty two Degrees of Nort hern Latitude, or thereabouts, the Air somewhat hot, and the Soil not altogether fo fertile as some other parts of New Spain are; but in recompence thereof the People are fo much the more industrious, living for the moft part by Handicraft Trades. Neither is it altogether unfick'd with Corn and divers farts of Fruits, but fides what it hath of Fowl and Beasts, as Geefe, Hens, Deer, &c. particularly it yeldeth plenty of Wax and Honey, by reafon of its frequent Swarms of Bees.

They report fome fpecial things of this Province, as namely, that the People of the Countrey us'd generally, and long before the Spaniards came thither, a certain Ce-
remony of Religion, not much unlike to our Baptism, and which they call’d by a Name that in their Language signifi’d Regeneration, or A Second-Birth; that they obser’d it so diligently, that few or none amongst them omitted to initiate themselves by it, believing, that thereby the Seeds and Ground-work of all Goodness was laid in them, and that they were forti’d by it against the assaults and temptations of evil Spirits; that after they were three or four years old, till they came to twelve, they usually thus Wash’d and Baptiz’d themselves; and that none were permitted amongst them to Marry, that were not first initiated after this manner; that they chose likewise a solemn Day upon which to do this; and that the Friends and Relations (especially the Father and Mother) of the Parties to be initiated, as well as the Parties themselves, always Fasted three days before the said Initiation; and that a great many of the Natives had a Tradition, or general Report amongst them, that of ancient time this Province of Yucatan was posses’d and cultivated by a certain People which came thither from the East, after a tedious long wandering, and many hardships endur’d at Sea, having escap’d the Hands of their Enemies one by the power of the Deity they worshipp’d; who help’d them, and made them to pass securely, even through the Waves of the Sea. All which, if true, seems not a little to confirm the Report which goeth for currant in the Welsh Chronicles, of one Madoc ap Owen, the Son of Cinmerth, a Prince of that Country, who is said to have fall’n upon a far Country this way in his Travels; which he lik’d so well, that having fecur’d to his Companions their safe abode there during his absence, he return’d himself into Wales for more Men; and that he transported thither as many as he could carry in ten Barques full fraught. This he is said to have done about the Year of our Lord 1190. but neither he nor any of his Men were ever heard of since; and the success of the Expedition, it seems, little enquir’d after by the Welsh. However, the Relation seems not altogether incredible.

The chief Towns of the Province are, 1. Merida, in the Navel of the Country, and the Seat of the Governor, twelve Leagues distant from the Sea on either side. 2. Valladolid, thirty Leagues distant from Merida. 3. Campeche, a great Town, containing of about three thousand House’s more, when first conquer’d by the Spaniards; who found such Monuments of Art and Industry in it, as did clearly argue, that the Place had been once posses’d by some People that were not barbarous. It is now call’d St. Francisco, and was surpriz’d in the Year 1596. by Captain Parker, an English-man, who took the Governor himself and some other Persons of Quality with him, together with a Ship richly laden with Gold and Silver, besides other Commodities of good value. 4. Tabasco, by the Spaniard now call’d Villa de Nuestra Señora de Victoria, and commonly Victoria only, in memory, as ‘tis thought, of the first great Victory which Cortez obtain’d over these People at the Battel of Potonchan, as hath been said. 5. Cinta. 6. Potonchan. 7. Salamanca.

All along the Coast of this Country there lie certain Islands, some within the Bay of Gulph call’d Honduras, pertaining to the next Province, as 1. La Zara. 2. La Deconfecida. 3. Verneia. 4. Los Negridos; and some without it, as 5. Zaratam. 2. Pantoja. 3. De Mugeres, or The Island of Women; so nam’d by the Spaniards, who at their first Discovery of these Parts, for a long time together could meet with none but Women. The chief of them is call’d Acufam, commonly Cozamul, and is fifteen Leagues in length, and about five in breadth, and was as it were the Thorow-wfare, or Common Road of the Spaniards, when they first discover’d the Countreys of New Spain: For first here Landed Ferdinand de Corduba; after him John de Grijalva, and others; and last of all the fortunate Cortez. It is now call’d St. Crux.
CHAP. IV.

Guatimala.

Guatimala stretcheth to the Bihmus, or Neck of Land, which, as we said, joineth the Northern and Southern parts of the New World together.

This Countrey is bounded Northward with the Peninsula of Yucatan above said, and part of the Gulph or Bay of Honduras; on the South, with Mare del Zur; on the East and South-East, it hath Castillo Aqua; and on the West, New Spain. The length of it lieth upon the Coast of Mare del Zur, and is said to be little less than three hundred Leagues; but the breadth not half so much, and in some places very narrow. It is generally a fertile and good Countrey in all respects, but especially abounding in Cattle and good Pastures; it is subdivided into seven inferior Provinces or Countreys, which are 1. Chiapa. 2. Verapaz. 3. Honduras. 4. Nicaragua. 5. Veragua. 6. Costa Rica; and 7. Guatimala, specially so call’d: all differing in Language and Customs one from another.

The Bishoprick (as it is now call’d) of Chiapa is border’d on the West with New Spain; on the East with Vera Paz; and on the South with Mare del Zur. It is a Countrey much shadied with Woods, and cho’d replenish’d with many fair and goodly Trees, of divers sorts, and of the largest size, as Oaks, Pines, Cedar, Myrtle, and Cypress Trees, besides others which yield them a good kind of Rozen, precious Gums, &c. also several sorts of Balsam, as white, red, green, and black, not onely pleasant to the Scent, but an excellent Remedy for all manner of green Wounds: the belf of it drops out of the cut Bodies of the Trees; and the worst is pref’d out of the Wood and Leaves.

There are also proper to this Countrey several other kinds of Trees and Plants, as that whose Fruit taftes like Pepper and Cloves, being of a great height; a Tree whose Leaves cure all ulcerated Sores, or the bitings of any poysonous Beast.

There is a sort of Cabbage call’d llantas, which grows to the height of a Tree, so that Birds make their Nefts in them; they are eaten likewise like other common Cabbages.

There is also an Herb with narrow Leaves, which is no sooner touch’d, but it shrinks up to nothing; but at the going away of those which touch it, it obtains its former vigour.

Here are likewise Quails, Ducks, Geefe, Pheafants, Parrots, Turtle-Doves, Pigeons, and the like, in great abundance.

Amongst the several sorts of Falcons which breed in this Countrey, there is one sort which hath one Foot proper to its kind, the other like that of a Goole; it feeds on Fift along the Rivers.

The Bird Toto-Quezall, which is somewhat smaller than a Pigeon, with green Feathers and a long Tail, is taken only for its Tail, which when the Indians have pull’d out, they let the Bird fly again, there being a Law among them, that whofoevers kills one of them, is to suffer death.

The Cranes here are of a dark Gray; the biggest of them have a tufe of Feathers like a Crown upon their Heads.

The
The Birds Guacamayes, which are red and blue, are like a Peruan Goole.

Moreover, the Country yields brave Horses, Goats, Sheep, Rabbets, and Foxes; also wild Dogs, Leopards, Lyons, and Tygers.

The wild Hogs which breed here have their Navels on their Backs, and have no Tails, they smell exceeding strong, and feed together in great Companies.

The Taquatrin, a certain Beast proper to those Parts, hath a Bag under its Belly; in which it generally carries seven or more young ones, and hath also a bald Tail; it creeps into Houses in the Night to steal Hens.

Here is also a certain Beast (whose Name we find not) about the bigness of a Rabbit, and like a Rat, and carries its young ones on its back whensoever it comes abroad.

The Serpents, which are very numerous here, trouble the Inhabitants exceedingly, especially near the Village Kbatepque, where there are such an abundance on two little Hills, that none dares approach them; some of them are very poysfonous, for if touch'd with a Stick, the Poison runs up the same; and whoever are anointed with the Blood of a dead Serpent, die a lingering Death. John de Laet relates, that the Indians took one which carried thirty young ones, which being a Finger long, creep up and down immediately; and the old one, being above twenty Foot long, serv'd the Natives for Venison.

Amongst other Beasts is also the Tuchlambdaquy, or Fortres of the Serpents; it hath a Head like an Adder, thick Belly, glittering Scales, a black Back, sprinkled with white Croffes; at its Tail there grows yearly a Bone, with which it makes a Noise when it flirs; its poyfonous Teeth deftroy those which are bit therewith in twenty four Hours, unless the part which is wounded be held in the Earth so long till the pain be over. Notwithstanding the noise, terrible aspect, and gestures of this Animal, the Indian Hunters make nothing to take the same by the Tail; and wrap it up in Linnen, and carrying it home make it tame. It is able to live a whole Year without either Meat or Drink; its Head when cut off grows to the bigness of a Man's Thigh in ten day's time.
AMERICA. Chap. IV.

No less resolute are the Indians in taking the Ititocas, which is an Ell long, of a crimson Colour, full of black and white Specks, the Bones whereof they wear about their Necks in Head of Chains.

The Ititocas is a Serpent which doth no manner of hurt, though terrible to look upon to those which know it not, having a Bag under its Chin, a glittering Comb on its Head, and on its Back Sharp Bones, which stand like a Saw, and a long Tail: It lays forty Eggs at a time as big as Acorns, of a very good taste, and fits to eat when boil'd: It also lives both in the Water and on the Land.

Here are also many Baboons, which are big and heavy; with ugly Heads, short Legs like a Man, and Tails standing upwards; they eat all sorts of Fruit, but chiefly covet after Wine and Bread; and are so lascivious, that they often sit upon Women: The Females generally bring forth two, one Male, and the other Female. There is also another sort, whole Skins, being red, are full of little Spots.

The ancient Inhabitants of Chiapa (divided into the Chapaneca's, the Zeques, the Zeltates, and the Quelenos) are very Civil and Witry, also skilful in Painting, Singing, Breaking of Horses, and many other Trades.

The Places of more principal note in this Country, inhabited by the Spaniards, are 1. Ciudad Real, pleasantly seated in the midst of a round Vale or Plain, and almost encompass'd with Hills representing the form of an Amphitheatre; also at the Foot of one which stands in the midst of the rest, the City is built. It is a City specially Priviledg'd by the King of Spain, having a Court of Justice, Cathedral, and Dominican Cloyster; of pure and temperate Air, and the Country round about plentifully abounding both in Corn and Fruit, onely somewhat too cold, to produce Lemmons and Oranges; but for Peares, Apples, Peaches, Quinces, Cherries, and the like, they grow here in great abundance.

2. Chiapa, which giveth Name to the Valley aforesaid: It is a Bishopp's See, and famous, it but for one of its Prelates, viz. Bartholomew delas Casas, of the Order of Predicants, who was Bishopp of this City, and his Memory justly precious amongst the poor Americans at this day, for his Charity towards them, and for the stout and zealous opposition which he made against the Spaniards cruel and inhumane dealings with the Natives at the beginning of their Conquests: by which at last, notwithstanding much difficulty and resistance made by interested Persons of the other Side, he procur'd them Liberty, and an Edict from the Emperor in favor of them; whereby they were declar'd to be a Free People, and not Slaves, and the Spaniards forbidden to use them any longer as such, or to force them to any kind of Labour against their wills, or otherwise than by agreement with them, which Liberty they enjoy to this day; and though the Spaniards are said to give them very small Wages in some places, and for their Work in their Sugar-Mills (which is no small Labor) not above five Reys, or Two Shillings six Pence a Week, for the Maintenance of themselves, their Wives and Children, yet by reason it is with Consent, and in a Country where all things are plentiful and cheap, their Condition is much better than it was, and the favor which that good Bishop did them, never to be forgotten. It is at present a great and populous City, and lieth almost in the mid-way between the Cities of Mexico and Guatemala.

4. Tecpatlan, the chief of twenty five Villages, said to belong to the Zoquetes. Here the Dominicans have another Cloyster.

The Zeltates possess a fruitful Country, have thirteen Villages planted with Trees that yield Cochenile, being under a Common-wealth Government.
The chief Place of the Quelenes is Copanavatzia, where there is good Cheefe, and store of brave Cattel: The River Chiapa gliding through the midst thereof, flows itself in the Northern Ocean. In this part of the Country are Beasts not unlike Apes, with long Tails, which they wind about the Legs of those whom they find swimming and so pull them under Water; wherefore they go to Swim take Axes along with them, to cut off their Tails.

The Water of the River Blanco is clear and wholfsom, running for the most part through Rocky Grounds, which nevertheless are overspread with Trees.

In the highest Ground of Chiapa, a League and half from the City Real, spring clear Fountains, whose Water ebbs and flows every six hours.

Near the Village call’d Axica is one which runs three years together, though in the driest Season, and is dry three years, though it Rain never so much.

Not far from the Village Cinacatan is another Spring, whose Water cures several Sickneses, but kills all Birds and Beasts which drink of the same.

Here are likewise divers Baths.

The Rivers which run out of the Valley Chiapa, fall into two great Pits.

Near the Village Bartholomew, in the Province Quelenes, is a strange Cavern, out of which by the throwing of a stone into the same, are heard mighty noises like claps of Thunder.

Not far from the Village Chicocomoco, appears a Cavern, in which is a great Plain on one side, and a standing Lake, whose Water is like Sand, on the other.

The Spaniards, if they wanted not Slaves, might dig good store of Gold, Silver, Copper, Lead, Tin, and Quicksilver, out of the Mines on the Mountain Ecatepeck, which is in nine Leagues compass: The Wind blows so strong after Sun-rising, that no Man is able to travel for it, but in the Night.

**Sect. II.**

**Vera Paz.**

Vera Paz, or The Country of True Peace, was so nam’d by the Spaniards, as they say, because it was never conquered by the Sword, but reduc’d to Obedience only by the Preaching of the Dominican Fryers. It is bounded on the West and South-West with Chiapa; on the East with some part of Guatimala and Honduras; and on the North with Yucatan. It contains about thirty Leagues in length, and almost as much in breadth, being a woody and mountainous Country for the most part, yet well distinguisht with Valleys and lower Ground. It is much subject to Rain, which is said to have for nine Months of the Year almost continually: by reason whereof the Country, being otherwise hot, is much annoy’d with a kind of Mosquit, or great sort of Gnats, which spoil the Fruit very much, and are otherwise not a little trouble to the People. Moreover, there happen oftentimes terrible Earthquakes and Storms, with Thunder and Lightning.

The chief Commodity of this Country, are a kind of Amber, which some call Liquid Amber, which drops from divers of their Trees, and is said to be a Commodity very precious, and of much use; Mastic, Sanguis Draconis, Gum Anime, Sarsaparilla, China-Wood, and divers other Medicinal Drugs, which it affordeth in great plenty. The Woods afford a sweet smell, and the Trees in the same grow a wonderful height.

The Canes which grow here, being a hundred Foot long, and proportionably thick, serve for Timber.
There is also a hard wood call’d Iron-Wood, either from its hardness or colour, or both, which never rots.

The abundance of Flowers which grow here afford nutriment to innumerable swarms of Bees, which are about the bigness of small Flies. Their Honey, which is somewhat tart, they hide in the Roots of Trees, or in the Earth. Another fort, which is made by the Wafps, bereaves those that taste of their Senes.

The noted Beasts in this Country is the Danta, which resembles a Mule, hath no Horns, but Ash-colour’d long Hair, short Neck, hanging Ears, thin Legs, with three Claws before and two behind, long Head, narrow Forehead, little Eyes, a Nose hanging over its Mouth, little Tail, sharp Teeth, and a Skin which is six Fingers thick, and scarce penetrable by any Weapon. This Beast is taken in Traps, Holes, or else with Dogs, which he often kills when hunted towards the Water. They say that this Beast taught Men first to Let-blood; for if it be too full of Blood, it pricks it self against a sharp Cane, and stumps up the Orifice again very carefully. The Flefh thereof is good Meat, as also that of the Roff-Lyons, which in the day-time feep on a high Tree, where they are shot by the Indians.

The Tygers are much more dangerous to be taken; yet the Indians Hunting them, eat them in head of Beef; and also through all New Spain.

The Bears, which make the Ways very dangerous to travel, have black frizzed Hair, broad Tails, Feet like Mens Hands: but since the Indians have made use of Guns, which they learn’d from the Spaniards, they have much lessen’d the number both of Bears and Tygers.

There are likewise many Leopards, Apes, and wild Goats (whose Skins serve the Natives for Drums) Hogs, and Armadillo’s.

Amongst their Fowls, are Eagles and Parrots.

The Country is so well fto’d with Water, that in three Leagues space are above thirty Rivulets, and as many Fountains.

On the Mountains grow great quantities of Saffarilla, Mechoacan, and the China Root, which being yellowish hath several Saffron-colour’d Knobs on the top. The Saffarilla grows with many Stalks, creeping along over the Ground; the Body thereof is tough and full of Prickles, the Leaves broad and sharp at the ends, and are of a bluish colour on one side, and green on the other, and bear Clusters of Flowers, which close like Buds, and are first green, next vermilion-red, and lastly blackish: within are two hard Stones, which inclose a white Kernel, by the Indians call’d Japaucanga.

The Bay Golfo Dulce, which pours its muddy Water into the Sea, feeds the great Fith Monati, and a great number of Crocodiles.

Several Rivers abounding with Fith fall also into the same, having their Banks set all along with Trees, in whose Boughs, joyn’d together on the top, those fcor of Birds make their Nefts which prey on Fith.

The Women in this place are much shorter Liv’d than the Men, so that there are often thirty Widowers to one Widow. Women with Child are Deliver’d by themselves in the High-way; and from thence they go to the next River to wash themselves and the Child.

As for any Towns or Places of much Traffick or Note, inhabited by the Spaniards, we find not any nam’d, save only St. Augufines; near unto which there is said to be a Cave and Fountain within Ground; which converts the Water that falleth into it out of several lefser Springs, into a kind of Alabaster or Stone, perfectly white, and fashions it likewise into Pillars, Statues, and other artificial Forms of very curious Workmanship, as Last reporteth.
Honduras hath on the South, Guatimala above said; on the West, a certain Bay, or Arm of the Sea, which they call Golfo Dulce, from the abundance of fresh Waters which run into it from all Parts; on the North and North-East, the Atlantick Ocean; and somewhat to the South-East, Nicaragua. It contains in length, viz. from East to West, Coafling along upon the Sea, about a hundred and fifty Leagues, and in breadth eighty. The Countrey is rich both in Corn and Pasturage, being laid to be very much advantage'd that way by the constant overflowings of the Rivers, which are very many, about Michaelmas-time, and which the People order so well, that they water their Gardens, and exceedingly fertilize the whole Champain, or lower part of the Grounds by them.

The fruitful Valleys of this Countrey were anciently very well inhabited, till vast multitudes of the Natives were deftroy'd by the Spaniards Cruelties, of which the Bifhop Bartholomeo de las Casas, in his Letter to the Emperor Charles the Fifth, gives this Relation:

"The young Children (faith he) they murder'd, beating out their Brains against the Stones; the Kings and Princes of the Countrey they either forch'd to death, or threw them to the Dogs to be torn in pieces; the poor People they drove into their Houses, and then set them on fire; those that remain'd were condemn'd to the greatest flavery imaginable, being us'd in stead of Mules and Horses, and having greater Burdens laid upon them than they were able to carry, in so much that thousands of them fell down dead under them; some out of delfpair running into the Woods were famish'd; after they had kill'd and eat their Wifes and Children for Hunger. In this one Province onely they massacred above twenty hundred thousand Men, and amongst others, Persons of Quality, which had civilly entertain'd them: nay, they tortur'd the poor innocent Natives all the ways they could possibly invent, onely to know of them where their Gold lay; particularly Diego de Valsafo spar'd none that ever fell into his hands; in so much that in a Moneths time above ten thousand were flain by him: He hang'd thirten Noble-men, to twelve of whom he gave the Denomination of The twelve Apostles; and the chiefeft of them he call'd in a derision, Jesus Christ. Some they suffer'd to starve to death, with their Heads compres'd between the cloven Barks of wild Vines; some alo they buried alive, and leaving onely their Heads to appear above Ground, bowl'd Iron Bullets at them, and forc'd them to eat one another; besides infinite other hellish Cruelties, too horrid and dreadful to be recounted."

This Countrey produces much Maiz, Wheat, Honey, and great Calabashes, from whence the first Discoverers call'd that Sea Golfo de las Ymeras, because they met with abundance of Calabashes, floating on the Water, which at Santo Domingo bear the Name of Ymeras.

This Countrey is water'd by three Rivers, the first Chamaucum, which glides by the City San Pedro; the second Ilva, inhabited on both Shores; the third Lagoa, the Grounds adjacent to which would prove very fruitful, were the Inhabitants not too lazy. In stead of a Plough they use a long Pole, with two crooked Staves at the end, one bent downwards and the other upwards, with which they cut and turn the Earth. The Natives feed on several Roots, Flesh, and Vermine.

As a 1

As
At their Feast they make themselves Drunk, with a Drink made of Honey, Noble-men heretofore onely drinking the Liquor of Cacao; but of late it is common, and made by all People, though never so mean. They speake several Languages, the chiefest whereof is that of the Chontales, a Salvage People. They divide their Year, call'd Jalvar, that is, Passing, into eighteen Moneths, and each Moneth into twenty Days. They formerly measur'd the Year by the Nights, and began the Year forty days sooner than the Europeans.

The Towns in this Province are 1. New Valladolid, by the Indians nam'd Conoyagua, lying in a pleasant Valley under a temperate Climate. The Cattell brought hither from Spain increase exceedingly. The Silver-Mynes are also so well stor'd, that they keep the Melting-house in the Town always employ'd.

The Governor of this Place hath his Residence next to the Treasury-Chamber.

Anno 1588, the Bishop's See was translated hither from Truxillo: Nineteen years before which Francisco de Monteis sent his Lieutenant Alphonfo de Cacenes thither, to build a Village half way between the Southern and Northern Ocean; who accordingly erected the Town Santa Maria de Conoyagua, near a River navigable for Canoes, which disembogues in Puerto de Cavallos. The remaining part of the Way to the Haven Ponofea being passable for Carrs (which was a means to prevent many Inconveniences which us'd to happen to Travellers on the Way between Panama and Nombre de Dios) the Spanish King was so much concern'd at the first proposal hereof, that he sent the famous Surveyor Baptifia Antonello thither, and the rather, because he received information, that the new Way, along which they carried the Merchandize from Peru, Mexico, and other Countreys along the South Sea, lay very pleasantly, by reason of the brave Vineyards, Corn-Fields, Fruit-Trees, Pastures, Streams abounding with Fith, Herds of Deer, and Covy-Warrens; yet Antonello meeting with many troubles, would not undertake the Business.

New Valladolid is adorn'd with a great Church, a Cloyster, belonging to the Monks De la Merced, and handfom Streets.

2. Thirty Leagues Westward from this City lies another call'd Gratias a Dio's, begun by Captain Gabriel de Royas, Anno 1530. that so he might be near the Gold-Mines: But because the Natives kept the new Inhabitants in continual alarm, and daily Storm'd the unfinished Fortifications, Royas was necessitated to leave off building any farther, the rather, because none came to his assistance from the neighboring Garrison.

Six years after Gonzales de Alvarado undertook this Work, and built the City on a Rocky Mountain; which, though otherwise barren, produc'd lufty Horses and strong Mules.

3. San Pedro, though lying under a hot and wholsome Climate, us'd formerly to be a brave City of Trade; but it is gone much to decay since Golfo Dolo hath been discov'd, because from that Bay the Commodities are carried in Barques up into the Countrey.

4. The Village Juan de Puerto de Cavallos, inhabited by Factor's and Moors: It receiv'd that Denomination, because not far from it several Horses were forc'd to be thrown over-board in a Storm. Though it be but ill fortifi'd, yet it hath an exceeding large Haven. Captain Christopher Newport arriving here Anno 1591, found two hundred Horses, and in them a considerable Booty left, notwithstanding four Ships richly laden had lately fet Sail from thence.

Six years after Newport, Capt. Sherly re-took the Place, and leaving the Haven open for Pyratts, Alphonfus Coriado judg'd it convenient to remove the Trading Place to Amatique; he built the Village Thomas de Castilla, and fortifi'd the same against all manner of Assaults.
Behind Cavalllos lies the Valley Naco, which is exceeding fruitful, being situate between high Mountains, where formerly was found plenty of Silver.

3. Eastward from Cavalllos appears the famous City Truxillo, near a large Bay, fecur'd from all Storms by two Cliffs, full of Trees; the Mouth of the Haven call'd Joan Gil, is above two Leagues broad, and receives two Rivers, one from each side of the City: The Stream Quaimarette flows Eastward, and the River Antonio Westward, both abounding in Fish. The Country round about produces abundance of all sorts of Provisions, and chiefly abounds in Grapes, which are gather'd twice a year: Eight days after August they cut their Vines, which afford them ripe Grapes again in October; they have two Harvests of Corn; also Lemons and Oranges are very plentiful: The Cattel brought hither from Spain are exceeding'd to an incredible number.

Truxillo it self lying on a steep Mountain, is defended on that side which respects the Sea, with a thick Wall of fix Foot high; between which and the Haven are many brambly Buffes, which prevent the access to the Wall, onely a narrow and steep way leading up to the City, which hath a strong Gate, guard'd with two Brafs Guns, and sufficiently Fortifi'd to oppose an Enemy. The Eastern Cliff, which bends before the Haven is call'd Puenta la Rey, on which stands a Houfe with a high Beacon: Beyond the Wall Eastward, near the Haven, is a Ship-yard, before which stands a large Wooden Cross: The Cattel in which the City Store is kept, joynts to the Wall, near unto which, within the Town appears St. Francis Church: but the Cathedral call'd Eglæsa Mayor, is seen above all other Buildings: The Houses cover'd with Palmite-Leaves, have Walls of Pleited Buffes, Plaifer'd over within and without: Behind the City, where it lies open, are exceeding high Mountains.

Anno 1576. the English falling on this strong Place, carry'd a rich Booty thence; after which, Capt. Anth. Sherly and Capt. Will. Parker ventur'd once more on the fame, but being discover'd by the Centinell, were forc'd to Retreat, not without a considerable los' : When not long after, Captain John Van Hoorn a Hollander, attempting the fame, had much better success; for he Leighing Anchor for Pernambuco, with four Frigats, three Ketches, and a Sloop, set Sail to Truxillo, where arriving, lay close before the City with his four Frigats, which fired very fierceley on the Town; the Inhabitants of which not being idle, kill'd three Men in one Ship, forc'd her to fall farther off from the Castle: Whilst the Ketches and Sloop went about a Gun shot Westward beyond the City, towards the River Antonio, where they Landed two hundred and fifty Soldiers, which march'd with all speed up the Hill, where the Castle lay which they Seal'd at Noon-day; the Besieg'd being provided with seven Guns, shot, and threw Stones continually amongst them, yet were forc'd to Retreat from the Dutch Hand-granado's: During the storm, the Admiral himself Landed, but before he came out of the Boat, the foremention'd Soldiers had made themselves Masters of the Fort, with the los' of one and one-half Men, and were busie Pillaging all places they came at, and carrying their gotten Booty to a Watch-houfe near the Castle on the Shore; when on a sudden a Fire happen'd in the East part of Truxillo, which increas'd in such a manner, that in few hours two third parts of the City lay in Ashes; every one then had enough to do to save themselves, yet for all the haffe they made, several Hollander's were kill'd at the blowing up of the Magazine, and most of the Booty loft by the Fire; infomuch that they carry'd but two hundred thirty nine Skins, fix Bales of Indigo, eight hundred and twenty Pounds of Sarsaparilla, seven Brafs, and three Iron Guns, four Clocks, and some few rifles with them; having before made an agree-
agreement for twenty Pound of Silver, with the Governor Joan de Miranda, who inform'd them, that they had not the least knowledge of the Hollander's Fleet, till the Evening, when the Beacon on Punta La Rey was fir'd: Moreover, that the City was inhabited by two hundred Spaniards, and as many more Mulatoes and Moors; and that the Trade thereof was much gone to decay, because there had been no Gallies there in two years before.

Twenty seven Leagues from this City lies the Village Jorgo de Olancho, where four thousand Spaniards force Tribute from sixteen thousand Indians, who polishes much Gold.

Sect. IV.

Nicaragua.

Nicaragua is a Country of this Province, border'd Northward with Honduras; on the East, with the Atlantick Ocean, and part of Veragua; on the South, with Mare del Zor; and on the West, with Guatimala, being call'd by Diego Lopez de Salzado, The New Kingdom of Leon, and comprizing several little Territories, as Niquete, Nequeteri, Mabhyth, Deria, Mafaya, Mandigua, Cacobasque, Cepoceo, Los Micos, Madira, and the Contales. It hath few Rivers in it, the want whereof is supply'd by a benefit of a great Lake, in the midst of the Country, call'd by the Spaniards, Laguna de Nicaragua; containing, as is suppos'd, above one hundred Leagues in compass. It empties it self by the Port of St. Juan into the Atlantick or North-Sea, but reacheth as far as the South or Mare del Zor, at least within a very few Leagues; and from whence some Spanish Captains are laid to have made a passage, though with much difficulty, into the Lake, and from thence to the North-Sea. It is abundantly well stor'd with good Fish, but withal much haunted with Crocodiles; and the Country about it is plentiful in all things, especially Cattle, Cotton-Wool, Sugars, and all kind of Fruits: Amongst which, the chiefest is the Zeiba, which is of so great a thickness, that fifteen Men holding Hand in Hand, can scarce encompass the same. The Callabafies ripen here in fourteen days time: The Sea along the Coast, breeds Whales and other Sea-Monsters, which are often seen above Water.

The Inhabitants of this Country, (except the Contales, which live on the Mountains, and maintain their old Salvage Customs) have for the most part learnt the Spanish Tongue and Manners, and exercise themselves in all sorts of Arts and Sciences, especially in Working of Silver, making of Clothes, Wax-Work, and the like: From the Mountains they gather Balsom, Liquid-Amber, Turpentine: They also drive a great Trade in Cotton, Skins, and several sorts of Provisions, to Panama, and Nombre de Dios.

The Lake Laguna de Nicaragua, which hath a hundred and seventeen Leagues in Circumference, and round about inhabited, is by three Leagues of Land separated from the South-Sea; and discharges its Waters into the River Desaguadero, which falls into the Northern Ocean. Alphonso Calera, and Diego Machea de Zufote, were the first that Sail'd out of the forementioned Lake into the Sea, not without many dangers, by reason of the great Water-falls, call'd Rondales, which fall into the River Desaguadero, and forc'd them often times to draw their Barques over the Land.

The chief City is, t. Leon, which is surrounded with Woods, and lies close by the Lake; hath a great Church, five Cloysters belonging to the Monks, de la Merced, several Hoults for the King's Officers, and a hundred and twenty thousand Families.
lies of Indians which pay Tribute. Three Leagues beyond Leon appears a high spiry Mountain, from whole top, both Morning and Evening, riseth a mighty smoke, and sometimes cafts out great sulphurous Stones over the neighboring Fields, and on a sudden mighty Flames. A Dominican Monk, in hopes to get some melted Gold out of its burning Mouth, went up the same with four of his Fraternity, and carry'd an Iron Chain and a Kettle, which were no sooner let down into the hole, but they were immediately melted; yet not so discourag'd, they resolv'd to venture a second time with stronger Materials, which nevertheless had the same, or rather worse event; for the Fire flew out in such a manner, that the Dominicans sadly scorched, had enough to do to escape with Life, since which none durst presume to approach the same.

But besides the Episcopal City Leon, Erected by Franciscus Fernandez, 2. Granada acknowledges the same Builder, and lying also on the shore of Laguna de Nicaragua, is adorn'd with a Castle, Church, and several Sugar-Mills: Not far from it lie the small Lakes Masaya and Lindiri; the first which is inclos'd between exceeding high Mountains, covers the foot of the burning Mountain Masaya; the other falls into Laguna de Nicaragua, near which is the smoky Mountain Munbacho, surrounded with Fruit-Trees.

3. & 4. The Towns Jean, and Neva Segovia, which are not far from thence, are of little consequence.

5. Realdo, this is, as it were, the Chattam of America, being a place on the South-Sea, where the King of Spain hath all his Ships built that are made of American Timber, and inhabited by few or none but Shipwrights, Mariners, and Men of that kind of Profession.

8. Cartago, forty Leagues distant from Nicoya, and lying almost in the midit of the Isthmus, or Strait of Darien, equally distant both from the North and South Sea; on both which it is said likewise to have a convenient Port or Haven for Shipping.

The Spaniards, when first they Landed here, call'd this Countrey Mahometts Paradise, because of its exceeding Fruitfulness. The Cacao which they use here in stead of Money, is not unlike the Stone of an Almond. The Inhabitants, in stead of using a Steel and Flint to strike Fire withal, rub two pieces of Wood together so long, till one of them is kindled; and burn the Boughs of Pine-Trees in stead of Candles. Amongst the several Languages which they speak, the Mexican is the chiefest: Amongst their Recreations, Dancing is principal, which is perform'd after a very strange manner, for they meet sometimes two or three thousand together, according to the bigness of the Province, in a spacious Field, which is made clean before that purpose: He that leads the Dance goes backward, and with many strange Gestures, turns himself about, with which the rest, following four and four together in a row, imitate, whilst their Tambores beat on hollow Instruments, and fing Songs, which are first answer'd by the Ring-leader of the Dance, and then seconded by the whole Company, each of them waving a Fan or a Calladofe, and being all adorn'd with Plumes of Feathers on their Heads, and Strings with Shells about their Arms and Legs; they also act several antick Tricks, the one, the blind Man, the other, the Cripple, one feigns himself to be deaf, the other makes a wry Mouth, one cries, and another laughs, whilst others drink Healths in Chocolate, which continues till Midnight.

A King of this Countrey in former times us'd to feed the Fith Manat with Bread, in the Lake Guanabo, where it would appear as its being call'd Matto, Matto, which signifies
signifies Noble-minded, and oftentimes carry eight or ten Boys on its Back from one side of the Lake to the other; but being shot by a Spaniard with an Arrow, never appear'd again.

There is likewise a black Beast in this Country call'd Cacu, resembling in some things a Hog; it hath a hard Skin, little Eyes, open Ears, cloven Feet, short Nose, and makes such a terrible noise, that it affrights those which hear it.

No less strange and wonderful is the Fox-Ape, which hath two Bellies one under another; in the lowest of which it carries its Young, which are never brought into the World till they are able to shift for their own Food. It hath the Body of a Fox, Feet like a Man's Hands, and Ears like a Bat.

It will not be amiss before we conclude with this Province, to give you a Relation of the Difficultie which happened Anno 1527. between the Spanish Commander Francisco de Monteio and the Nicaraguan Cacique Alquinotes, who being a hundred and ten years old, told him, "That before the Spaniards arrival there, great numbers of his Soldiers perished after a strange manner; for after having vomited abundance of Worms, they fell down dead on a sudden: those that escap'd the Contagion differing amongst themselves, made two Parties, which twice Engaging with one another, each of them lost above a hundred and fifty thousand Men.

Yet both these Plagues were no ways to be compar'd to the Slaughter which the Spaniards had made amongst them.

About the same time an Italian, call'd Hieronymo Bonzo, Lodging with a Nicaraguan Noble-man that understood the Spanish Tongue, was thus set upon by him: What do not (Oh Christ) the Christians do! they no sooner get their Foot into an Indian's Hut, but they commandingly call for Maiz, Honey, Winter-Clothes, Gold, Silver, and a Woman to cool their lustful desires: Certainly there is nothing more vicious on Earth. To which Bonzo gave him this Answer: The wicked Spaniards commit oftentimes unseemly things. The Indian again suddenly retorted, saying, Where are any such Men to be found as good Spaniards? I have never known any but wicked Villains. To which Bonzo said, Why have you made place for them on Nicaragua? Which was thus reply'd to by the Noble-man: All People round about took Oath on the first News of the Christians arrival, to hazard all, and fight to the last Man, before they would be under the infupportable Yoke, with which they had heard other Countreys were oppress'd with by them. To which purpose they made ready Bowes, Arrows, Lances, Stones, Clubs, and other Weapons of War: But when it came to the trial, the Spaniards Horfe, of which they had never seen the like, struck such a terror into the Indians, that they fled, and sent two Agents to Monteio to desire Peace; but their Design was only to gain time, that they might gather new Forces, to venture a second Encounter; which prov'd as fatal to them as the first. Then desiring Peace once more, they gather'd all that were able to bear Arms, and swore one to another not to flir a Foot; and which made a Law, That whoever did shrink should be kill'd immediately: But the Women being inform'd hereof, begg'd that they might rather suffer under the Spanish Yoke, than be torn in pieces by their Dogs, or kill'd by their Bullets and Swords, alluding, that they were not able to refist the Spaniards; and entreated them, that if they were resolv'd to go on with their first Design, they would first send their Wives and Children to the other World, that so they might not fall into the hands of the merciless and bloody Christians: Whereupon most Voices judg'd it convenient to make use of the Opportunity, and to submit to Monteio. But his cruel dealings made some to contradict that Determination, for which they paid dearly; for not onely they, but their little Infants, were put to the most cruel Deaths.
"Deaths imaginable, which made many of them also to lay violent hands on themselves.

**Sect. V.**

Costarica.

*Costarica* borders on the East with *Veragua*; on the South and East, with the Sea; and on the North, with *Nicaragua*. The Countrey itself is barren and mountainous, whose Inhabitants were valiant enough to Encounter with the Spanish Forces, being unwilling to lose their former Priviledges.

This Coaft was discover'd first by *Christopher Columbus*, who *Anno 1502*. Sailing up the Rivers *Belen* and *Veragua* with Barques, took much Gold out of the Mynes *Hirna*, but chiefly from between the Roots of Trees which were grown together.

**Sect. VI.**

Veragua.

*Veragua* is bounded on the West with *Costarica*; on the East it hath the Districkt, or Countrey of *Panama*, being otherwise waf't on all sides by the Sea. It hath its Name from a River of great note in this Traft, by which it was first discover'd. The Countrey is for the most part mountainous, and the Soil outwardly barren, but recompensing all defects with the abundance of its more inward Wealth, that is to say, in the richness of its Mynes, of which it is said to afford many, and so inexhaustibly rich and good, that the Spaniards here know no end of their Wealth; although by the Scntiencs and untameableness of the Natives, it was a long time, and they met with many difficulties, before they could make themselves Masters of the Treasure.

The chief Towns they have here are 1. *La Conception*, lying at the Mouth of a River so nam'd, and the Seat of the Governor.

2. *La Trinidad*, upon the Banks of the fame River likewise, but down towards *Port Beleno*, and about six Leagues Eastward of Conception.

3. *St. Foy*, twelve Leagues more to the South, where the Spaniards melt their Gold, and caft it into Bars or Ingots.

4. *Carlos*, a Town they have upon the Coast of *Mare del Zur*.

5. *Philippins*, another on the West of *Carlos*; both of these seated upon a large capacious Bay, before which there lie certain little Islands, to the number of thirty or more, which the Spaniards are said to have wholly dispeopled long since, by forcing the Natives over into the Continent to work in the Mynes, as usually they did before the Emperor's Prohibition: but now they use Slaves or *Negros*, which they buy for that purpose from *Guinee* and other Parts.

**Sect. VII.**

Guatimala, properly so call'd.

*Guatimala*, specially so call'd, hath on the West the River *Xicalapa*, which divides it from *Veras Pacas*; on the East it is bounded with the Countrey of *Nicaragua*; on the North, with *Honduras*; and on the South, with *Mare del Zur*. This...
This Country was conquer'd by Peter de Alvarado, Anno 1525. It is, by reason of its neighborhood with Vera Paz, not altogether clear of Mountains, but otherwise well water'd with Rivers, and enrich'd with fair and fruitful Valleys, which afford not only good Pasturage, and many great Herds of Cattel, but likewise good store of Wheat, Maize, and other Fruits of the Earth. Great plenty of Cotton-Wool is generally both here and in the other Provinces, viz. Vera Paz, Chiapa, &c. some Medicinal Woods likewise, and Liquors, and absolutely the best Sulphur in America. The People are generally tractable and well dispos'd, both in point of Religion and civil Government.

The Towns of chief note are 1. Guatimela, now call'd St. Jago de Guatimela since the re-building thereof; for about the Year 1586. it was almost buried in Ashes, which one of the neighboring Mountains, for the space of six Moneths together, continually belch'd out in such fearful quantities, that many People were slain, the old City deferted, and a new one built in another place. The day before this sad Accident hapned, the neighboring Mountains were observ'd to shiver, and a great noise was heard from under Ground; which amazing the Indians, the news thereof was carried to the Bishop, Francisca Moroquin, who narrowly enquiring into the Causes of these Accidents, and what they might portend, found that a sad Event would suddenly follow, as accordingly it did; for about midnight on the eighth of August, Anno 1541. such a mighty store of Rain fell, as if the Clouds had been all dissolv'd into Water, which came rolling from the Rocky Mountains with such violence; that it wash'd down great Stones, which carried on by the strength of the Water against the Houses, beat them down; and none could have seen how they were ruin'd, had not the mighty flashes of Lightning, follow'd by terrible claps of Thunder, lighted the Night. Some instantly deserting this miserable place, fled up into the Country, and there built a new Guatimela (as above-mention'd) fur-nam'd St. Jago, three Leagues farther towards the East, in a Valley through which flow two Rivers, between two Vulcans, or smoaking Mountains; which sometimes vomit forth terrible Flames, mix'd with dreadful Thunder-claps, Ashes, and great Stones, info much that the Ground all about it; which is exceeding fruitful, seems to move. There are many of these Vulcans in several parts of America, as namely at Acrequias in the Kingdom of Peru, at Puebla de los Angelos, in the Province of Tlahuca above-said, a Mountain of so great height, that they are fain to go little less than thirty Leagues turning and wind before they can reach the top of it, and others in several other places. They are generally Mountains of great height, and running sharp upwards, but at the top containing some quantity of plain and level Ground; in the midst whereof is a Pit or Hole, out of which abundance of Smoak and fiery Sparkles are vomited almost continually; and so deep, that they are suppos'd for the most part to reach to the very bottom of the Mountain. Some of these Vulcans cast forth neither Fire nor Smoak, yet are clearly seen to burn at the bottom with a quick Fire, and which is so extremely hot, that it instantaneously melts Iron, or any other Metal that is cast into it, as by experience hath been found: for some conceiving that the Matter which maintains these Fires within the Bowels of the Earth so long together, can be nothing else but melted-Gold, have endeavour'd several times to extract and draw it forth in certain Vessels of Iron and Brass, which they have caus'd to be let down into the bottom of the Vulcan or Pit, by long Iron Chains made on purpose: but, as we said, the extream heat and force of the Fire below always melted them before they could be drawn up again, and by that means hath render'd all such Attempts frustrate. In this Town, now call'd St. Jago, reside above six hundred Spanihs Commanders,
manders, and more than twenty five thousand Indians which pay Tribute. They have also a brave Church and two Cloyfets, one belonging to the Dominicans, and another to the Order La Merced, and likewise a noble Hospital. Nor far from thence is a place call'd Xezoles, where there are Orchards of Cocoa, two Leagues in square, each of them producing yearly as much as fifty thousand Men are able to carry. They reckon the Cocoa by Contels, which is the number of four hundred; by Xequpiles, of eight thousand; and by Carga's, of twenty four thousand. In this County is a Mountain, whose top smoking continually consumes by degrees, and oftentimes covers the neighboring Country with Ashes. The Water which flows from the same differs very much, for some of it is wholesome and fit to drink; some foul and stinking, and some turns Wood, if laid in the same, to Stone. Here is also the Beast whose Head is highly esteem'd for the Bezaar Stone, which it carries in the same. Here is likewise a little Bear, which in stead of a Mouth, hath a long Nose with a round Hole in it, and a hollow Tongue, with which it ciucks Honey, and disturbs the Nefts of Pismires. The Women in this Place make curious Earthen Ware, colour'd either red or black with the Mud of two several Brooks. The Indians call'd the boiling Fountains in this County Hell, because they bubble up a Bowes-hight high, and make the River Caliente, which, notwithstanding it hath pass'd half a League through a wide Channel, retains its exceeding heat. Not far from it lies a Stone, which having a Crack in the middle, sends forth a thick Damp, and against bad Weather a thundering Noise. On the Mountains grow exceeding large Trees, epecially Oak. Here Pismires which are of an extraordinary bigness, are brought to Market amongst other Provisions.

2. St. Salvador, forty Leagues distant from Guatimala Eastward, and seated upon the River Guachapa, and having about it a small Territory, which by some is accounted a distinct Country or Province.

3. Acapulca, a Town of the Natives, situated at the Mouth of the River, and being as it were, the Port-Town to St. Salvador.

4. Trinidad, a Town of great reftort, being the greatest Empory and Place of Traffick for all sorts of Commodities, betwixt the People of New Spain and those of Peru.

5. St. Michaels, two or three Leagues distant from the Bay Fonfeca, upon the South Sea.

6. Xeres de la Frontera, on the Confines of this Province, towards the Borders of Nicaragua, besides several Villages which we shall have occasion to mention.

In the middle of a Lake within this Territory is an Island, on which the Indians had a Tradition, That a Man no sooner set his Foot but he died immediately: which Opinion of theirs was chang'd when the Spaniards went thor'her in Boats fulls and return'd safe again, with Relation that they had seen a large Stone Image, resembling a Woman; before which lay the Ashes and Bones of flain People. Round about the Village Guaymoco grow great Ballom-Trees, which afford Timber of fifty five Foot long. From this Village leads a Way to the City Salvado, near which the fore-mention'd River Guachapa runs with so many windings, that the Traveller is forc'd to crofs the same several times before he can come to the Foot of a Mountain which formerly cast out terrible Flames; but now the combustible Matter being consum'd, there appears only a great Hole on the top, with Ashes in a large compass round about it. At the Foot of the same are two Pits, one of which smoaks continually in such a manner, that it stilles all tho'le that approach it; yet the Mountain is well overpried with Cedars and Pine-Trees.

Three Leagues farther lies the Village Nixapa; and not far from thence the
Hill Elmal Pairs, which consists of great Stones and Ashes, wonderfully mixt together: No less wonderful is a Brook which flows in the Night till Morning, and then sinks into the Ground: And in the Countrey Choluteca is another, which hides it self at Noon, and appears again towards Night. The Cavern which formerly produc'd Fire and Smoke, now affords good Water to the Village Curcatan, and City Salvador: Near the Village Tzepoge are five Springs, which call up Allom and Sulphur. The Natives Chontales which speak several Languages, flock to the Village Minilla, to make Offerings; not far from hence are two Pits, one of which is full of boyling Water, and the other as cold as Ice: Moreover, Cocori lies near a high Mountain, on the top of which is a very turbulent Lake.

The chiefest Haven of this Countrey, which lies along the South-Sea, is Bahia de Fonseca, Discover'd by Confalves Davila, Anno 1522, and so nam'd from Joam Rodrigeaz de Fonseca, Bishop of Burgos; In the middle thereof appears the Island Petronella, with nine others, of which four are inhabited by Indians.

The good conveniency of the Haven Fonseca, induc'd some of the Spaniards to make a new Passage from the side of the Southern Ocean, to the Northern, viz: from Panama to Nombre de Dios, designing it to reach from the said Haven Fonseca, unto Puerto de Carelor, which are distant one from the other forty five Leagues; most of it good way, except some over-grown Mountains, which might be made passable with little trouble; to which purpose they built the Town Buena Esperanza, yet nevertheless the Work remained unprosecuted.

There are moreover reckon'd as appertaining to Guatimala, the small Provinces Soconusco, Suchipepec, and Choluteca, the chief of them being Soconusco, to which belongs the Town of Guatimala, where the Spanish Governor hath his Residence; the rest seem to be only small Territories about Towns of the same Name, in like manner as St. Salvador, and St. Miguel before-mention'd.

### CHAP. V.

The Kingdom of Mexico, or New-Spain.

New Spain, the chiefest part of the Northern America, reckons in length from the East-Point of Yacatan, to the place where Mexico lies against Guadalajara three hundred and sixty Leagues; and in breadth from the Northern parts of Panama, to the Southern Ocean, a hundred and eighty Leagues; besides a great part which lies to the Northward, behind inaccessible Mountains and Wildernesse, inhabited by the Tepoecanos, Guachucules, Cacateques, Tecoquinos, and others; and was, before the Spaniards Conquer'd and Dismember'd it, much larger than now it is; for as much as it comprehended the whole Province of New-Galicia, and reach'd from the furthest Point of the Peninsula of Yacatan Southward as far as New-Bificay, and the Confinces of California Northward, containing in length seven hundred Leagues and more, and about half as much in breadth: But since the Conquest by Hernando Cortez and his Followers, the whole Countrey of New-Galicia is taken from it, and made a distinct Government or Audiencia, as the Spaniards call it, of it fell.

The
The Natives of the Countrey are of the Race of the Chichimeca, a Salvage and Wilde sort of People, of the Province of New-Gallicia, especially in the Parts of New-Beliz, living in Forests and in deep Caves under Ground whose Polterity do still at this day much trouble and annoy the Countrey thereafter; notwithstanding all the endeavors of the Spaniards, and the Garrillons which they keep in those parts on purpose to delter them. About five hundred years ago, it appears according to the account of the Mexican Annals, divers Hoards, as they are call'd, of these Chichimeca, weary, it seems, of their Woods and subterraneous dwellings, issu'd out into the more open Air, and fell down in huge multitudes into the Southerly parts of America, which are now call'd Mexico and New-Spain; not at once, but at several times, and under several names, viz. of the Suchimilit, Chice, Tepanteco, Tlascalteco, and others, who, after driving out the People they found in those parts, settled themselves in their room; and though at first every Nation or Company of them, as they came, seiz'd upon some Province apart by themselves, and held it, as it were, in Sovereignty to themselves, without any acknowledgement of any dependence or submission to their Neighbors, or those that were there before them; yet in the Tract of time, and by fortune of the Wars, which the one upon another, they fell under the Government of one King, viz. the King of Mexico, which was the chief City of the Province.

This Kingdom, at the time that the Spaniards first discover'd the Countrey, was Govern'd by a Prince, nam'd Motecuma; one, who by his Valor and good Success in the Wars, had in a few years of his Reign, before the Spaniards came thither, subdu'd the better part of a hundred Cities and great Towns in this Dominion; and held in actual submission to his Government, and Tributary to him, no less than thirty several Casques or petty Princes; every one of which paid him Tribute, and were able upon occasion to bring into the Field an hundred thousand Men: He is said to have been, for his Person, a wise and good Prince, just, affable, and tender of his Subjects good; but by reason of some heavy exactions, which his own Power, and the Practice of his Ancestors before him, gave him the confidence to Impose upon the Conquer'd People, a great part of his Subjects liv'd but unwillingly under his Obedience, and rather by constraint than otherwise: being also further exasperated against him by one barbarous Custom, which the Mexicans frequently us'd, viz. the Sacrificing of Men. Their manner was, whensoever they had any solemn occasion of doing Honor to their Devil-god Vitzilopochtli, as they call him, to send out an Army of Men from Mexico, into some of the subdu'd Provinces, in case they had no Enemies nearer Hand, and to fetch in as many Men as they thought good, to be Sacrific'd, whose flesh likewise afterwards they did eat in a solemn Banquet. This being a busines of their Satanical Religion, and Motecuma a Prince extremely Superstitious and Devoted to the Service of his gods, it is said, that he Sacrific'd commonly, one year with another, twenty thousand Men, and some years, upon extraordinary occasions, not less than fifty thousand: So great and grievous a Tyranny, by the just Judgement and Permi of Almighty God, for their great and unnatural sins, did the Enemy of Mankind exercise upon them. He was likewise much given to Women, but it was only to such as were count'd his Wives; of which he is said to have had no less than a hundred and fifty with Child by him at one time.

The Bounds of this Kingdom at present are thus; on the East it hath a large Arm of the Sea, which they call The Bay of New-Spain, or The Gulf of Mexico; On the West, it hath some parts of New-Gallicia, and Mare del Zuh; on the North, the rest of New-Gallicia, and part of Florida; and on the South, Mare del Zuh again; and
part of Guatimala. It extendeth itself in length from Jucatan South-East, to the Borders of New Galicia Northward, above eight hundred Italian Miles, and in breadth, from Panama to the South Sea, about half so much. It lieth wholly under the Torrid Zone; nor is it a Country generally so mountainous or high feared, as some others of America are but for the most part level or low; yet is it so far’d, (for three parts at least of four, by the cooling Blasts of the Sea, and the Heats otherwise so moderated with frequent Rains, which it hath confluxently three Moneths in the Year; viz. June, July, and August) that the Air is rendered thereby exceeding temperate, and the Climate not unhealthful, especially to temperate Bodies, and such as are never so little used to it. A goodly Countryt is it, of inexhaustible Wealth and Riches, whether we regard the Mynes of Gold, Silver, Brass, Iron, &c. of all which it hath much, and very good; or the Fruits of the Earth, abundance of Cattle, plenty of Corn and Grain, of which they have two Harvests; or any other Commodities and Endowments of Nature, which serve for the enriching of the World. Amongst other things, it affords Caffia, the Fruit whereof is a thing well known, and much commended by the Apothecaries for its use in Physick, especially in Purgations; and removing of all Obstructions of Phlegm, Choler, &c. Such flavor of Balm, Amber, all sorts of Gums and precious Liquors, as no Country in the World is better furnish’d with excellent Perfumes and Physick, than the Kingdom of New Spain.

Amongst the many other sorts of Trees which this Country produces, the most remarkable is their Trunks, of which, there being five kinds, one is call’d Cambeba, from whence proceed the admirable Tincture, commonly known by the Name of Cochinele, which is thus made: On the top of this Tree is found a Worm, which hath the bigness and shape of a great Louise, which fo increases, that in one years time a hundred Trees shall be Rock’d from the seed of one of these Animals. The Worm is self being white, after the Skin is carefully pull’d off, put in cold Water or After, and so dry’d, becomes Cochinele. The best sort of it is to be had in Tlascala, and that in so great a quantity, that no less than five or fix hundred Arrobes of Spanish Measure (each Arrobe is as much as five English Butheles) is yearly Transported thence. The other sort, which grows on the Mountains, and that which is not so carefully gather’d, call’d Chichimeca, Dyes not so well as the right Cochinele. The Tunes also bears a Fruit long and whitish, with a smooth Shell, and full of little Seeds like Figs: The red, which are inferior in taste to the white, colours the Urine red.

The Pine-Apples which grow here differ from the Spanish, for the Pulp is not inclos’d in a Shell: They have a pleasent smell, and a Pulp, which if eaten much of, causes an Appetite, being of a tartish taste; they keep good a long time when Salted.

But much more beneficial is the Cacao, with which Fruit New Spain drives a great Trade; nay, serves for Coin’d Money. When they deliver a Parcel of Cacao, they tell them by five, thirty, and a hundred. Their Charity to the Poor never exceeds above one Cacao-Nut. The chief reason for which this Fruit is so highly esteem’d, is for the Chocolate, which is made of the same, without which the Inhabitants (being so us’d to it) are not able to live, notwithstanding it causes Phlegm and Vomiting to those that are strangers thereto. When the English Commander Thomas Candiff coming into the Haven Guatule, burnt two hundred thousand Tun of Cacao, it prov’d no small loss to all New Spain, the Provinces Guatimala and Nicaragua not producing so much in a whole year. The Trees on which this Fruit grows are divided into four sorts, differing in bigness and shape: all of them are very tender, for
for they will not only grow in no place but on their usual Ground, but cannot endure the cold Nights Storms, or extreme of Heat; wherefore the Cacao-Trees which grow out of the Fruit that falls off, come to no perfection, except in shady and warm Valleys; which is also the reason why the Planters of New Spain plant the great Leafy Tree Cacauquantlbly (that is, The Mother of the Cacao's) near the Cacao-Tree, that it may the better grow under the Shadow thereof; in which manner whole Woods are planted: In the second year it bears Fruit, which is first ripe in January, and again in the midst of Summer. Amongst the four sorts the chiefest is Quathual, of an indifferent height, and full of sharp-pointed Leaves, which are fast to the Boughs without Stalks, and bears a great Flower of a yellowish colour, which falling off, leaves long, tough, and hairy Threads behind them, out of which grows the Cacavently, a Fruit which is oval, heavy like a Melon, of a Saffron-colour, of a fat and thick Juice, a bitterish, yet pleasant taste, and very cooling; being dry'd in the Sun it is thereby made fit to keep; it is likewise highly esteem'd, because the Chocolate is made of the same. Before the Spaniards made themselves Masters of Mexico, no other Drink was esteem'd but that of the Cacao; none caring for Wine, notwithstanding the Soil produces Vines every where in great abundance of it self. But besides the Quathual, New Spain hath three other sorts of Cacao-Trees, viz., Mecaual, pleasant to behold for its height, large Leaves and Fruit; the next is the Xochucual, which is less than the former; and lastly the least sort, which is call'd Halcacabual. The Fruit of these four sorts of Trees, though differing in shape, yet is all one in power and operation.

The Spaniards to make Chocolate mix Maiz (by the Mexican's call'd Tlaalli) either whole or Ground, or boil'd before with Chalk. Moreover, they put the red Kernels also in the Drink, which grow in the Fruit of the Achiate-Tree. Of the Kernels, which are dry and cooling, boil'd in Water, and still'd till it comes to a Pap, they make Cakes, which mix'd with the Chocolate, gives it a cleansing power, and takes away all tarts that cause vomiting.

The Pepper Mecasschite, which grows creeping along the Earth, with long and fragrant
fragrant Leaves, round Stalks, hairy Roots, and three long Cods which shoot upwards. This Pepper tempers the over-cooling property of the Chocolate. Lastly, it confifts also of *Xochinacatl*, *Tiltsxohte*, and the Rozenifh Gum, *Holli*. The *Xochinacatl* is a Tree with small Leaves, and great Flowers hanging on long Stalks that bend downwards, within of a purple, and without of a dark-green colour, of a sweet fnell, and resembling an Ear; and this Flower also gives a pleasant taffe and whollom operation to the Chocolate. The *Tiltsxohte* runs up to the tops of Trees like Ivy, the Flowers, of a darkifh brown colour, cleanse the Nerves, strengthen the Brain, and take away the rawness of the Stomach. The *Holli* drops out of the *Holynabйте*, a smooth barking Tree full of Moifture, which at firft appearance is white, then yellowifh, and laffly black, which kneaded into round Balls and Roasted, is a remedy against a Loofnefs and forenefs of the Bowels.

The Natives of the Countrey are very ingenious in divers mechanical Arts, especially in making of Feather-Pictures, a piece of Curiosity wherein they are held to be incomparably, or rather inimitably excellent; and fo induftrious at it, that although the Americans generally are not a People over-much addicted to any kind of Labor or Study, yet at this they will fit a whole day together, without either Meat or Drink, alone out of a natural affection they have to the Work, and a desire to be excellent in it; The Countrey indeed affords them great variety of Birds and other Fowl, of moft rare and exquifite Colours, which is a great advantage to their Skill, and helps much to the accomplishment of their Work. They Paint likewise very critically upon their Cottons; and are held to be generally the beft Goldsmiths in the World; of moft perfect skill in the purging and refining of all forts of Metals, but especially of Gold and Silver: And yet in other things so strangely fapid and ignorant, that when the Spaniards firft appeared amongst them, not a few of them (as is reported) took the Horse and Man both for one Creature; and when the Horfe Neighed, they would enquire very seriously what he said.

There are likewise many fair Lakes in this Province, but the principal archeofe of Chapala and Mexico; the former of which is in the more Northern parts of the Kingdom, towards the Borders of New Galicie, and is chiefly famous for the abundance of good Salt that is yearly made and Tranfported thence. The other of Mexico is one of the largest, and goodlifhest in the World, of circular Form (as some fay) little lefs than nine hundred Miles in Compass, environ'd with the main Land, the Peninsula, or Cape of Florida, *Jucatan*, and the Iland Cuba, having two onely Passages in and out, and both of them well forti'd: the one betwixt the Point of *Jucatan* and the Ile Cuba, where the Tyde violently enters; and the other betwixt the faid Iland and the Cape of *Florida*, where it goeth as violently out: upon which Gulf the King of Spain hath always some good Ships in readiness for all occasions: and by them, 'tis fuppos'd, he doth more affure his Estates in those parts of America, than by all the Garrifons befores.

The whole Kingdom of Mexico, or New Spain, is subdivided into three Inferior Provinces:

*Mexico,* the chief Province of New-Spain, is denominated from Mexico the chief City, nor only of the Province, but of all America; lying between *Tlapalet* and *Mechoacan,* extends in length from North to South, a hundred and seventeen Leagues; and in breadth along the Southern Ocean, feventeen, but up in the Countrey, fifty four
four Leagues: In which circumference lie to the North-East, Latoulaqua, Mexico, Santa, Xilotepeque, and Panama; Westward, Metlaalse, and Calepeque, Eastward, Tuzco, South-East, Chalco, Southward, Suchimilco, Tlaloc, Coyocu, and Acapulco.

It is bounded on the East, with the Gulf of Mexico; on the West, with Mexico, on the North, with Panama, and some parts of New-Gallicia; and on the South, with Tlafcalla.

This Country is both large and rich, containing not much less than one hundred and thirty Leagues, both in length and breadth; and if it yields any thing to Peru in the plenty of Gold and Silver, 'tis certain it much excels it in many other Commodities: as namely, in all sorts of Fruits, abundance of Cartel, plenty of Corn and Grain; in all which, the advantage this Country hath, not only of Peru, but of all the other Provinces of America besides, is well known: Not to speak any thing of the great plenty and variety of good Fish, which both the Rivers and Lakes of this Country afford, which is very great; inasmuch, that the very Tribute of the one Lake of Mexico is said to yield an Income of above twenty thousand Crowns yearly, one with another.

The People of the Country are generally Industrious and Active, especially since the Spaniards came among them; rich Merchants, if they apply themselves to it; and they lay likewise good Soldiers, when they are train'd and imployn'd that way.

The chief Towns and places of the Province are, 1. Mexico, both anciently and at present, the Metropolis and Capital City; being the Seat of an Archbishop, and the ordinary Residence of the Vice-Roy, and chief Governors of New-Spain.

This City, by the Indians was formerly call'd Tenunstatan, lies in nineteen Degrees and a half to the Northward of the Equinoctial-Line; rais'd out of a brackish Lake, full of muddy Water; whose circumference along the Mountains is seventy Leagues: This Lake swarms continually with Boats, which carry the People to and from one inhabited Island to another; four Stone-bridges, no less costly than artificial, with Arches and Gates in several places, lead from the City to the Main Continent.

The fresh Water which they have in the City Mexico, is led into the same through Pipes that lie in the bottom of the Lake; but none are to enjoy the benefit thereof, before they have paid a certain Sum of Money to the King's Collectors.

Moreover, the City divided into Islands, contains above sixty thousand Houses, which being built on several Islands, have large Bridges, which reach from one to another; some that lie in the middle of the Lake, they approach in little Boats; round about the Lake, especially where the way leads from the Continent into the City, lie several Suburbs, all inclosed with Walls, between which stand strong Towers, cover'd on the top: To keep off the force of the Water, the Tenunstatan have with great labor and charge, made a Bank through the Lake, half way along the City: But the Lake Laguna, from whose bottom Mexico is rais'd, is divided in two parts, the Sweet Lake, which is higher than the Salt, falls in to the same through Sluices, with Bridges built on the Bank that leads from the City to the main Land: The Salt Lake, which hath brackish and bitter Water, ebbs and flows according as the Wind blows; no Fish is able to live in the same, because the Water which in the height of Mexico falls into the same out of the Mountains, hath a sulphury Ground: All along the shore, much Salt is made, with which the Citizens drive a great Trade: There are continually above a hundred thousand Boats (by the Indians call'd Acalos, and by the Spaniards, Canoes) going off and on from one shore to another: The fresh Water Lake, which is bigger than the Salt, and feeds small Fishes, hath above fifty...
Suburbs about the same, of which, some boast five thousand, and others ten thousand Houses: Nay, the Suburb Tefcuco, in former times was no way inferior to Mexico in bigness; since the Spaniards have been Masters of this City, they Stove up many Moats, to Inlarge their narrow Streets.

Besides three publick Markets, every open place affords all Sorts of Provisions daily; the Indians call the Markets Tianguaytly, and the Spaniards, Tianguex; the first and chiefest stands in Tatlalco, adorn'd with Gallerions on three sides; in the Middle of this Square, which is accounted the biggest in the World, stands next to the place of Execution, a Rately Fountain; the Tents which are every Week pitch'd up here for Trade, amount to above thirty thousand. The second Market call'd St. John's, is in Mexico, and swarms continually with People. The third is call'd Hipolito, from the Guardian-Saint of the City, whether every Wednesday and Thursday comes such a multitude of People, that this spacious Market is too little for them; for the sake of every Commodity, a peculiar corner is allotted; but great Packs are left to be disposed of in Boats, which lie near the shore.

At the four corners of the City, at present call'd St. John, St. Maria la Rosonda, St. Pablo, and St. Sebastian, are above four thousand Spanish Families, and thirty thousand Indians, besides what inhabit Tatlulco, now St. Jago.

The Air in this place is very strange; in the day time, the Sky is generally serene; the North Wind against the Evening brings Rain, of which the Mountain Tepeaguailla lying a little League beyond the City, gives certain Testimonies; for when a black Cloud appears on the top thereof, it is certain to be blown from thence over Mexico with Rain: After a moist Evening follows a Star-light Night, and a PLEASANT Morning: From September till May, it is generally dry Weather here, but if it chance to Rain, the Rain is attended with a Storm, which occasions a fulphurous Fogg, very unwelcom, and so dark, that one Man cannot discern another, and causes a pain through all the Limbs, nay sometimes Death itself, wherefore, whenso'ere it approaches, every one keeps close in his House, or goes into the Countrey.

Moreover, it is worthy of observation, how strangely this City is alter'd since its being Conquer'd by the Spaniards, and especially when Anno 1629. it was overflow'd by a mighty Deluge; which alteration by Barnabe Cavo, in a Letter to the Jesuite Hernando Leon, is thus set forth:

Mexico, says he, lying in a Valley between high Mountains, hath seventy Leagues in circumference: The Valley being Oval, is for the most part interspers'd with Lakes, which the Indians, and after them the Spaniards have digg'd, only the Lake which washes Mexico is natural; and to Stove the Water-falls, there are Banks and Sluces every where: The Flood before Mexico ence flows a Fathom and a half higher than before Mexico. The four other Lakes to the Northward have much more Water than the Mexicalings, of which, some have scarce four, others but three Leagues in circumference; when as the Mexicaling's Lake reckons fifteen, and Mexico's sixteen. On the breaking of the Banks, Mexico hath often suffer'd great damage, wherefore the Vice-Roy de Palafox took special care to make a Vent for the Water through the lowest Mountains; whereupon the Countrey being Surveyed, the Northern Coast near the Village Gueguncaco, was found to be the most convenient. But about the manner of letting the Water out, the Surveyors could no ways agree; most of them were of opinion to dig Channels, into which the Lakes might discharge their Waters; others, thought better to make a Gutter under Ground, which left Palafox put in hand with unhappy success, because the Laborers who under-mind'd the Ground, were choak'd with the falling in of the Sand,
Chap. V. A M E R I C A.

245

or stifled with the sulphurous Vapors rising out of the Earth: Nevertheless, they gave not over the Work, though they began it quite another way, for a French-Man, call'd Henry Martin, advis'd to deepen the River Quaintitlan, which falls into the Laguna, and by that means make it a Bay, into which the Laguna might pour her over-charg'd Waters: Which design, though contradicted by the Jesuit John Sanchez, was put in practice; by which means the Water fell in a short time so much, that they could walk dry to the Clift El Pomel, lying a League from the City; wherefore they continually labour'd on this Work, till such time as Conde de Goves came over for Vice-Roy, who judg'd the Charge to be unnecessary, nay Commanded the Ditches to be broken down, which flipt the Water along the Silver Mines of Pachuca, that he might see exactly how much it would over-flow Mexico: After which the Flood rose yearly higher and higher; till at laft, Anno 1629, a mighty Rain falling, slipt the Laguna in such a manner, that it over-whelm'd all Mexico, wafh'd down the Houses, all Merchandizes which could not endure the Water, were spoil'd, and had not they had innumerable Boats to help them, thousands of People might have perih'd in this Deluge: But at laft, Henry Martin advis'd again the fore-mention'd Channel to its former Perfection, and brought the Flood which fell down out of the Mountains within the Banks of the River.

Quaintitlan digg'd also a Channel of eight thousand Fathom long, and made an Arch'd Sewer under Ground of the same length, which Sewer hath at every two hundred Fathom's distance, Vent-holes, and a hole of fifty Fathom deep, and by this means, diverting abundance of Water, they dry'd Mexico in a short time: When the Banks and Streets began no sooner to appear, but they fell to work to raise the Ground, and to lay Bridges, and also to build more Boats. The Citizens likewise found it convenient to make another deep Sewer for the carrying away of more Water, notwithstanding it requir'd twenty years labor. The River, which in a manner runs through the middle of the City, is curb'd by a Wall; a crooked Bridge, with many Arches, and of a long extent, leads to the City, in which stand many brave Palaces, with pleafant Walks of Trees about them; the Cloyslers of several Orders of Fryers, appear with high Spires and Turrets, above all other Buildings.

The Francifcaus have here four very sumptuous Buildings: The firft, Confecrated to St. Francis, stands in the uppermoft part of Mexico, within a large Square Court, and on each a pleafant Walk of Trees: The Cloysler it felf is very high, and treble Wall'd, with Towers and Galleries about it: In the middle of the City stands another Tower'd-Cloyfter, call'd St. Jago. The third lies a little distance from it, which being built long, hath a flately Turret, and is call'd Maria de Rondan: The fourth, not far from the firft, but much smaller, is nam'd San Diego; these belong to the Francifcaus. The Augufin Monks are also no way inferior to the Francifcaus, for magnificent Structures, with spacious Halls, high Towers, and rich Balconies: The firft is denominate from St. Augufline, juft behind which appears San Pablo, lefs flately than the reft. St. Sebastian, near the Laguna, is built in manner like a Church, whose Tower ends like a Pyramid. The Cloysler San Cruz, belonging also to the Augufinens, built Square, stands near the Market, in the middle of which stands a flately Poflion: The Court within environ'd with thick Walls, amazes the beholders by the pleafantnefs of its situation.

Moreover, the Dominicans inhabit two brave Cloyslers; the chiefeft Dedicated to St. Dominic, is eight Square; to which is adjoining a pretty large Church, with a Steeple: The second, which stands on one Side of St. Jago, and consists of three feveral Structures, is call'd College de Porta Cali. Oppofite to St. Jago, near the great Market,
Market the Jesuïs have a flately Colledge, or High-School, where many are brought up in the Latin and Greek Tongues, whence it is call’d, Casa Professa Les Estudios.

There is alfo another Habitation of Religious Men, call’d Illefoye Sanna Noviciado, which for State, may vie with any Royal Palace.

The Monks of La Merced dwell in two Cloysters, both Confeccrated to the Virgin Mary, yet Sirnam’d Montferatte, and Carmel: The firft lying not far from the River, is a mean Structure, in comparison to the laft; the uppermoft Tower of whose Temple appears above all other Buildings, in the upper part of Mexico near the Cloyster of St. Francis.

The Women have alfo fourteen Cloysters here, the chiefet whereof is Dedicated to Catharine of Siena; but much more splendid is that of Santa Terefa, built like an Imperial Palace; famous for its ftately Gardens, and round Fountain, which continually fpouts Water. The refl, which we call onely name, are La Encarnacio, Santa Ines, Jesuïs-Maria, Laureaffo, Las Des-calzas, Santa Clara, Juan de la Penitencia, Regina Cali, Santa Monica, las Roggidas, Jeronimo, and Conception; beftides the Almihouses, Real de los Indios, and Noftro Senora del Amor: There are likewise eight Hospitals, viz, de Dios, del Spiritu Santo, Juan de Doys, de la Mifericordia, de San Hippolito, and de San Lazaro. The three chief Churches bear the Name of Catharine, Martin, and Vera Cruz; and the Clergy-men thereto belonging, enjoy many ftately Palaces, amphib which are Juan de Lateran, de Chrifto, and las Nivas.

The Refidence of the Vice-Roy which lies near the Dominican Cloyster, Porto Cacili, is fo fumptuous a Structure, that it may fland in competition with any of those Edifces which were fo much cry’d up by the Ancients; nevertheless, it is not to be compar’d to the Arch-bifhop’s Seat, built round like a Theatre, whose Luftier expreffes the Quality of him that inhabits the fame, he being Governor of the Bishopricks of Pofcala, Guaques, Mechoacan, New Galicia, Chiapa, Yucatan, Guatimala, Verapaz, and the Philippinas. This marvellous Structure was begun by Ferdinand Cortesius, but was finifh’d by Sebastian Ramires de Eueniel, and not much inferior thereunto is the Casa de Cabildo Alameda.

At preffent, Mexico is thought to be one of the richest Cities of the World, abounding (if reports be true) in all kind of voluptuous gallantry and bravery, even to excels: It is suppos’d to contain about fix or seven Miles in compafs, and to confift of above an hundred thoufand Housies or Families, whereof not the tenth part Spaniards, but thofe that are, all Gentlemen, at leaft as to their garb and manner of living, for they live moft splendifdly in all refpects, both for Diet and Apparel.

For the firft, we have spoken fo much already of the general plenty of all things in the Kingdom of New-Spain, that pertain to this part of pleafure, that it is not to be doubted: And for the SEcond this may be some infinace, viz, that it is no extraordinary matter to fee an Hat-band or Role all of Diamonds, in some ordinary Gentlemen’s Hat; and of Pearl among the common Citizens and Tradeemen. The Coaches (which moft Gentlemen keep) almoft cover’d with Gold and Silver, richly beft with Precious Stones, and within ordinarilie lin’d with Cloth of Gold, or the beft China Silk that can be gotten; of which Coaches, in time of year, at the Alameda, as they call it, which is, as it were, The Hide-Park of Mexico, and a place made of purpofe for recreation and delight, a Man fhall obferve not seldom, above a thoufand or two thoufand Coaches, full of Ladies and Gallants coming either onely to take the Air, and their Pleafure, both the one and the other attended with a numerous Train of Servants and Mulatties of both Sexes. In la Plateria, which is
but only one Street in Mexico, nigh to the Vice-Roy's Palace, in less than half an hour's space: with the turn of an Eye, you may see Millions of Wealth in Gold, Silver, and Precious Stones, in the Goldsmiths and Jewellers Shops thereabouts.

In a word, there is nothing hinders Mexico from being the most absolute City in the World for delight and bravery, but only two Inconveniences to which it is subject: The one is the danger of the Lake, with the Infalls whereof it may seem to be almost continually threatened, and in the Year 1629, did actually suffer a very great calamity, the Waters breaking through the Banks, and drowning a great part of the City, with the destruction of much People, and the loss of all their Goods intirely, through the avarice (as is suppos'd) of the Vice-Roy that then was, and some other of the King's Officers, who diverted the Money that should have been employ'd for the fortifying and repairing of the Banks, to their own proper uses: The other is from the nature of the Soil and Ground it self on which it standeth; which is found to have a tincture of Sal Nitre in it, somewhat strong, and the Winds partly from the Lake it self, and partly from the Hills about it, raising the Durt of this Earth constantly every Evening, for many Moneths of the Year together, so violently, that the Air is even darkned therewith for some time: The Inhabitants are much annoy'd by it, and made subject to divers Hypochondriacal Pains and Infirmities, and sometimes kill'd with it, especially such as either cannot, or care not much to avoid it.

The City lieth about sixty Leagues, or a hundred and fifty Miles distant from the Atlantic or North Sea, from whence by the Port of St. John d'Ulua, or Vera Cruz, (which are the usual Landing-places) there is a fair and easie March to Mexico, by the Cities of Xalabar, Perotta, Puebla de los Angelos, and Tlascalta, all of them open and unfortifid Places, (as likewise Mexico itself) and the Countryside round about very rich and well accommodated with all things.

The next City of note in ancient times was Cuitlala, which being built in a fruitful Plain, had above twenty thousand Dwelling-houses, and as many more Banqueting-houses. The number of the Temples and Turrets were equal with that of the days in the Year: The Government thereof belong'd to a Mayor and six Aldermen, and one chief Priest; for they never went upon the least Devotion before they had been at their Devotion, in which the Priest's Office was only to perfume the Idols four times in twenty four hours, viz. in the Morning, at Noon, after Sunset, and at Midnight; at which times none durst be absent, but they us'd also a cruel Exercise on themselves, and one much more cruel on others, for on usual Feast-days they abat'd from Meat, Drink, and Sleep, scourging their Bodies with knotted Cords after a miserable manner, evacuating their Seed, that so they might curb all fleshly Desires, and met every Night in a spacious place, where sitting down they wounded themselves with Lances in their Legs and Arms, so long till the Blood gush'd out of the fame, which gathering in a Cup, they anointed their Temples therewith, and dip't the Lances in the fame, and then hung them up before the Temple in Bundles of Straw. Of these were a great number, and the more, because they never us'd their Lances but once. But on these Days, which were Consecrated to the Idol Texcatlipoca, every one besides the Priests wore a new Rope made of the Hemp Manguy, of a Fathom long, and a thick Knot at the end, with which they beat themselves so miserably on their Backs, as if they intended to have broken them: After which the Priests flay'd five days in the Temple, in which they us'd the like cruelty, eating scarce once in twenty four hours.

Their Prisoners they us'd after a most horrid manner, viz. in their Temples stood a round Stage of Stone; to the top of which they ascended by a Square Scaffold,
fold, supported by twenty eight Pillars; behind which appear'd thousands of Men's Heads, and amongst them the Prisoners that were to be Offer'd fat stark naked, and guarded by several armed Men; three Foot from the Steps which led up to the top of the Scaffold, stood a pyramidal Stone, (by the Indians call'd Quaxicalli) and behind it two round Chappells, cover'd on the top like Mitres, each had four Holes in a large Gate, in which sat a horrid Representation, worshipp'd by six Priests call'd Chackalnuas, whereof one call'd Papas, or Topilzin, whose Office was to pluck out the Hearts of the Prisoners, being in greatest esteem, wore a red Mantle about his Body, not unlike a long Coat, with broad Fringe, which trail'd after him upon the Ground, and also a Crown of green and yellow Plumes on his Head; his Ears and under Lip were likewise adorn'd with Precious Stones: The other five appear'd in like manner with their Hands and Faces painted red, but having Leather Fajics about their Heads, and white Coats stitch'd with Black on their Bodies, they might easily be distinguished from the Topilzin, who on a sudden ran down the Stairs to the Prisoners, and showed each of them an Image, (saying, This is your God) made of Bleed Paste, Maiz, and Honey, green Beads for Eyes, and Grains of Maiz for Teeth; whereupon the Prisoners were led up, and laid with their Backs on the sharp Stone Quaxicalli; then the five Priests took hold of their Legs, Arms and Head, put woollen Collars about the Sufferer's Necks, whilst the Topilzin showed Reverence to the Idol; which done, with a sharp Stone he cut open the Breast of the Prisoner, who in a deplorable condition lay on the pyramidal Stone, and pulling their Hearts out of their Bodies, show'd the same reeking to the Sun, and at last threw them toward the Idol, and the dead Bodies down the Stairs, where some appointed for that purpose carried the same away; but every one taking his own Prisoner, and roasting and boiling him, serv'd him up to his Friends as a great Dainty.

This kind of Murdering was not only us'd amongst the Mexicans, but also by all the other neighboring Indians, and especially in the City Chalula, which (as we have said before) signifies The Sanctuary of all the Gods: for in this Town six thousand Children were yearly Offer'd.

The Citizens hereof us'd to drive a great Trade, especially in Cocinile.

Their Habits were several; for Persons of Note wore Cotton Coats, about the Edges of which hung Feathers and pieces of Cony-skins: the meaner sort went in Neqinos, or a sort of Linnen Coats made of the hairy Leaves of the Tree Maguey.

3. The City Tezco, full of handsom Streets and fair Houses, is built near the salt Mexican Lake, yet hath no want of fresh Water, with which it is supply'd by Gutter's from the Mountains under Ground, according to Anthony Herrera, it twice exceedeth in bigness the famous City Sitvill in Spain.

4. Quitavaca, by the Spaniards call'd Venezuela, (because it is, like Venice, surrounded with Water, and divided into several Iles,) boasted formerly above two thousand Families: From the Town a Cawley of twenty Foot broad, and half a League long, leads through the Lake to the Main Continent.

5. Ixtapalapa, a very populous Place, and lying part of it in the salt Lake, and partly on the Main Land; where several fresh-water Pools afford store of Fish, two Leagues distant from Mexico, to which leads a broad Way, in the middle of which stands a Fountain, surrounded with high Trees, which produces excellent Water.

6. Mexicaltzingo, situate upon the Lake Laguna, a Town consisting of four thousand neatly Houses.

7. Caycan, in a fruitful Plain, containing six thousand, being but a League and a
a half from Yzcapalapa: to which the neighboring Village Huanilocucho was not much inferior.

These three Places, before they were subdued by the Spaniards, boasted many brave Temples and high Towers, whose Inhabitants appear'd at a great distance, but now being turn'd into Cloysters, they are inhabited by Monks and Nuns.

The Salt made here of Earth, though not white, and only fit to make Pickle of, is transported to many Places.

About Mexico there are also several Villages, the chiefest of which are 1. Maristlan, a Town pleasantly seated upon the top of an huge Mountain, in the midst of most delicate Groves and shady Woods, and reckoned to contain no less than thirty thousand Inhabitants in all, dwelling either in the City, or upon the sides of the Mountain.

2. Antepecue; this is a Town belonging to the Marques de Valle, who is of the Poffeignty of Cortez, and said to be seated in the most delicious place of all New Spain.

3. Acapulco, a Town seated upon the South-Sea, or Mare del Zun, yet belonging to this Province. It is a haven-Town, and one of the most frequented upon the South-Sea, situate upon a large and capacious Bay of about a League broad at the Entrance, and affording many convenient Stations and Docks for Shippings. At the bottom of the Bay Westward lieth the Town, with a strong Castle very advantageously built, both for the command and security of the Port, well walled and fortified with Bulwarks, and having a constant Garrison of four hundred Soldiers in it, or thereabouts. The reason whereof, I suppose, may be chiefly this, viz. that from this Port there is the greatest Traffick and Entercourfe held betwixt the East and West-Indies, together with the Philippine Islands.

The Countrey hath many rich Mynes of Silver in it, and some of Gold; the chief of which are by Herera reported to be these, viz. 1. those of Pachuca, fourteen Leagues distant from Mexico. 2. Of Tacho. 3. Taltuncana. 4. Cuutepecue. 5. Zautulpa. 6. Zapangue, and divers others.

The rest of the Villages are Guatitlan, Teyauca, Escasalaco, Tacuba, and Su
tchilico.

The neighboring Province Xilatepeck, which is exceeding fruitful, is also famous for two Fountains, whereof one near the Village Queretaro produces boiling Water, which when cool'd, is a wholesome Drink for Cattel: The other for four years is full of Water, and for four years after it is empty; in great rainy Seasons it is quite dry, and in dry weather it overflows.

Between the Villages Queretaro and San Juan, is a Plain which extends it self seven Leagues in breadth, and seven in length, besides two Leagues farther beyond Queretaro, where a hundred thousand Head of Cattel, and ten thousand Horses, find plentiful Pasture.

The Mountain Nevada, near the City De los Angelos, deserves no small admiration; for it begins at thirty Leagues end to rise exceeding high, and being flat on the top, hath a wide gaping Mouth, whose bottom is fathomless; from which at sun-rising and setting rises a Smoak up directly towards the Skie, but immediately after spreading like a Plume of Feathers, it is dispers'd by the Wind, and no more seen till it appears in a dusky Cloud. With the Smoak are also Ashes vomited up; yet the Mountain is very pellentially planted with lofty Cypress, Cedar, Oak, and Pine-Trees. The neighboring Fields abound like with Wheat, Cotton, and Maize. There seldom appears any Rain here.

At the Foot of this Mountain lies the Village Tepeco, famous for the Crystal C and
and Allom gotten there. The Village Ocotlan is also maintain'd by the fame: But Tucula by Gold-Mines, and fruitful Lands, which are twice a year shaken by Earthquakes; wherefore the Inhabitants live not in Stone Houles, but in little Straw Huts.

South-Eastward from Nerada is excellent Sugar to be had, and on the Mountain it self the famous Gum Amine, which drops out of a Tree call'd Jetaiba, which is always green, with hard white Wood, a pale yellow speckled Bark, three long soft Leaves hanging one over another on one Stalk, and the Fruit on the middle of the Body. After the rainy Seafon is past in October, then they cut a Hole in the Body of the Tree, out of which the Gum drops: it hath a pleasant smell, and is exceeding good against the Head-ache occasion'd by Colds.

Not far from hence appears the Valleys Matazingo and Atzompan, which have excellent Pastures, in which Diego Nunez de Camargo bred forty thousand Sheep out of two in ten years time.

And these are the chiefest Towns, Villages, and Countryes, which surround the famous City Mexico.

Concerning the erecting of this City, the Indians relate thus: That the seventh Family of the Navatlaic's, Extracted out of the Country Aztlan, rang'd up and down not without thousands of Inconveniences, from one Country to another, according to the Information which their Sages had given their Spirit Fizquipitli, till at last some of the Priests straying from the Army, or rather Multitude, got into a Wilderness, full of Brambles and Thorns, and came at length to a Place where was a Spring of clear Water, in which the Fifthes glitter'd like Silver; where taking up their repose that Night, their Spirit inform'd the eldest of them in a Dream, that they should find thereabouts a Tunal Tree (whose Leaves grow out of one another) under which, on a Stone, lay the Heart of the famous Sorcerer Capil: This Tunal Tree should be discover'd by a Crane on the top of it, which in one Foot should hold a Bird, and in the other a Bough of the Tree, near which they were to build a City: The old Priest wak'd, and relating his Dream, every one endeavor'd to find out the fore-mention'd Tree; at last they found it, by discovering on the top a Crane, with spread-out Wings looking up towards the Sun, and holding in his Claws a small Bird, invested with curious Feathers: Whereupon they with all speed built a Chappel of Turf and Clods of Earth, and cover'd the fame with Canes, to keep their Idol from the Weather, resolving, so soon as they could, to build him a better Temple.

The Lake on whose Illes they fixted, abounded with Fishe and Fowls, which they exchang'd with the neighboring People for Stone and Mortar for the building of a Temple for Fizquipitli; and a new City; to which they made a Cawley in the Lake Laguna, and divided it into four great Wards or Divisions, and subdivided them again into letter; over which they plac'd peculiar Idols, and order'd a Crane like that which they had seen on the Tunal Tree to be their City Arms. The dividing of the Wards occasion'd great dislike amongst the Grandees, judging those to whose lot they fell, not to be worthy of them; wherefore deferring the same, and travelling along the Lake Laguna, they felted themselves at last in a sandy Soil, which they call'd Tlatelolco, and entertain'd a bitter hatred against their Country-men who kept the four Wards of the new Tenaytitan, doing them all the mischief they could; wherefore the Assaulted were necessitated to chuse a King, that they might be the better able to oppose their Enemies: But that they might not raise a Discontent amongst themselves about electing a Governor, they judged it safest to take a Foreigner, amongst whom they found none so capable of so great an Office as Acapanitzly.
AMERICA

Atamapixtli, Grand-son to the King of Culhuacan, whereupon sending Ambassadors thither, they obtain'd their desires.

The new King was no sooner Crown'd, but he settled all things in order with great Prudence, infomuch, that Mexico grew daily to be more famous and feared: But this sudden growth rais'd a jealousy amongst the Neighbours, who dreaded their growing Power and Valor.

The Tapuenceans who were also a valiant People, being the nearest to them, and having Azcapuzalcó for their chief City, made it their main design, utterly to root out the Mexicans, before they grew to be more Populous and Potent; notwithstanding they had hitherto receiv'd Tribute from them, for delivering the Lake Lagoa to them, which was a quantity of Timber and Plants; yet they demanded not only more Tribute than formerly, but also in such a manner, as was thought impossible to have been perform'd, which was, that those Plants which were formerly brought to them, as growing on the Land, should be set in the Water, fo as to come floating to them, as they grew, to Azcapuzalco, which if they did not pay, they should expect to be all put to the Sword. The Mexicans much amaz'd hereat, and not knowing how to produce the demanded Plants, Vitzlipuztí inform'd the oldest Priest, that the demands might be satisfi'd, and commanded him to throw Earth on the Water, and to Sow Seed on the same, which at the usual time produc'd Matz, Azí, Chias, Tomates, and the like, with which the Tapuenceans being satisfi'd, demand next a Goose, and a Hen which laid Eggs, out of which the young ones should appear, when on the floating Clods of Earth, the Nefts came oppolite to Azcapuzalco, by which the advice of Vitzlipuztí, they perform'd fifty years one after another. Mean while, Atamapixtli (who had inlarg'd Mexico with Streets, Palaces, Temples, and Markets) dying, would not name any one to succeed him, but left the choice of the Election to the Commonalty, who Crown'd his Son Vitzloviloi, and Marry'd him to the King of Tapuenceans Daughter, that by that means they might gain his friendship, and be eas' of their strange Annual Tribute: Whereupon Ayauchigual, the King of Tapuenceans Daughter being Marry'd to Vitzloviloi, was within twelve Moneths deliver'd of a Son, which the Grand-father call'd Chimalpopoca, which signifies A Gun which gives Smoke, and afterwards was satisfi'd with two Geese, and some Fifth yearly from the Mexicans, only as an Acknowledgment that they inhabited his Countrey. Chimalpopoca loosing his Parents, in his tenth year was Crown'd King, with a Bowe and Arrows in his left Hand, and a Wooden Sword in the right: Soon after he oblig'd his Mothers Father to be kind to the Mexicans, for they being in great want for freshe Water, he had leave by Channels to bring the same out of the Mountain Chapultepec, a League distant from Mexico; to which purpose they made a Pipe of Planks, and hollow Trees joyn'd together with Clay, quite through the Lake; but this Pipe not being tight and durable, and the fresh Water by that means mixing with the Salt, they sent Agents to Azcapuzalco, to request Stones, Mortar, and Work-men to make a substantial Sewer: This message was ill relent'd by the Council of Azcapuzalco; What, (said they) do the Mexicans think, shall a rambling company of People, which on Charity live in another Countrey, Command those that Govern them to be their Servants? This grudge went so far, that at last they took a Resolution without the King's knowledge; (for he was suspected, because of his Grand-child (Chimalpopoca) to forbid all manner of Trade with the Mexicans; nay, to endeavor utterly to root them out; yet some judg'd, that they ought to spare Chimalpopoca, while others on the contrary said, That he ought to be destroy'd, because his Father being a Mexican, he would to the utmost of his Power defend his People; which last being approv'd of, so troubled the King of the Tapuenceans...
Izcoatl was no sooner Crown'd, but he made great preparation for a War, though against every one's Opinion, because of the Populousness of the Tapueneacs; yet it was concluded on, that they should request Peace, and a place to inhabit on the main Continent; that so they might remove from the Isles: This Request they thought could not be deny'd them in Azcapuzalo; provided the Mexicans brought their Gods thither, and wholly conform'd themselves to the manners of the Tapueneacs, for otherwise they could expect nothing but utter Ruine: Yet though every one else imbrac'd the Proposal, Tlacaelol, the King's Nephew, stiffly oppos'd it, alleging, that it did not agree with the Mexicans quality, to make so mean and flavish a Price; and that they had best consider, first if there were no other means to be found: and that he would willingly venture his Life in going to Azcapuzalo, as a Spie, to pry into their whole Designs and Intentions, which was perform'd accordingly; and soon after returning, he brought information, that the Tapueneacs were making great preparations for War, and made no mention at all of Peace; which news struck a general fear into all Peoples Hearts; many desiring that they might save themselves by flight; but Izcoatl putting fresh courage into them, made an agreement with the People, that if he was beaten by the Tapueneacs, they should eat him up; but if he prov'd Conqueror, they should all be at his Command; to which all consenting, they boldly march'd with their King to the City Azcapuzalo. The Front of the Army consisting of the prime Nobility, was led by Tlacaelol, and the Rear Izcoatl brought up, who was also to give the sign on a Drum, when they should fall upon the Enemies; who having ten Men to the Mexicans one, suddenly Sally'd out of the Gates, where they were so briskly entertain'd by Tlacaelol, that in a confused manner they soon ran back into the City, whither the Conqueror pursuing them, got within the Gates, where he put all to the Sword which he could meet with; some fled to a steep neighboring Mountain, whither being also follow'd, they threw down their Arms, and begg'd Quarter, to serve the Mexicans as Slaves, which was granted them, whilst Izcoatl found an unvaluable Mass of Treasure in Azcapuzalo, and distributed the Conquer'd Country amongst those who had behav'd themselves best.

This Conquest made the neighboring People jealous of the Mexicans, whose Successes and growing Power they dreaded.

The Towns Tacuba and Cuuyocan, though they had Governors of their own, yet were subject to the Tapueneacs, whose General advising those of Azcapuzalo to try another Encounter, they took up Arms again; but before it came to a Battel, the Cuuyocans play'd a sly trick with the Mexicans, for inviting them to an Idolatrous Feast, after they had Eat, Drunk, and Danc'd, they forc'd them to put on Women's Apparel, to their no small disgrace and ignomy; which remain'd not unreveng'd, for the Mexicans made a Poysonous Fume in the Gates of Cuuyocan, which made Women with Child to Miscarry, and many to fall dangerously sick; yet lastly, both Parties march'd into the Fields, where whilst Izcoatl was elsewhere in gagg'd, Tlacaelol marching about, came upon the backs of the Cuuyocans with such eagerness, that they fled to a strong Temple, which soon after was set on fire by Tlacaelol, who pursu'd the Enemy ten Leagues.
This Conquest fir'd up the Suchimicos, the first Family of the Naratlaca's, to stop the proceedings of the Mexican, that they might not, as they had already done to others, fall upon them; to which purpose they thought to surprize the Conquering Army; but Tlacelte who led the Van, March'd in good Order to meet the Suchimicos, fell resolutely upon their whole Army, and after a short conflict, put them to flight, and took the City Suchimico for Izcoyte, who being Crown'd King there, Commanded the Conquer'd to make a direct Road betwixt Suchimico and Mexico, of four Leagues long, both, that a Trade might the easier be drove between these two Cities, and to keep them the better in awe: Notwithstanding these examples, Cuatlavaca, a City built at the Lake Laguna, truths to the abundance of Boats, which the Citizens knew how to use with great dexterity, daily molested Mexico with them by Water, whereupon Izcoyte resolv'd to send his Victorious Army thither, but Tlacelte opposing the fame, promis'd to subdue the Rebelling City with a considerable number of Boys, which had skill in the managing of a Canoe, which being permitted him, he accordingly made himself Master of Cuatlavaca, from whence the Boys brought a great Booty, and divers Prisoners, whom they lent as an Offering to Vitzlipruzli.

These unforehand of Victories being spread far and near, mov'd Tecoaco after several Skirmishes and Conflicts with Tlacelte, to submit to the Mexican King, who chose the Governor thereof for his Prime Councillor. Izcoyte Decaying, after having Reign'd twelve years, his Son Mucuczuma was chosen his Successor, the Election and Coronation being perform'd after the following manner.

The new King rancted in Tygers Skins, was led into the chief Temple before a Hearth, on which burnt Fire both Night and Day; not far from which stood the Throne, where sitting down, he offer'd Blood, which was taken from his Cheeks, Ears, and Legs, after which, an Orator Congratulated him, in the name of the Nobility; which done, they ended the Solemnity in a great Dinner, Fire-Works, and Dancing: At the same time it was establish'd, that all Future Coronations should be kept with an Offering of Provisions, fetch'd by the King out of the Enemies Country: wherefore Mucuczuma going to the Country Chalco, took several of the Natives, whose reaking Hearts he offers'd to Vitzlipruzli: Which done, the Coronation follow'd, to which an innumerable company of People came flocking from all the neighboring Provinces: Those which were Tributaries, brought Presents with them, before which the Heralds carry'd the Coats of Arms belonging to the Nobility of Mexico, in a good order.

Soon after the King's Coronation, he March'd and fell upon Chalco, the Inhabitants of which defended themselves very Valiantly, took Mucuczuma's Brother, among several other Prisoners, to whom the Conquerors proffer'd the Government, which at first he refused, but at last accepted of on this condition, that a high Maff should be erected with a Scaffold on the top, which made every one supposse, that Mucuczuma's Brother did in that manner aim at a high Election, but he at the appointed time, getting on the top of the Maff, call'd with a loud voice, and spake to the taken Mexicans which were there present, to this effect: Chalco seeks to set me on the Throne, the Heavens will not permit it; learn by me rather to die, than to live and be guilty of Treason to your Country: which he had no sooner said, but with some Flowers which he held in his Hand, threw himself down from the Scaffold, which so inrag'd the Chalcoans, that they immediately slew all the other Mexicans that were there present, which not long after was reveng'd by Mucuczuma, who not only subdu'd Chalco, but several other Provinces, leaving only Tlafeulca unattempted, that the Mexicans might have a neighboring Enemy to fetch Prisoners from.
from for their Offerings, and also by Skirmishing with them, train up their Youth in Martial Discipline.

Thus his Predecessors and he, having Conquer'd divers Provinces, insomuch that he was now become absolute Emperor over a vast Tract of Land, he resolv'd to settle the same in good order; to which purpose he erected Courts of Judicature, with good Laws; built a stately Palace and Temple; ordain'd several Customs to be observ'd in Religion; which done, and having Reign'd twenty eight years, he Deceasing, left Tlacic for his Successor.

The foremention'd Temple was call'd Cu, being built of Stone, in form like a Serpent, of an exceeding bigness, in the middle thereof there was a spacious open place, and round about it Habitations, two Stories high, the lowermost for the Inferior Priests, and the uppermost for the High Priests; in this place also above ten thousand People Danc'd in a Circle, on all high Feast; four great Gates face'd the like number of broad Streets, each two Leagues long: On the outmost Gate stood large Images, the Front of black Stones, Painted between each Lay with red and yellow Colours, no less Beautiful than Artificial: On each corner of the Temple were plac'd two Marble Statues of Indians, fitting with their Arms stretch'd out, and holding a Candle, and on their Heads Plumes of Feathers: Thirty high steps led up to a round place, set about with Death's-Heads, which was a Stage appointed for the slaughter of those, whose Hearts were to be Offer'd to the Diabolical gods, and whose Heads, their Bodies being eaten, were brought back to the Priests, who hung them under the Stage, where every Head hanging till it dropp'd off, the vacant place was immediately supply'd with a fresh Head. At the end of the Stage stood two Chappels, cover'd like a Cardinal's-Cap, in one of which rul'd the Image of Tizquitzli, and in the other Tlacoc, to which led a hundred and twenty Stone steps.

But besides this stately Temple Cu, Mexico boast'd nine more, standing not far alinber in a large Plain, all adorn'd with curious Imagery, and set out with large Pillars, each being Dedicated to a peculiar Idol; and built with magnificent Apartments,
ments, for the Priests to lodge in; the chiefest of them Dedicated to an Idol call’d TzecalliTaupa, or Lord of the Humble. This Temple was ascended to by eighty steps, and had before it a spacious Court; within a low and broad Gate appear’d a high Vail, which open’d into a spacious Square Hall, hung with Tapestry, at the end whereof stood large Images, and beyond which were several Rooms, in which Assemblies met, Scholars were taught, Judges sate, and Priests Resided.

But to return again to Mutezuma, his Funeral was no sooner finisht’d, but the four Prime Councillors were attended by the Commissioners of Tzequco and Tlacel, in order to the Election of a new King: Tlacel being the chief amongst the Dukes, was by a general Vote Saluted King, as being most worthy thereof, for his Special Services shewn in behalf of the Empire of Mexico: But he humbly refusing the same, was depriv’d of the choice another, whereupon he making choice of Tiovic, Mutezuma’s eldest Son; the Council immediately bor’d a hole through his Nose, and hung an Emerald in the same. But before he receive’d the Crown, he was forc’d, according to the Custom, to fetch in some of his Enemies for an Offering, which though he perform’d, yet he left more Mexicans than he took Prisoners, not without sufficient testimony of Cowardice; which being ill refeit by the People, he was Poyson’d in the fourth year of his Reign, and succeeded by his Brother Acayaca, by the appointment of Tlacel; who taking attaint’d to a great Age, and left the Charge of his Children to the new King, depart’d this Life, to the great sorrow and grief of the whole Empire; by the States whereof he was Bury’d with great Solemnity.

In the mean time, Acayaca went with a considerable Army to the remote Province Teguanteyeke, to fetch Prisoners to be Offer’d at his Coronation; and marching before alone, Challeng’d his Antagonist, the King, to a single Combat, which he refuse’d, and chose rather to fall upon Acayaca with all his Forces; whereupon, the Mexicans cunningly seiz’d Flight, ambuscaded themselves till the Enemies pursuing them, gave them their desir’d advantage, for rushing out of their Ambuscade, they set upon the Teguanteyekeks, so disorder’d, that they easily put them to Flight, and had the pursuit of them as far as Guatulco, a noted Haven upon the South-Sea; from whence Acayaca returning Victor, receiv’d a Crown for a Reward; yet notwithstanding these Proofs of his Valor, the Lord of Tlatelulco Challeng’d him; whereupon he sent Agents thither, with Proffers, that since the Citizens of Tlatelulco were of one Blood with the Mexicans, whom they defer’d upon the dividing of the Worls and Towns, just before the Election of the first King Acamapichtli, they should, if they pleas’d, be receiv’d anew into fellowship and alliance with the Mexicans, acknowledging one and the same King for their Supreme Head and Governor: But the Ambassadors being scornd and laugh’d at for their Proffers, returning, related the same to Acayaca, who immediately marching thither to take revenge, sent part of his Army to fall on the Enemy by Water; whilst himself falling upon them by Land, put the Lord of Tlatelulco, with his whole Army, to Flight, which was so closely pursu’d, that they forc’d their way into the City with them, put the Governor to Death, and laid the Town in Ashen; those which went by Water, having had no less success.

Acayaca, after eleven years Reign, Deceasc’d, bequeath’d his Crown to Aztol; who sought to promote his Election by ingaging with the mighty Province Quauatemala, whole Inhabitants, though but a little before, they had been so bold as to demand Tribute of the Mexicans; yet terrify’d at the approach of Aztol’s Army, fled over an Arm of the Sea, where they had been secure, had not Aztol invented a floating
floating Isle of Planks, by which he got over his whole Army; upon which the amaz'd Quaquauatlans immediately submitted themselves to the Mexicans, who pursuing their Victory, extended their Dominions to Guatimala, over a Tract of three hundred Leagues.

The new King having now subdu'd all his Enemies, and made himself glorious by his Victories, was also ambitious to be as much extoll'd for his Generosity and Magnificence; to which purpose he distributed all the Wealth which was brought unto him from the neighboring Countries, amongst the Poor and the Nobility; to the first he gave Clothes and Provisions; to the last, Plumes of Feathers and Arms. Moreover he caus'd all mean Housers to be pull'd down and new ones to be built in their places. Lastly, he consulted how to bring fresh Water into Mexico, which was plac'd in a brackish Soil: Upon this Design he was so bent, that when one of his Sages diffiwaded him from it, alleging, That the Water would drown the City, he, in stead of following his Advice, banish'd him his Presence, and upon his flying to Cuaoacan, caus'd him to be fetch'd from thence and Executed. Then prosecuting his Design, he cut the Ditch before Cuaoacan, by which means great store of fresh Water came flowing into the Lake Laguna, which the Priests welcome'd with strange Ceremonies; for some perfum'd the Water, others Offer'd Quails Blood, whilst others play'd on several Musical Instruments, with many other Ceremonies, which are at large describ'd in the ancient Mexican Chronicles, kept in the Vatican Library at Rome. But the Prophecy of the Executed Sorcerer was in a manner fulfill'd; for the Water overwhelm'd a great part of Mexico, and divided the City into Illes: But to prevent farther Mischief, Antzoll caus'd Banks to be rais'd, and Channels digg'd; and not long after, in the eleventh Year of his Reign, he deceas'd: After which the Mexican Kingdom tended towards its period, as the ensuing Story will declare.

Amongst the Mexican Nobility, Mutezuma, a melancholy Man, yet very prudent, who resided in a stately Apartment near the great Temple Cà, that there he might the better converse with Viztilpuaztl, was elect'd King; which he no sooner heard, but fled from hence: but being found out, he was against his will led to the Grand Assembly, and from thence to the holy Hearth, where for an Offering he drew Blood out of his Cheeks, Ears, and Legs; and, according to an ancient Cuftom, the Council of State boring a Hole in his Nofe, hung an Emerald in the same; after which the Lord of Teczoo saluted him with a Speech; which (since it is mention'd by Jofeph d' Aofha, together with several other Speeches of Congratulation to their Kings, which were taught to Schollars, to make them expert in their Language) it will not be amiss to be annexed here, that of many this one may serve for a pattern of the Mexicans Eloquence, which is as followeth:

"The great happiness, most noble Mutezuma, which is befall'n this Realm by your Election, may eafily be conjectur'd from the general joy, none be
sides your self being able to undergo an Office, in the management whereof so much Prudence is requir'd: It is a most certain testimony that God loves Mexico, that he hath given its Inhabitants understanding to make such a Choice. Who can doubt, but that you who have expatiated through the Heavens, and con-
vers'd with Viztilpuaztl, may eafily Govern us Mortals on Earth? Who can de-
spair, but that the Vertue inclus'd within your Breast, will extend to the Widows and Orphans? Therefore rejoice, O Mexico; the Heavens have granted us a Prince without Vice; Merciful, and not a Violator of the Laws; Affable, not depling common Conversation. And you, O King, let not this great Pre-
ferment
having heard out the Speech, would willingly have answered the same, but could not utter a word for Tears, which gushed from his Eyes. Before he went out to fetch Prisoners for Offerings at his Coronation, he first settled his Household Affairs. And whereas till this time the Kings had been serv'd in their Palaces by ordinary Citizens, he took Knights, and the chiefest of the Nobility, intending thereby to make a distinction between the Nobility and the common People, and add more Majesty to the Royal Dignity. This done, Mexcuzuma marching against a certain rebellious Province, fetch'd a considerable number of People to be Office'd to Vizaluzalli. At his Return the Coronation-Day was appointed, against which thousands of People came to Mexico; even their very Enemies of Tizcalco, Mechoacan, and Texcoco, which were never conquer'd by the Mexicas, flock'd thither in great numbers. All those Countreys which were under Tribute bringing unvaluables Treasures, came in vast Multitudes, which so throng'd the City, that the very tops of the Houses were fill'd with Spectators, no King in Mexico ever going to the Throne in such splendor; nor was ever any King so much fear'd by his Subjects, none of the common People daring to look in his Face; neither did he ever set Foot on the Ground, but was always carried in a Chair on the Shoulders of his prime Nobility; he never wore a Suit of Clothes but once, nor ever us'd a Cup or Dish after it was once fould; he strictly maintain'd the Laws which he had made, and often went himself in a Disguise, to make a strict enquiry after all Affairs whatsoever; by which means the Mexican Power was now arriv'd to the highest top: but, as other Realms, grown top-heavy with good Fortune, turn at last top-lost turvy, just such a Misfortune befell Mexico; but not without several fore-running signs of its destruction: for in the City Cholula their God Quezalcocatl inform'd them, that a strange People were coming to take possession of the Mexican Dominions; and their Soothsayers prognosticated the same, for which Mexcuzuma committed them all to Prison, and doublets had put them all to death, had not they escap'd with the help of the Master of their diabolical Art; and though they escap'd themselves, yet their Wives and Children were all put to death upon the King's Command: Soon after which appear'd a mighty Comet, or blazing Star for a whole year together; the great Temple Cu was loft on Fire, and burnt to the Ground none knew how; the Water which was thrown on the same to quench it, burnt like Brimstone; in the Skies appear'd three fiery Heads at noon-day, and out of a long Tail shot Sparks on the Earth; the Laguna, between Mexico and Texcoco, began to swell into a Tide, which turn'd some Houles top-lost turvy; a shrill Voice was heard in the Night crying on the Water, Children, your ruin is at hand; whither shall I carry you that you may not be lost?

No less strange is what d'Aoife relates of a Bird present'd to Mexcuzuma, not unlike a Crane, which the Fishermen had taken on the Laguna; on the shining Forehead of which there appear'd the resemblance of two Armies Engag'd, and one defeated by the other, and that whilst the Sages, call'd to interpret the meaning hereof, sat in Confultation, the Bird vanish't.

Moreover, there goes a Tradition, That a Countrey-man being at his Labor, was taken up by an Eagle, and carried through the Air into a gloomy Cave, where a Man lay fast asleep snoring, when on a sudden he heard a Voice afar off, saying, Do you know that Man? whereupon the Countrey-man taking special notice of the dormant
dormant Man, knew him, by the Royal Apparel, to be Mutezuma; after which the Voice was heard again, saying, How soundly doth he sleep: the time is coming which provides Punishments for many Crimes; burn the Snoazer with the Torch which he holds in his Hands, he will feel no pain: Not long after he being inform'd hereof, and looking on his Thigh, found the same burnt, to his no small amazement.

Having now posse'd the Throne fourteen years, he receive'd news of a Fleet, and therewith a Draught of the Men and Vessels painted on Cloth. This startling him, he immediately advis'd with his Council, who judg'd it convenient to secure the Coast along the Southern Ocean with strong Watches; yet nevertheless Ferdinand Cortesius Landed with five hundred Foot and sixty Horse, took the City Potosichanon, march'd through the Country Sicuchimalar to Tafalecta, where they had a sharp Conflict, in which the Spaniards were in great danger; and had not they had six Field-Pieces with them, which did as much affright as hurt the Indians, they had without doubt been cut off there. In Chinsuteal they were in as much danger, for certainly the Spanish Army had been set upon in the Night, had not a Woman inform'd them of it.

Mean while Mutezuma consult'd with his Sorcerers to delktoy Cortesius by Charms, who then was marching through Chico, whereupon a considerable number of Sorcerers went thither to the top of a high Mountain, where, as they were beginning their Incantations and Charms, their 'Idol Tezcalipoca appear'd to them; and in an angry manner told them, That Mutezuma should lose his Crown and Life; and to confirm his words, they shew'd them a dreadful spec'tacle; for looking about, they saw the City in a light flame. This being told to Mutezuma, he resolve'd to make himself as secure as he could, and went to meet Cortesius with costly Presents, delivering him the Crown in the presence of all his Council; to which purpose he took one Marina, experienced in the Cabilhan Tongue, with him for his Interpreter; all things then seeming to end in Friendship. But they continu'd not long in that state; for Cortesius, whose whole Design was to bring Mexico under the Spaniards Subjection, not long after accus'd Mutezuma, that Coalcopoca had on his Commands form'd the new Spanish City Vera Crux, which he could no way excuse; and notwithstanding Mutezuma deliver'd him Coalcopoca, with fifteen of his Nobles Prisoners, who were all burn't with green Wood; yet he was committed Prisoner, to the great discontent of the Mexicans, who said, "That they were now come to a "fine pass, to be thus fool'd by a few Strangers, who had imprison'd their King, "trampled upon their ancient Images, endeavor'd to murther all, and in des-"pite of them brought their mortal Enemies, the Tafolectans and Gnazuyzingans, in "to Mexico.

About this time there were certain Ships come to Vera Crux, which was a new Port-Town of this Country, that the Spaniards had built since their coming thither, and had Landed near upon a thousand Men; which was an Accident that had like to have spoil'd the Design of Cortesius and all his Company at Mexico, these Men being sent by James Velasquez, Governor of Cuba, expressly against Cortesius and his Men, upon pretence that they had act'd not conformably to the Commission which they had receiv'd from him, and gave him no account of their proceedings; which in a great measure was true: for it must be confess'd, that Cortesius and his Men finding themselves to have fall'n upon an Adventure that was certainly rich and good, and having got such footing and interest in the Country already, by their Success and Victories, and chiefly by their Confederacy with so many of the Natives and People of the Country, revolted to them, did almost at first, by a general concurrence, renounce their Commission, and dependency upon Velasquez, and protest'd.
profes'd to act immediately from and for the King of Spain. What pretences they had for such a Resolution, seemingly at first irregular, is not so well known. Whatever they were, they proceed in it, and the whole Company (excepting only a few, who yet went along with the rest) chose Cortesius anew for their Commander in chief, and appoint likewise by common consent, all other Officers of Justice, both Civil and Military, among themselves: and to give the better colour at Court to their Proceedings, they send Portocornero and Monteio, two of their Principals, into Spain, with a rich and noble Prefent to the Emperor, both to make report of the State of the Countrey, and to procure immediate Commission from his Majestie, to proceed; after which they advance towards Mexico, as hath been said. Viterafuez, being at Cuba, and understanding their Proceedings, labor'd to intercept both their Messengers and Prefent, but could not; and therefore lent Pamphilus Narvaez with eleven Ships, and about nine hundred men of Warre, and apprehend Cortesius, and oppose his Proceedings. This hapned about the time that the Differences were but newly calm'd betwixt the Spaniards and the People of Mexico; and though it obli-
g'd Cortesius to leave the City in a waving and unsettled condition, yet he took such order, that Mutezuma still remain'd under the Guard of the Spaniards as before, afflicted with thousands of their Friends of Tlascalla, and he himself taking the rest, and some few Spaniards along with him, with undaunted courage and resolution marches against Narvaez; and such was his good fortune, that not onely Narvaez became his Prisoner without much blood-shed, but likewise all his Men joyn'd with him in his Design, through the favour of the Chancery or supream Court of St. Domingo, and by the procurement of the Licentiat Vasquez de AyIon, a Judge of it, who was sent with Narvaez to accommodate the Differences. With this Recruit Cortesius marches back again to Mexico; but at his coming finds things in a very bad condition; for the Citizens, gather'd together under the Command of one Quicuxte-
moC, had recourse to Arms, and for three days and three Nights vex'd the Spaniards with continual Stormings, notwithstanding whatever Commands they had to the contrary from their imprison'd King, who at last, looking out of a Window, endeavoring to appease them, was hurt with a Stone, of which he soon after died, as they say, who would not have the Spaniards thought to have murder'd him, as the Mexicans say they did, with divers other Noble-men, and some of his Children, the very Night they fled. However it were, not long after his Death, out of extremity, necessity, and chiefly for want of Viciuals, the Spaniards were forc'd to leave the City in the night-time, and with the loss of four hundred and fifty of their Men, who were either slain or taken Prisoners at the passing of a Draw-bridge, the rest making a heavy Retreat to their Friends at Tlascalla. There is standing at this day in Mexico, upon the place where so many of them were kill'd, a certain Hermitage, which they call Los Martyres, or The Hermitage of the Martyrs, though but improperly, if upon that occasion, as one of their own Writers confesses, though he alleges no other reason.

This Retreat of the Spaniards out of Mexico hapned to be upon the tenth of July after mid-night, in the Year 1520. which the Spaniards at Mexico call The Doeful Night. Nevertheless the undaunted Cortesius being got, though with much difficulty and trouble, by reason of the pursuit of the Mexicans for a good part of the Way, to his sure Friends of Tlascalla, neither lost his Courage, nor gave over his Re-
solution of yet gaining Mexico, especially the way being now laid open, and sufficient occasion given by the Death of Mutezuma, and the provocations of the Mexicans themselves, to make himself absolute and sole Lord of the Place: wherefore having lent for, and procur'd a competent Supply of fresh Soldiers from
Santo Domingo, or Hispaniola, America, Cuba, and other places, being in all nine hundred Foot, eight hundred Horse, and seventeen Pieces of Ordnance; he joyns himself with the Auxiliary Forces of Tlascalla, which were no less than a thousand Men, Arm'd with Bowes and Arrows: and with this Army marches again towards Mexico, and besieges it both by Land and Water, viz. with the help of thirteen Brigantines or Galliots, which he had built upon the Lake, and fix thousand Canoes, or little Boats, which his Friends and Confederates had procur'd him. By which means, and by his Army on Land, in a short time he cut off all Provision from the City, and after a Siege of full three Months or more, and a most stout and obstinate resistance made by the People within, in which they are said to have lost above a hundred thousand Men, beside those which perish'd by Famine, Sicknes, or otherwise, he took it by Storm upon Tuesday the thirteenth of August 1521. Sack't it first, and then burnt it to the Ground; yet afterwards he caus'd it to be Re-built again, far more Beautiful than at first it was; as in due place we shall further see. They speak not of above fifty Spaniards slain during the whole Siege, six Horses, and not many Tlascalleans.

In this manner, and with so little Charges to the Conqueror, there fell to the Crown of Spain the richest and goodliest Kingdom (one of them) of the whole World, viz. the Kingdom of Mexico, which the Conquerors presently nam'd New Spain; and in reference to which name, the Catholick King hath ever since flil'd himself in the plural number Hispaniarum Rex, or King of both Spain's, and all by the Valor, Prudence, admirable Resolution, and happy Conduct of Cortez, who was at first but a private Adventurer in the American Plantations and Discoveries, though otherwise a Gentleman of a good Family in Spain, born at Medellin in the Country of Estramadura. The Emperor Charles the Fifth, who was also then King of Spain, for his great Service, endow'd him deservedly with many great and rich Territories in the Provinces of Tlascalla, Mixcoacan, and other parts thereabouts, made him Marquis of the Valley, viz. of Guanata, (which is his chief Title) a rich and flourishing Province of that Country, Captain General, or Commander in Chief, of all the Military Forces of New-Spain, and General Discoverer of all the Maritime parts and Coasts of America towards the South-Sea, assigning him in propriety the twelfth part of whatsoever should be discover'd, to him and his Heirs for ever; but deny'd him the Government of Mexico out of reason of State, though 'tis said, he much defir'd it.

Among the famous Havens which lie along the South Sea, and Northern Ocean the chiefest is Acapulco before-mention'd, whither all Merchandise is sent to be transported to China, which is above two thousand Leagues distant from thence; in which Voyage they generally spend fourteen Months; four Sail, each of eight hundred Tun, appointed for this Trade; generally two of them for Sail to China in March, and returning in Summer, have no sooner drop'd their Anchors, but the other two set out from Acapulco, from whence the way by Land to Mexico, is seventy two Leagues over steep Mountains, dangerous Rocks, and several Rivers; the chiefest whereof are, first, Del Papagayo, or De las Balsas, which runs exceeding strong, which the Indians crosses on bundles of Canes ty'd upon Callabagos: Next San Francisco, which though the biggest, yet hath many shallow places to wade over. The Musquitoes are no small Plagues to those that travel this way, for their Poylounous Stings are the occasions of many Ulcerated Wounds, and oft-times Death it self.

In this way lies also the Countrey del Valle, from which Ferdinand Cortesius receiv'd the Title of Earl.
The Mouth of the Haven Acapulco gapes a full League North and South, and within exceeding large, hath a nook call'd Boca Grande, where the Ships Ride safe at an Anchor: More Eafterly appears a Land Inlet, (by the Spaniards call'd Puerto del Marques) secure'd against all Winds; near which is the City of San Diego, to which belongs a Fort, with six Bulwarks, lying on a Promontory; the main of the City is one large Street, confifting of fair and flately Houses, and leading directly to the Haven; the Church which is of an oblong square, hath a high Steeple in the middle.

A Dutch Admiral, one for Spilbergen, after he had done the Spaniards all the mischief he could along the South Sea; ran with five Sail under the Fort Acapulco, which fir'd ten Guns at him; whereupon, the Dutch Admiral Manning a Boat, with a white Flag, they agreed upon a Ceflation, and the Spaniards went aboard of the Admiral; to whom Pedro Álvares, and Francisco Menendus, having been a considerable time in Holland, and speaking the Language of that Countrey very perfect, promis'd that all his Demands should be satisfi'd; yet Spilbergen was suspiacious that the Spaniards had a design upon him, wherefore he came and lay close under the Castle with his five Sail, and made ready his Guns: But this suspicion was soon clear'd, when Álvares and Menendus propos'd to lay as Hostages, till the Governor of the Town sent the Admiral thirty Oxen, fifty Sheep, some hundreds of Poultry, Coals, Oranges, Citronels, and the like fresh Provisions, as also Wood and Water; during which time, the Prisoners being set at liberty, several Persons of Quality came to visit the Admiral, amongst whom was Captain Castilo, one that had serv'd twenty years in the Low-Country Wars; and Melchior Hernando, Nephew to the Vice-Roy of New-Spain, who defirous to see the Ships that durft set twice upon Rodrigo de Mendofa, Admiral of the King of Spain's mighty Fleet, stood amaz'd that such little Frigates durft Ingage with so many great Spanish Ships; and carry'd the Admiral's Son to the Governor of the City, call'd Georgius Pego, who civilly entertain'd him: Eight days Spilbergen spent here at Acapulco, admiring the courteous Entertainment of the Spaniards, and the more, because that having News but eight Moneths before of the Dutch Fleet setting out, they had in that short time made all things ready for reftistance, the Fort having Seventeen Bras Guns, and four hundred Soldiers, besides many Noblemen and Reformades, whereas at other times there us'd not to be above forty Men, and four Guns in the same.

Sect. II.

Mechoacan.

The next Province of New Spain is the Bifhopprick of Mechoacan, which hath on the North-East, Panuco; on the East, Mexico, properly so call'd; on the South part, Tlascala, on the West, the Main Ocean, or Mare del Sur; and last of all, more directly Northward, Xalifas, which is a Province of New Galicia: The Name signifieth in the American Language, as much as A Fifth Country; and so it is, having many fair Lakes and Rivers in it, abundantly well for'd with Fifth. The Country is exceedingly pleasant and healthful, that 'tis usual for sick Persons of other Provinces to come hither to recover their health, only by the benefit of a good Air. The Soil is abundantly fertile of all sorts of Grain, that of four measures of Seed, it hath been often observ'd, they have reap'd the next Harvest, more than fo many hundred measures of the same Grain. Very well Wooded; and by reason of its many Rivers and fresh Springs, equally rich in good Pasture:
and besides great plenty of Medicinal Herbs and Plants, it affordeth good store of Amber nigh the Sea Coasts, Mulberry-trees, and consequnetly Silks; much Honey, Wax, and divers other Commodities, both for necessity and pleasure. The People of the Countrey are generally tall, of a strong active Body, and a good Wit, especially in comparison of other Natives; not unskilful in divers curious Manufactures, the most excellent Feather-Pictures, afore-mentioned, being said to be found in this Province. They feem more generally inclin'd to the Humors and Customs of the Spaniards, than any other Americans; and receiv'd the Preaching of Christian Religion, when time was, with such willingness, so that the Countrey is now entirely Christian, and divided into several Parishes.

The Languages which are spoken in Muchacan are several, as the Otomian, Chichimean, and the Mexicans, which is common through all New Spain, and the Tarascan, a neat and brief Language, which properly belongs to this Countrey.

The Lions and Wilde Dogs of this Countrey devour great numbers of Cassel yearly, yet the greatest mischiefs happen from the Tygers, which often fetch People out of their Hovels, notwithstanding the Doors are lock'd, for they break in the great walls and Roofs, with much eagerness and strength: Of the greatness whereof, Jacob Boutin tells us this story: That the Governor Peter Carpenter let a Trap without the Walls of Batavia, of great Timber, Plefted with Iron, Baiting it with a Goat, which taking effect, the Tyger that was caught therein, impatient of such close imprisonment, rent the Timber, and getting out, left the Goat untouched.

Hugo Linfchet relates, That the Tygers in the Weft-Indies hurt no Spaniards, exercising their cruelty only on Indians; and that finding a Black and a White Man sleeping together, they devour the Black and not the White: How far these affertions deserve to be credited, may appear by an evident contradiction of the first, for it is well known, many Spaniards in the Weft-Indies have been eaten by the Tygers.

General Fedcrman marching in this Countrey at the Head of his Army, was assaulted by a Tyger, which in despight of them all killing a Spaniard, and three Indians, escap'd from them: no Trees serve for a refuge against their fury, for they climb up to the top thereof, and fetch down their Prey; their Claws are so exceeding Venomous, that whoever is scratch'd with the same, is never to be cur'd; there is no Beef but they will venture upon, wherefore they lie in the Bushes, from whence they rush out upon them; but this disadvantage they have, that most other Beasts are too nimble Footed for them, for they are a very heavy Creature, whatever hath been deliver'd by the Ancients concerning the Tygers swiftness.

As to the difference which they make in Humane Flesh, it is thus far true: That they find more sweetness in Womens Breasts than other parts, and chose a Black Man before a White: Concerning the first, France gives a sufficient testimony, when two Tygers, in the time of King Lewis the Twelfth, breaking loose, left a great number of Women lying Breasts in the Road. The second is confirm'd by John Johnston's Relation of a strange accident that happen'd in Bengal, viz.: A Moor dreaming that a Tyger fetch'd him out of the Ship, hid himself the next Night between Decks, of which the Master asking the reason, was inform'd concerning his Dream, which prov'd prophetic, for about Mid-night a Tyger leapt into the Ship, and devouring the Moor, went away without touching any one of the Hollander's, of which there were thirty: But a Sea-man walking on the shore escap'd more wonderfully, for a Tyger setting upon him behind, and a Crocodil before, he leaping from betwixt them, discover'd to the Tyger the Crocodile, to whom the Tyger directly running, and ingaging with the Crocodile,
par'd the Sea-mans life : Notwithstanding the cruelty and mischief of these Tygers, the Indians are led by their foolish Superstition to worship them; because, as they say, the Devil often appears to them in that shape.

Besides the Tygers, the Inhabitants of Mechoacan are exceedingly molested with Squerrils, which not only carry much Fruit into their Holes, but also under-mine the Houses, so that they often sink or fall on one side, the mischief being the worse, because they increafe daily. Most of them bear four young at a time, which on the third day run about for Prey, and can scarce be taken, because of their exceeding swiftness, leaping a great distance from one Tree to another; their Tails serve them on divers occasions, for leaping they ufe it like a Wing, and at their crossing over a River, for a Sail; in tempeftuous Weather, they flop their holes therewith, to keep out the Wind.

There are fix {several} sorts of Squerrils; the first call'd *Tilic*, cover themselves with their Tails; the second *Quapatcha*, is as big again, and can never be made tame; the third *Techalol*, with a bald Tail and great Eyes; the fourth *Talmoaton*, hath a thick Head, and a Tail full of black and white streaks; the fifth *Qui-omitpatian*, hath a little Head and long Legs; and leaping from one Tree to another, seems to fly; the laft sort call'd *Tzacitechalol*, is whitifh.

The Foxes do also great mischief here, their Urine smells fo horribly, that forty days after, none are able to abide near the place where they have urin'd, and on whatsoever Stuff or Cloth a drop thereof chance to light, the flink can never be wash'd away.

Here breeds also a fort of Birds, call'd *Auroat*, which are not unlike Moore-Hens; they flie exceeding high in the Air, feed on nouht but flinking Carrion, which they fcent at a great distance; they have a hairy Head and Neck, and ugly Face: Some of the Fowls of this Country flay here all the year long, others go away, and return at certain times.

The Natives, since the Spaniards coming thither, have gotten their Habits and Language, learnt all forts of Trades; their Tables, Chefs, and Cupboards made of Brasile-Wood, are no way inferior to the best that are made in Europe. Painting is also in great esteem amongst them: They make handsom Clothes, Shooes, and strange Copper Locks. They have a peculiar Art in Tilling their Ground: They teach the Spanish Dogs several tricks, but not feeding them well, they caufe them to run from them, and turn wild, whence they are call'd *Cinarrones*, because they do much hurt to the Cattel.

The Inhabitants, when a Fever or Ague is upon them at the higheft, leap into cold Water: against other Sicknesses they ufe Herbs, whole sovereign Power Experience hath long since taught them.

Since the Spaniards made Mechoacan a Bifhoprick, they have built ninety four Schools, fifty Churches, several Hospitals and Cloyters, inhabited by Francifcan and Augustin Monks.

There are faid to be in this Bifhoprick a hundred and fifty Towns or Burroughs (besides many Scattered Villages) most of which have Free-Schools erected in them, for the Training up of Youth in the Christian Religion, good Literature and Arts; and few of them without an Hospital for the Sick; of which Towns the principal are as followeth:

1. Zinzoutza, the Seat of the ancient Kings of Mechoacan. 2. Paéuar, a City forty seven Leagues different from Mexico, once a Bifhop's See. 3. Vallabolio, the Metropolis or chief City of the Province, since the Epifcopal Chair was remov'd from Paéuar thither. It lieth upon a great Lake, equal almost for bignefs to that of
The People of this Country, when the Spaniards came first amongst them, liv'd in the form of a Common-wealth, or Free-State, refusing to be subject to the King of Mexico,

Mexico, and is about seven Leagues distant from Pazcuaro, towards the East. 4. St. Michæls, a good Town, forty Leagues Westward of Mexico, and in the Way to the Zacatecas, but lying in a Road that is somewhat dangerous, being not a little infected with Salvages on both sides of it. 5. St. Philips. 6. La Conception de Salaga, seventeen Leagues distant from Valladolid, and a convenient Stage for Travellers, being indeed, with the two last mention'd, built chiefly for the defence and securing of the Country against the Salvages. 7. Guaxanata, a Town on the Borders of Panuco, where there are very rich Mines of Silver. 8. Leon, another Town likewise of very rich Mines, twenty four Leagues distant from Valladolid, and three score from Mexico. 9. Zamora. 10. Villa de los Lagos, and others.

Towards the Sea there is 1. Acatlan, but two Miles distant from the Sea-Coast, and a small Town, yet by reason of a safe and very good Harbor which it hath for Shipping, a Place of no little Trading. 2. Natividad, another well known and convenient Haven upon Mare del Zurb, pertaining to this Province, and from whence they usually set Sail for the Philippine Islands. 3. St. Jago de buena Esperanza, so call'd by the Spaniards, perhaps from the abundance of good Pearls they found upon this Coast. 4. Coima. 5. Zucatula, and some others.

This Province, as we said, was at first a distinct Kingdom of itself, yet subordinate and Tributary to that of Mexico; the King whereof nam'd Tamaga, or Bimbicha, (as Last reporteth) at the first coming of the Spaniards thither, after the Conquest of Mexico, voluntarily submitted himself to them, and was Baptiz'd. Nevertheless afterwards, upon a pretence of I know not what, Treason intended by him against them, and which the Spaniards Writers themselves professefully think to have been feign'd, by command of Nunnez de Guzman, President of the Chancery of Mexico, he was most inhumanely burnt alive, and his Kingdom seiz'd upon by the Spaniards.

S E C T. III.

Tlascalla.

The Bishoprick of Tlascalca, formerly call'd Tlascalteca, Tlaxcala, and Tlascalatan, is a Province of New Spain, which extendeth itself entirely from one Sea to another, viz. from the Atlantic to Mare del Zurb, with which it is bounded on the East and West Parts, lying otherwise, and for the most part betwixt the Provinces of Mexico, last spoken of, and that of Guaxanata, which followeth, containing in length from one Sea to the other, not much less than an hundred Leagues, and in some places four score in breadth, but towards the South Sea growing much narrower. It is a Countrey exceedingly plentiful both in Corn and Cattel, full of rich Pasturage, and so plentifully for'd with Maize, Wheat, and other Grain, that it is accounted as it were the Granary of America; besides Deer, all manner of Venison, and great store of Fowl. There is likewise Copperers, Alom, Silver-Mynes, Mannia, Amine, and Liquid Amber, with a sweet smelling Gum which drops out of a Tree. The Rivers feed no Fish, because they fall with exceeding force from the Mountains; only near Topoyance, is a deep Lake of fresh Water, inhabited round about by Indians, enjoying the pleasure and profit of the many Cumbeha-Trees, which yield Cochinite, producing yearly above two hundred thousand Duckets worth of that Commodity. In this Lake swim black Hedge-hogs, whose Flesh is good and wholesome to eat.

The ancient State of the Tlascalans,
Mexico, with whom they had almost continual War; and upon that account, as hath been said, assisted Cortesius in the Conquest of the Kingdom, without whose help 'tis most certain he had never been able to do any thing. They enjoy therefore many special Priviledges and Immunities more than other Americans do. They pay no Tribut, but only a handful of Wheat yearly for every Person, by way of acknowledgment, otherwise living, under the Protection of the Spaniards, wholly in the Form of their ancient Government. In former times they were great Man-eaters, and not onely eat the Flesh of their Enemies, but also of one another, info much that Man's-flesh hung in publick to be sold.

The River Zubuatl, which ruffles out of the Mountain Xicoculcan, oftentimes overflows all the Country near it, and washes away divers Houses. Zubuatl signifies Scabby Water, because all those, epecially Children, that wash in the same, are sure to be Scabby. On its Banks the Spaniards have built many Houses, the fashion whereof is now also imitated by the Indians of this Province, who formerly built quite after another manner; for they made low Houses of Earth, Wood and Stone, with large and strange Chambers; some a Stones-cast one from another, others clofe together, had narrow crooked Streets that ran betwixt them.

In this Province are two forts of Languages spoken, viz. the Mexican, and that of the Otomous, who formerly defering Mexico, chose the Tlascalan for their Protectors: They are a tolifom and painful People.

To the Northward of Tlascalans are Mountains, which all the year long, except three Moneths, are cover'd with Mif; and the Woods on the tops of them are a great felter to Lyons, Tygers, Wolves, and wild Dogs, call'd Adives, and other wild Beasts, which do much hurt to the small Cartel. Here are also many Serpents and Adders.

The whole Province is faid to contain two hundred good Towns and Burroughs, and more than one thousand Villages, all of them exceedingly populous, and suppos'd to contain in the whole above a Million and half of Natives, besides Spaniards, who have some few Colonies in the Country for securing of it.

The chief Towns of the Province are 1. Tlascala it self, which denominates the whole Country as the Metropolis, and where the Bifhop's See was at firft, till in the Year 1530, it was remov'd to Puebla de los Angesl. It is a fair Town, and commodiously ftead in the midft of a large and fertile Campain of threescore Miles in compass. It confifeth of four large and beautiful Streets or Quarters, and in the midft of them where they all meet, hath a Piazzza, or Market-place, equal to that of Mexico, and able to receive twenty or thirty thoufand Perions conveniently, to Buy and Sell in it; and whole Shambles feldom shew les than fifteen thoufand Sheep, four thoufand Oxen, and two thoufand Hogs.

2. Puebla de los Angeles, or The City of Angesl, a Town built by Sebastian Ramirez, a Church-man, and he that was the firft President, or chief Governor of Mexico, under the Crown of Castile. It was built in the Year 1531, almoft in the Road-way from Vera Cruz to Mexico, and ftead in a very delicate and fertile Country, and of a good Air. It is a Bifhop's See, and valu'd at twenty thoufand Ducats of yearly Rent, the City it felf suppos'd to contain about fifteen hundred Families; where there is abundance of excellent Cloth made, and for fineness nor yielding to the beft of Spain. Its chief Edifices are, the Cathedral and four Stately Cloyteres, belonging to the Dominicans, Franciscans, Augufines, and Capuchins; as also a Free-School for five hundred Indian Children, endow'd by Ramirez with a yearly Revenue.

3. Zempoallan, ftead upon a River of the fame Name.

4. Nacaplix, in the Valley Ocumba, ows its original to an Indian call'd Juan, who
at first had onely one House, and a Herd of Hogs there, till upon his invitation, all the neighboring People came from the tops of the Hills; in Qmusch, that in a short time, the place was Peopled by thousands of Families.

5. Guasacinga, all hitherto great and ancient Towns of the Natives.

6. Segura de la Frontera, a Spanish Town, built by Cortez presentely upon the Conquest of Mexico, for the securing of the Conventes, as the Name imparted.

7. Vera Cruz, a Town built by Cortez and his Companions, at their first Landing, and where afterwards, by a Stratagem, and out of a resolution either to Conquer or Die in the Countrey, he caus'd all his Ships to be burnt, that his Soldiers might not so much as think of returning back from whence they came. The Town was at first built five or six Leagues up within Land; but the place being found not to be so healthful, the Inhabitants in a short time deserted it, and feated themselves upon a Bay of the Sea, right over against St. John D' Ulina.

8. Medellin, another Spanish Town, built likewise by Cortez, in memory of his own Birth-place, which was Medellin, a small Town of Eiframadura, a Province of Spain, but was afterwards destroy'd by some Spanish Commanders, out of malice to Cortez.

Lastly, St. John D' Ulina, a noted, and the most usual Port to all this Province, and likewise to the City of Mexico it self, from the North Sea: but of difficult entrance, especially to such as are not well acquainted with the Passage, or want Guides, by reason of certain Rocks and Quick sands, wherewith the Mouth of the Haven is said to be bar'd but within, the station is more safe. It hath likewise two strong Bulwarks or Forts rais'd, on either side of the Entrance one, to defend the Passage; besides a strong Castle, built since Captain John Hawkins surpris'd twelve Ships richly Laden within the Haven, and thirteen others that arriv'd with a new Vice-Roy from Spain, valu'd at near sixty Tun of Gold, of which he might easily have made Prize, had he not trusted to the Vice-Rois Promife, to give him all satisfaction he should require, by which being deceiv'd, he lost all his Fleet but two Ships.

Between Tlascala and Los Angelos are the Fountains, out of which the River hath its Original, which gliding by Machancan and Zacatula, falls into the South Sea: This River is so exceeding full of Crocodiles, that they have made several places which formerly were Inhabited on its Banks, utterly desolate, for the Females laying generally Eggs as big as thole of a Goose, increase prodigiously; and were it not that the Indian Mice, call'd Ichneumones, destroy'd them, they would grow still to greater numbers: But this Animal creeping in at the Crocodiles Mouth, eats his way out of the Belly again; Water-Serpenfs, Hawks, Buffelers, and espeffially Tygers, are also their mortal Enemies, for they throwing the Crocodiles on their Backs, rend open their Bellies: They are more defirous of Mans flesh here than in any other place, because the River of Tlascala hath but small store of Fish; in the day time they lie cover'd in the Mud, from whence they rush forth, and set upon thole that happen to pass by them; they pursue the Canoes in the Water, and strike down the Rowers with their Tails.

Eight Leages beyond Tlascala, appears the Mountain Popatepec, which for ten years ceas'd imoaking, till Anno 1540: it broke forth in such a manner, that the Countrey all about was terrifi'd therewith, for it vomited not only a black Smoak, but also horrible Flames, which sometimes being blow'd downward, burnt the Corn in the Fields, and the Abbes thereof flying as far as Guazocingo and Chuilte, burnt a great deal of the Town to the Ground; every one endeavor'd by flight to secure themselves, with intention never to return thither again; but the

Flame
Flame and Smoak abating, Captain Diego de Ordas went up to view the place, whence the Fire was call'd forth; which curiiosity and presumption of his, had like to have cost him his Life, for the sulphury Smoak breaking forth on a sudden, had almost stifled him.

Moreover, the Bishoprick of Tlascala, is on the North Coast wash'd by the River Papahua, since call'd Alvarado, from a Spanish Commander, who first Steer'd his Course thither: The next Stream nam'd Banderas, is so call'd, because the Natives held white Clothes on Poles, to invite the Spaniards ashore. The third is Almeria, on which, Cortez, a year after the taking of Mexico, built the Town Medellin, as above-mentioned.

Along the Tlascalan shore, wash'd by the Northern Ocean, lie the Isles Blanca, Verde, and Sacrificios: The first receiv'd its denomination from White Land, the other from Green Trees; and the third, because Joan de Greyalve, who first Discover'd New Spain, Landing on this Island, found a Bloody Altar there, with Sacrific'd People with open'd Breasts, chopp'd off Arms and Legs.

The River Almeria falling into the Ocean opposite to the Sacrificios, the Spanish Ships came once to an Anchor there; but in the latter times, they have forfaken the same, because the Northern Winds us'd to blow very hard against the shore, and spoil'd many Vessels: But Henry Hawks gives this reason, That a dreadful apparition of Spirits frighted the Spaniards from thence.

In the Bishoprick Tlascala, is also compriz'd the Province Tepeaca, whole Metropolis was built by Cortez, when with great Loos he was sent from Almeria. The Soil thereabouts is barren and ftony; the Water which they have in the City, is brought in Pipes from a River which flows out of the Mountains into the Market place. The plain Countrie hath many good Pastures. The Inhabitants thereof speak four sorts of Languages; of which, the commonest is the Mexican; others use the Popoloca or Otman Tongues.

The Village Ayazcan appears afar off on a high Mountain, on whose top is a Lake of a hundred and fifty Fathom in circumference; the Water whereo'f is very cold, and of a bluish Colour, and neither Ebbs nor Flows, to which the Villagers climb along a narrow Path.

Not far from thence, in the Plain, are two other very deep Lakes: The first call'd Tlacae, is a League in circumference, and breeds delicate white Fift, not above a Fingers length: The second call'd Machichican, about the same bigness, which in Stormy Weather is very turbulent.

Amidst the Fowls of this Countrie, the most noted is a little Summer Bird, with a long crooked Tail, speckled Feathers; feeds on nothing but Flowers and the Dew; about Harvest time, when the Rain ceaseth, it hangs fast with its Bill on a Tree, and as soon as the first Rain falls, it revives again.

In this Countrie Tepeaca are five Villages, in each of which is a Francifcan Cloyster and convenient Hospital.

In this Countrie they gather the Water in the time of the Rainy Moneths, in a digg'd Pool, which every Morning produces little Toads with long Tails, which in few days fall off; but these little ones growing to be great, make a most dreadful noise in the Night: From October till March, not one drop of Rain falls in this Countrie; during which time, the Northern Winds make a dry and wholsome Air, yet oftentimes a tempestuous Sea, to the loss of many Ships.

Farther up into the Countrie, between Vera Crux and Los Angeles, lies the Village Rinconada; and also Xalapa and Perota built of Straw Houses in the middle of a Wood of Cedar and Pine-Trees, inhabited by the Spaniards, for the accommoda-
ring of Travellers: To which purpose there are likewise Inns built near the
Spring Fuente de Ozumba, which gushes out of a high Rock.

Nor far from hence is the Populous Village Chetula, where a small number of
Spaniards dwell amongst thousands of Indians, who chiefly make use of Mules to car-
ry their Loads.

S E C T. IV.

Guaxata.

Between Los Angelos and Guatemala, lies the Bishoprick of Antigua or Guaxata
largely taken; it hath on the North, the Bay of Mexico; on the South, Mare
del Zor; on the East, Jucatan and Chiapa, which is one of the Provinces of
Guatemala; on the West, Taycalla.

The Country extendeth it self upon the South Sea about an hundred Leagues
in length, but from the Sea to the Borders of Taycalla, one hundred and twenty;
Eastward not above half so much, having a good Air, and a Soil no leas fruitful,
especially in Mulberry-Trees, and abundance of Silks, which the Country
affordeth, more than any other Province of America besides; nor is it less rich
in Mines of Gold and Silver, there being scarce a River in the whole Country,
but the Sands of it are said to be Tinatur'd more or less with that yellow Metal;
also Crytal and Copperes. It yieldeth likewise great plenty of Cafea and Cochinel,
two rich Commodities, and the People generally, if they would take pains, might
be the wealthiest, 'tis thought, of any other in America: But whether it be through
any voluntary contempt of Riches, or through any natural slothfulness, as yet
they seem to Pine in the midst of plenty, living, for the most part of them, little
better than from Hand to Mouth; nevertheless, exceeding liberal of what they
have, especially such as bear the Habit of Religion, and attend the service of
their Souls; maintaining in a plentiful and good manner, as 'tis said, no less than
one hundred and twenty Convents of Religious Men, of several Orders; in this
only Province; besides Hospitals, Schools for the training up of Youth, and oth-
er places of publick Charity; it is said also to have three hundred and fifty Vil-
lages, and near as many brave Country Houses. It is sub-divided into many partic-
ular Provinces; which, because they are many and but small, in comparison of
some other, we may call Wapentakes, or Hundreds, rather than Provinces: The
principal whereof are these that follow, viz.
4. Guazacadeo. 5. Guaxataca: and 6. the valley of Guaxata, from whence Cortez, af-
ter the Conquest of Mexico, had his Title given him by the Emperor, Marquefs
of the Valley. It is the richest and most pleasant part of the whole Province, extended
in a continu'd Tract together, full sixteen Leagues or more, lying about four and
Southward of Mexico, and wanting neither Mines of Gold and Silver, nor any other
of the prime and best Commodities of the New-World.

In this Country they speak thirteen forts of Languages, of which the Mexican is
most us'd.

Amongst the Plants which grow here, is an exceeding Poisonous Herb, which
kills those whoe'ere pluck it; though a long time after, that is to say, if it be of a
Years growth, it kills not before the Years end; if a Moneth old, at the Moneth's
end; if a Day, on the same.

This Country formerly suffer'd also many inconveniences by Earthquakes,
but of late they are somewhat abated, which the Spaniards ascribe to Martialis, Pro-
tector of the Cathedral at Antequera.
Mistaeca is divided into Alta and Baxa, both of which have Rivers and Brooks that afford Gold, whither the Indian Women taking Provisions, go for several days, and gather Gold in Troughs, which they exchange at the Spaniʃh Markets for Provisions.

Not far from the Village Cuertavaca, lies a high Mountain, remarkable for a strange Cave, whole Entrance is very narrow, at the end whereof appears a square Place of fifty Foot, upon one side whereof stand Pits with Steps; near which begins a crooked Way of a League long; at the end of which is a spacious Place with a Fountain of good Water; from the Foot of which flows a small Brook: But because none have made any farther discovery of this Cave, the other parts of it remain yet unknown.

On the top of St. Antonia, the Indians live with their Families in Caves between the Rocks.

Not far from hence appear two Mountains, whose tops, though they lie at a great distance from one another, at the bottom they are so near, that a Man may step from one to the other.

The six Rocks Penules, formerly Garrifon'd by the Kings of Mexico, have Gold, Lead-Mynes, and a Root which is us'd in stead of Soap.

In the Village Totonachiapo, is a Cave of half a Mile long, at the end whereof the Water prevents a farther discovery.

The Rocky Countrey Zapotecas formerly bred very salve Inhabitants, Mantled in Furs, but now Civiliz'd, clad after the common manner.

The People spread over Guaxacucoles, Yuta, and Cuézcoxala, obseve Circumcision according to an ancient Custom; from whence some have in vain sought for a testimony, that these Americans should be originally extracted from the fasting Tribes of Israel; but the Tartars more immediately, who at last crossing the Straits of Anian, furnish'd the defolate Countrey of America with Inhabitants: But this Opinion is without any probability of truth; for it will never follow from their Circumcision, that the Tartars, the greatest People on Earth, must owe their original to a few Israelites, Prisoners, since that Ceremony was never thought on by them till they embrac'd the Mahometan Religion. And though they had been Circumcis'd before Mahomet's time, this would be no testimony that they were extract'd from the Israelites: for how many People embrac'd Circumcision, which were never extract'd from Abraham's Seed? It is affirm'd by Dioscorus Siculius, that the Cholchians; by Phile Judeus, the Egyptians; by Herodotus, the Moors; by Strabo, the Troglodytes; by Cyprian, the Phœnicians and Arabians Circumcis'd themselves from all Antiquity, which is to this day observ'd by some of them. It also plainly appears by the Prophet Jeremiah, that the Egyptians, Edomites, Ammonites, Moabites, and Ishmaelites, had the same Custom anciently amongst them.

The Towns of principal note inhabited by the Spaniards in this Province, are 1. Atequera, in the Valley aforefaid, a rately City, and beautifull'd with a fair Cathedral Church, built with Pillars of the finest Marble, of great height and bigness. The River which slides by the Walls, springing out of the Ground, runs to the Mountain Coatlán. Not far from thence lies the Village Fórerra, which boasts four hundred Spaniʃh Families, though some say that the greatest part of them are Indians, who pay the Spaniards Cotton Cloaks and Nuts for Tribute.

2. Ilipónfó de los Zapotecas, lies on a Mountain belonging to the Mixes, anciently a salve, strong, and long-bearded People, who speak a groʃ Language, and in former times went naked, only a white Deer-skin, Tann'd in Man's Brains, about their Middle. They maintaine'd continual War against the Zapotecas, and could never
never have been subdued by the Spaniards, had it not been for their Dogs, which kept them in such awe, that thirty Spanish Soldiers ventur'd to live in Illuphonso amongst thirty thousand Mixes, who now drive a Trade in Cotton, Maize, and Gold.

3. San Jago de Nexapa appears at a great distance on a high Mountain, where also twenty Soldiers with their Dogs were wont to awe the cruel Natives.

4. The last Place, built by Gonzales de Sandoval, Anno 1522. is Villa del Espríritu Santo, Commands fifty Indian Villages, which with great difficulty were brought to submit to the Spaniards.

The River Aquivicoco affords a convenient Harbor, the Mouth thereof being a hundred and ninety Paces broad.

Upon the Southern Ocean is the Haven Guatulco, where the Ships that Sail to Honduras and Peru take in their Lading. The Custom-house belonging to this Place was first plunder'd by Sir Francis Drake, and nine years after burnt by Captains.

The River Ometipus, which springing out of the Mountain Cacatpec, falls into Teponanque, abounds with divers forts of good Fish, especially Cra-Fish. There are also reckon'd of the Natives of this Province, no less than fifteen thousand Persons that pay Tribute to the Spaniards, besides Women and Children, and also a great number of Spaniards.

Sect. V.

Panuco.

Panuco is the most Northerly Province of New Spain, by some call'd Guasheca, bounded on the East with the Gulf of Mexico; on the West with Uxtepa, a Country of New Galicia; on the North with some undiscover'd Countries of Florida, from which it is divided by the River of Palms; on the South with Mexican and Acaxcan. It is call'd Panuco, from a River of that Name, which turning from the Mountains Tepecuan in New Galicia, and dividing New Biscay from the Province of Zacatecas, paffeth through the midft of this Country also, and at last empties itself into the Gulf.

This Country is reckon'd to be about fifty Leagues in length, and not much less in breadth; of a fruitful Soil, having some Mynes of Gold in it, and once very populous till the Spaniards, about the Year 1522.disseanted it by their inftaiblable cruelty.

Before Ferdinand Cortesius, Francis de Garay attempted to Conquer this Province, but after much pains to no purpose, he return'd with but a small remnant of those he carried with him; and though Cortesius subdue'd the Countries Ayetexetlan and Chila, yet it was not without many considerable Losses; for the Inhabitants being valiant and cruel, not fearing the Spanish Bullets, ran in amongst them, and made great slaughter, and (according to an old Custom in New Spain) drank their Blood.

These People, on their Festivals Days call'd Raexipo Velizzi, which signifies A Flaying of Slaves, us'd to pull off the Skins of a certain number of Slaves, with which they walk about begging Alms from Hut to Hut, and who soever deny'd them, was sure of a Blow in the Face with the bloody Skin; of which so long as there was but one Lappet remaining, they went a Begging; and whatsoever they got, was employ'd in Ufes and Necessaries belonging to their Idolatry. On the forementioned Days they also us'd other barbarous Customs, amongst which this was one:
one: The Priest challenging the Slave which was to be Offer’d, to Fight for his Life, he had one of his Feet ty’d to a great round Stone, and having a Sword to offend, and a Shield to defend himself, Encountred with the Priest, who was Arm’d after the same manner, whom if he conquer’d, he not onely preferv’d his Life, but gain’d the Name of a valiant Man.

They alfo dealt strangely with Persons that were yearly to be Offer’d to their Idols: for after having wafh’d them, they put on them the Clothes of the Idol, and gave them the same Name, every one honouring them as a God; were permitted to walk up and down, but guarded by twelve Men, that they might not escape; for then the chiefest of the Guard was to supply the others place: Moreover, they refided in the chiefest Apartments of the Temple, eat of the best, were serv’d like Princes, and attended through the Towns by Persons of the greatest Quality, who led them through the Streets; where they no sooner play’d on a little Pipe, but all People came running to them, fell at their Feet and worship’d them: In the Night they lock’d them up in a Cage, secure’d with Iron Bars, and at the appointed time flay’d them alive.

The chief Towns now remaining, and inhabited by the Spaniards, are 1. St. Lewis de Tamique, a Colony of Spaniards situate on the Northern Bank of the River Panuco, at the very Mouth of it; where it hath a very large Haven, but so bar’d with Sands, that no Ship of any great Burden can enter or abide in it with safety; and yet the River otherwife so deep, that Vessels of five hundred Tun, might Sail up three score Leagues at leaft within Land, and thereby visit the rich Mynes of Zacatecas on the one side of it, and of New Biscay on the other, at pleasure, and without fear of much opposition.

2. St. Stevan del Puerto, on the South side of the fame River, eight Leagues distant from the Sea, or Gulf of Mexico, at present the Metropolis or chief Town of the Province, built by Cortesius in the place where stood old Panuco, which was likewise the Metropolis, or Head Town of the Natives, before the Spaniards burnt and destroy’d it.

3. St.
3. St. Jago de las Valles, which is a Fronteer Place, and enjoyeth certain special Immunities, and some fair Possessions also for defence of the Country against the Salvages. It is twenty five Leagues distant from St. Steven del Puerto, lying in an open or Champain Country, and is fenc'd about with a Wall of Earth.

Miles Philips, an Englishman, put afofte by Captain John Hawkins, in the Bay of New Spain, Anno 1568. suffer'd great hardship before he came to Panama, from whence returning, he made mention of a City lying along a River of the same denomination, (which is there not above two Bowe fhootes-broad,) in a pleasant Country, containing two hundred Spanish Families, beside the ancient Inhabitants and Negro's, which all drive a great Trade in Salt, which is made in Pans Welfward from the River: Philips travelling from Pano to Mexico, saw by the way the Villages No- bete, by the Spaniards call'd Santa Maria, and a Cloyfter of white monks; Next he view'd Meftillan, where some grey monks had a Houfe, and the Town Puchmenn.

Another account of this Province is taken from a Journal kept by John Chilton, four years after Philips's Voyage; he having a Spaniard for his Convoy, left Mexico to find out Panama; in three days time they reach'd the City Meftillan, where he observ'd, that twelve Spanish Families liv'd amongst thirty thoufand Indians. The City built on a high Mountain, full of Woods, is surrounded with Villages, through which run many brave Springs; and the Air about them is no less wholesome than the Ground fruitful; the High-ways are shaded with all sorts of Fruit-Trees.

The Village Canchevultepc, four times more Populous than Meftillan, belongs to a Spanish Nobleman, who built a Cloyfter there for nine Auguffin Monks, of which Order there also refide twelve in the City Guazuala.

Moreover, they travel'd over the plain Country Guasfrean, to the Village Tan- ceslabo, inhabited by a tall People, with blue Painted Bodies, and Pleited Hair, hanging down to their Knees, going stark naked, but never without a Bowe and Arrow. They effect nothing more than Salt, as being the onely Cure against certain Worms that grow between their Lips. From hence they travel'd to Tam- pice, in which Journey they spent nine days, and coming thither, were inform'd, that of forty Christians which dwell in the fame, the Indians had flain twelve, whilst they were gathering of Salt. From hence they came to Panama, then, in a manner deserted, because of the Indians oppetting the Spaniards, of which, at that time, there were but ten, and one Priest. Chilton falling sick here, resolved nevertheless to change that unwholesome Air and barren place for a better; to which purpose, getting a Horse, he took an Indian behind him for his Guide, but loosing his way in a thick Wood, happen'd amongst a Company of wild People, which dwelt in Straw Huts, twenty of them immediately surrounding him, brought him some clear sweet Water to drink; out of a Gilt Venice Glafs, which having drunk, two naked Men led him into the high-way; which ended at the Gate of the Wall'd City Santo Jago de las Valles, inhabited by twenty five Spanish Families, who inform'd Chilton of the great danger which he had been in, for the People which gave him the Water were Man-eaters, who not long since, had burnt an Auguffine Cloyfter, built on a Mountain, had taken away, and eat the People, of which they had in all likelyhood gotten the Venice Glafs; and had they not observ'd Chilton to be sickly, he had without doubt been eaten by them, and his Skin, with some of his Hair, (that being a great Ornament amongst them) been hung about their middle.

During Chilton's stay in St. Jago, Frans de Page came thither with forty Soldiers from the Vice-Roy Henry Mauriques, and took five hundred Indians; good Bowe Men out of the Neighbouring Villages, Tamehita and Tameclita, with which he design'd to go to the Silver Mines at Zacatecas: Chilton joyning with this Company, came to the great,
great River De las Palmas, which separates New Spain from Florida, where they spent three days in vain, seeking to find a passage over; wherefore they at last took pieces of Timber, which joying together, and standing upon, they were Tow'd over by Swimming Indians; being gotten on the other side, they March'd over steep Mountains, and thick Wildernesses, and came at last to Zacatecas, on whose Silver Mines, the richest in all America, work'd above three hundred Spaniards daily.

S E C T. VI.

Tabasco.

The last Country belonging to New Spain is Tabasco, bounded on the North by the Northern Ocean, and on the East with Jucatan; and however some account it a distant Province, yet others make no mention of it, letting it pass for that part of Jucatan which lies about the City Tabasco, from which it seems to be denominated: The Ground level, and without Mountains, hath many great Woods of Cedar-Trees, Brasile, and others. Here are also many good Indian Fruits, as the Mammeys, Zapotes, Agacates, and Guajabs. For three Moneths they have continually dry Weather, the rest of the year being for the most part rainy; which vicissitude of Moiture and Heat makes the Country exceeding fruitful, inomuch that they have three or four Harvests of Maiz in a year.

Vines, Figs, Lemmons, Oranges, Rice, Barley, and all sorts of Garden-Herbs grow here also in great plenty.

The Pools, Brooks and Lakes, abound likewise with all manner of Fish: and for Sea-Fish, besides the Tortugas, and Iguanas, the Minas, or Sea-Cow, is of principal note.

This Fish is terrible to behold, having a Head like an Ox, little Eyes, two Feet near the Head in stead of Fins, two round Holes in stead of Ears, round bones like Balls in its Brains, a short Tail, and briskly Skin: The Females have two Dugs, with which they suckle their Young.

Peacocks, Pheasants, Parrots, Quales, Hens, Pigeons, with several sorts of Birds altogether unknown to the Europeans, are here in great abundance.

The Woods also abound with Tygers and Lyons, which do no little hurt to the Inhabitants, Wild Hogs, Deer, and Rabbits, are likewise here in great plenty; and Turtles of an exceeding bigness: Likewise Apes, Polecats, and Squerrils, which do very much hurt to the Fruit-Trees, especially the Cacao. The Mystic's are a great annoyance to the People, and disturb their rest at Night.

Since the Spaniards have conquer'd Tabasco, they have forc'd the Inhabitants to observe their Laws and Customs. They speak three sorts of Languages, amongst which that most us'd, call'd Chontal, is copious of Words. The second, Zaguès, is spoken on the Mountains which divide Chiapa and Tabasco. The Mexican Tongue was first brought thither by the Garrisons which Mutezuma plac'd there in the Forts Zimatlan and Xicalango, and is the most spoken, in regard it hath not onely its Accents, but is also of great use, partly because it is understood in most places of America, and partly because the Priests have made Songs in that Tongue, with which the Tabacs are much delighted.

The chief City Nostra Senora de la Victoria, already mention'd in Jucatan, was la call'd by Ferdinand Cortesius, from the great Victory which he obtain'd over the Indians when he March'd first towards Mexico.

Thus far of the Description of the several Parts and Divisions of New Spain, differing
fering in Customs and Languages, though most of them have some affinity with the Mexicans, who by force of Arms had made a way to the supream Empire. All of them acknowledge a Creator, but have no Name to express the Word God. But besides the Creator of the World they have made to themselves Gods of many other Creatures; amongst which are the Sun, Moon, Stars, and the Manes of the Deceased, the care of whose Burial they committed to the Priests, which was sometimes in the Fields, sometimes in their Houses; others carried their dead Bodies to the Mountains, some buried them in Temples; and as they either burnt or buried the Body, so they buried or burnt their Clothes and Riches with them, especially of Persons of Quality, whilst those that accompanied the Corps sung a mournful Song, after which they Feasted. The Heirs of Noble-men that had been at the Funeral put themselves all into Mourning. A Person, after he is dead, is stretch'd out upon the Floor, where he lies till all his Friends come to Present and Complement him, as if living: But at the death of an eminent Person they not onely bring him Presents, but proffer him his Slaves, Steward, Butlers, Dwarfs, and Household Priest, (all which a Lord must keep) that they may serve him in the other World. The Priests which perform'd the Funeral Ceremonies, walk'd before the Corps with the Image of the Idol which the Deceased had appropriated to himself; (for every Lord, according to the greatnes of his Quality, bore the Name and Apparel of some Idol or another;) other Priests beat on Drums, play'd on Pipes and singing Dirges, perfum'd the Way with Myrrh, whilst the Servants and Relations made a doleful cry; a Herald also carried the Coat of Arms and Trophies of the Deceased, artificially painted on Cloth; at last they pyl'd sweet Wood about the Corps, which being lighted, and the Body burnt to Ashes, a Priest in a frightful Dres, Vizarded with a gaping Mouth, long Teeth, and fiery Eyes, came on a sudden, and with a long Stick stirr'd the Ashes about, and gathering it in an Urn, buried the same with the fore-mention'd things.

The Idols in New Spain are represented in terrible Figures, to which they Offer humane Sacrifices. 

The
The Priests, divided into higher or lower Orders, acknowledge a supram Head, which they call Popes. Each Idol had a peculiar sort of Priests: Those that served Vizilpacli, obtain'd their Places by Inheritance; but others were chose by the Commonalty, unless they had been bred Priests from their Infancy.

The Mexican Cloisters in the time of Heathenism were generally built in the chiefest Temples, in a great Piazza, or Square Court, where for the most part two Monastic Houltes stood one against another, the one inhabited by a Fraternity of Recluses, and the other by a Sisterhood, which last being Maids of twelve or thirteen years of age, call'd The Penitential Daughters, swept the Temple, prepar'd Meat for the Idols and Priests, which was plentifully supply'd from the Alms and Offerings that were daily brought in to the Priests, consisting of little Cakes made like Hands and Feet, besides other strange Meats, which being set before the Idols, was soon after taken away again, and eaten up by the Priests: They were under a Governor, who employ'd them in making Embroideries to adorn the Temple; and sometimes rose up with the Priests at Mid-night, and play'd on Pipes, perfum'd the Temple, and cour'd themselves till the Blood ran down their Backs, befmearing their Faces therewith, and leaving it on a whole year; then going into a large Chamber, where a Ciftern stood for that purpose, they wash'd it off again; after which, if they committed the least uncleanliness, they were put to a most miserable Death; which was judg'd upon seeing a Rat run through the Nuns Chamber, or a Batt flying by it, or finding any piece of Cloth gnaw'n by a Mouse or Rat; for they suppos'd that the fore-mention'd Creatures dare not come into a hallow'd place, unless defil'd. In this reclus'e manner they were only confin'd to live a year, which being expir'd, they had free leave to Marry.

The Houle opposite to the Nuns in the same square place of the Temple, was inhabited by Youths of eighteen and twenty years of age, whose Heads were shaven like Monks, and pleated Tufts hung from the Crown down to their Backs; they liv'd also mean and chaste, kept the Priests Clothes and Perfum'g Vessels, carried Wood for Offerings, and kept always burning Lamps before Vizilpacli's Altar. Amongst them were also Boys of a less Age, whose Office was to gather Flowers and Herbs to throw the Temple with, to sharpen the Priests Lances, which they let themselves Blood with every Night in the Legs, and carry them Water. These Youths, Cloth'd in Nets, fell on their Faces on the Ground, when they met with a Woman, and went four and four, or fix and fix together, to beg Alms, and by turns watch'd the fore-mention'd Fire; in the Morning they drew Blood out of their Thighs, with which they anointed their Temples down to their Ears, and when the Blood look'd black, wash'd it off again in a congeated Bath, which their strict and severe Life endur'd a whole Year.

The particular Religion of the Mexicans, compos'd of cruel slaughters and butcheries of Men, reign'd a long time against the minds of the other Indians that were under their Dominion, every one beginning more to abhor the cruel slaying of living People, and tearing out the Hearts of Men for Offerings; and the rather, because they were forc'd to fetch them out of their Enemies Country, with the hazard of their own Lives, in so much that they were ready long before to have embrac'd another Doctrine, if any other Teacher had but appear'd amongst them; which was the chief reason why they so easily receiv'd the Roman Religion: for when Cortesius had conquer'd the City Mexico, the Mechcan'g Agents entreated him to lend them Teachers to prescribe them Laws, according to which they might live, because their Idolatry, which had long oppress'd them, was not to be suffer'd any longer, because of the Cruelties which were requir'd of them in the performance thereof.
Their Proceffions were rately, and after this manner: The chiefest Nuns raising a Paffe of Bledai-Seed and parched Maiz, kneaded it with Honey, of which they made an Idol reftembling their Deity Virtipuzzi, across whose Nofe and Forehead they drew a blue Stroke; his Head they adorn'd with a Plume of Feathers, and in the left Hand plac'd a round Box, in the right a crooked Staff like a Serpent, and Wings behind on his Shoulders; at the appointed Feast-day the Nuns meet before Sun-rising, in new white Apparel, with Garlands of Maiz about their Heads and Necks, which hung down below the left Shoulder, their Faces painted with several colours, about their Arms hung Parrots' Feathers from their Elbows down to their Heads: Thus adorn'd, they carried the kneaded Idol to a Court, where the Youths that inhabited a Cloyter in the fame Temple, fetching the Idols blue Throne, with great Reverence set it down at the lower Step of the Temple, at which the People threw Dust on their Heads; which was no sooner done, but the Boys ran with all speed to the Mountain Chapultecue, a League from Mexico, whither the Multitude following them in manner of Proceffion, made all Short Prayers and Offerings there; from thence hastening into the Champain Fields Atla-
cuayó, they perform'd the like Service as before; which done, they went to the Village Cuacoacy, a League farther; from whence they came back in all haste with their Idol into Mexico: Wherefore this Proceffion for its expedition was call'd Ipina Virtipuzzi, The Idol being brought into the Temple, was by four Cords made fast to his Throne, hoifed up to the Cieling with the noife of Drums and Trumpets, whilft the fore-mention'd Youths throw'd the Temple both within and without full of Roses; after which the Nuns gave the Boys the resemblances of Bones made of the fame Dough with the Idol, with which they were to cover the Floor of the Chappel; then appear'd the Temple-Priests, with Scarfs about their Bodies, Garlands on their Heads, and Strings with Flowers about their Necks, each going in order according to his quality to the place where the Bones lay; which being Confecrated with Songs and Dances, were religiously worshipp'd for Bones of the Idol; after which fix of the Priests went down to the Stone Quiaxicalli, on which the Prisoners lying upon their Backs, had their Hearts pull'd out; which being finifh'd, the Maids and Boys before-mention'd went to meet one another, Dancing to the sound of Pipes, Drums and Songs; which their nearest Relations anfwerîng, Dance'd round about them, whither the whole City and Coun-
trey People all about came flocking in great numbers.

During this high Feast none, upon great Penalties, durft eat any other Food but the Cakes made of the fame Dough of which the Idol was made; neither were they permitted, though Children, to drink till the Afternoon.

Laftly, the Priest climb'd up to a Chappel fhow'd with Roses, in which the Idol fittin, they difrobf'd him, broke his holy Arms and Legs into little pieces, which they distributed amongst the common People, who recev'd them with great Reverence, and with tears in their Eyes, imagining they eat the Body of their God; for which honour every one paid a tenth part of the Charge which had been fpent in this high Feast. Then a Priest admonifh'd them how they fould lead their Lives, fince they were united with their God; which ended, they all went to their feveral Habitations in a wonderful good order from the Temple.

Concerning the Mexicans Apparel, it is a fufficient testimony, that they are no way of the fame original with the feveral barbarous Nations, that run up and down naked in New Spain: for the Inhabitants of Mexico went antiently Cloth'd in Cotton: On their Heads they wore a high Plume of red Feathers, about their Necks, over their Shoulders, Breast and Back, a kind of large Thorax of Feathers curiously
curiously pleited; each Arm adorn'd with Armlets, and their Middles girt with broad white Girdles full of red Streaks; in stead of Garters they wore Laces of Feathers, as also a little above their Ancles. Their Priests befmeard all their Bodyes, especially the Head, with an Ointment, whose special vertue was to make their Hair grow exceeding long, which they braided with broad Cotton Strings; they also smutch'd themselves with a kind of blacking Stuff; when they went to make Offerings to their Idol in Caves, Woods, or on high Mountains, they bedawb'd themselves with an Ointment made of Spiders, Salamanders, Adders, Scorpions and Toads, which the Temple-Boys caught for them in great abundance. This Ointment they made with many Circumstances; for having roasted the fore-mention'd Vermine on the Hearth of the perpetual Fire before Vtuliputu's Altar, and ftamp'd the fame in a Mortar with Tobacco, living Scorpions, the Seed Olotubqui, (to which they ascrib'd a power of representing Visions) hairy Worms, and Soot, they kneaded all together, put the Ointment in Pots, and plac'd it before the Idol, thenceforth reparing it a fæculifid Medicine, that would prove good against all manner of Difeases; wherefore the Priests being always fent for to the Sick in stead of Doctors, perfum'd the Patient, faw'd his Hair, hung Snakes Bones about his Neck, and order'd him at a certain Hour to bathe himself, and in the Night to watch before a Fire-hearth, and to eat no Bread but what had been Ofer'd to their Idol. Moreover, the faid Ointment is thought to have another power, viz. to make thofe that anointed themselves with the fame, valiant and ftrong; which the common People believ'd, because the Priests would go through Woods and Wildernesfles that abounded with ravenous Beasts.

These Heathens also fæem'd to have fomething of Circumcifion and Baptifm; for they not onely cut off a piece of the Infant's Ears and privy Members, which they Offer'd to their Idols, but alfo wash'd them as foon as they came into the World, putting into their Hands fuch Tools as were of use in their Fathers Profession. Their Marriages alfo were celebrated with great solemnity: The Priet having ask'd the Bride and Bridegroom, If they would joyn together in Matrimony? if
they both consented, they’d the Brides Scarf, and Bridegrooms Coat together, and
so accompanying them home, led them nine times about the Fire-hearth: If the
Bride had no Impediments, then the Bridegroom made Presents to her Father and
Mother, Offerings to the Gods, and a brave Dinner to the nearest Relations; after
which an Inventory was drawn of what each of them had brought, that upon
their being Divorc’d, (which was very common amongst the Mexicans) each might
have his share; and if they had Children, the Man was to keep the Sons, and the
Woman the Daughters; nor were they permitted, on pain of death, being once parted,
and to join together again.

On the nineteenth of May they kept the Feast Texcoatl, Consecrated to the Idol
Tezcatlipoca, before whom they Offer’d a Slave, which was done after this manner:
Towards the Evening the Multitude coming into the Temple, the Priests pulling
off the Idols old, put on new Apparel, hung him full of Precious Stones and Arm-
lets, set Plumes of Feathers on his Head, which done, the Curtains behind which he
stood, were drawn, and a Priest Cloth’d exactly like the Idol coming forth,
turn’d himself round, blow’d a kind of Trumpet towards the four Winds, and are
Earth, which all the People imitated: whereof those which had committed any
hainous Offence, Offer’d Incense to the Idol, and weeping, begg’d forgiveness of
their Sins. Those that were Soldiers besought him to grant them store of Prisoners,
and strength to conquer their Enemies, for which they would return him thanks
with Offer’d Prisoners.

This Feast of Texcoatl lasting ten days, ended on the twenty ninth of May with
peculiar Ceremonies; for in the Morning a company of Priests, black all over,
carried on their Shoulders a large Chair of State richly adorn’d, in which sat their
Idol Tezcatlipoca, and Priests with long pleated Hair, and clad in the same Appa-
rel with the Idol, which they set down at the Foot of a pair of Stairs which led up
to a Chappel; whither the attendent Youths and Virgins came and spread Carp-
ets before it, and green Boughs of Manghey; after which two Priests carried the
Idol into a spacious Court in the Temple, several others walking before, each with
a perfuming Vessel; when they threw their Perfumes on the Consecrated Hearth,
they held their Hands towards the Idol, defiring him that he would send their
Prayers to Heaven: Next follow’d the Multitude, who fcourg’d themselves till
the Blood ran down from their Backs. So soon as the Procession was ended,
the represented Tezcatlipoca was hoisted up to the Cieling, and abundance of Flowers
throw’d before the Altar; which done, every one went home to Dinner, whilst
the Youths and Virgins adorn’d the Idol, and plac’d Meat before him: Laitly,
the Votaries came two and two with Baskets of Bread, and Dishes of Meat:
their Govenrises in a white Sur-Coat over a red Velt, with Wings on her Shoul-
ders, and broad Girts, at which hung Calabashes fill’d with holy Reliques and
Flowers: Moreover, he conducted the Votaries to the Steps of the Altar on
which the Idol sat; where having eaten Bread they came back, and the Temple-
Servants went in their places, and carried the Meat which stood on the Altar to the
Priests Cells, who by that time were to have Fasted five days: this done, the Peo-
ple came all to the Temple again, to be present at the end of the Feast: then a
Slave, who had represented the Idol a whole year, appear’d, to whom every one
having fhew’d Reverence, the chief Priest cutting open his Breast tore the Slave’s
Heart reaking out of his Body, and fhew’d it to the Sun; then the Consecrated
Youths and Maids made a great noise with Drumming, Singing and Dancing about
the Body till Sun-set; after which the Virgins going up to the upper Chappell,
plac’d Bread and Fruit, made up like dead Mens Bones and Heads, before the Idol,
where,
where, after it had stood a little while, the Servants went up and fetch'd it down, while the Youths and Maids went to their several Cloysters.

Much after the same manner, and with such like brutish Ceremonies, not worth mentioning, was also celebrated the Feast of Quetzalcoats.

In the inner part of the Temple stood a Stage, on which upon Festival Days the People Acted Drolls; in which they sometimes feign'd themselves deaf, blind, lame, and the like, and begg'd to be cur'd of their Idols; sometimes were dress'd like Serpents, Adders, Crocodiles, or other ravenous Beasts, in which postures they fough the one with another.

Those Feasts were all kept on certain times, according to the Mexican Almanack, in which the Year was divided into eight Moneths, and each Moneth into forty five Days, which together made three hundred and fifty: The five remaining Days, to compleat the Year, they kept apart, on which all Affairs whatsoever were laid aside, as Selling, Buying, Offerings, \\nnothing else being thought on but Feasting one another for the passing away of the time. The first Day of their Year was on the twenty sixth of February. Each Moneth had a peculiar Name and Sign. Moreover, they divided the Year into four parts by as many Representations, viz. a Houfe, a Rabbit, a Canes, and a Flint to strike Fire with; and Figur'd it out by a Wheel with four Spikes jutting out round about it, colour'd green, red, blue, and yellow, and in the middle thereof a Sun; each Spike signifi'd thirteen years, whereon it had thirteen Divisions, differing from the four fore-mention'd Representations: At each Division of the Wheel they set down what remarkable things should happen that year by certain Characters; as, a Man in red Apparel typifi'd that Year when Ferdinand Cortesius, clad in Red, conquer'd Mexico. When the Wheel was fill'd with fifty two years Prognostication, then on the last Night they broke all their Pots and Vessels in pieces, and blew out their Candles, because they believ'd, that at the end of the said fifty two years the World would be at an end, and therefore they had no need of Housholduff, or ought else: But so soon as the Day appear'd again, they play'd on Pipes, Trumpets, and Drums, rejoicing that God had deliver'd the destruction of the World fifty two years longer; then they bought new Utensils and Candles, and made solemn Proceffions.

Concerning the Art of Writing amongst the Inhabitants of New Spain, Joseph Acosta tells us, That some old Books, containing ancient Passages, the Course of the Heavens, nature of Beasts and Plants, were found in Yucatan, according to the Relation of a Learned Indian, but were all burnt by Command of a Spanish Bishop, because he supposed them to be full of Matter touching the Black Art. Their Histories describ'd with the Representations of the Things. Rhetorick and Poetry the Children were taught by Rote in the Schools, so that they never forgot what they had once learnt; But at present they use Spanish Letters or Characters.

Moreover, the Government of Mexico hath ever been kept in a good Order, the King's Power being exactly limited, that nothing might be lost of the common Privileges. The fourth King made Earls, who next to the Lords of Texcoco and Tlacate, had right to the Crown, which was like a Mitre turn'd up behind, and rising before with a Point. According as they increas'd in Power, so they advance'd in Royal Dignity; in which Mutezuma the Second exceeded all others: And to manifest his Splendor, his Houfe for all sorts of Creatures, and many other things, might serve for a sufficient testimony: for in it he kept Sea-Fifth in Salt Water, River-Fifth in fresh Water, and all manner of Beasts in peculiar places: The Birds were kept in great Aviaries, surrouned with golden Rails: Next to the Kings follow'd four Earls call'd Atlachocalcatl, which signifies Princes of the Throne Lamens, a Weapon
Wespan much us'd amongst the Mexicans. The next in Degree were the Tlacatl, or Man-chleevers; Esauhtmacatl, or Blood-sidders; Tfahancalqui, or Lords of Blackness, without all which the King durst not take any Business in hand. High and inferior Courts of Judicatory, where Matters of Life and Death were try'd, were in most Cities; and other Courts also for petty Quarrels, Controversies, and the like. The Collectors brought their Revenues to the Court every Month. The chief thing which prefer'd both Rich and Poor to Places of Honor,consisted in Valour and heroick Exploits. Their Arms were chiefly sharp pieces of Flint made fast to a Stick, with which they could at one Blow chop off a Horse's Head. They us'd Pike's, Clubs, and Lances, and sometimes Slings: For defensive Armour, they had Helmets and Shields, made of Tygers, Leopards, and Lyons Skins. They always fell upon their Enemies unawares, their Design being generally to take Prisoners rather than to kill them; for they refer'd them to Offerings to their Idols. Mutezuma made several Commanders over his Armies, giving them a Power one above the other, which were to be distinguish'd by several Marks; for the chiefest ty'd the Hair on the top of their Heads with a red String, between which stuck a brave Plume of Feathers; at the end whereof hung as many Tailors as they had done noble Exploits. To this Order belong'd also the King, who wore one of the same Marks, with which King Mutezuma and his Son stand Carv'd on a Rock. The Ayulas, or The Order of the Eagle, consisted of valiant Men. The Grey Knights were of less Quality, and wore Collars which reach'd up to their Ears, the lower part of their Body being naked. Persons of greater Dignity, when going to the War, were Arm'd from Head to Foot: Which Order was also permitted to wear Cotton-Clothes, and Shoes richly embroider'd with Gold and Silver; they us'd painted Vessels, and had Lodgings provided for them at Court.

Moreover, it is worthy of observation, what great care the Mexicans took in the bringing up of their Children, to which purpose they had Schools near to their Temples, in which Youth was taught to Sing, Dance, Morality, Obedience, and also Martial Discipline. Children of noble Extract had Learned Men for their Tutors. Their Punishments for Transgressions were very severe, the Masters forcing their Scholars to Fall and Watch, carry great Burthens of Provisions to the Army, and be in the midst of Engagements. Others, whose Fancy led them to a holy Life, willingly embrac'd the Services of the Temple.

Their manner of Dancing in New Spain was very strange and differing; they us'd pretty Instruments, and Songs which contain'd antique Passages, according to the Times; they in their Motions imitated Shepherds, Fisher-men, Plowmen, Hunters, and the like: Sometimes they Dance'd in Mascarades, with a Man on their Shoulders, making the same Motion with his Hands in the Air, as the other with his Feet on the Ground. They had also Tumblers and Dancers on the Ropes, which shew'd strange Tricks on an erect'd Pole. But above all Dances, the Mitotes was the chief, which was generally Dance'd in the King's Palace, or inner Court of the Temple; in the middle of which they plaec'a great Drum and a hollow Tub on a large Image; round about which the most eminent Persons made a Ring, Sang sweetly, and Dance'd leisurely, when on a sudden two that are more nimble, with divers Motions came into the midst of them, and Dance'd exactly after the sound of the Drum and hollow Tub, which was seconded with the noise of Flutes and Pipes.
New Galicia.

New Galicia, by some call'd Guadalajara, from the chief City. This whole Province is the most Northern Country of all America, that is inhabited to any purpose by the Spaniards. Here, 'tis true, they are scatter'd up and down in all the parts of it, but it is at a huge distance, and for the most part only where the Mines are. It is bounded on the East and to the South, with the Kingdom of Mexico or New Spain; on the West, with the Gulf or Bay of California; Northward, for so much as is yet discovered, with Quivira and Cibola, lying between eighteen and twenty eight Degrees of Northern Latitude, that is, from La Naturalidad, a Port so nam'd by the Spaniards, in the Confines of New Spain, to the most Northerly Borders of Cibola, a part of this Province, containing, as is supposed, not much less than three hundred Leagues in length, and in breadth much more, and whereof not a tenth part is either used or frequented by the Spaniards.

The Air is generally here very temperate, inclining rather to Heat than Cold, and subject now and then to sudden Storms of Rain, and great Claps of Thunder, which yet do not hinder, but that the Country is held to be reasonably healthful, and the People obv'rd to live generally to a good old Age. The Soil, by reason of the Climate, would be a little inclining to Drought, but that, besides the frequent Rains which it hath, it is constantly moistened with fresh Morning Dews, which make it for the most part wonderfully fruitful, almost beyond belief, yielding for every Bushel of Wheat that is sown, three or four; and of Maiz, two hundred for one; besides great plenty of Sugar-Canes and Cochinele; both which nevertheless the Spaniards are said to neglect in some parts, employing themselves wholly about richer Commodities: for the Country affords them good store of Mines of Silver and Lead, but of Gold or Iron, not many as yet have been found. The Rivers abound plentifully with Fish, and the Woods with Venison, and some other wild Beasts. The Country is generally more mountainous than plain, frequently shaded with Woods, and whole Forrests of the stately Pine-Trees and Oaks that are to be seen; amongst which breed abundance of Wolves, which do great mischief to the People, as also Scorpions and Mysterybees. The Hurts receive'd from Scorpions, are heal'd with the Juice of the Fruit call'd Pome; those from the Mysterybees, by Vinegar and the Juice of Lemmon. Here is like wise a green Stone, accounted a sovereign Medicine against the gravel.

The Trees peculiar to this Country, are, the Tuna, already spoken of in Guatemala, and thought to be the same we vulgarly call Indian Fig-Trees, and are distin guished into six sorts.

The first, by the Portugeus call'd Cardon, hath sharp Prickles, thick Leaves, full of slimy Juice, an odoriferous Flower, oval Fruit, cover'd with an Orange-colour'd Rind, and small Roots: The Fruit within consists of a white juicy, and well tasted Pulp, full of black Seed.

The second hath a round Body, full of Boughs, with Star-like Prickles hanging downwards, the Flower white, and the Fruit very like that of the Cardon, only smaller.

...
The third is the *Casabre*, which shoots up to a great Tree full of prickly Cods; at the utmost end grows a large white Flower; the Fruit, which is as big again as an Egg, is pleasant and cooking.

The fourth hath a straight Body full of Prickles, runs lesser and lesser to the top; at the end of the small Boughs, each thick Leaf produces another; the Wood, if kindled, burns like a Candle.

The fifth, nam'd *Cumbeba*, grows out of small Roots, with three or four corner'd thick Leaves, full of Prickles, the Flower somewhat less than the former, the Fruit oval, hard and red, having a white and juicy Pulp: The Prickles of this *Cumbeba-Tree* are so sharp, and stick in so deep, that they can scarce be pull'd out. This is that sort of *Tunas* that produces *Cochinele*, which is a Worm that grows under the Leaves, and is cover'd with a Skin, which being neatly taken off and dry'd in the Sun, as formerly mention'd, becomes a rich Commodity. *Joseph de Acosta* tells us, that the Spanish Fleet, Anno 1578, carried so much *Cochinele* to Spain, as amounted to two hundred eighty three thousand seven hundred and fifty Ryals.

But the last sort of the *Tunas* is the *Unirumbeba*, which hath a straight Body full of Prickles, on the top whereof grow divers prickly Leaves, not unlike those of the Palm-Tree: It is only found in barren places, remote from the Sea.

Moreover, all kind of Fruits transplanted hither from Spain thrive very well, as Apples, Pears, Granats, Figs, Peaches, Apricocks, Muskmelons, &c.

*The Root* *Casabre* affords a much better Feeding for Swine than Acorns: But amongst many other Roots which are found here, as the *Xiquimas, Taca, Coehno, Carí, Totorá and Maní*, the chief is the *Batata*, which is fat, sweet, and windy; it runs over the Ground with a tough green Sprig, the new Fibres taking Root dispersedly up and down, being yellow without, and within full of milky Juice; the Leaf resembling a Heart, is of a pale yellow colour on the top, and donuy underneath; roasted in Aashes, it eats better than a Turnip: It is divided into three sorts.

The first, call'd *Omenapo jeima*, when boil'd, fleshes like red Beetl, but Dyed of a Skye-colour; the innermost Skin, which is of a dark Red, yields an Ink-like Juice. The
Chap. VI.

A M E R I C A.

The second fort, call'd Parro, differs little from the first, only the Body, Root, and Veins of the Leaves, are of a Purple colour.

The third fort Jetioge, being white, hath a very good telltiff, and cures the Ague.

The Pepper, which is here call'd Aji, grows in the warmest Valleys, and the more by being often water'd: there are of it divers kinds, differing in colour, smell, and taste one from the other; for one is green, yellow, or red: another sort yields a strong musky scent; and one sort is sharper, another milder: the Veins and Kernels thereof are eaten with Salt.

The Herb Cevadilla cures all manner of Sores.

This Country also breeds an innumerable company of Deer, Hogs, Goats, Sheep, Oxen, and Horses; and of hurtful Creatures, Pismires, which do great mischief to the Plants, and Loculfs, which fall in huge Swarms on the Corn, and cannot be frighted from the same by any mean whatsoever. The want of Water is also no small prejudice to the Fields.

The biggest River, call'd Guadalajara, with many windings runs North-westward into the Southern Ocean; and four Leages from the City of the same, falling down from a steep Rock, it makes such a horrible noise, that it deafens those which approach the same.

The Lake Mechoacan opens here also with a wide Mouth.

The River before mention'd, produces all manner of Fish in great abundance; and also a fort of Hedge-hogs, call'd Ignana, which live both in the Water, and on the Land, and are of two sorts: The first, call'd Setemhi, is four Foot long, of a deep green colour, with black and white Spots, hath a scaly Skin, white Spots on each side of the Head, a row of sharp Prickles from the Head to the Tail, wide Noftrils, great black Eyes, and little Teeth. The second sort, call'd Tejagnacu, differs from the first, in having white Spots on a brown Skin, a longer Tail, and a red Tongue, which is flat. Both sorts are reported to last eight Moneths together; and though often terribly wounded, and dead to all imagination, yet live a great while after; and though they swim up and down in Rivers, yet they Lay their Eggs in the Sand: their Fleshs boil'd is both wholesome, and of a good relish.

The Spaniards which inhabit New Gallicia, drive a considerable Trade in Merchandizing, Husbandry, breeding of Cartel, and working in the Mines: They use Wayns and Carrs, drawn by Oxen, Mules, and Horses, to carry their Loads, as also Spanish Weights and Measurers. They are little troubled with any other Mischiefs but what may happen from the treacherous Natives, who take all opportunities to run into the Woods, that there they may exercise their Pagan Religion in freedom; in which having spent some time, they gather a considerable number together, and oftentimes fall unawares on the Spaniards, who use Leather Shields and Helmets, and fur'd Cotton Clothes, to secure them from the Arrows which the Indians, lying in Ambuscades, shot at them out of the Bushes.

The Natives, though subtle, are lazy, and will not work, unless for great Rewards. They wear Cotton Shirts, square Cloaks of the same Stuff, made fast with two Buttons on their Breast; Drawers, and foal'd Shoes: Flag-Matts serve them for Beds, on which they lie under Cotton Clothes: About their Necks, Arms, and Legs, they wear green Stones, and Snale Shells for an Ornament. Their greatest Recreation is Dancing, their Mufick being nothing else but the noise or sound of a piece of hollow Wood. Horsfleth, and Bread made of Maiz, is by them accounted a great Dainty. The Drink Cacao is also highly esteem'd amongst them; but much more the Wine that they make of Aguey, which is the wonderful
ful Tree that affords many necessary things, vix. Syrup, Honey, Oyl, Vinegar, Yarn, Needles, Water, and Wine; every Man making it his Business to plant and preserve the same with great care near his House, notwithstanding they grow in several places of the Fields; they have broad thick Leaves with sharp ends, out of which is drawn a Thorn, which serves them for a Needle or Pin. These Leaves have a hairy Filament about them, which serves in stead of Thread: the young Sprout being cut, produces a sweet Juice, which boil'd, makes good Wine; when grown sour, serves for Vinegar; but being twice boil'd, becomes a Syrup; and being hung over the Fire a third time, a perfect Honey: Also the Wood being spungie, keeps Fire as well as Match. Moreover, the Inhabitants when they travel, carry Leather Bags with them full of Cacao, Maiz, and Pepper, mix'd together.

Over each Village in this Countrey the Spaniards have plac'd an Indian Caisque, Alcalde, and Alguazil, where all sorts of Provisions are sold at a Set-price.

The Caisques are succeeded by their Heirs, who refert nothing worse than Affronts, and take pride in nothing more than their Valour.

The Moors or Negro's which are brought hither from Guinea, do all manner of hard Labour.

The Guachichiles and Guamares are a valiant People, and have each their peculiar Language, utterly different from the Mexican.

This Countrey comprehends these inferior Provinces: 1. Guadalajara; 2. Xalisco; 3. Chiametla; 4. Couliacan; 5. Cimolos; all of them on the Western Shore; 6. Zacatecas, to which some add Nova Bifcaia and Nova Mexico, though others treat of them as distinct Countreys apart from the rest.

**Sect. II.**

**Guadalajara.**

Guadalajara is bounded on the West, with Xalisco; on the South and South-West, with New Spain; and on the North, with Zacatecas. It is a Countrey exceeding pleasant, and rich in all kind of Commodities, but especially in its Mines of Silver. It is well water'd with the River Barania, which runneth through the midst of it, and with divers other Streams: yielding abundantly both Wheat, Maiz, and some other Grain. In a word, there is nothing faid of the properties of New Gallicia in general, either for Soil, Climate, or People, but is peculiarly verif'd of this Province.

The chief Towns are 1. Guadalajara, which gives Name to the whole Province. It is feated on the Banks of the River Barania, in a most delectable and sweet Air, and a rich Soil, by advantage whereof it is become the Metropolis of New Gallicia, honour'd with an Episcopai See, which was translated thither from Compostella in the Year 1570. with the Courts of Judicature, and the Residence of the King's Treasurers for that Province. This City was built on the Plain Melino, by Nuynez de Guzman, in the Year 1531. The neighboring Mountains afford store of Timber. All manner of Spanish Plants grow here likewise in great plenty. In the City is a Cathedral, several Cloysters, inhabited by Augustine and Francisca Monks. The Bishop of this City belongs to the Arch-bishop of Mexico. The Air very temperate, neither molesting the Inhabitants with too great Cold, nor excess of Heat.

2. St. Maria de los Lagos, a Town thirty Leagues Eastward of Guadalajara, being a Fronteer Place, and built on purpose to secure the Countrey against the Chichimece, which are a barbarous and unreduced People of the North-East parts of this Countrey,
Chap. VI. A M E R I C A.

Country, who harbouring themselves in Caves under Ground in the thickest of huge Woods and Forrests, do oftentimes Issue out, and make foul spoil in the Country where they come, having first intoxicated themselves with a Liquor made of certain Roots, and would do much more harm, if it were not for this Garrison.

3. Del Spiritu Santo, built by the Founder of the other two, viz. Nunez de Guzman aforesaid, in a part of the Country which they call Tepeque.

S E C T. III.

Xalisco.

Xalisco, or Galisco, as some call it, is bounded on the North, with Conisacan on the South, with some parts of New Spain; on the East, with the Province of Guadalajara; and on the West, with the Gulf or Bay of California. The Country is chiefly fertile in Maz and Mines of Silver, not altogether so apt for Herbage and Pasture as some other Countreys about it. The People were Cannibals before the Spaniards came amongst them, eating Man's flesh; were much given to quarrelling and Contentions amongst themselves, but by this time, 'tis supposed they are reasonably well reclaim'd both from the one and the other.

In this Country, besides many other goodly Streams, is the great and famous River Baratia, on the Banks whereof are seated most of their principal Towns, as 1. Xalisco, which gives Name to the whole Province, and to a large Promontory or Foreland on the Western Coasts, which shoots itself out into the Bay of California, right over against certain Islands, which the Spaniards call The Three Maries. This was an ancient City or Town of the Natives, but sack'd and taken by Nunez de Guzman, in the Year 1550.

2. Compefsla, built by the aforesaid Guzman, and so nam'd from the City in Spain, so famous for the Grave of James the Apostle, who (according to the Roman Writers) was buried there, lies near the South Sea on a barren Soil, within the Torrid Zone; yet the Ground breeds many sorts of Vermine, besides other noxious Creatures; amongst which the Capybara roots up whole Trees and other Plants in the Night. This Beast, resembling an indifferent large Hog, hath short Legs and Claws, thick Head, with a Beard, wide Ears, and on each Jaw-bone twenty four Teeth, besides two Tusks, but no Tail; it goes slow, but swims exceeding fast, and dives under Water for a considerable time together: they often feed together in great Herds, and make a terrible noise.

3. La Purification, a small Town on the Sea side, towards the Confines of New Spain.

S E C T. IV.

Chiamerla.

Gainst Xalisco juts Chiamerla, along the South Sea, where the Inhabitants wear short Cloaks, and Deer-skin Shoes; and in the Wars use Shields made of strong Twigs twissted together. The Women, which are indifferent handson, are clad down to their Feet.

The chief Town of this Province is Sant Sebastian, so call'd from the River upon which it stands; it was built by Captain Franciscus de Yvarra, Anno 1554, who disco-
AMERICA. Chap. VI.

vering many Silver Mines, hath made several Melting-houses, in which the Silver being melted swims upon the Lead.

Sect. V.

Couliacon.

Next to Chiametla, Westward and Southward of Cinoloa, lies Couliacon, Coasting all along the Bay of California, which it hath on the West; on the East it hath New Biscay; and on the South, Xalisco. The Country is not defective in any kind of necessaries Provision, but more especially it aboundeth with Fruits of all sorts. But the Spaniards look only at the Mines, of which they have some few in this Country. The People were generally Cloth'd with Cotton-Wool when the Spaniards came first amongst them; but yet never a whit the more modest, being exceedingly given to Venery, and that in a more shameless and beautility manner than many other Americans who went naked.

The Spanish Towns are these, 1. Hujisula, seated on the Banks of a fair River, distant about a day's Journey from the Sea. 2. Quinola. 3. Quatrobarrios, an old Town of the Natives, but new made by the Spaniards. 4. El Leon, an old Borough. 5. Quinola, the chief Town of the Province. 6. St. Michael, in the Valley of Arroba, two Leagues distant from the Sea, in a rich and plentiful Country, both for Corn and Fruit, whether it was removed from the Banks of the River Orola, where it first stood; it was built by Nunez de Guzman in the Year 1551. after he had burnt the Towns, and destroy'd a great number of the Natives, Inhabitants of the Country.

This Country was first discover'd by the aforesaid Nunez de Guzman (after he had built Guadalajara) after this manner: Marching from Chiametla to Pizalta, he ruin'd this Province with Fire and Sword: he likewise conquer'd the Countrys of Zapata and Pizalta; the first being a Plain, lay included within high Mountains, where the Spaniards met none but Women, till they came to a great River call'd De la Sal, whose Banks on each side were well inhabited; the second just against the Ocean, and is water'd by a River of the same Denomination. Here, within the Houses, (which are built after a strange manner) lay thousands of Serpents mingled together, with their Heads sticking out on the top and at the sides, and hissing with open Mouth at those which approached them. The Inhabitants shew'd great Reverence to these Serpents, because (as they said) the Devil often appeared to them in that form. And this seems to be a Custome amongst them from the Tradition of Evos being tempted by the Devil in the shape of a Serpent: Nor was this Superstition peculiar only to these Indians, forasmuch as divers Nations of the ancient Heathens of other parts of the World, worship'd the Likeness of a Serpent. And even amongst the Greeks, according to Plutarch, Hefychius, Clemens Alexandrinus, and others, it was no unusual thing in their religious Worship to call on Evos, and at the same time to chew a Serpent. Plutarchus and Athanas Ely, That the Egyptians honour'd a Serpent for their God. The same faith Erasmus Stella of the old Persians; Sigismund Baro, of the Littlanders; and Alexander Onagius, of the Sarmatians and Samegetes. Moreover, some write, that in the Province of Calcas are Serpents with exceeding great Heads, and weighing as much as a great Hog, to which the King shews great Reverence; so that it seems the Devil takes delight to be worship'd in that shape wherein he work'd the Fall of Man-kind.

Guzman leaving Pizalta march'd to Bayla, where he found the great River De Min- geres,
and the Countrey full of Woods and Pastures: thence travelling upwards along Mucures, they ascended to the top of a Mountain, where they were assaulted by the Inhabitants of the aforesaid Village Qunola, whom nevertheless they soon put to flight; but not long after receiv'd a shrew'd Repulse at the Entrance into a Wood built full of Houfes; yet nevertheless being at length Conquerors, though not without sufficient los's, they march'd farther in amongst the Mountains, till their Provisions beginning to grow scarce, and they seeing no likelihood of getting to an end of this troublesome Journey, at laft their NecelTities forc'd them to retire.

The Flood which comes out of the Sea up to the City St. Michael, through the River Cignatia, abounds with Fish, and especially the Guarapusc, which is seven Foot long when it comes to its full growth; it hath no Scales, but a smooth Skin of a Silver colour mix'd with Green: from the Head to the Tail runs a crooked Line of thin Scales on each side; it swims exceeding swift, feeds on leffer Fitches, and spawns in the Sea: the Flesli being wholliom and good to eat, is salted up against Winter. At the fame Place is also the Piracarsa, which shines exceedingly, having Silver-colour'd Scales, a broad slit Tail, a long white Beard, four great Fins, and a little Head. Farther into the Sea are a fort of flying Fish, call'd Pirabees, which rife by thousands up out of the Water, so escaping the Dolphins and other Fitches which prey on them; yet sometimes they are snatch'd up by the Birds, or else by the Fitches, when they dive down into the Water to wet their own Wings, which consist of a thin Skin, distinguishing'd in length by tough Fins. These flying Fish also differ much one from another, for most of them are like Herrings; others have a thick Head, round before like the Dolphins.

Moreover, the Countrey about St. Michael was always well inhabited. The Houfes, being artificially built, were adorn'd on the top with many obfene Images, and venereal Representations: But since the Spaniards have conquer'd this Countrey they have deftroy'd them, and built other Houfes in their stead, and also beftow'd much cost and labour on the Silver Mines De las Virgines.
Cinoloa is the most Northern part of New Galicia, bounded on the West, with some part of the Gulf or Bay of California; on the East, with a long Ridge of Mountains, which they call Tepesuan; on the North, with Cibola; and with Couliacan on the South. This Country, besides the general fertility of the whole Province of New Galicia, yields great store of Cotton-Wool, by reason whereof both Men and Women here are better Apparell'd, for the most part, than elsewhere; where the Americans are; is exceedingly well water'd with Rivers, which descend from those Mountains Tepesuan, not above thirty or forty Leagues distant from the Sea; and which, with the variety of their Streams and Meandrous glidings, do divide the Countrey into many and good Pastures, which are likewise tor'd with abundance of Kine, Oxen, and other Cattel.

The chief Towns poifed by the Spaniards are 1. St. Philip and Jacob, seated towards the Sea fide, on the Banks of a fair River, about thirty or forty Leagues distant from the Town of Couliacan.

2. St. John de Cinoloa, an ancient Colony of Spaniards, fetled there by Francisco de Tvarra, in the Year 1554, which is all they have in this Country, except fome few old Forts of the Natives, which they found, after their manner, poorly furnifh'd; but have fince repair'd them for Defence against the Natives of those Parts, which as yet remain unreduc'd.

This Province was alfo discover'd by Nunez de Guifman, who having refled some Weeks in St. Michael, proceeding on his Way, he Ferried over the River Petatlan, which receiv'd that Denomination because the Houfes were cover'd with Mats, by the Indians call'd Petar.

The People hereabouts were generally Man-eaters.

Eighteen Leagues farther runs the River Tamochala, which hath many Villages on both fides thereof.

Between Petatlan and Tamochala lie feveral defolate Wildernefles, and Woods of the Brafil Tree.

But Guifman travelling up twenty seven Leagues along the foremention'd River Tamochala, came to the Province Cinoloa, where they lay'd fix Weeks, by reafon of the abundance of Rains; during which time the Villagers provided them Turtle-Doves, Hares, Rabbits, and all forts of Fowls; but at laft deferted their Habitations in the Night: after which the Spaniards croffing Tamochala went along a barren Defart, where (had they not found Water in certain Wells, and likewife store of Juice out of the Tunas Trees) they had without doubt perifh'd; at laft gettng over the River Taguinu, they found a deferted Village, out of which a broad Path led along the Stream: whither Guifman marching, he came into a Plain, where he spy'd feveral Indians, which after fome refiftance were routed by the Spanish Horfe.

The Villages built on the Banks of the River Taguinu, as alfo the Language of the Inhabitants differ little from the former.

Not far from hence a Ridge of Hills runs into the Sea, and alfo extend themfelves a hundred Leagues towards Xalifo.
The Zacatecas, as they call them, are bounded on the South, with Guadalajara; on the North, with New Bifcey; on the West, with Comitan and some part of Xalisco; and on the East, with New Spain. The Country, especially the more Western part of it, is very rich in Silver Mines, no Province of this part of America richer; but not so apt either for Wheat or Maiz. But the Eastern parts of it are abundantly frow'd with all forts of Fruits, the Woods every where replenish'd with Deer, the Fields no lefs with Corn, and every Tree almost giving Entertainment to some Bird or other.

The Towns are 1. Las Zacatecas, forty Leagues distant from Guadalajara, and fourscore from Mexico, but neighbor'd with most rich Mines, and therefore both Garrison'd and well peopled by the Spaniards; for 'tis suppos'd there are no lefs than five hundred Families of them in the Town, and about the Mines.

2. St. Martins, twenty seven Leagues distant from Zacatecas, and as rich a Place, having a Colony of four hundred Spaniards at leaft.

3. St. Lucas de Aviuno. 4. Erena, leffer Towns, but both of them rich, and seat'd in the midst of excellent Mines.

5. Nombre de Dios, in the most Northerly part of this Countrey, sixty eight Leagues distant from Guadalajara, and founded by the aforesaid Francisco de Yvarra, who having subdu'd and quieted the Natives, and thereby gain'd to himfelf the Government of thefe Countreys, granted the propriety of fome Silver Mines both to the Spaniards and to the Natives, and by that means drew fo many of them thither, that in a fhort time it became the chiefeft and beat peopled town of the whole Province.

6. Durango, in the Valley of Guadiana, eight Leagues distant from Nombre de Dios, and built by Yvarra.

7. Xeres de Frontera, a Place built on purpofe for the repreffing of the Chichemeca Aforesaid, and other Salvages that infefled the Borders of Guadalajara, in the Re- gency of the Marquês of Villa Manrique.

8. Laft, St. Lewis, built by Alonfo Pacheco, in that part of the Countrey which is call'd Uxitipa, and peopled by him with a Colony of Spaniards, being diftant about twenty Leagues from Panuco in New Spain, to which the whole Countrey of Uxitipa once belonged.

The aforesaid Francisco de Yvarra, Anno 1554, diſcover'd the Mine call'd Sant Martin, and since alfo Lucas Aviuno, the Mine Del Sombrereto, lying near the City Del Erena: but the Mines De las Ranchos, Chalchuites, De las Nieves, and Del Frisalla, would produce much more Silver, if the Mine-works were flor'd with Quick-filver. The Vice-Roy of New Spain, nam'd Lodowic de Velascoe, order'd a certain number of Soldiers, Slaves, Horfes and Mules, for every Mine, to defend the Workmen from the Affaults of the Natives, which oftentimes Sallied out upon them. Moreover, Velascoe lent Priests through all the Countrey to Preach the Gospel: But Yvarra having the care of the Priests, guarded them with a company of Soldiers, and in his Way diſcover'd the Valley San Juan, and the River De las Nacos, where he conquer'd the rebelling Natives.

Near the Silver Mine Sant Martin the Monks built a Cloyfter, after which Yvarra gave free leave to all that would, to dig in the Mine at Aviuno, which he had bought.
bought, on condition they should pay the real fifth part of what they got, to the Spanish King: which Privilege flir'd up many, insomuch that Aviño in a short time grew very populous. Tvarra, though having brought his Business to this part, could not rest, but sent Antonio Pacheco to a Valley in Guadiana, to build the fore-mentioned City Durango, where several Rivers make a convenient and delightful place for Habitation, whither Tvarra follow'd three Monthes after, and finifh'd the new Town. But the chiefest Silver Mines, which borrow their Denominations from the Province Zacatecas, are continually guarded by five hundred Spaniards, and as many Slaves.

### CHAP. VII.

### New Bifcay.

New Bifcay, by some accounted a Province of New Galicia, hath on the South, Zacatecas; on the West, the Countrey of Cinolos; Northward it is bounded with New Mexico; the Eastern Borders of it looking towards Florida, not yet well discover'd: so call'd by the Spaniards, only from its neighborhood to New Galicia. It is, as the other Provinces, exceeding rich in Silver Mines, and hath some also of Lead; which serve principally, as some say, for the refining or purging of the other Metal. The People generally are of a stout and resolute Disposition, and with much Difficulty submitting to the Yoke; yea, the Spaniards themselves confess, that there remain yet to this day four great Towns unreduc'd, though they lie, as it were, in the mid-way, betwixt the Zacatecas aforesaid, and the Mines and Town of St. Barbara of this Province: The Spaniards call them Las Quatro Cienegas, or The Four Quagmires, as lying, perhaps, in the Marshes, or in some Fenny and lower parts of the Country.

The Towns which themselves hold, are, 1. St. Barbara, famous for the rich Mines about it.

2. St. Johns, equal to the other, and not above three or four Leagues distant from it.

3. Ende, the most Northerly Town which the Spaniards have in this Countrey, distant about twenty Leagues from the other.

These be all Colonies of the Spaniards, and built on purpose for securing the Mines; which when they were first discover'd by Tvarra, he order'd Rodrigo del Rio to guard the same, and took up his Winter Quarters at St. Juan in a strong House, flor'd with all manner of Provisions, and erected there by him, as a place of defence against the Chichimecas, who (though the Spaniards kept the place with strong Guards) kill'd above four hundred of their Horses and Mules; which lost no way daunted him, so as to change his Resolution of going to Topia: whither travelling, he found many snowy Mountains, and suffer'd extreme Cold, which kill'd most of their Horses, being seen fifteen days after to stand stiffly frozen, as if still alive; at last getting within the Borders of Topia, after he had suffer'd many inconveniences, he was oppos'd by the Inhabitants, till he pacifi'd them with Prefents.
His Country hath many convenient Havens, viz. San Jago, Navidado, Malacca, Charilda, below the Promontory of the Bay Xalifo, the Road Majorcan, and Chiambola, so call'd from a Town about eleven Leagues from the Ocean.

Here, and in several places of New Gallicia, grow Lillies, Roses, Violets, Jaffamns, and many other Flowers; amongst which the Flaripondium deserves peculiar observation, because it flourishes the whole Year; and its white Blossoms, which are bigger than Lillies, opening in the Morning, yield an exceeding sweet smell.

In no less esteem is the Murcina, by the Spaniards call'd Granadilla, which will not grow, if bereav'd of any of its Leaves: it bears a Flower from the resemblance of our Saviour's Suffering, call'd The Passion-Flower; which exceeds the biggest Rose in circumference; the uppermost Leaves green, those underneath of a purple colour; on the top hangs a round Bush of a thousand interwoven threads of divers colours, distinguishing'd by white and red Specks; the pale stalk which sticks in the middle of the Flower, is divided into five others, that bend downwards with a yellow Button-like Knob; on the middlemost stalk stands a pale yellow Flower, which appears three hours after Sun-rising, and clofes again a little before Sun-Set; the Fruit, which is very round, smooth, and of a pale Green, hath white Specks, a thick Rind, Saffron-colour'd Pulp, which is wholesome, of a good relish, and hath abundance of black Seeds inclos'd in little Husks.

CHAP. VIII.

New Mexico.

New Mexico (as 'tis call'd for distinction's sake) is bounded on the South-West, with New Biscay; more directly Westward, with some parts of Quivira; the Countreys Northward of it not yet discover'd; Eastward it extends itself as far as Florida.

This Province doubtless for largeness may compare with New Gallicia, having been search'd and discover'd by the Spaniards above a hundred, some fay two hundred Leagues directly Eastward, and to the North-East; and they report Wonders of it, if we may believe them, at least in respect of what was generally found in these Northern parts of America at their first Discovery; as namely, That they have Towns fairly and well built of Lime and Stone, Houses of four Stories high, and most of them provided with Stoves for the Winter Season, as well as any in Europe; the Streets fair and broad, and the People as curious and expert in divers Arts and Manufactures as any of theirs. More particularly they tell us of a Town call'd Chia, of the Province of Queret, so big, that it is said to contain eight several Market-places. Another call'd Acma, a great Town, but seated on the top of a high Rock, without any ordinary way of access to it, but by a pair of Stairs hewn out of the hard Stone, or else by certain Ladders, which the Inhabitants let down and take up as they please. And likewise of a third, which they call Conbias, containing, as they fay, no less than seven Leagues in length, and about half so much in breadth, seated
feated upon a Lake, but stately built, and much of the space taken up with Mountains and many fair Gardens, in the midst of which the Town Standeth; of all which more hereafter. This is certain, that the Country to which they give the Name of New Mexico, is of a vast extent, reaching from the Mines of St. Barbara in New Biflay Eastward, and to the North-East, above two hundred Leagues already discover'd, but doubtless taking up no small part of those Countries which are sometimes affign'd to Florida, if not of the Confines of Virginia also.

This Country was first, Anno 1581, discover'd by a Francifean Monk, nam'd Auguffine Rayz, who with two other Monks of his Order, got eight Soldiers of Conde de Cormac, Vice-Roy of New Spain, for his Companions; with whom he travell'd from the Valley Sant Bartholomew, to the Province De los Tigua's, where one of the two Monks was kill'd by the Natives, which occasion'd such a fear amongft the Souldiers, who judge'd themselves too weak to make any resistance, that they resolve'd to return, notwithstanding all the arguments which Rayz us'd to dissuade them from it; yet nevertheless he and his Brother Francisco Lopez, and four Indians, went onward of their Journey; which news the Souldiers carried back to the Francifeans in Sant Bartholomew; who fearing their Brethren would be destroy'd, sent several Souldiers and a Monk, call'd Bernardyn Beltran, after them, who were also accompanied by Antony Efyejus, who spent a great part of his Estate in rasing of Men, providing Arms and Provisions, loading therewith a hundred and fifty Horses and Mules; with which he travell'd direct North from the fore-mention'd Valley, and after two days Journey found a People call'd Conchi, who went naked, and liv'd in Huts built together like a Village: They were Govern'd by Cafiques, fed on Hares, Deer, Rabbits, Maiz, Calabafles, and Melons. Several adjacent Rivers afford them plenty of Firth. They were amaz'd at the Crosses which the Spaniards there erected, till they were inform'd of a Crucifh'd Saviour. Efejus being every where kindly Entertain'd amongst them, and conducted twenty two Leagues farther, came amongst the Indians call'd Paffagnates, of the like Constitution with the Conchi's; who had skill in Minerals, and judge'd that there were many Silver Mines in that Country. From thence the Paffagnates travell'd with the Spaniards to the Borders of the Los Tobofos, who no sooner saw them, but they fled, because a few years before they had been miserably dealt with by the Spaniards; but being inform'd by the Interpreters, that they needed not be afraid of anything, they all appeare'd, and conducted Efyejus to the Borders of the Patarabuyes; which People posses a large Country, Stone Houses and Villages built in good order. Great Rivers which come out of the North, and others that disemboqu'd into the North Sea, afford them all forts of Firth; as also the Woods plenty of Venifon, Fowls, and wholesome Plants. In some Pools also the Salt Water afforded Salt.

The Valour of the Inhabitants may sufficiently appear by the rough Entertain-ment which the Spaniards met with all the first Night; for the Patarabuyes fell so fiercely upon them, that had not the Watch given notice thereof in time, none had escap'd with Life; nevertheless five Horses were kill'd, and a considerable number of Men wounded: after which retreating, they went upon a neighboring Hill, whither Efyejus sent his Interpreter, and an Indian the same Country, to inform them, That the Spaniards came not to molest them, and if they pleas'd to come to them, they should meet with none but Friends; which was the more easily credite'd, because the Cafiques receiv'd some Prefents; after which being reconciled, they conducted the Spaniards twelve days Journey up a long River, whose Banks were inhabited in several places. From thence they reach'd to a Place, inhabited by a People richly Cloath'd, who also seem'd to have some knowledge of God, for in their
their Discourse they pointed up to Heaven, call'd the Creator and Preserver of all things, Apollo, and signifi'd that they had receiv'd that Knowledge formerly from those that were left of Pamphius Narvaez's Army, who having rang'd through Florida were driven hither.

These People also Present'd Eftepus many tanned Skins, with which he went to a great Village, the Inhabitants whereof were very courteous, and barter'd them for brave Plumes of Feathers and Cotton Cloaks, ftrack'd with blue and white: but Eftepus having no Interpreters whom they could understand, could not learn by what Name they were known, yet by signs they expres'd what time of the year they had Precious Stones brought to them; and also what their Country produc'd; and also that abundance of those Riches was to be found in a Province about five days Journey Westward from thence, whether they freely offer'd to conduct the Spaniards, which accordingly they did, bearing them company one and twenty Leagues to the next Province, inhabited by a People whose Name also they could not be inform'd of, yet staying three days amongst them, they were Entertain'd with Presents and Dances both Night and Day. The Country afforded them also store of Venison and Fruits: Those that understand Minerals, judg'd that there were likewise several Gold Mines.

Leaving this Province, they entred into a great Wildernefs of Pine-Trees, in which they travell'd twelve Leagues in fifteen days, without seeing either Man or House; but at the end of the Wood they spy'd a Village of Straw Huts, where there were great quantities of white Salt, and Deer Skins neatly dres'd. The People of the Place courteously Entertain'd the Spaniards, and conducted them along the River Del Norte, to New Mexico: The Banks of the River on each Side was plant'd with Nut-Trees and Vines, which spread themselves out above three Leagues; through which they had scarce pass'd three days together, when they saw ten populous Villages pleasantly situ'd on the said River, from whence came many thousands of the Natives to meet Eftepus, who was not so much amaz'd at the great number of People, as at their extraordinary Civility and decent Habits; for they Entertain'd him with well dres'd Meat, roasted Poultry, and pleasant Fruits: Their Garments were Cotton Cloaks, Deer-skin Breeches, Shoes and Boots of good Leather. The Women wore their Hair neatly Comb'd and Pliet'd. Their Houses were almost four Stories high, handomely built, and divided into fair Chambers, had Stoves or Cells under Ground against the Cold in the Winter. Every Village was Govern'd by a Caiique, whose Commands were publish'd by the Algonquins. Each House had a peculiar place in which their Idol flour'd, before whom they let Meat twice a day. Near the High-way's stand Temples very curiously painted, wherein their Deity, as they say, diversify'd himself in his Progress from one Village to another. At certain Distances near their Plough'd Lands, stand'd Portico's, supported on four Columns, under which the Husband-man us'd to eat, and take his Noon-sleep. Besides their Swords, which were strong enough to cut a Man through the Middle, they us'd Bows and Arrows: Their Shields were made of Deer Skins.

Eftepus having stay'd here four days, went to the Province De las Tiguas, which had sixteen Villages; in the chiefeft whereof, call'd Paola, Augustine Rojas and his Brother Monk Franciscus de Lopez had been slain, besides four others; wherefore the People being conscious of this Crime, and fearing that Revenge would follow, fled to the Mountains, from whence they could not be enticed, whilst the Spaniards found their Houses full of Provisions and some Minerals.

Now those being dead whom they fought for, some thought it convenient to return; but Eftepus and Beltran perswaded the contrary, alledging, That farther up,
according to the Indians information, lay several Provinces which were worth the discovery, and advis'd that the chiefest part of their Forces might stay there, whilst they and some few resolute Men went farther upon the Discovery, which accordingly was perform'd. Espejus having travell'd two days, came into a fruitful Province, jutting against Gibola, in which he found eleven Villages, inhabited by above four thousand People, who were clad in Skins and Cotton, worship'd many Idols, and receiv'd the Spaniards with great Civility.

The like Entertainment they met withall in the Countrey Los Quires, wash'd by the River Del Norte; near which stood five Villages, inhabited by about fifteen thousand People.

Thirteen Leagues farther they found De los Cuanamé, having also five Villages, the chiefest of which being Cia, boasted (as above mention'd) eight Market-places: The Houses, made of Lime, were neatly Painted, and compris'd in all above twenty thousand Persons, all civil People, who present't Espejus and his Company with handiwork Cloaks, for good boy'd Meat before them, and shew'd them rich Minerals, and the Mountains out of which they got the fame.

Of the like Constitution were the Inhabitants De los Amíres, which being thirty thousand in number, resided in seven well built Villages, lying North-West from Cuanamé.

After this they march'd Westward, and found the eminent Village Acoma, mention'd before, built on an exceeding high Rock, to which led onely a narrow Path up a pair of Stairs cut in the Rock; as also many Wells to receive Rain, besides what they have out of a River, led by Moats round about their Plough'd Lands, The Spaniards staying here three days, were Entertain'd with all sorts of good Meat, Dances and Drolls.

From hence travelling twenty four Leagues more Westerly, they entred the Province of Zuny; where the erected Croffes which had remain'd there till that time, were sufficient testimonies of Cornaro's having been there, after he was deferred by Andreas de Cuyocan, Cafer de Mexico, and Antonio de Guadalajara, being fectled on Zuny, (otherwife call'd Gibola) and speaking the Indian Tongue better than their Native Language, inform'd Espejus, that sixty days Journey farther lay a great Lake, whose Shores were crown'd with many brave Villages, inhabited by a People who wore Golden Armlets and Ear-rings; whither Franciscus Vafañez had gone a second time, had not Death prevented him. This Information so encourag'd Espejus, that notwithstanding it was so great a Journey, yet he resolv'd to venture thither, though the Monk Beltran and most of his Company perswaded him to the contrary; whereupon Beltran return'd: After which Espejus went on to the said Lake; whither he was accompanied with a hundred and fifty Indians. Having gone twenty six Leagues, he found a populous Province, whose Borders he no sooner approach'd, but he was told, That if he was willing to lose his Life, he and his Party might enter into a forbidden Dominion; yet notwithstanding this threatening Message, he wrought so much upon the Caiquè by the Prefents which he sent him, that he was permitted to come in freely; nay, the Inhabitants of Zanato frow'd Meal on the Earth for the Spaniards to go over, and present'd Espejus at his departure with forty thousand Cotton Cloaks, and a considerable quantity of Plate, which he fent with five of his Soldiers, and all the Cibolan Indians, back to Gibola, keeping onely four Companions and one Guide, with whom he travell'd forty one Leagues Westward; where he found a Mountain, to the top whereof led a broad Path; which ascend-ing, he took up Silver Oar with his own Hand. The several forts of People that inhabited here were all civil and courteous, living in good fashion, in pretty large Houses,
Houses, built on the Banks of a pleasant River, shaded with Vines and Nut-Trees, and thick planted with Flax: They inform'd Espejos, that near a River which runs eight Miles towards the North Sea, were such stately Palaces, as could not be beheld without great admiration. But Espejos going back a plain Road to Cibola, found not only those whom he had sent from Zaguato, but also Beltran, with the other Soldiers, who having been detained there by the Civilities and kind Entertainments of the Indians, were now upon returning home; so that Espejos was left alone with eight Soldiers, who resolv'd to venture their Lives and Fortunes with him. They travell'd along the River Del Norte, through the Provinces De los Guines and Habatas, where Mountains, overspread with Pine-Trees and Cedars, have many rich Mines. The Natives wore painted Cotton Cloaks, and dwelt in stately Houses five Stories high. At the Borders of the Realm Los Tamos they were stop'd, and not permitted to come on farther; wherefore being but few in number, and several of them sick, they judg'd it convenient to cross the River De las Vacas (so call'd from the abundance of Cows that were thereabouts) to the River Conchos and the Village Bartholomew, where Espejos was inform'd, that Beltran was long before his arrival gone to Guadiana.

And now that we may have the better Account of New Mexico (which Rays, Espejos, and Beltran endeavor'd to discover) it will be necessary to begin with the first original thereof, according as several ancient Histories make mention.

The most ancient Possessors of that part of Northern America call'd New Spain, were for their fierce and valiant Nature call'd Chichimeca, who dwelling in Caves, fed on Moles, Rabbits, Hoghogs, Serpents, Roots and Herbs. Whilst the Women accompanied their Husbands in their Travels, the Children were put into Baskets, and hang'd in a Tree. No manner of Government was to be found amongst them. They never Till'd their Ground till the Navatlanans came from Nau Mexico (which was anciently divided into two Countries, Azlan and Tucultuacan) to New Spain; after which they Sow'd their Lands.

The Navatlanans (who us'd to dwell in Houses, worship Images, plough their Lands, and obey their Governors) were divided into six Tribes, each Tribe posseffing their limited Bounds: and there goes a Tradition, That out of six Pits that are to be seen in New Mexico, the Navatlanans had their original. The time when they defected New Mexico, as their most authentick Histories or Records declare, was (according to our computation) Anno 9340. and they farther affirm, that they spent forty years in a Journey, which might have been travell'd in a Moneth: The reason of which tediousness was, because they refus'd in all places where they found a fruitful Country; but as they had advice from their diabolical Spirits, which (as they say) appear'd visibly to them, they still went on farther and farther, yet left behind those that were aged, sick, and decrepit, building convenient Houses for them, and appointing Overseers to look after them. The Ruins of the Houses are yet to be seen on the Way along which they pass'd.

The six Tribes divided themselves after this manner: Four of them seed round about the great Lake of Mexico: The Sicuhamilans taking the South part, built, besides two other Towns, a Metropolis of their own Name, as the Chelcan on the North. The Tapuosans built Aecuapuzaco in the West, which signifies A Fishers Hole, because of the abundance of Inhabitants. The Eastern part was taken up by the Chalcatuts. And all these Names have a peculiar signification; the first signifies People of Flower Fields; the second, People of Mouths; the third, People of Bridges; and the fourth, Crooked People. Not long after, the Taltucans, a strong People, went over the Mountains on the other side of the Mexican Lake, where they built several Towns
on a hot, yet fruitful Soil, the chiefest whereof they call'd Quabunachua, that is, A Place where an Eagle's Voice is heard. The Tlafealtcans went near the Snowy Mountains, one of which, being between Mexico and De los Angelos, vomits horrid Flames and Smoke up into the Skie. Here scattering up and down, they built several Villages, besides the City Tlafealtla; the Inhabitants whereof asliffed the Spaniards, as hath been related in the taking of Mexico, for which good Service they live free, without paying any Tribute.

When these six Tribes came first from Mexico thither, the Chichimecans made little or no resistance against them, but hid themselves amongst the Rocks: yet some of them not long after taking courage, flew to Arms, and had without doubt destroy'd the Tlafealtlans, had not a subtle Plot sav'd them: for under a show of Friendship they falling on the unarmed Chichimecans, kill'd every Man of them.

Joseph de Acosta tells us, that Anno 1586. he saw a Grave in Mexico, wherein a Chichimecan of a Gygantick size lay buried.

After this Conquest gotten by the Tlafealtlans, the fore-mention'd six Tribes liv'd in Peace and Quiet, and strengthened themselves the more by Marrying into one another's Families.

The Chichimeca keeping on the Mountains left the new People in quiet possession of their Lands, nay, learnt some of their Customs, insomuch that they began to build Huts, chuse Governors, and live according to their Laws.

The Tlafealtlans having possessed New Spain three hundred and two years, a seventh Tribe (a valiant and civiliz'd People) came thither, upon their Daemon Vizigipazti's promise of having the Suprem Government: wherefore he was carried in an Ark by four chief Priests, whom he inform'd whither and when they should travel or rest, for where ever they ropt, they built a Tent in the middle of their Army for their Idol, whom they set on an Altar; which done, they Sow'd the Ground about them: yet if their Daemon commanded them to march before Harvest, then they left the Product to the ancient and sick People. But at last Mexico, from whence the Name of Mexico is deriv'd, conducted the Army into Mecheican, where the pleasant Soil among the Lakes entice'd many to take up their Habitation. But Mexico proceeded on his Journey, yet not without great Crosses, in regard Vizigipazti's Sister (some Inchantrefl's probably so call'd) did much hurt to the whole Army by her Sorceries, because they would not honor her as a Goddess, till Vizigipazti inform'd one of them that carried the Ark, that the Army should march on, and banish the Witch from them: whereupon the accordingly being driven away, built the Village Malinalco, as a Habitation for Conjurers. Mean while, the Army grew weaker and weaker by their leaving so many People behind them in most places; therefore they judg'd it convenient to rest a while in Tudla, where a great River water'd the Country, which, according to Vizigipazti's Commands, being dry'd up, made a large Lake about the Mountain Chapultepec, whose Banks being planted with Willow and Poplar-Trees, were exceeding pleasant, and the more, because of the variety of Birds that made their Nests in the same; which so delighted many of the People, that being tie'd with travelling, they resolve'd to settle there; which Resolution was so ill reftented by Vizigipazti, that he commanded the Bank to be broken, that the Waters might have liberty to flow its former Course; and threatened them with heavy punishments: after which in the Night a terrible Cry of Murder was heard in one part of the Army, which being inquir'd after the next Morning, they found divers People lying on the Ground with their Breasts cut open, and their Hearts pull'd out; whereupon those that remain'd went on to Chapultepec, where they fortifi'd themselves in the Mountains against the adjacent People.
Chap. VIII.  

People, which Cepit, Son to the Matinecon Witch, had rais'd up against them, and soon after the Tapacans and Chalcons went against their new Neighbors, with whom they began a bloody Fight, when Titilipucu, at that time General of the Mexican Army, preffing in amongst them, broke their Ranks, and made way for all his Army (though with his own Death) to march Conquerors to Culhuacan: The Prince of which Province gave them a Place to settle on, near the white Water Tecaapan, whole Shores swarm'd with Adders and Serpents, upon Design that the Strangers might be destroy'd by them; but it prov'd quite otherwise: for they without regret eat the poyonous Animals; and Dunging the unfruitful Soil, receiv'd a plentiful Harvest: They would willingly have settled here, after their long ranging up and down, if Titilipucu would have approv'd thereof; but he told them, that they must possess themselves by Arms, and make a Culhuacan Maid their Goddesses: whereupon they derr'd the Captain's Daughter of Culhuacan, who was sent them in rich Ornaments, and with a stately Retinue: But she was no sooner ent'red on the Tecaapan Shore, but they flay'd her alive, and her Skin being stuff'd, and nam'd Toci, was religiously worshipp'd. But not satis'd with this cruelty, they sent for her Father to visit his Daughter in her Dignity; who accordingly coming with great Attendance, was led into a dark Chappel, where by the burning Tapers he knew the Goddess to be no other than his Daughter's Skin stuff'd full of Cotton; whereat burning with rage, he afterwards fell upon these Murderers with all his Forces, and drove them to the Place where they afterwards built Mexico.

We have often made mention heretofore of the Governor of this Journey, Titilipucu, it will therefore be necessary to give an exact Description of him, as followeth:

He was a wooden Image like a Man, fitting on a blue Seat in a triumphant Chair; at each end of which was plac'd a Staff with a Serpents Head upon it, from whose Forehead, which was Painted blue, ran a Streak of the same colour, cross his Nose to both his Ears; upon his Head stood a Plume of Feathers, the ends whereof were tipp'd with a golden Varnish; his left Hand held a white Shield, on which stuck five Feathers, and on the top a Laurel Bough; next the Shield lay four Arrows, pretend'd to be sent from Heaven; in his right Hand a Truncheon, full of blue crooked Streaks like Serpents; behind on his Shoulders appear'd Wings, not unlike those of a Bat, his Eyes large and round, and his Mouth reaching from Ear to Ear, made him terrible to behold, also gaping, and full of Teeth, which flux out of his Belly; in his Breast also were two fiery Eyes, and under them a shrivel'd Nose; his Feet ended in Claws, hung round about with Precious Jems, golden Boxes and Shields set out with divers colour'd Feathers. The Curtain behind which this Idol sat, was not drawn open except on a Feast-Day.

Next Titilipucu stood generally a leffer Image, call'd Tlaoc, and also the Goddess Ticci, Daughter to the Prince of Culhuacan, who (as before mention'd) was dash'd by their Demon's Command. Since which time they suppos'd, that they were never more acceptable to their Gods, than when they appear'd Cloth'd in another Man's Skin; and accounted no Offering better, than a Heart taken out of their Enemies Breast, since their Spirit destroy'd so many after that manner in the Army at Tula.

But Ticci, they say, had also a Son much inclin'd to Hunting, whose Image they carry, attended by a thousand People, with the sound of Horns and Trumpets, to an Arbor on a high Mountain; which being made of green Leaves pleated, had in the middle an Altar, on which they set the Idol, whilst the Multitude surrounded it.
the Foot of the Mountain, and let all the Buffles about the same on Fire; which done, they shouted and hollow'd, and play'd on several Instruments; which frightening the wild Beasts that lay shelter'd in the Woods, made them run to the top of the Mountain, where they were more and more inclos'd by the People, insomuch that many of them were slain for an Offering before Tocci's Son's Altar; which done, they carried the Idol back to his Temple, and the People made Merry with the slain Venison.

As great Reverence they shew'd to Tetzatilpaca, because (as they said) he pardon'd their Sins. This Idol was made of a black shining Stone, richly Apparel'd, having Golden Ear-rings; in his undermost Lip a Silver Sheath, in which stuck sometimes a green, and sometimes a blue Plume of Feathers; his Hair was ty'd with an embroider'd String, at the end of which hung a Golden Ear, whereon Smoak was Painted, signifying the Prayers of oppressed Sinners; moreover, the String hung full of Pearls, and about the Neck in a String hung a Jewel; on his Breast, as also on his Navel, a green Stone; in his left Hand he held a Fan made of a Gold Plate, in which stuck many colour'd Feathers: this Plate glittering like Glass, was in stead of a Mirrour for Tetzatilpaca, to observe all worldly Transactions in the same: and to punish Criminals, he held four Darts in his right Hand. His Feast they kept once in four years.

This Idol also had the Command of Hunger, Drought, Famine, and pestilential Diftemper; wherefore he had quite another shape, sat on a Stool behind a red Curtain embroider'd with dead Mens Bones and Sculls; his Body Coal black, his Head stuck full of Quails Feathers, a Quiver with four Arrows in his left, and a Rod in his right Hand, which made the Image seem very terrible.

The Idol Quetzalcóatl, being their Guardian over the Merchants, was plac'd in a high Temple, being shap'd like a Man, his Face onely excepted; for that resembled a Bird's Head, with a red Bill full of Teeth, a Comb, and a long Tongue; on the hind-part of his Head stuck a Mitre, and about his Legs Silk Garters belit with Pearls.

Cibola, Tontonreac, and Nova Grananda.

Though the Province of Zuny above-mention'd in the Chapter of New Mexico, in the Voyage of Elfrems, be there otherwise call'd, and appear to be the same with Cibola, yet we find it not treated of by any as part of New Mexico, but by some as a distinct Province, by others as a part of California largely taken; for besides that California, properly so call'd, hath formerly been taken rather for a Peninsula than an Island, and still affords to some an Argument of question, whether it be one or the other. The whole extent of the Province generally so term'd, hath been reputed to comprehend the supposed Peninsula itself, Cibola, Quivira, and Nova Albion; but since, according to the best Maps and Discoveries, there seems little doubt to be made, that California, strictly taken, is a perfect Island: and since upon that Consideration we have referred it to be describ'd amongst the Islands of Northern America, we also consequently judge it most requisite to consider those Countreys apart that were included in the extended California.
Cibola lieth Southward of Quivira, betwixt it and New Galicia, to the North and East: on the West it hath Mar Vermiglio, or the Bay of California. The Air of this Province is indifferently temperate, especially if compar’d to the sharp Frosts and Golds of Quivira. The Countrey is for the most part level and plain, as Quivira is, having but few Trees in it, except here and there some Woods of Cedars, which yet do abundantly supply the Natives both with Timber and Fivel. The Ground affords plenty of Maiz, and some small white Peahe, of both which they usually make Bread. There is great store of Venelion, and a kind of Sheep (as they say, and as it should seem by their Fleece) as big as some little Horses or Oxen, some of their Horns weighing forty or fifty Pound: But perhaps by some mistake of Authors, this Beast may be no other than Taurus Mexicanus, elsewhere describ’d, whose Hair is extremely thick and shaggy, and of which they make Cloth as of Wool, as hath been said. There are also Lyons, Bears, and Tygers in this Province, in such numbers, that the People of the Countrey are not a little troubled with them, and would gladly destroy them if they knew how. The People are generally well Limb’d, tall of Stature, and seem to be a little more Ingenious than their Neighbors of Quivira; yet they go naked many of them, one ly cover’d with Mantles made of Skins, which are many times painted, and that with such Curiosity and Art, as do sufficiently argue, that neither themselves nor their Neighbors of Quivira, from whom they have them in Traffick, do make them, but that they are the Merchandise and Commodity of some other Nations, perhaps of Cathay or China, who, by the North-West Seas, do Trade with the Maritime Parts, and People of Quivira.

This part of the Countrey hath been reasonably well search’d by the Spaniards, but as yet nothing discover’d so considerable, as to perswade them to stay in it.

That which seems most observ’d, is the great Lake Tontonde, situate almost in the midst of the Province, upon which, or near unto it, they found seven or eight old Towns of the Natives, some whereof contain’d four or five hundred of their Cottages or little Houses, and were forth’d also with Ramparts, and other Works of Defence, so as the Spaniards could not become Masters of them, but by Force and Storming: In the attempt whereof Vasquez Coronado, their Commander in chief, was twice beaten down with Stones by the Natives; yet at last carrying the Place, he found in it good plenty of Maiz indeed, which was some refreshment to his Army, but nothing else: whereupon having nam’d the Place Granada, in memory of the Vice-Roy of New Spain, who sent him upon that Expedition, he departed. In his return homeward he fell upon a certain Countrey, which he nam’d Tucayan, of which his Companions report great matters; as first, of a certain River call’d Huex, on the Banks whereof, in the space of twenty Leagues, or thereabouts, there stand no less than fifteen good Burroughs, well built, and furnish’d likewise with Stoves or Hot-houses, against the Cold, as in other Countreys of Europe; as also of a very fruitful and pleasant Valley, which they therefore call’d Areba de Corazon; of another great Town and Territory, call’d Chichiltica; and lastly, of the Valley of Nuestra Senora, or Our Ladies Dale, in the South parts of the said Territory, all of them describ’d for such rich and delicious Places, that some take them for the Camps Elsif of America, especially seeing the Spaniards were never known to visit them a second time, the Discoveries that have been made since being one of the North-West Parts of the Countrey, along the Coasts of Mar Vermiglio, and this no farther than only to give Name to certain Capes or Promontories which they met with, as namely 1. Porto de St. Clara, near to the Mouth of the River which they call Rio del Norte. 2. La Playa. 3. St. Michael. 4. Lago del Oro, which bordereth on Quivira; and lastly, El Rey Coronado, Eastward of that.
Tontoneac is mention'd by so few, and by those few so obscurely, that it cannot well be determin'd to be any other than that Countrey which lies about the great Lake Tontoneac, above spoken of in Cibola, and which being made Habitable by fix or seven Towns not inconsiderable for Habitations of native Indians, might haply pass for a distinct Province. And perhaps the reason why this Province hath been so obscure, and little taken notice of, might be from the ruin of thefe Towns by War, or some other Accident: and to this purpose are the words of a late Writer, The Province of Tontonceau (faith he) hath five Houses only lelt, which fland on the Shore of a salt Lake.

Nova Granada, besides that it is a generally known and describ'd Province of Southern America, is also nam'd amongst the Provinces of Northern America, particularly by Bertius, Cluverius, and Golinskius, and in some late Maps of America so conspicuously specify'd, that it might appear to be all that Traet of Land which contains both New Mexico and the several Provinces adjoining to it; but since we find it not describ'd by any at large, it will with most verisimilitude pass for that part of New Mexico where stands the City of St. Fo, and this is most plainly express'd by Monsieur Marinii, though there are who confound Cibola with New Granada. Waiving which Difciption, we shall only insert a short Description of the Place, according to Corno, who seems to have been one of the firft Discoverers of these Parts, and whose Credit is prefer'd before that of Marcus de Niza.

New Granada (faith he) consists of seven Villages, built in the circumference of four Leagues, the chiefest whereof boast two hundred Houses, which for the most part are four or five Stories high, and built of Stone; the cellars thereto belonging, being nearly Pav'd, serve for Stoves against the Cold: they ascend to their upper Rooms by Ladders. The inhabitants go naked, only some covering above their Middle, and over their Shoulders Cotton Cloaks, painted with divers Colours. They live on Maiz, white Pea, Hares, Rabbits, and Venison: their Salt wherewith they season the same, they fetch from a neighboring Lake. The Turks, which they have in great numbers, are kill'd only for their Feathers, notwithstanding their Flesh is exceeding good Meat. The Soil is for the most part plain, yet hath some high Mountains; and the Pastures flourish with Grasfs. The Woods abound with Bears, Tygers, Lynx, wild Hogs, Rhinocerots, and the like ravenous Beasts, which make the Ways dangerous for Travellers. Besides large Deer, there are also Sheep, which in bigness may compare with Horses, having exceeding great Horns, and little Tails.

Concerning the abundance of Turkiefs, of which Niza makes mention, Corno could give no certain account, because a little before his Arrival the Granadians had convey'd their Children, which were under fifteen, and the aged People, who were above sixty years of age, with their chiefest Goods, into remote places. However, it is not unknown, that this Countrey affords Turkiefs for Corno in his Journey to Quivira, Besieg'd a City in these Parts near a great River; the inhabitants whereof, when they were not able to defend themselves any longer, throwing their Cloaks, Turkiefs, and other Riches into the Fire, Sallied out upon the Spaniards, and died not altogether unreveng'd; as shall be specify'd more at large in the Description of Tignes, which being nam'd among the Towns of Quivira, will upon the comparing of Circumstances, be apparently found to be the fame with this.

Lately, New Granada hath no Fruit-Trees, but little Cedars fit for Building.

CHAP.
Quivira.

Quivira is the next Region accounted of California, largely taken; yet appearing by some Charts to lie so vastly remote, that all New Mexico, Gallicia, and other Provinces already mention'd, lie between that and the Island. And whereas New Granada is by several made a part of New Mexico; yet most certain it is, that by some it is confounded with this Countrey, or at least accounted a part thereof, as hereafter shall more plainly appear, according to the Account of those that have most fully and particularly describ'd it.

Quivira takes up the most Northern and unknown part of America towards the West, reaching as far as the supposed Straight of Anian aforesaid (if there be any such) or else joyning to the Continent of Tartary. It is likewise the least fruitful part of all the West-Indies, especially for Corn. Cattel it hath good store, and Pasturage indifferent good, the Countrey being for the most plain and level, and nothing else but Pasturage. The Natives are few and Savages, living in Hoads or great Companies together, after the manner of the Tartars, to whom they are Neighbors, and (as it is not improbably thought) of their Race. The Men Clothe themselves most commonly in that kind of Oxes Hide, elsewhere spoken of under the Name of Taurus Mexicanius. The Women wear little else but their Hair, notwithstanding the Countrey, especially for one half of the year, is excessive cold. Their Cattel, though they are much less than the ordinary King of Europe, are the chief Sustenance and Employment of the Natives; by Pasturing huge Herds whereof from place to place, the People live, and maintain a Traffick with other Parts. Yet some of them inhabit Towns, the chief whereof, as yet discover'd, seem to be these which follow:

1. Acuc, or Acuco, a small Town, but seated in a strong defensible place, and being a great Staple for Cotton, the Territory about it hath been taken for a distinction Province, and by some call'd The Kingdom of Acuco.

2. Tignes, a Town seated upon the Banks of a River bearing the same Name, and inhabited, it seems, by a stout and resolute People, and whom the Spaniards, coming amongst them in the Year 1540, had much ado to master: for they endured a Siege for the space of six Weeks; and at last finding themselves so strongly begirt by their Enemies, that there was no means to escape but by Death, or yielding up themselves, rather than they would fall alive into their hands, they first buried and spoil'd all such Treasure as they had (which were chiefly Saphires, and a few other Gems, that the Countrey afforded) and after that setting on fire their Household-stuff, they took their Wives and Children with them, and made a desperate Sallie out upon the Spaniards; wherein although they were most of them slain, and trod under the Horses Feet, or drown'd in passing the River, yet was it not without some loss to the Spaniards themselves: nor would those few that were left behind deliver up the Town, till it was fir'd about their Ears, and that they could no longer abide in it. This Town, by all Circumstances, must needs be the same with that before mention'd in Nova Granada, which makes good what we have said above, viz. That New Granada is by some confounded with, or at least taken for a part of this Region.
3. *Cicaric*, another small Town, four days Journey from *Tignes*. The Country about this place, although generally it be all good Pasturage, and maintains abundance of Cattel, yet is it open and plain, that for almost a hundred Miles together, the Spanyards, in their March hither from New Spain, found neither Stone nor Tree, nor any thing else that could serve them for a Land-mark, so that they were forc'd, as they march'd along, to raise up Heaps of Cow-dung, to serve them for direction in their coming back, which was not long after: for not finding the Commodities they sought for, and fearing to be surpris'd by Winter in those cold Countries, where they had no kind of accommodation, they made somewhat a hasty Retreat, leaving behind them only some few Religious Men, of the Order of St. Francis, whose Endavours to do the People good by Converting them to the true Knowledge and Worship of Almighty God, procure'd them not long after, the Crown of Martyrdom, being murder'd all of them, except one, by the Natives, and he not without much difficulty escaping their Hands.

**Nova Albion** was so denominated by Sir Francis Drake, when he was there Entertain'd by the King of that Country, whether or whether it were in Quivira that he was thus Entertain'd, and left that Denomination, or in the Island of California, appears not either from the Relation, or from the common Concern of Cosmographers, since some there are, who will have Quivira and Nova Albion to be one and the same Province; others reckon it to be the utmost North-West part of California; others make it distinct from Quivira, yet determine it not to the Island California, seeming rather to make it an adjoyning Country to Quivira: wherefore finding little else that concerns the Description of the Place, except the said Voyage of Drake, we shall here set it down, and leave the farther Disquisition concerning the Situation of the Place, till we come to describe the Island of California it self.

Captain Francis Drake set Sail from Plymouth Anno 1577, and after much hardship getting through the Straights of Magellan, arriv'd in the Haven Guatulco, having before his coming thither taken as many rich Spanish Ships in the Southern Ocean as he could possibly have wish'd for; to that his only care now needed to have been how to get safe home; yet he put on a Resolution, not to come short of *Ferdinendas* Magellan, who Sailed about the World. Which brave Resolution of Drake's was approv'd of by all his Sea-men, whereupon he set Sail along the North of California the fifth of June, being gotten into forty two Degrees, which was the farthest that Cabrillo went, he came on a sudden out of a warm Air into so frigid a Climate, that the Sea-men were almost kill'd with Cold, and the farther they went, the colder it grew; wherefore falling down three Degrees more Southerly, they got into a convenient Haven, where the Natives who liv'd along the Shore brought them Promises; which *Drake* left not unrequited, by returning them others, that were to them more novel, and not unuseful.

These People are exceeding hardy; for notwithstanding the extraordinary coldness of the Climate, the Men go naked; but the Women wear Garments of pleated Flags or Ruffles, which being put about their Middle, hang down to their Ankles; on their Stomachs hang the ends of a hairy Skin tied together, which hanging also over their Shoulders, cover their hinder Parts. They Shew great Respect and Obedience to their Husbands. Each House is surprized with an Earthen Wall, and all the Corners thereof being close stopp'd, and Fires made in the midst of them, they are very warm. Ruffles and Flags Srow'd thick on the Ground near the Walls, serve them in stead of Beds.

The Indians coming a second time to Visit the English, brought them Plumts of Feathers,
Feathers, Neckbands of Net-work, and flore of Tobacco: Drake pleas'd with this their kindness, built Tents on the Brow of a Hill, on the top of which the Indians flood that brought the Presents, whil'st one of them with a loud voice maintain'd a long Discourse, which he had no sooner ended, but every one laid down his Bowe and Arrows, and walk'd unarmed down to the Tents to proffer their Gifts: their Wives staying behind on the top, pinch'd their Cheeks; and made sad lamentation, which Drake suppos'd was because they made Offerings there: whereupon he also caus'd all his Men to kneel down and lay their Prayers, which made the Indians to look very earnestly upon them, and to return him the Presents which the day before they had receiv'd of him.

The rumour of these Strangers arrival spreading all over the Countrey, made the Inhabitants far and near devious to see them; the King himself sending Ambassadors to Drake, to inform him that he was on the Way coming to see him; all which the Agents related at large, and desir'd some Presents, as a testimony that their King should be welcome; which he being assure'd of, came with a Retinue of above twelve thousand Men, before whom walk'd one of a Gygantick size, carrying a cufly Scepter, on which, by three long Chains made of Bones, hung a great and a small Crown made of Feathers; next follow'd the King himself in a Suite of Cony-Skins; then came a great confus'd company of People, each of them carrying a Present: whereupon Drake putting his Men into good order, march'd to meet the King; at which the Mace-bearer made a long Preamble, and when he had done, Danced to the Tune of a Song, which he Sung himself; then the King and his whole Retinue also fell a Singing and Dancing so long, till being weary the King went to Drake, and humbly desir'd of him, that he would accept of the Realm, assuring him, that all the People should be under his Obedience; which said, he put the fore-mention'd Crown on his Head, and hanging three double Chains about his Neck, call'd him High: whereupon Drake took possession of the Countrey in Queen Elizabeth's Name. The King staying alone with Drake, his Retinue went amongst the English, every one looking very earnestly upon them, and
to those whom they lik'd best, being the youngest, they falling down and crying, proffer'd Offerings, as to Gods, and held their Cheeks to draw Blood out of them; which the English refusing, they defifted; but shew'd them great Wounds, and de- 

The English going up into the Country found the same well grown with Woods, which abounded with Cones, whose Heads differ'd little from the European, but having Feet like Moles, long Tails like Rats, and in their Sides a Bag, wherein when they had fill'd their Bellies they put the remainder. They also saw numerous Herds of Deer, with whose Flesh having been courteously Entertain'd in several Villages, they return'd to the Fleet. Drake, just before he weighed Anchor, caus'd a Pillar to be set in the Ground with a Silver Plate on the same, with an Inscription, mentioning the Day of his Arrival, Name and Arms of Queen Elizabeth, and free delivering of that Realm to him by the Indians: he also nail'd a Sixpence with the Queens Effigies on the Plate, under which he caus'd his own Name to be Engraven.

THE ISLANDS OF Northern America.

CHAP. XI.

Terra Nova, or New-found Land, with the Island of Assumption.

Aving treated at large of all the several Regions and Pro- 

vinces of the North part of the Continent of America, we come now to those Islands that lie within the same Degrees of Northern Latitude with that part of the Conti- 

cent: The first is Terra Nova, or New-found Land, discover'd together with several other Parts upon the Continent before mention'd by Sir Sebastian Cabot, by the Countene- 

nance and Charge of King Henry the Seventh of England; 

whereupon a rightful Claim thereunto, and Interest therein, hath been own'd by the succeeding Kings of England, as hereafter shall be more particularly related.

New-found Land is situated betwixt the Degrees of forty six and fifty three of Northern Latitude, and is divided from the Continent of America by an Arm of the Sea, in like distance as England is from France. The Island is as large as England in length, greater in breadth, and lies near the Course that Ships usually hold in their Return from the West-Indies, and is near the mid-way between Ireland and Virginia.
Chap. XI.  

**A M E R I C A.**

We shall not much need to commend the wholsom temperature of this Coun-
yrey, seeing the greatest part thereof lieth above three Degrees nearer to the South,
than any part of England doth, so that even in the Winter it is pleasant and health-
ful as England is.

The natural Inhabitants of the Countriy, as they are but few in number, so are
they something a rude and salvge People, having neither knowledge of God, nor
living under any kind of Civil Government. In their Habits, Customs, and Man-
ers, they resemble the Indians of the Continent, from whence it is to be suppos'd
they came; they live altogether in the North and Weft part of the Countriy, which
is seldom frequented by the English; but the French and Biscaniers (who refort thither
yearly for the Whales-fishing, and alfo for the Cod-fish) report them to be an
ingenious and tractable People (being well us'd) and very ready to affift them with
great labour and patience, in the killing, cutting, and boyling of Whales, and mak-
ing the Trayn-Oyl, without expectation of other Reward than a little Bread, or
some fuch small Hire.

It hath the moft commodious Harbours in the World, and the moft fafe Seas to
Sail to it; there being not any Islands, Rocks or Sands between the **Lands-End in Eng-
land and New-found Land,** and for the moft part it is not above three or four Weeks Sail
thither, and les coming back; and is the moft commodiously situated for the dis-
covering of the North-Weft Paffage, and other Inlets into the South Sea; whereby
the ordinary Voyages to China, Japan, and the East-Indies, are much eas'd in the
expence of Time and Charge; and the moft open to Trade to all Parts, of any Island
of the West-Indies.

On the Eafte side of the Land, are the Bays of Trinity and Conception, which ftrech
themselves towards the South-Weft.

**Tors-Bay** and **Capelin-Bay** lying alfo on the Eafte, ftrech themselves towards the
Weft.

The Bays of **Trepaffey,** **St. Mary,** **Borrel,** and **Plaisance,** on the South part of the
Land, extend their Arms towards the North.

The great Bay of **St. Peters** lying on the South-Weft side of the Land, and Sou-
therly from the great River of **Canada,** being about twenty Leagues distant, the fame
frectheth toward the Eafte.

**Trinity Harbour** lies in near forty nine Degrees of North Latitude, being very
commodiously feat'd to receive Shipping in feafonable Weather, both to Anchor in,
and from thence to Sail towards either the Eafte, Weft, or South. It hath three Arms
or Rivers, long and large enough for many hundred Sail of Ships to moare falf at
Anchor near a Mile from the Harbours Mouth. Close adjoining to the Rivers fide,
and within the Harbour, is much open Land, well flor'd with Grasf suffi-
cient, Winter and Summer, to maintain great flor of ordinary Cartel, besides Hogs
and Goats, if fuch Beasts were carrid thither; and it flangeth North moft of any
Harbor in the Land, where our Nation practiceth Fifhing: It is near unto a great
Bay lying on the North fide of it, call'd **The Bay of Flowers,** to which Place no
Ships repair to Fiff, in regard of lundry Rocks and Ledges lying even with the Wa-
ter, and full of danger.

The bottom of the Bay of **Trinity** lieth within four Leagues through the Land
South-Weft, Southerly from **Trinity,** as by experience is found; and it comes near
unto the Bay of **Trepaffey,** and the bottom of some other Bays.

**Trepaffey** in like manner is as commodious a Harbour, lying in a more temperate
Climate, almost in forty fix Degrees of North Latitude, and is both fair and plea-
fant, and a wholsom Coast free from Rocks and Shelves, fo that of all other Har-
bouris
bours it lies the most South of any in the Land, and most conveniently to receive our Shipping, passing to and from Virginia and the Bermuda Islands; and also any other Shipping that shall pass to and from the River of Canada, and the Coast thereof, because they usually pass, and so return in the sight of the Land of Trespass, and also for some other purposes, as shall be partly declar'd in the following Discourse.

Fruitful Soil.

The Soil of this Country in the Valleys and sides of the Mountains is so fruitful, as that divers places the Summer naturally produceth without Tillage, great plenty of green Peaife, and Fitches, fair, round, full, and as wholesome as ours in England.

Berries and Fruits.

Of Berries and Fruits, there grows Strawberries, red and white, and as fair Raspite-berries and Goose-berries as there be in England; as also Bilberries, which are call'd by some Whortes, and many other delicate Berries peculiar to the Country, in great abundance. Likewise small Pears, Cherries, Filberds, &c.

Herbs and Flowers.

There are also Herbs for Sallets and Broth, as Parly, Alexander, Sorrel, &c. and also Flowers, as the red and white Damask Rose, with other kinds, which are most beautiful and delightful, both to the sight and smell. And questionless, the Country is flor'd with many Physical Herbs, though their Vertues are not known.

When Corn was first Sow'n here, it was obviou's to grow very fair, the increase was great, and the Grain very good; and several sorts of Kitchen Plants that have been Set here, have prov'd very well.

In divers parts of the Country there is great store of Deer, and some Hares, many Foxes, Squirrels, Beavers, Martins and Otters, yielding excellent Furrs, Wolves and Bears, with other sorts of Beasts, serving as well for Neceffity, as for Profit and Delight.

Birds.

Variety both of Land and Water-Fowl is in this Country infinite: The chief Land-Fowl, besides a great number of small Birds, that live by scrapping their Food from the Earth in the hardeft Winter, are Hawks, great and small Partridges, Thrutf, and Thrufells abundance, very fat; as also Filladies, Nightingales, and such like, which sing most pleasantly. There are also Birds that live by prey, as Ravens, Gripes, Crows, &c. For Water-Fowl, there is certainly so good, and as much variety, as in any part of the World, as Geefe, Ducks, Pigeons, Gulls, Penguins, and many other sorts. These Penguins are as big as Geefe, but do not fly, for they have but a little short Wing; and they multiply so infinitely upon a certain flat Island, that men drive them from thence upon a Board into their Boats by hundreds at a time, as if God had made the innocency of so poor a Creature to become such an admirable Instrument for the sustentation of Man: And also Godwits, Curlew's, and such like; which do not only serve those that Trade thither for Food, but also they are a great furthering to divers Ships Voyages, because the abundance of them is such, that the Fisher-men do bait their Hooks with the quarts of Sea-Fowl on them; and therewith some Ships do yearly take a great part of their Filling Voyages with such Bait, before they can get others.

The fresh Waters and Springs of that Country are many in number, and with all so very pleasant, delightful and wholesome, that no Country in the World hath better: And Fewel for Fireing, no where more plentiful.

In like manner there is great abundance of Trees fit to be employ'd in other serviceable uses: There are Fir and Spruce-Trees, found, good, and fit to Maff Ships with, and as commodious for Boards and Buildings as those of Norway; and out of these come abundance of Turpentine. Moreover the Pine and Birch Trees here are scarce to be compar'd for height and greatness.
Chap. X.  

**AMERICA.**

The Rivers also and Harbours are generally fto'd with delicate Fish, as Salmon, Peals, Eels, Herrings, Mackrel, Flounders, Launces, Capelin, Cod, and Trouse, the fairest, fattest and sweetest, that ever were seen in these Parts. The like for Lobsters, Cra-fish, Mufles, and other variety of Shell-fish.

The Seas likewise all along the Coast, do plentifully abound in other sorts of Fish, as Whales, Spanish Mackrel, Dorrel, Pales, Herrings, Hogs, Porpoises, Seals, and such like Royal Fish, &c.

But the chief Commodity of New-foun'd Land yet known, and which is grown to be a fettled Trade, and that it may be much better'd by an ordinary Plantation there, (if the Traders thither will take some better courfe than formerly they have done, as shall be declared) is the Cod-fishing upon that Coast, by which our Nation and many other Countreys are enrich'd.

Almost incredible is the benefit of the Fish, which the French, Biscainers, and Portuguefe fetch yearly from this Coast of New-foun'd Land, and the Bank, which lieth within twenty five Leagues from the South Cape of that Countrey, where the French use to Fish Winter and Summer, usually making two Voyages every year thither. To which Places, and to the Coast of Canada, which lieth near unto it, are yearly sent from those Countreys, more than four hundred Sail of Ships.

This Island of Terra Nova belongs properly and justly to the Crown of England, having been under the sole Jurisdiction of the English from the first Discovery thereof, which was by Sir Sebastian Cabot, Employ'd by King Henry the Seventh, to find out some other part of America, than what had been discover'd by Columbus, as hath been above declar'd in several places.

Afterwards King Henry the Eighth continu'd the English Interesse there, and Employ'd one Pratt into that Island, in order to the Plantation thereof.

Queen Elizabeth no less careful to preserve that Plantation, sent Sir Humphrey Gilbert, a Devonshire Knight, to plant a Colony there, the better to secure the fame, and to increase Trading there; and accordingly the said Sir Humphrey with two good Ships and a Pinnace in her Name, took possession of that Countrey, in the Harbour of St. John's. He Sailed from thence towards Virginia, and by reason of some unhappy direction in his Course, the greatest Ship he had struck upon Shelves on the Coast of Canada, and was there loft, with most part of the Company in her; and he himself, being then in a small Pinnace of twenty Tun, in the company of his Vice-Admiral (Captain Hayes) returning towards England, in a great Storm, was overwhelmed in the Sea, and so perish'd.

In the Year 1608, it was undertaken anew by John Guy, a Merchant of Bristol, and with so good success, that the Colony in a short time were well furnish'd with Wheat, Rye, Barley, and other Grain of their own Sowing, with Turnips, Cole-worts, and abundance of other necessary things, not without some probable hopes of Metals, a certain and plentiful Trade of Sables, Musk, and other rich Commodities.

In the Year 1613, Sir George Calvert Knight, then principal Secretary of State, and a Privy Councillor to King James the First of England, &c. purchas'd a part of New-foun'd Land, which was afterwards in the Year 1623, granted to him and his Heirs by Patent from the said King, under the Great Seal of England, bearing Date the seventh of April, in the One and twentieth Year of his Reign: by which means the said Trade of Land was erected into a Province, and at the Inheritance of the said Sir George Calvert, call'd Avalon, from Avalon in Somersetshire, where Christianity was first Planted in England.

This Province lies in the forty seventh Degree of Northern Latitude, and is thus bounded
bounded: It begins Southerly from the middle part of a certain Neck of Land or Promontory, situate between the two Harbours, Fermofe and Aquafort; and from thence following the Shore towards the North unto the middle part, or half way over a little Harbour, call’d in that regard Petit Port, or Petit Harbour, which boun-
deth upon the South part of the Plantation of St. Johns, including the one half of a
certain fresh River, that falleth into the said Port of Petit Harbour; and so tending
along the South Border of the said Colony of St. Johns, extendeth it self to a certain
little Bay, commonly call’d Salmon Cove, lying on the South side of the Bay of
Conception, including the one half of the River that falleth into the said Cove, as also
one half of the Cove itself; from whence passing along the Shore of the said Bay
towards the South, and reaching unto the bottom thereof, where it meets with the
Lands of the fore-mention’d John Guy, nam’d Sea-Forrest, is bounded with a cer-
tain River or Brook, which there falleth into the Sea, and from the Mouth of the
said Brook ascendeth unto the farthest Spring or Head thereof; from thence pass-
ing towards the South for six Miles together along the Borders of the said John Guy’s
Plantation, and there crossing over Westward in a right Line, reacheth unto the
Bay of Placentia, and the space of one League within the said Bay from the Shore
thereof, thence turning again towards the South, passeth along the Harbour of
Placentia, with the like distance from the Shore, and descending unto New Falkland
towards the North and West part thereof, stretcheth it self in a right Line East-
ward, continuing the whole Southerly length upon the Bounds of the said New
Falkland, unto the middle part or Point of the Promontory, or Neck of Land be-
fore mention’d, between the Ports Fermofe and Aquafort; at which place is describ’d
and finish’d the Perambulation of the whole Precinct, whose Extent may be thus
computed, commencing from the Promontory between the Ports Fermofe and Aquaf-
ort, which is fifty or sixty Miles from South to North distant from Petit Harbour;
from whence crossing Westward to the Bay of Placentia, is judged to be sixty Miles
more or upwards, from East to West.

And thereby was also granted to the said Sir George Calvert and his Heirs, all
Islands and Ilets, within ten Leagues of the Eastern Shore of the said Region to-
wards the East, together with the Fishting of all sorts of Fish, having unto the English
free liberty of Fishting, as well in the Seas as in the Ports and Creeks of the Province
aforesaid, and the Priviledges of salting and drying their Fish upon the Shores of
the said Province, as heretofore they reasonably use’d and enjoy’d the same, so as they
do no injury or notable loss or detriment unto the Lord Proprietary, his Heirs and
Affigns, or to the Inhabitants of the said Province, in the Ports, Creeks, and Shores
aforeaid, and especially in the Woods growing within the said Province.

And by the said Patent all Royal Jurifdictions and Prerogatives, both Military
and Civil, within the said Province and Islands thereunto belonging, were farther
granted to the said Sir George Calvert and his Heirs, and he and they thereby created
the true and absolute Lords and Proprietaries of the said Province, saving the Al-
legiance due to His Majefty, His Heirs and Successors, to be held of them in Capite,
yielding and paying unto them therefore a white Horfe, when, and as often as any of
them shall come into the said Province, and the fifth part of all Gold and Silver
Oar which should be found there.

Sir George Calvert, before the obtaining of this Patent, had caus’d a fair Houfe
and Fort to be built in the said Province, at a place call’d Ferryland, and in the Year
1624: having obtain’d a Difmiffion from his Employment of Secretary of State,
and being then created Lord Baltimore of Baltimore in Ireland, he did in the Year
1627, Transport himself to Avalon, to inspect his Concerns there in Person; from
whence
whence returning the same year, he Embark'd himself again, together with his Lady, and all his Family, except his eldest Son, for Avalon the year following, at which time (there being then War between England and France) he redeem'd above twenty Sail of English Ships, which had been taken there that year by French Men of War, whereof one Monfieur De la Rade had the chief Command, and shortly after took six French Fishing-Ships upon that Coast, and sent them the same year, with a great many French-men Prisoners, into England. Coming thence, he left a Deputy there, and continu'd the Plantation till his Death, which was in April 1632. After whose Decease it descended of right to his Son and Heir Cecil, now Lord Baltimore; who thereupon sent one Captain William Hill as his Deputy thither, to take possession thereof, and to manage his Interest there for him. Captain Hill, according to his Commission, shortly repair'd thither, and liv'd some years at the Lord Baltimore's House at Ferryland above mention'd.

In the thirteenth Year of King Charles the First, of England, &c. about the Year of our Lord 1638, Marquels Hamilton, Earl of Pembroke, Sir David Kirk, and others, under pretence that the Lord Baltimore had defecting that Plantation, obtained a Patent of all New-found Land, wherein Avalon was included, and shortly after disposed of the Lord Baltimore's of his Manion Houfe in Ferryland; and other Rights there, and during the late Rebellion in England kept possession; but His now Majesty King Charles the Second, immediately after his most happy Restauration in the Year 1660, upon the now Lord Baltimore's Petition, thought fit to refer the whole Matter to be Examined by Sir Orlando Bridgeman, then Lord-Chief-Justice, now Lord-Keeper of the Great Seal of England, and others, to report the true State thereon to His Majesty, together with their Opinions thereupon: The Referrees accordingly, upon full hearing of Council on both sides, certifying, That they conceived the said Patent to Sir George Calvert, to be a good Patent, in force, and not avoided by the later to Sir David Kirk and others; and that the Title and Interest to the said Province did therefore belong to the Lord Baltimore. Whereupon His Majesty, on the twentieth of March in the same Year, Order'd the Possession thereof to be re-delivered to his Lordship, which was accordingly executed: Since which time his Lordship has peaceably enjoyed the possession thereof, and continues the Plantation to this day, by deputing Lieutenants there from time to time, for the better Government of that Province, the rest of New-found Land remaining still to the aforesaid Proprietors, claiming the Patent of 13 Car. 1.

The Commodities that are either by Art or Nature produc'd there, are the same with those of the remainder of New-found Land. The Winter there is extremly cold, the Summer very hot, but withal pleasent; and during that Season there is great plenty of Pasture for Cattle.

The Coast of this Province is very safe, and as well furnish'd with variety of bold and pleasant Harbors, as any other part of New-found Land; where the English likewise fish for Cod, the letter fort whereof is call'd Poor-John, which is there caught in great abundance, especially at Ferryland, and in the Bay of Bulls. Besides these there are divers other excellent Harbors on the Eastern Shore of Avalon, as Capling Bay, Cape Brule, Britton, Isle of Spears, Barrom Cape, Whitefords Bay, and Petit Harbour above mention'd. On the West are the Bay of Placentia, and several other good Harbors.

There are no Indians in Avalon, but few English, by reason of the excessive Cold in Winter, though Sir David Kirk and his Lady, and also his Family, liv'd in the Lord Baltimore's House at Ferryland for the Space of ten years and upwards.

The Soil seems to promise great Store of Mines, which probably may in time be discover'd.
discover'd. The late Lord Baltimore took accidentally a piece of Oar up that lay there upon the surface of the Earth, and brought it with him into England, which was found upon trial to yield a greater proportion of Silver, than the Oar of Potosí in the West-Indies, but hitherto no Mine of it hath been discover'd there.

The Trade of Fishing being of so great concernment to the Nation of England, the same (if it be well manag'd in this Island of Terra Nova) will employ every year above two hundred Sail of English Ships, and ten thousand Mariners, besides the great benefit which may accrue unto the Nation by Impostion upon Strangers there, which would amount to several thousands of Pounds per Annum; with which those Coasts may be Guarded, and Ships Trading thither fecur'd: besides the great Customs by the Ships call'd The Sacks (being commonly in great numbers every year) who carry Fish from New-found Land into the Straights, France, Portugal, and Spain, and who bring their Returns into England, as Bullion, and all other native Commodities of those Countries.

If the Island were well forti'd, we might Command all those of other Nations that come to Fish in New-found Land, to pay Contribution in Fish or otherwise, for their Privilege to Fish there, the said Island being first Planted by English, and pertaining to the Kingdom of England; or if occasion should require, they might be utterly debar'd of Fishing there.

The Trade of Fishing is of so great concernment to France, Spain, Portugal, the Straights, and other Parts, that they cannot well be without that yearly Supply in Fish which comes from that Island: Neither can the Hollanders, Spaniards, or Portuguese, well set any Ships to the West-Indies, without New-found Land Fish, there being none that will endure to pass the Line sound and untainted, but the Fish of that Countrey, salted and dry'd there. And so long as the Act continues still in force, That no Fish be Transported from the said Island, but in English Bottoms, it will contribute very much to our encrease of Shipping there, and by consequence, of the employment of Mariners; and the Fishing of that part of the Island will be solely appropriated to the English Nation, to whom of right it belongs, which will prove the greatest Ballance of Trade in that part of the World; and that whereas above two hundred Sail do Trade thither yearly to Fish, if a thousand Sail come, if there be but Fisher-men enow, they may all have Fraughtage there.

The French, if once the Island be forti'd, will be depriv'd of their Nursery of Mariners, this being the only place, besides Canada, and one or two adjacent Coasts, where they come for supply of Fish, with which that Nation cannot be furnish'd so well from other Parts.

By well Planting and Fortifying New-found Land, the Trading to Virginia, New England, and thofe Parts, would be much encourag'd, New England having had of late great Traffick with New-found Land, where they vend the Growth of their Plantation. Besides, New-found Land is a Key to the Gulf of Canada, which if the English had again in their possession, as they had in the Years 1628. and 1632. they might give a Law to all foreign Kings and People interested in any of the parts of America, and a Protection to all the English Plantations upon that Continent, where-by great security, comfort and profit would arise to the Nation and People of it: whereas on the contrary, if the French, Spaniards, or Dutch, should possef themselves of the said Plantation, they would not only deprive this Nation of all the Advantages aforesaid, but would also derive to themselves so great a Power to prejudice all the Plantations of the Coasts of America belonging to this Nation, that the Inconveniences thereof are scarce to be imagin'd or express'd.
Chap. XII.  

A M E R I C A.

After the granting of the Patent aforesaid of 13 Car. 1. Sir David Kirk's great Pains there, and confiant Endeavours, were beyond expectation befs'd with a con tinuance and preservation of Trade in that Place; in the carrying on of which, he had always a special regard to the real Advantage of this Kingdom, and the particular Service of His Majesty.

Before this Island, right over againft Cape Ray, at the distance of twenty four Leagues or more, there lieth an huge Bank or Ridge of Land, extending it self in length out of the Sea, above a hundred Leagues, but in breadth not above four or five and twenty, when it is broadest, and in other parts much lefs, sharpning tow ards each end into a Conus, or narrow Point. It is accounted one of the Wonders of the Sea, which round about, at some distance, is very deep, and hardly to be founded, especially betwixt the Bank (for they commonly call it) and Cape Ray, but drawing nearer, it grows by degrees more and more fhallow, insomuch that nigh the Land there is not much more Water than is neceffary for the Ships to ride in. It runneth out in length, as was faid, from North to South, from forty one Degrees of Latitude to fifty two; and round about it there lie fcafter'd a multitude of leffer Islands, which Sir Sebastion Cabot, when he first discover'd the Place, call'd by one common Name Los Baccalows, or The Islands of Cod-fish, from the great quantity of that fort of Fish he there found; which was fuch, that they hinder'd the pafs age of his Ships, and lay in fuch multitudes upon the Coafts, that the very Bears would come and catch them in their Claws, and draw them to Land.

IN the Gulf of St. Laurence, towards the Mouth of the River Canada, is another lefs considerable Island, faid to have been firft discover'd by Quartier, and by him call'd The Island of Affumption; by John Alphonfo, The Island of Aftenion; by the Natives, Natifcotece: It extends it felf from the forty eighth to the fiftieth Degree, between the South-Eaft and North-West.

Quartier makes mention of a strange kinde of Fifth, found in the River of Canada, like unto a Sea-Hog, but having the Head of a Hare, it is call'd by the Natives Adabothius.

Nor far from this is a little Island, call'd by the French, Ifle de Sable, or The Sandy Island; and another on the Weft of Terra Nova, call'd Ifle de Bretons, or The Island of St. Laurence, besides feverall little fcafter'd Islands in the Gulf of St. Laurence, as Menago, and The Three Islands of Birds; in which are found a kind of amphibious Animal, call'd by the French, Cuadrus, and by the Englifh, Morj; somewhat like a Sea-Calf, but more monftrous.

C H A P. XII.

The Bermudas, or Summer-Islands.

The Bermudas, or Summer-Islands (probably fo term'd as to the firft Appellati on from certain black Hogs, by the Spaniards call'd Bermudas, which from a Ship bound with them to fome other parts of the Weft-Indies, and caft away upon that Coaft, fwan aflhore, and there increafed; or, as others fay, from John Bermudes, a Spaniard, who is faid to have been the firft Discoverer; or, as to the second, from one George Summers, an Englifh-man, who there fuffer'd Shipwrack.)
are situated in thirty two Degrees and twenty five Minutes of Northern Latitude, about sixteen hundred Leagues from England, twelve hundred from Madera, four hundred from Hispaniola, and three hundred from the nearest Coast of Virginia. The first that endeavour'd to settle Plantations here was a Spaniard nam'd Hernando Camelo, being design'd Conductor in this Expedition: And this Undertaking was so much the more eagerly prosecuted, upon consideration that the Plate-Fleet Sailing from Havana through the Straights of Bahama, might here have a convenient Harbour; but those who were invited to become Adventurers, with provers of great Advantage, shewing themselves very slack in the Business, and Charles the Fifth being at that time intangled in War and other troublesome Affairs, the Design came to nothing, and for above sixty years after no farther Attempt was made by any for the Planting of these Islands, till at last the French made a Voyage thither under Captain Barbier, but by Shipwreck were frustrated of their hopes; nor made they any more Preparations in this Design. In which nevertheless the English were not so easily discourag'd; for first Captain Gosnol and Smith set forth, at the Charges of Mr. Edward Wingfield; next, Captain Nelson; then successively West, Gates, Aylett, and Wyatt; but all with little or no success, till at length in the Year 1612, a Company was establish'd in London by the King's Letters Patent, who sent one Mr. Richard Moor with sixty Men to the Bermudas, where he spent three years in fortifying those Islands: but that which put a little stop to this good beginning, was a kind of Misfortune that hapned; for the Ships which were gotten ashore from a Shipwreck increas'd so exceedingly, that they devour'd all the Plants in the Field, and the Provision in the Houses, insomuch that a great Famine proceeded from thence, all means to destroy the Vermine being in vain; till at last Providence sent a Diceafe amongst them, which kill'd them all in a very short time. Mean while Moor went on in the fortification of the Island, and was ere long supply'd with fresh People. Mr. Barlet was sent over with sixty Men, and carried from thence with him eighty Pound of Ambergroce. And soon after three Ships more, viz. the Blessing, the Star, and the Marguer, convey'd thither four hundred and ten, Men and Women. As soon as Moor was call'd away, Daniel Tuckard coming from Virginia to succeed him, began'd himself very much, Planting all places full of Trees fearch'd from the West-Indian Islands; as also Tobacco, with which he freighted a Ship to London. Moreover, the Countrie was divided into Acres, that every Planter might have an equal share, and know his own Lands. Anno 1619. Tuckard was succeeded by Nathaniel Butler, who in four Ships brought thither five hundred Men and Women, to supply the first Plantation, which was much decay'd since the Rats had devour'd their Provisions, so that it was little look'd after by the Company in London: But now they built a Church and erected a Court of Judicature, and all things were order'd conveniently for the publick good. After which many Noble Persons fee Sail thither in the Magazine Frigate; and the Planters being now fifteen hundred in number, inhabited twenty Leagues of Land in length.

On the longest Island, call'd St. George, (for the Bermudas consists of several Islands, great and small) they built Warwick and Dover Fortes, with other Fortifications and Towers, which had their Denominations from those Noble-men and Gentlemen that were Undertakers in this Plantation, as Cavendish, Pogge, Earl, Herbert, &c. from the Earl of Devonshire, the Lord Paget, the Earl of Pembroke, and others. Amongst the Havens the eminentest are, Southampton, the Inlet Harrington, and the Great Sound.

All these Islands lying together resemble a Half-Moon, and are surrounded with Rocks, which appear at Low-water, and at High lie but shallow; for it seldom

Ebbs
Chap. XII. AMERICA.

313

Ebb's or Flows above five Foot. The Shore, for the most part Rocky, and harden'd by the Sun and Wind, receives no damage by the Waves which continually beat against the same.

The Ground itself differs; for in some places it is sandy or clayie, and in others partly black, and partly white, or Ash-colour'd Earth, which last is accounted the worst, and the black the best. Three Foot deep under the Ash-colour'd Earth lie great Slates, and under the black, a white spungie Stone, like the Pumice, in whose moist Crevices Trees take root.

The Pits or Wells, though they Ebb and Flow with the Sea, yet produce a wholsome and sweet Water.

The Skie is generally serene, but when over-caft with Clouds, is subject to Lightning and Thunder; yet the Air is of a good temper, being neither exceeding cold, nor excessive hot: for which reason the European Fruits grow better there than in their natural Soil.

Their Harvest is twice a year; for that which they Sow in March, is ripe and gather'd in June, then what they Sow again in August, they gather in January.

These Islands breed no hurtful Creatures; nay, the yellow Spider which spins silken Cobwebs, is free from Poylon.

The Plant Nettles, which bears speckled Pears, grows betwixt the Rocks which are drench'd with Sea-water.

The Hogs which above a hundred and fifty years since swam ashore out of the Spanish Wrack, are exceedingly increas'd there, but because of their poorness are scarce eatable, they feeding only on the sweet Berries which fall from the Palm-trees.

About the white and red Mulberries, which grow plentifully there, breed thousands of Silk-worms, which spin Silk according to the colour of the Mulberries.

The Sea produces somequantity of Pearls and Amber-greece.

From the beginning of the year till May, the Whales are seen to swim not far from the Shore.

A strange sort of Sea-Fowl breed in Holes like Rabbits; and amongst other Birds, here are also fowre of Cranes.

The Tobacco which the English have planted here grows very well.

Here are likewise great Tortoises, which Lay their Eggs in the Sand on the Shore, where they are Hatch'd by the Beams of the Sun, and are taken after this manner: In the Night some are set to watch where they Land, and whilst they are digging a deep Hole in the Ground, are thrown on their Backs, and not being able to get upon their Legs again, they lie and groan very pitifully: some of them having above two Balons full of Eggs in their Bellies, which being about the bigness of a Tennis-Ball, have a thin Shell, which incloseth a Yolk and White. If these Eggs lie buried six years, then the young Tortoises breaking the Shell, come out of the Sand, and instantly creep into the Sea. Their Fleth is not onely wholsome but toothsom. The Oyl made of them is not inferior to Butter.

Moreover, the Bermudas produce Cedars, the like of which are not to be found in the whole World: The Leaves are donny and prickly at the ends, almost like those of the Juniper Tree: The Wood hath a sweet smell, and the Berries, which are like the Myrtle, of a pale Red, inclose four white Kernels; the outermost Skin whereof is sweet; the innermost, which covers the Kernel, sharp, and the Pulp tartish: The Trees are always flourishing, being at the same time full of Blossoms, green, and ripe Fruit: The Berries, when grown ripe, begin to gap, and fall off in rainy Weather,
AMERICA. Chap. XIII.

Weather, leaving a round stalk on the Boughs, which loses not its Rind till two years after; half which time the Berry requires, before it attains to its perfect ripeness, which generally happens in the Winter: The Boughs shoot straight upwards, and become in time so heavy, that they cause the Body of the Tree to bend. This most excellent Wood grows in divers places of the Bermudas.

We shall conclude with the resolute Exploit of five Sea-men, Anno 1616, who, to the great admiration of all People, set Sail from thence in an open Vessel of three Tons through the main Ocean, and after having suften'd terrible Tempefts, arriv'd in the space of seven Weeks safe in Ireland.

These Islands are remarkable for divers sorts of Plants, unknown in other Parts, as the Prickle Pear, Poyson Weed, Red Weed, Purging Bean, Cat's Eye, Red Pepper, and the Sea Feather. Also several strange Birds, as the Egg Bird, Cabou, Tropick Bird, and the Pemlice, which preface various Storms.

CHAP. XIII.

Hispaniola.

The Islands call'd De Barlovento, by which are understood Hispaniola, Cuba, Jamaica, and Boriquen, as also the Lucais, with the Caribes, and lastly the Isles call'd De Sotavento, viz. Margareta, Cabagua, and Tabago, are by some comprehended all under the general Name of The Isles Antilles; though others reckon the Antilles to be the same with the Caribes only. But leaving this Controversie undecided, we shall begin with the Isles De Barlovento, the chief whereof is Hispaniola.

Hispaniola, or Little Spain (as Columbus nam'd it) is, though not the largest, yet the fairest and goodliest of all the American Islands, call'd by the Natives anciently Hayti and Quisqueta: It lieth about fifteen Leagues Weftward of Porto Rico, and distant from the main Land of America about one hundred and twenty, 'tis of a triangular form, the sharpest Point whereof is that towards Porto Rico, which they call Cabo de Enganoso: that towards the West inclines to a Semi-circle, containing a good and convenient Bay betwixt the two Points, viz. St. Nicholas to the North, and Cabo de Donna Maria towards the South. It is not thought to be less than a hundred and fifty Leagues in length, and in breadth from threescore to thirty, and to contain in the compass of the whole, four hundred Leagues at least, lying betwixt eighteen and twenty Degrees of Northern Latitude, having an Air somewhat infected with the Morning Heats, but well cool'd again in the Afternoon, by a constant Wind from the Sea, which they call there Viron: It is, for the fertility of the Soil, one of the richest and most flourishing Countreys in the World; the Trees and all things else there continually clad, as it were, in their Summer Livery, the Meadows and Pastures always green, and of such an excellent Herbage, that Cattel both breed and thrive there beyond belief; both great Cattel and small, as Kine, Sheep, Hogs, &c. brought thither out of Spain, having multiply'd to such numbers, that they live wild now in Herts in several places, and are both hunted and kill'd, like Stags or other Venion, only for their Hides, which they lend yearly into Spain and other Parts of Europe, as a great Merchandize and Commodity of huge profit to them.
Wild Hogs also have been formerly seen to feed in the Woods in great multitudes, but the Dogs since they were brought over hither, have made great havock amongst them.

The Animals peculiar to this Island are 1. A little Beast call’d Hutias, not much unlike our Coney. 2. Chemi, almost of the same form, but a little bigger. 3. Mobui, a Beast somewhat less than the Hutias. 4. A Beast call’d Caxi.

Likewise amongst other strange sorts of Creatures here, the Cuyere is very observable, being about an Inch big, and having four Wings, of which two are larger than the other: when they fly they shine after such a manner, that in the Night they make a Room as light as day, insomuch that some have made use of them in stead of Candles to Read by.

No less wonderful is the Fish Manate, whose shape hath been describ’d else where: It breeds for the most part in the Sea, yet sometimes swimming up the Rivers, comes ashore and eats Gras. The Calique Caramatesi kept one in the Lake Guaynato, which was so tame, that when call’d by the Name Maton, it us’d to come out of the Water, and go directly to the Calique’s House, where being fed, it return’d to the Lake, accompanied with Men and Boys, who with their Singing seem’d to delight the Fish, which sometimes carried ten Children on its Back over the Water; but at last a Spaniard striking at it with a Pike, it would never come forth again when it esp’y’d a Cloth’d Man: It liv’d twenty six years in the fore-mention’d Lake, till by accident the River Haybcoic over-flowing into the said Lake, the Fish return’d to the Sea.

Besides this great Fish, here is also a sort of small Fish, call’d Abacatnias, with a little Mouth, black Eyes encompass’d with Silver-colour’d Circles, four black Fins, two long ones under its Belly, one on the Back, and one on each side of the Head, the Tail list and cover’d with a glittering Skin: It is as big as a Flounder, and not ill Mear, but thick and round.

When the Spaniards first settle on Hispaniola, they were exceedingly torment’d with a sort of leaping Insects call’d Nigua, which us’d to eat through their Skin into the
the Flesh in such a nature, that many of them lost their Arms and Legs; but at last, they found out a Remedy against this Evil, viz. the fearing the Wounds with hot Irons.

Besides the aforesaid plenty of Flesh, they have many excellent Fruits all the year long, as Banana's, Pine-Apples, Cuffud-Apples, Plantens, Papanas, Musk-melons, Water-melons, and many other peculiar Plants, as 1. the Azucba, a fair large Tree, the Fruit whereof is call'd Pimna, resembling a Malecotoum: Of this Tree there are three sorts, Jaina, Boniana, and Jaigua; 2. Quaconex; 3. Asa; of which there are also several sorts, as Carive, Huarahae, Azibleano, Acafran-Axi, and Asu-Coral; 4. Tuca, the Root of which serves in stead of Corn; 5. Certain Trees call'd Guaibes, besides plenty of Mint and Potato's.

The Island of Hispaniola was formerly divided into several Provinces, amongst which the Mountainous Country Hyguay lies towards the Isle of Porto Rico. On the Mountains, which are flat on the top, are great variety of sharp-pointed Stones. The Soil is a sort of colour'd Earth, which produces all sorts of Fruit, especially the Root Cafabi, and Melons.

Hyguay also conterminates with Yeyagna; Northward lies Samana; Southward, Yaquina, where there is Store of Brazil Wood: And between the City Domingo and Yaquina, is the Country Bavarco, which with its Mountains extends sixty Leagues in length, and above twenty in breadth, without any Water, Pasture, or Food for Cattle or Mankind.

Next follows the Country Xaragua, lying at the great Inlet which divides Hispaniola; for one side extends to the Promontory of Sr. Nicholas, and the other to the Point Tiburon. This Country produces abundance of Cotton.

Lastly, the Provinces Guaba, Haniguaya and Cabay, are very eminent; as also Cibao, which is full of Gold-Mines; and La Vega Real, with Magnana, which lies between the two great Rivers Neyba and Yagui; the Rocky Country Ciguays, and the low Coast Darica, where Christopher Columbus built the City Navidad, which he afterwards deserted.

Ginger was formerly brought hither from the East-Indies, but now grows here in such great abundance, that above two and twenty thousand Jmaltress are yearly Transported from thence to Spain.

With as good success grow here also the Sugar-Canes and Maiz.

Peter Martyr, a Councillor to the Emperor Charles the Fifth, relates, That Hispaniola produced in his time, besides Silver, Copper, and Iron, five hundred thousand Ducats in Gold! Nevertheless the rich Mines lay undiscover'd, because they wanted People to work in them, insomuch that had they not planted their Royal Seat in Domingo, the Island had long since been deserted, notwithstanding the exceeding fruitfulness of the Soil, because the Spaniards exercised their Cruelty in such a nature, that of sixty thousand Inhabitants from the Year 1508. to Anno 1514. scarce fourteen thousand of them were left alive; all which is affirmed by the Bishop De las Casas. Nay, the fore-mention'd Peter Martyr relates, That the Men wearied with working in the Mines, killed themselves, despairing of ever being releas'd from their Slavery; and Women with Child destroy'd the Infants in their Wombs, that they might not bear Slaves for the Spaniards. He adds hereunto, That of a hundred and twenty thousand Persions, few were left in a short time.

These Provinces in former times had each of them their Casique, whole Splendor confinth chiefly in Dancing to his Devotion, with a Girdle full of Bells about his Middle, a String of Pearls about his Arms, a Covering over his Privities, and a Plume
Plume of Feathers on his Head, with a Drummer before him, and a small Train of Arm'd Men after him.

On the Coast are first the Point of Nisao, ten Leagues to the West of Santo Domingo.

Eighteen Leagues farther is the Port Ocoa, which is a Bay where the Fleets of Nova Hispania take refreshing, when they do not Anchor in the Nook of Sepsepin, which is near unto it, or in another call'd The Fair Haven, two Leagues before you come to Ocoa.

Twenty Leagues beyond Ocoa is the Port of Asua.

Thirty Leagues more Westwardly is a large Point right against the Island of Bola, which lieth five Leagues from the Coast.

The most Westerly Point is call'd Cape Tiburon: It hath an Island three Leagues from it Westward, call'd Caprio; and Sailing along the Coast, you will see an Island call'd Camito; and farther in the Nook of Tagana another call'd Guanabo of eight Leagues long.

On the North side of the Island, the most Westerly Cape and Port is St. Nicholas, from whence North-East and by East, lieth the Island of Tortuga, near the Coast of Hispaniola: It is of five Leagues length.

Farther along the Coast is Monte Christo, the West Cape of Natividad; to the East of which there is a great Bay call'd Port Real.

This Island is so full of Harbours, that he that will Coast it, cannot well miss of one where he pleaseth, most of which afford fresh Meat and good Water.

Moreover, Hispaniola hath many brave Rivers, the chiefest of which are Hayna; Niga, along whose Shore the first Sugar-Canes were planted; Nigua, a great River; Taquino; Taqui, which Columbus call'd Rio de Oro, because the Ground thereof glitter'd like Gold; and lastly, the Rivers Nicaragua, amongst whose Sands is Gold; Nigua, which borrows its Denomination from the fore-mention'd leaping Infeft; the swift Stream Juno, whose Banks are crown'd with handsom Houses; and Jaquin, which hath many Salt-panes.
The Rivers Itabo, Ocoa, Cepi, Bia, Cajui, Sanate de Plata, and Chiabon, have some one, others more Sugar-Mills upon them.

But the chiefest River is Ozama, broad, and so deep, that the biggest Vessel may lie close by the Shore; and also washes St. Domingo.

This City, the Metropolis of all the Isles round about, was built by Bartholomew Columbus, and was peopled Anno 1494: after which it flourished eight years, when, a terrible Storm blowing the same down to the Ground, Nicholas Olanda remov'd it to the Western Shore of Ozama, that the Spaniards, who had for the most part sett'd towards the West, might not be necessitated to Ferry over: but the first place found much more conveniently, being not onely provided of a Fountain of Sweet Water, but also freed of those unwelcome Vapours which daily rise with the Sun at this new-built City. To prevent the inconvenience of crossing to the fore-mention'd Fountain, of which the Inhabitants found themselves oftentimes in great want, Olanda went about to lead the neighboring River Hayna into the Ozama, but the Design not being prosecuted, because of the onely thing which would have made it able to stand in competition with any City in the World; for it lies on a Plain, the South side whereof is wash'd by the Sea; the East side, by the River; on the North and West are many delightful Fields.

The City, which in a manner is built square, is divided into long straight Streets, full of fair Houses after the Spanishe manner: in the middle thereof is a square Market-place, with a handom Church, the Yard whereof is encompass'd with a high Wall, which upon occasion would serve for a place of great Defence.

The Collectors of the King of Spain's Revenue dwell in stately Palaces; and the Dominicans, Franciscans, and Monks De la Merced, have brave Cloyfeters, besides two more for the Nuns.

The Latin School and Hospital belonging to the City, are Endow'd with great yearly Revenues.

The Arch-bishop of St. Domingo hath Command over the Bilhoprick of Conception, La Vega, Cuba, Venezuela, and Porto Rico.

The City is surrounded with a Stone Wall, and fortis'd with a Castle, which with two Bulwarks reaches to the River Ozama, and within them two Half-Moons.

On the utmost Shore stands a round Tower near the Southern Bulwark.

Before the new discover'd Countrey entice'd away many People from St. Domingo, and the Silver Fleet put into Havana, the Inhabitants drove a great Trade in Hides, Tallow, Sugar, Coffee, Horses, and Hogs.

Anno 1586. Sir Francis Drake Landed here with twelve hundred English-men, took the City by Storm, flaid a whole Moneth in the fame, and upon Composition with the Spaniards, left it undefray'd.

Other chief Towns in Hispaniola are 1. Salvaton, twenty eight Leagues distant from St. Domingo, towards the East.

2. Zeybo. 3. Cotuy, formerly inhabited by those that work'd in the Gold-Mines; the last especially was once a rich Town, and much frequented, but now in a manner deserted.

4. Aqua, or New Composfielda, eight Leagues distant from St. Domingo, famous for the Sugar-Mills not far from it, and one of the Ports before-mention'd.

5. Yaguana, for its brave Harbour also call'd Maria del Puerto, in the more Western parts of the Island; a small Town not above a League distant from the Sea; It was burnt by Captain Christopher Newport.

6. Con-
6. Concepcion de la Vega, adorn'd with a Cathedral and Cloysters of Fryers, and lying twenty or thirty Leagues Northward of St. Domingo: It was built by Columbus, and from thence he had his Title of Duke de la Vega.

7. San Jago de los Cavaleiros, a very pleasent Place, ten Leagues Northward of St. Domingo.

8. Puerto de Plata, or The Silver Haven, four Leagues distant from St. Domingo towards the North: It hath been counted the second Place of Trading and Wealth in the whole Island, being commodiously seated on an Arm of the Sea, and fortified with a Castle.

9. Monte Christo, one of the Ports also above-mention'd: It lies fourteen Leagues Westward of Plata, and extends it self along the Northern Coast: it is wash'd by the River Yagu, on whose Banks are many Salt-panes.

All those Cities are much decay'd, and thinly inhabited, the Spaniards being most of them drawn by the temptation of new discover'd Gold and Silver Mines in other places, and the first Inhabitants having been miserably destroy'd. The Bishop De las Casas, an Eye-witness, relates, That the King Guacacarillo succ'd the Goods of a stranded Ship, of which Columbus was Commander, and receiv'd the Spaniards very courteously; but not being able to continue supplying them with that quantity of Gold they requir'd, wanting Men to gather so much out of the Streams and Mines, and seeing no way to rid himself from the Spaniards Oppressions, fled to the Province of Cignayos, the Cafique of which was his Deputy, whereat the Spaniards were so enraged, that they burnt all that they could meet with, neither sparing young nor old; and at length taking Guacacarillo, put him in Irons, and thought to have carried him to Madrid; but the Ship in which he went suffering shipwreck, he with many others was cast away, being before almost dead with grief for his Confort, who had been Ravi'd by a Spanish Commander. Likewise Anacocana, Sitter to the Cachique, or Governor of the Province Xarana, and Partner with him in the Government, seeing three hundred of her Councillors burning in a great House, set on fire by the Spaniards, and her Subjects torn by Dogs, or cut in pieces, hung her self out of despair. The same Death died Eignanama, Queen of Huguey. Others say that Anacocana was put to death together with her Brother in a most barbarous and cruel manner, by Nicholas de Olanda, who succeeded Diego de Arana in the Government of this Island. Many Women and Children were kept alive only to Manure the Ground. The Men dying of their hard Labour in the Gold-Mines, and those which endur'd stoutly the cruel Labour under Ground, were never suffer'd to go to their Wives; from whence proceeded a great decrease of People, the Spaniards seeming purposely to design the destruction of the Natives of Hispaniola, though they receiv'd great benefit by their Service; for Gold in former times was found between the Cracks and split Stones of the Mountains, whose Veins the Mine-workers digg'd for not without great and dangerous Labour.

The first Planters of Hispaniola are, according to the common opinion, deriv'd from Matinio, a high and Mountainous Isle, from whence the most eminent Inhabitants were driven by certain Rebels, as formerly the Syrians under the Government of Dido, were driven from Tyre to Lybia, and the Batavians from Hefien to the Country between Rhine and Wall, at present inhabited by the Gelders and Hollander: These Matinioenians thus expell'd from their native Countrey, fled themselves on Cabaua, near the River Bahaboni: The first House they call'd Canoetia, and afterwards turn'd it into a Temple, to which they shew'd Reverence, and made great Prefents: In like manner the Tjens, which stood on a high Rock belonging to one
of the Canady Islands, was by the antient Inhabitants of the Place had in great veneration, insomuch that many leap'd down from the same, being persuaded by the Priests, that the Souls of those which threw themselves off this sacred Breakneck, should immediately be translatated into a place of everlasting happiness.

This Island was, as we said before, first call'd Hauy, which signifies Wild, because in many places it swells with wondrous high Mountains; and in other places is overgrown with great Woods: it was afterwards by the antient Inhabitants named Xoquen, that is, Uneasurably great, because they suppos'd it to be the whole World, and that the Sun shin'd in no other place.

The Natives of this Island, though wholly rude of acquisition Knowledge or Literature, like the generality of the Americans, yet they took care to instruct their Children in the Original and Antiquities of their Countrey, and the Wars and Exploits of their Predecessors, both which they contain'd in Songs call'd Areitos, which they us'd to Sing to the sound of Drums and Trumpets; but especially their Persons of chief Quality studly'd most these Areitos, and exercis'd themselves in Dancing.

The most remarkable of these antient Areitos, were such as pretended to prophesy of things to come; which if of good consequence, were Sung very mournfully and with many Sighs; nor were they always however inspir'd, without effect, as appear'd at first by woful event: for long before the Spaniards Landed in Hifpaniola, it was foretold by one of them, that Magnacoclias, signifying Cloathed People, should Land on Hifpaniola, who with sharp Weapons should cut off Heads and Arms, and under whose insupportable Yoke their Successors must spend their days without hope of ever being releas'd.

It might be disputed whether these Predictions were dictated by good or evil Spirits; but it is generally believ'd, that all their Oracles, whether haping true or fallacious, were suggested by diabolical Spirits to the Priests, who commonly convers'd with them; and that these Spirits knew the Design of several People to discover new Countreys.

Their Images Zemes, stuff'd full of Cotton, were fashion'd into very frightful Shapes, and might pass for those things which we call Terricula, or Bugbears; of which none were made very small, and those they ty'd on their Foreheads when they went to the Wars. Every Governor had a peculiar Zemes, to whom he shew'd Reverence, in return whereof he expected Rain, fair Weather, and to conquer his Enemies, supposing him to be a Mephit of a perpetual and endless Being, by them call'd Yocana Guamánosc; whom nevertheless they suppos'd to have a Mother, to whom they gave five Names, viz., Attèir, Mamona, Guacarapita, Liella, and Guanagosa.

Their opinion of Man's Creation was thus: They say, that out from a Mountain in the Province Cuanan, out of certain small and great Caverns therein, came little and great People: The biggest Hole, call'd Cazibaragn, and the little one, nam'd Amianna, were said to be lock'd up every Night, that none might pass the Sentinel Mackekeel, who out of curiosity leaving the Mountain Cuana, and going up into the Countrey, was discover'd by the Sun, whose Beams he not being able to endure, was turn'd into a Rock. The like Mischance happen'd to many others, who in the dark Night going to Fish, in the Morning at their Return were chang'd into Oaken Trees, only one of the Fishermen was sent away by the chief Commander Vagoniana, who moved at the Complaint of a Nightingale's Singing, suffer'd all the Men to go into the Hole, and the Women and Children he Transported to Matinima. But to make short of these non-sensical Stories, in conclusion, the Men being let out of their Caves, saw many Strange Beasts amongst the Woods, which being
Chap. XIII. AMERICA.

being turned into Women, were entertain'd by them, and brought forth a numerous Progeny, which spread over all Hispaniola.

No less ridiculous an Account do the Priests give concerning the Original of the Sea, viz. That Jaius, a mighty Man, buried the Body of his deceased Son in a Pumpanion, which some Moneths after, out of meer affection to the Deceased, he cutting open, abundance of Whales sprung out of it. This Wonder being every where known, amongst others, enticed four Brothers born at one Birth (whose Mother died in Childbed) to get the Pumpanion into their possession, which their Design prov'd successful; but afterwards struck with a pannick fear of Jaius's coming thither (who oftentimes came to mourn over the Bones of his dead Son) they fled, and threw away the Pumpanion, which breaking with the fall, the Sea gush'd out of all places thereof, and cover'd the Plains in such a manner, that nothing of them was seen, only the tops of the highest Mountains appeared; at which the four Brothers terribly a frighted, rang'd through barren Defaries, in which they had died of Hunger, had they not come to a Baker's Houfe, which one of them entering, ask'd for *Axubi;* but the Baker denying them Bread, 'spite on them, which caus'd a mortal Dropie, which the Brothers upon consultation found no way to cure, but by cutting a hole in the Skin with a Sharp Stone, and to let out the Water; but out of each running Wound Sprung a Woman, who bare them four Sons and four Daughters.

There is a certain Cave call'd Jorana-beina, which is adorn'd with a thousand Pictures, in great esteem amongst them; at the Entrance on each side thereof stands a Zeme; that on the right side is call'd Bintahettes, the other Marobre, to which they come from all places to pay their Devotions, because (they say) the Sun and Moon came out of the said Cave to lighten the World.

Much after the fame absurd rate is their Opinion of the Deceased; for they suppose that they range through Woods and Forrefts in the Night, eat of a Fruit call'd Guanaba, and feast to the Embraces of Women in Moon-shiny Nights. A Traveller, say they, if he be frighted at the appearance of a deceased Person, great Inconveniences will certainly attend him, but if he goes floutly towards him, then the Goblin vanishes.

These Delusions are made great Mysteries amongst them, and contain'd in Songs, which their Priests Boiti Sing to a kind of Tabor made of a piece of hollow Wood, pretending that they have familiar Conversation with the Zemes concerning future things.

Their Ceremonies about their sick, especially if Persons of Quality, are likewise very remarkable and conceited: First they chew a strong kind of Herb, call'd Cshobba, with which having sufficiently intoxicated their Brains, they foam at the Mouth, and run with a Stone and a piece of Flesh in their Mouths to the sick Person, whose Family they drive all out of Doors, except one or two, whose presence the Patient requires; then the Boiti walks four times about the sick Person's Bed, making strange Gestures, pinching his Lips and Nose, blowing upon his Forehead, Throat and Temples, and sticking several parts of his Body, alleging, that thereby he draws the Diftemper out of the Veins; after that he chases and rubs his Shoulders, Thighs and Legs, and ties his Hands and Feet together, then running to the Door, proclaims, That the Sick in a short time shall be recover'd to his former Health; which said, he returns with his Arms stretch'd out towards the sick Person, takes the piece of Flesh out of his Mouth, which he gives him backwards, saying, You shall rise and go forth in Health, for I have taken away your Sickness: But if he judges the Diftemper not curable, he makes the Sick believe, that Zeme is displeas'd.
displeas'd with him, because he did not build a House for him, or consecrate a Garden to him, or in some respect or other did not worship him as he ought to have done. When the Soul departs out of the Body, they conjure the Body with many Adjurations, to reveal whether it died according to God's decree, or through neglect of the Boiti, as not having sanctify'd himself enough by fasting when he went first to the Sick, or not prescribed sufficient Medicines: wherefore if (as they say) the Devil answers them from the Mouth of the Deceased, that the Boiti did not perform his due Office, then the nearest Friends revenge themselves on the Boiti, but if otherwise, then they are highly esteem'd amongst them. The Women taking the Stones which the Boiti kept in his Mouth, wrap them up in a fine Cloth as a holy Reliquie, supposing that they will much facilitate their Child-birth.

The Caziques defirous to know future Events of War, or whether the approaching Years will be fruitful, go into a Chappel consecrated to the Zemes, and sniff the intoxicating Herb Cobobba up their Noftrils; whereupon they break out into loud Exclamations, and some kind of strange extravagant Actions; till the power of the Cobobba begins to decay, and the Frenzie cease; then coming again to their Senses, they bow their Heads, and lay their Elbows on their Knees, in which posture they sit for a considerable time, then lifting up their Eyes: they yawn as if they came from Sleep; then they mutter to themselves whilst their Retinue which stand about them (for no common Person is suffer'd to be there) thank them with a loud Voice, for the pains they have been at in discoursing with the Zemes; then the Caziques begin to declare what hath been reveal'd to them, viz. whether they shall be fortunate in the Wars or not; whether it will be a fruitful or unfruitful, healthy or sickly Year.

Moreover, at the Birth of the Cazique's Children, the neighboring Governors visit the Women in Child-bed, and every one gives the Child a peculiar Name; from whence it happens that one Man hath oftentimes forty Names, and is highly imped'd if any one of them chances to be forgot in any Writing directed to him.

Their manner of Succession in Government is not unremarkable; for not the eldest Heir-male of the Family, but first the King or Cazique's Brother, if he have any, and after his Decease the eldest of the Sifters Inherits the Realm or Seigniorie: if the Sifters have no Male-issue, then the Brothers Sons Inherit; and in case they have no Male-heir, then the next of Blood, whether Male or Female: but if the Prince or Cazique dies without Children, Nephews, or other near Relations, the next in Power in the Country Inherits, and Marries as many Wives as he pleases, of which she that he loves best is burnt alive in her best Apparel with her Husband when he dies, and near the Corps stands a Cup of Water and some of the Bread Cazabi.

There are several Languages in Hispانيola, but differing from each other: for in the Province Bainoa they have a different, both Pronunciation and Dialect from that in Caizinu.

In the said Province of Caizinu is a very remarkable Rock, or vast Stone to be seen, at the Foot of a high Mountain; and underneath the said Stone is a great Cave, into which they go through a large Passage, not unlike a Temple Door; near which conjoin many deep Rivers, with such a Noise and Foam, that they lose both their Sight and Hearing, whoever approach the same.

Of the Language of the Province Bainoa, Peter Martyr gives us this Specimen:

"The Wife of a Cazique (says he) went to Prayers in a Chappel which was built by the Spaniards; at her Return from whence her Husband desiring to enjoy her, she refusing, said, Tenoca, teitoca, techeta Cynato guammchina, that is to say, Be contented."
AMERICA.

Since the Spaniards had first possession of this Island, it hath been twice Invaded by the English, the first time under the Conduct of Sir Francis Drake, who took the Town of San Domingo, raid it in a good while, and could if he had pleas'd, have totally dispos'd of the Spaniards; the second time under Colonel Venables, sent thither by Oliver Cromwell during his usurp'd Dominion; at which time it might as easily have been taken as at first, had not the Business been rashly and indifferently managed, as shall presently be declar'd more at large. The first Expedition of Sir Francis Drake hath been already hinted, but for the memorableness of that bold Exploit, we shall give a particular Account of it from a late Writer, who hath fet forth the Life of that brave English Heroe. In the Year of our Lord 1580, about the end of February setting Sail from St. Christophers for Hispaniola, by the Way they met with a small Frigat bound for San Domingo, and the Men of her being Examind, one affur'd them that the Haven of it was a barr'd Haven, and the Shore well fortif'd; so that there was no convenient Landing within ten English Miles of the City, whither this Man undertook to conduct them. January the first they Landed ten Miles from the City, and marching thither under the Command of the Lieutenant General, arriv'd about one a Clock in the Afternoon; when they came near about a hundred and fifty Gentlemen well Mounted, present'd themselves against them; but the small Shot playing upon them, they departed, and the English proceed'd towards the two Gates of the City that lay towards the Sea, both which the Spaniards had Mann'd, and plant'd their Ordnance without the Gates, and some small Shot in an Ambush by the Way-side: The English being about twelve hundred Men, divided themselves, the Lieutenant-General leading the one half to one Gate, and Captain Powel the other half to the other Gate, vowing that with God's assistance they would not rest till they met in the Market-place: No sooner had the Spaniards discharg'd their Ordnance, doing some little Execution, but the Lieutenant-General halted, or rather ran upon them, to prevent their Charging again, and notwithstanding their Ambush, entr'd Pell Mell with them into the Gate, not staying till he came into the Market-place, unto whom shortly after came Captain Powel with his Companies. This Place they strengthen'd with Barricado's, the City being too large to be guarded by so small and weary an Army. And after Mid-night they in the Castle, hearing some of the English buthe about the Gate, quitted it, some being taken Prisoners, and others escaping by Boats. The next day the English enlarg'd their Quarters, and fortifi'd themselves, and held the Town for a Moneth's space. During this time the General sent a Negro Boy with a Flag of Truce to the Spaniards, who by the Way was met by some Officers of the Galley which the English had taken, together with the City, who furiously thrust the poor Boy through the Body; who returning to the General, and having declar'd how barbarously they had us'd him, fell down and died in his Preseence. The General being much mov'd herewith, commanded the Provost-Martial to take two Fryers, and to carry them to the same place with a sufficient Guard, and there to hang them, and withal he sent one of the Prisoners to inform the Spaniards why he did it, and to tell them, that till the Party who had thus murder'd his Messenger were deliver'd to him, there should no day pass wherein he would not hang two Prisoners, till all were consum'd. Hereupon the day following the Murtherer was brought, and an Offer made to deliver him to the General, who yet thought it more honorable to make them perform the Execution themselves in the sight of the English, which was done accordingly.
During their abode here, Commissioners oft pass’d between the Spaniards and them about the Ransom of the City, but not agreeing, the English spent every Morning till the heat of the Day in firing and destroying the Houfes in the outward part of the City, two hundred Mariners being employ’d therein for divers days; yet were the Houfes built so magnificently and strongly of Stone, that they could not consume one third part of the Town all that time; whereupon the General was contented to accept of twenty five thousand Ducats of 5 s. 6 d. apiece to spare the rest.

Here his Soldiers met with good Pillage, especially of rich Apparel, but Treasure they found none; for the Spaniards by their Cruelties had so destroy’d the Natives, who us’d to work in the Mines of Gold and Silver, that they were wholly given over; and in that Island they were forc’d to use Copper Money: yet they found store of Wine, Oyl, Vinegar, Wheat, Woollen and Linnen Cloth, some Silks, &c. which much reliev’d them: there was but little Plate found, but good store of Porcelan, or China Dishes; yet some they found, and very costly Hourfhold-stuff.

Venables his Expedition was in the Year 1654: when Cromwell having gain’d the supreme Power under the Title of Protector, and having us’d so many Engines for the getting of Money to maintain his Greatness and usurp’d Authority, that he was almost brought to his last Shifts, bethought himself of this Project, (or, as some suppose, had put it into his Head by Cardinal MAzarin, the then great Minister of State in France, with whom he had intimate Correspondence) thinking thereby to kill two Birds with one Stone: for on the one side, he thought by this notable Exploit to advance his Fame abroad, and gain Credit and Applause with the People at home, by enlarging his Empire, and spreading the Renown of the English Nation, and so consequently to establisht himself the more firmly in his new gotten Power; and at the same time by the great Riches he promis’d to himself from this Adventure, to recruit his Stock, which all his griping Exactions, especially from the King’s Party, could scarce supply for the keeping up of his Army, maintaining Intelligence, and other vast Expenses: To this end he sets forth a considerable Fleet with extraordinary speed and secrecy, it not being known whether this Fleet was design’d till they were almost upon the very Place, that the Spaniard might not be forewarn’d to provide against them, only in general terms it was given out, that the Design was both advantageous to the Nation, and would prove a great enrichment to all that went upon it; so that it is no great wonder, if within a short space a good competent Army was got together of such as having neither Estates nor Employments, willingly offer’d themselves, as Men that went from the fear of Iron Grates, to the hopes of Golden Ingots; and many of them were such as having been in the late King’s Army, and disdaining to take any Employment at home under that Government, were easily induc’d to Lift themselves in this Armada: nor was Oliver a little glad of this occasion of sending out of the Land, and employing upon a desperate Adventure those Men, who he had reason to suspect would, upon any opportunity offer’d, be the first Opposers of his usurp’d Power. This Army being sent to Portsmouth for Embarkation, and there making such Preparations as was convenient, which a Month’s time or thereabouts was thought would accomplish, a Messenger came from Desborough (who was there to let them going) to the General, that he should prepare to Embark on Christmas-day; which at the first the General receiv’d with great impatience, alledging, That it was not possible so to do, and that he would not let Sail without his Arms and other Necessaries, which were not yet come from London; however, at his going to Desborough he was prevail’d
Chap. XIII.  

prevail'd upon to set sail, with a promise that the ships with the arms should immediately follow him to the Barbado's, where he was to stay till their arrival; so on Christmas-day they set sail, and about the fourteenth of February arriv'd at Barbado's with three thousand men, and a company of Reformado's, which there were doubled, and then, and not till then, it was told them, That the reason of their so sudden going away, was because there was a Plot forming in England for restoring the King, and that they were not thought fit to be left there at the head of their regiments, to be tempted with the advantage of joining with any such party. At Barbado's they flait till they had almost undone that place by eating up their provisions, the planters there seldom preparing more than they have occasion to spend in their houses, and for their servants (having better and more profitable employments upon their hands) and the soldiers not being content with such provisions as their servants would be well pleas'd with, so that they were in danger of starving the island and themselves too: Thereupon a council of war was call'd, and the necessity of leaving that island declar'd, and orders issu'd out to set sail for Hispaniola, where they might make such attempts as their condition would allow, wanting arms and other necessaries; when they came within five or six leagues of Hispaniola the fleet lay by, and a council of war was call'd by the commissioners (for such they had who were never soldiers) with some few officers of the army, where it was resolv'd to attempt San Domingo, and an order made, That in case it be taken, no soldier should offer to plunder, but that satisfaction in lieu thereof should be given by the commissioners; the officers of the army in vain opposing and protesting against it, which occasion'd the soldiers to say, That the commissioners should take the town themselves, for they would not. Loss were there drawn by the several colonels who should first land, which fell upon the black regiment, who had no arms but half-pikes of eight foot long, made of cabbage-tree in the Barbado's; and orders were then given out to the several colonels to land at the river hind, within two leagues of San Domingo, so they steer'd their course thither, as was thought, by night, but the next morning found themselves twenty leagues at least from the place of rendezvous, though one regiment landed there, who durst not attempt the town for want of orders, though doubtless they might have taken it, had they not stea'd in expectation of the general and the rest of the fleet; but when they were thus call'd leeward of the town, they must land their men, who so soon went on shore, but the order against plundering was read, and the soldiers in a mutiny to whom it was read, which made the rest forbear to read it, judging it no time now to disoblige them, who had in their officers opinion too just a cause of discontent: However this was made known to the rest, and discourse'd as they march'd, that they had not thought to be under a committee here, but they would make them weary of their employment ere they had done: And this indeed was enough, besides the faintness and unfulfil heat of the country, to disannimate men of good resolutions, especially the ordinary soldiers, whose hopes of plunder is the chiefest prop to their courage, and excited gain the spurt to their valour. After they had landed their men, next morning early they march'd towards San Domingo; but before noon the heat and drought which they felt made them sensible of their first Etour and inadvertency, in coming from England without their necessaries; for through want of bottles, which were left behind, and came not till three months afterwards, the men fell down dead in the high-ways, every one fainting and languishing, and crying out for water; shortly after they met with a field of oranges, which was no unwelcome sight, with which they stor'd themselves; but ere they had march'd
four or five Miles thought they had quenched their present Thirst, and their Drought began to increaie however, they march'd on, leaving some of their Men dead on the place, others fainting, were set upon the Troopers Horses till they came that Night to some Water, which gave them new life, and the Morrow early march'd again till they came within some Miles of the appointed Rendez
-vous, where they heard of the other Regiment that Landed at the right place: And now having refresh'd themselves with Rest, Water, and Provision, they march'd to the taking of the Town; the General himself, with a small Party and a Guide, went towards the Town to find out some Water, which he knew the Soldiers would want, (not having Bottles to carry any) but as they were on their March, which was very leisurely by reason of the Heat, they heard a firing of Muskets, then making more speed in their March, supposing an Engagement, in the Highway, about a Mile from the Town, was found one of the General's Secretaries, with others, dead; and not long after some came back to the General, and told him, That looking for Water with the Guide, an Ambuscade issu'd out, and had kill'd the Guide that should have shew'd them the place of Water, and some others; and although some which Commanded the foremost Regiments were very forward and willing to assault the Town, yet it was not thought fit so to do till the Army came up, by which time it was Night; and though they were then within half a Mile of the Town, yet the Soldiers were so impatient for Water, that they could not stay till the next Morning to assault the Town, but were forc'd to march back to the River Hind about eight Miles; (and this Relator did at that time drink his own Water) there they liad till they had again refresh'd themselves, and then prepar'd for their Return to attack the Town; and notwithstanding the March it self in a hot Countrey was irksome enough, yet they were forc'd to make the Soldiers to draw the Ordnance and other Carriages for want of Horses and other Necessaries, which were left behind; however, they willingly underwent it by Turns: And now a Forlorn was drawn out, and other Orders given for a March, especially it being taken notice of, that the Enemies manner of Fight was and would be by Ambuscades, a File in every Company were order'd to stand till the other came up, and to face to the Right and Left to the Woods, which were all along as they went, for fear of a Surprize; and the Forlorn marching near an old Fort, call'd Jeronymo, which we had been poiss'd of before, but thought not worth the keeping, and fearing they might meet with some small opposition there, began to fortifie themselves, and took a Dram of the Bottle, which as they were drinking, and others eating a bit, suddenly rush'd forth an Ambush of about a hundred and twenty Blacks, with a Spanish Commander in the Head of them, which so amaz'd and surpriz'd them, that some few only Discharging, the rest immediately fled; the Blacks quickly falling in with their Lances, and doing such Execution as the time would allow them; for presently the Alarm being taken, and Supplies marching out for their relief, the Enemy, who had done more than they could possibly expect to have done, retreated into their Fort, which they had better fortify'd than before, and had planted some small Drakes there upon it, the Execution was so short, that they had not time either to strip or pick a Pocket, left they had paid too dear for it. After this Defeat a Council of War was call'd, and there it was agreed the next Morning early to fall on upon that little Fort, and so proceed to the taking of the Town; but very early, as they were in that expectation, Orders came from the General to the Army to march back to the River Hind, for what reason this Relator (though a considerable Person) never yet knew; where after they had stay'd some time, that Miscarriage was question'd at a Council of War, and one of the chief Officers
Chap. XIV. America.

Officers of the Forlorn order'd to have his Sword broke over his Head, with other disgraceful Impostions, and two Colonels of the Army were order'd to draw up the Causes of this Miscarriage to send to England; which, because 'twas thought would too much reflect on them in Power that were to supply them, was by those Colonels judg'd inconvenient, and so 'twas never done. The number of Men lost by Stragling, Sicknes, and this unhappy Engagement, amounted in the whole to about two hundred and thirty. In a short time after this, it was order'd to Ship the Men; which done, after some Debates amongst the Commissioners what was best to be done, Provisions nor Utensils yet coming fit for the Deign intended, which was to poiffes some considerable Place in the Main, it was agreed, That they should ftre their Courfe for the Iland of Jamaica; which they did accordingly, and on the tenth day of May 1654, with little opposition poiffes'd it: where the fame Soldiers have fhev'd not onely fuch Courage and Resolution upon all occasions, (in many and frequent Encounters and Invaifions made by the Spaniards, not onely with Soldiers of those Parts, but fuch as have been fent from Spain, Naples, Catalonia, and other Places) as might fpeak them Englifh-men, but fuch hath been their Patience and Sufferance, as none of this Nation in the memory of Man have ever been put to, the Effects whereof their King and Countrey, 'tis hop'd, will have occasion to remember, to their immortal Honor and Renown.

Hispaniola is surrounded with feveral other IJles, as 1. Eaftward appears Saona, full of pleafant Woods and Paffures, with Cattle feeding on them: in former times it produc'd much to:azzib for the City Domingo; but fince the Spaniards murder'd all the Inhabitants Anno 1502. it hath never been inhabited. 2. The Rocky Shelf St. Catalina. 3. Abague. 4. Navaza. 5. Guanabo. 6. Tortuga, abounding in Hogs. and 7. Benta, famous for the excellent fpeckled Wood which grows there, and a Swift River, which oftentimes detains the Ships there whole Moneths.

C H A P. XIV.

Porto Rico, and Monico.

Another of thofe call'd The Isles of Barlovento, is Boriquen, anciently foonam'd, but now more generally Porto Rico, from St. Juan de Porto Rico, its chief Town, is an Iland fifteen Leagues distant from Santa Cux, to the North-West, and about as many from Hispaniola to the South-East, but from the Continent or main Land of Paria (which feems to be the nearest) a hundred and thirty, or a hundred thirty fix, as fome reckon. It lieth almost in a quadrangular Form, being supposed to contain about thirty Leagues in length, and not lefs than twenty in breadth, in eighteen and nineteen Degrees of Northern Latitude.

The Iland on the North, which is lefs fruitful than the South part, produces Gold, and is generally water'd with many Rivers. There is alfo Silver, Tin, Lead, Quicksilver, and }mpires, us'd by Painters. The Rain generally falls there between May and August. A little before, or in the beginning of Harveft, the Hurricanes breaking forth from the Clouds, rage in fuch a manner, that it is impoffible for any Ships to endure the Sea, and a Northern Blaff generally doth great damage to the Plants here.

Ten Leagues towards the South-East beyond Porto Rico, appears Sierra del Loro, guillo,
The Tree

*Guaiaba,* being a continu'd Ridge of Mountains which runs through the whole Island from East to West, extending both ways to the very Sea-shore.

Twenty three Rivers discharge their Waters also into the Ocean; amongst which the chiefest is *Cairabon,* particularly noted for ten Sugar-Mills which are erected upon its Banks.

The Hills, Plains, and Valleys, are invested with variety of Trees peculiar to this place, as *Tabunoco,* which affords a medicinal Gum, good against Lamefies, and green Wounds: it is also of great use to preserve a Ship's Keel from the Worms.

Another Tree call'd *Mega,* is everlasting Wood, and bears a great Flower like a Rose.

The Leaves of the *Figillo Pintado*-Tree cures all manner of Bruises.

The same power is also in the little Tree *Sanča Maria,* as likewise in another by the Spaniards call'd *Balsamo.*

The Body of the Tree *Zoña* is so thick, that fifteen Men holding Hands together, cannot encompass the same.

The speckled Wood, and *Casía Fistula* grow also here in great abundance.

Here is likewise Apple-Trees, which grow by Rivers sides, or on the Sea-shore, whose Fruit is rank Poylon, and who-ever sleeps under the shadow of them, will certainly be Lame: The Fruit eaten generally causes Death; or if Nature be so strong in him that eats of it, to overcome the same, yet he is certain to lose his Hair.

As hurtful is the prickly Herb *Quiñey,* which bears white Flowers like Violets.

But this Island receives the greatest prejudice by the Tree *Guaiaba,* because it grows in most places, and over-runs Plains and Hills, so spoiling all the Grafs, between which and the fore-mention'd Tree there is such an antipathy, that none will grow near it. The Tree bears a brown Apple full of Kernels, which are eaten by Beasts and Fowls, and from which falling on the Ground when ripe, grow up in new Trees, which makes the Countrey a meet Wilderness: The Body of it is smooth and of a pale colour, the Leaves hard, and glittering, and grow two and two
two over one another, the Flowers have also five Leaves, in the middle of which rises a Crown like that on a Peacock’s Head: The Fruit, which is cover’d with a soft Doun, and somewhat longer than the European Apple, when cut through, hath a pale red Pulp, full of eatable Kernels: before it is ripe, it is of a sharp tate, yet good boyld, but when ripe, of a most delicious and pleasant relish; nevertheless too much of it caules a Lask: The Roots, which are red without, and white within, are juicy, sweet, and very long, the Leaves follow and sourre of taffe.

Amongst the strange Beasts the Javaris, Opaffum, and Tatow are the most remarkable. The Javaris are taken for a fort of wild Hogs, and have short Ears and a Navel on their Backs, little Tails, some black, and some spotted white. The Opaffum is as big as a Car, hath a sharp Mouth, the upper Jaw-bone hanging over thelower, long, straight, and broad Ears, and a very long Tail, bald at the end, which winds in a Circle, on its Back black Hair sprinkled with grey Spots, and with its sharp Claws climbs up the Trees, where it feeds on Fruit, and sometimes presys on Fowls. Nature hath furnisht this Beast with a strange Bag under its Belly, whereof the in-side hath a far softer Doun than the out-side, in which the young ones lie and fuck, after which the Bag opening, they creep out upon the Ground. The Males have also a Bag, which serves only to carry their Young in, for they and the Females carry them by turns.

The Tatow, which is arm’d with sharp Scales, hath the Mouth of a Hog, and at each Foot five sharp Nails: when it is Hunted, or goes to sleep in the Night, it draws its Head, Legs and Tail under its scaly Coat of Mail, like a Tortoise, and in that manner lies secure against all manner of danger.

The Venusion taken here is very delicate, but difficult to be got; for this Beast having a breathing-place in its Back, never tires with running, and when encompass’d by the Dogs, falls valiantly on thole that are nearest to it, and often tears them in pieces.

The chief Towns in this Island, are 1. Porto Rico it self, commonly call’d Chief Towns and Cities.
St. John de Porto Rico (so term’d by Christopher Columbus, as being the first Land discover’d by him in the Year 1493; at that time when he could not persuade his Seamen, wearied out with continual hardship, from returning, if they discover’d not Land in two days) a strong and neat Town, built by the Command of Philip the Second, King of Spain: It was attempted by Sir Francis Drake in the Year 1559; without success, but a few years after taken by the Earl of Cumberland.
2. St. Germanus, in the West part of the Island, three or four Leagues distant from the Sea.
3. Arrecibo, Westward from Porto Rico, where the most noted Haven is of those Parts, for all the others are full of Rocks and Sands:

The antient Inhabitants of this Island maintain’d continual Wars with the Cannibals (probably the Natives of the Islands so call’d) who us’d every year to come either: those that were conquer’d, as well of the one side as of the other, were eaten by the Conquerors; so that in effect, both sides were but a different sort of Cannibals.

Columbus Landing here, found a great House surrounded with twelve others, but all of them empty and desolate.

This Island (which formerly is said to have been under the absolute Power of one sole King) the Spaniards not much regarded at first, having enough to do with Hispaniola, where they found more Gold than on Porto Rico.

Anno 1510. John Ponce de Leon obtain’d a Commission from the Court of Spain, to be chief Governor of this Island, and built Cibarca, which Place was inhabited twelve
twelve years, notwithstanding it stood behind a ragged Mountain, in a desolate place far up in the Country; but their thirst after Gold, of which some Veins were discover'd there, made them dispense with all other inconveniences: yet at last beginning to be weary of this desolate and barren place of Settlement, they removed to Guanica, water'd by many Rivers, whose Sands had great quantities of Gold-dust. Not staying long there, they went four Leagues farther, and call'd their new Plantation Soto Mayor. Lastly, returning again, they settled themselves in the former Valley Guanica, and built the fore-mention'd Town St. German by the River Guanabo, which makes an inconvenient Haven.

Juan de Porto Rico stands Eastward at the beginning of the North Coast, on a small Peninsula, joined to the Island by an high Island call'd Puente de Aguilar. Near the Mouth of the Haven lies on a rising Hill the Fort Morro Empinado, built triangular by John de Texila and Baptista Antonelli (who also planted there forty Guns), and surrounded with the Sea, which renders it a well fortified place. The Governor Diego Menéndez de Valdez had in it fifteen hundred Men and eighty Horse, when the fore-mentioned valiant Duke of Cumberland with a far less number fell upon him in the Year 1797, and not only took the City Porto Rico, but several other Fortifications; and besides an invaluable mass of Treasure he carried away eighty Guns. Sometime before this Defeat the Spaniards under the Government of Christopher, Son to the Portuguese Duke of Camina were Invaded by the Cannibals, and all that were then upon the place utterly destroyed, none of them escaping but the Bishop and his Servants, who betimes fled away with the Church Ornaments; so that the Islanders from that time were put out of doubt that the Spaniards were mortal, for they suppos'd them immortal when first they saw their great Ships, and heard the noise of their thundering Cannon.

Hugh Linsbrot relates, That the Cafique Jaguara threw a Spaniard into the Water, to try whether he would drown or not, and seeing him wholly deprived of Life, he concluded by consequence that the rest of them were mortal, and thereupon he set upon them when they were seeking for Gold, and kill'd above a hundred and fifty of them.

Peter Martyr relates farther, That these People, though very expert in Arms, yet were oftentimes beaten by the Cannibals, who at one time carried above five thousand People out of Porto Rico for their Winter Provisions.

Nor was their Condition better'd after the Spaniards conquer'd the Island, for those that could not furnish them with Gold, were certain of Death: Nor were their Cruelties in other places undivulg'd to this People before their Arrival; whereupon (as is related by Peter Ordonez de Carillo) the Cafique Flavroy being inform'd of the Spaniards Approach, took an Oath from his Subjects, That they should never discover where the Gold lay, though they should be put to death for it; For (said he) Gold is our God, for which they make so many cursed Blood-baths where'er they come; therefore throw the Gold into some very deep Waters; for when the Spanish God is sunk, the Spaniards will lose their courage, and not plague us so much for it.

Many were the Idolatrous Ceremonies of the old Natives of this Place, which would be too tedious to relate; but amongst the rest, they annually kept a great Feast, at which the Cafiques summon'd all their Subjects to a Temple appointed for that purpose, where the Priests had prepar'd an Idol ready set forth in all its Pageantry; near which the Cafique plac'd himself, when upon the beating of a Drum all the Commonalty came also into the Temple; the Men painted with divers Colours, having on their Heads Plumes of Feathers, about their Necks, Legs, and Arms, Strings of Sea-shells. The Married Women had a light Covering about their
their Middle, but the Maids went stark naked, all of them Dancing and Singing Songs in praise of the Idol; after which having saluted the Cofague, they thrust little Sticks down their Throats, so to bring up all they had upon their Stomachs; which done, and sitting down with their Legs under them, they began to Sing anew, often bowing and Shewing Reverence to the Cofague; whilst the Women carried Baskets of Bread amongst those that Sang, and utter'd certain Prayers, which were answer'd by some of the Men; the Bread being blest by the Priests, they gave every one a piece, with which they return'd home very merry and joyous.

But the God of this Island, whoever he was, hath been a long time left without Worshippers; for those that were left by the Invading Cannibals, were cruelly massacred by the Spaniards, incompletely that they have been thereby necessitated to furnish themselves with Negro's to work in their Mines and Sugar-Mills; and these also not able to endure such hard Entertainment, ran most of them away; for when a Negro did not bring Gold enough home at Night, his Master tying him naked to a Stake or Post, and beat him with Rods or Switches so long, till the Blood ran down his Back, then pour'd boiling Oyl into the Wounds, and then threw Pepper and Salt into them, and so let him lie, or else put him into a Pit, out of which his Head appear'd only. But those that fled gathering together, sometimes met with the Spaniards, and paid them in their own Coin.

Afterward of Porto Rico, and betwixt it and Hispaniola, there lieth a little, but fruitful Island call'd Mona; and Westward of that, another call'd Monica, or Monetta; which laft the English, when time was, found so admirably fcr'd with a fort of wild Fowl, that the huge Flights of them seem'd to darken the Air over their Heads, and upon their Landing found fuch plenty of their Eggs upon the Shore and Ground thereabouts, that they presently laded two of their Boats with them. But how people'd or poss'd, not so well known.

C H A P. XV.

Cuba.

Afterward, or rather to the North-West of Hispaniola, lieth Cuba, accounted one of the four Isles of Barlovento, and by Columbus, upon his first Discovery, call'd Joanna, afterwards Fernandina, then Alpha and Omega, till at laft the prefent Name prevail'd; it is parted from the other by a Frith, or narrow Channel, which runneth betwixt the Capes of St. Nicholas, belonging to Hispaniola, and that call'd Mayzy, belonging to Cuba: On the North it hath a Frie of little Islands call'd The Leeway Islands, of which more in their proper place, fo many and fo thick scattered, that they serve for no small Security and Defence of the Island on that side; besides, a part of the Peninsula of Florida, which Coafleth it likewise Northward; on the West it hath the Country of Jucatan, which is part of the Continent, but at a distance of forty or fifty Leagues; and on the South, Jamaica. It is reckon'd to be in length from Cape Mayzy, which looks towards Hispaniola to the Cape of St. Anthony, which is upon the Bay of Mexico, two hundred and thirty Leagues, but in breadth in some places not above fifteen or sixteen Leagues over; in the broadest place from Jardines to Lucanaka, not above forty,
in others sixty five. But for fertility of Soil, contending with Hispaniola it self, and for temperature and healthines of Air, much exceeding it; nor less rich formerly in good Mines both of Gold and Silver, and plentifully flor'd at present; not only with Sugar-Canes of the best Growth, but likewise with abundance of Ginger. Roots, Capiata-Fijilula, Mastick, Aloes, Cinnamon, Long-Perpe of America, as they call it, and divers other sorts of Spices. The Patures no less abounding with Cattle of all sorts, especially of European Breed; the Rivers and Coasts of the Sea with good Fish; no Scarcity of Fowl, whether wild or tame; good Brass and Iron still found, with some Gold in the Rivers, especially those which fall into the Bay Xagua on the South side of the Island; the chiefest thereof are Ahinao, La Luna, De Marci, and Canto; the biggest of them falls Southward into the Sea; all of them breed store of Crocodiles, which have oftentimes seiz'd both upon Men and Beasts, and carrying them into the Water, devour'd them there.

The Cedars breathe forth a most excellent sweet smell; and grow so large, that out of the single Trunks of some of them Boats are said to have been made, capable to hold forty, sometimes sixty Men.

There are also many other very odoriferous Trees, yielding a certain Rosèn or Gum, no less precious than the Storax.

But nothing grows here more plentifully than Vines, the Bodies or Stocks of which are as thick as a Man's Middle, and bear excellent Grapes.

Besides Partridges, Turtle-Doves, and other Fowl, the Sea-Shore breeds thousands of Cranes, which when young, are white, but when old, become of several Colours; they fland commonly with their Legs in salt Water, which they drink.

The Parrots which breed here is't to be taken by the Natives after a strange manner: A Boy having a Bundle of Herbs about his Head, climbs up to the top of a Tree, holding a Parrot over his Head, which by gripping he forces to make a noise, and thereby draws others to come flying about him; upon which, being expert in this Art, he throws a String with a Noose made fast to a Stick about them, and pulls them to him.

There are a sort of four-footed Serpents, by the Natives call'd Y gunas, of which they us'd to eat.

The Flesh of Tortoises or Turtles, was accounted a great Dainty amongst them, especially those of the bigges t size, of which some have been known to weigh a hundred and thirty Pound; The Feet of them are said to cure the Leprosie and Scabs. Amongst the peculiar Trees of this Countrey, are the Zagua and the Canina. The Cotton, which is of the natural Growth of this Place, is exceeding fine.

Here is also the Bird Flamingo, and another sort of Bird call'd Bambayats. In former times Cuba was Govern'd by several Lords, each Commanding over his own Province.

The chiefest of these Provinces are Mayzi, Bayana, Cuyba, Camaguey, Macaca, Xagua, Habana, and Ubima; some of them are plain, others mountainous, and being more or less fruitful, were very populous, before the Spaniards came thither, but since their cruel Massacres, scarce any of the ancient Natives are left; Nor are the Spaniards here at present very populous, considering the largeness of the Island.

In the Province of Camaguey is a Valley three Leagues in bigness, where Nature produces a great number of large Stones so exactly round, that no Man with a Compass can make a more exact Circle:

Though the Gold, which is digg'd out of the Mines, and found in Rivers, is none of the purest, yet the Copper which this Countrey affords is accounted excellent.
The Serpents here are about the bignefs of a Hare, having Heads like Weezles; their prey on little Beasts call’d Guaniniquiæs, and have been account’d delicious and wholesome Meat.

The antient Natives went formerly naked. The Men made it a Custom to forbear their Wives when they pleas’d; yet the Women were still oblig’d to be faithful to them, though from the very firi’d day of their Marriage they were taught to Cuckold them, by a certain wicked Ceremony in use amongst them; for the Bridegroom lay not with his Bride the first Night, but suffered her to be enjoy’d by one of his Friends of equal Quality with himself, whether he were Lord, Merchant, Laboring-man, or what Estate foever.

This Island was reduc’d under the Spaniard Government not without great effusion of Blood; for the Natives having had continual Wars with the Cannibals, as hath been faid, were not ignorant in the Exercise of Arms. The first Spaniard Commander against them was Valdivia, whom they flew with all his Men, and hew’d his Ship in pieces. Little better escap’d Fogeda, whose Men were all cut off, and he himself, escaping very miraculously, died not long after of his Wounds in St. Domingo.

Within two years after, viz. Anno 1514. Diego Valaquez with better Success set forth for Cuba, where the first thing he did was to build a City, which he call’d St. Jago, lying near a Southern Bay, full of Fish, and defended with several small Isles, behind which the Ships in the greatest Storm may Ride very secure; by reason whereof the new City increas’d fo much, that in a short time it could fwear two thousand Inhabitants, a brave Church, a Cloyster, and was made a Bilhop’s See, but subordinate to that of St. Domingo.

Three or four Leagues from the City are three famous Mountains, by the Spaniards call’d Sierra de Cobre, or The Copper Mountains, from the abundance of that Metal which the Mines in them afforded, and do yet afford; but the City was afterwards almost left defolate, (divers Houses in the fame standing empty) having in it scarce two hundred Inhabitants; which made it the eafier to be taken by a hundred and sixty English-men, led by Captain Cliff, Anno 1561. who carried from thence a hundred thousand Pieces of Eight, and a Ships Lading of Hides and Sugar.

2. Besides St. Jago, Valaquez built the Town Baracoa, on the Eastern Shore of Cuba, waft’d by the River Mares, which falls into the Ocean between two Mountains on one Side, and a flat Point on the other, and is a most excellent Harbor: Not far from which grows the best Ebony Wood.

3. He also built the Town St. Salvador, one of the moft healthful Promontories of all Cuba, near the River Bayamo, which produces round Stones, us’d there in stead of Bullets.

4. Helikewise built Trinidad, before which hardly accessible Harbor many a Ship hath been cast away: But this Fort was by a mighty Storm level’d even with the Ground.

5. Near the Haven before the Town Puerto del Principe is a Fountain, out of which at certain times flows liquid Pitch.

6. The Town call’d Villa Santi Spiritus, six Leagues from the Ocean, boafts fifty brave Houses, and is waft’d by the River San.$

7. The chiefleft City which the Spaniards posfefs in the Weft-Indies, and the present Seat of their Governor, is Christoval de Havana; which stood firft on the South side of Cuba, but was afterwards built on the North, opposite to Florida: The Harbor before it is large and fafe, for it is able to contain a thousand Ships, without the least endangering of one another, and yet the Entrance fo narrow, between a
Promontory and a square Fort, that two Ships cannot Sail in together: the shallowest part thereof hath six Fathom Water. On each side the Mouth of the Harbor is a Fort, the one call'd Meca de Maria, which stands built on a Champain Ground; the other call'd Morro, which lies at the Foot of two Hills, on whose tops several Guns are planted, which Command the Town and Haven.

Betwixt these two Forts is a Tower cover'd, on the top whereof is a round Lantern, wherein stands continually a Watch-man, who puts forth as many Flags as he discovers Ships at Sea, to give notice thereof to the City, which is a Mile from thence.

Before Havana stands a third Castle, well fort'd with Guns, as likewise the rest are, in all to the number of two hundred and forty, and strongly Garrison'd; of which great care was taken by the General Jean de Texeda, and Baptista Antonelli, an Architect, sent thither by Philip the Second, King of Spain, to secure the Place from all foreign Assauls, because the Plate-Fleet, and other Ships that come out of the West-Indies, have their place of Rendezvous here, and from hence set Sail altogether for Spain. The City stands along the Haven, and hath two Churches with spiry Steeples. The Houses are now built after the Spaniards manner.

But Havana was not so strongly fortif'd in former times, for Anno 1536, it could not resist a mean French Pyrate, who loosing the rest of his Fleet was driven hither by Storm, and conquering Havana, had burnt the same, confisting at that time of woodens Houfes cover'd with Thatch, had not the Spaniards redeem'd them from the Fire for seven hundred Ducats; with which Money the French sett Sail, when the day following three Ships arriv'd from New Spain before Havana, and having unladed their Goods, and preparing themselves for Battel, pursu'd the Pyrate; whom getting sight of, the Admiral, who Sail'd before, durst not venture to Engage him alone, but raid for the other two Ships: from which cowardly Action the French Pyrate taking Courage, fell on the Spaniards Admiral, who without firing a Gun ran his Ship ashore, and deferted the same: the next Ship thereby discourage'd, Tacking about, made away from the Enemy; on which the third also follow'd, insomuch that at last they were all three taken by the French; who encourag'd with this unexpected Victory, sett their Course a second time to Havana, where they got as much more Money from the Inhabitants as before. After this the Spaniards built all their Houfes of Stone, and a Fort at the Mouth of the Harbor, yet nevertheless the City lay open on the Land side, of which the English Fleet, Cruising about in those Seas, being inform'd, Landed not far from Havana, and enter'd the City before Day-break: the Spaniards thus suddenly surpriz'd, and into the Woods, while the English plunder'd and ranfack'd the City without any resistance. But this was not the last Blow which Havana receiv'd, for during the Wars between the Emperor Charles the Fifth, and the French King Henry the Second, a Ship sett Sail with ninety Soldiers from Diep to Cuba, where they made themselves Masters of St. Jago, and carried great Treasure away with them: Thus enrich'd, they set in the Night on Havana, but found their Expectations frustrat'd, for all the Houfes were empty, the Spaniards (being so often plunder'd) having remov'd all their Goods to their Counrty Houfes, which lay scattering about the Island. Whilst the French were searching the Houfes, two Spaniards came under pretence of agreeing with them, but their Design was chiefly to take an Account of their Enemies Forces. The French demanded fix thoufand Ducats of them: to which the two Spaniards reply'd, That all their Goods would not raise so much: then going to their Party, inform'd them of the number of the Enemies, and their Demands; whereupon Consulting, some judg'd it best to comply with a force'd Necessity, and
if they could not get any thing abated, to pay the demanded Sum: but most of them were of another opinion, alledgeing, That the number of the French was not equivalent to their Demands, and that it would not be for their Credit, to yield up their Estates so tamely, without trying their Title by the Sword: This being judge'd fit, they march'd to Engage them with a hundred and fifty Men, which about Midnight fell on the French, and at the first Onset flew four of them; but upon the firing of the Gun they were all alarm'd, and after a small Skirmish, put the Spaniards to flight. The Conquerors encag'd at this treacherous Plot of the Spaniards, let fire on Havana, in which at that time was a good quantity of Pitch and Tar; with which the Gates, Windows, Roofs, and Penthouses being all bezew'd over, were in few hours all in a light Flame; after which the Churches in order for their firing, were also going to be over-laid with the same combustible Matter; at which a Spaniard boldly defier'd, that the Temples erected for Gods Service might be spared: to which he was answer'd, That People who keep not their Promise, nor had any Faith, had no need of Churches to profess their Faith in. The French not satisfied with burning, pull'd down the Walls, and utterly demolish'd the Fort.

The Haven Xagua also is not inferior to any, the Mouth thereof being a Bowsheet wide, and within, ten Leagues: The Ships are securely shelter'd behind three Islands, and also the Mountains, which rise along the Shore.

Moreover, the Inlet Matanqa is not only eminent, by reason of the round Mountain Blau de Matanqa, which rises from a low Ground, but chiefly for the Expeditious of Admiral Peter Petersons Hein, who being sent out by the West-India Company, to Cruise up and down before Havana with one and thirty Sail, was from thence by a strong Current driven down to Matanqa, where he stood from the Shore, when ten Ships came just running amidst his Fleet, and were all taken but one: About Noon they discover'd nine Ships more, which Sailing along the Shore, got into the Inlet Matanqa, where they ran aground, whither Hein, following, came up to them the next Morning by Break-of-day, and after a small Resistance took them, being valued to be worth above a hundred and fifteen Tun of Gold, besides the Musk, Ambergreece, and Bezaan, with which two other Ships were laden, and another rich Prize.

This large Island Cuba (as we have before observ'd) formerly divided into so many populous Territories, is now in a manner desolate; for according to the Spaniards Relation to the Admiral Henry Jacobson Lucifer, when he was before Havana, Cuba had upon it not above sixty thousand Persons in all, in Anno 1627. But whoever Reads that which Bishop Bartholomeo de las Cafias hath written in his Book, (Printed first in Sivill in the Spanish Tongue, and afterwards, with the King of Spain's leave, in French at Antwerp,) will easily find the reason, why Cuba and many other Indian Countries lie so desolate: and how sensible the Indians were of the Spaniards ulage, appears by this following Story, related by the said Bishop, of a Catholic call'd Hatbrey, who before the Spaniards approached his Country, Anno 1511, fled from Hispaniola to Cuba; where afterwards he was taken by the Spaniards, and condemn'd to be burnt alive with green Wood: while he was tying to a Stake, a Franciscan Monk Preach'd to him the Mysteries of the Christian Religion, of which he had never heard; and likewise that he should ascend up to Heaven if he dy'd in that Belief; but if not, burn perpetually in Hell: Whereupon Hatbrey asking the Franciscan, If there were any Spaniards in Heaven? and being told there were, answer'd, I will rather converse amongst the Devils in Hell, than amongst the Spaniards, whose Cruelty is such, that none can be more miserable than where Spaniards are,
Before we conclude the Description of Cuba, it will be material to add some Passages of a Letter from Major Smith, Governor of the Isle of Providence, who was taken there in the Year 1665, which will give light to the knowledge of the present State, not only of Cuba, but of some other parts of America, belonging to the Spaniards; which is as followeth:

Cuba is a very good Island, and in it is generally the best Land, for so large a Country, as I have seen in America, although I have travelld the main Continent in several places, and have crost'd from the North Sea to the South Sea, as also the North side of Hispaniola, and most parts of Jamaica.

This great Island is easy to be conquer'd, and would make the best Plantation, besides the prejudice it would be to the Spaniards, and the great advantage to our Nation; for instance, Had we the Port and City of Havana, which might in all probability be reduc'd with two Regiments of good Soldiers from Jamaica, carrying with them two or three Sloops or Shallop's for Landing Men, fitted with good Arms and other Necessaries for an Assault, presently after their Armado hath pas'd out of the Indies, which is once in two years, towards the latter part of the Summer. There is good Landing on the West side of the City, where it lies open; and you need fear no Ambuscado's: but not on the East side on the Harbor, for there you will be gall'd by the strong Castle of the Moors, until the City be secur'd; but when that is once taken, you may easily reduc'd that Castle also, there being no danger of their retaking it, until the next Armado arrives there, which will be almost two years, against which time you will have Planters enough from other of our Islands, to Manure the Land, and assist the Soldiers in defence thereof: This once effected, would utterly ruin the Spaniards, for these Reasons: Our Ships lying both here and at Jamaica, would be at all times ready to gather up their fragling Fleet, which it is difficult to keep imbodied without the help of that Port of Havana, it being impossible for their great unruly Ships to turn up to Windward from the Bay of Mexico, or Puerto Bello, without preparation; and on the other side, to pass the Gulf of Florida, is for them as impossible, where they always Rendezvous, Victual, Water, and provide all things necessary for their Return into Spain; after which they diligently wait for a convenient Season of Winds and Weather (being much obser'd from the Changes of the Moon) when to pass that dangerous Straight: for to say truly, the Spaniards are neither very fit for Sea nor Land-Service, excepting some Officers and Soldiers bred in Flanders for Land-Service, and a few Biscarros for Sea-Affairs. They are so sensible of their Weakness, and jealous of their Riches in those Parts, that it is very difficult for any ingenious Man to get his Liberty, being once taken, fearing he might give such Intelligence, as to be thereby the cause of their ruine, witness their blind-folding of all strangers, when they pass their Cities and Castles; for they much dread an old Prophecy amongst them, viz., That within a short time the English will as freely walk the Streets of Havana, as the Spaniards now do; which indeed had been easily perform'd with a third part of the English Army sent to Jamaica, and a far greater advantage to the Nation: for I esteem that Port and Harbor of Havana in the West-Indies, equivalent (against that Nation) to Tangier in the Straights of Gibraltar; and if we were at once Masters of both, it would without doubt fo straiten the Spaniards, as absolutely to admit us a free Trade into their Ports of America, where they impart our Commodities, and fell them for ten times more than they first cost in Spain, by reason of the great plenty of Silver: which Trade would not only be of infinite advantage to us, but also prevent them of their future enslaving of our Nation in Chains as now they do; for
for being employ'd about their Fortifications, they are worse us'd, all things consider'd, than if they were taken by the Turks.

I have seen other parts of the West-Indies, where the Spaniards might be store'd of considerable quantities of Riches, as at Panama, where their Silver Bars lie py'ld up in Heaps in the open Streets Day and Night without Guard for five or six Moneths together, waiting the arrival of the Armado; which when arriv'd in Puerto Bello, they Transport it thither with so slender a Guard, for so great a Treasure, as would be an easie Prey to a thousand revolv'd Men (although of extraordinary value for so small a Charge;) but here is no retting, nor long remaining, they being so numerous (as in all other places of the main Land) though of great Wealth, and easily gotten with a Catch and away: But to my purpose,

This Island of Cuba hath adjacent to it great Conveniences of Salt and Fishings; and in it are very great plenty of Horses, Neat, Sheep, and Hogs, both wild and tame, of a far larger and better breed than any other parts of America: It hath also many very rich Mines of Copper already open, and is the only Place that supplies all the West-Indies with Metal for the infinite number of Ordinance they have in all their Ports and Castles, both in the North and South Seas; but whether it hath any Mines of Silver or Gold, I know not; but if there were any such, they would not adventure their opening and discovery, fearing the Invasion of that Island, whereunto is so easie access by Sea, and of so great import to their whole Interest in America: for which reason also they refuse to work any Mines in Florida, that are nigh the North Sea, (although they have there very many) but do rather employ themselves about others farther up in the Country, although with greater Labor and Cost, for conveyance of the Produce by Land to Mexico. And lastly, (for its full praise) this Island hath many very good Ports and Harbors of great advantage to Ships, for safe passing the Gulf; and should the Spaniards keep three or four Frigats always plying between the Western end of Cuba and that of Havana, off and on, it were impossible for any Ships of ours that came from Jamaica to escape them; the Scales turn'd would be their Case to all America. Neither wants it great Sugar-works, which have Water-mills and Horse-mills, and very many large Cocoa Walks, the molasses and best Tobacco: and in short, it produceth all other Commodities, that any of our American Islands have knowledge of.

C H A P. XVI.

Jamaica.

The Island of Jamaica lieth North from the Southern Continent of America, in the Sea call'd Mare del Nor; and South from the Isle of Cuba about twelve Leagues; and West from Hispaniola twenty, in eighteen Degrees of Northern Latitude; and beareth from Río de Hacha North-West, a hundred and fifty Leagues; from Santa Marta North North-West, a hundred and thirty five; from Río Grande North-West, a hundred and thirty; from Cartagena North, fourteen; from Porto Bello North-East and by North, a hundred and ninety; from the Bay of Darien, North and by East, a hundred and seventy; from the Bay of Mexico, a hundred and fifty. It is of Form something nearly resembling oval, being in length from East to West, about fifty four Leagues, or a hundred and seventy Miles;
from North to South in the broadest and middlemost part, about three and twenty Leagues, or seventy Miles over, and so growth narrower and narrower towards each Extream; in circumference about one hundred and fifty Leagues, or four hundred and fifty English Miles.

This Island is well water'd with Springs and Rivers, and is all over, especially in the Western parts, full of high Hills and Mountains: It is also well Wooded; for the North and South parts chiefly abound with tall and large Woods: Nor are there wanting every where Savanas, or Pastures, which are thought to have been Fields of Indian Maize, till the Spaniards arriving here, brought in Horses, Cows, Hogs, and Asiego's to feed.

The Air in this Place is more temperate, and the Heat more tolerable, than in any of the rest of the Barloventi, by reason of the cool Breezes which constantly blow from the East, and the frequency of Showers of Rain, and refreshing Dews which fall in the Night.

This is also the only Island of the Barloventi, which is not subject to violent Storms and Hurricanes; and the Diseases which are predominant here, are only bred by Intemperance, as Surfets, Feavers, and Agues, or occasion'd by ill Diet or Slothfulness.

The Commodities of this Island are very many; and first for Vegetables, the Sugars are so good, that they now out-fell th'other of Barbado's 5 s. per Cent.

Cocoa, of which there are many large Walks; and greater plenty by improvement may easily be produc'd.

Tobacco, so good, that the Merchants give Six pence a Pound for it, and buy it faster than the Planters can make it.

Indigo is producible in great abundance, if there were Hands sufficient employ'd about it.

The Cotton of this Place is accounted very firm and substantial, and prefer'd before any that grows in the neighboring Islands.

Of Tortoise-thell there is also good store, by reason that much of that sort of Tortoise is taken on this Coast.

Here are also great variety of Dye-woods, as Brasileto, Fustick, Red-wood, a kind of Log-wood, and several others, besides divers of those that are accounted the most curious and rich sorts of Woods, as Cedar, Mohogany, Lignum-vitea, Ebony, Granadilla, and others, which are frequently Exported.

Moreover, there are very probable testimonies, that there are Mines of Copper here, since both there have been th'other who affirm to have seen the Oar wrought out of one of them, and the Spaniards report the Bells that hang in the great Church, to have been Cast out of this Island Copper. As for Silver, the English are said to have been shew'd a Silver-Mine behind the Mountains, West of Caymay.

Ambergreece the Spaniards report to have been often found on this Coast.

Salt might be made here in great abundance, there being three good Salt-pans; and Salt-petre hath been found in many Parts.

Ginger is reported to grow better here than in most of the Caribbean Islands; and Cod-pepper very plentifully; and also a certain kind of Spice call'd Pimente, being in the form of East-India Pepper, of a very aromatic and curious taste, partaking as it were of divers Species together: it grows wild in the Mountains, and is very highly valued amongst the Spaniards.

Of Drugs and medicinal Plants there is here a very great abundance, as Curcuma, China-Roos, Cassia-Fifthula, Venillard, Achiotie, Tamarind, Contrayerva, Cipratus, Adiantum Nigrum, Aloe, Cucumis Agræstis, Sumach, Acacia, Muffeto, with several others, both Drugs, Ballioms and Gums.
Chap. XVI.  

**AMERICA.**

Coclidele is produc'd by a Plant that grows in this Countrey, but it is not made without much care and curiosity, and the English are not yet well experience'd in the Husbanding thereof; besides that the Growth of the Plant is much obstructed by Easterly Winds.

There is here greater Store of Cattel than in any of the rest of the English Plantations in America, as Horses, which by reason of the great number of them, are bought very cheap.

Cow's, of a large size, and of which vast numbers are yearly kill'd.

*Afingo's* and Mules, both wild and tame, being a very serviceable sort of Cattel in those Countreys.

Sheep, large and tall; and whose Fleesi is counted exceeding good, but the Fleece worth little.

Goats in great abundance, being a sort of Cattel very peculiar to that Countrey.

But of all other Cattel, Hogs are here in the greatest plenty, both wild in the Mountains, and tame in the Plantations; and they are more in request for Food than any of the rest, their Fleesi being counted both of a better relish, and more easily digestible than the Hogs-fleesi of our Parts.

The Fisli that is very plentifully caught in these Coasts is of infinite variety, and quite of another kind from what we have in this part of the World, the principal whereof is the Tortoise, which is taken in great abundance both on these Coasts, and in the Islands *Cameras*.

The tame Fowl in this Place, are chiefly Hens, Turkeys, and Ducks; but of both wild Fowl infinite Store, as of *Guineo Hens*, *Flamingo's*, Teal, Ducks, Wigeon, Gefe, Pigeons, Snipes, Plovers, Parrots, Turtles, Parachites, Machaw's, with divers others.

Choice and excellent sorts of Fruits are here in great abundance, as *Cocho-Nuts*, *Mannee, Mannaee, Supatas, Supatillas, Avocatas, Cylonds, Prickle-Apples, Prickle-Pears, Sower-Sops, Custard-Apples*, and many others.

For *Timber-Tree's, Platanee and Pines*.

And for Garden-Herbs, Radish, Lettice, Parfley, Cucumber, Marbles, &c.

The ancient Inhabitants us'd two sorts of Bread, the one made of Stamp'd Roots, and the other of Corn, which is Reap'd thrice every year, and grows with such succness, that one Pint low'n yields two hundred.

They had a strange way to make their *Cegari Cakes* of the Root *Jaca*, which keep good a year: They first press'd out the Juice with great Weights, which if drunk raw, occasions sudden Death; but boil'd, is palatable and good.

Potato's are here in great abundance, and grow like Artichokes in a moist Soil, and shoot forth Leaves of a dark-green Colour, like Spinage; they spread upon the Earth by Stalks, and bear a Flower like a Bell; at the end of which grows the Seed: the Roots are generally White, but sometimes Red, Marble-colour'd, Yellow, and Violet; they are not only pleasing to the Palate, but accounted very wholesome when stew'd in a clofe cover'd Pot, with a little Water.

But much daintier are the *Amamas*, which grow on a Stalk of a Foot long, surrounded with sixteen large sharp Leaves, between which grows a Fruit like a Pine-Apple, but much bigger, with an uneven Rind, of a pale Green, and inclining to a Carnation on a yellow Ground; on the top shoots out a red Bunch of Leaves and Flowers; the innermost Pulp melts on the Tongue, and is so delicious a taste, that it exceeds all other Dainties; the Seed produces Fruit once.

Of this Fruit there are several sorts, the chief whereof is accounted a special Remedy against a bad Stomach, Grave, Poyfon, and Melancholy.
A fort of Indigo Plant.

Cotton.

Chap. XVI.

A certain Fly or Wasp was frequently seen to fling Flies, call'd Maui, chilli and Merrywings, but the English Quarters are little infected by them.

Hugh Lindsay writes, That the ancient Natives of this Place were a subtle and sharp-witted People, skilful in Handicrafts, and expert in warlike Affairs, above all the Americans besides.

The Drink made of Annaas is no way inferior to Malvasia Wine.

Here you may observe a remarkable Secret of Nature in a certain ever-green Plant, which grows either on the Bodies of old Trees, on the Rocks, or in the Woods; the Stalk whereof surrounded with Leaves, full of dark red Spots, bears a sweet-smelling Violet-colour'd Flower, the Leaves whereof as soon as touch'd, close up together and die, and according as they are held in the Hand a shorter or longer time, this strange alteration continues.

Since the Spaniards planted Ginger on Jamaica, it hath grown there in great abundance; the Male Plant (for it is divided into Male and Female) hath generally bigger Leaves than the Female; the Stalks, which are without Knots, have more Leaves upwards than downwards, and spreads along the Earth, still take Root anew; when the Leaves wither, then the Ginger is commonly ripe, but it hath not that poinancy whilst green as when dry'd.

The Cotton of this Island (of which the Clothes and Hammocks that are made are vended in most parts of the Western World) grows on a Tree of equal height with a Peach-Tree, with a straight Stem or Body, out of which shoots Boughs of an equal length, and at equal distance; between the Leaves, which are narrow and long, grow red Flowers, and from them, oval Seeds, which when ripe, inclose the Cotton, and a Seed like Pepper.

Of hurtful Creatures here, besides the Manchonele, and a sort of Snakes call'd Guan'a's, wherein 'tis thought there is little or nothing of a poiyonous quality; the most obseravable is the Alligator, with which many Rivers and Ponds abound; it is a very voracious Creature, but is seldom known to prey upon a Man; it moves swiftly and strongly forward, but turns slow; the biggest of them are about twenty Foot long, their Backs scaly and impenetrable, so that they are hardly kill'd but in the Belly or Eye; they have four Feet or Fins, with which they go or swim differently; are obser'ved to make no kind of noise, their usual course for getting their Prey, is to lie on their Backs as dead, then with a sudden onset to surprize what-ever Fowl or Beast comes fearfully near them; the best caution other Creatures have of them is from the strong smell that flows from their Bodies: to require the harm done by them, they have something of vertue, for the Fat or Oyl of their Bodies hath been experience'd to be an admirable Ointment for all kinds of Pains and Aches; they Lay Eggs no bigger than a Turkeys by the Water side, still covering them with Sand, which heated by the Sun-beams, hatcheth the young ones, who naturally creep into the Water.

In some parts of the Country there are also a sort of flinging Flies, call'd Maui, chilli and Merrywings, but the English Quarters are little infected by them.

The Island was discover'd by the Spaniards under the Conduet of Columbus, who first built there the Town of Mellelina; which disliking, he remov'd again to Oristana; and finding that an incommodeous and unhealthy Situation, he remov'd again to another Plantation, where he built a very fair Town, first call'd Sevilla, afterwards St. Jago de la Vega, consisting of about seventeen hundred Houfes, two Churches, two Chappells, and an Abbey, being the chief, if not the only Seat of the Spaniards before the arrival of the English, for their Enanches, or small Plantations, were committed wholly to the custody of their Slaves.

Dieg, the Son of Christopher Colon, (or, as he is vulgarly call'd, Columbus) was the first that was constituted Governor of this Island, and sent Juan de Squivello Comman.
Commander, who upon their first arrival here committed such horrid Cruelties and Massacres, that (as the fore-mention'd Bartholomeo de las Casas writes) five thousand Inhabitants were in a short time reduc'd to less than three hundred, multitudes being put to death in a most inhumane and barbarous manner, some roasted alive, others torn in pieces by the Spanish Dogs, besides many other studied ways of Butchery, too dreadful to be read with patience; nor were they free from Civil War amongst themselves, which first began in this Island.

The first and only Attempts upon this Island since the Spaniards made themselves Masters thereof, have been the English, who in the Year 1592. under the Conduct of Sir Anthony Shirley Landed upon it, & got clear possession thereof, none of the Spaniards that were then upon the Place daring to make the least resistance; but not thinking it worth the keeping, they soon deserted it, and made Sail back again for England: after which they remain'd unmolested for a long time, till in the Year 1654. a Fleet of English was sent out for Hispaniola by Cromwell, under the Command of Colonel Venables, with a Design for the taking of St. Domingo; but meeting with ill success in the Enterprize, and being forc'd to quit that Island with loss of Men, and fructrations of their hopes, they steer'd their Course for Jamaica, and on the tenth of May in the Year above said, with little opposition poslfs'd themselves of it. Upon their approach to St. Jago the Inhabitants thereof deserted it, and betook them to the Mountains, gaining time by a pretence of Treaty, to secure their Women and Goods; and sometimes making Incursions upon the stragling Parties of the English, slew and took many Prisoners by surprize: but being weary of this wild and irregular kind of living, they betake themselves at last to the Isle of Cuba, where many of them, the Grandees especially, were permitted by favour to continue, the rest being by the Vice-Roy commanded back, with promise of speedy and considerable Supplies; by that time this remnant of the Spaniards was near to d'out with hardship and necessity, some being very much discourag'd and driven to utter dependence of Mind, others destroy'd out-right, part of the long promis'd and expected Supply arrives, the greatest part being to follow soon after; but finding
finding the Islanders so few in number, and in so sickly and necussitous an Estate, they would not joyn with them, but maugre all the Governor’s Perswasions or Commands, retreat to the North part of the Island, and there fortifie at a place call’d Chiveras, expecting every day fresh Recruits; which not coming time enough, and their Quarters being discover’d, they were set upon by the English, and most of them either slain or taken Prisoners: not many Moneths after the rest of the Spanish Forces Land, being in all about thirty Companies, with Ordnance, and good storing of Ammunition, who falling presently to make strong Fortifications at Rio Nuo, are nevertheless in a short time utterly defeated by the English: Upon which, and several other ill Successes, despairing to regain the Island, they Ship off their Women and the richest of their Goods; and the Negro Slaves grown Masterless, by the general either slaughter or departure of their Patrons, shake off their Obedience to the Spaniards, and constitute a Governor of their own, a Black; yet submit themselves, and own Subjection to the English Government, the Spaniards from Cuba, both by their Perswasions and monethly Contributions, in vain endeavoring to reduce them; onely some few there were that stood out, whom the rest not onely made it their business to discover, but help’d the English to take them, insomuch that at last the Spanish General not having above fifty Men left him, was forc’d to seek for Peace, and offer’d Terms of Accommodation; which the English General would not be drawn to accept of, unless upon Condition that he should deliver up to Jusitice as many as were left of those that had barbarously murder’d any of our Men, either in time of Treaty, or after Quarter given.

The English in this Island are settled for above a hundred Miles along the Country from the Eastward.

Their chief Towns are 1. St. Jago, (built by the Spaniards, as afore mention’d) which lieth six Miles within the Land, North-West from the Harbor of Cagway. Here the English have built a small Fort.

2. Passage, a small Town, built also by the English six Miles from St. Jago, for the convenience of going to Cagway, consisting of about fifty Houses and a Fort, whence crosses this Harbor, about three Leagues distant is the Town of 3. Cagway, seated on the Extrem end of the Point, containing in it above six hundred Houses, all built by the English, besides the Governor’s Palace, and the Houses where the Stores for the Army are kept.

This is counted the most healthful Place in all the Island, and the very Scale of Trade, where all Merchants, Strangers, and Sailors reside.

Here, upon the utmost Angle of the Point towards the Sea, is a round Tower, built of Lime and Stone; about which is rais’d a strong and regular Fort, containing sixty pieces of Ordnance.

This Town is now call’d Port Royal, and is thought to contain about sixteen thousand Inhabitants.

A Mile from hence is another Fort, call’d Landward, which runs from the Harbor to the Sea, to defend the Town from any Attempt by Land.

Off the Mouth of the Harbor towards the Sea, lie divers small Islands, the most Western of which being within half a League of the Fort, and between which and the Fort every Ship that comes into the Harbor is necessitated to pass: It is call’d Little Island, where a Fort is likewise rais’d, to defend the Mouth of the Harbor, containing eight pieces of Ordnance.

Another Fortification is at Portmorant, which we shall make mention of among the Harbors.
The chief Harbors of this Island, are 1. Port Anthony, on the North, a very safe Land-lock'd Harbor, only the coming in is somewhat difficult, the Channel being narrow'd by a little Iland that lies off the Mouth of the Port.

2. On the East of the Island is Portmorant, a very capacious Harbor, where Ships do conveniently Wood and Water, and Ride safe from all Winds.

3. On the South is Port Cayway, a Harbor wonderfully convenient, secure and capacious, being five Leagues over in some places, in others four, and at the narrowest; there; it is Land-lock'd by a Point of Land that runs twelve Miles South-West from the Main of the Island, having the great River that comes by Los Anglos, and St. Jago running into it, and divers Springs about it, where Ships do conveniently Wood and Water. Here is every where good Anchorage, the Road being so deep, that a Ship of a thousand Tun may lay his Sides to the Shore of the Point, and load and unload with Planks afloat.

4. On the West is Point Megrell, a Port very convenient and secure; to Windward from which, a little North-West, is the Seat of the old Town of Melilla, founded by Columbus, as afore mention'd.

The chief Plantations of this Island, are 1. Portmorant, above the Harbor before mention'd, and by the two Rivers that run into it. Here are good Plantations of Sugars, Cottons, Tobacco's, &c.

2. Hence about ten Miles lieth Morant, where a thousand Acres of Land have been taken up by my Lord Willoughby, and a Company of Merchants.

3. Hence farther Leeward lieth Tallow, having good Plantations of Cotton, Tobacco, and other Provisions, excellent Savanas, and some store of tame Cattel.

4. Thirty Miles hence, on the North side of Cayway is Ligonce, where are excellent Plantations of Sugar, Cotton, and Tobacco, very pleasant Savanas, and some store of wild Cattel.

5. Twenty Miles farther West, nine Miles from the Harbor of Cayway, is Los Anglos, having some Plantations of Sugar, Cacao, and Tobacco, all which were old Spanish Plantations, and are less considerable than those made by the English in other places.

6. Eight Miles from hence, North-West, is Guanabo, where likewise were some Spanish Plantations, since improv'd by the English, who have very many excellent Plantations of Sugar, Cacao, &c.

7. Hence West South-West lieth Guatibacoa, a most pleasant rich and fertile part of the Country, abounding with Cattel, and excellent Savanas. Here the Negroes feoted that revolted from the Spaniards, who are endeavouring to make some Plantations of Tobacco's and Provisions, and with them are feoted some few English, who have divers Walks of Cacao.

The several Governors of this Island since the taking of it by the English, are as followeth: General Robert Venables stay'd upon the Place about three Moneths after the taking of it, and at his coming away for England he left the chief Command to Major General Richard Fortescue, who liv'd Governor about three Moneths; after which Lieutenant General Edward Darcy was by the Army elected President; but upon his coming away soon after England, Lieutenant General William Brain was sent over Governor in his room; who living in the Government about three quarters of a year, did as it were bequeathe it again to Darcy, for he was chosen by virtue of a Blank Commission, wherein Brain had in勤奋 his Name whom he would have succeed, and remain'd Commander in Chief both by Land and Sea till His Majesty's Restoration, and then by His Majesty's Letters Patents was confirm'd in the Government, and so was the first that was Governor there for His Majesty:
The next that succeeded was the Lord Windsor, upon whose coming away Sir Thomas Middlford was sent Governor, and after him Sir Thomas Lynch, who remains Governor at present.

CHAP. XVII.

The Islands call'd the Lucaies.

Having done with the four Islands of Baffovento, as they are term'd, viz. Hispaniola, Cuba, Porto Rico, and Jamaica, we come next to the Lucaies, so call'd, as some think, from Lucaioneque, one of the biggest of them; they lie over against Florida, Westward from the Bermudas, South-West and North of Hispaniola, and the rest of the Baffoventi; and because they are but small ones, and lie so near the Continent, Geographers sometimes describe them as a part, or appertaining to the Continent. The chiefest of these Islands are Lucaioneque afore-mention'd, Bahama, and Guanahani; Lucaioneque is accounted the biggest of them all, and lieth in twenty seven Degrees between Bahama and Guanahani. Bahama lies nearest to the Coast of Florida, and gives Name to the Straights so call'd, which run between the Cape of Florida and it, with such a violent Course and Torrent, that although it be above sixteen Miles broad, yet many times neither Wind nor Oars, can prevail against it; that though the Winds be prosperous, Ships cannot enter it; and if it be crofs, they go with the Current; yet those Straights the Spanish Fleet must pass in their Return from the Havana towards Spain. Guanahani was the first piece of American Ground discover'd by Christopher Columbus, and therefore by him call'd San Salvador, or St. Saviour, because that thereby he was deliver'd from the mutinous rage of the Seamen, who threatened to throw him over-board, if they discover'd not Land in such a time. There are besides a number of small Isles scatter'd up and down, which are generally comprehended in the number of the Lucaies; one is Little Island, encompass'd with a company of Shelves call'd the Bimini, so that it is hardly accessible: there goes a Tradition, that it hath been inhabited by very beautiful Women, the fame of whom drew many to attempt to Land there and take up their Habitation; in which Attempt many were cast away: There is said to be a Fountain in the midst of it, of such a Vertue, that whosoever drank of the Waters of it, had their Youth renewed. Also three Islands, or rather Rocks, call'd Los Martyres, lying to the South-East of Cape Florida, and cover'd for the most part with a whitish Sand and a few Bushes growing on them: they seem at a distance to bear a resemblance of Men, impal'd, or bound to Stakes, as the Martyrs in the primitive Times usually were, which occasion'd the Spaniards so to Name them; 'tis very dangerous to come too near them, but to have fight of them is of great ufe to Men at Sea; for by passing these Rocks, and leaving them on the South-East, they certainly know, that they are now entred the Straights of Bahama, that is, that they have left the Ocean, and are fall'n in amongst those many Islands, which do, as it were, Barracado and Block up the Eastern Coasts of America, towards Nombre de Dios and Terra Firma, as they call it, through which the Continent is sometimes dangerous; by reason of contrary Winds; and always such, that it requires the skill and care of an experienced Pilot to conduct the Ships well thither. The rest are Abacoa, twelve Leagues long; Yuma, twenty Leagues in length, and eight in breadth, between twenty four and twenty
twenty five Degrees; Tumaca, fifteen Leagues in length, between twenty three and twenty four Degrees; Tamaana, seven Leagues every way; Tabague, ten Leagues likewise, and lying between twenty two and twenty three Degrees; Maguana, twenty Leagues long, and ten broad; Quagua, ten Leagues every way, and lying between twenty and one and twenty Degrees; Caycos, five Leagues in length, and in the one and twentieth Degree; Mackre, in the twentieth Degree, encompass'd with Shelves; Abreo, environ'd also with Shelves; and fifteen Leagues long; also Guatoc, Cigatoe, Guanima, Jabaka, Triangulo, and several others.

On these Islands are no Inhabitants; those that did live there were a harmless simple People, and therefore the eaiser taken and carried away by the Spaniards that have made them so defolate: Many of them seem of a good Mold, and the latitude promiseth much fertility. The Air is certainly good and wholesome, and not so extrem heat as other Parts of that heighth. There is scarce any Beast on them, save a Coney that hath a Tail like a Rat, but Pigeons and other Birds in great numbers.

There is the Gum Benjoin, of the best and worst sort; Guaiacum, Safaparilla, and Saffrae; and on some of them Red-wood and Ambergrisse.

Our English Sea-men are little acquainted with these Islands, though they Sail round them yearly.

In the time of the Rebellion one Captain Sail and others, obtain'd a Patent, making thither on the Coast of an Island, which was call'd Illatheria; his Ship was wrack'd, but the People recover'd the Shore with a few Necessaries.

The Coasts of most of them are dangerous, and bad to make; and that Ship that shall be near or amongst them, must keep the Lead always going; but with a wary Pilot, and care in giving the Islands a fair Birth, they are easily recover'd.

The Spaniards know this Place well, and have a yearly Trade thither for the aforesaid Commodities, and amongst the Islands are Wracks of divers of their Ships.

---

CHAP. XVIII.

The Caribby Islands.

The Caribby Islands, as they are generally call'd, are a Row or Ridge, as it were, of lesser Islands, which extend themselves almost in fashion of a Bowe, from the Coast of Paria as far as St. John de Porto Rico; they are otherwise call'd The-Caribbes, sometimes The Cameranes, and by some The Islands of Cannibals, or Man-eaters, (though this Appellation cannot in reality be more appropriated to those Islands than to many other, either Islands, or Parts of the Continent of America;) lastly, whereas all the Islands between Florida and New Spain, and Southern America, are by some comprehended all under the Name of The Antilles; yet the Caribbes and the Antilles are most generally, and, we conceive, most properly accounted the same; and they are so call'd, either as lying like a Bar before the greater Islands, or Quasi Anti-Isles, i.e. Opposites Isles; they lie all under the Torrid Zone, between the eleventh and nineteenth Degrees of Northern Latitude, and are twenty eight in number; but before we come to treat of each of them in particular, we shall take notice of the most observable of those things which are common to them all in general.
The Air of all these Islands is of a good temperature and healthy, and the Heat not so excessive in them at any time of the year, as might be conjectur'd from their Situation under the Torrid Zone, by reason of a gentle East Wind, which rising in the Morning, continues most commonly till towards the Evening, allaying the scorching heat of the Sun, and refreshing the Air; but the Nights are commonly very cold; and it is observable, that by how much the hotter any Day hath been, So much the colder the Night following happens to be; whereof this reason is given, That the Vapors rais'd in the Day-time by the Sun, and falling down condens'd at Night, do very much cool the Air; but it is never so cold as to Freeze.

For half a year together Day and Night are equal in these Parts, and the rest of the Year the Day fourteen hours long, and the Night ten.

From April to December there commonly fall here great Rains, and all that Season is accounted Winter, and the Drought and Heat of the other Moneths is taken for Summer; but the Woods of these Parts looking ever green, make as it were continual Summer.

The Soil is generally as fertile as in most places of Europe, and each Island furnish'd with fair Rivers, Brooks, Lakes, Springs, Wells, and other Sources of fresh Water, besides in many places Mineral Waters, which are us'd with good success in the cure of several Diseases; also out of some Mountains flore of Brimstone is digg'd, and it is conjectur'd that there are not wanting Mines of Gold and Silver, if they were well look'd after; and there hath been often found Crystal upon the Sands by Rivers sides.

The Vine, though wild, and naturally growing in the Woods, yet yields a very large fair Grape; and those which are cultivated in their Gardens or Vineyards, bear excellent Grapes twice a year, but very little Wine is made of them, in regard they find it will keep but very few days.

Wheat in the Caribbes grows up no farther than the Blade, and the reason is judge'd to be, because through the rankness of the Soil, and for want of Winter, this Grain springs up fast, and hath not subsistance enough left in the Root to supply it up to maturity; but no doubt but Barley, Rye, and those other Grains, to the ripening of which more Heat is requisite, would thrive there very well.

Besides Lemon-Trees, Orange-Trees, Citrons, and Pomegranates, and other Fruit-Trees growing in Europe, there are very many sorts of Trees, Herbs, Pulfe, and other Plants, of a different kind from those amongst us, and peculiar for the most part to these Islands.

Of Fruit-Trees; the most ob servable are the Goyavier, somewhat resembling the Laurel, only having a softer Leaf, and of a brighter Green; its Fruit about the bigness of a Pearmain, but full of little Kernels like a Pomegranate.

The Papayer, which is of two kinds, one generally growing in all the Islands, the other proper to Santa Cruz: the first hath a Leaf not much unlike that of the Fig-Tree, and the other bears a Fruit about the bigness of a Melon, which by the Portuguese is call'd Mamao, from its resemblance of a Woman's Breast: the Tree is hollow and fpuny within, and grows up sometimes to the height of twenty Foot.

The Monick, call'd by the Islanders Cosset, from the Name of an Island from whence the Seeds were first brought by the Dutch, and bearing a Fruit like a small Cucumber not perfectly ripe.

The Jatupa, or Japape, by the Portuguese call'd Japapoy; and by the Brasilians, Japapaba; having Leaves like those of the Walnut-Tree, Flowers like the Narcissus, and a Fruit like a bak'd Apple, which when it falls from the Tree makes a noise like the Report of a Gun discharg'd, which is said to proceed from the burbling forth
forth of the Seed out of the thin Skin enclosing it, and breaking with a violence; the Juice of it Dyes of a Violet-colour, and the Swine and Birds that feed upon it, are laid to have their Flesh and Fat of the same colour.

A sort of Vine commonly call’d The Raisin-Tree, and by the Caribbeans, Oldum; whose Fruit being like a large Violet-colour’d Grape, hath in stead of the several small Grain-Rrones which are indos’d in the Husks of common Grapes, one hard Stone, like that of a Plumb.

The Acajou, bearing for Fruit a kind of Chestnut, in form of a Hares Kidney, which serves for a Creft to a very fair Apple that by degrees grows under it, of which the Islanders make a Drink, very much in eftem amongst them, being of an excellent taste.

The Icaco, a kind of small Plumb-Tree, so much coveted, and held for a Delicacy by some People that live near the Gulf of Flanures, that they are from thence call’d Icacos.

The Monbain, which Fruit being a kind of yellowish Plumb, is chiefly made ufe of to mix in the Drinks of Onicon and Mabu, to make them taste the better.

The Courbury is by some reckon’d to be but a species of the Monbain, onely more full of Leaves, and growing higher and bigger; but the Fruit of the Courbury is sufficiently different from that of the Monbain.

The Indian Fig-Tree, differing in Leaf from the common Fig-Tree, but whose Fruit both in figure and taste is not much unlike the Fig growing in these Parts: This Tree is commonly of such a vast Bulk, that the Branches of some of them have been seen to afford shelter to two hundred Men.

A kind of Service-Tree, differing from ours, by its exceeding heighth, fair Leaves, and pleafant Fruit.

The Prickly or Thorny Palm, so call’d from its being arm’d all over with Prickles, both Trunk and Leaves; by incision into its Branches a sort of Wine is made, and it is conjectur’d to be the fame Tree which the Brafiians call Agy.

The France-Palm, an exceeding high and freight Tree, bearing on the top of its Trunk a whiteth marrowy subftance, by the French call’d Choude Palmist, or Palm-Cabbage; for being boy’d with the thin Leaves that incircle it, and well reason’d, it is reckn’d amongst the Delicacies of the Caribbes.

Lataneir, another kind of Palm; and Cocoa, which is also reckon’d amongst the several sorts of Palms; this last is a Fruit-Tree famous all over America, and hath been at large describ’d elsewhere.

There are also many other Trees fit for Dying, Joyners Work, and Building, (besides the Acajou before mention’d, of the single Trunks whereof are made those long Shallops call’d Fyrages, which are able to carry fifty Men) as

The Acomas, of the fame bulk and heighth with the Acajou, and equally esteem’d by Joyners and Carpenters, and of the Fruit whereof the Woodquills grow fat at a certain time of the year.

The Rofo-wod, to be rank’d amongst the chiefeft of those Trees that are made ufe of by Workmen.

Indian Wood, a very precious and useful Tree for several sorts of Materials, and of a very fine scent.

The Iron-Wood, so call’d from its hardnes, weight and soliditie, above all that have hitherto been spoken of, and beyond either Cypres or Cedar for incorruptibility.

Brafile-Wood, so call’d as growing most plentifully in Brafile.

Yellow-Wood, denominated from its Colour, and much esteem’d for its usefulness.
in Dying green Ebony, easily taking the lustre of the true Ebony, and being very useful for the making of Cabinests and other curious Pieces of Work; It also Dyes of a very fair Grains-green.

The *Roncon*, by the *Braflians* call'd *Urnex*, in the Husks, succeeding the Flowers whereof, which grow in little Bushes at the end of the Branches, is enclos'd a most rich Vermilion Dye, of a very soft and viscous Matter.

Here are also many other Trees, either useful in Medicine, or other ways advantageous, as the *Casfia* Tree, of the bigness and figure of a Peach-Tree; the long Pipes or Cods whereof, containing the Medicinal Fruit, are well known amongst us by the Name of *Casfia-Fistula*, and to be had at every Apothecaries.

Medicinal Nuts, each Nut containing three or four Stones in so many Cells; every one of which is inclos'd within a thin white Pellicle, pleasant enough to the taste, and out of which is extracted an Oyl, us'd by the Portugafe in several both Culinarie and Physical occasions.

The Cinnamon-Tree, so noted for its aromatick Bark, also Sandal-Wood, Guina-cum, and Saffafra.

Cotton-Tree and Soap-Tree, whose Uses the very Names imply, and which Trees have been touch'd upon elsewhere.

The arch'd Indian Fig-Tree, the Bodies of which Trees have been antiently the feulkling Holes and Retreats of the Inhabitants from their Enemies; the Bark is useful for Tanners.

The Gourd-Tree, of the bigness and heighth of a great Apple-Tree, and of which are made most of the Household Vessels and Utensils, which are in common use at present amongst the Inhabitants.

The Mabot-Tree, of the Bark of which are made Laces and Points.

The Myrce, or Mandiobae, of whose Root the Cassava Bread is made, and which growing in several places of America, hath been already taken notice of; as likewise the Banana-Tree, and that call'd The Apple-Tree of Paradise, otherwise Adam's Fig-Tree, the Fruit being reported to be of a very delicious taste.

Other Trees not known in Europe, are the Mapoju, divers kinds of Thorny Wood, the Milky Tree, being of a venomous quality, the Manceuilte, and that whose Root beaten to Powder, and thrown into Rivers, intoxicates the Fish, with several others of lef note.

Innumerable sorts of Shrubs might here in like manner be reckon'd up, but the chiefest are, That remarkable Plant, anciently known by the Name of Ricius, and commended for its Vertues by Gulen and Dioscorides.

Coral-Wood, so call'd from its little Seeds, which being as red as any Coral, are us'd for Bracelets.

The Jasmin, bearing a Flower of an admirable sweet scent.

The Candle-Wood, so call'd from its combustibleness, by reason of an aromatick Gum which is within.

The Herbs, Flowers, Roots, and Pulfe which grow here, are some of them common in all parts of Europe, as Cabbages, Onions, Chibols, Melons, all sorts of Milters, Cucumbers, Citrils, Parsnips, &c.

Others, if not peculiar to this Island, yet growing chiefly there, and in several parts of America besides, as the Ragettes, so call'd from the resemblance its Leaves have with a Racket, a thorny-spreading Bush, whose Fruit being of a Vermilion colour, makes the Urine of those that eat of it as red as Blood. Some liken this Plant to the Tunas, already describ'd, which yields that rich Scarlet Dye call'd Cochinele.
The Torch, so call'd by the European Inhabitants, by the Native Islanders, Acon-
leora; a great Thistle, or thorny Buff, putting forth from the middle of it long
stems and thorns, like of Torches, and bearing Fruit like a great Fig, not unpleasing
to the taste.

The Lienes, creeping upon the Earth, and spreading up and down like Ropes,
and bearing brown Husks of a Foot long, wherein are enclosed Fruit call'd Sca-
chezfutis, of which are made Boxes to keep Snuff, Tobacco, or the like.

A sort of Tepervivum, which runs twirling upon Rocks, Trunks of old Trees,
like Mistletoe, and sometimes on the Ground.

A sort of fentitive Plant, call'd by the Inhabitants Huafett, or The Living Herb;
of which kind of Plant something hath been already touch'd upon, and which be-
ing transplanted, is kept in several Gardens of the Curiosi as a Rarity.

The Sweet-Rafs, whose small Root dry'd, and reduce'd to Powder, helps Women
in Travail.

The Balifir, whose Leaf apply'd, mollifies and cools inflammations of Wounds.
The Darts-Herb, whose Root bruised and apply'd, draws away the Venom of
empoylon'd Darts; besides Scelopentria, a sort of Aloes, several kinds of Maiden-
hair, and other medicinal Herbs.

The Granadilla, or Passion-Flower, growing in several other parts of America, and
defcrib'd elsewhere.

There is also a sort of Pease in some of these Islands, differing from ours, and
call'd The Pease of Angola, as first brought from thence. Likewise a sort of Beans
call'd The Seven-years Beans, by reason the same Stalk bears seven years one after
another.

The Herb call'd The Musk-Herb, from the dusky colour of its Flower, and the
sweet scent of the Seed, grows also in these Parts very frequent.

The Pyman, or American Pepper, is the same with that before describ'd under the
Name of Axi.

Their Potato is a Root not unlike the Tophambo, or Jerusalem-Artichokes, other-
wise call'd Saligots, growing plentifully in our Gardens, but more wholsome, and
of a better taste.

The Anana's, or Pine-Apple, accounted a most delicious Fruit, of an admirable
sweet scent, and very pleasant to behold, grow not only plentifully in these
Islands, but in most places of America; besides the Sugar-Canes here, and in many
other places, but not so generally.

The Plant from which is got the Dying Material call'd Indico, is very different
from that which grows in Madagascar, which bears small odoriferous Flowers, of a
white and purple Colour mix'd together.

Of these Trees, Herbs, and other Plants, which are produc'd in these Caribbe
Islands, some are more peculiarly of the Growth of one Island, some of another; so
that we shall have occasion to speak more largely of some of them, when we come
to speak of each Island in particular.

The four-footed Beasts found in these Islands, are chiefly the Opafium, the Javari,
the Tatan, the Agony, and the Musk-Rat, which being all of them no less known in
other Parts of the New World, have been already taken notice of, and of which we
may have also occasion to treat more at large in the particular Islands, we shall
therefore only name the other Animals, whether Birds, Reptiles, Insects, or Fishes,
as partly having been heretofore treat'd of, and partly to be describ'd hereafter.

The Birds are, the Frigate, Peaier, Craw-fowl, or Grandgaufiers; Flammans, Swallows
of America, Arras, Canides, Parrots, Paroquins, Tremble, Sparrows of America, Eagles

L 13
of Orinaca, Maytenys, Celibys, besides what are common amongst us, as Herons, Coots, or Moor-hens, Black-birds, Field-pars, Thrushes, Turtles, Wood-quills, Pintado’s, &c.

The Reptiles are, Anitis, Zoguetis, and Melboyjitas (of which farther mention will occur in the Isle of St. Christopher) Globe-mouches, nam’d by the Caribbeans, Oulleooma, Scorpions, and several sorts of Lizards, call’d by the Caribbeans, Ouamayaca; by the Brasilians, Senembi; and by other Indians, Jaquanas.

The Reptiles are, besides those common with us, as Glow-worms, Palmer-worms, Spiders, Bees, &c. the Cucuyos, mention’d in Edifpaniola, and the Flying Tiger.

The Fishes are, Sea-Parrots, the Dorada, by some call’d The Sea-Bream, by others, The Amber-fish; the Bonite, the Needle-fish, the Epadon, or Sword-fish, the Marforin, the Requiem, the Remora, the Leuanius, the Becune, the Sea-Hirchin, the Sea-Woodcock, besides Whales, and a certain Fift called, for its hideous shape, The Sea-Devil, and lastly, the Sea-Unicorn, with a particular Description of which we shall conclude, as having it from Monsieur du Montel, who was an Eye-witness thereof.

"This Unicorn (faith he) was pursuing a Carango, or some other lefser Fift, with such earnestness and impetuosity, that not considering that it needed a greater depth of Water than the other, it flunk with half the Body dry on a Sand-bank, whence it could not recover the deeper Waters ere it was deflroy’d by the Inhabitants: It was about eighteen Foot in length, being at the largest part of its Body about the bigness of a Barrel: It had fix great Fins like the ends of Galley-Oars, whereof two were plac’d near the Gills, and the other four on the sipes of the Belly at equal distances; they were of a Vermilion red colour: All the upper part of the Body was cover’d with great Scales, about the bigness of a Crown-Piece, which were of a blue colour, intermix’d with several Spangles of Silver; near the Neck the Scales were closer, and of a dark colour, seeming as if they were a Collar; the Scales under the Belly were yellow, the Tail forked, the Head somewhat bigger than that of a Horse, and near the same figure: It was cover’d with a hard and dark-colour’d Skin; and as the Land-Unicorn hath one Horn in his Forehead, so this Sea-Unicorn had a very fair one issuing out of the fore-part of his Head, about nine Foot and a half in length, it was as straight as could be, and from the place whence it came out it grew smaller, and smaller to the very Point, which was so sharp, that being thrust hard, it would enter into Wood or Stone, or some more solid Substance; it was at the place where it came out of the Head, about sixteen Inches about, and from thence two thirds of the length it was like a Screw, or, to say better, made waving like a wreath’d Pillar, save that the Channels grew smaller and smaller, till they gently ended in a Point, which was two Inches beyond the fourth Foot: All the lower part had over it an Alth-colour’d Skin; which was all over cover’d with a small soft Hair, short as Plush, and of the colour of a wither’d Leaf; but under that it was as white as Ivory: As to the other part, which seem’d naked, it was naturally polished, of a shining Black, mark’d with certain small white and yellow Strokes, and of such solidity, that a sharp File could hardly get a little small Powder from it: It had no Ears standing up, but two spacious Gills, as the other Fishes; the Eyes were about the bigness of a Hens Egg; the Ball, which was of a Skye-colour, Enamell’d with Yellow, was encompass’d with a certain Vermilion, which had beyond it another as clear as Crystal: The Mouth was wide enough, and furnish’d with several Teeth, whereof those before were extremly sharp, and those towards the Throat in both Jaws were broad, and a little knobbed: The Tongue was of a length and thickness proportionable, and cover’d with a rough Skin of a Vermilion colour. What was further remarkable, it, that this Fift
Chap. XVIII.  

**A M E R I C A.**

had upon the Head a kind of crown, riding above the Skin about two Inches, and made oval-wise, the Extremities whereof ended in a Point. Above three hundred Persons of that Island did eat of the Meat of it; and that plentifully, and thought it extremely delicate; it was interlarded with Fat, and being boil'd it came up in flakes like fresh God, but it had a much more excellent taste.

Those who had seen this rare Fitch alive, and had with great Levers broken the Back of it, affirm'd, That he had made prodigious Attempts to thrust them with his Horn, which he turn'd with an inexpressible dexterity and nimbleness, and that if he had had as much Water under him as would have born him up, he would have been too hard for them all. When the Entrails were taken out, it was found that he liv'd by Prey; for there were within him the Scales of several kinds of Fitch.

What could be preferable of this miraculous Animal, especially the Head, and the precious Horn faftned in it, hung up near two years at the Guard-house of the Island, till Monsieur Le Vaisselle, the Governor of it, presented one Monsieur Des Transarts (a Gentleman of Saintonge, who had given him a Visit) with the Horn. Not long after, coming over in the same Ship with the Gentleman, who had that precious Rarity put up in a long Chest, our Ship was cast away near the Island of Tpada, one of the Isles, and all the Goods were lost, but nothing so much regretted as the loss of that Chest.

The Natives call themselves Cuban-bonon, that is, Inhabitants of the Islands, and Caribbeans; which last Denomination was not only receiv'd amongst the American Isles, but also on the Main Continent of the Northern and Southern America, long before the Spaniards coming thither.

Concerning the original of these People, there are several Opinions; for those who make them to be Extracted from the Jews, have no other testimony, but that they abtain from Swines-flesh; Thofe that take them for a People fled from the great Islands, Hispaniola, Jamaica, Cuba, and Porto Rico, to save themselves from the Spaniards Crueltie, dispute against a known Truth; for who knows not, that the Indians who escap'd the Spanish Slaughter, have not the least resemblance either in Language or Customs with the Cannibals? nay more, they are mortal Enemies to them; besides that, the Cannibals at that time when Columbus first arriv'd, possefl'd those Places which they now inhabit. The Cannibals seem ignorant themselves in this Point: for they affirm their Extraction to be from Guyana, where the Calibites speak the same Language, and also observe the same Customs and Religion: The occasion of their removal they ascribe to the King of the Avogizes, who made all the adjacent People to his Court, Slaves to him; which to prevent, they first went to Tabago, where being strengthened by new Comers, they resolv'd to take revenge on him; and Engaging with him in a Field-Battel, utterly defeated him, and part of none of his Party alive, except the Women; whence it proceeds, that the Avogizes Women have the same Customs and Language with the Caribbeans. But Bristock, an English Knight, by long Conversation experience'd in the several American Tongues, faith, That the Caribbeans have their Original from the Apalachites in Florida; who being a valiant People, destroy'd many of the Natives that inhabited Mexico, that so they might Settle themselves there; to which purpose they built a City like that of Apalache. The Apalachites inhabiting Northerly, and spred over a barren and Rocky Country, made use of this opportunity to conquer their defeated Habitation: for on a set-time they let fire to all the Villages, and spoil'd all things which they could not carry away with them, that not the least hopes of returning might be left them; therefore they must either Conquer or Die: which resolv'd
of all'd upon, they fell unawares on the Apalachites, whose King had nevertheless so much time, that he Guarded the usual Paths which directed to the inhabited Villages: But the Apalachites leaving the common Roads, climb'd over almost inaccessible Mountains, and so got into the heart of the Country, which exceedingly amaz'd Paracosms (for so that King was call'd) who lay Encamp'd at the foot of a Mountain, whether the Van of the Apalachites were marching: Whereupon he sending his Army to meet them, they began a most fierce Combat; when at last both Parties wanting Arrows, they fell upon one another with Clubs till the Night part'd them; and neither could boast of the Victory. At last this War was turn'd into Peace, and the Articles of Agreement were thus, viz.

That the Cofachites should for ever possess the Province Amana, and become one People with the Apalachites, and acknowledge the King of Apalache for their Chief Governor.

After which the Cofachites were call'd Caribbeans, which signifies Accidental Subjects: But these two sorts of People did not long agree; for the Caribbeans slighted the Customs of the Apalachites in the Country Bemaria, and at the same time threw off their Obedience to the King, chose one Ragazin for their Governor; & did the neighboring Province Atalia, and at last def't the Apalachites; who inferior to them in Strength, and making use of subtility, suppos'd it the best way to make a Difference amongst the Caribbeans themselves; to which the Priests freely proffer'd their Assistance, and their Design prov'd also successful, for the Caribbeans regarding no Religion (only dreading the angry Deity Mahouga) the Apaliche Priests call'd Jana's, took great pains to persuade their Neighbors to the worshipping of the Sun, which so prevail'd, that a considerable number of them ascending the Mountain Olains, fell down and shew'd Reverence to that celestial Luminary; which Opportunity Paracosms taking notice of, caus'd the Jana's to publish amongst the Caribbeans, That in the beginning of the Mauirim, or March, a great Feast should be held in Reverence to the Sun on the usual place, where the King would Entertain, and gave Presents to all the Worshippers thereof.

How great a Religion this Sun-worship was antiently amongst the Gentiles, appears from the Writings of several authentick Authors.

The Syrians, whose Idolatry the Israelites learn'd, honor the Sun by the Name of Babal, which signifies Lord.

The Phenicians call'd the Sun Beelsamen, Lord of the Heavens; and the Citizens of Accaron, Baal-zebahim, Lord of the Offerings; but God chang'd the Name to Baal-zebub, or The God of Flames.

Melchis, or Milcon also signifi'd the Sun amongst the Ammonites; in honor of which Children were carried by their Parents, and set between two great Fires, or elfe by the Priests, upon pretence of cleansing them; and sometimes parch'd to death in an Image of Melchis, which had seven Cavities heated like Ovens.

Macrobius tells us, That the Assyrians ascrib'd the supreme Command to the Sun, under the Name of Adad, and to the Godd's Adargets, representing the Image of Adad with Beams darting downwards, and Adargets with those that shot upwards; by the first they expres'sd, that the celestial Power confined in Sun-beams, which shooting downwards warm the Earth; and by the second, that all things by those Beams were cherish'd and enliv'n'd.

The most magnificent Temple which Syria Apanis boast'd, was Consecrated to the Sun.

The Arabians Offer'd Myrrha on the tops of their Houses at the Rising of the Sun; who also was the Sham and Baal-Pear of the Mosibites and Medians.

Near the Red-Sea, lay the City Bafamfa, which signifies The House of the Sun, famous for the many Feasts which were kept there in honor of this Planet. The
AMERICA.

The Persians accounted this Luminary for the greatest God, and Consecrated to him three several Feasts, looking upon him as the Author of Wisdom, Goodness, and Power, and is express'd by three several Operations, viz.: Warmth, Light, and Distinction of Time.

The Egyptians honor'd the Name of Obris, whom some will have to be the same with Mystrum, or Chamjzon, the first Founder of the Egyptian Monarchy.

In Egypt also was famous amongst many other Cities that of Heloipiis, which signifies the City of the Sun, where the Ox Mivis or Menapi being Consecrated to the Sun, was religiously worshipp'd. This Image is describ'd by Macrobius.

The Moors made likewise great Offerings to their Assabin, for to they call'd the Sun; and allow'd their Priests only the privilege to gather Cinnamon, and that with this Proviso, That they should first Offer forty four Oxen, besides Goats and Rams, to Assabin, nor should fetch the least Stick of Cinnamon either immediately before or after Sun-set: The Cinnamon brought altogether, was to be divided by the Chief Priest, and the rest having each their Portion assign'd, which remain'd was sold to the Merchants, to Trade with into Foreign Parts; but if the Sun chanc'd to set the Cinnamon on fire, then they concluded they had not dealt justly.

The Greeks, according to Proclus, hung a long Pole full of Laurel and Flowers on every seventh day of the Moneth; on the top thereof was a great Copper Ball, from which hung others still lesser and lesser; about the middle of the Pole hung three hundred and sixty five Garlands; and the bottom thereof was cover'd with a Woman's Garment of a yellow colour: The uppermost Ball represent'd the Sun, the lesser the Stars, and the Garlands the Days of the Year, in which manner they worshipp'd the Sun.

The same Sacrament the Mussulmays and old Germans ador'd in ancient times; and to this day the People in the utmost North, Japamans, Chinese, Tartars, and the East and West-Indians, pay their chief Devotions to the Sun; the reason of which may easily be made out: for it is the common Opinion of all Men, as Aristotle, Simplicius, Theophrastus, and other Heathens witness, to place the Omnipotent Godhead in the uppermost Orb, which surrounds the Earth; wherefore those that Pray, lift up their Hands to Heaven: but because the rest of the Heavens appear not so replethend as the Sun, therefore they take the Sun for the only chief God, whether for its exceeding luster and glory, or for its being a hundred and sixty times bigger than the Earth; or for its swift Course, in running ten hundred thousand Leagues in a short a time, or for its nourishing and genial Warmth, which gives Life to all things, or for its necessary Light, by which all worldly Affairs are manage'd, or for its measuring the Days by its moving from East to West, and the Seasons of the Year, by a Course from the South to the North; for all these excellent qualities being well consider'd by the most Learned Heathens, or observ'd by those of lesser Judgment, have made them swear that Honor to a visible Creature, which is only due to the invisible Creator.

Thefe and such like Arguments induc'd the Caribbeans to go to Bemarin, where the Feast of the Sun was to be kept.

The Apalachite King also Entertain'd the neighboring People exceeding courteously in the chief City Melilot; from whence he was carried in a Chair on the Shoulders of four Men, with sound of Pipes and Drums, and an innumerable company of People, to the top of the Mountain Olamni, where he made a fately Offering to the Sun, and afterwards Feasting and Carressing the Caribbeans with Gifts, he sent them home all well contented and satisfi'd with their Entertainment. This Cu-
Part of the Caribbeeans took from the Apalaches.

They people the Caribbeeans and grew powerful.

Original of the Apalaches.

Their Opinions in Religion.

The Bird Ta-nazuli.

Description of the Mountain Island.

From was yearly observ'd, when at last they began to neglect their Duty, wherefore Toltlabius refoily'd to proclaim War against the Caribbeeans, if they did not continue paying their Devotions to the Sun: which Injunction was differently receiv'd; some judg'd it to be inconsistent with their purchased Freedom, to receive Laws for Religion from a neighboring King, alledging, That if any Reverence was due to the Sun, it might as well be given on the Mountains of Amanu as within Toltlabi's Realm: others, who lov'd Peace, and had a zeal to the Olaimi-Religion, would not be against the Proposals, which occasion'd a Contention amongst themselves, and every one apply'd himself to those that were of his Opinion; nevertheless those that stood upon their Freedom, were of the greatest Party: wherefore the Worshippers of the Sun clos'd with the Apalaches, who going out with their Forces, routed the other Party, and receiv'd those Caribbeeans that joynd with them in Religion into Co-partnership also in the Government, so that they united into one People: But those that were routed rally'd again, and not without thousands of Inconveniences made towards the Sea, where Embarquing, they Landed first on the Isle Ayay, now call'd Sanfel Cux, and in process of time grew very populous; for from thence by degrees have been peopled all the little Isles which lie before America, and grew so considerable, that they were fogg'd to by the Calabites, to side with them against the Areves, Yaos, Sappoyar, and other People their Enemies on the Main Continent, where they have taken many large Countreyes, extending as far as Brafitte, where they are greatly respected and fear'd for their Valor and Policy in warlike Affairs.

But because the memory of antique Passages hath no firm foundation in Books, having been only taken by Tradition from time to time amongst the Caribbeeans, therefore we cannot give you an exact Account of their Removal from Florida; yet it remains without contradiction, that it hapned above five Ages before the Spaniards Arrival, which time at least was requir'd to the peopling of so many great Islands and Kingdoms.

Concerning the Original of the Apalaches, they themselves affirm, that they cannot certainly determine the time when they first Setled here: however, they report that they have peopled the Provinces Bemarin, Amana, and Matika, many Ages ago. That they are Extracted from the Tartars, appears not obfcutely, by their Customs, Idolatry, and Language. Amongst other things, they have learn'd from the Tartars religiouly to remember those Kings which perform'd any grand Exploits in the Service of their Country. Amongst others, the Apalaches make mention in their Areitos, or Songs, of a King call'd Mofde, eminent for his noble Achievements, and prudent Governing of his People.

They believe that the Sun many Ages since was Darken'd or Ecclips'd twenty-four Hours together, during which time the Waters over-flow'd the highest Mountains, except that of Olaimi, where there flood a flately Temple, built in honor of the Sun; in which all those that fled thither were preferv'd, and dispers'd afterwards into several parts to re-people the World as soon as the Waters were abated, and the Sun appear'd in his full lustre again: whereupon they imagine, that to this day their Bird Tonazuli, at the Rising of the Sun congratulates his appearance with great joy, and at his Setting, requests his speedy return from under the Horizon.

The Tonazuli is a Bird like a Bull Finch, onely its Belly and Wings are of a Golden colour, the Back and Tail blue, its Head adorn'd with divers colour'd Feathers, its Claws and Bill like Ivory, and it Sings like a Nightingale.

As for Olaimi, it is a perfect round Mountain; the Way which leads to the top thereof...
Chap. XVIII. **AMERICA.**

thereof runs winding two Leagues long, and is planted on each side with Cedar, Pine-Trees, Ciftins, and Saffrass, the top of which is a fair Plain a League in circumference; Eastward from it is a Cavern, to which Nature hath afforded more Convenience and Ornament than could be given to the same by Art and Charges: The first Beams of the Rising Sun dart into the Cavern, which being oval, appears like a white Vault, which on the top hath a great Hole for the Air to go in at: The bottom is like the purest Marble; on the Floor stands a Stone Cistern to receive the Moisture which drops out of the Rocks. Whilest the People Danc'd on the fore-mention'd Plain, Feasted and Sung, the Priests Offer'd Myrthes, and all manner of Perfumes.

The Clothes which the Rich gave to the Sun, were distributed amongst the Poor, according to a Lift which was taken of them.

But in procee's of time the Apalachites have most of them embrac'd the Christian Religion; the first occasion thereof was this: When John Ribaull had brought a French Colony to Florida, and gain'd a Fort, (which from King Charles the Ninth he nam'd Charles-Fort) the Spanish Commander Peter Melendez fell unawares upon him, and so far impower'd his Men, who had of themselves a natural hatred against the French, that they fpar'd neither Man, Woman, nor Child; only ten Men escaping the bloody Banquet, fled to the Floridan King Zaturiona, where they were kindly receiv'd, and hearing of the Civility and Power of the King of Apalache, de'r'd that they might go thither; which Zaturiona not only granted, but also furnish'd the seven French-men (for the other three were dead) with good Guides, who visit'd Zaturiona's Relations, living in several Villages along the pleasant Stream Selay, over which they pass'd on large Boughs artificially joyn'd together, and travell'd through Woods, Marshes, and Mountains full of ravenous Beasts, and sometimes Engag'd with the fragling Floridans which lurk'd in the most defolate Wilderne's: having travell'd two days Journey, by an Ambuscade of King Timago's People, they loft two of their Guides, the rest being dangerously wounded, and through many Difficulties came at last to Avoka, and from thence to the King of Apalache's Court, who receiv'd them all with great kindness: Whereupon they resolv'd, being induc'd thereto by their courteous Reception, fruitfulness of the Soil, and good Customs of the Inhabitants, to Settle themselves, all but two of them, who return'd with the Guides to Zaturiona: the rest that stay'd there, endeavor'd by promulgating the Christian Religion, to reduce the Pagans to the belief thereof; which many embrac'd, and also learn'd the French Tongue, notwithstanding their Priests fauva's oppo'st the fame. After the death of the French (which the Apalachites much bemoan'd) their Idolatry had like to have gotten the upper hand again, had not some English Families, fleeing from Virginia from the Cruelties of the Indians, and not able to reach New England, Landed at Florida, with intention at first onely to get fresh Provisions, but Rowing up the River Selay, and taken with the pleasantness, they chose the Province Bemarai for their Habitation, where accordingly they Setled Anno 1651. Amongst them were severall Learned Men, which fo effectually perfwaded the Heathens to embrace the Christian Faith, that in twenty eight years time the King and most of his Nobles were Converted and Baptiz'd by them in the chief City Melia't.

But since our Design is onely to give you an exact Account of those People which inhabit the Islands lying before America, it is sufficient that we have shew'd you how they are Extracted from the Caribbeans and the Apalaches.

As to the Customs of the Caribbeans, since they are very much alter'd by their long Conversation with the Europeans, we cannot better inform our selves of their ancient
antient Customs, than from thofe which to this day are obferv'd on St. Vincent, and
some parts of the Main Continent, where the Caribbeans have learn'd nothing from
any Strangers.

The Caribbeans are a well proportion'd People with broad Shoulders and Hips,
round Faces, without Beards, wide Mouthes, white Teeth, little Eyes like the Tar-
tars, Feet fo hard, that they are almoft Dart-proof, flat Nofes, fo made by fqueezing
them down in their Infancy, and long black Hair. There are few or no deformed
People amongft them ; all of them go stark naked, and paint their Bodies Red
with a Plant call'd Rocou, and Oyl ; about their Eyes they draw a black Circle
with the Juice of the Apple Junipra. This their Painting ferves them both as an
Ornament, and to make them strong. Others anoint their Bodies all over with a
gleyw Stuff, on which they flick all forts of Feathers. Others ufe Gum and Flowers.
Moreover, they adorn their Head with Plumes, their Ears with Fifth-bones, or
Scales of the Cares, or pieces of Cryftal, which they alfo hang in their Lips and
Nofes. The Men wear Armlets near their Shoulders, and the Women about their
Writs ; about their Legs they tie for Garters Strings of Seeds : others take a pride
in wearing the Bones of their flain Enemies, and the Teeth of the Agouty, Tygers,
wild Cats, or Cockle-shells. When they appear in greatest Luflre, then they
wear Armlets under their Arm-pits, and alfo Scarfs of Feathers, which either hang
over their Shoulders, or are girt about their Middle, fo that one end thereof tou-
ches their Thighs. They fet an exceeding value on certain pieces of Copper call'd
Caracols, the leaf of which they hang in their Ears, and the bigget before their
Breasts : and becaufe they are fetch'd out of the Province of the Arovages their Ene-
mies, they are esteem'd as Marks of true Valor, and he is highly esteem'd that
wears them.

The Caribbeans which Converse with the Europeans, fpeak two forts of Langua-
ges, the oldeft of which is smooth, acceptable, fluent, and for the moft part spoke
between the Lips. According to the feveral pronunciations one word hath divers
fignifications : but the Mystery of their oldeft Language they will difcover to
none. It is very obfervable, that the Caribbean Men fpeak feveral words, which
though the Women understand, yet are never f spoken by them : and alfo the antient
People ufe feveral Sayings which the younger never mention, and the Youths fuch
liwife as are never f spoken by the Antient, which being spoken apart by each in
the time of War, are underftood by none but their Soldiers, that fo their Designs
may the better be kept secret. But their mix'd Language hath many of the Euro-
pean words, efpecially of the Spanifh, which they fpeak whenfoe'er they converse
with the Europeans. Moreover, though the Caribbeans on the leafe occasion laugh
aloud, yet they are of a dull Spirit, stubborn, and nothing to be got out of them
but by fair means.

Their Employment is Hunting, Flying, Tilling, Building of Houfes, and the
like. Theft is not known amongst them, fo that no Man is fufpicious of his Neigh-
bor ; wherefore they leave their Huts open both Night and Day. They are alfo
feldom at Variance one with another, but generally Love always amongst them ; yet
if a Quarrel doth happen, then the injur'd Perfons revenges himfelf to the heighth.
Perfons that profefs Caffity are much honor'd amongst them ; and here Youth
bears great refept to Age.

They are alfo very ignorant in natural Knowledge, infomuch that when the
Moon is Eclip'd, they fuppofe that it is devour'd by Maboya ; and wherefoe'er
they fnell any ill fcent, they believe the Devil to be not far from thence, Gun-
powder they fuppofe to be a Grain, and are very fearful of Fire-Arms : Though
they
they have many brave Salt-pits; yet they use no Salt, nor eat any Swine's flesh, though all those Islands abound in that sort of Animal, fearing that if they should eat the same, it would cause them to have little Eyes, which they account very homely, though it is a property generally incident to them; neither will they eat any Tortoise, because they would not be so gross as that Creature. Lastly, they know no greater Number than they reckon on their Fingers and Toes, for what exceeds twenty is to them innumerable: They hold that good Spirits, whom they call Akamone, residing in Heaven, never trouble themselves with Earthly Affairs.

Their Offerings consist in Caffow and the first of their Fruits, which are set at the end of their Huts in Vessels on small Tables, cover'd with Leaves or Rushes, without uttering any Prayers; for they never Pray but in publick in company of the Boyez or Priests, and that either for revenge against Injuries, or for recovery from Sickness, or that they may know the Events of War, or for Protection against the Maboya.

Each Boye hath his peculiar God, which, Singing with a conjuring Verse, he calls to him in the Night whilst he Smokes a Pipe of Tobacco.

Some have been of Opinion, that this Conceit of the Maboya proceeds from the phlegmatick Nature of the Caribbeaus, who in their melancholy Dreams imagine themselves to be grievously beaten by the said Maboya. But there are sufficient testimonies to prove, that these Heathens have often really suffer'd much by this Maboya, often appearing to them in such horrid Shapes, that the poor Caribbeaus would sweat and quake at the sight thereof, and inflicting such sad Pinches and bloody Stripes all over their Bodies, that they liv'd in perpetual fear of this evil Spirit: and yet notwithstanding these cruel Sufferings, they shew'd no manner of Worship to Maboya, only they believ'd that they had done safe, when they wore little Pictures about their Necks, made resembling the Shapes in which Maboya appear'd to them; but their best Remedy was to flye to the Christians.

They believe their Boyez able to resolve any Question they ask of them; particularly, when any one dies, the nearest ally'd to him asks the Boye this Question, Who is the occasion of his Death? to which if the Boye names any one, they never rest till they have despatch'd him to the other World. Concerning their original brutifh way of living, they give much credit to an ancient Fable, which is to this effect:

The most antient Caribbeaus, living under no other Roof than the Canopy of Heaven, fed on nothing but what the Fields naturally produc'd, which salvage Life on an old Man much beamao'd. when a certain Deity clad in white Apparel descending down on the Earth, said, That he would have come sooner to have bid them the way of a civil Life, had they request'd it before. Moreover, the Angel shew'd them a place along the Shore where there lay sharp-cutting Stones, with which he told them they might cut down Trees, and with the Timber build themselves Houses, and cover them with the Leaves of the Palm Tree to keep out the Rain; which said, he broke his Staff into three pieces, which being Planted, soon after produc'd the Root Manioc, which stamp'd and dry'd, made good Bread.

The Caribbeaus have also a strange Opinion concerning the Soul, that is to say, That every one hath as many Souls as he hath Pulses, but the chiefest is the Heart itself, which after Death removes with Jeezi, (that is every ones peculiar God or Genius) to the Company of the other Deities, where they live after the same manner as here on Earth; wherefore those that are Persons of Quality give Charge at their Deaths, that their Servants may be kill'd and buried with them, that so they may serve them in the other World; That the other Souls, which are the Pulses, are
are of two sorts, whereof the first call'd Maboy's, range through Woods and Wildernesses; and the other call'd The Onnekoons, reside along the Sea, and over-turn the Ships that Sail by. That the Souls of Heroes remove to pleasant and delightful Islands, where they are serv'd by the Arovages; That Cowards at their Death go behind a high Mountain, where they become perpetual Slaves to the Arovages.

So soon as they hear a clap of Thunder they run into their Huts, and place themselves on little Stools round the Fire, cover their Faces, and laying their Heads on their Knees, make a doleful noise, as supposing that Maboy is exceedingly enraged against them.

Their Huts, for the most part built near Rivers and Streams, are of an oval fashion, their Roofs made of Palm-Tree Leaves or Sugar-Canes, the Walls nothing but Bougfs set in the Ground and pleated together, and the Floor of sifted Earth or Sand, rammed in and kept very even and smooth; besides a Room wherein they Sleep and Entertain their Friends, they have also a Kitchin to dress their Meat, and a place to lay their Bowes, Arrows, Clubs, and the like, in; they use Mats in stead of Walls, to separate one Apartment from the other. Their Household-stuff is little; the richest of them have Hammocks in stead of Beds; the meaner use Sticks laid crofs one another, and cover'd with the Leaves of the Banana-tree, made fast at the four corners with Cords. Hollow Calabashes, and Earthen Ware call'd Camis, serve them for their Kitchin Utensils. In the little Camis they prepare their Tumalis, or Pepper-pottage, and in the biggest their Liquor Ovicou.

Their Cleanliness may appear by this, that when they go to eafe Nature, they make a Hole in the Ground with a Stick, and after they have done, fill it up again, burying their Excrement that it may not be seen.

Round about their Huts feed many Hens and Turkies, which they breed not so much for their own use, as to exchange for Iron.

They remove their Habitations very often, either out of fear of being haunted by the Ghost of some deceasd Perion, or to avoid some Smell which they find noisome and offensive, or because their Hut hath been set on fire by Lightning.

The Women are always employ'd to keep their Families in good order, to prepare Venison and Fih for the Mens Tables, to spin Cotton, Comb their Husbands, and paint them Red. The Men spend their time in the Wars, Hunting or Fishing. They have also learn'd of the Europeans to burn Train-Oyl in Lamps in the Night, when as before they burnt Twigs of a gummy Shrub before mention'd, which for that reason the Hollander's call'd Candle-Wood. Each hath a little Stool, and a Table call'd Munstoun, on which he eats his Meat when he pleaseth, having no flat-Meals. The broad Banana-Leaves serve them for Napkins and Table-clothes. Their chiefest Dainty is Crabs roast'd in the Shell with the Juice of Lemmon and Pyman. At great Feasts they dress their Meat with the Fat of their Enemies, being the Arovages. Their usual Drink is Mabky, made of Potato's, which refreshes, and is good against the Plague; also another Liquor call'd Oke, made of Sleep'd Caffador, and is like Beer in taste, strength, and colour. They also by making an incision into the Palm-Trees, tap a Liquor from the same in Calabashers, like White-wine. They use little of the Drink Confeon, because it swells the Body, notwithstanding it is pleasing to the Palate; But the Liquor which is most esteemed amongst them, is the Wine made of the Sugar-Canes, which are squeez'd in Mills made for that purpose, and then boil'd in great Kettles. During the dressing of their Meat (which being done leisurely, is sometimes half a day before it is ready), they Sing, and Dance to the Time, which one keeps with a Calabash fill'd full of little Stones, in which
which they believe the greatest happiness they shall enjoy in the other World consists: But the Caribbeaus never Dance more antique than when they meet in the Carbet, which is a publick House of Entertainment; whether the Women carry a Drink made of Coffee, which makes Drunk as soon as Wine: The Men bring Fih and Hedge-hogs; all of them painted with Roses, and adorn'd with Plumes of Feathers, commit all manner of Debaucheries. At other times they also keep Feast-days, which is either when they are prefer'd to some Office, or Place of Honor, or when they have defeated their Enemies, or when they mourn for the Death of one of their nearest Relations.

Their Boats, which they call Peruquo's, are made of single hollow Trees, full of Benches, and painted with several strange Shapes, and are able each to carry fifty or sixty Men.

Their Musical Instruments in which they take most delight, are Drums, Strings of Silk-grafs stretched upon Calabashes, and Flutes made of the Bones of their Enemies.

They keep Watches on high Hills, to descrie the Ships off at Sea, and no sooner have they esp'y'd one, but they immediately give notice to one another; whereupon those that are most valiant put off to Sea in their Canoes, and know by the Languages to distinguish between a Spaniard, French-man, English-man, and Hollander. If they find that 'tis an Enemy who Lands on their Coasts, they guard all their Avenues, lie in Ambuscades, and gather together in by-ways, and where they see any advantage they shoot thousands of Arrows; which done, they fall in amongst them with great Clubs: but if they chance to be defeated, then they lurk behind Bramble-bushes, or climb up inaccessible Mountains, or else, if near the Sea, they save themselves by Diving and Swimming under Water above two hundred Paces before they appear again; and if a Party of them chance to meet together afterwards, they venture a second Engagement: But if those that come on their Coasts are Friends, they Swim, or go in their Boats to meet them, climb up their Ships, and carry the Sea-men on their Shoulders a-shore, where the Carque in the Name of the whole Island bids them welcome, and conducts them to the Carbet, where an ancient Man salutes the old Men, and a Youth the young Men; after which asking their Names, the Couban calls himself by that Name ever after; and desigts the Strangers to accept of his Name; during which their changing of Names they use many Ceremonies of Friendship: this done, they proffer them Cotton Hammocks to rest themselves in, and pleasant Fruit to eat, till they have prepar'd other Meat; which is no sooner Ready, but a little Table is set before every one of them, and a Dish of Meat consisting of boy'd Hedge-hogs, boy'd Crabs, and Pot-herbs; which if the Guests do not eat heartily, or drink up all the Liquor which they give them, they take it as a great Affront; but if they eat and drink heartily, they take it kindly, and shew great favor at their departure.

Their Offices of Government have been usually three; the meanest belong'd to the Tioubouhilauhe, whose Place was to Govern over the Carbet, a House where Strangers were entertained, Matters of War disputed of, and publick Feasts kept. Tioubouhilauhe Commanded the Canoes in the time of War, that is, under the Nahohe, who Commanded the whole Fleece: But the chiefest Officer of all was the Ouboutingi, to which degree of Honor none attain'd, unless he had kill'd several Arrows, or at least a Governor.

When the Caribbeaus drew all their Forces out of the Islands to a Battel, then they chose one out of the Ouboutingi, who during their March Commanded the Army as General, which his Office ended with the War, and extended no farther than his own Island.
Their warlike Consultations were no les observable, for the *Ouboutos* appointed a Day, on which the Islanders met at a Feaste in the *Carbet*, whether they accordingly came all at the time appointed, and having Eat and Drunk, and Danc'd a considerable time, an antient Woman with tears in her Eyes, and mournful Countenance, enter'd the *Carbet*, and defir'd Audience; which being granted her, and every one silent, she began to relate the Damages which from antient times the *Arovages* did to the *Caribbeans*; and that in the last Engagement so many valiant Men were slaine, and afterwards devour'd by them; therefore it would be a shame not to take Revenge; which being seconded by the *Ouboutos*, put Valor into the Hearts of all that were present: Whereupon the following day Messengers were sent to the other Islands to acquaint them with their Intentions, that they might prepare their Clubs, make sharp and poiyon their Arrows, String their Bows, prepare Provisions, and fit out their Canos: They poyson'd their Arrows with the Juice of *Mancheillo's*, which made the least Wound mortal. Their Provisions and Arms they laid up in their Canos, so to preserve their Periago's (which are Boats that can carry fifty Men), if they should chance to over-set, which often happen'd, though they were soon turn'd up again. They went from one Island to another, where they not onely flor'd themselves with fresh Provisions, but increas'd their Fleet with new Affiliants; with which approaching the Main, they hal'd their Boats aforeshore in the Evening, and driving four Stakes into the Ground under the Trees, made fast their Hammocks to the same, in which they slept till Mid-night, and then fell on their Enemies, but if discover'd by them, they retreated to their Boats and return'd home; but if they were not discover'd, they fell upon the Huts of the *Arovages*; who resiling, they shot Arrows with burning Cotton into them, and so setting them on fire, forc'd the *Arovages* to venture a Battel in the open Field; where having spent all their Arrows, they Engag'd one another with great Clubs, with which at one Blow they broke either Arms or Legs, or knock'd out their Brains. If the *Caribbeans* chance'd to be defeated, then those that remain'd of their Party made a lamentable noise, howling for those that were kill'd, and mix'd their Tears with the Blood of their slain Friends, whom not without the greatest danger they fetch'd from amongst their Enemies, and carried them aboard of their Boats: But returning Victors, they were wont to infulit over their Prisoners with all the bitter Taunts imaginable, and then taking advantage of those sharp Upbraidings which their cruel usage extorted from them, to put them to death with most humane Tortures, and then to Feaste themselves upon their mangled Bodies, all claiming a Right to their several Prisoners, as to so many Beasts appointed to the Slaughter; But of late Ages they have contented themselves to dispatch them speedily with their Clubs, and so assign them to their Shambles.

As the *Arovages* had been formerly, so the Spaniards at length became the Object of the *Caribbeans* irreconcilable Hatred, insomuch that oft-times being Invaded by them, they gave them such rough Entertainment, that they were glad to fave themselves by flight; for the *Caribbeans* not regarding their Guns, press'd upon them, and many times took Vessels richly laden from them, till of late years that a Peace hath been concluded between them; wherein nevertheless those of the *Caribbeans* refuse to be concern'd, that inhabit St. Domingo and St. Vincent, who cannot to this day forget the cruel Outrages committed by the Spaniards.

To come to their Marriages, they were allow'd as many Wives as they pleas'd to have, insomuch that their Governors were in esteem according to the number of their Wives; nor were degrees of Consanguinity so regarded, but that an Uncle might take his Niece; whom he no sooner had carried to his House, but the Marriage
riage was finish'd. They seldom Divorc'd their Wives after they had bore them Children, but otherwise the Man would break the Bond of Matrimony when he pleas'd. A young Man that had no Relation might court a Stranger, and if her Parents allow'd of it, the Match was made. One that had behav'd himself valiantly against the Arovages was sure of several good Matches, for he was refus'd by none whom he Courted; and the abundance of Wives was the greatest testimony of their Valor. Each Wife had a peculiar Dwelling, so to prevent all Diffentions: So soon as one of them was with Child, her Husband Lay not with her till after Delivery. If any Woman committed Adultery, her Husband was permitted to knock out her Brains, or rip open her Belly; which done, he acquainted her Father with the Deed, who return'd him thanks for the fame. Murderers were either burnt or cut in pieces. Children were born here with little trouble, for the Women were no sooner Deliver'd, but they carried the Infant to wath at the next Brook; which done they return'd home to their Houfhold Labor, whilst the Man on the contrary kept his Bed, and ate nothing but a piece of Cassava Bread, which he hollow'd out in the middle, and left the edges till the Feast, which was kept at the Naming of the Child: Moreover, he fed on all manner of Dainties for a whole year after. But this Custom was observ'd only at the Birth of the first Son, at which time they scratch'd the Father's Shoulder with a sharp Curry-combe, at which if he flinched not, it was accounted a good Omen of the Child's future Valor. At fifteen days old they made Holes in the Child's Ears, Lips, and Noftrils, through which they put a String for the tying on of what-ever Ornamentals. With the like Ceremonies the Child receiv'd a Name, taken from his Predecessors, Trees, Filhes, or some remarkable Passages during the Mothers bearing of the Infant in her Womb, or of the Father's Lying-in: But this Name was chang'd fo soon as they went to War, or kill'd a Commander of the Arovages, whose Name they exchang'd for their own: After which the Mothers took special care in bringing them up, and at fix Moneths the Children were able to run alone: When they attain'd to the age of two years, they cut off their Hair, at a great Feast made for that purfale; from which time forward they exercis'd them in Shooting with Bows and Arrows; to which purfale they hung up pieces of Meat for them to shoot at, which they must either hit down, or Fafit.

Their Ceremonies to make Soldiers were very strange, viz. The Father conduct'd his Son to the Caribe, where he told him the Duties of a Soldier, beat him with a Bird of prey, call'd Mano-feuric, till he had bruiz'd the Head of the Bird, and scratch'd his whole Body all over with a Curry-combe till the Blood came, and then put Lemmon Juice into the Wounds, afterwards put him in a Hammock, and hung him up for several days without giving him any Meat; all which Torments and Trials if he endure'd with patience, then he was accounted a good and approved Soldier.

Few bred up their Children to be Boyez, or Priests; yet those that were brought up to it, abtain'd from certain Food from their Infancy, and before they could be receiv'd into the Order of Priesthood, they were forc'd to draw Blood from every part of their Bodies.

The Caribbeans attain to an exceeding great Age: Charles de Rotchfort witnessteth, That in his time there liv'd Men who remembred the first Arrival of the Spaniards under the Command of Chriftopher Columbus, which consider'd, they could not be less than each of them a hundred and fifty years old. Many Women also were found there, who bare Children after they were eighty years of age: yet neverthelesse they are not free from Sicknesstes and Diftemperst, which cannot juftly be attributed to the Climate,
Climate, that being extraordinary healthful, but to their ill Diet. Besides the trouble from Disease call’d Pyans, which makes their Bodies live full of great Knots, they have been much troubled with pestifilential Sores, occasion’d by the eating of Crabs, and poiysonous Tortoise’s, Lamanitus, and Hedg-hogs. Against which Evils they wanted not Medicines, consisting of Herbs, Roots, Gums, and Oyl. The bitter Bark of the Chipion-Tree, steep’d in Water, and mix’d with Lantus, hath a sovereign operation. The like vertue is in the Juice of the Myby-Tree, which they us’d to take inwardly: and for outward Means, they us’d a Salve made of burnt Canes, temper’d with a Water press’d out of a certain Tree. To draw the Matter out of the Sores, they us’d the Juice of Juniper. Letting Blood was never customary amongst them, but to cut and scratch the foe part was to them in flead of Phlebotomy. But if all the fore-mention’d Medicines would not help them, they fled for aid to the Boyes, who immediately order’d the Hut wherein the Patient lay to be made clean, the Table call’d Matoutou to be over-spread with Coffee, Onyco, and Garden Fruits, for an Offering to the evil Spirit Maboya, and as many Stools to be place’d about the same as there were People to be present at the Ceremony; and after that all the Fire and Candles were put out, the Boye enter’d into the Hut about Midnight with a Lighted Roll of Tobacco, then muttering some words to himself, stamp’d with his left Foot, and blew the Smaok of the Tobacco up into the Air, which done, and tearing the Tobacco in pieces, he threw the Smaok over the Hut, and call’d up his Spirit, who shaking the Roof of the House, made a terrible noise; then the Boye drew near to the Patient, suck’d his Sores, and anointed them with the Juice of Juniper; after which if the sick Person recover’d, he made a great Feast, and an Offering to the aforesaid Spirit: But if the Diftemper were mortal, then the Boye inform’d the Patient’s Relations, That his Spirit had compassion upon the Sick, and was resolv’d to carry him above the Stars, to accompany the other Gods which refide there.

Thus much in general of the Inhabitants of the Isles that lie before Northern America; it will next be requisite to give you an Account of them in particular.

There are generally reckon’d of these Islands twenty eight by Name, though there are many more in number; for besides that there are a multitude of small obfcuré Islands that are not nam’d, there are of the more considerable sometimes two or three that go under one Name; the twenty eight are these following: Anegada, Sombrero, Las Virgenes, Anguilla, Saba, St. Crux, St. Martin, St. Bartholomew, Barboutos or Barbonde, Rotonda, Nevis, Eufathius, Antego, Montserrat, Guadalupe, Desedo, Marigalanta, Todos Saníos, De Ave, Dominico, Martinengo, St. Lucia, Barbados, St. Vincent, Bickia, Granada, Takago, St. Christopher.

Sect. II.

Anegada and Sombrero.

Towards the North-East of Porto Rico, at eighteen Degrees and thirteen Minutes, lies Anegada, seven Leagues long, surrounded with Shoals and Banks, as also the neighboring Sombrero, being in the same Latitude with the other, and so call’d by the Spaniard, because it appears like a Hat: Both of them being uninhabited, harbor abundance of Birds, amongst which is the Mauqueney, a little Eagle, and the remarkable Colby, whose Body being a little bigger than a Wren, is adorn’d with divers colour’d Feathers, resembling a Rain-bowe; about its Neck is a Carbuncle red Circle; the Belly and ends of the Feathers are of a Golden
Golden colour, the Sides of an Emerald green, the Bill and Legs black like polished Ebony, the Eyes glittering like Diamonds, on the Head a curious green cuf of Feathers: the Cocks far exceed the Hens in beauty; they fly (swifter than any Bird whatsoever, and the fluttering of their Wings makes a noise like a Whirlwind: they live upon the Juice of Flowers, and especially of Cotton-Flowers; they smell like Amber, and build their Nests amongst the thick Leaves of a little Bough, where they cannot easily be found; the Nest itself open towards the South, is curiously made of the fine Fibres of the Plant Pite, surrounded with pieces of Bark, and within fill'd with Cotton, downy Feathers, and Silk; the Eggs oval, are somewhat bigger than an ordinary Pearl.

In the Moneth of May that fort of Crabs call'd Painted Crabs (for some have Violet-colour'd Shells, others yellow, full of purple Specks, and others sawny, with red Streaks) come creeping down the Hills in good order, eat up all the Herbs and Plants, and go four times one after another into the Water to wash themselves, which done they return to the Woods; but the Females at a set-time betake themselves to the Sea, in which they Lay their Eggs, which afterwards being cast on the Saltshores, and warm'd by the Beams of the Sun, produce young Crabs in a short time, which no sooner come out of the Shell, but creep towards the Woods, when grown somewhat bigger they climb up the Rocks, where the old ones keep in vast multitudes, and flop upon the Entrance of their Holes in such a manner, that they cannot be found out, whilst they cast off their Shell, creeping out backward through an opening at the Tail scarce discernable; thus for a certain time they lie bare, and stripped of their Shells, being only cover'd with a thin Skin, which growing harder and harder, becomes at last a firm Shell like the former.

These Crabs are a wholesome Meat, unless they feed under the Manchestel-Trees, which commonly are poiyonous.

Sect. III.

Las Virgines.

Neat Sombrero, at eighteen Degrees, lie also the two Isles Las Virgines, surrounded by ten others (and flat Shelves), without Trees or fresh Water; but the Sea therabouts abounds with Fish, and chiefly with the Perroket, which hath Scales like a Carp, but greenish; the Eyes surrounded with Silver Circles shine very bright; in stead of Teeth they have strong Jaw-bones, wherewith they Grind all manner of Shell-fish, which are their Prey. These Fish have an excellent Rellish, and weigh generally twenty Pound.

Here is likewise great plenty of the Dorade, which is a very large Fish, and about five Foot long, full of little Scales, with a prickly Back, two Fins at the parting of the Head, and as many under the Belly. This Fish swimming very swift, oftentimes follows the Ships that Sail that way.

Sect. IV.

Anguilla.

Southward at eighteen Degrees and twenty Minutes, on this side of the Line, appears Anguilla, inhabited by the English, containing ten Leagues in length; it makes a pleasant Prospect, because of the many Junipas-Trees which grow upon
upon the same, whose Boughs bend towards the Ground; the Leaves are not un-

like those of an Oak; the Flowers both in smell and shape come near the *Narcissus*; the Wood firm and grey, may be neatly Plan'd; the Tree bears fresh Leaves every Moneth, and Fruit like Apples, which generally crack in their fall from the Tree, because of their thin Shell, as hath been already describ'd.

The *Oculeum*, or Vine, makes the Shore also very pleasant; the Leaf round and thick, hath a mixture of Red and Green; the Bark inclofeth a Violet-colour'd Wood; the Boughs whereof are loaded with Violet Grapes, which in Read of Ker-

nels contain hard Stones.

**Sect. V.**

**Saba.**

**W** Eastward from *Anguilla*, at seventeen Degrees and thirty five Minutes, lies *Saba*, which shews at a great distance like a Rock. The Inhabi-
tants of *St. Eustatius* going thither, found a pleasant Valley, able
to maintain many Families.

The Sea about this Island is so clear, that a Stone may be seen lying on the bot-
tom of it.

Amongst many other sorts of Fish, the *Bonito* is the most remarkable, which is
thick and fleshy, two Foot long, with a dark green Back, and white Belly without Scales; it devours greedily all manner of Carrion.

**Sect. VI.**

**St. Crux.**

**N** Orth of *St. Christopher*, in eighteen Degrees and some Minutes, lies *St. Crux*, which the *Caribbeans* who were beaten by the *Apalaches*, first inhabiting, call'd *Ayay*, where *Columbus* found great opposition, for the Women them-
selves shot poiyfous Arrows at the Spaniards; and before the Islanders submitted to them, they took many *Spanish* Ships, burnt their Villages, and slay'd many of the Spaniards alive. The Soil, though Hilly, is rich and fruitful.

The *English* Landing here Anno 1587. found a standing Pool, whose Water made
swell the Faces of those who wath'd themselves with the fame before Sun-rising, in such a manner, that they were not able to see for several days after; but they at
last found a Fountain of wholesome Water.

Since the Spaniards destroy'd the Inhabitants of this Island, it lay desolate for a
considerable time, notwithstanding it hath fourteen Leagues in length, and little
lefs in breadth, till at last the English and *Hollander* took possession of the same, each in a peculiar place; but not agreeing together, the *English* fell upon the *Hollander*, and made themselves Masters of the Island in 1649. and not long after they were serv'd in the same kind; for the Spaniard judging them to be weakened by the *Hollan-
ders* removing from the Island, set Sail thither from *Porto Rico*, burnt all the Houfes, flew the Inhabitants, and brought *St. Crux* again under the *Spanish* Government.

Mean while the Lord *Paimy* fitted out two Sail of *French* Ships, to drive the *Span-
iards* from *St. Crux*, and succeeded in his Enterprize; for the *Spaniards* immediately fled to their Ships, left at liberty some *Holland* Prisoners whom they had taken, and
the Island in posseffion of the *French*; who straightway sent Captain *Auger* thither
as Governor, who design'd to build a Fort to secure the Harbor, but died before the
same was finish'd. Poincy succeeding him, made an end of the Fort, and flo'd the
Island with Ammunition and Provision. The Cross-Church built there by the Or-
der, and at the Coft of a Company of Flushing in Holland, was deliver'd alfo to the
French.

The Trees which grow here are of four benefical kinds, serving for four feve-
ral ufc's; some yield Fruits of a pleasant taste, and wholifm to eat; some excellent
Medicines; others Timber for Building; and others Stuff to Dye with.

Granates, Oranges, Lemmons, and Citrons, grow better here than in any place
of the World.

But the Papaye-Tree is particularly worthy of our Description; It grows twenty
Foot high, without Boughs, thick and fhreight, hollow and fpungy within, bears
three-corner'd Leaves hanging on long Stalks, hollow in the middle, and of a Fing-
ers thicknesss, on the top round about the Body of the Tree, grow a fort of Fruit
like Quinces.

This fort of Papaye-Tree grows on moft of the Caribbe Islands; but the second
fort call'd Manna, is to be found no where but on St. Crux; it hath more Leaves
than the firft, and a yellow Bark with green Streaks, within full of round and
sharp biting Grains; the Blossoms thereof yield a sweet smell; every Moneth the
Tree produces new Fruit, not unlike a Womans Breast (whence it hath its Deno-
mination as before obferv'd,) and rellifhing incomparably well.

St. Martin

Not far from St. Crux, at eighteen Degrees and sixteen Minutes, lies St. Martin,
which hath seven Leagues in length and five in breadth, and is famous for
many excellent Salt-Mines; to preferv'e which, the Spaniards built a City
and Fort there.

Adrian Peter and Martyn Thyszon, fent with eleven Sail of Ships from the Texel
by the West-India Company, to Cruze for the Spanifh Plate-Fleet before the Flemifh
Ships, finding their labor loft, Steer'd to the Inlet of Todos los Santinf, where finding
no Enemies Ships, they Sail'd along the Coast of Pernambuck, and from thence
(meeting with no Prize) to the Caribbe Islands; and Landing on Granada, receiv'd
fome damage from the Inhabitants; thence going to Blanca, they got above a thou-
sand Goats, and ten thousand Lemmons from Hispaniola; near Cuba they were furpris'd with continual Thunder, Showers, and Storms, which forc'd them to ftand
to and again off the Island a considerable time, where they thought to wait for the
Spanifh Ships that came from Nombre de Dios; but being defeated of their aim; by
reafon that Fleet was re-infoc'd with a considerable Supply, they Pet Sail June
1629, towards the City and Fort of St. Martin, where coming to an Anchor they
found the Place in this condition: On the right side of the City glides a fleft-
Water River, with many meandering Streams from the Mountains; on the left side
the Ocean makes a great Opening or Bay, which for a little space growing narrow-
er, becomes as laft an Inland Lake; from the Countrey opposite to the City on the
other fide of the afore-mention'd Inlet, runs a Ridge of Hills toward the Sea; on the
utmoft Point thereof stands a square Fort, defended from the force of the Water
with great Stones, pvr'd up at the Foot thereof, cover'd like a Houfe; having on the
top of it a Watch-bower, and not far from it a Chappel; moreover, the Mountain
Calvaria
Calvaria, rises on each side and behind the City, with high Precipices; not far from the Mouth of the River appears a strong Castle with several Bulwarks, and thereon great Guns; along the Inlet is a fair Market-place; in the middle of the City stands a Church Confecrated to Dominicus, near which there is a large Hospital, which fronts the Sea; the Cathedral stands at the farther end of the City, and on the declivity of a Mountain a fair Chappel; near the great Fort the Governor hath a pretty Palace; nor are the Francisca Cloysters much inferior to any of the other Structures of this City, which taken altogether bears a good Form, by reason of the uniformity of the Streets.

But anno 1648. the Spaniard totally defeerted this Island, which Michael Adriaenfagon Raiter hearing of, brought several People from St. Eustatius, and took possession of it in the Name of the States of the United Netherlands: Yet they enjoy'd not long the entire Propriety, for the Spaniards again went and claim'd those Places which were theirs upon the first gaining of the Island; which the Hollanders allowing them, they liv'd peaceably and quietly together, each having their own Churches, Store-houses, Land, and Negro's. The Dutch Plantation was maintain'd by the Zeeland Lords, Lamfen and Van Ree.

There are divers Pools of salt Water in this Island, which afford the Inhabitants store of Fish, and especially Tortoises.

The Woods produce wild Hogs, Pigeons, Turtle-Doves, and Parraquito's resembling a Parrot, and which though much smaller, are more apt to be taught.

Near the Salt-pools also breed Birds call'd Flammans, not unlike a Jack-daw, only differing in Feathers, for they are first white, next ash-colour'd, and at last turn red; they seldom flye or sit alone, but for the most part in great Flocks in open places, and Moorish Grounds; when some of them seek for their Food under Water, one of them stands Centinel, and on the least noise or appearance of a Man, gives notice by Chirping to the rest, who hereupon immediately flee away; thole that shoot them lie commonly hid under an Ox Hide.

About the same Pools breed likewise the American Swallows, with crooked Bills, Feet like Ducks, black Bodies, white Bellies, and long Tails.
St. Bartholomew.

Near St. Martin, at sixteen Degrees, lies the Island St. Bartholomew, which being about five Leagues in circumference, is surrounded with Rocks, and was first Planted by De Poincy: It makes a delightful Prospect, because of the many Trees which grow on the same; amongst which the most noted are the Soap-Trees, whose Wood makes the Water Lather, and washes as well as Soap; but they are of two sorts, for in some this soapy Quality is contained in a round yellow Fruit, not unlike a Plumb; in others a white soft Root supplies the office.

The little Tree Canopla, out of whose Bark drops a Gum, grows also very pleasant, the Body being divided into several Branches; the Leaves are discoloured, being underneath of a dark Green, and of a brighter at the top; the Flower consists of five Leaves, and closes at last into a kind of Cherry, full of yellow Juice, and white Pulp; it blooms generally in October and December, and bears Ripes Berries the two following Months: a Fire being made about the Tree causeth the Bark to crack, whereby it yields abundance of Gum, chiefly used in Medicine for its opening and loosening Quality.

Likewise the Parietive-Tree, which grows along by the Sea-side and by Pools, is sufficiently remarkable, for the Boughs thereof grow downwards, twin'd and pleated together so thick, that in time of War they serve for Bulwarks, and are the Receptacles of wild Swine.

Moreover, on this Island, as on all the other hereabouts, grow Calabash-Trees, which have thick Boughs and oval Leaves join'd one to another, and bear every Month fresh Flowers and Fruit, grey Flowers, mark'd with green Streaks and black Spots, and Fruit with hard Shells, full of juicy Meat and flat Seeds, which being taken out serve for Boxes, Cups, or little Dishes.
AMERICA.

Chap. XVIII.

Along the Shore is also found a fort of Fish call’d the Sea-Star, which is a yellowish Fish, whose hard Skin full of little Knobs shoot forth five Darts or Beams; in stormy Weather they fasten themselves to the Rocks.

No less wonderful is the Fish call’d the Sea-Apple, whose brown Skin is full of Prickles, which when the Fish dies fall off, nothing remaining but a white Shell, curiously embroider’d with little Holes.

On the Banks, and near the Rocks, grow also Sea-Trees, whose thickest Boughs putting forth still lesser and lesser Branches, are pleated together very wonderfully, and being all glaz’d as it were with Salt-petre, seem greyish.

S E C T. IX.

Barboude.

Situation of Barboude.

B arboude, which some call Barboude, others Barbada, being five Leagues in length, lies at seventeen Degrees and thirty Minutes, and North-East from Monferrat, in a shallow Sea.

Here the English Planting, have from their first Arrival been much molested by the Caribbeans of Dominico, who for a great while us’d twice a year to Invade them in the Night, killing and destroying whom and whatso’er they met with, only Women and Children, with some other Booby, they carried to Dominico.

S E C T. X.

Rotonda.

Situation of Rotonda.

T he Isle Rotonda, which is much lesser, hath receiv’d that Denomination from its round Form, for it rises in the middle into a Hill, which at a distance appears like a Steeple; it lies at seventeen Degrees and ten Minutes. The Sea about the same being very deep, makes a good coming to the Island with Ships.

S E C T. XI.

Nevis.

Situation of Nevis.

I n light of Rotonda, at seventeen Degrees and nineteen Minutes, lies Nevis, which hath six Leagues in circumference. Out of the middle of the Island rises a Mountain all over woody; round about which the English, who Setled there Anno 1628. have their Plantations, and have increased from a small number to above three thousand, and make a good Advantage of their Sugar, Ginger, Cotton, and Tobacco, which they Plant there.

They are Govern’d by a peculiar Governor and a Council, who punish Thieves, and all manner of Debothes very severely.

There are also three Churches, which on the Sabbath-Day are all throng’d with People, who resort thither for the Worship and Service of God.

The Harbor call’d Bath-Bay, and the Store-house built about the same, are secured by a great Fort full of great Guns.

Several Springs on this Island afford the Inhabitants good Water. Here is also a Mineral Spring, a place to Bathe in, which hath been found to cure the same Distempers which the Waters at Bourbon have done.

Moreover,
Moreover, this Island abounds with the Pistacia or Pishick-Nuts, which grow on small Trees, with soft long Leaves, round at bottom; and ending in three Points: These Trees being commonly full of thick Boughs, serve commodiously for Hedges; the Wood and Leaves sweet a milky Juice, dropping out of the same with the Rain; the yellow Flowers which grow on the same are like glittering Stars, and the taste of the Nuts like a Hazle; but if the Skin which covers the Kernel be not pull’d off before they are eaten, they purge to Death.

But the great Profit which Nevis receives by Nature is attended with some Inconveniences, which trouble this and all the other Islands: amongst many may be reckon’d the Muficho’s, a sort of little Bugs, whose poysonous Sting causes such intolerable Itching, that those who are stript by them cannot forbear to scratch themselves till the Blood comes, by which their Sores seething, prove often very dangerous.

Also the Murinjins, who are so much the lefs dangerous, because they make always a great noise before they fling.

Wafps likewise are here very troublefom, but their Stings are cur’d with Rué, as the Stings of Scorpions are with the Juice preis’d out of the fame Animal.

The Wood-Lice, which are here in great abundance, have a soft and white Body, only the Head, which is mark’d with a black Speck; their Mouthes are so very hard, that in two hours time they eat through thick Cheifs. And no lefs damage do the Bagetos.

But the Chigas are a kind of small Fleas, that breed in Dust, Ashes, and the like, and are of all the most pernicious; they first get in under the Nails of the Toes, and from thence run over all the Body, but especially the bottoms of the Feet, where they first occasion an itching, and then eat Holes through the Skin; they make Blisters as big as Peas in the Flesh, wherein a swarm of young ones breeding, cause Ulcers and rotten Flesh, which must be eaten away with Aqua-fortis and burnt Alom.

Sect. XII.

Eufathius.

Eufathius, which is rather a Mountain, rising out of the Ocean like a Sugar-Loaf, than an Island, lies at seventeen Degrees and forty Minutes: It hath scarce five Leagues in circumference; yet receiv’d some while since a Colony of above sixteen hundred People, sent thither from the States of the United Ne therlands, under the Command of the Lords Lamfjen and Ree. Besides the natural Strength of the Place, whereby a few are able to keep off a great number, it is forti’d with a strong Fort, which Commands the Harbor. The Inhabitants are very industrious, and make great profitt of the Tobacco which they Plant.

In the midst of this Island is a Mountain over-grown with Trees, which seems to end in a Point, and hath about it a pleasant Plain.

The abundance of Fowls, Hogs and Goats, afford the Inhabitants store of Provisions; for their Store-houses are never so empty, but that they can supply their Neighbors Wants.

The want of fresh-water Brookes they supply with Rain-water, which they preserve in Citerons.

Though the Air of the Island be wholesome, and the Soil fruitful, yet it is subject to many great Inconveniences; for besides the terrible Thunder-claps and Earthquakes,
quakes, that rend the Ground, the Inhabitants are exceedingly troubled in August, and September with the Winds, which in twenty four hours blow from all Points of the Compass with such mighty Gales, as if they would turn all things into their first Chaos. The Caribbeans call these Tempests Hurricanes, which formerly us’d to happen but once in seven years, but of late every two years, and sometimes twice in a year. What damage these Winds cause is scarce to be express’d; the Sea raising its turbulent Waves up to the Skyes, casts the Ships on the Shore, which though in Harbor, are certain to be wrack’d, whilest the Land seems to labor under a general Ruine, whole Woods being rooted up by the same, or at least bereav’d of Boughs and Leaves; the Corn is beaten down, the Plants blasted, Hoults turn’d topfe-turvey, Mountains rent asunder, and sometimes pieces of Rocks blown into the Sea. Before the Hurricanes there are severall fore-runners, which give notice of their sudden approach, viz. the Sea on a sudden is so calm, that the Least motion is not perceiv’d; the Birds flye from the Mountains into the Valleys, where they lay themselves flat on the Ground; and the Rain which falls is bitter and salt.

Charles de Rochfort observ’d, that in his time some Ships laden with Tobacco being loft in a Hurricane before St. Christopher, soon after the Tempest ceased, thousands of Fishes were seen swimming with their Bellies upwards, intoxicated no doubt with the Tobacco.

Sect. XIII.

Antego.

Between Nevis and Montserrat, at sixteen Degrees and eleven Minutes, lies Antego, being seven Leagues long, and about six broad; it is dangerous to come at with great Ships, because of the many Rocks which lie before it, and remain’d the longer uninhabited, because of the want of fresh Water; yet at last the English taking possession of it, digg’d Pits, and made Troughs to catch and preserve Rain-water in, so that it is now inhabited by at least eight hundred People, who live on Plants, Venison, and Fitch.

Upon the Sea-shore appears often-times the Sword-fish, which hath no Scales, but a grey Skin, and white Belly, rough like a Fyle, a flat Head, two Fins on each side, two on the Back, and one in head of a Tail, with which it makes a swift motion: the Sword of it is a long Bone, arm’d on each side with twenty seven white and strong Teeth. This Fish striving to be Chief of the Sea, Encounters with all other Fishes whatsoever, even with the Whale himself, whose Belly he often rends open; near his Eyes are two Noftrils, out of which he blows the Water he drinks into the Air.

Sect. XIV.

Montserrat.

Montserrat, lying just at the seventeenth Degree, is so call’d from a Spanish Hill beyond Barcelona, whose shape this Island represents off at Sea; it is about three Leagues in length, and almost as much in breadth, and is very Mountainous, except a little towards the East, and as much Westward.

The English have a Church here, in’d in the in-side with Cedar, which this Island produces in great abundance.

Also
Allo the Acajou-Tree, which grows an exceeding heighth, with mighty Boughs, under which many judge it very wholifom to sleep: But there are two sorts of the Acajou-Tree, the one differing from the other in tallness of Body and Colour; of which the most effectual is the red and sweet-smelling, which is not subject to any decay; for that which is white, and yields Gum when cut, is of a less value.

The Aconis is also no way inferior in bigness to the Acajou, which bears long swarthy Leaves, and yellow Fruit not unlike a Plumb; but because of their extraordinary bitterness they are not eatable, only the wild Pigeons at a certain time of the year feed on them, after which their Flesh becomes bitter also; from the Bark when cut, runs a milky Juice.

The Cypres-Trees when plan'd, yield a pleasant Marble colour to the Eye, and a delightful fragrance to the Scent.

The Iron-Tree, with sharp-pointed Leaves, crack'd near the Stalk, blossoms in March and September; after the Violet Blossoms follow a black kind of Fruit like a Cherry, being an excellent Food for Birds; the Wood whilst flourishing is red, but cut down changes its colour, yet is so hard that it never decays.

Moreover the Musk-Herb yields a sweet smell, and grows like Brambles without Thorns; between long dusky Leaves hang yellow Flowers, which afterwards become Cod's full of Seeds, that smell exactly like Musk.

Sect. XV.

Guadalupe:

Guadalupe, or Gardelupé, formerly call'd Caricuita, lying at about sixteen Degrees, and containing sixty Leagues in circumference (for it is the biggest and noblest of the Caribbean Islands) is divided in two by a narrow Channel; wherefore one part is call'd Grand-Terre, and the other properly Guadalupe; whose Eastern Point, nam'd Capes-Terre, and its Western, call'd Baffo-Terre, are both inhabited by the French.

Several high Mountains, especially towards the Center, start up from very low Grounds, with their barren Crowns towards the Skye, some whereof are overgrown with Trees.

At the Feet of some of the Mountains are large Plains, water'd by sweet Streams which formerly invited the Spanish Fleets thither to water.

There is also a sulphurous Mountain, which smoaking continually gives the taste of Sulphur to the Streams which flow about the same.

This Island boasts likewise several boiling Springs which cure the Dropsey, and all other Diftempers proceeding from Cold.

Towards each of the two fore-mention'd Points, are large Gulphs that produce strange Fishes, abundance of Tortoises, and all manner of Fith, and amongst others one sort not known by Name, which is generally about four Foot long, having a sharp and big Head, with glittering Eyes, a Back streak'd with blue and green, and a Belly half white and half red, eight yellow Fins, and a broad Tail, with which it swims exceeding swift.

Near the Shore swim the Sharks, an ugly Sea Monster, which bites a Man under the in Middle at once; their Head is hard and prickly, their flat Mouthes opening discover three rows of Teeth.

After this Fish swims generally the Pilot-Fish, or Rambois, which is so curiously speckled, that Nature seems herein to excell what-ever can be represented by the artificial
artificial Pencil) and move either swifter or slower, according as the Shark leads. The Brain of this Fish is judg'd exceeding good against the Gravel and Stone.

Guadalupe was first discover'd in the Year of our Lord 1635: by the French, under the Command of the Lords Du Peslis and De Olive, and after them one of the Captains of St. Christophers: Since which the Champain Ground being Till'd and Manur'd, brings forth in great plenty, Rice, Maiz, Monocock, and Potato's.

Father Raymond Breton got possession of the fruitfulllest part of the Island for the Reformed Jacobines, or White-Fryers, and since the present Governor Monsieur De Howell lent also for the Jesuits and Carmelites, to build Cloysters in a new City, which lies in Boffe-Terre, and which is also built full of Store-houses and Dwelling-houses two Stories high.

The Castle, which lies near the City, hath four Bulwarks, with great Guns. The next neighboring Mountain is also crown'd with a Garrison'd Fort.

The Countrey hereabouts bears Moubante-Trees, which produce yellow oval Plumbs with great Stones, wherewith the Hogs are exceedingly fatned.

The Corbary, which grows higher than the Moubante, hath a hard shelly Fruit, in which lies a douny Pulp of a Saffron colour: The Gum which drops out of the Tree is hardned by the Sun, and becomes very clear, wherefore the Caribbeans make use of it for Arm-rings, and other Ornaments.

**Sect. XVI.**

**Desfado.**

**Situation of Desfado.**

Ten Leagues to the North-West of Guadalupe, and at sixteen Degrees and ten Minutes, appears Desfado, or Desrado, like a Galley, of which the North-East end hath a low Point; to the Northward lie Sand-Hills full of red Veins: It was so call'd by Christopher Columbus in his second Voyage, from obtaining of his Desire, it being the first of the Caribbees which he discover'd, as St. Salvador the first Land in all America.

The Grove, the Soil is wholly barren, and destitute of Trees, and breeds the amphibious Creatures call'd Guano's, which in stead of Fins to swim withal, have four Feet; the biggest of them are fifteen Inches long; their Skin full of little Scales shines like Silver, and in the Night they make a loud and thrill noise from the Holes in the Rocks.

The Frigate. On this defolate Island are an innumerable company of Fowls, call'd Frigates, which have a Body like a Duck, but larger Wings, and flye swifter; so soon as they perceive a Fish in the Water, they falling upon the Same, catch them in their Claws, and especially devour abundance of flying Fith.

But the Fauers, which are much leaner, are no way so swift; they resemble a Moor-Hen, have Feet like Ducks, Bills like a Snipe, and in rainy Nights rest on the Ships in stead of Rocks, so that many times they become an easie prey to the Mariners.

**Sect. XVII.**

**Marigalanre.**

**Situation of Marigalanre.**

Not far from hence, at fifteen Degrees and forty Minutes, appears Marigalanre, like a Wood in the Water.

On the South-East side, about half a League from the Shore, lie blacks Stones
Chap. XVIII. A M E R I C A.

full of white Specks. Westerly the Shore is very plain, whither the Governor Monfieur De Howell sent some People from that Island, of which twenty were kill'd by the Caribbeans, who had Gardens and Fish-ponds thereon: Not long after which Howell build a Fort here, and Garrison'd the same with Frenchmen.

The Woods afford a delightful sight to the Eye, as also the Cinnamon-Trees, whole Leaves never wither, a sweet smell to the Nose.

The Ocean hereabouts produces plenty of Lamantins, which are dry'd, like Haberdine. This Fish grows eighteen Foot long and seven thick; the Head thereof is like a Cows, with little Eyes, and a thick brown Skin, rough and speckled in some places, and hath two little Feet in stead of Fins; it feeds on Weeds, which grow on the Rocks and Banks; the Females bring two young ones at a time, which fuc for some days; their Flesh palatable and wholifm, is ftrek'd with Fat, which when melted never putrifies; they are often taken in the Mouths of Rivers than in the Ocean.

About this Ile, as well as the rest of the Caribbees, are Fishes call'd Sea-Devil, the Sea-Devil, four Foot long, and proportionally thick, their Skins rough, their Heads flat, their Backs arm'd with Prickles, little black Eyes, wide Moufhes full of Teeth, and two Tusks that stick out of the fame, four Fins, a long flit Tail, with which they fwarm exceeding fwift, above their Eyes stick broad sharp Horns turn'd towards the Back; the Flesh is deadly poifon.

The Bocnue, which is eight Foot long, falls upon a Fish like a mad Dog, biting great pieces of the Flesh out of the Body, which occasions preft Death; its Flesh is likewife poifon.

S E C T. XVIII.

Todos Santos.

Southward from Guadalo, and at the fame Latitude with Marigalante, lie four deolate Iles, call'd Todos Santos, and on their Shores a fort of Shell-fish call'd Lambis, from the femeblance of a Tongue; the Shells whereof the Indians Sound in stead of Horns when they give an Alarm, as also another fort call'd Porcetes, of which the most efteem'd are without of a Carnation, and within of a Silver, or Skyee-colour mix'd with Golden Beams. The next are the Black, mix'd with a pale Blue, and little Veins. But the moft remarkable Shells are chofe, whose Back Nature hath mark'd in fuch a manner with Musical Notes, that one might almost expires a Tune by them.

Moreover, it would amaze the Beholder, to fee the Mother-of-Perl Oyster mov- ing at the Foot of a Rock; for at the Rising of the Sun they appear above the Water, and gape for the Dew, of which they have no sooner receive'd a Drop, but they close their Shells, and fall to the Ground again.

S E C T. XIX.

De Aves.

Westward from Todos Santos, at fifteen Degrees and forty five Minutes, lies the Ile De Aves.

Besides Ducks, Pluvers, Moor-hens, Geefe, and the like Fowls (that suffer themselves to be catch'd by the Hands of Men, which are very strange to
to them) there are here also many rare sorts of Birds, as the white Birds call'd

*Agretios*, which are somewhat bigger than Crows, with red Bills and Feet, and
curious Plumage on their Heads; they often fly a great way off at Sea.

The large Bird call'd *The Crow-fowl*, which feeds on Fish, hath a thick Head, a
long flat Bill, hollow Eyes, and a short Neck, under which hangs the Maw, big
enough to contain a Pail full of Water: On the Trees along the Sea-side they
watch for Fish which swim near the top of the Water, and by their attentiveness on
their Prey, are easily shot themselves.

Here is likewise the Bird *Arras*, of the bigness of a Pheasant, but more resem-
bling a Parquuito: their long Tail consists of divers colour'd Feathers, some
have shining skye-colour'd Heads, Backs, and Necks, their Bellies and Wings of a
pale Yellow; they are so stout, or rather so simple, that if they are not hit with the
first Shot, they will stay for a second: They also learn to talk, but not so di-

ficultly as the *Canides*, which are no way inferior in beauty to the *Arras*, nay exceed
them very much: *Monfieur de Montell* above mention'd, leeting one at *Coraffop*, de-

scribes it after this manner:

"It deserves to be numbered (faith he) amongst the most beautiful Birds in the

*World*; I took so particular notice of it, having had of them in my Hands ma-

ny times, that I have the Idea's of it still fresh in my Memory. Under the Belly,

Wings, and Neck, it was of a waving *Aurora*-colour, the Back, and one half of

the Wings, of a very bright Skye-colour, the Tail and greater Feathers of the

Wings were mix'd with a Sparkling Carnation, diversifi'd with a Skye-colour,

as upon the Back a Grass-green and shining Black, which very much added to

the Gold and Azure of the other Plumeage: But the most beautiful part was the

Head, cover'd with a Murrey Doun, check'er'd with Green, Yellow, and a pale

Blue, which reach'd down wavingly to the Back: The Eye-lids were white,

and the Apple of the Eye yellow and red as a Ruby Set in Gold: It had upon

the Head a certain Tuft or Cap of Feathers of a Vermilion Red, sparkling like a

lighted Coal, which was encompass'd by several other Jeffer Feathers of a Pearl-

colour.

"If it were recommendable for all these extraordinary Ornaments, it was much

more for its Familiarity and Innocency; for though it had a crooked Beak, and

that the Claws with which it held its Meat and brought it to its Beak, were so

sharp as to take away whatsoever it fattened upon, yet was it so tame as to play

with little Children and never hurt them; and when one took him into his Hand,

he so contracted his Claws, that the sharpness of them could not be felt: He had

this Quality of a Dog, That he would Lick with his short and thick Tongue

those who made much of him and gave him something he lik'd, put his Head to

their Cheeks to Kiss and Careful them, and expressing his Acknowledgments by

a thousand pretty Infinuations, he would suffer himself to be put into what po-

titure one would, and took a certain pleasure in diverting those he thought his

Friends: But as he was mild and tractable to those who were kind to him, so

was he mischievous and irreconcileable to such as had injur'd him, and he could

distinguifh them from others, and make them feel the sharpness of his Beak

and Claws.

"He prattled in the *Dutch*, *Spanish*, and *Indian* Languages, and in the latter he sung AIRS

as a natural *Indian*: He also imitated the Cries of all sorts of Poultry and other

Creatures about the House; he call'd all his Friends by their Names and Sir-

names, flew to them as soon as he saw them, especially when he was hungry; if

they had been absent, and that he had not seen them a long time, he express'd

"his
his joy at their return by certain merry Notes; when he had sported himself till they were weary of him, he went away, and perch'd himself on the top of the Houfe, and there he talk'd, sung, and play'd a thousand tricks, laying his Feathers in order, and dressing and cleaning himself with his Beak. He was easilie kept, for not onely the Bread commonly us'd in that Iland, but all the Fruits and Roots growinge there, were his ordinary Food; and when he had more given him than he needed, he carefully laid up the remainder under the Leaves wherewith the Houfe was cover'd, and took it when he had need. In a word, I never saw a more loving or more amiable Bird; 'twas a Present for any Prince, if he could have been brought over the Sea. This Bird had been brought from the Caribbee Ilands to Monfieur Rodenbok, then Governor of the Fort and Dutch Colony, which is in the Iland of Coraffao.

Sect. XX.

Dominico.

At fifteen Degrees and thirteen Minutes, lies the Iland Dominico, so call'd because it was discover'd on a Sunday, about thirty Leagues long, and not much less in breadth, and diversify'd with high Mountains, and exceeding deep Valleys; of which the Caribbeans that dwell there relate, That formerly in one of the deepet of them, a huge and monstrous Serpent had an Army of Serpents to defend an invaluable Carbuncle which he had in his Head; which being cover'd with a thin Skin, was onely discernible when he drank or play'd, for then the luftre thereof lightned the whole Valley.

When firft the French approach'd this Coast with their Ships, the Ilanders going Aboard in their Canoes, barter'd Provisions for Coral, Cryftal, and other Triftles.

On this Ile also grows the famous Manchelenite-Tree, which bears long Leaves, and sweet smelling Fruit, streak'd red, and tasting like a Hazle-Nut, but bringing a deadly Sleep upon those that eat of it; it seldom rots though it fall into the Sea, or any fresh Rivers, but is crufted over with a Shell reembling Salt-petre, and poysons the Water in such a manner, that all the Fith dying, are seen floating upon it; in the Trunk and Boughs thereof is a milky Juice, which dropping upon the Body, cauzes it to break out in Scabs, and if it chances to touch the Eyes, it taketh away the Sight for nine days: and not less hurtful is the Moifture which drops from the Tree.

The Caribbeans dip their Arrows in this poysonas Juice, against which Nature hath provided an excellent Medicine, being as followeth:

There are amongst the other Reptiles of America a sort of Snails, which creep into the Legs of dead Crabs, to keep themselves from the Weather; when taken they make a noife, and being laid before the Fire they come forth; the Water squeeze'd out of them, or the Oyl drawn from them by the Sun, cures the Parts poysoned by the Manchelenite-Tree.
Opposite to Dominico lies Martinico, by the Indians nâm'd Matunina, which lying at fourteen Degrees and thirty Scruples, is forty five Leagues in circumference; It appears at a distance like three Mountains, the highest whereof resembles a Hat, and is seen in all parts of the Island, which, on the North where three Rocks deny access for Landing, seems to be divided into three Isles.

The Caribbeans have been forc'd, after many bloody Battels, to surrender up this Island to the French: But before they were well settled, the Caribbeans marching over exceeding high Mountains, deep Concavities, and thick Woods, fell upon them with all the Rage imaginable: the Reasons of which some attribute to Du Parquet, who in prejudice of the Martinico Caribbeans, sent Frenchmen over to Granada and Alouzia: others suppose, that they took up Arms to revenge the Death of their Country-men on St. Vincent, who were destroy'd by the French with poysfon'd Brandy. But the French furnish'd with new Supplies, took sufficient Revenge; for they drove the Caribbeans out of their Houses, and chace'd them into Woods and Deferts.

The Hills that are over-grown with Trees, are Receptacles for wild Beasts, especially Hogs and Serpents. The other Hills are Till'd and Sow'n, though not without great trouble.

The Tobacco which grows on the steep Ascents much exceeds that which grows in the Valleys, or in the Tracts of Land shaded with Trees.

Since the French, anno 1635. (being sent from St. Christopher's by the Lord Def. nambe) Settled themselves on this Island, under the Command of his Deputy Du Pont, they divided it into five Wards, separated from that part of the Isle which was inhabited by the ancient Natives: Each Ward hath a Church, or at least a Chappel, Armory, Store-houses, and Dwelling-houses, like an entire Village.

The first Ward is call'd Pylor, from a Caribbeeanc Captain, who was very familiar with Du Parquet, and inform'd him of his Peoples Designs. The second, nam'd Capet, is wals'h'd by a River of the fame Denomination, and hath many fruitful Plains.

The third retains the Caribbeanc Name, being Carbet, signifying a Publick Structure, to which they us'd to resort to Feast, or hold Councils of War; not far from which the Governor dwelt in a Stone House: Near the Harbor flood also an Armory in a Valley, water'd by a fresh River which falls out of the Mountains, shaded with Trees and Gardens full of Rarities: But since the Governor gave this and many other fair Buildings to the Jesuits; he remov'd to the fourth Ward, call'd St. Peter, where he built a Castle, and furnish'd the same with Brafs and Iron Guns to defend the Harbor.

A Stones-throw from the Governor's House lies the Jesuits Cloyster, on the Banks of a pleafant Stream, built very artificially of Marble and Free-stone, and having a pleasant Prospect over the River, and adjacent Gardens, beautif'd with the choicest of Flowers, Fruits, and Trees; and also a Vineyard, out of which they pref'd a consideralbe quantity of Wine.

The laft Ward, call'd Presbacur, extends East and West, some parts whereof swell into high Mountains, at the Feet whereof land fair Structures; others sink into low Valleys or Savannas.

Between
Between the French Settlements and the Caribbeans runs an Arm of the Sea, along whose Shores grows abundance of the Mabot-Tree, which is full of Boughs from the top down to the Ground. The Bark of this Tree serves in head of Ropes, and is also us'd to tie up Tobacco; the Wood is self is durable, and good for Building, wherefore most of the Houses built on Hills are of this Timber.

The best Harbor for Ships is between the Wards Carbet and St. Peter, defended from the Winds by high Hills.

Not far from the Inlet of the Salt-pits, appears about half a League off at Sea, a Rock call'd The Diamond, being a Receptacle for an innumerable multitude of Birds, and especially wild Pigeons.

Besides the Streams that in the rainy Seasons run through the Dales and Savan's, there are ten Rivers, which falling from the Mountains, glide through the Valleys into the Sea. Sometimes they swell in such a manner, that over-flowing their Banks, they wash down the Trees and Houses; which Inconvenience hath taught the French to build their Houses on Hills or rising Grounds.

The good Situation of this Island hath invited many Families thither.

**Sect. XXII.**

**Sr. Lucia.**

**St. Lucia (by the French, Alouzie) is so call'd because it was discover'd on the thirteenth of December, Dedicated in the Kalendar to the Virgin Martyr Lucia, who was burnt at Syracuse: It lies Southerly from Domincio at thirteen Degrees and forty Minutes, and is ken'd at a great distance by two fiery Mountains; the most Easterly of which is higher than the other.

At the Feet of these two Mountains lie pleasant Valleys, shadow'd by close Woods, and moistened by clear Springs; near which heretofore a small number of Caribbeans dwelling, maintain'd themselves with Fishing; they went stark naked, and painted their Bodies with red Oker, and drew a Vermilion Stroke from their Ears to their Noses.

An English Ship sent to Guinea to supply the Plantations there, Landed sixty six mutinous Perfons here, who were all kill'd by the Inhabitants; but when Henry Jacobson Lucifer putting into the Bay of Lucia to Water there, Anno 1627. Landed to discover the Island, he found neither Man nor House, nor any thing but a barren Soil; yet notwithstanding Du Parquet sent his Deputy Royfelan with a Colony to Plant in this Island.

**Sect. XXIII.**

**Barbados.**

The Island Barbados, which was Planted by the English, Anno 1627. lies between thirteen and fourteen Degrees, and hath twenty five Leagues in circumference, and somewhat more in length than breadth, and is supply'd with a fresh Water River, and several Pools. The Ground being fruitful in the producing of Tobacco, Cotton, Ginger, and especially Sugar, invited many People to Settle there, so much that in a short time it could shew twenty thousand Inhabitants besides Negro Slaves.

The Trees which grow on this Island, are not only delightful, but profitable;
amongst which the 

 foremost one is, with sharp leaves, white Carnation flowers like Stars, which hang by Clusters at the end of the Boughs, and after a while turn to a Cod full of vermillion Kernels: The Juice dry'd in the Sun and kneaded into Balls, is of a great value. Of the Bark of this Tree they make Strong Ropes; and the Root is very wholesome, and of a pleasant taste.

Moreover, amongst the insects that breed here, there are a sort of Flies worthy of a short Description; the Caribbeans call them Cayapon, being about the bigness of a Beetle; they have two strong Wings, and under them thinner, which they never spread abroad but when they fly, and then they carry such a light to them, that they give as much Light in the Night as a lighted Candle, (their Eyes also at the same time glittering like Fire) making no noise when they fly; they feed on the Juice of Flowers, and are so smooth, that they are very apt to slip through ones Fingers, and when they find themselves to be taken, they hide their glittering Wings under the other.

The Indians tie these Flies to their Hands and Feet, so as to have the benefit of their Light in the Night; and anoint their Bodies all over (at certain Solemnities where-in Candles are forbidden) with the Juice squeezed out of them, which causes them to shine like a Flame of Fire: They catch them with a piece of Wood which they move in the Air, whereupon the Flies going to fit, are taken with a Hat; but their Light vanishes if they are kill'd.

But as to what may farther be added concerning this Island, being one of the chief of our Plantations, we cannot better satisfy the curiosity of those who desire a true Information of all things that concern that Place, than by inserting verbatim a Letter from an intelligent Person who hath been long resident there, viz. Colonel Robert Rich, of no older Date than May 31. 1670. by which the present State and Condition of the Island, the Buildings and other Improvements made there by the Planters since they first possess'd it, in what Commodities of the Growth of the Country their chief Trade consists, their Strength, Militia, Government, and flourishing Commerce, and what-ever else is material to be imparted, may be clearly understood.

SIR,

I have lately seen your Proposal concerning an English Atlas, and having read Dr. Heylin's Book of the Chronography and History of the whole World, his third EditionCorrected and Enlarged, Printed Anno 1666. I find him very short and erroneous in his Description of the Caribee Islands, especially of this Island of Barbadoes, wherein I have been an Inhabitant more than eleven years. He said,

1. The Island is seventeen or eighteen Miles in compass.

2. On the South 'tis furnish'd with a large and commodious Harbor.

3. The chief Commodities are Tobacco, and a kind of coarse Sugar, call'd Barbadoes Sugar, which must be quickly spent, or 'twill melt to nothing.

4. That this Island is worth all the Plantations made by the English, and yet that we hold it at the Cost and Expense of the Spaniards, without whose Leave and Liking, not of Force to hold it.

This Description of Dr. Heylin's, in itself very false, is also much to the Dishonor of the English Nation, which makes me presume to trouble you with my own Observations, wherein having only aim'd at the Truth, you shall not have cause to doubt of being mis-guided.

This Island of Barbadoes is stated in thirteen Degrees and twenty Minutes, in length twenty two Miles, and in breadth fourteen and an half; it is naturally fortified with Rocks and Shoals on the North and East side of it, where no Ship may safely Anchor, only in two or three places small.
small Boats may go out and in to Fish. On the South-East and Westerly part, it is all along a Road where Ships may Ride at Anchor, but more especially in four chief Places, Roads, and Bays thereof.

The principal Road or Bay is call'd Carlisle Bay, and lieth on the South-West part of the Island near its center, and is a good Road, where five hundred Ships of any Burthen may Ride safely from all but South and Westerly Winds, which seldom in these Parts happen, they generally blowing Easterly, whence it is that we call the East parts Windward, and the West parts Leeward. Here lies also the chief Town for Trade, call'd formerly the Bridge-Town, but now St. Michaels, and having two Forts, answering each other, and a Platform between, which Commands the Road, and Defends the Town, the first and chiefest Fort is call'd Charles Fort, standing on Nedhams Point, lying out in the Sea to Windward of the Bay and Town, so that an Enemy keeping out of Command of this Fort, cannot (probably) come to do the Ships or the Town injury, for that they must come full in or against the Wind. This Fort is built strong with Stone and Lime; the Platform joins to the Windward part of the Town; also the other Fort joins to the Leeward part of the Town, all which are well fortifi'd and flo'd with great Guns. The Town consists of several Streets and Lanes, being about thirty Chain in length, and fifteen in breadth, and hath many fair and large Buildings, whereof the most are of Stone and Lime.

The second Road and Town is lately call'd Charles-Town, situate on Oyster's-Bay, and lies about two Leagues to Windward of St. Michaels, having also two Forts and one Platform; the two Forts stand the one to Windward, and the other to Leeward of the Town and Road, and the Platform in the middle, all well furnish'd with great Guns. And although this Town be not a Place of much Resent for Shipping, yet here are many considerable Store-houses for Trade, wherein Monetably are kept the Court of Common-Pleas for that Precinct, and Weekly Markets.

The third Road and Town is lately call'd St. James's, formerly the Hall, and is about two Leagues to the Leeward of St. Michaels, hath one very large Platform, and is otherwise well fortifi'd with Breast-works; and although few Ships come to Ride here, yet in this Town is maintain'd a great Trade with the Inhabitants adjacent, here also is kept Monetably the Court of Common-Pleas for this Precinct.

The fourth Road and Town is lately call'd Little Brifol, but formerly Sprights-Bay, which lieth about four Leagues to Leeward of St. Michaels, and hath two Forts well built, and strongly fortifi'd. To this Place come many Ships, especially from the City of Brifol, the which here Ride, unload and re-load, it being the next greatest Place of Repute to St. Michaels in the whole Island.

This Island is divided into eleven Parishes, and hath in it fourteen Churches and Chappels, and being subdivided into divers Plantations, small and great, hath Sugar-works accordingly, with fair and large Buildings made of Stone and Brick, which generally are pleasant Habitations, and delightfully situated, most having pleasant Prospect to the Sea and Land.

The Inhabitants of this Island are English, Scotch, and Irish, and some, but very few of the Dutch and French Nation, who formerly liv'd here a time of Servitude, and now dwell as Free-men, some by their Trades, and others on Plantations; also some few Jews live here and Trade as Merchants, they having obtain'd Licence from His Majesty so to do; besides Mulatto's and Negro's which are here kept, and accounted for Slaves, the number of which some years since, upon search, were found to be sixty thousand Persons, viz. forty thousand Whites, and twenty thousand Blacks.

The standing Militia of this Island that are in readiness to meet together on all occasions, and which at other times are often and well Discipline, consist of two Regiments of Horse, and five Regiments of Foot, wherein several Companies have near two hundred in a Company, and in some Troops more than a hundred Horse in a Troop; by all which you may easily apprehend how little of truth there is in that Saying, That we hold this Island at the Courte of the Spaniards, when those few English in Jamaica give the Spaniards such work to defend themselves.

The
The Growth and Manufacture of this Island and parts adjacent, is Sugars of all sorts, viz. Muscovado, Clay'd, and Refin'd; (I suppose I have seen here as good Sugar made as any is in the World) Gingers, Indigo, and Cotton-wood; also Tobacco, Logwood, Fustick, green and yellow, and Lignum-vitæ: Of these last heretofore much, but now no quantities to be had in this Island, only to the Leeward great store. The first four mention'd Commodities receive prejudice to their Profit by abundance of Rains or Droughts not happening in their proper Seasons: also violent Winds lodge the Sugar-Canes, whereby the quantity and goodness is les'd. The chief time for Expectation is from January to September, when comes in the wet Season, that makes the Roads not Cartable, and usually puts an end to Making and Transportation of them. We have two Crops of Corn in a year, Planted usually when the Rains first come in, in May and November, which is gather'd in about October, and in March and April following. Wines of all sorts are here Imported, but of Portuguese and French the greatest quantities, viz. of Madera, upwards of fifteen hundred Tun yearly; of Spanish, upward of two hundred Tun; of French-Wines, upward of two hundred Tun; besides Brandy and English Spirits; but of these latter now no great quantities Imported or spent, by reason of the general use of the Spirit of Sugar-Cane, call'd Rum, which the meaner sorts, as Servants and Slaves, do not only drink in great abundance, but much also is hence Transported into Virginia, Bermudas, and New-England. Here is also Imported great store of Provisions of all sorts, viz. Beef, Pork, Figs, &c. from Ireland, New-England, Virginia, Bermudas, New-found Land, &c. also Pea's, Flour, Butter, Cheese, and Biscuit; likewise Timber, Boards, Pipe and Flagon-head, Staves, &c. also Negro-Slaves from Guinea, and live Cattle, as Bulls, Cows, Asinengo's, and Horses, from the Cape de Verd Island, New-England; and from England, Servants, and all other Commodities for Plantations, and for Apparel; of all which great quantities are hither brought and sold.

The Shipping that comes to Trade to this Island belongs generally to England; some few Vessels are here built, and pass to and fro to the Leeward Islands; and some belong to New-England, Bermudas, &c. The number of Vessels which come hither to Trade in one year is found upon search to be about two hundred of all sorts, (some years more, some less) as Ketches, Sloops, Barques, &c. containing in Burthen fifteen thousand five hundred and five Tun, according as they were here Entered, which is at the least a third part less than their true Burthen, by reason every Ship pays one pound of Powder per Tun, the means ordain'd by this Country for storing the Magazine; the greatest part of which Ships re-load with Sugars for England, and many go for New-England, Bermudas, Virginia, Tangier, &c. not always full laden with this Country's Growth. The usual Rate for Tonnage from hence to London, is from 4 l. to 5 l. per Tun; sometimes when Ships are very plentiful, it is at 3 l. and less, and at other times when scarce, from 6 l. to 7 l. in the late War with the Dutch, it was at 1 l. 10 s. and 12 l. per Tun.

The Government is Constituted by the Laws of England, and Laws not repugnant to them, only some particular Laws are here made, proper for this Place, by the Governor (or Deputy) and his Council, (which usually are from seven to twelve in number) and an Assembly that consists of twenty two Persons, chosen by the Free-holders, two out of every Parish.

Sect. XXIV.

St. Vincent.

The Island of St. Vincent, South-West from St. Lucia, and having sixteen Degrees of North-Latitude, was so call'd by the Spaniards, as having discover'd it on that Saint's Day, being the fifth of April: It is accounted eight Leagues long and fix broad, and sites round about with high Grounds and several Mountains, which are seen at a great distance.
This Island hath a very fruitful Soil, and for the bigness of it hath been long since well peopled with Caribbeans before the arrival of the Spaniards, possessing here several Villages, to whom they are still sworn Enemies, but Truck'd with the Hollanders for Provisions, Horns, Axes, Knives, and other Trifles. At the West and South sides are convenient Bays to lie at Anchor and take Water in. The Inhabitants highly effect the Momen, growing to the bigness of an Apple-Tree; the Fruit which it bears reembles a green Cucumber, and is of a pleasant Juice, the Skin always green and prickly; the Seed which is in the same about the bigness of a French Bean, is generally black, and streak'd with Golden-colour'd Veins.

Here is also that Plant mention'd elsewhere, by the Spaniard call'd Granadilla, by the Dutch Rang-Apple, and La Fleur de la Passion by the French; and it is so call'd, as being fancied to represent the thorny Crown of our Saviour, together with the Cross, Nails, Hammer and Pillar; the Plant runs along the Ground, unless it meet with a Pole by which it runs up.

Sect. XXV.

Bekia.

Not far from St. Vincent lies the Island Bekia, which reckons twelves Leagues in circumference, and lies at twelve Degrees and twelve Scruples of Northern Latitude: It hath a secure Harbor against all Winds; but because it is without fresh Water, is is only frequented by the Caribbeans that dwell on St. Vincent, who come hither to Fish, and visit certain little Gardens which they have there for their pleasure.

The Soil produces store of Water-melons, whose red juicy Pulp yields, when squeeze'd, a great quantity of sweet Liquor, which is very refreshing, and good to create an Appetite; their white Flowers, notched at the end of the Leaves, afford a delightful smell.

Anno 1633. Captain John Johnson Van Hoorn putting in to Bekia to catch Tortoises, found a fine Inlet on the West, and Eastward a Ridge of Rocks, Cotton growing wild in the Fields, and upon the Shore a kind of Snails call'd Burgu, under whose first Shell appear'd another of a Silver colour with black Specks.

Sect. XXVI.

Granada.

Granada, lying at twelve Degrees and sixteen Scruples, like a Half-moon, from the North to the South, is full of Woods. Towards the South-West runs a fresh River into the Sea. The Shore very low affords good Anchorage at twelve Leagues distance. The Current grows exceeding strong here, and the Water also ebbs and flows in a few hours. Dirick Simonszoon Witgeest Sailing from Tabago, was amaz'd to see with what force the Current drove him to Granada.

Hither Du Parquet at his own Charge sent three hundred Men from Martinico, the French polit'd it, who scuffled with the Inhabitants six Moneths before they could possess the same in Peace; and scarce had they obtain'd it at last, but by telling them that the French Affillience would be very advantageous unto them against the Avoagers.

The Duke Serjilae in Paris inform'd of the Fertility of this Island, bought it...
of Du Parquet for a considerable Sum of Money: And indeed Granada is none of the
meanest of the Caribbees, the Soil producing very good both Fruit and Timber.
Trees, amongst which is the Latine Tree, of a tall Body, but ordinary thickness, and
in stead of Boughs; hang Leaves like Fans in long Stalks, which being ty'd togeth
er, serve for Roofs of Houses.

There is also the Tree Cocos, which yet grows not so high here as in other parts
of the West-Indies.

SECT. XXVII.

Tabago.

The next which comes in view is Tabago, (so call'd, as some think, from the
quantity of that Drug there Planted) eight Leagues long and four broad,
lying in the eleventh Degree and sixteen Minutes of Northern Latitude,
and hath many high Mountains full of Wood, out of which glide eighteen Streams,
which watering the Plains fall into the Sea.

Captain Vitgeeff coming to an Anchor here, found a convenient Inlet on the
East, and fresh Water to fill his Casks. Half a League from the Shore rise five
Rocks, through which he Sail'd with his Ships. Within the Cliff opens a Bay, in
which runs a River well flor'd with Fish. More Wetterly lies a larger Inlet,
which receives two delightful Streams. From the Western Promontory runs also a
Cliff Northward into the Sea.

This Island is chiefly known by high Coasts which rise on the East side, and fo
grows lower by degrees. It is likewise made pleasant by many Walks of Trees.
The Sea produces abundance of those sorts of Fish which are common amongst
us, besides Turtles, that lay their Eggs in the Sand.

The Cra-fish thereof are not much unlike Lobsters, have white and well
tasted Flesh, but hard to digest; they catch them in the Night on sandy Shelves
with lighted Torches.

The Crabs get their Food very wonderfully here; for when they observe the
Musles or Oylsters to Gape for fresh Air, they put Stones between their Shells, so
that they not being able to shut them, they pull out the Fish with their Claws.

The Woods feed an innumerable company of Beasts somewhat resembling
Hogs, (whose Navels are on their Backs) Opaffums, Javari's, and Tantous, as also the
Agouty's and Musk-Rats.

The Agouty's are of a dark brown colour, and have little Tails, two Teeth in
their upper, and as many in their lower Jaw; they make a noife as if they spoke,
crying Coose; if hunted by Dogs, they run into hollow Trees, out of which they
are routed by Smoak.

The great Musk-Rats are as big as a Rabbet, and like them live in Holes made in
the Ground, but resemble an European Rat, only their Skins are black, except one
part of their Bellies which are white; they smell so strong of Musk, that it over-
comes tho' that carry them.

Amongst the Brambles breed also Serpents of a green colour, two yards long,
and an Inch thick, feeding on Locusts and Birds, which they take in their Nefts,
but do no hurt to Mankind.

The Saffron Tree.

But Tabago boasts chiefly of the Saffron Tree, which resembles the Pine Tree,
hath a firm and freight Body, and on the top Boughs spred like a Crown, the
Bark of a dark colour and smooth, and smelling very sweet; the Leaves thin, notched,
and of a deep Green, have also a delicate smell; the thinnest Roots appear above the Ground, and are exceeding good to cure green Wounds, foppings and shortness of Breath occasion’d by Cold.

The Tobacco, by the Caribbeans call’d Youli, Planted among the Fruit-Trees, grows very plentifully here; it shoots up from a stringy Root, bitter of taste, with a thick Stalk, which shoots out Boughs with great Leaves, woolly underneath, and bears a kind of Violet Flower, which when dry’d, are succeeded by little Cods full of black Seed; and to prevent the over-growing of it, they cut off the top of the main Stalk.

The Bird Coliby, which is exceeding beautiful, makes his Neft under the Tobacco-Leaves.

A company of Townsmen of Walcheren, having a Grant from the States of the United Provinces, sent a Colony to Tobago; but they being scarce two hundred in all, were for the most part destroy’d by the Caribbeans; the rest weak or sickly, fearing the same Entertainment, sought to save themselves; So that the Island has not formerly been frequented but by the French from Martinico, and Guadalupe, who for some time came only to catch Turtles and Lamantins there.

The Caribbeans also either in their March against, or Return from the Arovages, Landed here for necessary Provisions; But of late the Lord Lampen hath Settled a Plantation in this desolate Island.

Sect. XXII.

St. Christophers.

St. Christophers, a pretty distance from Tobago, receiv’d its Denomination from Christopher Columbus, invited thereto by the shape of a great Mountain, having as it were another letter on one of its Shoulders, being fancy’d to repreffent the Figure of the suppos’d Giant Christopher, who is reported to have carry’d our

Saviour
Savour in the appearance of a little Child on his Shoulders through a deep Sea.

This Island lying seventeen Degrees and twenty five Minutes Northward of the Equinoctial Line, hath twenty five Leagues in circumference.

The Soil light and sandy, refutes not the production of divers sorts of Fruits common amongst us.

In the middle of the Island rises a high Mountain, out of which run fresh Streams, that sometimes fwell so high with sudden Rains, that they drown all the Countrie near them.

This Island being jointly the Plantation of both English and French, was divided into four Wards, two whereof have been long since in possession of the French, and the other two in possession of the English, strangely divided one from another; for the English in one Ward cannot go to the other without troubling the French; and so on the contrary; the English have more Rivers and People, the French more plain Land, fitter for Cultivation, and Forts furnish'd with Guns and Soldiers. At the Entrances of the Paths which lead into the several Wards stand Watch-houses, where Sentinels, or Watch-men stand daily in their turns.

In a Bay of the Sea they found a brave Salt-pit, from whence a sandy Cliff runs so far into the Ocean, a that some have swam from the end thereof over to the Island Nevis.

A Silver Mine hath been long since discover'd on this Island, in which the English and French claim equal Interest, but neither Party make any benefit of it for want of Miners.

The high Mountains, the Springs of boiling sulphurous Water, and brambly Woods, hinder all passage through the middle of the Island: The Ground runs more and more sloping to the Sea-side, and is divided into several High-ways, along which stand convenient Houses, cover'd with red or glaz'd Slate, shad'd with Trees; and environ'd with pleasant Gardens, to which there is a delightful Prospect from the Fields, of the green Tobacco-Leaves, the yellow Sugar-Canes, Ginger, and Potato's.

Besides the scatter'd Buildings, the French have built a compleat Town near the convenient Harbor of their Quarter, call'd Baffe-Terre, where the Merchants dwell in fair Houses built of Brick and Free-stone; whither all sorts of People bring their Commodities, and Truck their European Goods for such as St. Christopher's produceth. All manner of Trades and Handicrafts live also in this Town, and a Court of Judicature is kept every Week. The Church built of Free-stone, is cover'd with the aforesaid red Slate, and was formerly Govern'd by the Capuchins; but they being dismis'd Anno 1646, the Government was given to the Jefuits and Carmelites; who also built themselves other flately Edifices: but the Jefuit Henr. de C'on was the fift who bore the chiefeft Command over all.

The Sick that have not sufficient Means to maintain them, have an Hospital appointed, where all Neciffaries are provided for them; and to which is added a School for the bringing up of poor Children.

But the chiefeft Structure is the Castle, on the building whereof the Lord Poincey par'd no Cost; it is built half a French Mile from the Sea at the Foot of a high Mountain, shadowed with great Trees. In the Way thither stand the Houfes of the prime Officers; and a long Walk of Orange and Lemon-Trees leads to a large Court before the Front of the Castle it self, which is built Square with Bricks and Free-stone three Stories high; and the Entrance into it is ascend'd by a large pair of Stairs, near the Gate which opens to the West, stand great Stone Cifterns, into which they receive the Water through Pipes laid under Ground; the Chambers and
Halls are very lightsom and high, and the Walls of them adownd with Cedar; a flat Terrace on the top yields a pleasant Prospect all over the Countrrey; the Windows in the Front look open not onely upon the Orange Walk, but also upon several delightful Plantations of Sugar-Canes and Ginger.

Westward appear several Mountains, whose high Heads are invested with ever-flourishing Trees; and between the Palace and those Mountains a very large and stately Garden, full of all manner of Flowers and other delightful Plants, as well those commonly known amongst us, as those peculiar to that part of the World, in the middle thereof stands a Fountain, deriving its Source from the Foot of a neighboring Hill.

The Winds which blow from the Hills, and especially those cool Blasts daily coming out of the East, so temper the hot Climate, that it becomes very tolerable.

When any News arrives here of the French Conquests in Europe, they found the Trumpets on the top of the Castle, and the Standards and Ensigns formerly taken by the Governor in the Field, are hung out of the Windows.

On one side of the Castle stands a Chappel, and somewhat farther on a rising Plain, a row of Houses, inhabited by certain Retainers to the Governor, and is call'd Angola. The Offices and Lodgings for the Governor's Servants are built of Brick, about the Castle, which is fortif’d with five Sconces, whereon are planted several Guns.

The Governor keeps nine hundred Slaves, and a hundred French-men, to work in his three Sugar-Mills, to till his Ground, and for his Household-Service.

Several French Gentlemen have also built many fair Houses here; amongst which the chiefest are those on which Poucy, Trevat, Benevent, Girand, Aubert, de la Regiere, de St. Andant, de l'Esperance, and de la Lache spent great sums of Money.

The English also are not much inferior to them in their Counties.

Their Churches are five in all; first on the Point of the Palm-Tree stands a fair Church; a second near the great Road below the English Governor's House; a third at the Sandy Point; which are all well built, and large enough for a considerable Congregation, the other two at the Inlet Cayoune are short of the three first. The Ministers thereof receiv’d formerly their Benefices from the Bishop of Canterbury, in Cromwell’s time from the Tyers, as they were call’d, but of late, since the King’s Restauration, from the Bishop of Canterbury again.

The best Houses belonging to the English were built by Mr. Warner, Mr. Rich, Mr. Evrard, and Col. Jeffreyson; all successively Governors of the Place.

It was in the Year 1625, that the English and French jointly (Defnambuc Commanding the French, and Thomas Warner the English) Landed on this Island of St. Christopher, at a certain time when the Caribbeans, perswaded by their Boys to destroy all Strangers, were ready up in Arms, but they met with such Entertainment, that they soon lost their Courage, and yielded possession to the Assistants: Not long after which Defnambuc and Warner went (the one to Paris, and the other to London) to inform their Kings of the Condition of St. Christophers, and to raise a Company which might promote the Planting of it. Both attainted their Desires, and had fresh Assistence given them, for both Kings favor’d the Design, in regard of the good Conditions that were propos’d to those that should go Undertakers thither: And to prevent all Contentions between the English and French, they made Boundaries on each side; but Hunting, Harbors, Fishing, Mines, Trees for Wainscoting, and the like, were to remain in common; and each was to affist the other. The English Plantation increased daily more than the French; having constant Supplies from the Company.
Company in London; when as on the contrary, the Merchants at Paris grew weary, being defirous first to have a Return for what they had already spent, though the Country was not yet Manured: wherefore Defnambuc going thither himself, made the Company understand that they could not possibly expect to receive a Return, unless the Country were Planted with Tobacco, Indigo, Ginger, and Sugar, which require’d both Time and People. But whilst the Business seem’d to go on prosperously, a great Accident hapned which threw down the Work to nothing: for the Spanish King let out a Fleet within the fore-mention’d Year, of one and thirty Gallions, three Galeasses, and four Pinnaces, with seventy-five hundred Men, under the Command of Frederick de Toledo, Emanuel de Minefes, and John Fajardo, from Cadiz, when before the Island St. Jago there lay at the same time twenty-two Portuguese Galleys, fourteen Carvils, carrying four thousand Men, Commanded by Antonio Nunez Barreto, and Francisco de Almeida, who join’d with the Spaniards, took the City St. Salvador, and went about wholly to chase out of the Caribbee Isles all the English and French: in which Attempt nine English Ships lying before Nevis, were all taken by Toledo, who Sail’d within Cannon-shot of St. Christophers, Commanded at that time by the French Captain Rossey, the Forts call’d up by the English and French not being fort’d with Provisions or Ammunition, and consequently no way able to endure a Siege, and the left, because the Works were not quite finish’d; nevertheless Defnambuc immediately drew up his Soldiers to the Low-land, where he lay Intrench’d along the Coast, to prevent the Enemies Landing; but Rossey suffer’d the Spaniards to Land without the least Resistance: whereupon young Du Parquet Sallied out of the Sconces, fell valiantly upon the first Company, but being forsaken by his Men, was run down by the Multitude and kill’d: In the mean time all their Sloops full of Men Landed, insomuch that Rossey fearing to be surrounded, left his Trench and went up into the High-lands, whereby the Spaniards became Masters of the Fort, but did not pursue their Victory, as suspecting that the French might lie in Ambuscade in the next Wood; and indeed they suspected not in vain, for the French having underminded their Forts, had laid Gun-powder in some of the Cellars, which firing, blew up very many of the Spaniards, whilst Defnambuc Embarquing himself, sav’d those which were not slain by the Enemy’s Sword. Mean while the English relying on the League between the King of England and the Spaniard, made no Resistance, (notwithstanding they were inform’d that Frederick Toledo had quite ruin’d the French Plantation, and put them all to the Sword) but sent Agents to Toledo, to put him in mind of the League between Spain and England, which he not taking notice of, alleadg’d, That Pope Alexander the Sixth, when a Controversie arose concerning the new Discoveries in the East and West, between the Crowns of Castile and Portugal, had determin’d that Castile had sole Right to the Western World, and therefore that St. Christophers, being a part of the Western World, according to the Pope’s Gift, belong’d to his Master Philip; and insifting upon that Allegation, he command’d them to quit their Right to the Place; to which purpose he refer’d them six of the nine Ships taken at Nevis, on Condition that they should immediately let Sail for England, only those whom the six Vessels were not able to carry, were permitted to stay on the Island till the next opportunity: After which Toledo weighing Anchor, was scarce out of sight, when the English began to take new Courage, and gathering together to repair their ruin’d Works as well as possibly they could with what Forces they had left; for besides those who were for England in the six Ships, being near two thousand, the Spanish Admiral took six hundred choice English, which he distribut’d among his Fleet; whilst Defnambuc suffer’d a great deal of hardship, not only through ill Weather at Sea, but also for want...
want of Provisions; Having during this time been on the Islands St. Martin, Montserrat, and Antego, thinking to have possess'd himself of some or other of them in stead of St. Christophers, but not finding such a fruitful Soil, and convenient Situation, as what he had for'd to forfake, he was not forward to fix there, but rather judg'd it convenient to enquire concerning the Condition of St. Christophers, and at laft being inform'd by a Ketch, that the Enemy was gone to Havana, and the English were busy in Tilling their Lands, he return'd to his old Station; where nevertheless their Endeavors to repair what was ruin'd, had been in vain, by reason of the scarcity of Provisions, and want of other Necessaries, had not in their greatest extremity some Netherland Vessels arriving there, furnish'd them with Provisions, Clothes, and other Necessaries, on bare promises of payment: But not long after growing rich with Tobacco, Sugars, Ginger, and Indigo, they made Satisfaction to all their Creditors, and at laft attain'd to the Condition before mention'd.

In the late War between Us and the Dutch, the French taking advantage of our Engagement, endeavor'd to destroy our Plantations there, and to make themselves Masters of the whole Island; but the Matter being at laft brought to some Agreement, Sir Charles Wheeler hath been very lately sent over thither by His Majesty to re-settle Affairs there, and order the Capitulations between the French and English.

CHAP. XIX.

The Islands Soravento, and the Isle Trinidad.

In the Division we found to be made of the Islands that lie between Florida and New Spain, and Southern America, the laft are the Isles of Soravento, which are reckon'd to be the three, Margarita, Cubagna, and Tabago, but the last is by most accounted, and hath been mention'd amongst the Caribbes.

Margarita, so call'd from the abundance of Pearls (of which the Spanish Appellation comes near the Latine Margarite) found there by the Spaniards at their first Discovery, lies about the twelfth Degree of Northern Latitude over against the Main Land of Cumana, from which it is distant about seven Leagues: It is accounted sixteen Leagues long, and half as much in breadth, and was discovered by Columbus in his third Voyage in the Year of our Lord 1498, and was at first in great reputation, in regard of the rich Pearl-fishing upon its Coasts, wherein the Spaniards (more favorable it seems to the Natives of this Place than usual, because of their readiness to discover their Treasures) employ'd Negro's, brought from the Coast of Guinea, whom by severe Punishments inflicted, they forc'd to such excessive Labor, that many of them, though excellent Divers, were drown'd, others either devour'd, or lamen'd by the ravenous great Fish thereabouts, and by destroying the very Seed through their infaftable greedines after Pearl, brought the Trade of Pearl-fishing in a short time to a very small Account, in respect of what it might have been, had it been well husbanded. Nor hath this Island of late Years been much frequented, only in the Year 1601. Captain Parker with a Fleet of English put on Shore here, and took as many Prisoners as he had five hundred pounds of Pearl for the Ransom of, and at his coming away took a Ship he met from off the Coast of Angola, with three hundred and seventy Negro's aboard her, who were going to be sold for Slaves.

The Soil is not unfruitful, bringing forth several sorts of Fruit, and Rore of Maiz,
Maiz, and probably if improv'd, would as well bear Wheat, and other usual kinds of Grain; but there is great want of Water, which the Inhabitants are troubled to fetch from the neighboring Continent.

The Places of chief note, are 1. Mongatet, a Fort built by the Spaniards in a Nook of the Island, lying Eastward to secure the Pearl-fishing Trade, and to defend the Town where the Governor resides, as also the Treasurer of the King of Spain's Customs of Pearl, which have been formerly valu'd at 5000 l. yearly.
2. El valle de Santa Lucia, two Leagues from this Town, and as much from the Sea, a Spanish Colony.
3. Macanao, the only noted Place belonging to the Natives.

Sect. II.

Cubagua.

Cubagua lies South-West of Margarita, about the eleventh Degree of North-Latitude, a League or thereabouts distant from Margarita, and six Leagues from the nearest Continent, and about three Leagues in circumference. This is also a very great Place for Pearl-fishing, the benefit whereof hath been so considerable, that the King of Spain's Fifths are paid to have amounted some years to fifteen thousand Ducats; but otherwise of a poor and barren Soil, not only deficient of Water, but of Fruit, Grain, Herbage, and all manner of Cattle and edible Beasts, except a few lean Cones; nevertheless, in respect of the Pearl-fishing Trade, the Spaniards have Planted here a Colony, which they call'd New Cadiz, having plenty of Provisions brought them from the adjoining Coasts, and soon after their first Planting grew in a short time so powerful, that they became Masters of one of the best Ports of those Seas, call'd Maracapana Venezuela; but upon an Alarm of the Salvages of Cumana, for a while deferred the Island, and betook themselves to Hispaniola; from whence nevertheless being remanded back with fresh Supplies, under the Command of James de Caffellon, they soon re-inflated themselves in their former Plantation, and made it more strong and flourishing than before; in which state they remain'd as long as the Pearl-fishing Trade continued, but that decaying, the splendor also of this Colony declin'd: so that at present the only thing which makes the Place remarkable, is a Fountain on the East part of the Island, not far from the Sea, yielding a liquid bituminous Water, of singular use in Medicine, and sometimes found floating on the Sea at two or three Leagues distance.

About four Leagues distant from Cubagua there is an Island call'd Coche, about three Miles in compass; it was discover'd in the Year 1529, and was formerly little less considerable for Pearl-fishing than the other two.

Sect. III.

Trinidad.

The Island of Trinidad was first discover'd by Columbus, Anno 1447. in his third Voyage, and by him so call'd, as some guess, from its three Points or Promontories; but that seems not so probable, in regard it is otherwise call'd La Trinidad, or Infula Sanctae Trinitatis, and therefore is likely to have been denominated upon a religious Account: It lieth nine Degrees or thereabouts distant from the Line, at the Mouth of the River Orinoco, and is separated from the Coast of
of Parias, over against which it lies by a Straight that is three Miles over, and which for the dangerousness of passing it, Columbus, the first Discoverer of it, call'd Bocca del Draco; the length thereof from the most Southern Angle call'd Punta del Austral, to the North-East, call'd Punta del Galera, is reckon'd twenty five Leagues, (tho' that reckon fifty, may be supposed to mistake Leagues for Miles) and the breadth about eighteen.

The Air of this Place is fo impure, that it is accounted the unwholsomeft Island of all the Indies; nevertheless the Soil is not unfertile, as bringing forth Sugar-Canes, Cotton, Maize, Tobacco of the beft kind, with other Commodities of the general growth of the West-Indies, besides Store of good Fruit and Cassel; and one part of the Island call'd Terra de Beas, produceth great plenty of Pitch, but not of the beft kind; and there have been discover'd severall Veins of Gold and other Metals.

The Natives, some few, were antiently call'd Cauri, or Carai, and were different with their several Clans or Tribes, each under the Government of a Caffique, or petty Prince; but most of them fearing the Spaniards Cruelty, deferted the Island, and settled themselves in Guiana; and at present both this Place, Guiana, and El Dorado, have of Cuitom one and the same Governor, whose Place of Residence here is St. Iofeph, the chief, if not onely Town of the Island; it stands Southward upon the Carona. Here most of that Tobacco is made, which is sold amongst us for Spanishe.

On the North-East of Trinidad, and not above eight Miles distant from it, lies the Island of Tabago, which hath been already treated of, as one of the Caribbees, though some will have it one of the Ovearantos; it is on other wise call'd New Walcheren, from a Town of that Name in Zeland, from whence a Colony of Netherlanders was sent to Plant it.

Amongst others of the small obscure Islands hereabouts, is Virgin Gorda, which is sometimes reckon'd amongst the Caribbe Islands; but since there is nothing considerable to be spoken of it, it is sufficient that it hath been mention'd, though not punctually in its proper place.

CHAP. XX.

California.

Having before made mention of California, as it is by some taken for that large Portion of Northern America which lies most Southward, and also that most West of all that is known of the New World, and having treated of those several Provinces which are generally reckon'd to be comprehended in it, excepting California (strictly taken, as it is generally granted to be an Island) viz. Quivira, Cibola, and Nova Albion, lying on the Continent (though there want not those who make Nova Albion only the North part of California) we shall close up our Discourse of these Islands that lie Northward of the Equinoctial Line with the aforesaid California, and especially so call'd, which was by many thought and describ'd to be but a Peninsula, or half Island, by reason that the Bay which divides it from Quivira and
and New Galicia, towards the North runneth much narrower than it doth Southernly, which made them think, that somewhere or other at the North it was joyn'd to the Main Land of America; But later Discoveries, as hath been said, have found it to be a perfect Island, and altogether separate from the Continent: for about the Year 1620. some Adventurers beating upon those Coasts Northward, accidentally, and before they were aware, fell upon a Straight, the Waters whereof ran with such a Torrent and violent Course, that they brought them into Mar Vermijlo, whether they would or no, and before they knew it, and by that means discover'd that California was an Island, and that the Waters which were observ'd to fall so violently into that Sea towards the North, were not the Waters of any River emptying it self into the Bay from the Main Land, as was formerly thought, but the Waters of the North-West Sea it self, violently breaking into the Bay, and dividing it wholly from the Continent: It lieth North and South, extending it self in a vast length, full twenty Degrees of Latitude, viz. from twenty two to forty two; but the breedth nothing answerable: The most Northern Point of it is call'd Cape Blanche; that to the South, Cape St. Lucas, memorable for that rich and gallant Prize which Captain Cavendish, in the Year 1587. being then in his Voyage about the World, took from the Spaniards near to this Place. As for the Island it self, it is at present little, if at all inhabited by the Spaniards; whether it be that they want Men to furnish new Plantations, or that they find no matter of invitation and encouragement from the Country, or perhaps that the access thereto be not so easy, for 'tis reported to be wonderfully well peopled by the Natives, and that there were found onely upon the Coasts and along the Shore of Mar Vermijlo, twenty or twenty three Nations, all of different Languages; though from the particular Narrations that have been made of the Voyages of several eminent Persons into these Parts, it appears that the Spaniards have taken great pains in the discovery thereof, and also from the several Spanish Names of Places, that they have had Plantations there formerly, however neglected at present.

The Country is abundantly well stor'd with Fitch and Fowl, as appears partly by the Natives, who take a huge pride in making themselves gay with the Bones of the one, with which they load their Ears, and sometimes their Noses also; and with the Feathers of the other, which ordinary People wear onely flicking about their Waist; but Great Persons, and such as will be fine indeed, bett their Heads strangely with them, and have commonly one Bunch of them bigger than ordinary hanging down behind them like a Tail.

Having no knowledge of the true God, they worship what the Devil will have them, that is, the Sun, attributing to it only the increase of their Plants, healthful Seasons, and most of the other good things they enjoy, or are sensible of.

Their Government is laid to be only Oeconomic, each Father ordering the Affairs of his Family apart, without subjection to any other Superior; yet so well manag'd, that they live in good Peace one with another; not without many good Laws and Customs, viz.: That they allow but one Wife to one Man; That they punish Adultery with Death; That they suffer not Maids to talk or converse with Men till they be Married; That Widows may not Marry till they have Mourn'd at least one half year for their Husbands deceased; and divers others of like nature, which perhaps, if the truth were known, do more properly belong to the Natives of Utopia, or New Atlantis, than to these of California.

The Places therein, as yet observ'd, are onely upon the Sea-coasts, 1. The Capes of St. Clara and St. Lucas, the one at the South-East end of the Island, looking towards New Galicia, the other at the South-West, looking into the Sea, and towards Africa.
2. St. Croce, so nam'd from its being first discover'd on Holy-Rood-Day, being a large and convenient Haven, not far from Cape St. Clara.

3. Cabo de las Playas, so call'd from a company of little bare Hillocks appearing from the Sea, and is more within the Bay.

4. Cabo Baxo, so term'd; as lying towards the bottom of the Gulf.

5. St. Andrews, another convenient Haven upon an Island of the same Name.

6. St. Thomas, an Island at the Mouth of the Gulf or Bay, of about twenty five Leagues in compass, rising Southerly with an high mountainous Point, under which is a convenient Road for Shipping, and twenty five Fathoms of Water.

On the other side of the Island, towards the Main Sea, there is 1. St. Abad, a good Haven, and almost surrounded with a pleasant and fruitful Countryside.

2. Cape Trinidad, a noted Promontory.

3. Cabo de Cedras, so call'd (together with a small Island near it) from the store of Cedars growing thereabouts.

4. Enganno. 5. Pueblo de las Canoas, so nam'd from the abundance of those little Boats which the Americans generally use, and do call Canoes, whereof perhaps some store are made there.

6. Cabo de Galera, from its resemblance to a Rat.

It is believ'd there are many more Promontories and Bays on both sides of this Island, besides Rivers and Islands, yet not nam'd, and altogether unknown. Moreover Dr. Heylin hath well observ'd, that those above-mention'd are the Names onely of Places, and not of Towns and Villages, though doubtless there must needs have been some scatter'd Houses, built formerly by the Spaniards in so many Expeditions.

The first Discoverer of these Parts was Ferdinando Cortez, who having in the Year 1534, set out two Ships to that purpose from St. Jago, a Haven of New Spain, and not finding the Success answerable to his Expectation, went next Year himself in Person, and pass'd a good way up the Gulf, but for want of Provisions was forc'd to return without having done any thing to the purpose.

In 1539, one Francisco, a Companion of Cortez in the former Expedition, Set out upon
upon his own Charges, and having Coasted all about, both upon the Eastern and Western Shores, he at last Landed, but not without notable opposition from the Natives, who with much clamour, and many antique Customs set upon his Men so furiously with Stones and Arrows, that they had met with a fierce Repulse, had it not been for the Valor of their Auxiliaries, the Mastiff Dogs, which it seems they us’d to carry along with them in those kind of Voyages; but at last he got footing so far, that he took possession in the Name of the King of Spain with the usual Formalities, and following the Example of Columbus, set up a Cross in the Place for a Memorial and Testimony of his having been there.

Much about the same time Marco de Nisa a Franciscan, undertaking a Voyage into those Parts, reported Wonders at his Return, of the plenty of golden Mines, Stately Cities, set out with magnificent Buildings, the very Gates whereof were enrich’d with Turquoises, and other Precious Stones, and whose meaneft Inhabitants went glittering in Gold and Mother of Pearl, and of the flourishing Condition of the Kingdoms of Aen, Tonteac, and Marata; whereupon the Governor of New Galicia was sent by the then Vice-Roy of Mexico, with great hopes of bringing back a Confirmation of these Reports; but whether out of Spite to be deciv’d in his Expectation, or having real cause so to do, he represented all things as mean and delpicable, as the Fryer had proclaim’d them rich and glorious.

The next that went upon this Design was Ferdinando de Marcon, who is reported to have Sailed many Leagues up a River call’d Buena Gnia, and there to have receiv’d Homage of Naguacatus, one of the Heads of the Californian Tribes.

One more Attempt was made in the Year 1642. by Roderico Cabrillo, who discover’d the Island of St. Luke, and another call’d The Island of Possession; and this was the last we hear of that thought it worth while to go an Undertaker to these Coasts, and ever since all Undertakings hither have been so wholly laid aside, that what-ever was once discover’d in these Parts, seems rather to be lost and forgotten, than any way improvd.

As for Nova Albion, whereas many determine it to be onely the utmost Northern part of California, though it doth not absolutely appear to be so from the Relation of Sir Francis Drake’s Discoverie of it, we judge it agreeable to Method and Decorum not wholly to omit the mention of it in this place, though it hath been already spoken of, and the aforesaid Relation deliver’d at large amongst the rest of those Provinces of largely-taken California, which were taken for granted to be upon the Continent.

Drake and his Company brought home this Description of the Countrey and its Inhabitants, viz. That the Countrey was exceedingly well stord with Deer, Grazing upon and down the Hills by thousands in a company; that the Men generally went naked all over, the Women using only a piece of a Mat, or some such thing in stead of an Apron; that their Houses were built only of Turf and Ofter, yet so wrought together, that they serv’d very well to keep out the Cold; in the midst of it was their Hearth where they made their Fire; and lay all round about it together upon several Beds of Bull-Rutles. What their Towns were, or whether they had any, is altogether unknown.

Southern America.

CHAP. I.

Aving compleated our Description of Mexicana, or Northern America, being that great Peninsula which lies Northward of the Isthmus, or Straight of Darien, together with all the Islands on the North side of the Equinoctial Line, we come now to the Southern Part, otherwise call'd Peruania, from Peru the chief Kingdom thereof, being the other great Peninsula, which lies Southward of the aforesaid Straight: It is generally resembl'd to the form of a Pyramid revers'd; the Basis whereof, that is to say, the more Southerly parts of it towards Magellanica and the Straights, extend themselves largely both East and West, becoming more sharp and straight towards the North, and those parts by which it is joyn'd to Mexicana: in the whole it is suppos'd to contain a Circuit of seventeen thousand Miles at least, and is water'd with four of the greatest Rivers of the World, besides abundance of lesser Streams, which ifu'ing from the Andes and other Mountains of the Countrey, do run from all Parts both into the North and South Sea, much fertilizing the Countreys through which they pass; the four principal are these following:

1. Orellana, so call'd from the first Discovery thereof by Franciscus de Orellana, otherwise the River of Amazons, from a Generation of warlike Women, who (as the Tradition goes) inhabited certain Countreys lying upon the Banks thereof. This P P

fifeth
rifeth in the Province of Peru, and runneth a Course of little less than five thousand Miles, discharging it self at last into the North Sea, through a Channel, as some say, of three score Leagues broad, and yet with such a violent Current or Stream, that it is said to keep its natural course and take almost thirty Miles in the Sea.

2. Orinoco, by some call'd Raliana, from Sir Walter Raleigh, who endeavor'd to discover it, a River of the Province of Guiana, whose Head or Spring is not yet discover'd: It is said to be Navigable a thouand Miles together by the taille Ships, and no less than two thousand by Pinnaces and smaller Vessels, and discharging it self likewise into the North Sea by sixteen several Channels or Mouths, making thereby several Islands; some whereof are said to be of good bigness, and to lie at a distance of a hundred Miles or more one from the other.

3. Maragon, a River of a yet larger Course than any of the former, being, as tis said, no less than six thousand Miles from its Head, which is out of the Andes in Peru, to its Fall, which is likewise into the North Sea about Cape Blanco, by a Channel of seventy Leagues in breadth.

4. Rio de la Plata, otherwise call'd Paraguay, a River of two thousand Miles Course, and falling as the rest into the North Sea, by a Channel of three score Miles over, and about thirty Degrees Southward of the Line, towards the Straights of Magellane. 

The Andes, or Mountains before mention'd being the most noted, and biggest of all America, and indeed of the whole World, and thought by Cortesius to be the same with Sephar, spoken of in the tenth Chapter of Genesis, run above a thouand Leagues in length from Timana, a Town of New Granada in the Province of Paraguay, and are in the narrowest place about twenty Leagues broad; and also of equal height with, if not higher than Caucasus itself: the Ascent to them is impaiable, except in very few places, by reason of craggy Precipices, and wild overgrown pathless Woods, being only for a shelter to Serpents and other poysonous Animals, which are there so numerous, that a whole Army of one of the Kings of Peru is reported to have been destroyed by them; and what euer People there are inhabiting in any of these Woods and Faftnesses, must needs be in the very utmost degree of rude and brutifh salvages.

Some divide Southern America into Peruviana and Brasiliiana: Peruviana they sub-divide into Terra Firma and Peru; Brasiliiana into Brazil and Paraguay: But the most receiv'd and commodious Division is into these particular Provinces following, all of them wealthy and large, viz. 1. Castella Aurea, or Golden Caffile. 2. Nova Granada, or The New Kingdom, as they call it. 3. Peru, specially to call'd. 4. Chile. 5. Paraguay. 6. Brazil. 7. Guiana. 8. Lastly Paria, with some leffer Islands adjoining to all or most of these Provinces, and commonly reckon'd as part of them.

C. H. A. P. II.

Castella Aurea, otherwise call'd Terra Firma.

Castella del Oro, as the Spaniards call it, or Gold Caffile, taketh up all the rest of the Isthmus, or Straight of Darien, which hath not been yet spoken of, being bounded Eastward, and to the North-East, with the Atlantic Ocean; and on the West with Mare del Zur, and some part of Veragna; Southward it hath the new
Chap. II. A M E R I C A.

new Kingdom of Granada. It is call'd sometimes Terra Firma, because it was one of the first parts of firm Land which the Spaniards touch'd upon, after they had pass'd so many Islands, as seem'd for some time to block up, and bar them from the Continent of America: It is subdivided into these inferior Provinces or Countries, viz. 1. Panama. 2. Darien. 3. Nova Andaluzia. 4. St. Martha. 5. Laftly, the little Province De la Hacha.

The chief Rivers of the Province of Panama are 1. Chagre, as it was antiently call'd, but afterwards from the great number of Crocodiles that harbor in it, Rio de Lagoarts, falling into the North Sea between Nombre de Dios and Porto Bellano. 2. Sar- duilla. 3. Sardina. 4. Rio de Cobros, so call'd from the abundance of Snakes breeding thereabouts. 5. Rio de Comagre, which falls into the same Sea. 6. Chupa, famous in times past for its Gold-Sands. 7. Rio de Balsa, whose Banks are shaded with good Timber-Trees. 8. Rio de Congo, which falls into St. Michaels Bay.

S E C T. II.

Panama.

Panama, commonly call'd The Distrikt, or Circle of Panama, is bounded Eastward with the Gulf, or Bay of Uraba, by which it is separated from the reft of the Continent of this Southern part of America; on the West it hath Veragua, one of the Provinces of Guatimala; being on both the other sides wafh'd with the Sea: It is supposed to contain in length from Cartagena and Popayan, to the Confines of Veragua, about eighty or ninety Leages, in breadth not above threee-score in any part; and where it is narrowest, viz. betwixt the City of Panama and Nombre de Dios, if measured by a right Line, not above six or seven Leages from Sea to Sea. It lieth almost under the Equinoctial Line, but a few Degrees Northward of it, and therefore somewhat hot, and by the neighborhood of both Seas subject to a foggy and grofs Air, in comparison of some other parts, so that it is not counted generally so healthful a Country, especially for Strangers, and in Summer-time.

The antient Division of Panama, according to the Lordships of the Casiques that then govern'd, were these following: Careta, Aila, Comagre, Chiam, Coyba, Chante, Chire, Nata, Tohe, Trata, Hayla, Burica, and Esfotia, where the South Sea with the Spring-Tides flowing over the Plains, at its return being hard by the Sea, is turn'd into Salt, but as it hath always hapned in all other Countries of the World, that with the alteration of Government, the Division of the Country, and the Names of Places have totally chang'd, so also here the antient Division of Regions and Territories must give place to the Modern.

The antient Inhabitants of these Parts were a very warlike People, the Women always accompanying their Husbands in the Wars. They us'd to hang on the tops of their Standards the Bones of their greatest Heroes, thereby to animate their Soldiers. Their Arms consist'd of poiysonous Arrows, Stone Swords, and Pikes made of the Palm-Trees. They also carried with them the Idol Chiapa, to whom they offer'd living Children at the beginning of their Wars, and afterwards making Merry with the Flesh, anointed the Image with the Blood: Moreover, if they return'd home Conquerors, they spent several days in all manner of Debaucheries, as Drinking, Singing, Dancing, Cutting their Prisoners' Throats, with their Blood also anointing their Image. But if they were conquer'd, then they invented new Offerings to reconcile themselves with their Idol.

The chief Towns and Places which the Spaniards inhabit here, are 1. Panama.
the chief City of the Province, being also a Bishop’s See, which is Suffragan to the
Arch-bishop of Lima, and the ordinary Residence of the Governor and Courts of
Justice for thefe Parts: It is seated likewise upon the South Sea, and so near, that
at High-water the Ships are laid to Ride even under the Walls. Through this Town
the Wealth both of Peru and Spain paffeth once every Year; from Spain by Nombre
de Dios and Porto Bello, from whence whatsoever Merchandize or other Commodi-
ties come from Spain, are Transported to Panama by Land, and from thence by Sea
to all the Parts of Peru; and by Panama whatsoever comes from Peru, is sent
into Spain: It hath commonly a strong Garrison of Soldiers in it, and is doubtles-
as Place otherwise well fortifid, being of so great importance. From the Haven
Pericos three Ways lead to Panama, the first along a Bridge over a River, whose
Banks are great Fortifications to the City, the rather because the River is deep, and
next it a Pool over-grown with Weeds. The Way from Nombre de Dios plain and
without Woods, is wafh’d by the Brook Levendero. The third runs along over a
Stone Bridge and Champain Grounds, that extend from the Haven Pericos to the
City. Eastward from Panama appear feven Royal Housés on a Rock, wherein the
Courts of Judicature are kept. Five hundred Rods into the Sea lies an Island re-
sembling a Half-Moon, and the Haven wherein the Ships when they unlade caft
Anchor, there being else not Water enough for laden Barques, and all lie dry, the
Tide being out: At the Mouth thereof stands a woorden Sconce. The Places Venta
de Cruz, Chagre, Quebrada, and Balbano, are also fortifid against any Invaflon, where
else an Enemy might easil Land: But the strictefi Watch is kept at the River
Chagre, which Westward below Nombre de Dios falling into the Northern Ocean,
brings the Ships up to Venta de Cruz, from whence a Way scarce five Leagues long
leads to Panama. The Spanifh Commodities conftifting moft in Meal, Oyl, Biskets,
Cloth and Silk, are all brought from Nombre de Dios along the fame Way; or else in
Winter when they cannot feem the Current of the River Chagre, then they bring
their Goods by Land, not without great danger of being taken by the run-away
Negro’s, who fet upon them out of the Woods with poyfon’d Darts and Arrows;
and as many Spaniards as they take, is many several ways they put them to death,
because they formerly in the time of their Servitude were us’d with all imaginable
Cruelties. The Provisions fold here at a reasonable Rate are Maiz, Peruan-Meal,
Poulterey, Honey, Cattel, Swine, Oranges, Lemmons, Cabbage, and all manner of
Garden Herbs or Plants. Round about the fore-mentioned Royal Housés lie Bul-
warks, with a strong Castle on one fide. A fair Cathedral dothes the Place to be
a Bishop’s See: And the Francifca, Dominicans, and Monks of the Order De la
Merced, inhabit feveral fair Clyofters here. Two Leagues Westward is the Haven
Pericos, which being fecur’d from all Winds by three high Isles that lie before it, is
the chief Harbor in which the Peruan Plate-Fleet (confifting moft in small Barques)
comes to an Anchor before they touch at Panama. The Country is for the moft
part Mountainous, and in many places fends forth flanking Damps out of muddy
Pools; yet in some places are Savannah Grounds for Cattel to Graze in. The Air
would also be more unheafhul, if it were not clear’d by the Winds which blow
from the Sea. From July to October there fall continual Rains, mixed with terrible
clops of Thunder. The Inhabitants often recreate themfelves in Hunting wild
Hogs, with Nets made of the Brambles call’d Nequen or Henachen, and that after a
strange manner: for theyfet on fire the Bushes all about the place where, they sup-
pofe the Game to lie, which to fhan the Fire runs into their Nets; fo that the
fame Bushes are both their fhelter and deftufion, as affording Material to make
the Nets wherein they are taken. Besides other Birds the Woods also abound with
Pheafants.
Pheasants and Turtle-Doves, and amongst Beasts, those that carry their Young about them in a Bag, as also wild Cats. The Sea abounds with Fish, and produces Crocodiles of a large size, by the Spaniards call'd Lagartos. The Trees are seldom without Leaves, but bear little or no Fruit.

2. Nombre de Dios, which hath broad Streets, high woollen Houses, and a fair Church: It extends from East to West along the Northern Ocean, in the middle of a great Wood on Moorish Ground, having a great Fen on the West; being situated at an unwholesome Climate, it hath occasion'd the death of many People. The Merchants which dwell here had also Habitations in Panama, (the rest of the Houses being most of them Inns for Strangers) from whence as soon as they had gotten an Estate they went to Spain. The Country round about lies under Water in many places. The Oranges, Cassada-Roots, and the like, which grow here, occasion many Diftempers to those that eat of them. In the Harbor, which hath on each side a Ridge of Rocks, on which lies decay'd Forts, the Sea is often-times so turbulent, that the Ships are forc'd to Ride at fix Anchors speice. Eastward from the City a fresh-Water River falls into the Haven, on whose Banks stand several Garden-Houses and Orchards. Anno 1595, Sir Francis Drake arriving here, found a Mill beyond the City, not far from which on a Hill stood a Watch-houfe, of which having made himself Master, he set fire on the Town Nombre de Dios, as also on all the Vessels that were in the Harbor. The original of the Name Nombre de Dios was on this occasion, viz. Diego Niquela setting Sail with three Ships out of the Haven Cartagena to the Golden Country Veragua, was surpris'd by a violent Storm, in which two Ketches, Commanded by Lupus de Olano and Peter Umbría were driven out of fight, whilst he suffer'd shipwreck, and getting ashore, rang'd up and down in a desolate Country, where he found no other Food but Roots, till at last he met with Olano; when the Famine began to increase amongst them in such a nature, that being scarce able to carry their Arms, many of them were kill'd by the Inhabitants with poised Arrows, innumerable that of seven hundred there remain'd scarce ninety: Niquela shipp'd as many of them in a new Vessel which they had made as it could possibly carry, and promised to fetch the rest off from Veragua as soon as he had discover'd a Place fit to be inhabited: The first Place he Landed at was Puerto Bello, from whence being necessitated by the Indians who gather'd together to Retreat Aboard, not without the loss of several Men, he set sail to the Promontory Mompó, beyond which he Anchor'd in a secure Haven; where, as he was going ashore he call'd to his Men, saying, Saltem in tierra al Nombre de Dios, that is, Let us Land in the Name of God, and casting up a Fort against the Assaillants of the Natives, call'd it Nombre de Dios.

3. St. Philip, or Puerto Bello, so denominated by Christopher Columbus from its Haven lying along the North Sea, wonderful convenient and secure, by reason of the good Ground for Anchoring, and a Creek in the same, defended from all sorts of Winds, and which being surrounded with Woods, hath much overflow'd Land about it, as also abundance of good Gravel for Ballast; for which and several other Reasons, the famous Architect Baptista Antonelli advis'd the Spaniards King, to build this City for a Staple of Trade (in stead of Nombre de Dios, which was found unhealthy) having pitch'd upon an excellent Situation for it, viz. on a Plain at the Foot of a Hill, where there are three fresh Rivulets, meeting with a fruitful and hot Country: wherefore his Advice being taken, they first built a Fort at the Mouth of the Haven, put five Guns into the same to defend the new City, and on the Shore a strong Tower with eight Drakes: Moreover, the Rocks along the Shore, and close Woods about the Haven prevent the Landing of an Enemy: But at
the very time that this City was just begun to be built, Sir Francis Drake having burnt Nombre de Dios, ran into the Haven Puerto Bella, where he found ten Houfes, besides the Governors Palace, and a Cafele whose Breaft-works which the Spaniards had lately rais'd of Timber, Stone, and Earth, were all demolifh'd by the Englifh: But the Spaniards have since re-built the fame, and fortifi'd the Haven, with two strong CafKes, norwithftanding in the Year 1661. it was surpriz'd and taken by the Englifh under the Command of Captain Parker, and the Governor Pedro Melendez taken Prifoner.

4. Nata, commonly call'd St. Jago de Nata, situated on the West side of this Province, upon Mare del Zur, or The South Sea, about thirty Leagues diftant from Panama, towards the Borders of Veragua.

5. Acta, a Town upon the fame Coaft, but lying, South-East of Nombre de Dios: It was at first onely a Fort built by Peter de Arias, but afterwards grew up into a small City, of which at prefent there is nothing remaining but the remembrance of the famous Vasquez Nunez, Beheaded by his Father-in-law Arias.

6. Laftly, La Cruz Real, a few Leagues diftant from Panama, for the moft part inhabited by a fort of Negro's call'd Simmones.

Along the North Coaft of Panama are two small woody Islands call'd Cattiva and Comagre, lying low in the Water; also the Isle De Pintes, which rises high out of the Sea near the Main Land.

The Isles of Pearls.

On the Southern Coaft are Jole de las Perlas, or The Isles of Pearls, about twenty five in number, but indeed rather Rocks than Islands, excepting two, viz. Taroreque and Del Rios where in former times the Indians took great store of Pearls, by diving for them to the bottom of the Sea, and they were likewise of greater value and excellence than thofe of Cabagua, and great profit was made of them by the Spaniards, till by their Cruelties exercis'd upon the Natives through exceflive greedines, they depopulated the Islands, and left that altogether of which before they were fo inftantous: they are now only inhabited by a few Moors and other Slaves, who keep Castle there for their Masters.

It will not seem amifs to conclude our Description of Panama with a Short Account of the Englifh Captain John Oxenham's Exploits in that Part: He being incited by the Treasure which Sir Francis Drake fetch'd from hence, resolv'd to Steer for the Northern Coaft of Panama, where he hal'd his Ship of a hundred and twenty Tun on Shore, and cover'd the fame with Trees, buried his Guns, and march'd with two Field-Pieces and seven Men up into the Country, and was by the Indians conducted to a River which falls into the South Sea, where he built a Pinnace of forty five Feet long, and Sailing into the South Sea, Landed on Tararbegi, one of the Islands of Pearls; where he soon after took a Perman Barque with fifty thousand pieces of Gold, Store of Wine and Bread, and the day following another which came from Lima, loaden with a hundred thousand Pound in Silver Bars, and some Pearls; with which being enrich'd he return'd to the Main: The Governor of Panama being inform'd of it, put a hundred Soldiers into four Barques, besides a confiderable number of Negro Slaves; over which Juan de Ortego having the chief Command, was inform'd at Tararbegi what Course the English had steered; whereupon he pursu'd them to the River whither they were gone, which falling with three Arms into the Sea, they could not have known which way the English went, unless they had seen some Feathers of Fowls driving in the Mouth of the Leaff Branch, by which they judg'd that they were not far off; therefore Rowing up they found after four days Journey the Pinnace hal'd on Shore, and watch'd by fix Men, who were order'd to stand Sentinel, whereof one being shot by the Spaniards,
Chap. II. A M E R I C A.

of whom Ortega pursuing, found half a League from the Shore a Hatched made of Boughs, wherein the Booty lay, which he speedily carried to his Barques; but Captain Osenham inform'd herof, fell with two hundred Indians upon the Spaniards, who having a Wood on their Backs made such advantage thereof, that eleven English were slain, and seven taken, and had not the least fled, they had all been either kill'd or taken Prisoners: Those that were taken inform'd Ortega that they had been at difference amongst themselves about dividing the Booty, which was the reason of their staying so long: moreover, they discover'd where and how their Ship lay; all which the Governor of Panama write to Nombre de Dios; from whence four Sail were immediately sent to find out the Ship and the buried Guns, as also to take all such English as they should find preparing of Boats or Barques, and bring them to Panama; whereupon very many were taken, who were all miserably slain, except a few Youths.

S E C T. III.

Darien.

Darien, which by some Authors not being thought considerable enough to make a distinct Province, is reckon'd one and the same with, or at least part of, Panama, hath on the North the District or Circle of Panama; on the South, the new Kingdom of Granada; Eastward it is bounded with the Gulf of Uraba above said, and some part of the River Darien, which giveth Name to the Province; and to the West, with the South Sea; of a more temperate Air by far than that of Panama, and a Soil so admirably fruitful and luxuriant, that they lay Melons, Cucumbers, and generally all other Fruits of the Garden, are ripe and fit to gather within twenty days or less, after their first sowing, but very much infested by noxious Creatures, as Lyons, Leopards, wild Cats, Crocodiles, Serpents, and Bats, after whose Bitings a Man bleeds to death, unless he washes the Wound well with Sea-water, or flay it with hot Athes; and no less by the unwholsomeness of the Air, which is infested by the many stinking Damps that arise from the muddy Pools. The Inhabitants are sickly, and leaping generally to be troubled with the Yellow Jaundice, never attain to a great Age: they go naked, the Men only covering their Privities with a Shell or Cotton-Cloth: The Women wear a Cloth which reaches from the Middle down to their Knees, but if Women of Quality, to their Feet.

The Spaniards have many years ago made themselves Masters of this Province of Darien, in which Aphonfius Fageda built the City Sebastian, which was inhabited till a Spanish Knight call'd Ancifinus, Anno 1510. built Antiqua, and made it a Bilhop's See, which by reason of the unwholsomeness of the Place was remov'd to Panama, when Valquez Nunez discover'd the Southern Ocean, Anno 1590. because Antiqua lay on a low Ground between high Mountains, where the Sun burnt exceedingly, and the Way to the South Sea, being three Leagues from thence, it was very troublesome to convey Merchandize thither.

But a worse Accident befell the Town St. Cruz, which being built by the Spanish Captain Peter de Aris, was ruin'd by the Indians.

The chief Rivers are 1. Darien, which gives Name both to the Province and the Provincial Town, and falls into the Gulf of Uraba, being a large Arm of the Sea, eight Leagues over at the Mouth thereof. 2. Rio de las Redas, which runs in like manner through the Province of Nova Andaluzia, and falls also into the same Gulf.
So likewise doth 3. *Río de la Trepadera.* 4. *Corabaces.* 5. *Bero,* chiefly remarkable upon this Confederation, that some curious Etymologists have endeavor'd to derive the Name of *Peru* from this River, by the alteration only of the initial Letter.

The chief, and indeed the only Town of this *Tract* is *Darien,* built as aforefaid by *Encius,* a *Spanish* Adventurer, and by him call'd *St. Maria Antiqua,* and by others *The Antiqua of Darien,* being one of the first Towns that were built by the *Spaniards* on the firm Land; though there are who make mention of two other small Towns or Villages, the one nam'd at leaft, if not built by the *Spaniards,* viz. *Los Anglos,* scarce inhabited at present by any but the Salvages; the other an antient Town of the Natives, call'd *Bizu.*

**S E C T. IV.**

**New Andaluzia.**

Afterward of *Darien* and the Gulf of *Urraba,* lieth the Country of *New Andalusia,* otherwise call'd *Carthagena,* from the Name of its principal City: On the East it hath the Country call'd *St. Martha;* on the North, the Main Ocean; and *New Granada* towards the South. It is for the most part a Mountainous Country, and full of Woods, which they say yield abundance of Rozen, Gums, and some very good Balsams; also a sort of Long-pepper, much sharper than that of *East-India.* But the Plains, by reason of much Rain, to which the Country is subject, especially for some times of the year, of but a sivery and cold Soil. The *Spaniards* at their first coming found it a rich Country, not so much from the Nature and Profits of the Soil (though it be said to have some Mines in it, and those of *Gold*) but by reason of a certain Opinion and Respect, which the *Americans* of these Parts are generally said to have born towards this Country; insomuch that they would be brought and buried there from other Places very remote; and according to the Custom of the Country, not without good Store of *Gold* and other Jewels, according to the Quality and Condition of the Person that was buried; of which the *Spaniards* soon gain'd Intelligence, and in ransacking the Graves and Monuments of the Dead, are suppos'd to have found an infinite Malls of Treasure: but those Mines are long since exhausted.

The Inhabitants of *old Excuse'd* great prejudice by Tygers and Serpents; yet nevertheless this Country was very populous before the *Spaniards* arrival here; the Natives wore Cotton Aprons before, and Golden Rings about their Arms and Legs, as also Strings of Pearl, and the like. *The Women* here, as in the rest of these Parts, went with their Husbands into the Wars, and behav'd themselves valiantly, shooting poyn'd Arrows, insomuch that *Martin Ambiskey* took a Maid, *Anno 1509,* who had kill'd twenty eight *Spaniards.*

To the Province *Carthagena* belongs also the Country *Urraba,* which is so fruitful, that all kind of *Spanish* Trees and Seeds grow better here than in Spain: Besides which it hath its own Fruit, as also abundance of Pine and Palm-Trees, whose Leaves serve for Brooms. *The Guaiayna-Tree* bears a sharp kind of Fruit like a Lemmon, the *Guaraavana* a kind of Citrons, the *Manifesa* a Fruit not unlike an Orange, but tasting like a Melon, and the *Hovas* a great Plum.

Their Gardens abound with the Root *Batata,* whose Leaves send forth several Strings, which over-spreading the Ground satten in the Earth, and take new Roots; it is yellow without, and whitish within, and bears pale green Flowers, which at last turn to a Cod full of Seed. These Roots roasted in hot Ashes, exceed our *European*
Moreover, Urraba abounds in Venison, Fitch, and all sorts of ravenous Creatures; a thing as Tygers, Lyons, and a particular strange Beast as big as an Ox, having an Elephants Nofe, Horfes Feet, and hanging Ears.

The Trees likewise swarm with Birds; and especially near Lakes or Pools breed Pheafants and Parrots, of which some are bigger than Capons, others no bigger than Chickens.

Against Urraba juts the Mountain Abibe, whose length Westward remains unknown; the breadth thereof in some places is about twenty Leagues; it hath many Ways which cannot be travell'd with Horses. The top of this Mountain is uninhabited; but along the Valleys, which are many and large, dwelt formerly a People that posses'd great Riches in Gold, which they gather'd out of Rivulets that fell Westward from the tops of the Mountains. It Rains here almost all the year long, which makes the Ways very bad for Travellers to pass.

At the Foot of this Mountain, towards the South, lie two small antient Cafiquests, if we may so call them, formerly inhabited by a valiant People, call'd Tarabe de Zem, whether chiefly the dead Bodies were brought from all the adjacent Countries, to be buried in great State, as hath been before intimated.

The principal Towns and Places of note are 1. Cartbagena, (so call'd either from the reSEMBLaNcE of its Situation with the City Cartbagena in the Kingdom of Murcia belonging to Old Spain, or because the first Inhabitants were Citizens of the said City) which was begun to be built Anno 1532. by Peter de Heredia, but fully finished by Georgio Robledo, eight years after the first Foundation thereof was laid. This Epifcopal Metropolis is on the North waft'd by the North Sea over a plain shallow Ground; on the Land side the Sea flows through a narrow Bay by the City towards the Lake Canyope, which ebb and floues equal with the Ocean, and receives and discharges its Water through two Pipes which lie under along Bridge, joyning Cartbagena to the Main Coaft. This City boasted long since above five hundred Stone Houfes, being divided into twenty fix large Streets, whereof four are fix hundred and twenty Paces long: behind each Houfe is a Garden; and the Church appears above all the other Buildings: The Dominicans Cloyster is also fairly built; neither is the Francifcan inferior to it, who also posses a fcond Edifice on the Main Continent over the Bridge. The Cuflon-houfe and Court where the Courts for the whole Province of Cartbagena are kept, are also fately Structures. The Haven hath two Entrances, the chiefef whereof lies half a League Eastward from the City, and the Weftern, call'd La Boca, is as far again; both very dangerous, becaufe of the many blind Rocks that lie before them. Anno 1585, when Sir Francis Drake took Cartbagena by Storm, the whole was fortifi'd with Sconces, besides two Forts for the better security thereof, whereof one lock'd up the narrow Mouth of the Haven with a strong Chain; not far from which floud an Abbey, Dedicated to the Francifcans, and Wall'd round about; fince which they have feveral Out-works, Forts and Towers, to prevent all foreign Invasions. The City grows wealthy daily by the Perfon Plate-Fleet putting in there before they go to Spain; and especially by the Trade from New Granada along the River Magdalena. The Island before the Haven, antiently call'd Cofega, now Carex, inhabited by Fijher-men when the Spaniards Landed there, is now defolate, the remainder of those that were deftroy'd by them being fled to wild places from the Spaniards Cruelties; notwithstanding the People hereabouts were valiant enough to Engage with them. But fince the Devaffation made by Sir Francis Drake, Cartbagena hath receiv'd
AMERICA.

Chap. II.

receiv'd a more fatal Blow; for it was scarce fully repair'd, when five French Privateers burnt the City to Athes: which Mischief was occasion'd by a Spanish Seaman, who being whip'd by Command of the Governor, resolving for Revenge, went from Spain to France, and conducted the fore-mention'd Ships to Carthagena, where he reveng'd himself on the Governor; for finding him asleep, he first wak'd him; and after having told him of his causing him to be Whip'd, he kill'd him. The Booty which the Spaniards carried from thence at that time amounted to above a hundred and fifty thousand Ducats.

2. Tolu, by the Spaniards now call'd St. Jago, twelve Leagues distant from Carthagena, a Place memorable for the excellent Balsam which is brought from thence, and commonly call'd The Balsam of Tolu; it is gather'd in a Spoonful of black Wax, stuck under the Hole cut in the Bark of a low Pine-Tree, out of which in hot Weather runs a Golden colour'd Gum, very sovereign, and of an excellent Smell.

3. St. Croix de Mopox, a neat Town, seated a little above the confluence of the two Rivers, St. Martha and Magdalena, which waters this Province.

4. Barana de Nolambo, a Place of great Traffick, especially for all Commodities of the new Kingdom of Granada; it standeth upon the Banks of the River Magdalena, and about six Leagues distant from the Sea.

5. Buena Vista, otherwise call'd St. Sebastian de Buena Vista, a Town commodiously seated upon a rising Ground not far from the Gulf of Urraba, or the Sound of Darien, about a League and a half from the Sea.

6. Villa de St. Maria, thirty Leagues Southward of Carthagena. The Province of Carthagena is flor'd with many Brooks and great Rivers, amongst which the Stream Caucu falls into the River Magdalena, beyond Popayan near Mopox.

The River Zenu, which gives Denomination to the above-mention'd Territory, makes a very convenient Harbor with its Mouth; where much Salt is to be had.

The Daria, which runs between Panama and Carthagena into the Inlet Urraba, gives its Denomination to the foregoing Province, through which it also runs, as hath been already mention'd. The River which for its greatness is call'd Rio Grande, or Magdalena, (because it was discover'd on the Day Consecrated to that Saint) falls with such force into the Northern Ocean, about twenty three Leagues Eastward from Carthagena, that running two Leagues broad and ten long into the Sea, it retains its freeness of Water; in which there lying many Rocks, makes the same very dangerous for Ships. In the Mouth of the Haven lies an Island, which is divided by the River, the widest and most frequented Channel of which respects St. Martha, where thofe that carry the Merchandise up this Stream to New Granada, spend two Moneths in Toeing, when as they come from thence in three Weeks.

Thunder and Lightning rages here many times after a terrible manner from Midnight till Morning. In January there falls also abundance of Rain, which gliding from the Mountains swells the River exceedingly.
St. Martha.

St. Martha, so call'd from the chief City of the Province, is bounder'd on the West with New Andaluzia; on the East, with Rio de la Hacha; on the North, with the Ocean; and on the South, with New Granada; It is about three-score and ten Leagues in length, and not much less in breadth: It was antiently distributed into several little Seignories, Govern'd by Cofiques, or petty Princes, viz. Pozigueica, Betoma, Buritaca, Chimola, inhabited by valiant Men and beautiful Women, and above all the rest, Tairona, (whose People for a long time maintain'd War against the Spaniards) lying at the Foot of the high Mountains Sierras Nevadas, whose snowy Crowns are seen thirty Leagues off at Sea, and run along in a continu'd Ridge through Peru and Chile to the Straights of Magellan.

This Countrey was Discover'd, and part of it Planted, Anno 1524, by Roderic de Boftredas, who afterward was murder'd in his Sleep by his own People.

The Sun shines so exceeding hot near the Sea-coast, that there is no enduring of the same; but upin the Countrey the snowy Mountains occasion great Cold, and in Harvest and October, it rains exceedingly, whereas at other times it is very dry Weather, and the Winds blow generally out of the East or North-East, yet the Land Breezes coming out of the West bring sometimes Rains with them. From the Mountains, which are stony and barren, fall many Brooks and Rivers, which water divers Plains, the Grafs and other Plants of which are offen blast'd by violent Storms; nevertheless Oranges, Lemmons, Granates, and all sorts of Spanish Garden Fruits grow here in great plenty. The Woods afford likewise Pigeons, Partridges, Venison, and the like; the Rivers all manner of Fish, which are seen to swim in great numbers twenty Yards under the Water, especially in the Haven St. Martha, near which formerly liv'd many Fisher-men, who with Nets made of tough Twigs pleated together, caught such plenty of Fish, that they furnish'd all their Neighbours. The High-ways are made dangerous by Lyons, Tygers, and Bears.

The Countrey Buritaca affords the Inhabitants Gold; Tairona, excellent Stones against Bleeding and the Gravel, Jasper, Porphyry, and Gold; the Valley Tunia, many rich Emeralds, which Stones us'd to be in great esteem before America produce'd such great numbers of them. Acosta relates, That a Spaniard desiring to know the Price of an Emerald, shew'd two to an Italian Jeweller, who val'd the one at a hundred, the other at three hundred Ducats; but soon after seeing a Chefs full of them, said they were scarce worth a Ducat apiece; and that the Sule which the Roman Lady wore, being beset with Emeralds, and val'd at four hundred thousand Ducats, would not sell now for half so much. This Stone or Jewel exceedingly fortifies the Sight, wherefore the Emperor Nero represented the bloody Encounters of Fencers in an Emerald. It is also judg'd to be good against the Falling-sicknes, wherefore the Indians hang them in their Noses to this day, and adorn their Idols with them; they grow in stony Rocks along Veins, not unlike Crystal, and in time obtain a glittering Greensill; the biggest of them that are found in this Age are most esteem'd of in Geneva. The Emerald Pillar, which as a wonderful Ornament stood in Hercules's Temple in the City of Tyre, being very famous amongst the Antients, was without doubt no more than a green Stone; and perhaps of the same Material, was the Pillar erected by the Arabian King Miramamolines, in the Cathedral at Corduba. But the great fame of these Emeralds incite Gonzalvez Zimenes, Governor.
Governor of St. Martha, to leave his Place and seek for them; to which end he Sail'd up the Rivulet Gayra with two Ketches and forty five Spaniards, who meeting with the Caffique Bagotta, got much Gold of him, and afterwards went to the Valley Teffica; of which Simandosa being Governor, conducd Ximenez twenty three Leagues farther to an Emerauld Rock, from whence he return'd exceedingly enriched; the rumor of which spreading up and down, made several travel this; amongst whom was Peter di Lugo, Governor of Terra Firme, who fending for Aid from Carthagena, fought his way to Bagotta, who refil'd him for some time, till at laft being defeated he made Peace with them for a considerable quantity of Gold; which when Peter di Lugo had receiv'd, not regarding his Word, he plunder'd all the Countrie, and having committed all imaginable Cruelties on the Natives, return'd home with an invaluable Mails of Gold and Emeralds to St. Martha. Not long after the Welfares, German Knights, came from Venezuela, (which City the Emperor Charles the Fifth Morgan'd to them Anno 1518.) and travel'd through the snowy Mountains of St. Martha with Indian Guides, whose Instructions following, they dugg'd many Emeralds out of the Valley Fumia; the Inhabitants of which affrighted at the fight of the Strangers, hang'd themselves out of despair, though naturally valient, and ingenious in working in Tapestry the shapes of Tygers, Lyons, and other Beasts, and painting on the Walls of their Housels variety of Figures of divers colours, covering their Floors with Mats nearly pleas'd of Ruffles. They fed on Fitch, Vention, and Mans-flefh, and also on the Roots Agies, tafting like Chelfnuts, Ica, Maiz, Batata, and Caffada.

The chief Cities and Places of principal note in this Province are 1. St. Martha, which gives Denomination to the whole Province, it stands built at the North Sea, which makes a large and convenient Harbor, being defended from the Winds by high Mountains and two Ifles, is a Bishop's See, and hath a large Cathedral. The Housels built of Canes are cover'd with Palmuto Trees, and some with woodden Shingles. The Haven hath neither Fort nor Caflle to defend it, becaufe there is no Trade but with the Indians, which bring Earthen Ware and Cotton Clothes to sell; and because the Spanifh Ships feldom come hither, the Place is much gone to decay, and the more, becaufe it is no way defended against any Assault of an Enemy, which the French, and afterwards the English, under the Command of Sir Francis Drake, and the following Year under Captain Anthony Shirley took advantage of, and plunder'd and burnt the City.

2. Teniriff, built on the Banks of the River Magdalen, forty Leagues from St. Martha.

3. Tamalaneque, otherwife call'd Villa de las Palmas, twenty Leagues South of Teniriff, lying on a high flony Ground; between which are plain Pastures for Cattle, surrounded with high Woods, as alfo Pools made by the over-flowing of the Rivers, whole Banks are inhabited by the Indians, who are much addicted to Sleep and Drinking. The Pools before mention'd produce abundance of Fitch, as alfo Crocodiles, and the terrible Manati before describ'd.

4. Ocmara, which hath an Inland Haven.

5. Ramada, formerly call'd New Salamanca, standing at the Foot of the Mountain call'd Sierras Nevadas. This Town is famous for its Copper and Brains Mines.

6. Cividade de los Reyes, which built in the Valley Upari, stands on the Shore of the mighty River Guataporega, where from the beginning of January till May the Eastern Breezes moderate the Heat, otherwise intolerable: But the continual Rains thereabout occasions the Quaran Ague, and many such like Diffempers. The Natives hereabouts, salvage and valiant, would never submit to the Spaniards. The peculiar Plants
The peculiar Plants of this Place are the Tree Xagua, which bears a Fruit like a Raisin, which dry'd and ground yields exceeding good Meal for Bread.

The Root Scorezua, which cures the Biting of Serpents. The Indians also use the Tail of a Serpent for a Remedy against the same Evil, as they take Tobacco against the Falling-fickness, and inuff the Powder in at their Nostrils, and drink the Juice thereof to cause Loofnefs.

The chief Rivers of this Province, are 1. Polomino, so call'd from a Spanifh Cap-,<ref>chief River</ref>tain, that was drown'd there with his Horfe, falling from the Sierras Nevadas.

2. Guatupori, whose Water causes the Bloody-flux and Loofnefs, which again is cur'd by the fame Water drunk with beaten Cinamon. Guatupori reckons many Rivulets, amongft which the Cifar and Budillo are both large, deep, and abounding with Fift.

Near the City Los Reyes are three great Water-pits, triangular between flony Cliffs; nigh which a Tradition goes, That of old there lurk'd a terrible Serpent, which at times devours'd a thousand People; insomuch that none durft dwell thereabouts, till certain Spaniards having the hardnefs and curiosity to go seek out this Serpent, heard a great noise in the Pits, but saw nothing like the fore-mention'd Animal.

Here are likewise several Fountains of Pitch and Tar.

**S E C T. VI.**

Rio de la Hacha.

Rio de la Hacha is the Name of a little Province lying on the North-East of St. Martha, wafh'd on all other parts with the Waters of the Main Ocean, or with the Gulf or Bay of Venezuela.

The chief Towns of this Province, are 1. A small Town call'd De la Hacha, which gives Denomination to the said Province, having no convenient Haven, but otherwife fteared in a Soil very rich and fertile, nor onely of all sorts of Fruits and Plants, especially such as are brought from Spain, but likewise in many Mines of Gold, Gems of a large fize and great value, and many excellent Salt-Wiches, as they call them; It is eight Leagues distant from Salamanca aforesaid, and eighteen from Cape Villa, the moft Wefterly Point or Foreland of the Bay of Venezuela; and with the refi the had the hap to be surpris'd and pillage'by the Engliſh with Sir Francis Drake in the Year 1595, who refu'd twenty four thouſand Ducats, which the Governor proffer'd him for the Pearls he had taken.

2. Rancheria, fix Leagues Eafťward of La Hacha, inhabited chiefly by Pearl-Fishers, or fuch as get their Living for the moft part by Fishings for Pearl, which was wont to be good on thefe Coasts.

3. Tapia, five Leagues from La Hacha, and confiderable, for that the adjacent Parts were laid waffe by the Engliſh, to revenge the perfidiousnefs of the Governor of Salamanca, refuſing to pay the four thouſand Ducats he had promis'd, upon Condi-tion of their sparing the Town.

The laft King of those that Govern'd in any of these Provinces of Vera Firma, was Abibeça, who could not be won to come down from his Palace, which he had on the top of a Tree, till a Spanifh Officer, one Francisco de Vancuez began to lay an Ax to the Root thereof.

After Didaco Niguefa, Alfonso Oreda, and Ancifo, had made very large Discoveries in thefe Provinces, Valba was the first that discover'd the Way to the South-Sea.
New Granada.

The new Kingdom of Granada, as 'tis commonly call'd, was for the most part both discovered and conquer'd by Goncalvo Ximenes, about the Year 1536, and with so good success, that in less than a years space, the whole Country was quietly settled under the Spaniards Government, and the Captain with his small Company had made shift to gather together such a Mass of Treasure as may seem almost incredible, viz. from the Regali, or petty Princes of those Countries, whom he had either deftroy'd or made Tributary. But a more particular Relation of Ximenes his Journey take as followeth:

Being sent out by Peter Ferdinand de Lugo, to discover the Countries that lay along the River Magdalena, he travelld upon the right side of it with great trouble; for not onely the brambly Woods, Moors, and deep Brooks, made the Way exceeding bad to be travelld, but also the Inhabitants, who fell upon him from their Ambuscades: yet at last he reach'd Torqu, which Name he chang'd into Pueblo de los Bracos, because four Rivers unite their Waters there. Here ordering his Brigantes which were come up the River to call their Anchors, he judg'd it convenient to play all the Winter, because the twofl Rivers had drown'd the adjacent Country. Ximenes observing that the Indians fetch'd Salt from the Sea-side, judg'd that the Country was inhabited, and therefore in fair Weather march'd up to the Mountain Ope, behind which he found a Country full of Salt-pools, which produc'd Cakes of Salt. And somewhat farther the Province Govern'd by the Cacique Bogata, who at first refifting the Spaniards, was soon put to flight, when he heard the noise of the Guns. The Panches divided from Bogata's Country by a small Mountain, also maintaining continual Wars with him, suffer'd the Spaniards unmolested to travel through their Country, and the Valley La Trompeta, to a high barren Mountain, on the top of which Ximenes found several Emeralds; and going from thence fell upon the Cacique Tunia, and three days Journey farther, upon the Governors Sagamo and Diutama; from which three Countries he carried above a hundred and ninety thousand pieces of fine Gold, fifty-five thousand pieces of indifferent Gold, and eighteen hundred Emeralds; all which the Spaniards left behind with Guards whilest they went back to Bogata, whom they found lying dead of his Wounds on a high Hill: But Sagipà, Bogata's Succesfor, receiv'd Ximenes with great Civility, to engage his Assistance against his Neighbors the Panches; which he did not refuse him: but afterwards he fell most perfidiously upon the said Sagipa, whom he caus'd to be Executed, because he either could not, or would not discover where those Riches were which Bogata had left behind him. After he had pillag'd the little Region Neya, and brought into subjection the whole Country, he gave it the Name of New Granada, from Granada the place of his Nativity, being the chief City of the Kingdom of Granada in Spain, and built the City Santa Fe; which done, he quitted the Place, upon information that Sebastian de Bevalazar coming from Popayan, was seeking a Way Northward; and not long after him Nicholas Fobcrman follow'd, each claiming New Granada as their Right, whereas Ximenes allledged, That the first Discovery thereof was to be ascribed to him only; at last Agreeing, they resolv'd that it should be at the King of Spain's disposal.
The ancients divided their Country into two chief Principalities, viz. Bogota and Tunica, which before the Spaniards Arrival were each under their particular Caffe or Prince. The Men were of a good proportion; the Women also handomer, and of a fairer Complexion than their Neighbours: Their Habit also consisted of black, white, and divers colour’d Cotton Cloaks, and some also had Bonnets of the same. The temperateness of the Climate makes little difference between Winter and Summer. Their Houses were of Planks, and cover’d with long Rushes. Their chiefest Food was Maiz and Caffaye, which first grows on Stalks as large as Canes, containing very large and weightly Spikes of Ears, each Ear generally yielding seven hundred Grains, which are Planted in hot and moist Ground; one Bushel Sow’o, generally produces three hundred. But the Maiz is distingui’d into a courser or finer Sort, which last is call’d Morache, the Leaves and Canes whereof afford a wholesome Provender for Horses, and the Corn, Bread for the Inhabitants, who make it several ways; for sometimes they boil it in Water, and at other times parch it in Ashes, or grind it to Meal, which kneading into Dough, they make into Cakes, Biscuits, and the like: Moreover, Maiz steep’d in Water, and after being boy’d and set a working, makes a very strong Liquor. They also use Caffaye, which they make of the Root Yuca, which being large and thick, is cut in pieces, grated, and all its Juice, which is deadly poyson, being press’d out, is Bak’d in thin Cakes. There is likewise another Sort of Yuca, which hath not so poysonous a Juice, keeping good a long time, and is both wholesome, and of a good taste. The Natives of old liv’d much upon the Roots Tomote, and Cubias, all sorts of Venison, Fowls, and Fish, which the Rivers and Lakes afford in great abundance. Those that are left of the Natives, are a deceitful, crafty, and ingenious sort of People, very apt to learn Art, and to Trade with Salt to Rio Grande, and the Mountain Opou.

Besides Copper and Steel-Mines, this Country hath also several of Gold; and the Fields produce all manner of Plants.

The Panchas which remain are yet a savage People, but their Country is an in different fertile Soil, though not in all places alike; for those which border upon Tunia feed much heretofore on Pifmires, of which some being long, have double Wings, others lesser and without Wings; which last sort being roasting, are account’d a great Dainty, and a speedy Remedy against the Distemper of the Gravel. There are also a sort of venomous Pifmires, which biting a Man, caufe a fwelling and great itching, and those are call’d Tayques, whose Stings are cur’d by a Plaister of bru’d Pifmires.

The Country is bounded on the North with Caffella Aurea aforesaid; on the West, with Mare del Zor; on the East, with Venezuela; the Southern parts of it being not well discover’d, by reason of certain huge and impassable Mountains, which block it up wholly on that side, save only where a Passage is kept open into the Province of Peru, especially so call’d: It containeth in length about a hundred and thirty Leagues, and not much less in breadth, being for the most part a very healthful Country, and abounding in Mines of the beft Sort of Metal, besides others of Brass and Iron. It is subdivided into these two Provinces, viz. Granada and Popayana.
Granada.

Granada, specially so call’d, is a Countrey of a very temperate and good Air, as hath been before observ’d, neither subject to over-much Cold, nor to extremity of Heat; which is the more to be admired by reason of its nearness to the Line, from which it is distant Northward but a very few Degrees.

The Towns and Places of chief importance are, 1. St. Foy, commonly call’d St. Foy de Bagota, which was the old Name of this Province, and to distinguish it from another St. Foy, in the Country of New Mexico above mention’d. It is the Metropolis and Capital City of this Province, an Arch-bishop’s See, and the ordinary Residence of the Governor, built by the above-mention’d Conofalvo Ximenes upon the Lake call’d Guatavita, and hath been long since inhabited by above six hundred Families of Spaniards.

2. St. Michael, twelve Leagues Northward of St. Foy, and a well Traded Town. The Indians that dwell about this Place being above five thousand, pay great Tribute yearly. Not far from hence lies the Lake Guatavita, where the Inhabitants in former times offer’d much Gold to their Idols.

3. Tocaima, fourteen Leagues Westward from St. Foy, within a Territory which antiently belong’d to the Panches, who yet possess the worst part of it, lying still wild and unreduced: It is situate on the Banks of the great River Pati, which falls into the Rivulet Magdalena. This City, which enjoys the benefit of a wholesome Climate, is surrounded with Mines of Gold, Copper, Silver, and Lead. And besides the Fruits of the Country, all Spanish Plants thrive exceedingly after once planted; and though Sheep will not breed here, yet, Kine, Hogs, and Goats increase daily, but are often devour’d by Tygers, Lyons, and Bears. The Woods produce Nut Trees, Cedars, Guaiacum, or Rock-wood, and the wonderful Tree Zeyba, whose Leaves fall off every twelve hours, and grow again. The Fowls of this Country are many and several. Near the City are sulphurous Fountains, whose Waters cure Scabs and Leprosies. In the Valleys also flow Springs of salt Water, which thrown on Herbs, turns to Rozen and Pitch, and is good to make Boats tight. The tops of the Mountains are continually cover’d with Snow, notwithstanding some of them vomit forth horrible Flames and Ashes, which are blown several Leagues over the Country. The vicissitude of the Weather occasions two Summers and two Winters; the first Summer begins in December, and the second in June; the first Winter accordingly begins in March, and the other in October. This alteration of Seasons is not distinguish’d by any change of Heat or Cold, but the continuance of fair Weather during the Summer, and in the Winter, of such terrible Hurricanes, that blow from North to South, or from South to North, with such Thundering and Lightning, as if the end of the World were at hand. The chiefest Trees that grow here are Cedars, and one that bears exceeding great Almonds. The Quayna also bears a pleasant Fruit about the bigness of a Goose-Egg; and the Fig-Tree, Figs as large as Oranges. The Agapa which grows here is of such a nature, that an European sleeping under it, sweats exceedingly, but an Indian burths. The Bark and Sprigs of the Hobo, which grows high and round, serve against Swellings and Ulcers, and occasion also Luxuries. Sugar-Canes grow also here in great abundance, amongst which feed certain Beasts like Hogs, whose Navel grow on their Backs, and large Stags. The Fountains in most places of this Country run with salt Water;
Chap. III.

A M E R I C A.

Water; and sometimes Salt is found between fresh-Water Brooks. The Natives, who are valiant, jubilie, and well proportion'd, are since their giving over eating of Mans-flesh much increas'd, and many of them forsaking their Heathenish Idolatry, have embrac'd the Roman-Catholic Religion.

4. La Palma, built Anno 1572. in a certain Territory, the People whereof were antiently call'd Muyf and Colyme.

5. Trinidad, which is indeed the antient Tuedela newen'd, or a City sprung out of the Ruines thereof. This Tuedela stood on the Shore of the River Zarbi, which running between high Mountains, makes the Rivulet Taratena, and in the same Territory as La Palma above mention'd, viz. of the Muyf & Colyme, by whom the Spaniards, who had here a Colony, were so exceedingly molested, that they deferted the same, together with their Governor Peter de Osuna: yet not long after the forfaken Place was again re-built by the Name of Trinidad; but that Place proving incommodious, was again abandon'd, and a new Trinidad built, where now it is to be seen on a convenient place Eastward from the high and cold Mountain Paramo. From several rich Gemmaries thereabouts are digg'd STORE of Emeraulds, Crytal like Diamonds, white Marble, and the Beryl, especially on the Mountains Yoco and Apipi.

6. Tunis, having a Territory about it, to which it gives Denomination; It lies on a high Hill, from whence the Church and two Cloysters of the Dominican Fryers are seen at a great distance. Here also is kept the greatest Market in New Granada.

7. Pampelona, sixty Leagues distant from St. Foy to the North-East, abounding with Cartel and Gold.

8. Merida, surrounded with Corn-Fields, the farthest Town of this Province North-Eastward towards Venezuela.

9. Belez, which though it suffers great prejudice by a burning a Mountain that vomits Fire and Stones, and also Thunder and Lightning, is the greatest Residence of several Orders of Fryers.

10. Marequita, otherwife call'd St. Sebastian del Oro, which lies under a hot Climate, and hath much Pasture.

11. Ybague, the Habitation chiefly of Dominicans.

12. La Vittoria de los Remedios; and 13. Juan de los Lanos, or St. John of the Plains, seat'd in a rich Nook of the Countrey, where there are good Silver and Gold-Mines.

The Merchandife that come to these Towns, are brought up the River Magdalena in Canoes of sixty Foot long.

S E C T. III.

Popayana.

Popayana, the other part of this new Kingdom, is border'd on the West with part of Granada last spoken of, from which the River St. Martha divides it for the most part: On the North it hath Nova Andaluzia, or Carthagenia; on the West, Mare del Zor; and on the South, Quito, or rather some unreduc'd Countreys lying betwixt them both; it extends in length above a hundred Leagues from North to South, but in breadth, betwixt the River and the South Sea, not much above forty or fifty. The Countrey is said to be a little too much subject to Rain, yet not so, but that the fertility of the Soil answers the industry of the Inhabitants in most places very well.
Chap. III.

Sebastían de Bevalcázar, Governor of Quito, marching Anno 1536, with a Company of Spaniards to Otabalo, where the Country Popayan begins, was often set upon by the Natives from their Ambuscades, and the many Inconveniences which he suffered'd for want of Provisions, and trouble of travelling over the high Mountains, had necessitated him to return; had he not been resolutely bent to discover the Country; to which purpose marching on leisurely, he came into the heart of Popayan, where his weared People sufficiently reliting themselves amidst a fruitful Country, where they found pleasant Fruit-Trees, Houfes full of Provisions, and fresh Rivers, which glided from the Mountain Andes, and some of the Rivulets also affording Gold, were encourag'd to build several Villages; in which nevertheless they made no Settlement, either because they could not get Gold enough, or else being driven from thence by the valiant Natives.

The Places of chief note in it, are 1. Popayan, situate on the Banks of a fair River, but not nam'd, and in the midst of a Plain in a place of great Wealth, and enjoying a good Air. The original of the Name Popayan is from the Cafaque who Govern'd there at the time of the Spaniards first Arrival. It is a Bishop's See, and the ordinary Residence of the Governor of the Province. The chief Buildings are the Cathedral, and a Monastery of the Fryers De la Merced. The Savanna Grounds towards the North feed many fat Cattel. The Fields produce the best American Maize. Some of the adjacent Mountains either vomit Smoak, Flames, great Stones, or scalding Water, leaving a Salt behind it. Beyond the City Popayan the great River Magdalena takes its original in the Valley Cali, where several Brooks gliding from the Mountain Andes, inhabited by the Coscuocos, unite their Waters.

2. Antiochia, otherwife call'd St. Fides de Antiochia, on the Borders of New Andalusia, and about a hundred Leagues from Popayan. In the midst of a small Territory to which it gives Name, in the Valley Nore, between the River Magdalena and Daria, wash'd by Rivulets, whose Sands are Golden, and whose Banks are shaded with all sorts of Fruit-Trees. The Inhabitants white and very rational, sleep in the Night under the open Sky: Their Houfes are built a good distance from the Highways; near which the Pastures feed abundance of Sheep. The Pools breed plenty of FISH, and the Mines flore of Gold, especially in the Mountain Buritica.

3. Caramanta, feated likewise on the Banks of the River St. Martha, within a little Province alto of the fame Name; the Inhabitants whereof being valiant and strong go naked, and dwell in little Huts, make white Salt out of a Fountain and a little Lake: they generally go to Antiochia in six hours, which is forty five Leagues, so swift runs the Stream.

4. St. Anne, in the Cantred or Hundred of Anzerma, a Town neatly situate upon the side of an Hill betwixt two Rivers, and in the midst of Plain no less pleasant than fertile: It was so call'd by Bevalcázar, because the Indians of this Place name the Salt Anzer; it is surrounded with Villages and Woods on a high Plain between two Rivers. The Air being exceeding hot, lightens generally every day.

5. The Village Pueblo Llano, which is inhabited by little People, who Trade in Salt, and have alto Golden Rivulets. Near this Place is the Valley Aburro, consisting of many fruitful Plains, moistned by several Rivers; the Inhabitants whereof at the Spaniards first coming thither, hang'd themselves, with their Wives and Children.

6. St. Jorge de Arma, built in a Wood of Palm-Trees, so nam'd from the Territory in which it flandeth, rich and famous for its Mines of Gold, which it is said to have many and very good: The Ground round about being Mountainous, hath several Rivers, the chiefest whereof call'd Di Arma, is dangerous to cross, especially
Chap. III.  

AMERICA.

in Winter. The unwholsom Air hereabouts occasions many Sickneses. Amongst other Fruits that grow in this County, is the Pyracaba, which whose' eat, voids Urine as red as Blood. Adjacent to it are the little Provinces Panscuri, Pog, and Picara, which possesi Golden Mines: also the Territory Carapa, which hath high and rugged Land, and many Rivulets: likewise the County Quimbaya, which abounds with thick and long Canes, wherewith the Natives build their Houfes; in the hollow Bodies of these Canes the wild Bees gather store of Honey; and amongst them breed alfo exceeding great Lyons, the four-footed Beast Choca, which carries its Young in a Bag, Stags, Rabbets and Guadaguajies, which being bigger than Hares, are exceeding good Meat. The Mountain Nevada, wonderful high, and smoaking continually, produces the golden Rivers Tacurumi & De la Cequa. Twenty Leagues or more diftant from St. Jagois, 7. Carthago, the chief City of Quimbayas, and by which the aforesaid Rivers run. The temperate Climate here gives Health and long Life to the Inhabitants, who have severall Fountains of salt Water, and the Fruit Caymto, not unlike a Peach, black within, having little Kernels, and a Juice which Dyes so deep, that it can scarce be wash'd off. Horses and Cows they have likewife very plentiful. Carthago it felf stands in a pleafant Plain between two Rivulets; the Ways that lead to the fame are very dirty, because of the continual Rain which falls there, with Lightning and Thunder. A League beyond the City fows the Stream Confas; near which lies a Lake, out of which Salt is made.

8. The City Cali, the Refidence for the Governor and Collector, lying under a hot Climate in a plain Valley at a River, which falling from the Mountain, glides to the Stream Magdalena. Round about the fame dwelt antiently severall People, viz. the Gorrones, fo call'd, because they nam'd a Fifth Gorron, the Chancos, Giants, with long Faces and broad Foreheads, the Arrobacos, Agnales, and Los Timbas, inhabiting among barren Mountains; but most of them were slain by the Spaniards, or devor'd by one another, few only elaping to the tops of the Mountains. The Country also swarms with wild Beasts, which have also devour'd many of the Inhabitants, both Indians and Spaniards.

9. The Haven Bonaventure, fituate in a deep Inlet, about which live some Families which fend the Commodities that come from New Spain to Popayan, Cali, and other Places; and though there be a Way along by the River Dagua, convenient for Mules and Horses to travel, yet it is feldom us'd, becaufe the Castel are fo wea-ried out with the long Journey, that they cannot go through with their Loads; wherefore they employ the Indians to carry their heavy Burthen's over the Mountains, which they do for a small Reward.

10. St. Juan de Pajas, giving Denomination to the Countrey about it, and being built on the pleafant Plains of the Valley Atris, is fituate in a wholsom Climate, and is moifhned by severall Fountains and the River Ausagey, the Boundary of Peru. The Spaniards have several Houfes here, and breed fcore of Cattel, and efpicially Hogs. They have likewife Sugar-Mills, with which they make abundance of Sugar. The antient Inhabitants were salvage, deform'd, and of little Reafon.

11. Timana, giving Denomination to the Countrey about, is plac'd under a hot Climate, yet the Inhabitants live long; they drive a great Trade with Thred spun out of the Herb Pita; and alfo with Sweet-meats, Fruits Preferv'd with Honey and Sugar, and efpicially a Kernel not unlike an Almond. In their Gardens they Plant the Herb Cacoa, which they chew constantly for the strengthening of their Hearts. Near Pita is a Mountain with Load-Stones; and somewhat farther the Habitations of the valiant Tacones in the Valley Aquirya, the Paezes, Picara, and Manifes, which so molefted the Spaniards, that they forc'd them to forfake the Towns Neyra, St. Vincent, and Ville de los Angelos.

12. Guada-
12. Guadalajara de Boga; and 13. Sebastiano de la Plata, built on a Plain near the River Guadi; the Countrey about which is exceedingly troubled with Earthquakes, and the Inhabitants with their Neighbours the Nivees, who bring the Pleth of their Prisoners to Sale in the publick Shambles.

14. Almague, built on a high Mountain, and lying under a cool Climate, is surrounded with fruitful Fields, which feed Store of Cartel, and enrich'd with several Gold-Mines.

15. Juan de Truxillo, which the Indians call Ygancio.

Between the Promontory De Corrientes and the Island Palmas, are the Rivers Salinas and Balsas, which fall into the Southern Ocean; St. Juan, whose Banks are inhabited by a Salvage People which dwell in the tops of the Trees, because the River oftentimes overflows the Countrey. They lower Peale and Beans, and catch Fift; but buy other Provisions, with Gold.

Against the Mouth of this River St. Juan lies the Isle Gorgona, three Leagues in circumference, which is compar'd to Hell, because of the dismal Woods which are upon it, barren Mountains, Millions of Rough'd, whose Stings are intolerable, and never-ceasing Rain, inso much that the Sun never shines upon it.

West-South-West from Gorgona lies the round Island Del Gallo, about a League in circumference; it is divided by several Rivers, and round about Planted with Trees, on which the Indians dwell as at the River St. Juan.

CHAP. IV.

Peru.

Peru, so call'd, as some think, from the River Benu afore mention'd, in the Southern part of America, was antiently a great and mighty Kingdom, as Mexico in the Northern, and fell under the Power of the Spaniards much after the same manner that the Kingdom of Mexico did, viz. through the Diffentions and Differences amongst the People themselves, as in the History of this considerable part of the New World will be related at large hereafter.

The Kingdom of the Kings of Cusco, which in some sense, and by some Writers upon occasion, is call'd The Kingdom of Peru, was extended by the left Inca or King, Huayna Capac, from North to South above a thousand Leagues together, comprehending not only a great part of the Province of Chile towards the South, but also the new Kingdom of Granada, and divers other Provinces to the North; but Peru, properly so call'd, containeth little more than half so much, viz. six hundred Leagues in length, and about fifty or three score in breadth, except only in some places, as in the Countrey of Chacopoga, where 'tis thought it may be a hundred Leagues from the Andes to the South Sea: It lieth between the first and fifth Degrees of Southern Latitude, and is bounded on the East and North-East with that vast Ridge of Mountains which they call the Andes; on the West it is wash'd with Mare del Zar; on the North it hath the Countrey of Popayan; and on the South, Chile: It is commonly divided into three parts, which they call The Plains, The Hill-Countrey, and The Andes; the Plains are that part of the Countrey which lie along
along upon the Sea-Coast, being for the most part a mere Level without any Hills at all. The Sierra, as they call it, or Hill-Country, is that part of Peru which is partly mountainous and partly plain, fertile and well inhabited in both. The Andes are so high, rocky, and inaccessible, that they are scarce inhabited at all but by Salvages, save only upon the skirts of them. The Plains from the Sea-shore to the Hill-Country, are for the most part about ten Leagues over or broad, upon which it scarce raineth all the year long. The Hill-Country is commonly twenty Leagues in breadth where narrowest; and from September to April hath Rain, the rest of the Year generally being fair Weather; but on the Andes, which take up all the rest of the Countrey of Peru, it raineth almost continually all the year long. In the Hill-Country their Summer begins in April, as is said, and ends in September; but in the Plains it begins in October, and ends in May; so that in the space of a day a Man may feel both Summer and Winter; be scorch'd with excessive Heat in the Morning, and yet well nipt with Cold before Night. The Andes generally are cover'd with thick Woods and wild Forrests. The Hill-Country is for a great space naked and open; the Plains in many places sandy and dry, and would be much more scorch'd with Heat than they are, but for the neighborhood of the Sea, which affords them many cooling Gales from the South and South-West Winds, whose property, although it be natural in other parts to be tempestuous, to bring Rain and foul Weather, yet here there is nothing but Serenity and fair Sun-shine days all the year long, although these Winds blow almost without ceasing upon the Countrey, and no other at any time, whereas the Sierra, or Hill-Countries have Wind from every Coaft, and such as bringeth all sorts of Weather with it, Rain, Hail, Frost, Snow, great claps of Thunder, &c. The Countrey affordeth not so much Cattel of the breed of Europe as some other Provinces of America; but in stead of Kine and Sheep, the Woods and Pastures are replenish'd with multitudes of the Vicugnes and Pacos, which are of no less Profit and Service. The Pacos here are said to be as big as some young Heifers of two years old, bearing a Fleece like Sheep, and their Fleth no less pleasant than the Mutton of Europe. But the great Wealth of this Countrey lies out of sight in the bowels of the Earth, viz. in those rich and (as they may seem) inexhaustible Mines both of Gold and Silver, which, as 'tis well known, the Countrey of Peru affordeth more than any other Province of America besides. The Sierra opens into large Valleys, amongst the chiefeft whereof are Xauxa, Andagniatus, and Tucay, all of them well inhabited and fruitful. Below Cusco the Mountains Andes and those of Sierra run a greater distance than elsewhere one from the other, leaving the great Plain Callao in the middle. Moreover, several sandy Wilds, without Water, Herbs, Trees, or any living Creature, except Birds, extend from Tumbez to Taparaca. From the Valleys flow several Rivers into the Southern Ocean. On the Mountain Piria is a Fountain call'd Paccho, which springs in the Night, but is quite dry in the Day-time. Also near the chief City Quitos in the Valley Chito, is a Fountain whose Waters boil faster or flower according as any one speaks softer or louder; and when not a word is spoken, it frets not at all. If any thing exceed this for strangeness, it is a Rock in the Province Concudos, which is all compos'd of black and white Stones, which are so neatly plac'd by Nature, as if Art had done a Master-piece, in the exact placing of them one between another: but the chiefeft thing belonging to it worthy of admiration, is a wonderful power either to heal or hurt; for if the black Stones in this Rock be touch'd by any, they cause immediate Death; whereas the white ones cure all manner of Sicknesses, and being digg'd out, leave a Seed behind them, out of which grow new Stones to fill up the empty place.

Iuca Garcilaffo, Extracted from the Peruvian Kings, tells us concerning Plants, That
he saw a Raddiff which a Man with both Arms could scarce embrace, and that under the shade of their Leaves, Horses might stand. But of all the Peruan Fruit the 
Cocoa is the crown, which grows on Trees of a Fathom long in hot and moist Grounds of the Valleys between Andes and Sierra; from whence it is carried to the Sea-Coast in long Baskets by Companies of three or four thousand at a time on the Backs of the Sheep Pacos. Before the Spaniards coming hither none might chew Cocoa without the Governor's leave: A handful thereof chew'd and suck'd in the Mouth, enables a Man to travel two days without any other Sustenance, and mix'd with burnt Bones or Chalk, it is accounted an excellent Dish; there is such extraordinary plenty of them, that the Inhabitants spend yearly 90,000 Baskets of the Leaves in Pottage. The Peruan also esteem Mamayes, a Fruit which grows round, not unlike a Peach, with two Stones, hard Rinds, and a well-reflish'd Pulp within, which dipt in Sugar is a great Dainty; they grow for the most part in the Islands. The Guayavas bears a wholesome and delicious Fruit like a large Plum. The Palo, a Tree with many Boughs, bears a Fruit resembling a Pear, having a hard Rind, and within the Pulp a great Stone. The Fruit which grows on the Anona hath outwardly the same shape, but white within, and hath many black Kernels, which taste very deliciously. The Fruit Andas, so call'd from the desolate Peruan Mountains on which they grow, resemble the fore-mention'd Cocoa, but differ from the East-Indian, because they are full of hard shell'd Almonds, the like whereof grow on the Tree Cachapoyas, which are not inferior to any European Fruits that grow on Trees; in that part of Peru which hath its Name from that Fruit is the beft fort, being exceedingly devour'd by Monkeys, who plucking the Cachapoyas Almonds from their Stalks, throw them on the Ground to break their prickly Shells, that so they may eat the Kernels without hurt. The Mile-Tree, being a fort of Grapes, furnish'd with Wine. But the greatest benefit the Inhabitants receive is by their Sheep Patos and Moromoros, which carry great Loads, and feed on what they find by the Way; their Flesh is good and wholesome, and being either Soak'd or Salted, keeps good a considerable time; their Wool dries'd affords Lumps, of which they make fine Table-
Table-clothes and Tapestry, which on both sides is alike. The chiefest Weavers liv’d formerly at Copachica, near the great Lake Titicaca: They Dye their Wool with the Juice of boy’d Herbs. It seems also strange to consider what Loads the fore-mention’d Sheep carried for besides all sorts of Merchandize, they convey’d the Silver from Potosi to Arica, a Way of sixty three Leagues; but in former times they brought it as far again to Arequipa; and though they carried two thousand Bars at a time, amounting to above thirty thousand Ducats, yet they had no other Guard but a few Herdsmen, who driving them slept with them in the Nights under the bare Sky, yet lost none of their Riches, but when the bald Sheep call’d Moromoros, being wearied with their Loads, standing still, stretch’d out their Necks, and looking on their Drivers, on a sudden ran up into the Mountains, by which means the Silver was oft-times lost, if they were not suddenly shot. The woolly Sheep Patoes have also strange Tricks, for they often fall down under their Loads, and cannot be got up again, but must be let along till they rise of themselves. So soon as one of the Sheep hath gotten the Mange (which the Peruvians call T’ecarache), they bury them alive to prevent farther Infection.

The ancient Natives, though differing in Language and Customs, yet went all Apparel’d after the same fashion, the Men cover’d themselves with a Shirt, which came down below their Knees, and over that a Cotton Cloak; the Women wore woollen Coats down to their Ancles: Their Head-Ornaments were different according to an inviolable Compact between the Natives of several Provinces, for some were wrought, some plain, some divers colour’d Caps, with two, three, or no Feathers, according to the Cus tom of the Place: They were generally of a middle Stature; but those that were near the Equinoctial Line lefser. Their Histories make mention also of Gyants, who formerly inhabited the Promontory St. Helena, were each four times bigger than an ordinary Man, and fed not only on the great Sea-Monsters, but devour’d each of them thirty Peruvians at a Meal. The Stone Images of these Gyants are at this day to be seen not far from Puerto Viejo. They likewise kept for a long time Annual Feast-Days, on which they lamented the loss of the Gyants, which (as they say) was as followeth: 

A Youth glittering in glory like the Sun descended from Heaven, and breath’d Fire, which rending the Rocks so terrif’d the Giants, that they fled into a deep Cave, where they were all kill’d.

Cornelius Whitefleet relates, That Halvius, Governor of Puerto Viejo, being stir’d up by the Report of the fore-mention’d Images, caus’d all the Graves to be broke open, in some of which he found Bones, which they suppos’d to be Whale-Bones, had not the Sculls mani fested the contrary.

Concerning the original of the Kingdom of Peru the Natives give this Account of it: That the most antient Inhabitants flock’d together like wild Beasts, without constant Abodes, Customs, Laws, or Governors, which salvageness is still retain’d in many Parts, amongst the Brazilians, Churchmen, Chimpanes, Icayangus, Pilcorones, most of the Floridans, Chinchememas, and others, which degenerate from all Humanity. In time when some kind of Government began to be observ’d, it was rather Popular than Monarchical; yet generally those that were most powerful, valiant and subtile, bore the greatest sway: Amongst whom the first that five Ages since Commanded over the Inhabitants of the Valley Casca, was Ingaroca, a subtile and politic Peron, who built the Fort Pucora, Eastward near the Foot of the Mountain Andes, that so he might bridle the People which inhabited in those Parts between the Rivers, Moors, and Lakes, where the remainders of the Fort are to be seen at this day: Moreover, he conquer’d all the Countrey along the Southern
thorn Ocean towards the North and South, giving out that he was extracted from one of the seven Ingas (by which Name the Pernet Kings have been styl'd ever since) which came out of the Cave Pacaritambu, where they were prefer'd against the Deluge (of which the Electathons in America had long since an obscure knowledge,) and refer'd the drowned Families; wherefore every one not only obey'd, but paid him Tribute; and bound themselves to receive of him the true Religion, which they desir'd he would teach them, as none knowing the name better than he, whom they look'd upon as Extracted from the Ingas. Amongst these Ingas the chief was laid to be Mungcapa, who, according to their fabulous Tradition, clim'd through the Window Tambo out of the Cave Pacaritambu, and produc'd two Families, viz, Human Cusco, and Urin Cusco; from the first whereof Ingaroa affirm'd himself Descended, and having first made himself Master of all the Countreys about Cusco, rais'd the Family Vicaquirao, and laid out a great part of his Revenues upon Gold and Silver Utensils, and Ornaments for his Person and House, which he in his last Will charg'd that none of his Successors should inherit, nor dwell in his Palace, but that every one should build a new Habitation for themselves: He also erect'd divers Golden Idols.

Some Authors begin this Dynasty of the Kings of Peru in a very different manner, making Mango Cape to be the first thereof, and to have been Succeeded by his Son Chincharoca, which cannot but be the same with this Ingaroa here mention'd. Yungaragwac (that is, Crier of Blood, because on a time being Commander, and taken Prisoner, out of vexation and exceeding grief he cried Blood) Succeeding him after his Death, rais'd the Family Aucallipana, and was Succeeded by his eldest Son, the wealthy Viracocha Inga, of whom, when the Spaniards conquer'd Peru, went a Report, that great Riches lay buried in the Earth with him; wherefore Gonzales Pizarros tortur'd the Natives after an inhumane manner, to know of them where the Grave of the said Inga was; at last obtaining his Desire, they digg'd for the Body, which he found so well Embalm'd, that it seem'd to live, but no Gold with it; wherefore Pizarros receiv'd in his expectation, burnt the Corps; the Ashes whereof the Indians gathering in Urns, worship'd, though when he liv'd the Vulgar were much incens'd at him, for taking upon him the Name of Viracocha, who was their supreme God and Creator of all things; but he pacify'd them, saying, That Viracocha appearing to him in a Dream, had commanded him to take that Name upon him.

The fourth Inga, call'd Pachacuto Yupangui succeeded in the Throne after the Death of his eldest Brother, who was slain in a Field-Battle against the Changas, inhabiting the Valley Andaguas, where the Pernet Army was utterly defeated, few of them only escaping by flight; among whom was Yupangui, who perfwaded the rest to a subtile Design, by alluding, That the Almighty Creator, angry at their Destitution, had reveal'd many Secrets to him, viz. That the Creator in Heaven was call'd Viracocha Pachayachabich; That he refent'd it very ill; that whereas he formerly made Heaven, Sun, Moon, Stars, and Men, none worship'd him for it, but in stead of him they reverenc'd the Sun, Thunder, and the Earth, who had their Beings from him; That he would shew his Power against the victorious Changas by an unexpected Assistance of an invisible Army. This being belief'd of every one, stirr'd up the Peruans far and near, insomuch that in a short time a vast Army being rais'd, present'd themselves to Yupangui, who made good use thereof; and also told them that Viracocha had decreed in Heaven, that he Yupangui should be his Viceregent on Earth; which the Army believing, fet the Peruans Crown which they had taken from his Father, on his Head: Thus promoted, he march'd against the
the Conquerors, but invisible Men, whom Êfroa triumphed over, and who could be seen by none but himself, and that after the Battle they were turn'd into Stones, which they must seek for. Whereupon they gathering a great number of Stones on the Mountains, Yupangui call'd them Peruransac, and order'd that they should be worshipp'd, and carried with them into the Field wherefore they fought another Battel, hoping thereby to stir up his Soldiers to be courageous, who firmly believ'd, that with the yeivable Stones walk'd invisible Heroes that would certainly assist them. This Imagination wrought so much, that Yupangui's Army assur'd of Victory with the help of the Stones, went on undauntedly on all Designs, insomuch that being fear'd by all the adjacent People, he forc'd them all to submit themselves. This Yupangui rais'd the Family Êsancoco, and plac'd a great Golden Image call'd Indyapata on a Golden Chariot, which since was religiously worshipp'd, and afterwards carried to Caxamala, for a Ramom of the Peruvian King Attabaltba, whom the Spanish General Pizarro kept Prifoner, and at last Strangled. The Councillor Pulmo opening Yupangui's Grave, found the Body Embalm'd, and no way defaced, but the Eyes cover'd with thin Golden Plates, and on his Head appear'd the Scar of a Stone which had been thrown at him; and though the Body had lain eighty years in the Grave, yet it seem'd rather living than dead, being only a little grey. This Corps, as also several other Inga's, the Marquess Cametse brought from Cufco to Lima, so to prevent the Peruvians worshipping of them.

Yupangui after his Decease was succeed by Êosta Inga, and he by his Son of the same Name, who rais'd the Family Apoc Acho: The laft (for nothing worthy of memory was done by either of them) was succeed by Guamanaca, a wealthy and valiant Young man, who was no sooner setled on the Throne, but he manag'd all things with great prudence, maintain'd War with several People, and conquer'd the Kingdom of Quito, four hundred Leagues beyond Cufco, whither after his Death his Body was carried, and buried in the famous Temple of the Sun, but his Entrails were buried in Quito without many bloody Offerings, thousands of his Servants Sacrificing themselves at his Grave willingly, that so they might serve their Prince in the other World. The invaluable Treasures which he left behind him were carefully hid by the Peruvians till the Spanish conquer'd that Country: The pav'd Ways, magnificent Buildings, and Strong Castles, testify as yet the Power of this Inga, wherefore in his life-time he was honor'd as a God. His Mother Mamaelo liv'd to see above three hundred of her Children's Children, all Extracted from her Son Guamanaca.

The chief of the Family Tanabamba were Huafcar and Attabalba, Sons to Guamanaca, (both by the Coya, or lawful Queen, however some have deliver'd to the contrary) who falling in variance between themselves, resolv'd to decide the Quarrel by a Field-Battel, in which Attabalba, being the youngest, was Conqueror. This Civil War was at the height when the Spaniards invaded Peru, which they could never have conquer'd, had not the Realm been so divided. During Attabalba's Imprisonment by Pizarro, his two Generals, Quisnam and Chichicauhua, took the Inga Huafcar (formerly call'd Tito Cufi Quapls, Attabalba's Brother) in Cufco, and carrying him to the Valley Sacsabamba, burnt him alive. It is set down as remarkable, that Huafcar after his being vanquish'd, made great Offerings to Êfroa, thereby to gain his assistance in his extremity against Attabalba; when he was inform'd, that a strange People which came from a remote Place over the Seas, had defeated Attabalba's Army, and taken him Prifoner: From which News Huafcar taking courage, call'd
call'd the Spaniards Viscoschus, and judg'd that they were come from Heaven to his Delivery, and the more, because his Brother had spilt so much Blood already; for Attabalia had not only slain the Prince Atoco, which led Huascar's Army, with three thousand two hundred Men, and drank out of Atoco's Skull tipp'd with Gold, but had also pluck'd out the Harts of above a thousand Children, which the Cunasrites sent with Palm-Boughs to him, to desire Peace.

After Attabalia's and Huascar's Decease, Mango Inga their Brother drove all the Spaniards out of Cusco, whither they not long after coming with new Forces, necessitated Mango, not without the loss of many Men, to take his flight up into the Mountain Viscabamba, where he setting, his Successors Reign to this day, featur'd from any Invasion by the natural Strength of the Place. But the Inga Saritoa coming from the fore-mentioned Mountain, submitted himself to the Spaniards, who allow'd him the Valley Yucay to dwell peaceably in; but the rest of the Family of the Inga's that fell into the Hands of the Spaniards, were all of them kill'd in Cusco, not without great grief of the old Inhabitants, to see so antient and noble a Family, by which they had been Govern'd in great State for three hundred years together, put to death by common Executioners.

The City Cusco, which was the Royal Seat of all the Peruvian Kings, was made more splendid than ever before, by Guamanacav, of whom Augustine de Tarraute, describing his Magnificence, relates, That when his Queen was Deliver'd of a Son, who was to succeed in the Throne, Guamanacv kept a great Feaft for twenty days together, and on that day when the Child was to be Nam'd, a Golden Chain, each Link of which was as big as a Hand, and contain'd in all seven hundred Foot in length, was carried by twenty Peruvians to the Temple.

The Succession of the Inga's was after this manner: The Inga's keeping many Concubines had many Children by them, none of which could lay claim to the Peruvian Crown, but only the Son begotten on the Coy, or Queen, being generally the Kings own Sifter, whom they account'd lawful for them to Marry, as in antient times did the Egyptian Kings) Inherited the Realm, unless the Inga had a lawful Brother, who Inherited before the Son, though born of a Coy; or if the said Brother had a Son, he obtain'd the deceased Uncle's Crown before him, who in appearance was the elder Heir.

The same Succession was also observ'd by other Governors, which the Peruvians call Curacas.

The Burials of their Kings were perform'd with great solemnity; and the Treasures which they left behind were bellow'd in building of magnificent Gobah's, which were Temples or religious Houses, where a kind of solemn Worship was to be perform'd, to celebrate the Memory of the Deceased. Some part of the Treasure was also distributed amongst the Inga's Servants; but the Successor inherited not the least Mite of what his Predecessor had gotten, but was forc'd, according to an antient Law, to build himfelf a new Palace, and purchase'd every thing else belonging to it.

Their Crown or Diadem was onely a fine red woollen Clof with a Taffel, that hung down over their Foreheads, which other meaner Princes wore hanging on their right Ear.

Their Coronations were also kept in great Pomp and State, the Nobility and Priests coming from all parts of the Countrey to Cusco, besides an innumerable multitude of common People.

The Noblemens Presents to the Inga's consisted chiefly of Gold and Silver Vessels, fine Cloth call'd Cumbi, all sorts of Sea-shells, and flately Plumes of Feathers of inestimable value.
Thousands of Sheep differing in colour serv’d for Offerings: moreover, the Chief Priest sacrific’d a Child before the Image of Viracocha, on whom with great Reverence he cry’d, 0 great God Viracocha, we Offer you this Child, that you may keep our Realm in Peace, aid us in time of War, prosper our Inga in all his Undertakings, make him more powerful and greater than any of his Predecessors, and grant him wisdom to Govern this vast Countrey.

No People in the World can be more respective, and shew greater Reverence to their Kings, than the Peruvians: for there were never any heard of in this Countrey that ever Rebell’d against their Prince; the reason of which was chiefly, because they always Govern’d with great Justice and Mildness, placing Governors over the respective Countreys and Provinces, according to their several Divisions, greater or lesser, with subordinate Power one under another, so that they Rul’d with great strictness, punishing with Death both Drunkenness and Theft. Moreover, the Inga observ’d a prudent way in Government, viz. They kept their Subjects continually employ’d: The ordinary sort of Persons of subdu’d Provinces were sent to remote Countreys, and the Governors thereof kept at the Court in Cusco; and Princes Defend’d of the Royal Blood sent in their Places to Govern the new gotten Dominions: they divided the Inhabitants into Companies, plac’d one to Command over ten, another over a hundred, and a greater Officer over a thousand, and at last a Prefect or Major-General, over ten thousand; every one of which Officers were to bring in an Account every Week to the supreme Governor, who was always of the Inga’s Family, what Men dy’d of their number, or how many were born, a present Estimate of every one Stock, in Castell or otherwise, and all remarkable Transactions that hapned. On the high Feast-day they were all to appear at Court, and to bring in the Revenues gather’d out of their Substitue Countreys. The main Division of the Countrey was into four grand Provinces, call’d Tabuanitas, according to the four Ways that went from Cusco through the whole Realm, viz. Chinchaysuyu towards the North, Coclaysuyu towards the South, Andesuyu towards the East, and Cocondaysuyu towards the West. The Collectors were divided into Huanaysuyos, Upper-Collectors, and Urinaysuyos, or Under-Collectors. The Quiquomoyos, or Accomptants, could call us exactly with Buttons, not only what every Province, but also what each Man was to pay, and that according to the ability of the Countrey and Person.

Many were the stately Temples, invincible Castles, magnificent Palaces, and other wonderful Structures built by the Ingas, the chiefest whereof stood in Cusco, Tiahuanaco, and Tamba; the Builders whereof were sent for by turns out of the adjacent Countreys, from which they brought exceeding great Stones, molt of them thirty eight Foot long, eighteen broad, and fix thick, which were so neatly joyn’d together with Mortar or Iron-work, that a whole Edifice seem’d to be one entire Stone. Their Bridges that led cross the Rivers were made of Flags and Ruthes, fasten’d to each Shore with great Ropes. The like Bridge lay cross the deep Mouth of the Lake Chicuito, on which great Bundles of the Ruthes Toto being ty’d together, and cover’d with Straw, so strengthen’d the Bridge, that great Loads were safely carried over the same.

No Prince ever posses’d so much Riches and Splendor as an Inga of Peru, each Countrey presenting him with what was most esteem’d amongst them; the Chiches bringing Sweet-woods; the Lucanas, strong Sedan-Carriers; the Chambibiaces, brave Dancers; and so accordingly every Countrey provided him with what they best esteem’d, besides the usual Tributes which they paid.

Those which digg’d the Gold and Silver out of the Mines, had Meat, Drink, and
and Clothing from the Inga, though at other times he enjoy'd the Labors of his Subjects for nothing.

When at any time he conquer'd a Country by force of Arms, he made them pay three several sorts of Tribute; the first was bestow'd in religious Offices. Each Guaca or Chappel receive'd also a Revenue from the late conquer'd Countries, the Fruit of which serv'd for Offerings to their chief God Pachayachachus, the Sun, their Thunderer Chiquilla, and to the Souls of the Deceased, and for Food for the Priests. The Religion through the whole Realm agreed with that which was observ'd in Cofco. But the second Tribute fell to the Inga's Family, or Relation and Soldiers. Those who Till'd the Inga's Ground, Sung before him in Festival Clothes, That which could not be spent in the Court was laid up in Store-houses for ten years together, against a scarcity should happen. Aged People, Widows, and such as were decrepit, paid no Tribute. The third part was for the Poor, which had every Year a piece of Ground allow'd them to make use of as they pleas'd. In unfruitful Years they receiv'd an Allowance out of the Store-houses before mention'd.

So likewise the Paffure, Meadows, and Arable Land was order'd for three several Uses, one third for religious Uses, a second for the Inga's, and the laft for the Poor. The Sheep being shorn on a certain Day, yielded the Poor a certain quantity of Wool to make them Clothes. As soon as any Beast grew Mangy (which the Peruvians call'd Carache) they burnt them alive, to prevent the spreading of it farther. Those that belong'd to the Inga's Family, wore all Clothes made of the finest Wool, and the coarsest, call'd Taboaca, was distributed among the Vulgar.

Besides this good Order of Government, it is wonderful to observe the Peruvian manner of Living, each learning from their Infancy not onely a Trade, but all things which they accounted necessary in House-keeping, as Weaving, Tilling of Land, building of Houses, and making of Tools requisite for both; so that they never made use of one another on any Account. Moreover, Master Artists, who work'd more for Pleasure than Gain, dwelt apart, being Silver-smiths, Painters, Musicians, and Dancers.

Their Habits.

Their Habits were heretofore of one fashion through the whole Realm, onely the Covering of their Heads were severall, by which the People of one Country were distinguish'd from the other, according to an inviolable Law made many Ages since; some therefore wore thin Caps, others broad Pleats, others little Hats, others round Bonnets, others woven Caps, and the like.

Their Post-Stages.

Their Post-Stages, call'd Chasquis, were little Houses, each standing a League and a half from one another, wherein dwelt certain Officers, who with extraordinary speed convey'd the Inga's Letters from one Chasquis to the other; after which manner in two days time they convey'd a Letter a hundred Leagues. But since the Spaniards conquer'd this Country, that Convenience was loft, till the tenth Peruvian Vice-Roy Martin Enriques re-establish'd the same; for he allow'd a Sallary to those Officers, that they might with speed convey all Letters and Packets from one to the other, being diffant, according to his Establishment, four Leagues.

Their sever Laws against Malefactors.

Lastly, the Ingas maintaine'd strict Laws in criminal Affairs; for as they did not neglect to encourage noble Achievements (for whoe're had done a valiant Act in the Wars, was made Governor of a Country, or had a certain quantity of Land given him, or Married one of the Inga's Family,) so likewise they severely punish'd all Malefactors: for Murderers, Thieves, and Adulterers suffer'd Death without Mercy; yet they allow'd store of Concubines, and it was free for any one to Lie with his Neighbor's Concubine, but Death to have to do with any Man's lawful Wife, who were serv'd by the Concubines.
When a Bridegroom Betrothed himself to his Bride, he gave her (and put them on himself) a pair of Shoes call’d Affa, not unlike those of a Grey Fryer, which were lin’d with Cotton if she were a Maid, but with Leaves if a Widow, who nevertheless being generally younger than the Man, was to Mourn a whole year in Black for her deceased Husband; till the expiration of which time she was not to Marry another. Governors of Provinces and other Officers of State, receiv’d their Wives from the Ingas, who enquiring out the beautifullest and most accomplish’d Virgins they could hear of, put the Affa on their Feet, and gave them to such Persons as they most fanc’d; after which if they committed Adultery they were certainly put to death. The Marrying of Brothers and Sisters was also forbid, till the Inga Topa Topangui, Father to Guaynaaca, broke that Law, by Marrying his own Sister Mamoello, and made an Order that the Ingas onely should have that Liberty; nay, when he lay on his Death-bed, he strictly charg’d his Son Guaynaaca to take his own Sister Copa Cuifidmay to Wife; and this incestuous Marriage produc’d Fhuascar and Attabaliba, (though some fay Attabaliba was begotten on a Concubine) in whose time the Peruuan Kingdom went to Ruine. Guaynaaca also permitted the common People to Marry their Sisters of the Fathers side, but not of the Mothers.

The Peruuan Houfes were antiquely for the most part light and small; and for their Table they made but little preparation, satisfying themselves with a little Beer made of Rice, Bread b'k'd of Maiz, dry'd Flefh, Fish, and Roots.

In their Wars they us'd Slings, Darts, Arrows, Lances, Pikes, Halberds, Pole-Axes, and Shields.

Their Funeralls were also solemnly kept, especially those of Persons of Quality; the Corps was carried on a brave Chair, from which he was put into the Ground, with two of his Concubines whom he beat affected; and also three Servants, Gold and Silver Vessels, Maiz, and the Liquor Chicha, which the nearest Relation (putted into his Mouth through a Cane,) all which they did that the Deceased might make use thereof in the other World. But before the Funeral the Relations Mourn’d over the Corps several days, and after the Body was Interr’d, they plac’d the Picture of the Deceased upon the Grave: but the meaner sort of People had the Tools belonging to their Trade; and Soldiers their Arms plac’d on the fame.

In their Religion they had various Fancies; their prime God Viracocha bore several Denominations, and amongst others he was call’d Pacachama, or Pachachatich, by which he was signifi’d to be the Creator of Heaven and Earth; as also Hapu, that is, Wonderful. In honor to this Pacachama ftood formerly a magnificent Temple about four Leagues from Lima, where the Ruines still manifefl its former glory, it being the Place where the Devil answer’d the Priests, who ftood with their Backs towards the Image of Pacachama, bowing their Heads to the Ground, and showing many antic Tricks. The fecond Temple ftood near Cufco, in which the Ingas had plac’d the Images of all the Gods and Goddesses that were worship’d in Peru; and before each Image ftood an Altar: the chiefelt of them, call’d Paccha, conflifting of maffe Gold, was Dedicated to the Sun, on whose Forehead the Sun was Engraven on a Plate, which afterwards fell into the Hands of the Spanifh Captain Mancia Sierra de Lequigamo; but because he left the fame one Night at Gaming, this Proverb was rais’d upon it, Lequigamo lost the Sun before it rofe, because he got the Plate on which the Sun was Engraven in the Afternoon, and lost the fame in the Night: The Temple it self, built of great Stones, curiously joyn’d together in Mofaic Work, and within link’d with Golden Plates of a Finger thick, ftood full of Golden Chapells and Altars; round about it were several Galleries, into which
the Priests and Priestesses Chambers open'd. Near the River Ticiguaque a third Temple, Consecrated to the Sun.

This kind of Idolatry was common to the Peruvians, with several other Nations of the ancient Heathens, as hath been before observ'd, which made them mock at the Spaniards when they told them of a Crucifi'd Saviour, saying they had a splendid God, who appear'd to them in glory every Morning. In the third Temple near the River Ticiguaque in Peru, which exceeded the other two, they worshipp'd Thunder by the Name of Chuquilla, Cunilla, and Intillapa, which the Peruvians believ'd to be a Man that Commanded the Air, and who being Arm'd with a Club and Sling, throws down Rain, Hail, and Snow from the Clouds, and shooting Bullets through the lower Region,caufes Thunder and Lightning: They worshipp'd him after the fame manner as they did Viracocha and the Sun, with holding up of a thing like a Glove, and sometimes Offerings, especially in Cusco, living Children: Also they ador'd the Earth of which they made the Goddes Bathamama; also Mamacocba, the God of the Sea. The Rainbowe, which the Ingas carried between two Serpents for their Arms, was also religiously worshipp'd. Amongst the Stars they imagin'd Colca, by us call'd Aries, or the Ram, as chief; yet held several others of peculiar Denomination, in veneration, of which they crav'd such things as they wanted. The Shepherds ador'd the Star Norenchilla, or Capricorn, whom they judge to Rule over the Beasts. Others worshipp'd Machacay, which the European Astronomers call the Serpent, as commanding Serpents and Dragons, that they might receive no hurt from them. Tygers, Lyons, and Bears, were Rul'd by the Star Chuquichinchag; wherefore those who would walk free from those ravenous Beasts, lifted up folded Hands to the Constellations representing the fame. They believ'd that there was no Creature living on Earth, whose Likeness the Heavens could not afford; and that those which were on Earth were under the influence of those in Heaven: from hence proceeded the Names of the Stars Chacaus, Topatesas, Mamaus, Mirmo, and others. They likewise attributed a kind of Divinity to Fountains, Rivers, Rocks, Mountains, some kinds of Herbs, Roots, and especially the Popas, of
and had a veneration for all manner of Creatures that were of an unusual form. When they travell'd they sowed Shoes, Plumes of Fearhers, and Cops in all cross Ways and tops of Hills, by them call'd Apachitas; and if they want the fore-mention'd things, then they throw a Stone for an Offering, from whence it proceeds, that in all cross Ways, and on the tops of Hills, lie heaps of Stones, which are accounted holy.

The like fond veneration of Stones the Saracens are said antiently to have had, upon a Tradition, that Abraham had enjoy'd Agar upon a Stone, and that according to Euthymius and Libanius, he ty'd his Camel to a Stone when he went to Offer his Son Isaac.

The Images of their deceased Ingas, which they call'd Guaoiqui, were had in great honor, and carried with them to the Wars, and up and down in Processionings, and call'd upon for fruitful Seasons.

The Immortality of the Soul, the giving of Punishments to the Wicked, and of Rewards to those that do well, was generally believ'd amongst the Peruvian, but not the Resurrection of the Dead. Many suffer'd themselves to be buried with their Friends, that they might accompany them to the other World. When the Inga Guayacana was buried, above a thousand of his Courtiers Sung several Songs, kept a great Feast, and went with great joy to be buried with him, that so they might serve their King on the other side of the Mountains. They offer'd likewise a great number of Children, and with their Blood crost'd their Faces from one Ear to another: But this barbarous Offering was never us'd but at the Death of prime Persons of Quality; for the mention'd Person only Meat on the Graves, and gave the Dead two Sutes of Apparel, put Money in their Mouthes and Hands; for they believ'd that the Souls ranging up and down from place to place, suffer'd many inconveniences.

The Peruvian Images consisted generally of Gold, Silver, Stone, or Wood, all of them strangely deform'd: Some of them were said to give Responses like the Oracle at Delphos and Dodona, chiefly in the Temple Pacachama, whose greatness is sufficiently manifest by the Ruines of its Walls beyond Lima, where Francisco Pizarros got an invaluable Treasure. Each Peruvian Province had a Temple, besides which, in the Cities, Villages, and Hamlets, were Chappels of Ease, into which the Priests went at Night with their Backs towards the Idol, bended Heads and Bodies; in which posture they request'd to know future Events, and were many times answer'd (if we may believe their Reports) in a terrible Voice. The great Temple at Cusco, wherein the Ingas had plac'd all the Peruvian Idols, is now turn'd into a Dominical Cloyster. In each Province of Peru was also a Nunnery (if we may so term it) or Habitation of devoted Virgins, call'd Altagnes, i.e. A House of the Chaste, over which was plac'd a Governor nam'd Appopanaka, to whom none durst deny their Daughters; some of which were styl'd Wives of the Sun, and others Servants-Maidens to the same: The Wives Cloath'd in Embroider'd Coats, adorn'd the Temple, whilst the Maids kept clean the Walls and Floor. When they attain'd to fourteen Years of Age, some were chozen out from the rest, and oblig'd to perpetual Virginity and Sufferance of Life in their Chappells; which sacred Obligation if they broke by suffering any to Lie with them, they were buried alive after the manner of the Vestal Virgins, the Ceremony whereof is related by Plutarch: Others were oblig'd to make daily Offerings; others to make peculiar Sacrifices for the Inga's Health, and happy Events in War; many also were employ'd in the Court Service to wait upon the Inga's Wife or Concubines; and those being absolv'd from their Vow, were oft-times Married to Courtiers. These Nunneries were Endow'd with great Revenues from
from the Chacaras, or Church-Lands. Their Offerings were (for sometines they Offer'd to their Idols the highly esteem'd Herb *Coca*, &c., several color'd Plumes, Sea-Monsters, Gold and Silver Images of Beasts, fine Clothes call'd *Cumbi*, Sweetwood, and Tallow to burn) either to have success in their Journeys, Trades, or for the preservation of Health, or to obtain a plentiful Harvest. But their usual Offerings were *Coca*, a sort of Toads, which were eaten by the *Peruvians*. When they were to do any Busines of consequence, then Person's Quality kill'd their Sheep *Pachos*, not without strange observation of the colour and number of them, as also of the time; all which things well consider'd, they took the Sheep and laid it cross their right Arm, turn'd the Face thereof towards the Sun, and mutter'd several words to themselves according to the colour; for if it was spoted grey, they spoke to *Chaquilla*, or Thunder; if white and short Fleec'd, to the Sun; if well Fleec'd, to *Viracocha*. In *Cusco* they Offer'd daily a short-fleec'd Sheep to the Sun in this manner: Making a great Fire call'd *Vibbacaroca*, the Priests threw the Sheep and four Baskets of *Cocoa* into it. Their Sacrifices *Cuacovica* and *Sapovica*, to obtain Conquests, were also very strange: for they gather'd out of *Puma* (which is a defolate place) several forts of Brambles and Bushes nam'd *Cauilli*, which being all set on fire, they went about the Fire with round Stones in their Hands, on which they paint Serpents, Lyons, Toads, and Tygers, crying, *Huchum*, grant us Conquest, together with this Prayer, *Destrify, O Creator, the power of our Enemies God*, which said, several Starv'd Sheep were brought out, which for that reason they call'd *Inca*; whose Hearts having torn out they began their Prayers afresh, saying, *Mighty Viracocha, thus do thou pull out the Hearts of our Enemies*. For the prosperity of the *Incas* they kill'd in an open Field black Dogs, by them call'd *Apparocas*, whose Flesh was eaten with many Ceremonies by People appointed for that purpose. They made Offerings also to the Fountains, Rivers, Brooks, and Sea-shells, under pretence that those Shells were Daughters of the Ocean, and the Ocean the Father of Streams and Springs; when they had Sow'n their Fields, their Priests chose to that Office, went from Houfe to Houfe to gather such Offerings as every one was pleas'd to give; which they laid at the Banks of several Suces, at the time when the Water began to rise there, thinking by that Oblation to keep them from over-flowing their Lands, and washing away their Seed. In all places where two Rivers joyn'd together they wash'd themselves, having first daub'd themselves all over with flamp'd *Maiz*, and afterwards look'd upon themselves as well purg'd from Sin; which power they ascrib'd to their Baths. To strangle Children between four and ten years of Age was never us'd, unless upon the *Inga's* being sick, or when he receiv'd the Royal Taffel, that from the death of the Children he might receive Health, or Reign prosperously. The fore-mention'd Nuns that were chose to attend on the King's, were also strangled when the *Inga* was sick; nay, sometimes a Father would Offer his Son to *Viracocha*, on the Sun-Priest's suggestion, That by his Son's death he would recover from his Sickness, Praying to the foremention'd Deity, that they would be pleas'd to save the sick Father, because the Son had with his Death paid for his Fathers.

This kind of Cruelty the Devil seem'd to prompt the Heathens to, by making use of *Abraham's* Example, who prepar'd his Son *Izaac* for a Sacrifice on Mount Moria; and that it was a Practice amongst the antient *Ammonites* and *Moabites*, and other Heathens (by which even the Children of *Israel* were apt to be seduc'd) appears from the Scripture it self: the Ceremonies of which brutifh Customs, with the seven Brazen Chambers of *Moloch*, may be seen describ'd by Rabbi *Solomon*.

The high Feast *Capategori*, which the *Peruvians* kept in the first Moneth *Regis*, agreeing
agreeing with our December, deserves serious observation: for as long as the Feast lasted, no Stranger was suffer'd to Lodge in Casa, whither they all flock'd again after the Feast was over, to receive Cakes made by the Mamaconas (an Order of Nuns) of Maiz, and the warm Blood of a white Ram, and were distributed by certain Priests (Extracted from the Royal Family Inqui Yupangui) who carrying them up and down in Golden Dishes, gave every one of a Company one, saying at the delivery of it, *If you do not Reverence the Sun and Inga, this Food will witness against you to your Ruine; but if you worship them, then their Bodies will by this Pledge be united to yours:* after which those that had eaten of the Cakes promis'd Obedience, and thank'd the Sun and Inga for their Food.

At the fore-mention'd Chofquis a course was taken to carry all that desir'd, to every Temple through the whole Kingdom of Peru, where the Inhabitants receiv'd them with great Reverence, having before confess'd all their sins to their Yaburies, or Father-Confessors; who being chosen to that Office with a great deal of Ceremonies, impos'd greater or lesser Penances, according to the sins of the Penitent: those that were suspect'd to have conceal'd any of their sins, were put to cast Lots, or had the Entrails of the Beasts which they had kill'd to that purpose consult'd about them, and thereby were discover'd if they had conceal'd any of their sins; which whenever it hapned, the Priests falling upon the false Penitents, thump'd them with a Stone on their Backs so long, till they had confess'd all their Faults, which the Priest was not to reveal on pain of Death, but to make Expiatory Offerings. The sins about which they were examin'd, were chiefly Theft, Murder, Adultery, preparing of Poison, or slaying their Inga or Gods; for each of which Transgressions they had several kinds of Punishments. When the Inga fell sick, all People in general were forc'd to come and make Confession of their sins; also every one went to his Confessor when he was in trouble, or expected some Misfortune to befall him: The Inga himself confess'd his sins to none but the Sun, which he desir'd to relate to Viracocha, and to beg pardon of him for the same; which done, he bath'd himself in a running Stream, and cry'd; I have made my sins known to thee, O Sun, do thou, O Ri-
O River, wash away mine Iniquities, and discharge them into the Sea, that they may never be more laid to my charge: which custom of Bathing, call'd Opacuna, was also us'd by all other Penitents. A Father losing his Son by Death, was cenfur'd for a great Sinner, wherefore he could not be permitted to be Consecr'd before he had been whipp'd with Nettles by a certain ill-look'd Officer appointed, for that end; after which their Fathers Tehuiris enjoyn'd such Penances as they thought fit; some were order'd to fast several days; others to pay rich Garments, Silver, Gold, or the like; others receiv'd a certain number of Blows; some were condemn'd to live on the Mountains, excluded from the society of all Men. If their Sorcerers at any time foretold a Father's Death, then he immediately Sacrific'd his Son, that with his Death he might buy his own Life. No People were more respected than their Soothsayers, as Men that could discover private Thefts, Accidents that hapned in remote Countreys, and also future Events, and so far their Credit amongst the Vulgar carried them, that they undertook to tell the Spaniards when their Country-men should be Conquerors, and when defeated in the War they maintain'd against the Netherlanders. There were also cunning Women, who making themselves dead Drunk with Chica, with which they mix'd the Herb Filos, and afterwards coming to themselves again, answer'd all the Questions that were propos'd to them.

The Peruvians kept two sorts of Feasts, the first at certain times, the others on special occasions; the first Feasts were kept Monethly on the first Moneth Rayme, agreeing with our laft Moneth December, as aforesaid, they kept the great Feast Capacrayme, on which they brought Multitudes of Sheep and Lambs for Burnt-offerings, besides Silver and Gold. Not far from the Fire flood three Carv'd Images of the Sun, and three others representing Thunder; and this was generally the Day of the Infallallation of the young Inga's, which was after this manner: The chief Priest boring a Hole through his Ear, cover'd the upper part of his Body with the holy Cloth Guassa, while 'fore the inferior Priests whip'd him with knotted Cords, and paint'd his Face with the Blood. During these Ceremonies no Stranger was suffer'd to remain in Cufco, but after the Feast was ended they all return'd, and as before, receiv'd Cakes bak'd of Maiz and Blood, as a testimony that they lov'd and honor'd the Inga.

The three Images of the Sun before-mention'd they call'd Apoini, Churianiti, and Intiquaqui, that is, Father-Sun, Son-Sun, and Brother-Sun. In like manner they nam'd the three Images of Thunder, Chuquilla, Catuilla, and Inillapa; from which Acosta judges that the Devil had obcurely taught the Peruvians the Mysteries of the holy Sacrament and Trinity, (that their glory might be eclips'd by Idolatrous Errors) especially the last, which seems plainly to be signify'd by the Peruvian Deity Tanganaga, whom they affirm'd to be one in Three, and Three in One. And that other Nations also had a glimpse of the same may be collected from Philip Chaverius, who endeavors to demonstrate, that the antient Germans and Gauls obcurely ador'd the Trinity in the midst of their Heathenism, under the notion of Sun, Moon, and Fire; the Sun signifying the Father, the Moon the Son, and the Fire the Holy- Ghost, to confirm which he makes use of Cesar's Testimony, viz. They only esteem those Gods whom they see, and those that asift them, viz. the Sun, Vulcan, and the Moon; for they have never heard any thing concerning any other Gods. Dioecorus Siculus seems also to ascribe a glimpse of this Mystery to the Egyptians, when he says, That the antientest People in Egypt, when they view'd the World, and were amaz'd at all things on the Earth, they judg'd that two Gods Govern'd them all, viz. the Sun and Moon, by whom all things flourish'd and encresad, to whom they added a third, namely Fire, to which they attributed a Divinity, as conducing much to the increase and growth of
all things. The Moon, which was also call'd 

feno, they judg'd to be the Offspring of God, (for Son and Daughter were prominently taken) who, according to Homer, Marrying with Jupiter, brought forth Vulcan, which might haply be to them a Type or Figure of the Holy-Ghost, proceeding from the Father and Son: Vulcan was by her plac'd a President over the Fire, by which the Heathens seem'd to imitate the fiery Power of the Holy-Ghost, purifying and cleansing all things: and this cleansing Power was aim'd at by Romulus, when, according to Dionysius Halicarnassensis, he commanded his Soldiers to leap through a Fire made before his Tent, that so they might be purifi'd from all their Crimes. But it may be thought strange, that the Peruvians, Germans, or Egyptians, loft in a Wood of gross Idolatry, could have any apprehension though never so obscure, of the holy Trinity, when as the most nice and curious Greek and Roman Wits have made such gross mistakes concerning God. But to return again to the Peruvians: They kept their second Feast in the second Moneth Camay, on which they threw the Ashes of their Offerings into the River, and follow'd them on the Shore for the Space of five Leagues, praying the River to carry the Ashes to the Sea, where Viracocha would receive them. In the third and fourth Moneths they kill'd a hundred and ten black spotted and grey Sheep. In the beginning of May (by the Peruvians call'd Hattancuzqui) they gather'd in their Maiz, and kept the Feast Aymorai; after which they return'd home Singing from their Fields, call'd Chacra, and carried a great heap of Maiz with them, nam'd Perna, wrapping it up in rich Garments; three Nights they continu'd their Ceremonies, implo-
ring the Perna to preserve their Harvest of Maiz from any damage that might chance to come to it, and also to let that grow prosperously which they should Plant next. Lastly, their Sorcerers consult'd whether the Perna could last till the next year: to which if they were answer'd No, they carried it into the Fields, and burning it, made a new Perna, which when they knew to be sufficient to last good a year, they carried it to the Granary in great triumph. In the seventh Moneth Ancaya-
cuzqui, they kept the Feast-call'd Intraymi, with a hundred Sheep, in honor of the Sun. They also made several Images of the Wood Quimia, which they put in rich Habits,
Habits, strew’d the Ways with Flowers, Dance’d a strange Dance nam’d Caya, Singing several Songs. Person’s of Quality put Golden Plates about their Knees, as the common People painted them with divers Colours. In the eighth Moneth Chabua they kept the high Feast Huarqui, on which they Offer’d a hundred grey Sheep; the like number, but of a Chefnut colour, they Offer’d the following Moneth Tupaquis, besides a thousand Cuies, that the Air, Water, or Sun, might not spoil their Plants. Their Feast Siuna they kept on the tenth Moneth Cayaguami after this manner: They gather’d all together on the first day before the Moon rose, which no sooner appear’d, but they made a terrible noise, beat one another with lighted Torches, then wash’d the Dirt from their Bodies, and made themselves Drunk for four Days together. The eleventh Moneth Amrarani, was nam’d Pampaquis, from the Feast they kept therein, on which (besides the usual Offerings of eight hundred Sheep) they try’d a black Sheep to a Poit without Meat, till such time as there fell store of Dew. Their Feast call’d Raymacanta Raisqui, was kept in the last Moneth Agama, on which their Youth were bor’d through the Ears. Amongst the high Feasts which were kept on great occasions, the chiefest was Iteri, against which they all made new Clothes after a peculiar Fashion, wearing their Cloaks muffled about their Heads; in which manner they walked leisurely a whole Day and a Night; during which time none durst either Eat or Drink, or open his Eyes: But after this serious Processioning follow’d four days of extravagancy, as Drinking, Dancing, and the like. In their Dances, which were to the sound of Drums, Pipes, and Horns, they imitated all manner of Trades by strange motions of their Bodies, besides divers other Frolicks and May-games which they did at such times of Mirth and Festivity: But since the Spaniards conquer’d Peru, all these Heathenish Customs have been laid aside.

As to the Prognostications and Fore-runners of the destruction of the old Empire of Peru, it is reported, that Guaynacava, Father of the last King Attabaliba, lying on his Death-bed in Quito, said to his Princes, This Realm, at present soil’d to the highest top of Eminency, is hastening towards its Ruine; and though our Kingdom remain as yet free from foreign Invasions, the Countreys round about are already conquer’d and in Slavery: The Gods have call’d strange People from unknown Regions, who by degrees will reach us also. With me, who am the twelfth Inga, dies the Dominion of the mighty Peru. A People of other Fashions and Religion will subvert our Religion, Laws and Government, and bring us under subjection to them. There were also Signs and Prodigies that portended the Dissolution of this Empire, amongst the rest a great Eruption in the Province of Tainge, which rend’ring the Earth asunder vomited up Flames of Fire; nor was it long ere they were full fill’d, for whilst the Peruvians were making of Offerings to Piracchib for the delivery of their imprison’d King Huascar, News was brought to Cufco of Attabaliba’s being taken, the Particulars whereof, with other Matters touching the Conquest of this Kingdom by the Spaniards, and how they pillag’d the Country, murder’d the Inhabitants, and enrich’d themselves with their inestimable Treasures, shall in order be related.

The first that gave the Spaniards notice of Peru, was an Indian Prince call’d Tauguineco, who having been taken Prisoner, inform’d Vasquez Nunez of the abundance of Gold and Silver which was to be had there, who re lov’d to venture through a thousand Dangers into the South Sea. After which Francisco Pizarros, Ferdinand de Lugo, and Diego de Almagro, consult’d upon this great Design, Ann. 1525. Pizarros being order’d to Sail before with a Ship carrying a hundred and fourteen Men, and Almagro to follow with a Vessel carrying seventy Men, whilst De Lugo rai’d to manage the Affairs at home. Fifty Leagues Southward from Panama, Pizarros found a small
small Neck of Land nam’d Peru, from which it is most probable that great Kingdoms afterwards receiv’d its Denomination, though many deduce it from the River Berme, as before mention’d: Thence Sailing to the main Continent of Peru, and Landing, he left several of his Men, and being himself desperately wounded, return’d with ill success, whilest Almagro missing of him, Landed afterwards in the same place, and also left several of his Men, and one of his own Eyes: yet not long after they renew’d their Design, carrying with them in two Ships and three Boats, three hundred fnot Men, which all suffer’d extream Hunger, and had they not happily gotten some Sea-Crabs, they had without doubt all of them perish’d: at last Landing on the Coast of Catamez, they were Encountred by a People whose Faces were hung full of Golden Nails, and daily left more and more of their Men, upon which ill Success the new American Vice-Roy forbad the farther discovery of Peru, and call’d home the remaining part from the Island Gallo, so that Pizarro kept with him but twelve Men, with whom he went to the defolate Ille Gorgona, where he liv’d on Sea-Snails, till he receiv’d Provisions from Panama; after which they spent two years in making farther Discoveries upon the Coasts of Peru: During which time he visit’d the Queen Capullana, and discover’d a mighty Palace, where three of the twelve Men were kill’d, whose Memory deserveth to live for ever, because the World owes to their unheard-of Valor the Discovery of the mighty Kingdom of Peru; but there are only left Recorded the Names of three Worthies who surviv’d that Exploit, which were these following, Nicholas de Rivera, Peter de Candia, Juan Torre, Alonso Brifeni, Christophero Peralca, Alonso de Truxille, Francisco Cueliar, Alonso Molina, and the Pilot Bartholomeo Ruyz: With these nine Pizarro Landed on the Ille Puna, inhabited by a valiant People, who us’d Bowes, Darts, Silver Knives, and Pikes tipt with Gold: From thence he feter’d his Course unto the Haven Tumbex, where Peter de Candia Landing, was met by forty thousand of the Inhabitants, who conducted him to the Temple of the Sun, built by the Inga Guayanaca, and adorn’d in the in-side with Golden Plates. Not long after which Pizarro was by an Order from the Spanish Court made Governor of Peru, to the great discontent of Almagro; which Difference being decided, Pizarro let out again with two hundred and fifty Foot, besides Horfe, with which he Landed a hundred Leagues lower than before, where he got a great Mafs of Gold and some Emeraulds of the Cafiique, all which he sent to Panama, thereby to fit up the People to come to Peru to his affiance; where those that were at present on the Place, besides other great Hardships which they suffer’d, were miserably plagued with Ulcers in their Faces; yet they profecuted their Conquest as well as they could with what small Power was left them, and had newly taken Querto Viejo when Captain Belvalazar and Juan Florcix brought fresh Supplies of Men and Horfe; with which Recruit Pizarro conquer’d the Valley of Tumbex, from whence they Sall’d over to the Island Punas, where the friendly Entertainment they met with at firft, turn’d soon after into a bloody Battel: for the Spaniards not forbearing to prie into every House, and committing many Outrages, were set upon by the Natives, whom having at laft subdu’d, and being again supply’d with new Forces by Ferdinand Soto from Nicaragua, they return’d to Tumbex, where the Country was all in Arms upon the Report of the Spaniards Cruelties committed on the Illand Punas, infomuch that they Offer’d all thofe whom they took alive to their Gods, and fiew as many as they could conveniently meet with. Pizarro having fay’d about twenty days, went with his Brothers Juan and Gonzales, the Captains Soto and Belvalazar, and fifty Horfe over the River Ambato about Mid-night, through a thorny Way betwixt Mountains, and about Break-of-day fell upon the Tumbezian Army, and having feteled things pretty well
well in those Parts, he built the City St. Michael in the Countrey Tanganara, along the River De la Chira, where he was Complemented by two Agents from Cufco, who desiring Aid in Huascar’s Name against his Brother Attabaliba, receiv’d for Answyr, That he was going to Caxamala, as indeed he was, to find Attabaliba there; whole Commands that he should not approach prov’d all in vain: for Pizarro, under pretence of Complementing him in his Catholick Majestys Name, was no sooner admitted to his Prefence, but he took him Prisoner, and set for a Ransom upon him as much Gold as a Room of fifty four Foot long and nine Foot broad was able to contain, as high as he could just reach with his Hand held up: But the Gold coming slower than was expected, Pizarro was much incens’d thereat, whom Attabaliba endeavoring to pacifie, aleg’d, That it could not possibly come sooner, because the Way between Caxamala and Cusco, from whence the Gold was to be fetch’d, was at a great distance: The truth whereof Pizarro resolvling to try, sent Sotto and Peter del Bara to Cusco in Chairs, carried by Peruvians exceeding swift of Foot, and who if they tir’d were successively relievd by others that attended, without so much as setting down the Chair; being got about half way, they met with Attabaliba’s Captain Chactuchuma, he having taken Huascar Prisoner, who requested Sotto and Bara that they would be pleas’d to deliver him out of the Hands of his blood-thirsty Brother, for which kindness he would pay three times as much Gold as Attabaliba had promis’d, who was not able to give any thing else but the Golden Plates which were in the Temple of the Sun in Cusco; whereas Huascar had all the Treasure that was left by Guaynacaca; which indeed was true, for Huascar had caus’d it privately to be buried, and put to death those that did it, that so he might keep the place conceal’d where it lay; inomuch that none could ever find it out to this day, though the Spaniards have torture’d the Indians with all imaginable cruelty, to make them discover the place. But Attabaliba inform’d by Pizarro of Huascar’s Imprisonment, seem’d to be exceedingsorry, and said, I am much troubled at the News of my Captains laying violent Hands on my Brother Huascar, whom I acknowledge my eldest Brother, and both of the same Father and Mother; but I suppose he has no design to kill him, but only keeps him Prisoner, to bring him to grant me peaceably to enjoy the Kingdom of Quito, of late brought under subjection of the Peruvian Crown. Pizarro not observing Attabaliba’s subtlety (who design’d nothing but Huascar’s Death, out of fear that the Spaniards upon his liberal promisses to them, might promote him to the Throne) comforted him as well as he could: whereupon Attabaliba supposing that Pizarro would be little concern’d at the killing of his Brother Huascar, gave speedy Order that he should be burnt alive, which accordingly was put into execution: but before he was brought to the Fire, he foretold his Brother Attabaliba’s cruel Death. During which time Almagro came with fresh Supplies from Panama, eager to have a Share of the fore-mention’d Ransom, which at last was paid with overplus; for by daily bringing in of Baskets of Gold, the Chamber was fill’d up to the very top; but though Attabaliba had more than perform’d his Promis’d, yet Sentence of Death was pronounc’d against him pellamly after he had been Baptiz’d: the Reasons of which wicked and rash Condemnation were two; first the false Accusation of a Peruvian Interpreter call’d Philippillo, who defir’d his Death, that then he might with the more freedom enjoy one of his Wives; for Attabaliba murthering the same, had complain’d thereof to Pizarro, saying, That his Imprisonment was not so grievous to him, as the thoughts of the adultery, alleged against the just Law of his Country; the Defiler of an Inga’s Bed being not only to be burnt with the Adulterers, but also the whole Families of them, to the least Infant, their Houses to be ras’d to the Ground, and their Land low’n with Salt, as for ever curs’d. The second cause
cause of Attabaliba's Death is laid on Almagro, who came to Peru with new Forces, and who fearing that none of the Gold which Attabaliba had the delivery of, would fall to his share, as not having been in the Battel where Attabaliba was taken, therefore order'd him to be suddenly Strangled, that so the Booty might be equally divided. Not long after Pizarro conquering Cufco, got no lefs Treasure than at Caxac\nica. Here the Reign of the Peruvian Inga's ceased, with which before no Kings that ever Govern'd in the World were able to compare in Riches and Glory. Their Palaces were round about adorn'd with Golden Images; and they never are but out of Golden Vessels, spitting in the Hands of beautiful young Women of Noble Extract, were worshipp'd like Gods both whilest living and when dead, all their Subjects being their Slaves, and they the sole Lords of the whole Realm. In the interim Bevalazar march'd from the new City St. Michael, with a hundred and twenty Foot and eighty Horse, to affift the Conuners against one of Attabaliba's Generals, who having spoil'd the Ways by digging Pits, and covering them over with Bulfhes, refifted them in several places: then marching to Quito he burnt the City, after having kill'd a hundred of the Natives, because they laughed at the Spaniards Arrival. Afterwards joyning with Almagro, he went back to Cufco, which on the Way he had News of Quisquis, Attabaliba's General, and of his Brother Guapaloe, who making use of a Rock, threw down great Stones, by the Peruvians call'd Galgas, which in their Fall hitting others, brought down a great number with them, by which means he not onely defended the Place for the present, but kill'd fourteen Spaniards; nevertheless disfruting his ability to keep it, he retreated to a steep Mountain about Midnight, at the Foot whereof a Paffage led over a deep River, where he burnt all his Luggage that he could not carry with him; also above fifteen thousand Sheep and four thousand Prisoners, became wholly at the Discretion of Almagro, who leaving there Captain Martin Afote, order'd him to build the Town Truxillo: In the mean time Quisquis was put to flight by Pizarro, and went to Quito, where he loft many People, that were kill'd by Bevalazar's Guard; yet tho' those that were remaining chose rather to Fight to the last, than flye through Wildernefles, and there be Starv'd to death; which Quisquis contradicking, was Stabb'd by his Captain Guapaloe, and immediately after, cut to pieces. As soon as thefe Stirs were quieted, Pizarro began to build the City Los Reyes, near a convenient Haven of the Southern Ocean, whilet Almagro marching to Chili with two Troops of Horfe, and five hundred Foot, return'd without doing any thing remarkable, except his taking the Interpreter Philippilde, (whom he caus'd to be cut into four pieces) and his maintaining several Battels against the Chilefes, clad in Sea-Wolves Skins. In this Journey he loft several of his Men on the Snowy Mountains. About this time a Ship fittet out by Gabriel Carvajal, Bishop of Placentia, Sailing through the Straights of Magellan, ran into the Haven Los Reyes, out of which the first Rats swam afofte that ever were in Peru, by which the Countrie finde fuffering much damage, the Inhabitants call'd them Ocehas, that is, Sinful Creatures. Now all things on the Spaniards Side were tending to a quiet Politeffion, when a new Accidenc arose, which had like to have spoil'd all, for Mango Inga, Attabaliba's Brother, being releas'd out of Prifon by Juan Pizarro, obtain'd leave to go to Incaya, to fetch the famous Golden Image Macbfus, representing his Father Gonzacava: but he having now gotten his Liberty flew all the Spaniards which worke'd in the Gold-Mines, took the Cafele of Cufco by Storm, as also the City, after a Siege of eight Moneths, which nevertheless was by Francisco Pizarro soon re-taken, and Mango forc'd to flye into the Mountains Andes, after he had kill'd several of Almagro's Men; soon after Almagro about Midnight getting over the Walls, and taking, Ferdinando and Gonzalvo Pizarro, and

Amago Inga recalled out of Prifon, went upon the Spaniards, and at laft taken to Flight.
Alphonfo Alvarado Prisoners, condemn'd them all three to die, caus'd himsell to be proclaimed Governor, and gave the Royal Staff to Paulo Inga, whilst Gonfalvo and Alvarado breaking Prison, inform'd Francisco Pizarro thereof (who then had obtained the Title of Marques, and for an Inheritance, the Province Atahualpa) he was exceedingly troubled for his Brother Ferdinand, whose Enlargement he thought would be best procured by making Peace with Almagro, and the sooner, because the Peruvians began to rebel against the Spaniards in most places; flew divers Companies of them; amongst whom Diego Pizarro was set upon in a narrow Path call'd Lascefia Porcro, and amongst the Mountains loft seventy Horfe-men; and Gonfalvo de Tapico saw'd not one of eighty Horfe. Also the Peruvians set upon three hundred Troopers, Commanded by the Generals of the Horfe, Morgoveo and Gaeti, in a narrow Path, and row'd down great Stones from the tops of the Mountains both before and behind them, so killing both Horfe and Man before they could put themselves into a posture of Defence, insomuch that none escap'd with Life but two Troopers. Francisco de Godoy, sent out of Los Reyes with forty five Horfe, upon Discoveries, return'd alio with great lofs, being pursu'd twenty Leagues by the Peruvians; against whom Pedro de Lerna being sent out with sixty Horfe, fought a whole day with them, and though few of his Men were kill'd, yet many were wounded, and several taken: The victorious Peruvians retreating to the top of a sandy Mountain in the Night, offer'd the Spaniards they had taken Prisoners, as a testimony of thanks, to Pizarro, and afterwards stood drawn up near the City Los Reyes by the General Tizopangui. The Marques thus beat round, sent for Aid from New Spain and Truxilla, and alio for Alphonfo Alvarado to come back, who had been sent to discover the Countrey Chachapoya, and being gotten into a Defart, would without doubt have perish'd for want of Water, had not some Horfemen riding somewhat out of the Way, found Pits with fresh Water: notwithstanding which, five hundred Incaons (for so the Spaniards call'd the Peruvian Slaves) died for Thirft. He was afterwards suppli'd by Gomez Tortosa with two hundred Men, by the help of whom, though encompass'd by the Inhabitants near the Bridge Lamucach, where began a fierce Battel, Alvarado was in the end Conqueror.

Whilst the Spaniards found so much to do with the Peruvians, yet they could not forbear more and more Claffing amongst themselves, the Marques commanding that Almagro should surrender and leave the City Cusco; but he refusing to obey, forfc'd himself on the top of the Mountain Caytau, flopt the Ways by cutting down the Trees: but Ferdinand Pizarro getting up to the top along a private Way, made such a confusion amongst them with Bolt-shot, that Almagro, who was sick at that time, was forc'd to fudge; which being told Pizarro, he pursu'd him, and had doubtlefs utterly defeated him at that bout, but had not his Men, benum'd with marching in the deep Snow, been taken with a Diftemper which made them as if they had been all Sea-fick, (for such is the property of the Mountain Caytau) insomuch that they could scarce carry their Arms: Whereupon Almagro was advis'd to oppofe his Pursuers, and that he need not doubt of the Victory; but he either following his own Dictates, or being counter-advis'd, forfc'd himfelf in Cusco, whither Ferdinand and Gonfalone Pizarro march'd againft him. Rodrigo de Orgonos Commanded Almagro's Army, who being fick, lay on the Walls of the City to fee the Battel fought. The Peruvians, who on each fide were in the Spanifh Service, march'd in the Front: on the twenty sixth of April, Anno 1538. the Fight began, in which the Almagnians did much milchif with Cross-bar Shot amongst the Pizarrians; yet Almagro's Horfe retreated fift, being under the Command of Peter Valdivia; soon after which the rest of his Army, their Courage alfo failing, fled to the City;
into which, as soon as Origones being shot in the Head and slain, the Conqueror rush'd after them, and took Almagro Prisoner: yet not withstanding this prosperous beginning, he soon found himself in a great Strait, since those which remain'd alive of Almagro's Party refus'd to serve Pizarro, and murmur'd against him in all places, resolving to take Almagro from him by force, besides that Pizarro's Soldiers grumbled that they were not paid sufficiently for the many hazards which they had run: wherefore to compose their Troubles as well as possibly he could, he banish'd all whom he thought to be of the opposite Party, lest away the chief of his own mutinous Soldiers with Captain Peter de Candia, to discover new Countreys, put Almagro to death, and march'd to Callao; where being straitned for want of Provision, he made no stay, but got his Army with much ado to Cuzco. Gonzalve Pizarro was likewise so set upon by the Natives, that he left a considerable number of Men: In short, the Pizarraus were defeated in all places, and at length the Marquels, though forewarn'd by his Secretary Antonio Picado, was murder'd in his own House in the City of Lima, otherwise call'd De los Reyes, by a Bastard-Son of Almagro, nam'd Diego, in the Year 1541; his Body dragg'd to the Church-yard, lay there to every one's view and derision, till John de Barbara buried the same. His Father Gonzalve Pizarro, fir-nam'd The tall Citizen of Tuxilo, Commanding a Company of Foot in Navarre, had two lawful Sons, viz. Ferdinand, who was murder'd in the Spanish Castle Motta, and John that was slain in Cuzco, when Mango Inga conquer'd the City, the other two, Gonzalve and Francisco, being both Baftards; the last of which is said to have been expos'd by his Mother in the Church Porch, and kept alive for several days by fucking of a Sow, till his Father afore-mention'd finding him, and acknowledging him for his Son, put him out to Nurse, and when he was grown up sett him to keep Swine; which course of Life he soon left, and following Alphonfos de Ojeda, Balboa, and Pedro de Avita in their Expeditions, he quickly grew rich, and at last came to that height of Honor and Command we have heard. Francisco Martino de Alcantara was also his Brother by the Mothers side only. He was a Man who despis'd all Dangers and Hardships, was so well experience'd in Martial Affairs, that he might well stand in competition with many of the antient Heroes. In Los Reyes he built two very artificial Water-Mills, a Dominican Cloyster, and another for the Monks De la Merced, and likewise a flately Palace for himself: He was both meek and affable; and though he bore the greatest Command in the Emperor's Name over the mighty Kingdom of Peru, and got more Riches than ever any of the Roman, Peruvian, Grecian, or Affrian Monarchs possis'd, yet he went in the same plain kind of Apparel in the height of his Grandeur, as when he was but in a low Condition; about his Neck he commonly ty'd a Linnen Hankerchief, with which he us'd to wipe the Sweat from his Face: in peaceable Intervals he spent whole days in playing at Bowls, without any distinction of Persons, shewing often to play rather with a Sea-man or common Soldier, than a phantastick Gallant: He visited the meanest Citizens, and many times us'd to eat with poor People, to whom he was upon all occasions very noble and liberal: All his Designs he carried on by the strength of meer natural Parts: for he was so very illiterate, that he could neither Write nor Read; his Edicts were Sign'd with his two Marks, betwixt which his Secretary wright Francisco Pizarro; he is said to have had a Son which died young by Attabalida's Sifter, who came afterwards to be call'd Donna Angelina; he died in a very unfortunate time, for upon his good succes the Spanish Power had grounded their whole Desigs, thinking with the Peruvian Treasures, as the Sinews of War, to have erected a fifth Monarchy to succeed the fourth of the Romans.

Pizarro's Murderer, though aiming at the Supream Power, he had a considerable
Party to countenance and aid him; yet he found resistance in many places, not without the loss of many Men on both sides. In which juncture the learned Vaca de Castro Landed in Peru, with a Commission from the Emperor to settle the divided Kingdom of Peru in Peace and Quiet; but the young Almagro mad to see his Ambition thus cross'd, gave Battel to Castro in the Plain of Chapas; the Dispute was long and resolute on both sides, and the Night coming on made the Fight the more terrible, in which the Victory inclin'd to Castro; however the Almagrians flux to it roundly for a great while, and that chiefly through the valor of the Captains Babosa and Christopher Lafa, who breaking in amongst the Caffreans, hack'd and hew'd down all they came near, till at last they were forc'd to betake themselves to flight, and had not many of them exchanged their white Scars with the red of the plain Caffreans, scarce any of them had escap'd from being kill'd in the pursuit, and most of them that did escap'e were slain the next Morning by the Peruvians. Rodrigo Sarazar, Almagro's Deputy, deliver'd up his Lord to Castro, who condemn'd him to death, whereupon he was immediately Beheaded with a Sword. This Battel happen'd on the twenty-sixth of September Anno 1542, when it froze so hard the following Night, that most of those that were left wounded upon the place, were frozen to death. Thus Castro began his Government with Blood, and made it his first Business to make a Discovery by several of his Captains, whom he sent for that purpose, of the Countreys lying Eastward from Peru, lying upon the great River De la Plata, and the River Maranon, where in most places they met onely with Salvage People, and for the most part Man-eaters; and in one place where they Landed, a great Fire resembling a Dog came ath'ore and kill'd severall Arm'd Soldiers. A year and a half Castro had liv'd in Cufco, when at the arrival of the Vice-Roy Blasius Nunez Vela, all things were turn'd to peace-turvey, he being sent thither by the Emperor Charles the Fifth, accompanied by four Councellors, Diego Sepada, Liso Tejada, Juan Alvarez, and Peter Ortiz, to curb the Spaniards Villanies and Outrages committed against the Peruvians, entred Tumbes Anno 1544, where he immediately publish'd the Emperor's Edicts, which were to this effect:

All Peruvians are to be releas'd from Slavery; no Spaniard shall in the least oppress them, nor make use of their Service without rewarding them for the same, nor take any Provisions of them without paying for it.

This Proclamation was like to put the Spaniards into an uproar: for at that time a Peruvian Lord was forc'd to allow every Foot-Soldier three Slaves, and a Horseman five, besides Hens, Rabbits, Eggs, the Wine Agua, and other Provisions, for nothing. The general Complaints were, Is this the Reward for our Service which we have shewn to the Emperor? Is not this mighty Kingdom of Peru by our Blood and Labor joy'd to the Imperial Crown? Our Shoulders are grown bare under our Arms, our Bodies made useless with Wounds, and our Limbs lame'd with Bruses. Who shall maintain our Wives and Children, if the Peruvians, who according to the Law of Arms are become our Slaves, should not be forc'd to fish for Pearls in the Sea, and dig us Silver out of the Mines, and do us other Service for to maintain us? But Vela being deaf to these Complaints, relify'd that the Emperor's Commands should be fulfill'd, and that those that spake against them should lose their Lives: and that he might terrifie the generality with the punishment of a few, he caus'd Fryer Peter of the Order of the Virgin Mary to be Executed in Truxillo, Castro to be committed to Prison at Lima, because he had put Almagro to death without Examination, and shut the Gates of Cusco when his Agent came before the same. But do what he could, the Spaniards generally making Head, utterly refus'd to obey the Emperor's Edicts, and chose Goncalvo Pizarro for their General, who rais'd five hundred Men in compleat Arms in Cusco, from whence he march'd

435  
march'd directly with them to Los Reys, under pretence to deliver a Petition there to the Vice-Roy's Council, about deferring to put the new Edicts in force; till the Emperor was better informed of the present Condition of the Peruvian State; twenty great Field-pieces being also order'd to follow Pizarro's Army, were carried by the Peruvians over craggy Mountains; to each Gun without the Carriage were order'd three hundred Men, of whom twelve at a time carried it in their turns a hundred Paces a piece; though several eminent Persons considering the weightiness of the Affair, forsook Pizarro's Party, and went privately to the Vice-Roy, as on the other side, many defering the Vice-Roy joyn'd with Pizarro, who being not a little supply'd by Peter Puelles Governor of Guiana, took several of those that had defected him Prisoners, and put them all to death, whilst the Vice-Roy made what Preparations possibly he could, Hanging many innocent Persons only on suspicion of holding Correspondence with Pizarro, in much that there was no end of Murdering on both sides. But Vela clashing with his Councillors, because they would not consent that he should ruine Los Reys, resolved to do it without them; and to that end to remove the Emperor's Seal, Staple of Trade, and Courts of Judicature to Truxillo, and to spoil the Countrey all about; which as he was about to put in Execution, they privately got Captain Martin Robles, and Vela's Lifeguard, consisting of a hundred Men, on their side, whilst the common People mutinying broke into the Palace, took Vela and carried him to the chief Church in Los Reys, where the four Councillors were assembled, who order'd that the Prisoner should be ship'd and sent away to Spain, when Alvares Cueto lying in the Harbor with ten Sail, threatened to fall upon the Inhabitants if they would not releasethis Vice-Roy: whereupon the Councillors well provided with Guns, rais'd several Batteries against his Ships, so that Cueto finding himself too weak, set fire of his Vessels on fire, and sailed with the rest to the Haven Guatara, where being set upon by Diego Gazques, he was forc'd to deliver the remaining part of his Fleet up to the Councillors, who sent Vela away with the same, under the Command of Didaco Alvaradez. But Pizarro, who till this time had pretended that he sought nothing else but Vela's Departure, march'd close to the Walls of Los Reys with twelve hundred Men, Hang'd three Citizens upon a Tree, requir'd the Councillors to grant him Letters Patents, by which he might be acknowledg'd for the Supreme Governor of Peru; if which they refused, he threatned to put all that were in the City to the Sword; and upon Consultation it was judg'd convenient to grant his Demands, the rather, because they had not above fifty fighting Men in the City. Mean while Didaco Alvaradez making an Agreement with the Vice-Roy, they return'd back with their Ships, and Landed in the Haven Mouth of the River Tumbes, rais'd what Forces they could possibly thereabouts, but were forc'd to retire from thence to Quitos, (at the same time that the Cancellor Tejada, being seiz'd by Pizarro to the Emperor, came to an Anchor there) where they were courteously Entertain'd, as also in St. Michael, where they got daily more and more Assistants; of which Pizarro being inform'd, went thither with five hundred Men, and forcing the Vice-Roy to fly from thence, pursu'd him above thirty Leagues. Hanging up all those whom he could take of his Party. After many Encounters and Hardships suffer'd by both Parties, Pizarro exceedingly wearied, return'd to Quitos, where he minding nothing but all manner of Debaucherries, not in the least regarding the Vice-Roy's Desigms, which it concern'd him to have narrowly look'd into, for he having got five hundred Men on his side, resolv'd to venture a Battel.  

It was towards Evening when the two Parties had sight of one another: Pizarro having not only more Men, but also better Exercis'd in Arms than the Vice-Roy, who
who being sensible thereof, went silently about Midnight from his Station along
a narrow by-Path, so to fall behind upon the Rear of the Enemy, who mistrusted
nothing, by reason the Vice-Roy's Dogs kept a continual Barking in his old Sta-
tion, and the Peruvian Sentinels were heard calling to one another, and making
great Fires all the Night long; but because the Way was over-grown, and farther
about than it was supposed, the Vice-Roy finding the Night too far spent, went
back to Quito, out of which he Sallied as soon as he had sight of Pizarro's Forces;
against whom, being clad in a white Riding Coat, through the Slits of which ap-
pear'd a Cloth of Tiffue Doublet, he came Riding on a Bay Gelding in the Head of
his Party; with which breaking in amongst the Enemies Ranks, he made a consider-
able slaughter amongst them, till Hernando Tores coming near him, gave him a Blow
on the Had with a Battel-Ax, that fell'd him to the Ground, which the Lawyer
Carvajal's seeing, ran immediately, out of desire to revenge his Brother's Death,
whom the Vice-Roy had murder'd, and chopp'd off his Head. Thus Pizarro being
absolute Master of the Field, began to Flew his tyranny upon the Prisoners; some
he took away by Payson, others he Executed with the Sword and Halter, others
he banish'd to the remote Country (Chili, and spent his time in all manner of Vice
in Quito; where, amongst other lewd Actions, making Love to another Man's Wife,
he hir'd one Vincent Paul to murder her Husband, which said Vincent was afterwards
 Hang'd at Valladolid in Spain. The Adulterers also was afterwards Got with Child
by her own Father, and both of them put to death for Incest and murdering of their
Child. Pizarro being receiv'd as King in Los Regos, grew every day more proud
than other, in somuch that his Friends themselves began to hate and envy him, and
wanted only a convenient opportunity to rid themselves of this high-minded Ty-
rant. A strange Accident, among others, had done him great hurt, had it not been
timely discover'd, viz. Juan de la Torre, a Soldier formerly belonging to the Vice-
Roy, found accidentally a Grave in the Valley Elca (which by the Peruvians had
been worshipp'd above two Ages before) and in it so much Offer'd Gold and Sil-
ver as amount'd to above eighty thousand Crowns in Gold, besides many Em-
eraulds and Turcofes, all which Treasure he was puzzl'd how to carry away and pos-
sess securely, partly fearing the Emperor's Displeasure, if he should arrive thus
rich in Spain, the rather because he had Sallied with Pizarro, and also knowing it
was impossible to convey it on Ship-board without one or others knowledge; at
last, after many Contrivances, he judg'd it convenient to put the Money in a small
Vessel, and Sail with the same to Nicaragua, there to raise Men to oppose Pizarro
in those Parts, for so he might regain the Emperor's Favor. This Undertaking
seem'd to be threatened by many Dangers, he not having a sufficient Spirit to Com-
mand, or at least Experience to officiate the Place of a Captain. In the mean time

Pizarro's
Luxury, and
Tyranny.
another which he write himself to Pizarro, the Contents of which were to this purpose:

The Peruvian Soil hath drunk up the Spanish Blood long enough, and the ruin'd Realm is, as it were, left open for Rest: The Emperor proffers Pardon for all past Crimes, Repells the new ones, and will annex the Laws which the Vice-Roy Vela, during his Government, enjoyn'd the Spaniards to obserue.

If Pizarro aims at the general Welfare, he may easily see that Arms must first be laid aside, which he now depends on in vain, all his Associates being ready to forsake him, because no Soldier can take up Arms against the Emperor, without being guilty of high Treason.

Pizarro confounded with this Letter, call'd a Council of War, who differ'd very much from one another in their Votes, some judging that it would be best privately to deftroy Gofca, others were for an open Engagement, but most thought of another way, viz. to get his Person into their custody, and keep him under a strong Guard on the Island Puna, under pretence that the Peruvian Princes were sent for to come and acknowledge him as supream Governor, which because the Cities lay so remote one from another, could not be done in less than two years. Mean while an Embaffy was to be sent to the Court at Madrid, which should enjoyn Gofca to remain in Panama, and not offer to come to Peru till such time as the Emperor commanded the fame a second time at the return of the Agents. But Hieronymus Looia, chief Bishop of Los Reys, Thomas Martin, Provincial of the Dominicans, Gomez Solis, Pizarro's Steward, Laurence Aldana, who were design'd for this Embaffy to the Emperor Charles, never went their Journey, but flaid in Panama with Gofca, who had also gain'd to his Party Peter Alphonfo Amofa, who Commanded Pizarro's Fleet: Aldana likewise inform'd him of all Pizarro's private Councils; whereupon Gofca sent privately for Aid to Mexico, Guatemala, Nicaragua, and St. Domingo, and difpatch'd four Ships with three hundred Men, Commanded by Aldana, from the Haven Panama, with Order to Land about Midnight against the City Los Reys, and to fall unawares on Pizarro. Aldana accordingly falling into the Bay of Malavriga, was reliev'd and supply'd with Provisions by Diego Mora, Governor of Truxillo:

On the other fide, the Field-Marshall Carvayales being fent for by Pizarro, made a pompous Entrance, with the firing of Guns and Bonfires, into Los Reys, where all Perfons that feem'd to have the leaft inclination for Gofca, were either flabb'd or poyn'd. In the room of Mora, Pizarro sent the Lawyer Garjea Leon to be Governor of Truxillo, but he being taken by Aldana's Fleet, joyn'd with Gofca; and thus all things began to confpire the ruine of Pizarro, yet he defpair'd not, but being inform'd of the approach of the Ships, cauf'd the Drums to be beaten in Los Reys, forc'd every one that was able to bear Arms, on pain of death to serve him, made severallience of Soldiers, Commanders over his Horfe and Fooe, to whom he gave as much Money as they requir'd, to maintain thofe whom they had rais'd, and who were to be rais'd, by which means he got a thoufand Men in Arms; to which number, according to an Order fent to Cufco, Plata, Arquiqua, Lima, zero, and other neighboring Places, new Forces were expected to joyn; but Svedra, Governor of Gnanuco, deferring the City, left Pizarro and joyn'd with Mora, who fecur'd the Province of Caxamalca for Gofca. Thus Pizarro began to be daily more and more forfaken. Since the deftruction of the Vice-Roy Vela, Captain Diego (Cenien) had hid himfelf out of fear of Pizarro a whole year, in a Cave under Ground, but now inform'd of Gofca's Arrival, came forth, and getting forty Men and some Horfes together, which also belong'd formerly to the Vice-Roy, refolv'd, though meanly Arm'd, to go upon a bold DeSign, viz. to take the City Cufco; of which
Antonio de Robles, a Man hated and defpis'd for his mean Extract and little Wit, had the chief Command, there being therein a Garrison of five hundred Soldiers, besides the Citizens, who were likewise in Arms: Being inform'd of Centeno's approach, he sent out Francisco Aguirre as a Spy to discover the Enemy; but he joining with Centeno, advis'd him to march along a By-way, and towards Night to draw up about Cufco, which accordingly he did, and forcing open the Gates, rush'd in with his Horfe against the Enemy, who were drawn up in the Market-place, and breaking through their Ranks trampled whole Companies under foot; after which he fell in upon Robles, who having forgotten to give his Men the Word, caus'd a great distraction; for the Men blinded by the darkness of the Night, knew not Friend from Foe, infomuch that Robles's Party did one another more mischief than Centeno did; who being thus become Master of the City, caus'd Robles to be Beheaded the next day; and distributed a hundred thousand Ducats among his Soldiers, and then march'd with a hundred Men to the City Plata, to bring Mendoza, Governor of the same, under the Emperor's Subjection; in which his Design he likewise prov'd successful, being supply'd with a hundred and thirty Foot, which Lucas Martin, had fent from Arequipa for the Service of Pizarro, whom since he had deferred and joy'n'd with Cufco's Party. Mean while the Fleet under the Command of Aldama arriv'd in the Haven before Los Reys, to the great terror and amazement of the whole City; from whence Pizarro marching, Encamp'd himself with five hundred and fifty Men, to prevent their Landing, swearing that he would spare none who're fell into his Hands, and fent Order to Peter Martin, whom he had left in the City, immediately to Hang up thofe which would not follow the Army, or who return'd from thence home; to which purpofe Martin went from place to place with an Executioner, and thinking him not quick enough 'in his Work, stabb'd many Citizens himfelf: And ftrict Order was given by Pizarro, that all Runaways should be punish'd with Death; notwithstanding all which many of his nearest Friends daily forfook him, taking advantage of the darkness of the Night; nay, the Soldiers themselves would at Noon-day ride away from him, crying aloud, Long live the Emperor, and let the Tyrant Pizarro die: Wherefore he judg'd it most convenient to remove to the Countrée Nasca: During his Journey thither, whole Troops left him, infomuch that he scarce kept a hundred and fifty Men, and thofe he fear'd every Minute would fall upon him and Murder him.

With Pizarro's departure, the whole Scene of Affairs was chang'd in Los Reys; for there the Imperial Standard was erect'd, the City Cryer read the Letters of Pardon which Cufco had brought with him from Spain in the corner of every Street. Juan Padinino Landing with fifty Men, receiv'd all thofe that had deferted Pizarro, whileft Cufco fet Sail from Panama with five hundred Men, with whom Landing at Truxillo, he Encamp'd himfelf in the Valley Xauxa, whither great multitudes flock'd from all places out of malice to Pizarro, who in a short time had deftroy'd above five hundred Gentlemen. But Pizarro having quitted Los Reys, he pos'd the City Arequipa, which he found quite desolate, but meeting afterwards with the Forces Commanded by Juan Acofa, of which one half were alfo run away, joy'n'd with them, and march'd againft Centeno, who lay along the Lake Titicaca, with whom he Engag'd in the Plain Guarina; Ludovico Ribera Landing, Centeno's Party fir'd their Guns before the Pizarrians were within Shot of him, of which Cauyales making speedy use, drew up his Pieces close before the Enemy, and made an exceeding slaughter amongst them, killing above a hundred and fifty Men in the firft Onset; the Horfe amaz'd at the sudden defttruction of the Foot, fled, leaving the remaining Foot-Soldiers open to the Enemy, who was gotten behind them with his Musqueteers.
At his but Gafca +J? for with of which Gafca being informed, resolving upon a private and sudden Revenge, caus'd all Necessaries for War to be made ready, and march'd with a thousand and nine hundred Men out of the Valley of Xauxa to Cusco, where by the Way he was supply'd with the Forces, which the experience'd Colonel Peter Valdivia had brought from Chili; with which coming to Andagua, he took up his Quarters there for some time, because the mild Winter had with continual Rains made the Ways so dirty, that there was no travelling, and had rotted their Tents and Maiz, and also occasion'd the Bloody-flux amongst the Soldiers. In March, Gafca broke up with his Camp to cross the River Apurima, which he found very troublesome, because Pizarro had broke down all the Bridges: But Gafca caus'd Wood and other Materials to be carried to several places; that the Enemy should not certainly know his Intentions, and at last march'd over deep snowly Mountains to Catumbas, where suddenly he made a Bridge, over which march'd four hundred Foot, but the Horse suffer'd most damage; for sixty Horses loaden with Arms going to waide over, were carried down by the Stream against sharp Rocks, by which they were desperately gor'd in their sides, and many of them kill'd outright. Pizarro inform'd of the Enemies whole Proceedings by his Spyes, sent Acofia thither with two hundred Musqueteers, to fall upon those that were come over, whom he finding too many, durst not venture to Engage with them. Mean while Gafca's whole Army getting over on the other side of the River Apurima, march'd up a high Hill, whilst Pizarro Encamp'd himself five Leagues from Cusco, in a Plain call'd Singular, the Entrance into his Camp being fortifi'd with six Field-Pieces, each side by a River and several Mountains, and the Rere by a deep dry Moat: Gafca stood upon a Hill and view'd the Enemy's whole Forces lying in the Valley, and being oppress'd with excessive Heat, whilst his Men were so exceedingly pinch'd with Cold in the Night, that they were scarce able to hold their Arms, according to the strange property of the Peruvian Climate; for the tops of Hills generally Freeze, whilst the Valleys about a League from thence are parch'd with Heat: At Break-of-day Gafca descended the Hill; his Horse being divided into two Wings, were Commanded, the left by Juan Savedra, and the right by Balthazar Castro; Mendoza led some Dragoons, Valdivia guarded the Guns, and Gafca himself march'd in the Front of the Musqueteers. On the other side, Pizarro plac'd the Peruvians on his right Wing, Cepeda and Acofia Commanded the Horse, Carvajales and La Torre the Foot, Sebastian Vergara and Peter Soria guarded the Field-Pieces: But the Battle was scarce begun, when Cepeda and a great part of the Horse defecting Pizarro went to joy'n with Gafca, and immediately after the right Wing of the Musqueteers; at the same time Cenento and Mendoza fir'd amongst Pizarro's main Body, of which some ran away to Cusco, others with their Colours to Gafca's Army. Pizarro seeing himself thus forlorn, cry'd out, Since all are fled to the Imperial Standard, I will also betake my self thither, where perhaps I may find Mercy: Whereupon Acofia answer'd, 'Let us rather fall in amongst the thickest of the Enemy, and die valiantly: To which Pizarro reply'd, No, now I have lost Honor and Goods, I must take care for my Soul, that that may not be lost also; which said, he lighted from his Horse, Caparison'd in Silver, and deliver'd himself and his Sword into the Hands of the Sergeant Villavicencio, who found him Habited in curious Armor, a Golden Helmet with a stately Plume of Feathers, and a Corflit incircel'd with Emauralds about his Neck: Gafca seeing him brought before him in this manner, said thus unto him, Have you not order'd your Business well, to waste so much of the Emperor's Treasure, and shed so much Blood, and all to confirm your self in your unlawful Wurpotion.
AMERICA.

Chap. IV.

Usurpation of Peru: To which Pizarro answered, saying, I have spent my own Estate in the Service of the Spanish Crown, and might lawfully take upon me the Government of Peru, having with the loss of my Brother's Life, and the hazard of my own, discover'd the same. Carvajal escaping out of the Fight, had hid himself in a Thicket of Canes, but being discover'd by his own People, was by them brought before Gafca, who the next day, after the Battel caus'd him to be Quarter'd alive, and Pizarro's Head to be cut off in Prison; the other Prisoners were most of them kill'd in cold Blood.

Gafca thus become absolute Master of Peru, found an incredible Treasure left by Pizarro, of which he gave to every common Soldier above fix thousand Ducats, and with this his victorious Army march'd to Cusco, where he employ'd his Executioners affreth, in Hanging, Drawing, and the like; some that were stigmaiz'd and condemn'd to the Galleys, accounted themselves happy that they had escap'd so. Gafca, though Victor, perceiv'd no small Troubles to threaten him, having twenty five hundred Men in Arms, of which every one for their faithful Service judg'd that they deserv'd some Office or other, there being then above a hundred and fifty to dispole of, Pizarro having Executed the chiefest Officers, and those that bore any Command under him being either fle'd or kill'd in the last Fight: but the small number of Officers that were wanting, was not to be compar'd to all those that gap'd for Commission. The Revenues, which yearly amounted to eleven hundred thousand Ducats, went most of it away amongst the Officers, the common Soldiers getting onely a small Snip out of it; wherefore many began to murmur, and were upon the point of Mutinying, if Cunaça, the Judge of Criminal Causes, taking the chief of them, had not punifh'd them in such a manner, that all the rest being terrify'd, gave over their Complaints. After Gafca had spent above nine hundred thousand Ducats in the War 'gainst Pizarro, all which Money he took up upon Interest, which, after having settle the Kingdom in Quietness, he paid for the most part with the Goods taken from the Rebels. Next he made a Law concerning the Peruvians paying of Tribute, which before the Spaniards forc'd from them whenfo'ere and howso'ere they pleas'd, with the greatest Tortures imaginarable.

Gafca having again erected in Los Reys the high Court of Judicature, in which sat the Imperial Judges, return'd home with an unvaluable Mafs of Treasure for Charles the Fifth, and left the Peruvian Government to the Judge Cunaça; since which time Peru hath been Gov'ned by Vice-Roys, the first whereof, who succeed'd Cunaça, was Antonio Mendoza, and after him successively Andreas Hurtado Mendoza, Diego Valasco, Lopez Garcia de Castro, Francisco de Toledo, Martin Enrigues, Garcia Mendoza, Ludovico Velasco, and Juan Pacheco, under whom the Peruvian Kingdom hath enjoy'd Peace and Quiet, to the considerable enriching of the Spanish Inhabitants.

Thus much of the ancient Transactions in Peru, it will now be requisite to give you a brief Account of the several Provinces in this mighty Kingdom.

The Country is generally divided into three Juridical Regions, as they call them, or Courts of Appeal, which are Quito, Lima, and Charcas; but the particular Provinces, as they are commonly observ'd by Geographers, are laid to be six, viz.

Sect.
Quito.

The first Province of Peru towards the North is Quito, or the new Kingdom of Granada, with which on that side it is bounded, having on the West, Mare del Sur; on the South, Lima; and on the East, Los Quixas. It lieth in a manner right under the Line, and is said to be seventy two Leagues in length, and in some places about twenty five in breadth.

The Winter begins here in October, and continues till March, in which fall mighty Showers, and on the Mountains abundance of Snow; but all the Summer long the Sun is seldom darkned with a Cloud. Many of the Inhabitants die of a Giddines in the Head about the beginning and end of Summer. The Pox also destroys many of the Natives; with which Disease they are often born, and give it to the Spaniards, who are not able to abstain from the Indian Women; they use Saffaparilla and the Wood Guaiacum to cure themselves with.

Here grow also many poiyonous Herbs, which the Peruvians make use of to poyfon one another.

In the further parts of Quito grows the salt and cooling Fruit Quaba, two Handsfuls long, cover'd with a grey Rind, and within full of white Pulp and hard Kernels.

The Tree Guaba hath a pale smooth Bark, thick Boughs, hard and glittering Leaves, Flowers consisting of five Leaves, not unlike a Peacock's Plume, long Apples, woolly without, and within full of a pale red Pulp and eatable Stones; the Root, which spreads it self very much, is sweet, and when boil'd cures the Bloody-flux. This Tree grows in most places, especially in low Grounds, the more because the Kernels which the Birds picking out let fall on the Ground, spring up in new Trees.

The Spanish Fruits, as Peaches, Citrons, Figs, Pomegranates, Pears, Quinces, and Oranges, grow also here in great abundance, but when ripe are subject to rot.

Moreover, the Fields abound with Wheat, Barley, and Maiz; the Pastures afford plenty of Grass for Oxen, Horses and Sheep, which bring forth Lambs twice in fourteen Moneths.

The Ocean and Rivers store of Fish; the Stream Barbara us'd formerly to produce Gold also.

In moist Grounds the Inhabitants find abundance of Salt-petre, the best that is for the making of Gun-powder.

For the Accommodation of Travellers, Inns call'd Tambos, are built near the High-ways, exactly five Leagues distant one from another, where all sorts of Provisions are sold at a set Price.

The Natives antiquely went Cloth'd in a Frock without Sleeves, as wide on the top as at the bottom, and pleated their long Hair. They are strong, well proportion'd, on'd in Body, and subtile enough to learn any Art, but treacherous, inconstant, and inclin'd to Drunkenness: They were very hard also to be brought to receive the Roman Religion, so that most of them would not suffer themselves to be Baptiz'd till they lay a dying: They also drove a great Trade in Cotton, Wooll, and Cloth.

Between Pajo and Quito are several Villages, and the famous High-way, by the Ingas cut through the Wildeners and Mountains, the Wall of an old Cattle, and the wonderful Stone-Bridge Lumichaa, which Nature hath made over the swift River.
River Guaca; it consists of a hard Cliff, at the Foot whereof is a great Arch, through which the Water runs with exceeding force.

This Tract of Land produces Maniz, and abundance of Mortanas, a Fruit resembling Damask Prunes, which eaten in excess cause Drunkenness and Fainting.

The Lake Ingarocochea, signifying Bloody-Water, because the Inga Guayanaca was kill'd and drown'd twenty thousand there.

The chief Towns and Places of Note are, 1. Caranguez, antiently a Royal City, where stood a sumptuous and stately Palace of the Kings of Peru, now almost deserted. The Palace, built of Stone in a little Plain, without either Mortar or Iron-work, manifests its former glory by its Ruines.

2. The Royal Castle of Atabalo, or Ottawaillis, in the building of which the Ingas spared no Cost nor Charges; and indeed it is a Structure no way inferior to any of the antient Roman Edifices. Between this Castle and Cochoqui, a stately House, lies a cold snowy Mountain. Moreover, the Spaniards have several Habitations along the Way to Quito, and especially in the Valley Anuquito, where the Vice-Roy Vela loft the Battel fought against Conalvo Pizarro.

3. Quito, commonly call'd St. Francisco de Quito. There stood formerly here certain Palaces, built by the Ingas, but the City was re-built by the Spaniards at the Foot of a certain Ridge of Mountains, which it hath on the North and North-West side of it, and are said by Laet, to cross the whole Countrey of Peru quite over from the South to the North Sea: It was soon after the Building inhabited by five hundred Families of Spaniards at least, besides Natives, and well fortifi'd, and might be thought a Town very well seated in all respects, but for the neighborhood of a Vulcan, which at times annoyeth it very much, as namely in the Year 1560, when it vomited out such abundance of flaming Cinders and other sulphureous Matter, that had it not been for a Shower of Rain unexpectedly falling, would have much damnifi'd, if not destroy'd the Place. The Natives about Quito are more Moraliz'd than other Peruvians. The Valleys which are warm'd by the Sun produce all manner of Fruit-Trees and large Vineyards; and the Root Papas, not unlike Apples.
Chap. IV.  

**AMERICA.**

The Quínoa, which is of a Man's heighth, hath little Seeds, of which a pleasant Liquor is boyld. From Quíto the High-way leads to Cufco, along which at every four Leagues distance stands a brave Palace; and from Cufco to Chile, being in all above a thousand Leagues long. The City, built on a Sandy Soil, is divided in the middle by a Moat; over which lead several Bridges: the Streets are large and freight, and full of handiom Housés, and at the ends of the four chief Streets four Market-places. Besides the Cathedral, are two other Churches, Dedicated to the Saints Sebastian and Blasius. The Cloyfiers of the Frayncifcans and Dominicans are also no small Ornament to the City. Besides other flately Structures, are the Residences of the Receivers of the Kings Revenues, to which the Peruans that live about the City, being computed no lefs than fifty thousand in number, pay Tribute; and to keep them in subjeftion, the City Quíto is always well fort'd with all manner of Ammunition and Infruments of War. The chiefefl Trade here confists in Sheep, Goats, and other: Castel, Cotton-Clothes, Cloth, Flax, Hairs, Cordage, Sugar and Salt; which Sale, being grey and bitter, springs out of a Fountain in the Country Mira. The Oyl, Wine, and Drugs which are us'd here, are fetch'd from the South Sea up the River Ambato, and from thence with Carts into the City.

4. Thomebamba, famous for a Royal Palace, built there by some of the Ingas; It lies Southward from Quíto in the Province of Caucares, where two Rivers commix their Waters, near a Plain abounding with Venifon. There yet remain considerable Ruines of this Palace, in which one may discern the vast Dimensions of divers Rooms, in fome of which Arms were kept, and in others Provisions and Clothes; of which kind of Buildings or Magazines the Ingas had erected above a thousand in Peru, espeffially along the High-way, that they might have their Ammunition ready in all places if need should require. On the left side of Thomebamba appear'd the famous Temple of the Sun, whose Gates were not onely curiously Painted, but also Inlay'd with Emeralds. Both the Palace and Temple, adorn'd with Gold and costly Images of great Touch-stone and Jasper, contain'd within their Walls an invaluable Treasure. These magnificent Structures are at this day fall'n quite to decay. The People of this Country, who wear long Hair, pleated on the top of their Heads like a Coronet, go Cloth'd in Cotton Coats and Buskines of Hair-cloth. The Women, indifferent fair, and great admirers of the Spaniards, Plough, Sowe, and gather in the Harveft, whileft the Men flay at home, Spinning, Weaving, and doing of other Female-Offices. Anno 1544. they discover'd Mines here, which produc'd as much Gold as Earth.

5. Tacunga, where was formerly another flately Palace, about fifteen Leagues from Cufco; not far from the Mountain which fome years fince vomited Ashes and Stones into the adjacent Fields. Hereabouts was formerly a Cloyfter, inhabited by the Nuns call'd Namaconas, the Ruines whereof are yet to be seen, with feveral Houfes of Stone, but cover'd with Thatch. The Natives in this Place are of a brown Complexion, and of a very affable Nature.

6. Mulambato; 7. Mochi; 8. Rhiobamba, three small Villages, but each of them credited with a flately Palace. Oppofite to Rhiobamba lies the Province Chumbo, from which a troublesome Way leads to Guaynacapa over the River Chongo.

9. St. Jago de Puerto Viejo, giving Denomination to the Territory about it, which produces abundance of Potatoe Roots, Maiz, Jaca, three forts of Guavas, Cerezillas, and the Tree Tuma, which bears wild Figs. The Spanifh Fruits grow here likewife in great plenty. The fore-mention'd Beasts like Hogs, whole Navels grow on their Becks, are also very common here. The Woods abound with Deer and all forts of Fowls, amongst which one resembing a Goofe, and call'd Xuta; and ano-

'Tt 2
mer. The City Loxa, built in the Countrey of the Palaeas, a People that went naked, between two Arms of the River Catamayo under a wholofom Climate, near the High-way that leads to Cafco in the Valley Curibamba, where no poyfonous Beaf was ever found. The Soil bears abundance of Oaks, Hazles, Ash, Willow, and Cedar Trees; Maize, Barley, and Wheat. Not far from the City springs a hot and sulphurous Fountain, which cures all sorts of Sores and Wounds. The Countrey hereabouts is likewise flor'd with Fowls, Venifon, Cattel, and Fift. Moreover, the City receives no small luftre from two Dominicau, and one Francifean Cloyfter: Eastward from which lie defolate Mountains, whose tops are continually cover'd with Snow. Not far from hence were formerly two noble Palaces, Piedras and Tamboblanco, besides feveral Villages.

15. Zamora, Eastward from the cold Mountains Andes, built in a Marfly Soyl, where the Inhabitants are never viifit with Peftilential Difeafes, and use no other Phyfick for fuch Sicknesses as they are troubled with, than Tobacco, and the Herb Aquacolla. But there is a certain Nut that grows hereabouts, which occasions fudden death, if eaten raw, but being boil'd, is a wholofom Food. The Mines afford great pieces of Gold, of which one weiging eighteen Pounds, was presented to Philip the Second, King of Spain. The briny Springs produce good Salt. Three Rivers falling from the Mountains, are noted for their Golden Sands, and alfo afford delifious Fift. The Bees being here void of Stings, furnifh the Inhabitants with plenty of Honey. The Tygers and little Lyons devour many of the Sheep Paces, Goats, Hogs, and other Cattel, and fometimes the Natives themfelves. The City it felf is neatly built with Woodden and Stone Housfs, and adorn'd with a Church and Dominicau Cloyfter, besides a flately Palace, the Resifence for the King's Receiver.
Chap. IV. AMERICA.

16. The City Ica, situate in the Countrey Chiquimayo, it is so call'd from a swift River, cross which the Peruvians Women and Children swim, to the great amazement of the Spaniards. They paint their Bodies black with the Juice of the Root Tagnostics, and feed for the most part on the stamp'd Plant Yaca. On the other side of the Mountain, which rises on the Banks of Chiquimayo, lies the Countrey Perico, fruitful and well inhabited, against which justs the Golden Countrey Cherinos. Peru hath also several delightful Valleys, amongst which on the North the chiefest are the Tomboc, Solana, Pocho, and Pura, all of them very fertile, full of Rately Buildings, and water'd by several Rivers.

17. San Miguel, the first City that was built by the Spaniards in Peru, situate in a sandy and dry Soil, being extraordinary dusty in Summer, and very flabby in the Winter, because the hard Ground cannot soak up the Rain. The Ingas made a Way through this Valley fifteen Foot broad, between two Walls, and Planted Trees on each side.

18. Westward from Miguel appears Payta, near a convenient Haven in the South-Sea, which June 1547. was burnt by Thomas Cavendish, since which it had been rebuilt twenty eight years, when Joris Spilbergen, after a hard Engagement with the Spanish Admiral Rodrigo Mendoza, arriving in the large Haven before Payta, sent eight Sail with three hundred Armed Men up to the City, where finding the Enemy Encamp'd along the Shore, he return'd without any effect; but two of his Frigats, the Eolus and the Morning-Star, running close to Payta, fir'd whole Broad-sides at the same, whilest Captain De Wit took a Peruvian Fisherman, who had been two Months out at Sea, and taken abundance of Fish. The Guns which the Ships fir'd upon the Town strick such a terror into the Citizens, that they fled with Bag and Baggage into the Mountains, and left the City for a Prize to Spilbergen, who setting fire on the same, in few hours burnt down two Churches, a Dominican Cloyster, and several Alms-houses: But had not the Citizens been cowardly, they might easily
easily have kept off the Hollander; for the Vice-Roy Ludovico Velasco informed of Spilbergen's Arrival, had for'd the Place with Ammunition and Men, whose Courage failing, prov'd successful for the Hollander, who whilst they Rided here at an Anchor, took a very strange Bird on the Island Lobos, lying before Payta, being two Yards high and three thick, in its Bill, Wings, and Claws resembling an Eagle, and having a large Crest on its Head: Not long after Donna Paula being Governor of Payta, a Lady famous in Peru for her Beauty and obliging Nature, sent Cabbages, Oranges, Citrons, and other Provisions to the Hollander, and requested the Release of some of the Spaniards taken in the Engagement against Mendoza, but could not obtain her Request from the uncourtly Dutchmen.

SECTION III.

LOS QUIXOS.

The Province of Los Quixos lieth South, and to the South-East of Quito, being border'd more directly Eastwards with a part of the Province of Guiana, call'd by some El Dorado, or The Golden Country; on the South it hath Lima and Cufco.

This Province is subdivided into several lesser Territories, viz. Canela, Pacomores, and St. Juan de Salinas. Canela is so call'd, because it hath many great Woods, which produce the Fruit Canela in great abundance, the Owners whereof were most inhumanely dealt with by the Spaniards; for Gonzalo Pizarro supposing to get more of Gold there, found nothing but Trees, bearing a Fruit like Olives, by the Natives call'd Canela, with which they us'd to drive a great Trade, being otherwise poor and simple People, living in Huts, which Pizarro pulling down, caus'd the Inhabitants to be torn in pieces by his Dogs, because they could not furnish him with Gold, nor direct him where it was to be had.

Besides the Canela-Tree, this Country also produceth in great plenty the Tree which beareth the Apples Granadilla, exceeding good against burning Feavers; the Leaves are like Ivy, the Blossom resembling the Sun, and the long Leaves speckled with Red and White, open three hours after Sun-rising, and close again before the Evening, just as if Nature took care to preserve the beauty of the Flower.

In this part of the Province the chief are, 1. Baeza, otherwise call'd Quixos, built in the Year 1559, by Ramirez de Avila, eighteen Leagues from Cusco. 2. Archidona, twenty Leagues to the South-East of Baeza. 3. Avila. 4. Sevilla del Oro, all of them Spanish Colonies.

The Territories Pacomores and Iguaufongo, otherwise call'd The Countrey of Juan de Salinas, are said both to extend above a hundred Leagues in length, and little less in breadth. The Fields afford store of Pasture for Cattel, the Plough'd Lands produce Wheat and all sorts of wholesome Herbs; and in some places are also rich Gold-Mines.

The Jefuit Ad ma relates, That not far from Caruma he found great Stones, some of which were full of Golden Veins, but were hard to be cut from the Rock. Most of the Gold is found in the Sand of several Rivers, the chiefest whereof flow through Quito, New Granada, Valdivia in Chile, and Caragua in Peru.

On the Point of Quito, the River San Jago falls into the Southern Ocean; the Ground in the Mouth of the River being very uneven, for oftentimes the Ships are faft.
falted aground at the Stern, and on Head they have above eighty Fathom Water; yet nevertheless the Shoals are no ways dangerous.

South-West from St. James lies the spacious Inlet Matheo, and the Promontory Francisca, known by its Banks and high Grounds, which shew red and white at a great distance.

Not far from hence, exactly under the Equinox, appears Cape Passao, flat and low; between which and Matheo, the great Rivers Los Quiximes fall into the Sea.

Behind Passao rises the high Mountain Qague; and more Weastly the Bay Caraguas affords a secure Harbor for all manner of Vessels.

Next you come to the Town Puerto Viejo before mention'd, lying behind the Island Laurenso.

Five Leagues off at Sea, before Laurenso, lies the Island Plata, formerly famous for a Peruvian Temple, in which the Natives Sacrific'd Sheep, and sometimes Children, and painted the Figures of divers Persons with the Blood; to which they offer'd Jewels, Gold, Silver, Wooll, Cotton Shirts, and Cloaks. Francisco Pizarro arriving here, got an invaluable Mafs of Treasure; but at present it lying defolate, affords nothing but Brambles and wild Trees.

The next which come in view are the Havens Callo and Zalango, where there are safe Harbors, good Wood and Water.

The Cape of St. Helena makes also a secure Road on the North, and on its Shore hath a Spring, on the top of whose Waters swims a certain Gum, by the Natives call'd Copey, exceeding good to make Ships tight.

The River Tumbez falls into a large Bay, which on its North-East Point near the Main Land, hath the Island Puna, ten Leagues in circumference: The Soyl whereof produces abundance of Maize, Indigo, and other good Roots, besides great Woods full of fruitful Trees, and Sanjagorilla. The Inhabitants of a brown Complexion, and middle Stature, wear Cotton Cloaks, and Chains of Chaquira and Precious Stones: They drive a great Trade, and formerly maintain'd Wars with the People inhabiting upon the River Tumbez; their great want is fresh Water in the Summer. Thomas Candish Landing here Anno 1587, found a Ship hal'd ashore, and three Villages, in one of which stood a Palace belonging to a Cafique, surrounded with Stone Galleries; and near it a large Store-house full of Tar-pots and Hemp to make Cables of: The Village consist'd of two hundred Housè, and a fair Church with a Steeple, in which hung several Bells. The Cafique Married to a Spaniſh Woman being fled with the Villagers, Candish took many Oxen, fat Sheep, Pigeons and Ducks, the Bells; and what 'elie was not convey'd aboard, with him; and afterwards burnt the whole Town; but whileſt he was busy in making havock, a thousand Spaniards, and a considerable number of Peruvians fell upon the English on fuch a sudden, that they kill'd fome, and took others Prisoners.

Somewhat farther off at Sea appears the Ifle Clara, where thofe of Puna formerly buried their Dead.

The Inlet into which falls the River Tumbez, whose Shores are well inhabited, ends Westward at the Promontory Blanco; Southward from which lies the Ifle Los Box, where there are several Springs full of the fame Gum, or Bitumen, a little above mention'd.

Beyond the Point Agua lie the two Ifles Lobos Marinos, opposite to a low Coast; they are defolate, and barren of Grains, Trees, and all kind of Herbs; and defitute of fresh Water; but many Pelicans, Penguins, and other Strange Birds.

The discovering of these Coasts belonging to the Jurisdiction of Quito, deserves a short Relation:

Whileſt
Whilest Pizarro kept the Inga Attabaliba Prisioner, he sent Captain Bevalcegar to the new Fort St. Miguel, where eighty Horses and a hundred Foot being arriv'd from Panama and Nicaragua, and he being inform'd that there lay a great Treasure in Quito, and that the Canares, the Spaniards Friends, were exceedingly oppress'd by Ruminagua, Attabaliba's General, immediately march'd thither with the new arriv'd Forces before mention'd, to fetch the Booty, and to affish the Canares; but several things oppos'd him in his Design: for Ruminagua guarded the Way with twelve hundred Indians, digg'd Pits in the Same, and filling them with sharp Poles, cover'd them slightly over with Canes and Earth; all which Bevalcegar flunning, went about, fell in upon the Rere of the Enemy, and after a small Resistance conquer'd the City Quito. Mean while Ferdinand Cortejfo sent Petco Alvarado from New Spain, who taking Guatemala, receiv'd a Commission from the Spanish Court, to subdue the Northern parts of Peru. Soon after which Garcia Helgna being sent with two Ships to enquire concerning the State of Peru, brought News back, That Francisco Pizarro had gotten an unvaluable Treasure at Caxamalca; which he first'd up Alvarado, that he Landed five hundred Men at Puerto Viejo, march'd in great want of Provifions over the Mountains Acabucos, and had he not accidentally found a Pond of Sweet Water in a Thicket of Canes, both Men and Horses had all perifh'd; at last upon his approaching Quito, the Governor thereof, being Bevalcegar, not enduring to suffer an Equal, drew up all his Men in Battel array; but some Persions interceding between them, they were soon reconcil'd, and Alvarado being bought out with a great sum of Money, defect'd Quito; where after Gonzalo Pizarro, had remain'd a considerable time he march'd Eastward of the Province, which produces abundance of Cinamon; whither he was accompanied by two hundred Spaniards and four thousand Peruvians; against whom the Natives dwelling on the Borders of Los Quixos fought very valiantly, till Night approaching, when they all ran away; after which retfing a while, there arofe a mighty Tempeft of Thunder and Lightning, accompanied with a dreadful Earthquake, which swallow'd above five hundred Horses, whole Woods and Fields, whileft an unknown River burst out of the Earth, and overflew all the Countrey, inomuch that Pizarro expected nothing but a speedy Ruine, in regard no Provifions were to be found in all the Countrey; at last getting on the top of the nearest Mountain he loft many of his Men, who were frozen to death with excessive Cold. From thence marching to the County Zumaque, he got plenty of Provifion and Cinamon, which grows on great Trees in the Woods; the Leaves thereof resemble the Laurel; the Fruit grows in little Berries; the Root and Bark have a strong odoriferous flimel. Thence travelling to the Town Caca, he found a mighty Cataraft of Water, falling from a Rock above fifteen hundred Ells high; inomuch that the noise in calm Weather was heard five Leagues off. Pizarro leaving his sick People in Zumaque, went onely with a few Eastward from Caca to the Plain Coutry Cnema, full of Moorish Grounds, the Inhabitants whereof went naked: at last he came to the great River Maranon, which falls from the Mountains near Quito, and extends with several windings above eight hundred Leagues in length, and at the Mouth thereof is fifteen Leagues broad, which at that time overflowing all the Countrey, he judg'd it convenient to build a Brigantine, making the Shoes of the dead Horses serve for Iron-work, his Mens Shirts for Sails, and a Gun, which was to be had there, for Tar, and having Lanch'd their Vefsel, and put all their Baggage and sick People into the fame, they Sail'd close along the Shore, on which Pizarro made his Way through Brambles and Canes, or went over in the Brigantine whenfo'ere he expy'd a better Path on the other Side; in which manner they were gone two hundred Leagues down the River, with no other Food but
but wild Fruit and Roots; when Captain Francisus Orellana, was order'd to Sail away before with five Men, and seek out for Provisions, and at every Stream which fell cross-ways out of the Countrey into the great River, he was to leave a Mann'd Boat; but Orellana in few days drove down so far with the swift Rivers, that he saw no likelihood of getting up again in a whole year, neither could he find any Provisions, but fought daily with the Indians, who came stoutly to Board him in little Boats: amongst whom he was inform'd also, that thereabouts liv'd the Amazon Women, that 'Warr'd continually against their Neighbors; and at last he came into the Northern Ocean. But Orellana Sailing to Spain, obtain'd a Commission to be Governor of the Amazon's Countrey, whether he steer'd his Courfe with five hundred Men in three Ships; but Landing at the Canaries they all ran away from him, which so incens'd Orellana, that he soon after dy'd with Grief. Mean while Pizarro inform'd by a Spaniard whom Orellana had put ahide, that the Brigantine was by the strong Current carried into the Ocean, knew not what to do, his People since their departure from Quito having travell'd above four hundred Leagues, had eaten most of their Horses: Many dy'd by feeding on unwhol- fom Herbs; others fell down dead for Hunger, or tie'd out with toilfulm Tavel; their Clothes, rotten by the Rain, hung upon them like Rags, their Shoes were worn out, their Feet full of Blisters, their Bodies badly mangled with Brambles and Thorns, for no place afforded them a Boat. Pizarro leaving the River Maranon, went another Way, no less troublesome for steep Rocks and inaccessible Mountains. The Valleys through which they went, began now to be strew'd with dead and sick Bodies, who were not able to follow the Army, which march'd very fast, every one judging to be so much nearer his preservation the farther he could get. Those that fainted call'd continually on their Friends for help, but the Horses were grown too weak to carry them: Every one saw nothing but Death before his Eyes; wherefore, though call'd by their dearest and most intimate Friends that lay a dying, they never look'd back, their compassion towards others being turn'd into fear and care of themselves. The Forsaken implor'd their Saints, and besought Pizarro for aid, but finding their Complaints to be in vain, and raging through despair, they with'd all the rest the same success, and the like Friends, whenever they should be in the like Condition. Pizarro extremly griev'd and troubled, that he had brought the People into this Misery, sent a few Horsemen before to Quito, to carry the sad News of his deplorable Condition, that they might immediately send Provisions to him; which he receiving when he was within fifty Leagues from the said City Quito, distributed amongst those that were left alive, who being also almost starv'd, eat so greedily, that several of them were chok'd; the remainder were kept a considerable time in Garrison under the Command of Pizarro in Quito. Which City, built in a pleasant place, grew very populous in the Year 1544, there being several Gold-Mines found about the same in that time. But this lasted not long, for Quito siding with the Vice-Roy Blasico Nuñez Vela against Consalvo Pizarro, most of the Citizens were destroy'd by him, and their Horses burnt to Ashes. The like Destruction, and upon the same occasion, befell the three Villages in the Province Bracamoros, discover'd by Juan Parzelo and Captain Vergara, together with the Countrey Chichapoaia, where Alphonfo Alvarado built the Town Levanto, surrounded with deep Caverns, through which, to the great strengthening of the City, flow several Rivers. Round about Puerto Vuyo the Natives dwelt in Trees, whom the Spaniards had much ado to bring under their subjection; for their Countrey being barren and mountainous, was not only wanting in Provisions to feed an Army, but the Peru-
also threw great Stones out of their Huts built in Trees, and likewise Javelins and Pots full of boiling Water, with which they did much mischief to their Enemies that Storm'd them, who at last covering themselves with Boards, cut down the Trees, with which they falling were torn in pieces by the Spanish Dogs.

Sect. IV.

Lima.

Lima, call'd also Los Reys, hath on the East, Callao, and some part of Cusco; on the North, Los Quixos; and on the South, Charcas. The Country extendeth it self in length upon the Coasts of the South Sea two hundred and fifty, some say, full three hundred Leagues in length, viz. from Cape del Agua Northward, on the Borders of Quito as far as Arequipa towards the South, and runs Eastward to Brasile and Rio de la Palma.

In this Province are severall very pleasant Valleys, the first whereof is Motupe, to which a sandy Way leads from St. Miguel de Valverde, between barren Wilds, from whence several Streams falling are immediately drunk up by the Sand; wherefore all Travellers that go that Way carry Water and Wine with them in Calabashes for twenty Leagues together, which they Walk or Ride by Night, because of the excessive heat of the Sun.

In the Valley Motupe grow abundance of Trees, which receive nourishment from a River that springs up near the same. Here is also much Cotton.

Not far from hence are the Valleys Xayana, formerly very populous and full of Palaces: The River which flows through the middle is led in Trenches amongst the neighboring Fields.

The Valley Tuqueme is also very pleasant, and the decay'd Palaces, sufficiently testifie its former splendor.

The next being Cinto, is no way inferior to Tuqueme; and between both lie sandy Hills and barren Rocks, on which grow neither Trees nor Herbs, nor is any living Creature to be found upon them: the Way through which being a whole days Journey, cannot be travell'd without sure Guides.

The Valley Callique, water'd by a River of the same Denomination, and very thick set with Trees, was formerly very populous, but since the Spanish Wars it is become quite defolate; for not onely a considerable number of them were slain by the Spaniards, but also many destroy'd themselves, Wives and Children; of which Peter Martyr, Counsellor to the Emperor Charles the Fifth, sets down several terrible Examples, of which two were remarkable above the rest; the first was after this manner:

The Spanish Captain Olandus Lying with the Daughter of an Indian Cacique, questioned when she grew big with Child, Whether she was with Child by him? and that he might know the real truth by Torture, he caus'd her to be ty'd naked to a woorden Spit, and laid to roast against a Fire made of green Wood, so that she died in a most miserable manner; upon which her Father ran in a rage with thirty of his Companions to Olandus's Houfe, where he kill'd his whole Family, and locking all the Doors about the Houfe, set fire on the same, into which when it was at its greatest height, he and his Associates leap'd into the middle thereof.

The second Accident is also very terrible, viz. An Indian Maid being Got with Child by a Spanish Ass-driver, acquainted her Father and Mother with it, withal telling
Chap. IV.  

**AMERICA.**

451

telling them that the was ready to suffer Death for her Offence; and notwithstanding they freely pardoning, and periwading her to the contrary, the eat raw *Jaca*, which when boy'd is a wholesome Food, but if eaten raw, certain though languishing Death; which the perceiving, ran to the next River, where after having wash'd her self, the broke off from a large Tree a Bough of five Foot long, and making the end thereof very sharp, fell upon the same, and so kill'd her self. Several other Ravi'th'd Maids taking example hereby, hang'd themselves upon the Boughs of the same Tree.

But to proceed in oue Description, next to Collique lies the Valley Zana, of the like bigness, and famous for the City Micaflores.

The next is *Paeganes*, which exceeds all the former in fruitfulness, and populousness of Inhabitants, who before they were destroy'd by the *Ingas* were much fear'd by their Neighbors. This Valley also was adorn'd with several fair Temples, which are now turn'd into Cloysters. Cattel, Hogs, and Goats breed here in very great numbers. The chief Trade of this Place consists in Cotton and Linnen.

The Valley Chacama, in which the Dominical Monks inhabit a brave Cloyster, produces abundance of Sugar.

Four Leagues farther lies the spacious Valley Chimo, so call'd from an old Peru-vian Heroe, which affords a plesaunt Prospect, by reason of the many Banquetting-houses built there by the *Ingas*. No place in Peru is able to stand in competition with this for plenty of Provisions, the Ocean and Rivers producing store of Fish, the Countrie affording Cattel and all manner of Fruit. The Cotton which grows here is Shipp'd to the South Sea.

*Chanca* is a Valley chiefly considerable for the Town *Arnedo*, which is situate therein, of which more hereafter.

But the Valley Guanage, not far from Chanca, yields the best Peru-vian Liquor *Chica*, and hath a convenient Harbor for Ships.

The Plain Santa being overflow'd in the Winter, is all overgrown for want of Inhabitants, who were all destroy'd by the Spaniards. The Woods hereabouts swarm with a fort of venomous Bug, which exceedingly torments the Traveller.

Next follow in order the Valleys Guambaco, very fruitful, and Guarney, abounding with Horses, Hogs, and other Cattel. *Joris Spilbergen* Landing here Anno 1615, found the Haven secure against all Winds, and between the Shore and the Village Guarmey a Creek, and somewhat farther a fresh-Water Pool; on one side of which stood a decay'd Castle built of square Stone, whereon the Hollanders set the States Flag, and Garrison'd the same to secure those that fetch'd Water out of the forementioned Pool. In the aforesaid Village stood a Church with a spiry Steeple; behind which rose high Mountains, and at the Foot thereof a great Wood, into which the Inhabitants fled with all their Goods, so that Spilbergen found nothing but a little Meal, a few Hens, Hogs, and Oranges in their Hous'es, which whilst he was sending Aboard, a small Body of Horse appear'd, but immediately fled into the Woods. The Hollanders staying here seven days, were inform'd, that the Galley *Jesu Maria*, Commanded by the Admiral Rodrigo Mendoza, and the Santa Anna, by the Vice-Admiral Peter Alvires Piger, were both loit, not one Man being sav'd.

Not far from thence lies the Valley *Parmonga*, which though it be fruitful and pleasant, yet it is quite desolate; the Walls of a large Castle still appear, as testimonies of its being formerly inhabited; and within the said Walls also are still to be seen the Ruines of spacious Halls and fair Chambers, whose Walls are painted with wild Beasts and Birds: The Spaniards have digg'd all about, and undermin'd
the fame, in hopes to find, together with the several dead Bodies, a Treasure buried. Two Leagues Southward from this Valley Parmonga flows the River, Guaya-
man, by the Spaniards call'd Rio del Falcon, from a Hawk which was seen there. When any flour of Rain falls here, a great part of the Dale Barrana lies under Water.

Not far from hence lie the Valleys Gaura and Lima; which last exceeds all others in bigness, and was formerly exceeding populous; but since the Marques Pizarro built the City Los Reyes here, the Citizens have taken the Lands from the Peruvians. The Mines heretofore produce Gold and Silver. Amongst other things the Inha-
bitants highly esteem an Herb bearing yellow Flowers, which in a short time cures a putrified Wound, whereas if laid on found Flesh it eats the same to the Bone.

The Countrey of Collao hath a low Point, from which a long Cliff runs into the Sea, towards the small Island call'd Isla de Collao: On each side of the Point the Coast runs flowing in, the one side extending North-West from Collao, to the Cliffs Piscadores; the other South-East to the second Promontory; behind which is a large Bay, where the Valley Pachacama appears, famous for its exceeding fruitful-
ness, and a flately Temple built by the Ingas, where Ferdinando Pizarro found above nine hundred thousand Ducats, besides what the Soldiers and Commanders took, and what the Priests had hid, which none, though miserably tortur'd, would confess.

Opposite to Pachacama lies the Valley Chica, where it never Rains, nor any Brook or Spring moistens the dry Soil, which nevertheless produces Maiz and Fruit-
Trees. The Natives us'd to dig large and deep Pits, in which they Sow'd and
Planted, and at every Root laid the Head of a Fish call'd a Sardin, which they caught in Nets on the Sea-shore; wherein nevertheless nothing would have grown, but for the Morning Dews which fell. The Ingas also had curious Banqueting-houses here. In these Parts there grows a sort of Tree call'd Mula, of which Acosta relates a strange Wonder of Nature, very remarkable, viz. That it flourishes and bears Fruit on that Side which beholds the South, in that Season when it is Summer on the Mountains; the other which views the Sea, Blossoming and bearing Fruit when it is Summer on the Plains.

The Valley Guarco, spacious and full of Trees, produces especially the pleasant Fruit Guayears and Guaras, as also the best Wheat in Peru; wherefore it is yoked all over the Country. Here are also the Ruines of another lately Castle, built by the Ingas, the former lufte whereof is tell'd by its remaining Walls, which consist of exceeding great Stones, so neatly join'd together without Mortar, that it appears like one entire Stone; and by the decay'd Structures of several Halls, much of the curious Painting whereof is yet to be seen; from the Castle a large pair of Stairs led down to the Sea-shore. Two Leagues farther the River Lunayun runs through the fertile Valley of the same Denomination. The fatness of this Soil is chiefly ascrib'd to the Dung of a Fowl call'd Guana, which the Natives fetch in great abundance from the Ileis near the Main.

Next follows the Valley Chinea, one of the biggest in all Peru, and before the Spaniards Arrival very populous. In the time of the Ingas it also shew'd a magnificent Temple Dedicated to the Sun, built by Tepoja jugamigue; yet the Inhabitants still remain'd contant in the worshipping of their old Idol Cincapoma. Hither the Ingas sent their conquer'd Princes, who on a certain time were to appear in Cusco. The Dominicans at present possess here a neat Cloyster, from whence leads a plain Road to the Dale Lea, water'd by the River Piscu, which is dry in Summer; wherefore the Natives brought a Ditch from the Mountains, which since the Spaniards destroy'd the Inhabitants, is choak'd up with Sand.

Next the Valley Nasca comes in view, famous for the Castle Caxamalca, where the Ingas kept all manner of Ammunition for War, besides several Tombs, out of which the Spaniards took great Riches. This Valley is divided into several others, which for the most part produce Sugar-Canes; and through them all runs the Royal High-way, which is Wall'd in on both sides.

Beyond Nasca lie one behind another the Valleys Hatari, Oconna, Camana, and Quieca, all of them affording good Pasture for Cattle, and Fruit, ye are most of them defolate.

The Country Los Motilonos, thinly inhabited for want of Provisions, and divided by two Rivers, separates Moyobamba from the Country Churomal.

Southward beyond Caxamalca appear the Countries Guamachucos, and a little farther Conchucos and Piscobamba, all fruitful and pleasant, and adorn'd with several Structures built by the Ingas.

On the side of Piscobamba the Country Guara extends itself over barren Mountains, through which the Ingas cut a Royal High-way, and built a Strong Castle at the Entrance into the Country; the Inhabitants whereof being very laborious, work very diligently in the Gold-Mines.

The Territory Pinos, water'd by a River, and famous for one of the fairest of the Peruvian Structures, is surrounded by the Countries Guaycas, Tarama, Bomba, and Conchucos. The Mountains, though dangerous to Travellers by Lyons, great Bears, and other ravenous Beasts, afford abundance of Silver; and the fruitful Soil produces Wheat, Maiz, Grapes, Figs, Oranges, Quinces, Citrons, Cedars; and likewise feeds Goats, Horlies, and other Cattle.
The Countrey Victeo, being within the Jurisdiction of Guanaco, lies amongst the Mountains Andes, whether Ingo Mango fled, when the Spaniards made themselves Maffets of Peru.

The Towns and Places most observable and important in it belonging to the Spaniards, are 1. Miraflores, as the Spaniards call it, a well seated and wealthy Town in the Valley of Zum, as above mention'd, five Leagues distant from the Sea, where it hath likewise a good Haven or Port.

2. Truxillo, two or three Leagues distant from the Sea, the Haven whereof is laid to be large, but not safe. The Town itself is seated in the Valley Chineo, upon the Banks of a pleasant River, whose Water doth not only run through several Channels to moisten the Fields, but also to accommodate every House in the City: It hath broad Streets, a great Market-place, four Cloyster, two for the Dominicans, one for the Augustines, and the other for the Franciscans; one great Church, five hundred Houses, and a Palace, inhabited by the King's Collectors, and many Banqueting-houses about it. The good situation and fruitfulness of the Soil, mov'd the Marquefs Francesco Pizarro to build this City here Anno 1533, but the Haven belonging to the same lies open to all manner of Winds, so that the Ships Ride here in great danger.

3. La Parilla, otherwise call'd Santa, fourteen Leagues beyond Truxillo Southward, wash'd by the Southern Ocean, and one side by a fresh-water Stream, which being inclos'd between lofty Cliffs, makes a secure Harbor.

4. Arnedo, seated ten Leagues Northward from Lima, amongst the Vineyards of the Valley Chancas, otherwise having no great matter in it remarkable, but a fair Dominican Cloyster.

5. Lima, by the Spaniards commonly call'd La Cividad de los Reyes, or The City of Kings, so nam'd because Pizarro, who built it, laid the first Stone on Twelfth-day, Anno 1533, which they call The Feast of the Kings: It is seated in the Valley of Lima, (from whence the City is also so denominated) one of the fruitfullest Parts of all Peru, and so neatly built, that all the chief Streets of the City open upon a fair Market-place, or Piazza, of such a large Square, that upon the sides thereof are built, in a fally and convenient manner, the Cathedral, the Palace of the Arch-bishop, the Vice-Roy's Palace and Courts of Justice, with the Exchequer or Publick Treasury, the Town-houses or place where the City Magistrates meet and hold their Courts, the Publick Armory or Magazine, and a Free-School, wherein are taught by the Jews all Arts and Sciences, and also the Indian Language, and divers other fair Buildings of the Nobility and better sort of Citizens. No Country under the Heavens affords a more fruitful or pleasanter Place than this; the temperate Climate, neither troubling the Inhabitants with excessive Heats or great Colds, nor terrifying them with Thunder or Lightning, but having almost perpetual Sun-shine and fair Weather; only the three Winter Monaths, wherein there falls a sweet-smelling Dew, which cures the Head-ache; and there die but very few of pestilential Disempers. The Countrey about the City is pleasanter without exception. The Pigeons which are kept here in curious Houses built on purpose, fly a thousand in a Flight. The Fields abound also with Cattel. The Orchards and Gardens flourish with all sorts of Trees and Plants, whereof those that are brought hither from Spain grow better than in their natural Countrey. The Weft side of the City is wash'd by a pure & clear Stream, which flows the Market with great plenty of good Fish, it being distant but a Muquet shot, especially when the Water rises. This River is of great consequence, for it not only waters the whole Valley of Lima with its several Branches, but also runs under every House in the City, being built
Chap. IV.  

AMERICA.

built on Stone Arches; they are only one Story high, because there is no Wood to be had in the Valley of Lima but what in three years becomes all Worm-eaten; nevertheless the Houses are very beautiful both within and without, the Walls being very thick and strong, have curious Arbors of green Boughs on the top, in which the Owners shade themselves from the Sun. Most of the Houses built in the high Streets have pleasant Turrets, which face the Market-place, where all forts of Provisions are brought to Sale, as Oxen, Sheep, Venison, Sugar, Oranges, Citrmons, Grapes, and Wheat, which is ground in Water-Mills built near the River. This City is inhabited by many able Merchants, which often load Ships to Panama, that are valu’d at above two hundred thousand Ducats. To the Arch-bishop’s See, of this Place belongs the Bishopsricks of Chili, Charcas, Quito, Quito, Truxillo, Guanaco, Popayan, San Francisco, Panama, Nicaragua, and Rio de la Plata. The City is also adorn’d with two fair Churches, besides the Cathedral, and also other leffer Churches, four stately Cloysters, two Nunneries, and the Jesuits’s Palace, which is very magnificent. The Haven two Leagues distant from it, and call’d Callao de Lima, is large and secure for Ships. anno 1579. Sir Francis Drake took twelve Ships from hence, one whereof was laden with Linnen and Silk, besides a great Chest full of Silver: Which Inconvenience to prevent for the future, the Spaniards have built two strong Forts, and fortify’d them with Brats Guns. Thirty years after Sir Francis Drake’s Exploit, Joris Spilbergen coming to Anchor here, found the Place all inhabited, a Fort well for’d with Guns, and a strong Castle before the Mouth of the Harbor, from whence they shot Bullets of thirty six Pound weight at the Hollanders, and so shatter’d their Frigars, call’d The Hunter, that they could scarce keep above Water: Fourteen Spanish Merchant-men lying near the Shore, receiv’d little damage, Spilbergen not being able for Shelves to get to them, neither did he judge it convenient to Land, the Vice-Roy having at that time above four thousand Men in Arms, besides several Troops of Horse; wherefore after having fir’d several Guns on the Fort, and against the Church, he set Sail to Guarnsey.

6. Cannete, otherwise call’d Guanaco, from the Valley wherein it is situate: It was built by the Spaniards out of the Treasure which they found in the Castle afore spoken of in the same Valley.

7. Valverde, situate in a Valley of the same Name, where excellent Fruit may be had for a small Price; it is a well Traded and rich Town, about sixteen Leagues distant from the Sea.

8. Pachacata, situate in a Territory of the same Name, four Leagues Southward of Lima, memorable chiefly for Pizarro’s good fortune here, who is report’d to have found in one onely old Temple of the Natives, the quantity of nine hundred thousand Ducats of Gold and Silver, besides what his Soldiers are suppos’d to have seiz’d on, and convey’d away before he came.

9. Castro Verdena, three-score Leagues distant from Lima to the South-East: It lieth in the Valley of Chocloches, and is a rich Place, by reason of the good Mines of Silver which are about it, and abundance of the best sort of Tobacco.

10. Miguel de la Riba, in the Valley of Camana. The Inhabitants whereof drive a great Trade in Wine, Figs, and Raisins.

11. The City Aregua, which extends up towards the Mountains, is built in the Dale Quila, which runs eleven Leagues from the Sea, under a healthful Climate; but in the Year 1582, it was wholly ruin’d by an Earthquake; the reason whereof is ascrib’d to the wet sulphurous Mountains, which burns continually, and sometimes vomits out Flames and Ashes. The Marques Fizarro built this City forty six years before the fore-mention’d Earthquake, since which being re-built again,
soon attain'd to three hundred Houses, besides a Church and Cloyster; and though it be but a small Town, yet it is of a great resort, because the Gold and Silver is brought hither from the Mines Chancos, Porco, and Potosí, and from thence sent down the River Quílla, which washing the City Walls runs into the South Sea to Los Reyes, and from thence to Panama, Nombre de Dios, and New Spain. The Jurisdiction of this City Arequipa extends it self a vast way, viz. over the spacious Valleys between Hacari and Tampaca, and up in the Countrey beyond the Country Condefugo, full of Hamlets and Villages; the Inhabitants whereof heretofore worshipp'd the Sun. By the Way from Arequipa to Collao lie two great Lakes, out of one of which the River Aparima takes its original.

12. Caxamalca, rather a Fort than a Town, in a Territory of the same Denomination, built at the Foot of a Mountain wash'd with two Rivulets, over which lead several Bridges; near which also were formerly a flately Temple Consecrated to the Sun, wonderful Palaces and Baths for the Ingas, besides other magnificent Structures of Noble-men, which were the more famous for Attabaliba's Imprisonment and Death. The Soil round about may compare with any part of the World for fertility. The Inhabitants are a peaceable ingenious People, and make curious woollen Hangings.

13. St. Juan de la Frontera, built by the Spaniards North-Eastward and by East from Caxamalca in the County Chiachinpoyas, full of Gold-Mines and Cattel; so which belongs not only Chiachinpoyas, but also the Countreys Guiancas and Cafcainga, out of which above twenty thousand Peruvians pay Tribute to the Spanish King. These People espeically the Women, are very comely and beautiful; for which reason the Ingas fetch'd their Wives and Concubines from thence. Eastward from Frontera rise the high Mountains Andes, behind which flows the great River Mayobamba by several poor Villages inhabited by a littifh kind of People.

14. San Jago de las Valles, built in an ill place amongst the Shrubs and overflowing Rivers. In this Countrey grows a Tree which bears a juicy Fruit, not unlike an Almond in prickly Rinds, but resembling thole which cover a Chefnut, concerning which Physicians have deliver'd their Opinions, That there is not a wholesome Fruit in the whole World.

15. Leon de Guanuco, which receiv'd that Denomination from its Builder Vaca de Cafire, who call'd it Leon, because he was born in the Spanish City Leon, and Guanuco from the flately Palace of the Ingas which was built here: The Houses are built of Free-stone, and cover'd with Thatch. The Citizens of Los Reyes were much against the building of this Town, because several Lands belonging to them were taken away and given to Guanuco, where the temperate Air grants Long Life and Health to the Inhabitants. The High-way, in which stand several Store-houses, formerly full of Ammunition, runs through the middle of this Countrey, where in the time of the Ingas dwelt Astromomers, who by looking on the Stars pretended to tell future Events. Here the Women also us'd to be burnt alive with their Husbands.

S E C T. V.

Cusco.

Cusco is the far greater part of the Province of Peru, containing generally all the Sierra, or Hill-Countreys, and those parts of the Andes likewise which lie Southward of the little Province or Cantred of Guanuco, being Coasted Westward and to the North-West with Lima; Eastward, with Los Quixos, and some part
part of Guiana; and on the South, with Chacras, enjoying for the most part a temperate and good Air, neither over-heated with the searing Sun in the day, nor damp'd with any cold Mist or Dews in the Evening, as some parts of the Plains of Peru are, but well water'd with many fresh Rivers, which make the Valleys and lower Grounds of it good Pasturage, able to maintain great Herds of Cattle. The Woods are especially for'd with the Coca, whose Leaf is accounted restorative, and with much excellent Venison.

In this Province also there are some lefler Divisions of Countreys necessary to be describ'd, viz. the cold and barren Countrey Bambo, jutting against Guanaco, inhabited antiently by a valiant People, especialy near the Lake Chincasocha, which is ten Leagues in Circumference; in the middle of it are several Cliffs and little Isles: And out of this Lake also the famous River De la Plata hath its original, and runs through the Valley Xauxa, receiving by the way the Streams Paeos, Bilcas, Abanca, Aparima, Yucey, and others.

The next Countreys in order towards the South are Tarana, abounding with Wheat, and the eminent Valley Xauxa, surrounded with snowt Mountain. The Inhabitants by a general Name call'd Guanacos, were antiently divided into three forts, viz. the Maracabika, Lacapalanga, and Xauxa. Here were also several flately Housks built by the Ingas.

Upon this Valley borders the Village Acos near a Moorish place full of Canes, but before you approach the Village you come near a high Plain, where the Ruines of an antient Structure appear; and somewhat farther the Palace Pico: from whence the High-way directs to the Bridge Angayaca, which leads crofs the River Xauxa; near which the Ingas had severall magnificent Structures, and Baths of warm Springs. Not far from hence is the Village Pico, between which and Angayaca the Arm of the River Xauxa is cut with a Bridge, because in the Winter it glides so swift that they cannot Pery over it.

From Pico you go to the Wild, in whose Center flands the antient Caftle Pucara, (which in the Peruvian Tongue signifies Invincible Fort) where the Ingas receiv'd their Tribute from the neighboring People that live amongst the snowt Mountains.

The Banks of the great River Vinaque are crown'd with the Ruines of antient Structures, which (as the Natives relate) were built by foreign People; which Affertion of theirs seems to be confirm'd by the form and manner of Building, differing from the Ingas Structures, which us'd to be long and narrow. Moreover, several sweet Streams, abounding with Fith, especially Crabs, glide through the Plain Countrey out of the Mountains Aantes.

Not far from hence appears the Plain Chapas, and the Palaces Pilecs, of which now nothing remains but a heap of Rubbish, which lies in the Center of Peru. A fresh-water River, which gives the fore-mention'd Palaces their Denomination, glides out of Suras, and washes the High-way and flately Temple of the Sun.

The Countrey Suras, exceeding fertile, and stock'd with Gold and Silver Mines, is inhabited by a People which go Cloth'd in woollen Cloth, and for their Valor formerly much esteem'd by the Ingas.

Those that inhabit the Countrey Uramar are call'd Chacanas, whose Neighbors possess a long Track of Land abounding with Cattle and Fruit, but of late are most of them destroy'd by the Spaniards.

The River Abanca, which takes its original in the Mountainous County Parina-cocha, waftes severall Royal Buildings, and at lat discharges its Waters into the River Xauxa.

On each side of the great River Apuyima are erected two wonderful Stone Pillars,
over which lies a most artificial Bridge built by the Inga; from whence the Highway, being cut through hard Rocks, leads up into the Country; where the stately Buildings of Limatambo shew themselves; and beyond the Mountain Bilcaonga the Valley Xaguicagnana, inclosed between high Rocks, comes in view, where the Ingas us'd to recreate themselves in their Banqueting-houses; from whence the Highway, which is Wall'd in on both sides, runs directly through deep Moorish Grounds to Cuzco.

Eastward from Cuzco, behind the Andes, are many large Countries, which to discover the Spaniards had neither trouble, danger, nor charge: between both they found vast Wildernesses, inaccessible Mountains, and overgrown Countries yet at last they opened four ways thither: the first whereof runs through the Valley Paquil to Tono, a Village in the middle of the Mountains; from thence to the River Opotaji, along which it is very troublesome travelling, because of the thick Woods and steep Rocks: lastly to the hot and fruitful Valley Abifea, and so to vast Wildernesses, overgrown with Brambles and Bushes, which prevented any farther Discovery. The second Way runs thirty Leagues farther to the Southward, through the Countries Sanida, Camata and Catanaya, to Zama. Through this Way, Anno 1538, Pedro Anzurco travell'd; setting out from Zama, he found many desolate Mountains, barren Wilds, and close Woods, through which he entred into the Country Tucana, and from thence to the River Onapalchas, inhabited on both sides by the Cheriaboues and Marquises, who oppos'd him in his crossing over the River; but meeting with nothing but barren Commons, he travell'd up along the River, and view'd the Countries Moios, Cochabamba, and Chunguabo, from whence he return'd to Cuzco, having loft most of his People by Hunger and Hardship. But not long after others went over the Andes to the Countries which extend themselves East and West, some whereof travell'd through Camata, and others through Cochabamba.

The principal Towns and Places of Trade in it are, 1. Bombon, sittuate upon the Lake Chinchacocha, said to be ten Leagues in compass, begirt round about almost with Hills, and having neighborhood with many other lesser, but pleasant Villages.

2. Parcor, once a Palace Royal of the Ingas, sittate on the top of a little Hill, encompass'd with other Rocky and higher Mountains on all sides.

3. San Juan de Vittoria, which the Marquises Pizarro built Anno 1539. to secure the Way between Lima and Cuzco, from the Affaults of the Peruvian, before he absolutely conquer'd this Kingdom: the Walls are wath'd by a sweet Stream, to the great convenience of the Citizens.

4. Guamanga, a City lying in a pleasant Plain under a healthful Climate, built with Stone-houses cover'd with Tyles; the Owners whereof have great Store of Land, which they Sowe with Wheat, and alfo breed plenty of Cattel. To this City, which is adorn'd with three Churches, five Cloysters, and a large Almshouse, above thirty thousand Peruvian bring annual Tribute. The Mines produce Gold, Silver, Copper, Iron, Lead, Sulphur, and Load-stones; near which grows the perfonous Herb Mio, which kills the Cattel that chance to eat thereof. In the Woods alfo hereabouts feeds a Beaff, whose Pifs shins at a Miles distance. This City is by some deliver'd to be the fame with San Juan de la Vittoria above mention'd.

5. Bilca, another Palace of the Ingas, now a good Town of the Natives, and situate, as is suppos'd, in the very midft of the Country of Peru.

6. Guanacavela, a new Town, rais'd from the condition of a very poor Village, to a Place of very great Importance and Traffick, onely by the Mines of Quicksilver, which were first discover'd there in the Year 1566, by Amador Cabrera, through the assistance of a Peruvian nam'd Marincopa: This Cabrera selling his Interest for a hundred
Chap. IV. **AMERICA.**

hundred and fifty thousand Ducats, Sur'd the Buyer, upon pretence that he had fold it above one half under the value: whilest this was depending, Peter Ferdinando de Valdesco came from Mexico to Guananga, to make trial of the cleansing of Silver by Quicksilver, and finding it to succeed according to his expectation, he sent great quantities of it to Arica, and from thence by Land to Potosí. The King of Spain is said to receive from this Mine of Guanacavelica, all his Charges defray'd, above a thousand Pound per Annum for his usual fifth part: But the ancient Natives regarded not these Mines so much for the Quicksilver as for the Vermillion which is found mix'd with it, whereas with they delighted very much to paint their Bodies: There is great Art now us'd in the separating of the Quicksilver from the Vermillion.

This Town was long since inhabited by two thousand Spaniards at least, and twice as many Natives.

7. Cusco, which is the Metropolis of the Kingdom of Peru, built on a hard Ground, surrounded with Mountains, under a cold, yet wholesome Climate, and wash'd by two Rivers, which on the East side of Cusco parting, one runs direct Well, and the other Southward. One part of the City antiently bore the Denomination of Harac-Cusco, and the second, Oren-Cusco, where the chief Nobility and most antient Families dwelt. Concerning the original of this Place, the Peruvian say, That several Ages past there appear'd three Men, call'd Ayrache, Aranca, and Ajarmango, and with them three Women, nam'd Mamacola, Mamacona, and Mamarraga, all of them very richly Cloath'd; that Ayrache had a Precious Stone at the end of a Truncheon, which by holding up he rais'd the Mountains to the Skies, and when he let it fall, levell'd them with the lowest Valleys: Aranca and Ajarmango concluded to build a flately City, and sent for People from remote Countries to inhabit it; with which Design the Natives thereabouts seem'd to be well pleas'd: but before they went to work they judg'd it convenient to destroy Ayrache, whose great Power they envy'd: This being resolv'd upon, they invited him to a deep narrow-mouth'd Cave, that there they might worship the Sun his Father (for so Defended he took upon him to be), he was no sooner entred but the heat from the Mouth of the Cave with great Stones, hoping so to starve him to death; which Ayrache observing, ftoo amaz'd a while, till at last he threw off all the Stones, and flew with great and divers colour'd Wings up into the Air, crying aloud, Fear not, Aranca and Ajarmango, though you have design'd to take away my Life, but build a City in this place, and call it Cusco, for in it shall stand the Seat of the Ingas, under whose Jurisdiction extending far and near, many great Nations shall bow. The Temple which the Gods have there design'd shall not only exceed all other Structures in the World, in Art and Civiline, but be famous for Strange Offerings to the Sun. If the Citizens build Altar's for me, burn Myrrh, and make Offerings to me, they may certainly expect to vanquish all their Enemies, and increase their Power. According to my Example bore Holes through your Ears, as a sign of Obedience. All which Aranca, Ajarmango, and the fore-mention'd Women promis'd to perform. Whereupon Ayrache gave them a rich Diadem with a Tassell, which was to be the Head-Ornament of the succeeding Ingas; which they had no sooner receiv'd, but Ayrache and Aranca were turn'd into Stones, yet retaining their former shape; which Ajarmango observing, fell straight, together with the three Women, upon building the City Cusco. After the Deluge breaking out of the Hole Tambo, he chang'd his Name of Ajarmango for Mangócapa, that is, Mighty Lord, and made himself, as they say, the first Peruvian King. The City Cusco was divided into four Wards, the East call'd Andofayo, the South Calafayo the North, Chinchafayo, and the West Condofayo, every one one so call'd from the Countreys, to which the Gates of the four Wards are oppos'd.

If any one coming out of another Countrey, fetted himself in Cusco, as it hapned daily,
daily, he was permitted to dwell no where but in that Ward which fronted his native Country. The four high Streets, which through these Wards one way fall into the Market-place, being in the middle of the City, are the other way answerable to the four principal High-ways, viz. that which leads to Quito and Paflo, through Chinchafoo; to Arequipa, through Condesafo; to the Mountains Andes, through Arefo; and to Chili, through Choolafy. The two Rivers before mention'd, which part at the East end of the City, are pass'd over with divers Bridges. The narrow Streets are full of Stone Houfes, built in good Order. In several places are Vaulted Cellars under Ground, in some of which are buried great Treasures: they had been formerly the Habitations for Necromancers and Soothsayers; for this fort of People were once in great esteem amongst the Inhabitants, who coming from Chili, Paflo, Bocanore, Tepana, Bombon, Charcas, Collao, Chichapias, Chinchocos, and other Peruvian Countreys, receive great benefit from the freth Water, and from the Corn-Mills built on the Streets through the City.

The flately Palaces which the Peruuan Nobility have at several times built in Oren-Cuso, being one part of the City, are very wonderful, the Owners whereof were forc'd by the Ingas to appear at Court at Set-times, that so he might prevent all Insurrections: Alfo he caus'd the Children of the prime Lords to be brought up in Cufco, under pretence that they might learn the Cufcoan Tongue perfectly, in which the Ingas would always be spoken to; whereas their Design was to keep them as Hostages in their own Jurifdictions, that their Fathers might not rebel, by which means it hapned, that in most places of Peru, which amongst the several Tribes and Principalities had several Languages, the Cufcoan Tongue was underflood and spoken. But the Spaniards, who are the prezent Poffeffors thereof, have alter'd and repair'd most of the ordinary Houfes, which are now neatly built of Stone. Above all the old Structures, the Palace of the Ingas, and the Temple of the Sun, are the most magnificent; the Palace lies inclo'd within a square quadruple Wall, each corner whereof is adorn'd and strengthened with a Tower: The Palace it felf is built round, and with Arches, but that which chiefly amazes the Beholder, is to see how the Stones, which are fo big that forty Horses are not able to flir one of them out of its place, were brought thither by the Labor of the Builders from the neighboring Mountains; for the Peruuan never made use of any laboring Bealt, except their Sheep Paco, not knowing the use of Horses, Camels, Oxen, Elephants, or the like, before the Spaniards coming thither. The Halls within the Palace were Wainscoted with Golden Plates: yet the Inga's Apparel was not anfwerable to the refl of his Pomp; for in stead of a Crown they bound their Heads about with a red woollen Safl, with which they almoft cover'd their Eyes; at the end of the Safl hung certain Ribbands, which they gave the Governor as occasion offer'd, that by this Sign, as by a Comiflion, they might exercife their Offices; the fight of which String caus'd fuch Obedience, that if the Inga had commanded the Inhabitants of a Town or Countrey to murder themselves, none durft deny. The Inga was generally carried by a hundred of his Noble-men, of whom if any one had accidentally chanc'd to fumble, he was immediately put to death. No man durft presume to look him in the Face, or fpeak to him without a Prefent.

The Temple Curicanche, Dedicated to the Sun, was certainly the moft rich and fumptuous that ever the World boasted, it being Govern'd by the Chief Priefl Vollato. The Inga Guainaca spent an invaluable Treasure in the building of this Structure, for he cover'd the Roof and Walls with thick Plates of maffe Gold and Silver. At his return home from the Conquell of the Province of Quito, from whence the Inhabitants, according to an ancient Cuftom of the Ingas, were carried to one
one of the remotest Countries in Peru. But Guianacava enamor’d of a Quitoan Maid, slaid a considerable time in the City Quito, and kept a splendid Wedding at the Marriage of his Bride, who bare unto him the famous Attabaliba, whom he lov’d beyond all his other Children, and a little before his death made him King of Quito. But Huascar after Guianacava’s Decease would not suffer his Brother to live in the late conquer’d Kingdom of Quito, but gave him Battel in the Plain of Tomebamba, which lasted three days and three Nights, and after much Blood-shed, Attabaliba being defeated was taken Prisoner, and not long after making his Escape by the help of an ancient Woman (whilist Huascar’s Commanders and Soldiers rejoyn’d with Cups full of Cica for their gotten Victory) he made his Subjects in Quito believe, that he was transforming’d into a Serpent, crept through a little Hole out of the Prison; and that he had a Promise from Heaven to obtain Conquest over Huascar; which being believed, stirr’d up all his Subjects to take up Arms, and valiantly to go and meet the Enemy, whom they not onely defeated, but took Huascar Prisoner.

Huascar being destroy’d by Attabaliba, and Attabaliba by Pizarro, Mango Inga their youngest Brother took the Government upon him, made continual Sallies upon the Spanishs from inaccessible Mountains, and at his Decease left the remaining part of Peru to his Son Zaviers Topa; who seeing no good to be done by force of Arms, submitted himself freely to the King of Spain’s Jurisdiction in the Year 1557, since which the Spanishs have been sole Masters.

There are at this day four great Churches in Cusco: Alfo the Dominicans, Franciscans, Augustines, and the Monks De La Merced, have each of them rateley Cloysters here: but the Iesuits Structure exceeds all the other.

Above forty thousand Peruvians pay annual Tribute to this City. In the Valley about the City feed abundance of Cattel; also Wheat, and all manner of Herbs grow here in great plenty. The Gold and Silver-Mines have not that reft which they had formerly, moft of the Workmen being remov’d to Potosi.

Concerning the Service which they perform’d in the fore-mention’d Temple of the Sun, and their superflitious Opinions about their Idol Con, they are much of the fame ridiculous nature with what hath been already Diſcou’d of in other places. Five Leagues Southwardly from Cusco lies the Valley Yucay between high snowy Mountains, under a temperate Climate and pleasant Soil. Not far from hence the Ingas built a moft invincible Caſtle on a Rock, which was surrounded with many clifey Walls one above another; these Walls were also Carv’d with Images of Lyons, Tygers, and other wilde Beasts, which held Lances in their Paws; the top of the Rock was crown’d with a Royal Structure built of Stone, through which ran Golden Veins, joyn’d together with a certain Gum, by some call’d Jews-Lime. To the Province of Condofuyo belong the valiant People Chumbihacae and Ubinas. In the County Pomatambo they make Carpets of fine Wooll, curiously Painted.

8. The City Francisco de Vittoria, which lies in the rough Valley Vilcabamba, and is inclos’d by the Mountains Andes, belonging to the Jurisdiction of the Province Andefuyo.

9. The Village Juan del Oro, which is the chief Place of the Countrey Caravaya, and so call’d by the Spanishs from the fine Gold which is found there in great abundance.

Along the Sea-Coast of Peru belonging to the Jurisdiction of Los Rejos, lie the following Havens, Isles and Points.

South-East from the Promontory Aguya, rifes the Ile St. Roque out of the South Sea,
Sea, surrounded with Rocks, and abounds with Birds of prey; through the midst of it runs a River which divides the Island.

The Haven Malabrigo, ill defended against the Winds, cannot be entered by great Vessels, unless in calm Weather.

Next follow the Harbors Guanape and Santa, where the Ships us'd to furnish themselves with Water out of a fresh River; Ofuya and Guarmey, both inhabited by Peruvians.

Near the Mouth of the Road Guara stands a large Salt-pan, the Salt about which is found in great hard Pieces. The Island Collao secures the Haven before Lima.

Behind Cape Guaro lies the Lobos; and not far from hence the Harbor Sangallan, being so commodious that the Spaniards confer'd a long time whether they should build the City Los Reyes here.

The Promontory Nafca affords also good shelter for Ships; and the Haven Macari yields store of Refreshments. Moreover, the Streams Ocoma, Camana, and Quilca discharge their Waters into the Sea.

The Haven Arequipa appears at its Mouth like a little Pool, surrounded with Mountains.

Between Quilca and the River Tamboyalla lies the Isle Nadi; and a little more Southward the Haven Paracca and Pica; and up in the Country the Village Yca, where the most and best Peruvian Wine is to be had.

**Sect. VI.**

**Los Charcas.**

Los Charcas is the farthest Country Southward of the Kingdom of Peru, reaching up as far as Chile, with which on the South it is border'd, having on the North, Lima and Collao; on the West, Mare del Zur; and on the East, some Countries not yet well discover'd, which lie betwixt it and the Province of Paraguay, or De la Plata. The Country is said to be in length about a hundred and fifty Leagues, measuring it directly, or in a right Line from North to South; but measuring it about along the Sea-Coast, much about two hundred: It is not very rich either in Corn or Cattel, although in some parts it wanteth not good Pasturage; but of unpararelld Wealth, in respect of the Mines of Gold and Silver which are here digg'd, the principal whereof are those of Potosi and Parco.

The Mountains hereabouts are inhabited by the Cavinas, who dwell in Stone Houses. Their Neighbors the Cachos are a subtile, good natur'd, and painful People, breed many Sheep, Sowe Corn, and catch plenty of Fish out of the Rivers. Next comes in view the cold Country Conas. On the right side towards the Southern Ocean, the great Wildernefs Parinacocha extends it self a vast way; the Mountains round about are continually cover'd with Snow, and the Dales have many deep Moors.

Chief Towns and Places of note in this part of Peru are, 1. Plata, otherwise call'd Chinuifaca, from the Country whose Metropolis it is, situate under a temperate Climate, in a fruitful Soil for the production of all manner of Plants, and especially Wheat, Barley, and Grapes. In this City the High Court of Judicature of Los Charcas is kept, being a principal part of Peru, and inhabited by the richest Spaniards in the whole Kingdom, having gotten an incredible deal of Treasure out of the neighboring Silver-Mines, which from the time of the Ingas, or Kings of Peru, to its Discovery by the Spaniards, held out and continu'd so rich, that 'tis thought
thought Pizarro, if Reason could have rul'd him, might hence onely have rais'd him-self a Rent of two hundred thousand Ducats per Annum; but his desire and hopes, first to find more at Potosi, and afterwards his ambition and greediness to have and command all, carried him to violent Couries, which prov'd his Ruine, as hath been said. The Town is conveniently feated in a fruitful Soil, honor'd with the Residence of the Governor of the Province, and with a Bishops See, said to be the richest of Peru, viz. of fourscore thousand Ducats per Annum. The Cathedral and divers Cloysters give also a great lufyre to the City. The ancient Inhabitants of this Country, especially about those parts where now this City stands, were the Charcas and Charanges, both valiant People, who by Command of the Ingas fetch'd invaluable Treasures out of the neighboring Mines of Poro, where a thousand Men were continually kept at work. In La Plata were reckon'd long since, besides Spaniards, above sixty thousand Peruvians which pay annual Tribute.

2. Oropeza, a place of good Metal, as a man may perceive by the Name; it lieth in the rich and pleasant Valley Cochobamba, twenty Leagues distant from La Plata.

3. Potosi, eighteen Leagues Westward from La Plata, by the Spaniards call'd The Imperial City, built at the Foot of a Mountain bearing the fame Denomination, on a barren Soil under a cold Climate, though but twenty one Degrees to the Southward of the Equinoctial Line: the Cold proceeds from the high Lands, which lie bare to the bleak and sharp Winds call'd Tomahori, which blow every year very fiercely from May till September. But though the barren Country produces no Fruit, yet no place in Peru hath greater plenty of all Provisions and Dainties than this, the Markets being always full of Fruit, Salt-Meat, Milk, Pappas, Wheat, Sugar, Sweet-meats, and all things that are requisite for the subsistence of Man-kind, which are brought thither from all parts for the Silver, which is there in such plenty. As to what concerns the famous Mountain Potosi in the Country of Charcas, it is of an Ash colour, and rifies above the adjacent Mountains in the form of a Sugar-Loaf; on the top of it stands a Chappell, to which leads a craggy Path, which with a little care may be rid up with a Horse; the heighth thereof is a thousand six hundred and twenty four Rods, or a quarter of a League: at the Foot thereof appears the Mine call'd Guaina Potosi, that is, The young Potosi, near which the City Potosi stands, being two Leagues in circumference, and is adorn'd with a Church and Cloysters for the Dominicans, and exceedingly resorted to by Traders.

In the time when the Ingas Govern'd Peru, the Silver-Mines at Poro were very famous; but it was not till after the arrival of the Spaniards that Silver was found in Guaina Potosi, and by degrees the Silver Veins which lay hid in the great Potosi; the manner of which Discovery was as followeth:

A Peruvian call'd Guadpa, who work'd in the Mines at Poro, going a Hunting, it chanc'd that the Game ran up the steep Mountain of Potosi, which prevented his pursiuing of it any farther; but the Mountain being overgrown with Trees, he got hold from one Bough to another to help himself up, and at last taking hold of the Bramble call'd Quinua, he pull'd the fame out of the Ground, and finding it heavy, look'd upon it, and elpy'd a great lump of Silver hanging at the Root of it; whereupon viewing the Hole, he discover'd a rich Silver Vein, of which taking some pieces home, and melting them, he found that it was the best Silver that ever he had known; wherefore he privately got a greater quantity, and by degrees grew extraordinary rich; but though he carried his Design never to clole, yet he was at last suspected, and especially by his Neighbor Guaina, born in the Valley Xauxa, who was the more jealous of him, because he sold greater Bars of Silver than any were cast at Poro; whereupon he resolv'd to speak to him, and getting
getting out the Secret, it came to this Agreement between them, That they should both be Partners and share the Booty; Gualpa was to keep the Vein, since call'd The Rich Vein, and Guna was to have another, at present nam'd Diego Centeno: but they agreed not long; for Guna finding much labor upon his Vein, by reason of the hardships, and that he could get no share in what Gualpa got, acquainted his Spanish Master Vilarel with it, who rest not till he had found out the truth thereof; for which Vilarel obtain'd (according to the Custom of Peru) several Rods to work for himself, onely paying the King one fifth part of what he got, and so remain'd Owner of the Mine Centeno.

This Discovery of the rich Mine Potosí is said to have happen'd on the twenty fourth of April, Anno 1545. Soon after which they founded the Silver Vein Del Eftanno, which though it was very rich, was difficult to be digg'd, because of its hardships. The first Vein which Gualpa search'd after stood upright from the bottom of the Mine, and contain'd above three hundred Foot in length, and thirteen in breadth, and continuing good for two hundred Foot in depth, after which the Silver begins to lessen.

The Peruvian's relate, That the Inger first began to dig in Potosí, but gave it over because the Workmen heard a terrible Voice, saying, Leave off doing what you are about; the Treasures which lie hid here, are refer'd for a People out of foreign Countries.

These Mines produce yearly for the King's fifth part, forty thousand Pieces of Silver, each valu'd at thirteen Shillings, each Shilling being four Shillings, besides what he is defrauded of, which is perhaps half as much more.

The Mines of Potosí exceed all other, because the Diggers never meet with any Water, notwithstanding they work above two hundred Fathom under Ground, whereas the other Silver Mines suffer great damage by the Water; which was also the reason why the Spaniards left off digging of Silver in Peru, because they were not onely forc'd to cut through hard Rocks, but ran greater danger, or at least below'd extraordinary labor to get out the Water which broke in upon them.

The four Silver Veins of Potosí, viz. The Rich, Centeno, Del Eftanno, and Mendieta, lie on the East side of the Mountain, and extend North and South. The great Veins produce leffer, not unlike the Body of a Tree, from which shoot forth several degrees of Boughs. Each Vein is divided into several parts, posses'd by several Owners; the least part is open'd four Rods, and the biggest eighty; for none are permitted by the Law to open a bigger Hole. In the time of the Jesuit Joseph de Acosta, an Eye-witness, who Anno 1587. went from Peru to Spain, the Rich Vein was reckon'd to contain eighty seven Mines, of which some were digg'd two hundred Fathom deep. The Spaniards judge that at the Root of the Rich Vein is an incredible Treasure, though Experience hath hitherto taught us, that the Silver leasens in price and quantity the deeper they dig in the Ground.

For the more ease working in the Mines, the Spaniards have digg'd Trenches (which they call Socabonos) at the Foot of the Mountain towards the West, crosst the Mountain to the Mine, each of them being eight Foot broad and a Fathom deep, and lock'd up with Gates, through which the Silver is carried out, whereof the Owner of the Socabon receives a fifth part. The Socabon which leads to the Rich Vein, was begun Anno 1556. and finish'd in twenty nine years, extends itself two hundred and fifty Rods in length. The Miners work by Candle-light both by Day and Night by turns; those that work in the Day, sleep in the Night, and those that work in the Night, sleep in the Day. The Oar, which is as hard as a Stone, is cut out with Pick-axes, beaten in pieces with an Iron Crow, and carried upon their Backs on Ladders made of Leather: Each Ladder hath three Fallings about
about the thickness of a Cable, stretch'd out by Sticks, so that one goes up on one side, while another comes down on the other. Each Ladder being ten Fathom long, is pitch'd upon its several Floor on which the Laborers rest before they go up higher, for they make divers Floors according to the depth of the Mine. The Laborers carry the Oar in Bags fastened before on their Breasts, and falling back over their Shoulders three and three together, the foremost whereof ties a lighted Candle to his Thumb, and thus they help themselves with both Hands. It is a wonderful thing to consider, how the Peruvians are able to scramble up and down continually a hundred and fifty Fathom: But besides many other Inconveniences, the Mines often fall in, or at least great pieces, which bury all the Diggers. The Mines also, being excessive cold, occasion to those that are not us'd to them, a Vertigo in the Head, and Vomiting. The Silver runs for the most part between two Rocks, as it were, in a long Channel, of which one side is as hard as Flint, and the other much loftier. This Silver is of different value; the best, call'd Cacilla or Tacana, resembles Amber in colour; the worse sort is blackish, and sometimes of an Ash-colour. The pieces of Oar are carry'd on the Backs of the Sheep Pacos to the Mill, where being ground to Powder, they are put into Furnaces to melt; of which there were once above fix thousand on the top of Potosi; but since the quicksilver was found to cleanse the fame, not a third part remains pure.

In former times the Mines at Potosi, two Leagues from the little Lake Anlagas, produc'd thofe vast Treasures gather'd by the Ingas, which afterwards for the most part fell into the Spaniards Hands.

As concerning the Sea-Coaft of Los Charcas, it lies as followeth: Southerly from the River Tambopalla puts forth a three-pointed Rock into the Ocean, and makes the Haven De Ylo, into which falls a freath River. Next follow the round Hill Morro de los Diablos, and the Inlet before the Town Africa, secvr'd from all except a Weftcrly Wind, where the Silver that comes from Potosi is Ship'd for Lima. Since the English Admiral Sir Francis Drake took three Barks out of this Inlet, it is forti'd with a Caffle, which is fwar'd with Brafs Guns.

Nine Leagues Southward the Pijagua falls into the Ocean; and next you come to the little Village Elcacib, fittuate on a high and barren Tract of Land; as also the Haven Terrapaca, which by an Inland is made very secure.

Not far from hence appears the Foot of Piqua, where the Coast begins to rise very high; the Head of Tacana, the Stream Lottoyo, otherwise call'd De Loo, whose Banks are inhabited by poor People; the River Montelo, the Promontory Morro Moreno, before which utmost Point opens a Bay, secvr'd from all Winds by an Island. The Inhabitants here feed on raw Fift.

Next the River Claro comes in view, which is taken for a Boundary between Peru and Chilli.

Eastward up into the Country you come to Santa Cruz, built at the Foot of a Mountain in a Plain near a Brook, which rushing forth from a Rock glides through the City to a Lake full of delicious Fish. The Houses of Stone, are cover'd with Palm-Tree Leaves; and besides the Church there is also a Cloyter, inhabited by the Monks De la Merced. In former times the Peruvian Houses were built of Clay, and were often destroy'd by their Neighbors the Chinchuanacs and Titanes, who made Feasts with as many as they took of them. The People about this Place are meek and poor spirited, and speak besides four Languages, the Diagnetic Tongue, common amongst all of them. Before the Arrival of the Spaniards they went Cloth'd in Oltritches Feathers, but since taught to weave Cotton, they now make their Apparel of the same, and upon the account of Barter, drive a great Trade in it: They
They Dye their Cotton with the boyl’d Roots and Leaves of a little Tree.

Eastward beyond Santa Cruz lies the Countrey Paicuan, eminent for the great Calabashes which grow there, exceeding good to keep both wet and dry Meats in.

The Countrey receives a viuolitude of excessive Cold and intolerable Heat; the hard Winters taking beginning in May; and continuing till the beginning of August. In the middle of our Summer a South-wind blows seven Weeks together here, to the great prejudice of all Plants, which are during that time often wash’d away by continual Rains. About Christmas they Sowe, and gather in their Harvest in March. During the rainy Season the Ways cannot be travell’d, being all overflow’d by the Rivers; neither doth the Palm-Wood, which is four days Journey in length, permit any access to the said City Santa Cruz, because the conflux of Waters makes it a Moor all over; besides which, the Tygers Bears, and Serpents, make the Ways dangerous, especially at that time.

Through this Countrey the Spanish Captain Nafo de Chacas travell’d, when he discover’d the Taguanacs, a numerous People, which dwell along the great River De la Plata.

The Countrey about Santa Cruz produces all manner of Fruit, but few Trees, because of the want of Rain; but Corn, Maiz, Wine, Granadillas, Luiunas, and Tobacco, as also the Plant Hachalindi, in the Latin Tongue call’d Mirabile Peruanum, grow here in great abundance; which last shoots up to the bigness of a pretty large Body, full of Juice, and of a yellowish colour, out of which shoot knotty Boughs, and about each Knot two Leaves resembling the Herb Nightshade; the Flowers which hang at the ends of the Boughs are long, and pleasant to the Eye, by reason of their mixture of Purple, White, and Yellow, and also of a sweet smell. It is a strange Secret in Nature, that this Flower opens at Midnight, if any Light come near the same: The Rootalio is accounted an effectual Medicine against the Dropsi.

SECT. VII.

Collao.

Collao lieth Southward of those Countries, which go under the general Name of the Province of Cusco, having on the West Lima; on the South, Chacar; but Eastward, and to the North-East, it is shut up by a Ridge of Mountains, running in one Body or continu’d Tract from the Confines of Collao, as far as the City of Cusco, where they divide. The Countrey is generally plain, commodiously water’d in all Parts with fresh Rivers, and consequently affording rich Pasturage and good Herds of Cattel.

The chief Towns and Places of note are, 1. Chuquisia, a great Town, and held to be naturally almost impregnable, as being environ’d round about either with deep unfordable Waters, or with Mountains unpassable, and having one only Caufey leading to it, reported to be for two or three Leagues together no broader than to permit one single Person to march conveniently upon it.

2. The City Pucara, which was formerly well inhabited, but at present nothing remains of it, except the ruin’d Walls of great Houlfs, and large Images of Stone.

3. Ayaviri, by the Spaniards call’d Las Sepulturas, being a Place especially enabled by the flately Monuments of the Peruvian Nobility which were found there.

4. Hatuncolla, the Metropolis or chief Town of this Province, seated upon the Banks of the River Caravaya, whose Streams are very much fam’d for Gold.

The
The River Carayaga, which glides from the Andes Eastward to the City Juan del Oro, produces much fine Gold, but not without the loss of many People, which are kill'd by the unwholsom Air and Damps that arise here.

The Lake Titicaca, which waftes the Countrey Collao on the North, the Province of Omequay on the East, Chasquito on the West, and Chiquiabo on the South, is one of the greatest Lakes of America, being eighty Leagues in circumference, and in several places as many Fathom deep; wherefore it is exceeding rough in windy Weather. Into this Lake ten great Rivers discharge their Waters, which run away again through a narrow, but very deep Channel, in which the Stream runs so strong, that no Boats are able to abide in it.

5. Chiquiato, a Colony of Spaniards upon the Banks of Titicaca, having many small Islands in it of a good and fruitful Soil, abounding in Fitch and variety of Sea-Fowl; it is supposed to be fourscore Leagues distant likewise from the South Sea, having only one Esfuaor or Mouth, which is something strait, but of such a deep Water and violent Stream, that (as Acoita testifieth of it) it is not possible to build a Bridge of Stone or Timber over it; but the Natives in stead thereof have laid a Bridge of Straw upon it, which serves as well, viz. so many great Bundles of Straw, Sedge, or such like matter, well and surely made up and fastened together, as will reach from one side or Bank of the Esfuna to another; at which likewise having made them sure, they cast some good quantity of more Straw and Sedge upon them, and have a Bridge very convenient, upon which they both securely pass themselves, and also drive Cattel, and do other necessary Business. The Water is neither bitter nor brackish, yet is not drinkable because of its muddiness. Several Islands that lie in the Lake serv'd formerly for Store-houses of the chiefest Goods, which the People thereabouts living near the High-way would not trust in their Villages.

Here grows a certain Broom-Plant call'd Totara, good for many uses, and is also wholsom Food both for Man and Beast; moreover, they cover their Houses with the same, burn it on their Hearths, and make Boats. The Hur, a salvage People, made Floats of Totara, which they tied together, and built Villages on the same, which drove to and again, according as the Wind blew.

The Lake also breeds abundance of Fitch, and especially two sorts, viz. Suches; which are very pleasing to the Palate, but unwholSom; and the Bogas, which though les, and full of Bones, are a much better Food. There likewise breed plenty of Fowls about the same, especially wild Geoee and Ducks.

When the Peruvians intend to Entertain any Person, they go to catching of Fowls (by them call'd Chaco) after this manner: They make a Circle with the Floats nam'd Balsas, and Rowing close to one another, take up the inclos'd Fowl with their Hands.

Moreover, the fore-mention'd Channel, through which the Lake Titicaca discharges its Water, ends in a little Lake call'd Aulagas, likewise full of defolate Illes, but hath no visible place into which to empty its Water, therefore it must needs, according to the course of Nature, fall under Ground, where it commixes with a Stream whose original is unknown, though it be seen to fall into the South Sea.

The Town is a Place of extraordinary Wealth and Trading, and so considerable, that the Governor thereof is always nam'd by the King of Spain himself, and his Place estimated at fifty thousand Ducats per Annum.

6. Tiaguanaco, at the Esfuna, or Mouth of the Lake, memorable only for the Ruines of certain great and stupendious Buildings which antiently have stood there, some of the Stones whereof are taie to have been of thirty Foot length apiece,
A piece, fifteen Foot broad, and fix or seven Foot thick. There were likewise found the Statues of certain Men excellently Carv’d and Wrought, of a Gigantick stature or bignefs, and likewise veiled in foreign and strange Habits, not at all us’d, nor ever known to have been us’d by the Peruvians themselves, or by any other of the Natives of America.

7. *Nuestra Senora de la Paz,* or Our Lady of Peace, otherwise call’d *Pueblo Nuevo:* It is but a small Town, yet pleasantly leant upon the Banks of a River in a fair and fruitful Plain, full of Springs, Fruit-Trees, Savannas, and Fields of Maiz, having Mountains on either side: It lieth almost in the middle of the Province Chuquinabo, fourteen Leagues distant from *Cusco,* and as many from Potosi. The Province Chuquinabo it self (which in the Peruvian Tongue signifies Inheritance of Gold) hath many rich Gold-Mines, good Salt-pits, and a temperate Climate, except from the beginning of December till March, in which time the continual Rains cause Feavers and Agues. The Inhabitants being very poor People, us’d to go naked in the Summer Season.

8. *Cusavuna,* two and twenty Leagues beyond *Lopax:* It is only inhabited by Peruvians; amongst whom an Image of the Virgin Mary, long since erected there, hath been ever in great veneration, especially by reason of a Tradition of a great Miracle there perform’d: for the Spaniards affirm, That *Johannes Anachoret* going a Journey of several Weeks from home, plac’d a lighted Candle before the Image, which during the time of his absence did not at all diminish.

An Accident which fell out in this Countrey is very remarkable, viz. The Ground of an old Village call’d *Angaanga,* then inhabited by eminent Necromancers, began on a sudden to swell, and the Earth to run like a broken Wave two Leagues, overwhelming the Houfes in Sand, and filling up a neighboring Lake.

Eight years before this terrible Earthquake here, there hapned in the County of Hereford in England almost the same kind of prodigious Motion: for not far from the Town Ledborough, arose *Marcely Hill* to an exceeding heighth, and moving along bury’d all what’re it met with, after which manner it continu’d for the space of three days, to the great terror of all that beheld it.

Concerning the Roads or High-ways, it may well be said, That none of the seven Wonders of the World can compare with any one of them; neither was the Way that *Appius Claudius* made from Rome to Brandenburg, upon the repairing of which the Emperors *Julius* and *Augustus* spent great sums of Money, fit to stand in competition with the Roads made by the Ingas in *Peru:* for who cannot but admire at the consideration of so many Valleys fill’d with Mountains, the heaviest Rocks cut asunder, Moors dam’d up, great Stone Bridges laid over swift gliding Streams, and through vast Wildernesses a Way made of twenty Foot broad, inclos’d in high Walls, extending from *Quito* to *Chiloé,* a thousand Leagues, and at the end of every ten Leagues brave Houfes or Magazines, fix’d with Bowes, Arrows, Halberds, Axes, Clubs, Clothes, and Provision for twenty or thirty thousand Men. Some relate, that *Guainaca,* when he return’d Victor from the conquer’d Countrey *Quito,* suffer’d great Inconveniences on the pathlefs Mountains, and thereupon commanded his Subjects to make the fore-mentioned Way. But it is more probable, that this Master-piece was not the work of one *Ingas,* especially since besides the Way from *Chiloé* to *Quito,* there leads another through the Mountains over the Plains from *Cusco* to *Quito,* forty Foot broad, and five hundred Leagues long, inclos’d within two Walls.
Chap. IV.

AMERICA

The Peruvians relate from the testimony of the Quipos, much more concerning these High-Ways, and other Buildings on them, made by Guaminaca. These Quipos are Rows of divers colour'd Strings, full of all manner of Knots, which serve in stead of Characters to keep their Chronicles; in which were employ'd the Quipos Canyos, who being in the nature of our Secretaries, Registred all Transactions, performing the same with the severall Strings and Buttons, with which they gave Obligations, Discharges, and the like: but besides the Quipos they also us'd Rings full of little Stones for the same purpose; and knew with Muiz-Seed how to cast up an Account as well as the best Arithmetician with Figures.

Their Account of Time hung on the twelve Pillars Suyapaya, erected on a Mountain beyond Cuzco by the Inga Pachacuma, that is, The Regulator of the Year, to shew the Course of the Sun, and according to that their appointed Feast-days, times of Sowing and Harvest: Their Year begins in December.

The Spanish Government in the Kingdom of Peru is settled at present in great tranquility and splendor. The Vice-Roy, who keeps a Splendid Court in Lima, otherwife call'd Los Reynos, Commands over Chili and Terra Firma, and never comes abroad without a Guard of forty Halberdeers: when he travels by Land he is accompanied by the Arch-bishop, and guarded by his forty Halberdeers, a hundred Pike-men, and fifty Musketeers. His Reign is generally not above six or eight years, during which time he receives forty thousand Ducats per Annum out of the King's Exchequer.

The City Los Reynos hath been of late years very much enlarg'd and brought to a most flourishing Condition, being exceeding populous, and extending four Miles in length, and half as much in breadth: In the biggest Market-place is the City Hall and the Exchange, where all things are brought to be sold. Of the other three Markets, two have their Denominations from St. Anne and St. Jacob; the fourth is call'd El Santo de los Caballos, because nothing but Mules, Asses, and Horses are sold there. The chief Church is Consecrated to St. John the Evangelist; the other Three to Marcellus, Sebastian, and Anna. The Franciscans inhabit three Clouysters; the Dominicans, Augustines, and Monks De la Merced, each of them two, besides two costly Structures for the Jefuits. Other Orders have also five Clouysters here, viz. the Creation, Conception, the Holy Trinity, St. Joseph, and St. Clara; the three first have each of them a Church built hard by the several Clouysters, Dedicated to the Santas Virgenes del Montserrat, Del Prado, and De Loreto. Each Clouyster contains above two hundred and fifty either Monks or Nuns. Here are also four large Hospitals, the chiefest whereof call'd Andrias, hath seldom less than four hundred Sick, which are kept and cur'd on Charity. The second is for Peruvians only, call'd The Hospital of St. Anna. The third, built in honor of the Apostle St. Peter, is for poor old Clergy-men. The fourth, nam'd The House of Love, is for sick Women. Besides these there stands another Structure near the Walls of the City, Consecrated to Lazarus, where those that have the Leperose are cur'd. The House call'd The Holy-Ghost, receives all Sick and wounded Sea-men. The King maintains twenty four Students at his own Charge in the Royal Colledge, and the Arch-bishop as many in the Colledge call'd St. Toronius; but in the Colledge of St. Martin reside above six hundred, which are brought up in all manner of Arts and Sciences. Two hundred Students are also taught in the high School, where they chuse a new Governor every year. Here also is kept the King's Treasure, and the Court of Inquisition. The River which washes the City Walls runs so exceeding swift, that not long since it carried away a new Stone Bridge with nine great Arches.

The Dominican Monks were the first that Landed on Peru, the first which came thither.
thither with Francisco Pizarro being Vincent de Valle Verde, who was follow'd by Sancho Martino, Martino de Eguinvele, Dominico de Sancho Thoma, Pedro Illoa, Alphonso de Montenegro, Reynaldo Pedraza, and many others, who were staid up by the report of the Peruvian Riches; amongst whom were four Franciscans, viz. Pedro Portagnes, Jofuro de los Angelos, De la Cruz, and de Sant Anna, who were soon after follow'd by twelve Monks of the Augustinine Order. Anno 1552. Landed also at Los Reos, Colonel Andreas Salazar, accompanied with Antonio Lozano, Juan de Santé Pedro, Hieronymo Melendez, Didaco Palaming, Pedro de Espada, Andres Ortega, Juan Canto, Juan Chamorro, Francisco de Trejas, Juan Ramirez, and Balthazar Melgarejo. Salazar soon after his Arrival lent the Priests Juan Ramirez, and Balthazar Melgarejo to Guamuchulu, where he Baptiz'd and Instructed the Inhabitants in great numbers. Afterwards travelling to Moyabamba, he got a great esteem amongst those Idolaters, and (as it goes for currend amongst them) wrought many Miracles, amongst which this is reported for one: He being inform'd by an old Peruvian, that his Daughter nam'd Curi had hid several Idols; enquiring after it, he tax'd her with what her Father had told him; which the denying, and being rebuk'd by Ramirez, is said to have become immediately dumb, to have foam'd at the Mouth, at last falling down dead like a second Sophia in the presence of many, which caus'd many to forsake their Idolatry. But the Necromancers endeavour'd by all means possible to raise a diftrefsion on Ramirez, and with the affittance of their Master the Devil, so wrought their Inchantments, that the Tygers came in great Herds out of the Wildneffes to Moyabamba, and devour'd not only Men, Women and Children in the Highways, but alfo tore them out of their Houfes; yet did not the leaft hurt to any Spaniard; whereupon Ramirez valiantly went with a Company of his Profelytes to a Herd of Tygers, which when he approached held the Cross to them, which it seems so affrighted the Devil-Tygers, that they clim'd up the Trees. They farther relate (if you will believe them) to make the Miracle the greater, That Ramirez call'd to the Multitude, saying, Go and revenge the Deaths of your devour'd Parents, Children and Relations; whereupon he throwing a Stone, and all the rest following his Example, the Tygers leap'd out of the Trees, flood still, and suffer'd themselves to be kill'd like Lambs. Six years after the for-mention'd twelve Augustinine Monks follow'd eleven others, who set sail out of the Spanish Haven St. Lucar, and arriving at Peru went to the Village Tauc, where they broke the Image of the Goddess Hurarella, being as it were the Peruvian Venus, or Patronofes of amorous Delights, reported to have given Responses from the Wood in which she was worhipp'd. They also destroy'd the Idol Chanca in the Country Conchos, which being worhipp'd by the Indians in the shape of a Man, had yearly a fair Maid, aged fourteen years, given to him in Marriage, a solemn Wedding being kept, and several Sheep kill'd.

The Augustinine Monks are believ'd to have wrought also another Miracle in the Province Conchos, upon this occasion: A Conjuror call'd Chaumango, boast'd himself to be God, deny'd our Saviour, in testimony whereof he gave out that he would kick a Mountain to pieces, with his Foot; which Report spreading all over the Country, all the adjacent People flock'd to see this strange Wonder on an appointed Day, on which Chaumango being, it seems, as good as his word, and kicking the Mountain, caus'd it to rent from the top to the bottom, and the pieces to fly all about the People, who were exceedingly amaz'd; but the Sorcerer upon the Augustine Monk's rebuking him was (as they affirm) immediately eaten up with Worms. Many other Stories of Miracles go current amongst them, as of Marco Garcia and Didaco Ortiz driving the Devil from a white Stone which hung over a Fountain in
Chap. V.  

AMERICA.

in Chiquipalpa, and several others, but it would be very impertinent to dwell too long upon Discourses of this nature, especially since we are not oblig'd to make them a part of our Creed.  

To conclude our Description of this famous Kingdom of Peru, the People thereof at the Spaniards first Arrival viewing their Shipping, their Guns, and other Accoutrements, unknown to them before, had them in great admiration; as Men descended from Heaven; but when they began to be oppress'd by their Tyranny, and to be tortur'd by them, they look'd upon them as the Spawn of Hell, and curs'd the Sea that had brought so wicked a People to them.

CHAP. V.

Chile.

Following the Coaft of Mare del Zur, or the South Sea, the next great Province pertaining formerly to the Kingdom of Peru, is that of Chile. This is the most Southerly Province of the whole Countrey of America, reaching up as far as the Magellane Straights, with which to the Southward it is bounded; Northward it hath a Delfart, and an undiscover'd Countrey lying betwixt it and the Confinies of Peru, call'd Atacama; on the West, it hath Mare del Zur; and on the East, up to Rio de la Plata, the Atlantic, or North Sea, with some Countreys undiscover'd, which interpose betwixt it and Paraguay to the North-East: It lieth all of it beyond the Tropic of Capricorn, in a temperate Zone, and extendeth it self in length from the Borders of Peru, to the Mouth of the Straights five hundred Leagues or more; but the breadth of it neither equal nor certain: They say 'tis call'd Chile from the word Chil, which signifies Cold; it seems in their Language as well as ours, it being generally a cold and bleak Countrey, the Air in many parts of it so extremely sharp and piercing, that both Horse and Rider sometimes in travelling are frozen to death, as the Spaniards found by experience in their first Search and Discovery of the Countrey, under the Conduct of Diego Almagro, who is said to have left the greatest part of his Men dead behind him: But this is chiefly towards the Andes, and on the Sea-Coaft, the more Inland parts of it, though mountainous also in some parts, yet are more temperate, and being also well water'd with Rivers, are much more fruitful than the other, affording both Wheat and Maiz, and likewise other Grain, excellent Pasturage in many places, and great Store of Castel, Wine, Honey, and not without many and rich Mines both of Gold and Silver.

The Natives of this Countrey were found to be the most stout and warlike of all the Americans that the Spaniards had hitherto met withal, fighting with them, and oftentimes defeating them in the open Field, surprizing and sacking their Towns, and laft of all taking their Captain and Commander in Chief Prifoner: This was Pedro Baldi, one of those good Men that confented to the death of Attabaliba, the laft King of Peru, after a greater Ranfom accepted and paid, then perhaps the King of Spain could well raife on a sudden, if he had occasion to use it for himself. The Araucans (for so are the People call'd that had him Prifoner) are faid to have Entertain'd him for a while with great Jollity and Feafting, but for his laft Draught gave him a Cup of melted Gold, which the poor Man was forc'd to take down, and so died a cruel, though cqftly Death.

The
AMERICA.

Chap. V.

The whole Province generally is divided first into Chile, specially so call'd, and secondly Magellanica, or that part which lieth more Southward down to the Straights of Magellan.

SECT. II.

Chile, properly so call'd.

Chile, specially so call'd, is border'd Northward with the Defart and barren Countrey of Acayana above mention'd; on the South, with Magellanica; on the West, with Mare del Zor, Eastward, and to the North-East, with some parts of Paraguay, or rather with some undiscover'd Countreys lying betwixt them both: The length of it from North to South is reckon'd to be little les than three hundred Leagues, and generally of a fruitful Soil, affording besides abundance of Gold and Silver, both Corn, Cattel, Vineyards, and divers sorts of Fruits, equal both for kind and plenty to Spain it self, and sundry other parts of Europe. The Air likewise temperate, and the People in their Manners and Conditions come much nearer to the Civility, and likewise subtlety of the Europeans, than other Americans did; which doubtles may be attributed to the conformity of the Climates under which they lie, agreeable to those of Europe; though otherwise in respect of the Sphere and Seasons of the Year, there be a diametrical difference betwixt us; As for Example, their Spring beginning in September, which is our Autumn, and their Autumn in March, which is our Spring; their longest Day being that of St. Lucy, on the eleventh of December, which is our shortest; and their shortest being St. Barbaras, viz. the eleventh of June, which is our longest, &c.

The Towns of chiefeft note and importance in this Province, are 1. Copiapò, an old Town in the most Northerly parts of this Province towards the Sea, where it hath a very commodious Haven belonging to it.

2. La Serena, a Town situate on the Banks of Coquimbo, a pleasant River a little above its Influx into the Sea, built by Baldiçia in the Year 1544. the Countrey about very rich in Mines of Gold, and the Town itself so well Garrison'd for fear of the Natives, that when the English under Sir Francis Drake, about fourscore years since, attempted the gaining of the Place, they found hot Service of it, being stoutly resifted and beaten back again to their Ships, by a Sally of no less than three hundred good Horse and two hundred Foot.

3. St. Jago, the principal Town of the Province, a Bifhop's See, and the ordinary Residence of the Governor, lying on the Banks of the River Tapacalma, in the thirty fourth Degree of Southern Latitude, fifteen Leagues distant from the South Sea, at which it hath a very commodious and much frequented Haven, which they call Valparayfo, and where the English met with better fortune, as hath been said already in the report of Sir Francis Drake's Voyage.

4. La Concepcion, a strong Town, seated on the Bay call'd Pemco, fifty or seventy Leagues distant from St. Jago towards the South, a Place not a little forti'd both by Nature and Art, having the Bay and a certain Ridge of high Mountains beginning it almost round about; and where it is otherwise accessible, a Castle, and certain Bulwarks with Ordnance, besides a Garrison of five hundred Soldiers at least continually in it, and all little enough to defend it against the Araucanes, their deadly Enemies, who live thereabouts, and are ever and anon making Incursions almost up to the Walls of it. Over against this Place in Mare del Zor, but very near the Shore, there lieth a certain Island call'd St. Maties, exceeding plentiful in Swine and
and all forts of Poultries, which the Garrison of La Concepcion make good use of.

5. Los Confines, a Fronteer Town, built by the aforesaid Baldavia, for defence of the rich Mines of Gold at Angel, a Place near adjoyning.

6. La Imperiale, another strong Garrison of this Place on the Banks of the River Cauten, near to which that great Battel was fought, where Baldavia, with divers other Soldiers, were taken Prisoners, who were no otherwise overcome, but by being over-wearied with killing of their Enemies, and by that means not able to make their Retreat.

7. Villarica, another Colony of the Spaniards in these Parts, sixteen Leagues distant from Imperiale, and twenty five from the Sea.

8. Baldavia, so nam'd from the Commander Pedro Baldavia, who built it in the Valley of Gialdallanque, two or three Leagues distant from the Sea, where it hath a good and capacious Port; but nearer to it the best Mines of Peru, so rich, that 'tis said they yielded Baldavia every day so long as he could enjoy them, twenty five thousand Crowns.

9. Oforno, a Town lying in the Bay of Chile in a barren Soil, but otherwise neither less rich, nor less populous than Baldavia it self.

These three last mention'd Towns, viz. Baldavia, Imperiale, and Oforno, were in the Years 1596, 1699, and 1664, surpriz'd by the Araucanes, and other Salvages confederate with them, lack'd and burnt; and though the Spaniards be said to have recover'd and Garrison'd some of them with fresh Soldiers, yet how long they were able to hold them, or whether they be Matters of them at this day, we cannot say.

10. Castro, the most Southerly Town of the whole Province, built on a certain Island within the Bay of Chile.

11. Mendoza, and 12. St. Juan de la Frontera, both which lie towards Paraguay and Rio de la Plata, but on the other side of the Andes, forty Leagues distant from any of those we have spoke of, and perhaps more, not above a hundred from Buenos Ayres, and the Atlantic Ocean.

Sect. III.

Magellanica.

Magellanica, the other part of this Province, is bounded Northward, with Chile aforesaid, and some parts of the Countrey De la Plata; on the South with the narrow Sea call'd Magellans Straights; having Mar de Zuir on the West, and on the East the Atlantic Ocean. It contains in length from the Borders of Chile to the Mouth of the Straights, a hundred Leagues, and in breadth from the North to the South Sea, something more, viz. towards Chile and the North-West parts of it, for towards the South and South-West it straitens still more and more, insomuch that they who resemble the Southern part of America to the form of a Pyramid revers'd, make this part of the Countrey to be the Spire or top thereof. It beareth the Name from Ferdinand Magellan, a Portuengue, who first discover'd that narrow Sea, so famounly known by the Name of Magellan Straights. It is a large Countrey, and supposed not to be altogether barren of Metals; but as yet no great Discovery hath been made of it, partly by reason of the excessive Cold to which 'tis thought to be subject; and partly perhaps by reason of the difficulty of the Enterprize, it being so far remote, and very hardly passable in many places, by reason of the huge Mountains the Andes, which bar it as it were against all Adventurers; but chiefly by reason of the Hounts and untameableness of the Araucanes and
and other Natives of Chile, through whose Country the March lieth, and who must first be conquer'd, so that very little can be said more of this Country, than only to name the Ports and Places upon the Sea-Coasts, at which the Spaniards, and have other Nations at several times have touched, the chief whereof upon the South Sea are, 1. Cabo de las Islas, a Promontory or Foreland, twenty fix Leagues distant from that of St. Felix on the Confines of Chile.

2. Puerto de San Stephen, fifty Leagues from that, towards the South.

3. La Villa de Nuestra Senora, or Our Ladies Dale, a large and secure Bay, eighteen Leagues Southward of St. Stephen.

4. La Punta Deglada; 5. Puerto de los Reyes; and 6. Andonc Sin Salida, all of them opening towards the Straights. There is also at the opening of the Straights, Cabo de la Vittoria, Cabo Deffedado, and some others.

Upon the North Sea, and up towards Rio de la Plata, the chief Places observable, are 1. Rio de la Cruz, and the Cape which they call De las Ramericanas, about thirty Leagues distant from the Straights Mouth.

2. The Bay of St. Julian, forty Leagues Northward of the former.

3. El Puerto Deffedado; 4. Puerto de los Leones; 5. The Bay of Anegada, all of them good and capacious Havens for the security of Shipping upon the Coasts, and lying at a distance of thirty or forty Leagues one from another, up towards Rio de la Plata, and the Countrey of Paraguay, of which we are next to speak.

As for the Straights themselves, so much spoken of, and likewise so necessary to be known by those who frequent these parts of the World, they are a narrow Sea or Frith, by which the Atlantick Ocean, or rather some parts of it, doth fall into Mare del Zor, or the South Sea: the Passage is long, running, as 'tis commonly suppos'd, well nigh a hundred Leagues together, almost in a parallel Line, or in the same Degree of Latitude from one end to the other; and likewise extremely difficult by reason of the many windings and turnings of the Sea, which force them to be ever and anon altering of their Course, and a mountainous high Countrie on both sides of it, from whence it is almost continually beaten with Storms, both dangerous and terrible: They were first discover'd by Ferdinand Magellan, by Nation a Portuguese, but in the Service of the King of Spain, and by him nam'd Magellan's Straights; who although himself liv'd not to return into Spain, being slain in the Conquest of the Molucca Islands, yet his Companions did, in the Ship call'd Vittoria, from whence the Cape De la Vittoria above before took its Name. The Mouth or Entrance of them, by the Atlantick Ocean, lies in fifty two Degrees of Southern Latitude, and hath not above fifty three and some Minutes at the Exit, or opening into the South Sea.

There is likewise since this, and but of late times, viz., about the Year 1615, another Passage discover'd by the Dutch, and call'd from the Discoverer Fretum Mauri, or The Straights of la Maire, four or five Degrees more to the Southward than those of Magellan, and suppos'd to be a much easier and safer Passage.

The Intention by the discovery of these Straights, was to have found a shorter Way to the East Indies, and the Kingdoms of Cathay and China, than that which was then only us'd, viz., by the Cape de Buena Speranza, and the Coast of Africa, but by reason of the great difficulty, as 'tis to be suppos'd, and uncertainty of the Passage, neither the one nor the other is much frequented, the Spaniards for the most part serving themselves of their American Ports upon the South Sea, from whence they make their Voyages and Returns to and from the other Indies, and from thence home to Spain; and the English, with other Nations of Europe, Trading still by the Coast of Africa and Cape of Good Hope, or else by the way of Alexandria and the Persian Gulf, as heretofore.

Chap. VI.

Paraguay, or Rio de la Plata.

Ve have seen in Magellanica the farthest, that is, the most Southerly part of the New World, and before it in order all the Western Coasts of America that lie either upon or towards Mare del Zor, viz. from Panama, the first Province of this Southern part down as far as the Straights. We are now to return and take a view of the Eastern Coasts, and those Countries which lie upon the Atlantick Ocean, steering our Course henceforth Northward, not directly, but as the Coast leads us for a while Eastward and by North, forasmuch as the Land of America, from the Straights of Magellan up as far as Brazil, and almost to the Equator, runneth out with a long Point, little less than three thousand Leagues together.

The first Province we meet with on this side next to Magellanica, is the Countrey of Paraguay, oftentimes call'd Rio de la Plata, from the Name of an huge River, which runneth for the most part through the midst of it: It is border'd, as we said, to the South and towards the Straights with Magellanica; on the East, with the Atlantick Ocean; more Northward, or to the North-East, it hath Brazil; and on the West those undiscover'd Countreys of the Province of Chile, of which we have spoken.

The Countrey on both sides the River is reported to be a very jolly and fruitful Soil, bearing besides thole which are proper and native, all sorts of Europea Fruits and Grain in great abundance, with Sugar-Canes, both large and good, as any other Province of the New World. Nor is it excell'd by any other for good Pasturage and great Herds of Cattel, Sheep, and Swine; in particular, Horses are said to have multiply'd so here, that of thirty Mares, and about six or seven Stallions, which the Spaniards left there, in forty years the whole Countrey thereabouts was fill'd with the Breed of them, running wild in great Companies together, through all the Woods and Forests of the Countrey, and being of excellent Meat and Service if they could be tam'd. It affordeth likewise great Store of wild Deer and Stags, some Lyons, Tygers, etc. nor is it without good Mines, some both of Gold and Silver; but chiefly, as to what is yet discover'd, of Brasses, and Iron; and the People altogether salvage.

The River De la Plata, which (as we said before) divides this Countrey, is one of the largest of the whole World, rising, as 'tis suppos'd, out of the Lake call'd De los Xarages, three hundred Leagues more within Land, and falling into the Atlantick Ocean, or North Sea, in thirty four Degrees of Southern Latitude, with an Eftuary or Mouth of thirty, or two and thirty Leagues over.

The whole Countrey is usually subdivided into three inferior Provinces, which are 1. Rio de la Plata properly so call'd. 2. Tucuman. 3. La Crux de Sierra.

Sect.
Rio de la Plata, properly so call'd.

Rio de la Plata, properly so call'd, is that part of the Countrey which extendeth itself on both sides the River, in length many Leagues together, but not answerable in breadth.

The chiefest Towns of note in this Province, are 1. Buenos Ayres, by some call'd La Trinidad, on the Southern Banks of the River De la Plata, sixty four Leagues, as they say, from the Mouth of it: It is seat'd commodiously at the foot of a little Mountain, and fortifi'd with a Mud-Wall, a little Castle, and some Pieces of Ordnance.

2. San Fe, in English St. Faith's, fifty Leagues above Buenos Ayres, upon the same River, and a richer Place, chiefly by reason of their Cloth, of which there is here one of the greatest Manufactures of all these parts of Peru.

3. Nuestra Senora de la Assumption, commonly call'd Assumption, onely, lying yet higher up the River almost a hundred Leagues, a well built and well frequented Town, long since inhabited by two hundred Families at least of natural Spaniards, besides Mestizos, as they call them, which are the Breed of Spaniards by the American People, Men or Women, and Mulattos, which are likewise their Race, but begotten upon Negro's, of both which there are reckon'd to be here some thousands.

4. La Cividad Real, or more commonly call'd Ontiveros, fourscore Leagues Northward from Assumption, seat'd on the Banks of the River Parana in a fruitful Soil, as the Countrey generally is about all these Places; but the Air hereabouts is not so healthful.

5. St. Anne, upon the same River; and 6. St. Salvador.

Sect. III.

Tucuman.

Eftward of La Plata lieth the Countrey of Tucuman, extending it self as far as the Borders of Chile, a Countrey not yet well discover'd either to the North or the South. That part of it which lieth towards Chile is well Manur'd and Husband'd, and likewise very fruitful; but that towards Magellanica, neither the one, nor the other, remaining altogether untill'd and barren.

The chief Towns and Places of note, are 1. St. Jago de Efteco, the principal Town of the Province, and a Bifhop's See, seat'd upon the River Efteco, a hundred and fourscore Leagues distant from Buenos Ayres.

2. St. Michael de Tucuman, seat'd at the foot of a huge rocky Mountain, but otherwise in a Soil the fruitfulleft and best, both for Corn and Pasturage, in all this Countrey, twenty eight Leagues distant from St. Jago.

3. Talavera, or Nuestra Senora de Talavera, as the Spaniards call it, sittuate upon the Banks of Salado, in a good Soil, and inhabited by an industrious People, grown exceeding rich and wealthy, chiefly by their Manufactures of Cotton-Wool, whereof they have great plenty, and by which they drive a Trade as far as the Mines at Potosi, and other parts of Peru.

4. Corduba, another rich Town of this Province, and of great Trade, as lying at
La Crux de Sierra.

La Crux de Sierra is a little Territory (at least in comparison to some others) lying towards Peru, and reckon'd by some for one of the Provinces of Peru: it lieth betwixt the two great Rivers Paraguay and Guayay, a hundred Leagues distant, as 'tis said, from Charcas, to which yet in some Caules it is subjordinate.

The Soil of this Country is abundantly fertile in all sorts of American Fruits, besides good plenty both of Wheat and Maiz, and scarcity of nothing useful for Man's Life, unless it be fresh Water in some places.

The chief Towns of this Province, are 1. San Crux, situate at the foot of a great Mountain or Hill, but opening upon a large Plain, whose thirstly dryness is well remedied by a certain Brook or Torrent, which issueth out of a neighboring Mountain, and a few Leagues distant from the Town maketh a pretty Lake, which filleth the Country thereabouts, both with fresh Water and Fith in good plenty.

2. Barrana, a Town supposed to be not above threefcore Leagues distant from Potosi.

3. Nova Rion, once a Colony of Spaniards, but sack'd and spoil'd by the Salvages of these Parts about the Year 1548, and the first Discoveror of the Country, namely Namor de Chaves, treacherously murder'd by a Native, since which time 'tis said to have been deserted.

Brafilie.

Brafilie by Caprino call'd San Crux, because it was discover'd on the Day dedicated to the holy Cross, but generally Brafilie, from the red Wood, which it produces in great abundance, extends, according to the Account of the Portuguefe, between the Rivers Maranon and De la Plata: But according to the Division which Pope Alexander the Sixth made upon the Approbation of the Kings of Cassilie and Portuguefe, Brafilie extends not so far; for it begins in the North along the Stream Puna, and ends at the River Capybara, two Leagues beyond the Town St. Vincent: Eastward it is wash'd by the Northern Ocean, and on the West separated from Peru by defolate Mountains: It lies between 4 and 22 Degrees of Southern Latitude. Historiographers differ much concerning the first Discoverer; but without contradiction the first honor belongs justly to Americus Vespuccius, who being sent out by Ferdinand, King of Cassilie, in the Year 1497, arriv'd first with four Sail
at Brasile; whither he was follow'd two years after by Vincente Almez Pinzon, Associat
ate to Christopher Columbus; but with ill success, for two of the Ships were cast away
in a Storm, and the other two return'd sadly weather-beaten into the Spanish Haven
Tordes, yet not before he had made a farther Discovery of Brasile than Americus Vesp
ius; which so stirr'd up Emanuel, King of Portugal, that he sent Pedro Alvarez Caprakis
thither with five hundred Men in thirteen Ships, that so he might get sure footing
on Brasile; where Landing he erected a Stone Cross, and inform'd the King of his
whole Proceedings by Cffer Lemius, with whom he sent over two Brasilians, a Man
and a Woman, the Strangeness of whose Garb caus'd great admiration in Portugal
amongst the Spectators: the Man, having a flat Nose, went stark naked, and in
his nether Lip hung a Stone call'd Mataca; through each Cheek there was stuck a
piece of Brasile Wood, on his Shoulders he carry'd three Long Darts, and on his
Head he wore divers colour'd Feathers; the Hair about his Privities was all
pluckt out, and his Membrum Virile ty'd about with a String call'd Tacosymba, which
he untie'd when he Urin'd; his Body was strong and well proportion'd, and paint-
ed with several Colours. The Woman wore a Lappet girt about her Middle, in
which Girdle stuck a Cane Tobacco-pipe; the Lappet reached just to the top of
her Knees, the rest of her Body was alfo naked, on her Head she wore a broad Hat
made of Feathers, on the top of which stuck two Plumes; in her Ears hung Bells,
and about her Neck three Strings of Pearl; and her Body was alfo painted with
red and yellow Colours. Lemius also gave so much Information concerning the
fruitfulness of Brasile, that several Portuguese Families went thither, accompanied
with some Italian Fryers, which scattering up and down, began to build several
Villages, but were soon after most of them kill'd and eaten up by the Indians.

Anno 1549. King John the Third fitted out a great Fleet, which set Sail from
Lisbon under the Command of Thomas de Sofia.

Also the Jesuits Affilucciæ, Antonio Pireo, Leonardo Nonu, Didaco Jacobo, Vincente Rodi-
xico, and Emanuel Robrega, were sent thither by Pope Paulus the Third, and Ignatius
Loyola, whole Fleet came to an Anchor in the Bay afterwards call'd Bahia de Todos
Sanjos,
Sanctos, where Soa, built the City Salvador; since which the Portuzese have spread themselves farther and farther over Brasile.

The United Netherlands also sent Colonies thither with good successes, for they took several vast Countrys from the Portuzese, by force of Arms, and built new Forts and Towns in several places. But we will first give you a general Description of it, so as we may the better render a Relation in particular of every Province thereof, it being a considerable part of the New World, and both pleasant and fruitful, and the Sea-Coasts refresh'd by Easterly Winds, which begin before Day-break, when the North Sea ebbs or flows, for then the Wind rises with the Sun, and continues till Mid-night: Towards the West, where the Mountains divide Brasile from Peru, it is made temperate by Westerly Winds, which though judg'd unwholesome, because they seem to arise out of the Moorish Grounds, yet they hurt not the Inhabitants along that Coast, because they either break against the high Mountains, or are driven by the strong Wind which blows from the Sea.

The difference between Summer and Winter, shorter and longer Days, in the main part of Brasile, is scarce discernible, warm Weather lasting all the year round; and for the length of the Day and Night, the Sun being hid under the Horizon twelve hours, thines for the most part just as long, the greatest difference never being above an hour. Three hours before Day-break the Dew makes it exceeding cold till Sun-rising; wherefore the Brasilians make Fires in the Night near their Hammocks, not only to keep wild Beasts from them, but also against the Cold. After the coldest Nights follow the fairest Days, and the contrary after sultry Nights; nevertheless (except in the rainy Seafon, which begins with March and ends about August) the Sky is generally clear, yet it Lightens much towards the Evening. Rainbowes often appear in the Sky, and bout the Moon Halo. The Rain generally falls in great Drops, and with a mighty noife, before which it is generally very sultry hot, or else soon after. The Dew, which is fruit-fuller than in Europe, is falti, which makes it oft to rot things that lie in the open Air. During the rainy Moneths, a South-East Winds blows from a cloudy Sky, much stronger than the Northern in Summer. The South-East Wind drives the Stream to the North, as the North Wind drives it to the South: And more than this, there is little to be differ'd of the Seas ebbing and flowing hereabouts: At the highest Tides the Brasilians go several Leagues from the Shore to Fith, upon Planks made of the spungy Wood call'd fangada fastned together. The Sea, which seems to burn in the Night, is so clear in the Day, that the Fith may be seen to swim above twenty Fathom deep. A calm Ocean when the Days and Nights are of an exact length, and especially when dark Clouds appear, is a certain sign of a dreadful Storm. At full or New-Moon the Sea rises twelve Foot, and continues either a longer or shorter time, according as it is more or less turbulent, and the Rivers fall stronger or more gently into the same.

Before most part of the Coast of Brasile lies a Stone Cliff of above twenty or thirty Paces broad, which is never cover'd with Water, though in the time of Spring-floods. In this Cliff Nature in several places hath made a Gap, through which the Ships sail near the Shore, and ride safe at an Anchor.

The whole Countrie of Brasile is divided into thirteen Prefectures, or Lordships, and hath about as many Rivers, which more or less empty themselves into every one of these Countries. The Eastern part hath several Brooks and Fountains, which afford good Water both for Man and Beast. In some parts the Water is so strong, that the wild Beasts making themselves Drunk therewith, are easily taken. During the Winter Seafon the Rivers glide with great force, and swell on a

Y y 2

sudden,
sudden, overflowing all the neighboring Countrey, onely the River San Francifco runs strongest and rises highest in the Summer Season, whenas in the Winter it flows low, and poures but little Water into the Ocean. The original of this River is as yet unknown, yet is by moft believ'd to come out of a great Lake lying near, the Peruvian Mountains: The Hollanders, who fail'd forty Leagues up the same, found it every where broad and deep, and scatter'd full of Isles and Rocks. The Portuguesel leaving ten Leagues farther, discover'd the great Rocks Cococeras, from which the said River falls down with great violence, and extends it self North-West. In the other Brasilian Streams, though wide at the Mouthes, which generally are not above two or three hours walking from their Fountains or Springs, no Barque is able to Row up, they being exceeding shallow, although much Rain falls into them; the reafon whereof is becaufe the barren Mountains lying between Brasil and Peru, discharge abundance of Water through the Rivers of Amazon, Maranon, Francisco, La Plata, and the Juaiero, with fuch force into the Ocean, that they keep their Sweeptnes for thirty Leagues. Near the Sea fide are feveral Lakes and Pits which are drinkable, and others up in the Countrey that are brackifh.

The Countrey differs exceedingly, for where it extends in Plains the Soil is fat and clayie, and produces all forts of Fruit, but especcially Sugar-Canes. During the rainy Seafons the Trees flourifh most; after which the heat of the Sun, and fertility of the Soil speedy ripen the Fruit: wherefore they Dung not their Land, but on the contrary endeavor to make it lean with Sand, that the Plants might not have too many Leaves, and wither before the Fruit can be ripened. They Sowe in the beginning of the rainy Moneths, and especcially take care that the Seed lie not too deep in the Ground, because then the Sun-beams being not able to come at it, suffer it to perifh in the cold Ground.

The high Cocoa and Palmito-Trees, are transplanted all the year round, the Roots being only cover'd with a little Earth, becaufe they can endure no cold.

Several Trees here bear a cooling Fruit, as if kind Nature took care to provide against excessive heat.

All manner of Plants and Herbs brought hither from Angola, Portugal, the Netherlands, and the East-Indies, grow here very plentifully. But the Countrey generally would be much better, if some way could be found out to destroy the innumerable company of Pilmires, which though three times bigger than the European, resemble them very much, and cover the Paths in Woods and Fields for three or four Miles together; and raising Hillocks, make them hollow, and fill them with Corn: in the Full of the Moon they gather an incredible quantity of Grain, which they bite at each end, because it should not sprout: against the rainy Moneths they flop up their Holes, that the Water may not damnifie their Store. But thefe Animals have a mortal Enemy of the Tamaunda, of which there are two forts, the bigger call'd Guaç, the leffer Miri; the Guaç, notwithstanding it is no bigger than an ordinary Dog, yet it destroys Tygers, and other wild Beasts, with fuch a raging fury, that it never lets go what once it hath got hold of, but holds it faft so long till sometimes it dies of Hunger. The Guaç differing from the Miri onely in bignefs, hath a broad Tail full of grey and black Bristles, which sticks up when he is vex'd, but when he goes to sleep, covers himself with the fame. The Miri winds his long smooth Tail about the Boughs, by which hanging he searches the Holes in the Trees with his Tongue, which being thin and round, hath a Gutter in the middle, in which when it feels any Pilmires, it suddenly swallows them down: If he perceives them to have their Nefts under Ground, then he scratches up the Earth, and
puts his Tongue in at the Holes. Both the Guana and Miri have a thick Skin, and a broad black Streak from their Breasts on each side up half way their Bodies, and through the black runs also a white Streak. No Beast in the World is harder than this, for though it faits twelve days, and is afterwards fry'd alive, yet it will live several hours after.

The Lakes in Brasile are for the most part overgrown with Weeds just like a Field, yet are exceeding full of Fitch and Fowle. Where the Sea runs into the Lakes, great multitudes of Crabs are seen crawling along the Ground, and the Oylers hang in Clutters on the Boughs of a Plant call'd Mangy or Mangues, which grow with their Roots either near or in the Water, in such a manner, that new Bodies still shoot from the old Roots, which prevents eafe access to the chief Plane, on whose uppermost Leaves after Sun-rising flicks very white Salt, which in the Night, or in a cloudy Day turns to a brackifh Dew. Moreover, thofe places where Brasile rises with Hills and Mountains, are likewife very fruitful, except the barren tops of some, which seem to kifs the Skyes: and though the fruitful Mountains flourish in the time of the rainy Months, yet many of the Trees which grow on them die in Summer, and their Ashes being burnt by the Inhabitants, are us'd in head of Dung. Some Woods extend themfelves three hundred Leagues in length, and are full of Trees, fo tall, that an Arrow shot upwards falls short of the top of them, and a Boat may be made out of the Body, which can carry a hundred and fifty Men. On the great Boughs of these mighty Trees grow other excrefcent Shrubs after the manner of Mistletoe, which proceed from the Kernels swallow'd and mutted upon them by the Birds that light there. In some places also grow also Sweet-wood Trees, which afford either excellent Gums or Wod to Dye with; amongst which the chief is the Ibripitanga, which yields the Brasil Wood, that gives Denomination of Brasile to this vast Tract of Land. The Tree Ibripitanga is tall and spreading, hath fad colour'd Bark full of fhort Thorns; the Leaves are green, and differ in form but little from the Box-Tree Leaf; the Boughs shoot forth other leifer, full of yellow and sweet-smelling Flowers, which falling off are succeeded by a flat long Cod, of a dark grey colour, full of little red Pulfe; the upper part of the Tree is not good to Dye with, but onely the lower part of the Body, which becaufe the Tree grows far up in the Countrey, is not transportable without much trouble. But the Tatai-iba grows in the Woods along the Shore, the Bark being of an Ath-colour, involves a yellow Wood; the Leaves are sharp and notch'd, the Fruit not unlike Mulberries, pale, juicy, and full of white Seed; the Wood boy'd Dyes a pure Yellow. It is observable not onely of this Tree, but generally of the Trees this Countrey, that they neither flourish, nor fliet their Leaves all over at once, nor do several Trees of the fame kind, and growing here germinate or fade together; for whileft one is fullief of Blossoms, the other is without Leaves; and whileft the fame Tree sheds its Leaves on one fide, the other fide is newly Budded.

The European Plants and Herbs with fhort Roots, being once Planted in Brasile, come to be hard and lignifi'd. There is also great difference, according to the Ground in which they are Planted; for fuch Plants and Trees as in the Plains are but small and tender, grow ten times higher if Planted in the Woods.

All sorts of Indian Pulfe grow higher than the tallief Trees, like high Arbors; under which both Men and Beasts may shelter themselves from the Sun or Rain.

We find not upon Record or Tradition, that Brasile was ever troubled with an Earthquake, which is the reafon that it hath neither Silver nor Gold-Mines, becaufe fulphurous Fires are found under Ground, which are a cause of the production of
Gold and Silver, so likewise they occasion Earthquakes: yet in that part of Brazil, call’d Ceara, there are some Mines of Silver, out of which the Hollanders would have got greater Riches, had not they been employ’d in the Wars against the Portuguese.

Far up into the Countrey amongst the Mountains, inhabit Canibals, or Man-eaters. The Europeans that first travell’d that way, found the Countrey very fertile and full of People, especially in the Valleys, but somewhat incommoded by the want of Water, and the excessiveness of the Heat in the Day, and of the Cold in the Night. In some places the Countrey is so over-growne with Brambles, that they are forc’d to cut their way through the same. But there are a sort of Thistles, which having concave Leaves, receive the Dew and Rain for the accommodation of the Natives.

Besides Serpents and Dragons, the Tygers are most of all to be fea’rd when hungry, but once satiﬁ’d are easily taken.

Dogs, Oxen, Sheep, and Horses thrive also exceedingly in most parts of Brazil.

The Brazilians live to be very old without being Bald or Grey: There are feldom or never to be seen squint-eyed, lame, decrepid, or any deformed People; notwithstanding the Children are never Swath’d but thrown into cold Water as soon as born. The Men generally have a very near resemblance one with another, as also the Women, so that there is not such a difference betwixt Man and Man there, as amongst other People. There is scarce any Sickness heard of in these Parts; for besides a long Life, they enjoy the benefit of Health so long as they live. They trouble not themselves with much Business; and in one Hut, whose Covering consists of Palm-Leaves, dwell several Families together.

The general Bread of the Brazilians is the Stamp’d Root Mandiboca; besides which they also eat all manner of Fruit and Plants, and many times Flesh, which they either eat boyl’d, broyl’d, or stew’d; their Boyling is after this manner: First they kindle their Fire with two Sticks, the one of hard, and the other of soft Wood; the hard they make sharp at the end, and fix the fame into the soft, which setting on fire they immediately lay Cotton thereupon, or else dry Leaves, and so boyl the Flesh in round Earthen Pots call’d Cum: but they account that better which is stew’d
A M E R I C A.

Chap. VII.

flew'd in a Pot, the bottom whereof is cover'd with Leaves, on which they lay the Flesh, then fastening the same close on the top with Earth and Leaves, they make Fire over it so long till they think the Flesh to be sufficiently flew'd. Their Broiling they perform by fixing forked Sticks into the Ground, over which they lay several others like a Gridiron, and upon them the raw Flesh, cut in long Slices, and Pepper'd and Salted, then make a Fire under the same till it is enough; and their Meat so dree'd keeps good fourteen days. Their Fifth either boil'd or broil'd is eaten with the Sawve Jiquitinga. The Little Fish Pipha and Piquitinga they make up in Rolls, and lay them under hot Ashes. Both with their Flesh and Fish they eat for Bread, as hath been said, the Meal of the Root Mandioka, which they taking up with three Fingers throw into their Mouthes to dexterously, that the leaf scrap falls besides. They never observe any fixed hours to eat, for they make several Meals in the Day, and sometimes in the middle of the Night, if their Appetite serves, and neither drink nor speake whilest they are at their Meat. They sleep in Spread Hammocks made fast between two Poles, near which burns a constant Fire with which in the Day-time they dress their Meat, and at Night keep themselves warm, the Nights being there somewhat cold, because of their equal length with the Days.

Their usual Liquor is cold Water, taken out of the Fountains, Rivers, or Brooks; but to Caroufe they make the Drink Coo, of the Fruit of the Ocaha-Tree, which being stamp'd in a wooden Mortar, is strain'd, and at first looks like Milk, but after a few days standing turns to a darker colour, and is strong enough to make Astronomers of those that drink largely of it, but if long kept, it turns to be excellent Vinegar.

They have another Drink call'd Aipu, which is made two several ways; the first is thus: An old Toothless Woman chews the little cut Root Aipuanaeaea to a Peripol'd Caracu, which spitting in a Pot they pour Water on the same, and afterwards boiling it leisurely, skimming it all the time it stands over the Fire. The other way of making this Aipu, which is much the more cleanly, is to boil the said Root so long, till it comes to be like Butter-milk, and then letting it stand till it hath done working, it will be no unpleasant Drink.

Another sort of Drink amongst them is the Pocabi, made of the Fruit of the Tree Pacobebe and Pacobon; besides others made of the Tree Abo, of Indian Barley and Maize. Also their Liquor call'd Jetic, is made out of Potato-Roots.

In like manner the Plant Nana, by the Portuguese call'd Ananas, makes the Drink Nanai, which is exceeding strong and heady, but good against Fainting, Vomiting, Gravel, and Stoppagge of Urine, as also against Poyson.

The Tapuians, fur-named Cariri, meet at a certain time to make the Liquor Their Deba.

Aipu, whereof each takes as much to his Hut as falls to his share, and when it hath done working, they begin in the Morning very early at the first House in the Village, and drink out every drop which they find there, and so from House to House till they have drunk one another drie: and he is look'd upon to be the best Man that hath drunk and evacuated most.

The Brazilians take generally very strong Tobacco, which they first dry in the Sun, and afterwards before the Fire, the better to rub it in pieces; Their Tobacco pipe is a Cane and a hollow Nut cut off at the top, and a round Hole bored in the middle, into which they put the Cane. They forbear not to take Tobacco even in the midst of their religious Ceremonies, which are perform'd with Singing and Dancing in this manner:

The Tapuians making a round Ring at an equal distance one from another, all of them being stark naked, tie divers colour'd Plumes of Feathers on their back-sides with
with a string made fast on their left shoulders and about their waists; about their legs they have cotton garters; each in his turn bowing to the left, stretches down his left hand to the ground, and puts his right hand in between the strings, which tie the plume of feathers, and stamps continually with his right foot, while all the rest begin to sing a doleful song, which by degrees they change into a merry one, not without some appearance of understanding the art of music. Their songs contain first a mournful relation of a general deluge, which drowned their predecessors, all but some few, who escap’d by climbing up high trees and mountains; next the acts of those old heroes from whom they boast themselves extracted, who lost their lives, or valiantly fought for the public good, and were rewarded with the enjoyment of all pleasures and delights, of singing, playing, dancing, and the like, in a remote country, whether after their deaths they hope to be translated: Whilest they thus sing over all their songs, three priests stand in the middle of the ring, each holding the idol maraka (in their left hand) resembling an old ostrich’s egg stuck full of feathers on the top: about their waists they wear a girdle of rich plumes, on their heads also a crown of feathers; the middle priest looks with a stern countenance, and holds up his left leg from the ground, whilest the other two standing on each side of him, hold in their right hands a pipe, out of which blowing tobacco-smoke in one another’s faces, they utter these words, receive the spirit of heroick strength: the dance ended, they entertain their priests with meat and drink eight days together, and also put meat before their idol maraka, who is the chief deity they adore.

Their arms consist of bows made of hard wood, strung with twisted cotton thred; their arrows they make of the cane tagara, made very sharp at the end, or headed with some beaks sharp tooth, or pointed with the bones of the fifth iperm. Some of the tapuijans use great darts, and long clubs of black wood, broad before, and full of sharp spikes; the handles being wound about with cotton strings call’d fatirara, under which hangs a tuft of the bird ara’s feathers, as also about the middle. Their trumpets, call’d congucua, are the shin-bones of men, though they
they have other all new of great Shells and Canes. They us'd to be continually at War one with another, which they wag'd neither for Lands nor Riches, but either to make themselves eminent, and to be accounted valiant Soldiers, or most especially for the sake of Man's blood to feed upon, which they love beyond all things in the World, wherefore they fatten all their Prisoners for the Slaughter. Their Battalions are always cruel; for they fight very desperately. Emanuel de Moraes relates, That he saw a Brazilian fight with three Armed Portuguese, who flew him not till after he had wounded them all three.

The Languages of the Brazilians are several, each Country speaking a peculiar Tongue, but to different that they cannot understand one another. The Tabajara are divided into above eighty Tribes, each speaking a peculiar Language, which have no resemblance one with another; nevertheless they have a general Language which is understood by most of them. The Jesuit Joseph Anchieta publishing a Brazilian Dictionary in Coimbrica, Anno 1595, shewed that the fore-mention'd Language wants the Letters $f$, $j$, $z$, $r$, and hath no double Consonants in any word, except mb, nd, ng, so that the sound of the word falls generally on the last Vowel. The fore-mention'd Moraes well experienced in the Brazilian Tongue, writes an Alphabet of all the most familiar words thereof, us'd in common discourse, of which it will not be unnecessary to give this following Extract:

<table>
<thead>
<tr>
<th>A</th>
<th>C</th>
<th>Guaiá, an old Woman.</th>
</tr>

The Language gen. of the Brazilians.
The Words for Action, are these following:

A
Abi, Erring.
Abiqui, Coming.
Acamb, I die.
Acq, Covering.
Ace, Misusing.
Ami, Squeezing.
Amstareima, Hating.
Anda, Opinion.
Angipasa, Sinning.
Abba mandebe, To put on.
Api, Shaving.
Aptis, Binding.
Aroca, a Lefion.
Aytam, Feigning.
B
Beraba, Shining.
C
Coaga, Measuring, Proving, or Speaking.
Cacaha, Passing by.
Car, Curing.
Capucaya, Calling, or To be vex'd.
Carom, Hoping.
Caruca, Pissing.
Caucucuba, Loving.
Cecaraya, Forgetting.
Cema, Going out.
Cenduba, Hearing.
Ceroya, Naming.
Cepiac, Seeing, Punishment.
Cerura, Carrying.
Ceta, Smelling.
Ceye, Relating.
Cica, Ploughing.
Cipya, Making wet.
Cigye, Fearing.
Co, Going.
Cobaitim, Meeting.
Coqendoba, Opening.
Cuaba, Knowing.
Cupia, Performing.
Cun, Defending.
E
Ecau, To be able.
G
Genocu, Praying.
Goameenga, Biting.
Guapa, Sitting.
Guata, Walking.
Guena, Vomiting.
H
Jaba, To run away.
Jecocuaba, To remember.
Jemuna, Spitting.
Jeru, Demanding.
Jgaba, Swimming.
Jgu, Drinking.
M
Maendua, Thinking.
Mabo, Dying.
Maromohuanga, Warning.
Majaoca, Dividing.
Mba-ecu, Buying.
Mbaca.
These are of the most usual words of the general Language in Brazil, besides which every distinct Tribe or Division of People hath its peculiar Tongue, as hath been said, of which the chiefest and most eminent are the Tupinambus, Tabuaries, Patiguegnaros, Marubites, Waimorees, Tomonimenos, Waimauques, Waimaes, Topinaires, Porites, Molopuques, Motaias, Biberos, Waimauquenhos, Tamores, Toconans, and the Carigs; of all which the Tupinambus are the most comely, especially their Women, which (according to the testimony of the aforesaid Emanuel Moreas, an Eye-witness) may stand in competition with the European Beauties. These Women accompany their Husbands when they go into the Wars, and carry their Provisions, especially store of Tobacco. In the Lips both of the Men and Women hang little Stones. The Men take as many Wives as they please; and amongst the generality of the fore-mentioned Nations, there is scarce any sign of Religion to be discern'd.

The Tabuaries are accounted the best Horsemen; but in Singing and Discourse, the Patiguegnaros exceed all the other Brazilians: They place twenty or thirty Singers in a Row, which observing Time, Sing the Translations of their Predecessors with good Voices.

The Waimorees are a Strong People that inhabit the large Tract of Land between Babia and Itios, and having well timber'd Bodies, can keep pace with a Horse running full speed. Five or six of them often set upon a Sugar-Mill, though a hundred Men be at work in the same: They are all over bedaub'd with Dirt, because they lie like Beasts on the Ground: They wear long Hair, and have no certain Abodes.
The Tomonimenos, living about Spino Santo, are more civili'd; they make Walls of Stone about their Huts; and these Walls are full of Holes, through which they shoot Arrows at those that invade them; their Bodies are Painted red and black, and cover'd with Feathers. The Portugues taking sixteen thousand of them Prisoners at once, kill'd most of them, and destroy'd the Country all along the River Paradiva.

At the South and North Point of Cape Fior dwell the Wainooses, bigger and stronger than the Wainoores; and they also sleep like Hogs on the Ground about a Fire, hold all People for their Enemies, and their Flesh for the greatest Dainty. The Women Arm'd with Bowes and Arrows stand by their Husbands in Battle.

On Isla Grande reside the Wainoores, a little People, which have very long Bellies, go stark naked, shave the Crown of their Heads, and let the other part of their Hair hang down long on their Shoulders. The Women, which are of gros Bodies, colour themselves Red with Vinca, which is a wild Plant, but much us'd among them: the Kernels are inclos'd in Husks full of red Fibres. These Kernels are not onely mix'd with the other Ingredients of the Chocolette Drink, but also us'd to Dye of a red Colour: The Wood of this Plant is very white, and the Bark grey, like the Hazle; the Leaves being of a deep Green, resemble a Heart; at the end of the Boughs grow several Blossoms, each as big as a Rose, consisting of five Leaves, partly red and partly white, in the middle whereof are yellowish Threds with purple Points, which give little or no smell: After the Flower follows the Fruit, two Fingers long; when it begins to be ripe it grows still redder and redder, each Cod containing thirty or forty round Kernels, which being touch'd leave a red tincture upon the Fingers; the God when ripe opens of it self, and swells the Kernels speckled white, which dry'd, pounded, and mix'd with Pifs, Dye so strong a Red, that Linnen dy'd into the same will never receive any other Colour. This Root also boyld in Broth, makes it not onely red, but gives it a plesant taffe.

The Topinaques, which dwell about St. Vincent, are a strong and gros People, go stark naked both Men and Women: when they kill any of their Enemies they Paint themselves with the Fruit Janipan, put a great Plume of Feathers on their Head, and two Sticks in their Mouths, Dancing with strange motions of the Body, inclining sometimes towards the right, and sometimes towards the left side, for three day together; during which time they drink a filthy kind of Liquor. The Women, who have well proportion'd Bodies, oneley covering their Heads with a Cap, about which they tie a Bread of Hair, to which a square Basket being fastned, hangs below their Backs when they travel.

The Mountains along the Ocean, which inclose much Gold, are inhabited by the Parents, a peaceable People, molesting none of their Neighbours; they sleep in Nests of Flags, and have no other Houses than three Poles place'd triangular, and cover'd with Palm-Leaves; they feed on Pine-Nuts and Eyries, Apples that have Shells like a Walnut, and have also the precious Balsam-Oyl in great abundance.

Along the River Paradiva inhabit the Molopaces; the Men strong and well timber'd, have Beards long enough to cover their Privities. The Women also fair, modest, prudent, and never laughing, tie their Hair, painted with several colours, round about their Middle with a Cord, so that it serves in stead of an Apron. They observe a set-hour for Dinner and Supper, which is not us'd by any other Brasilians. The Mountains in these Parts consisting of a black Mold, have plenty of Gold, but it is of no esteem or regard amongst them, onely that which is wash'd down by the Rain they gather up, but put to no other use than to make Hooks to hang their Nets on.
The Motayas, being of a low Stature and brown Complexion, shave off the Hair of their Heads, or else pluck it up by the Roots; they are eaters of Man's flesh.

Not far from whose Dominions appear the Mountains Pinos up in the Country, which abounding with Gold and Precious Stones, are inhabited by the Bikeros, otherwise call'd Lepos, which live under the Trees like Beasts.

The Waiapawons have little Villages, built along a nameless River; they are a Gigantick People, but very ignorant. Thirteen Portugese undertaking some years ago to travel through this Country to the South Sea, found on some Mountains abundance of Gold and Precious Stones; and amongst many strange things they saw a Crystal Mountain ten days before they came near it, over which they could not travel because of its steepness; at the foot thereof sprang a broad Stream, making a great noise. From thence travelling forward, they came to the Tamoyes Country, the Men whereof, being well proportion'd, wore great Bunches of Feathers on their Heads: the Women, exceeding fair, had carv'd Breasts. The said Portugese being taken here, were put into Prison, and all slain and eaten, excepting one, who escap'd after this manner: Thirty thousand Tamoyes falling into the Country of the Amazons, by the Americans call'd Mandiocuytams, made a great Feast with three hundred of them, whilst the rest fled to the River La Plata, where they got help from the Portugese, who kill'd ten thousand of the Tamoyes, made the rest Slaves, and releas'd their imprison'd Countryman.

The Tocomanas, a little People, dwell between La Plata and St. Vincent.

The Caryogs possess much Gold and Precious Stones.

The Maraquites, by the Western Indians call'd Tapuyers, that is, Wild People, are divided into seventy six sorts, all differing in their Languages; amongst which the chiefest are the Arodua, Cajan, Maquaro, and Payne, which all live without Law, Religion, settled Abodes, or Friendship with any Neighbors; and the Women Fight as well as the Men. Jacob Rabbi, who dwelt a considerable time, and convers'd amongst these People, describes their Customs thus:

"Their King Jandui, sir-named Otphicayna, from the River which flows through it, the..."
the Country of the Tapuyans, causes (if he thinks fit) to be publish'd through the whole Camp of the Enemy, whither he will go the next Morning, and what he will do all the Day following, having first consulted with his Council of Sorcerers. Before they march they wash their Bodies in the Rivers, rub themselves all over with Sand, and afterwards wash it off again, then stretch themselves till all their Joyns crack, run to the Fire, and when throughly warm, scratch their Bodies with certain Fifth-Teeth, infomuch that the Blood gushes out of several places, all which they judge to be good against weariness.

'About a Stones-caff from the King's Tent lie two thick Logs, a large Stride one from the other, against which the whole Multitude stand divided into two Parties, each of whom chufeth the strongest Man accounted amongst them to carry the Log for a Wager, and when these two are tire'd, they are releas'd by others, and he that comes laft to the appointed place with the Log, is laugh'd at by the Party to which he belong'd that was there first, where they all lay for the Youths that bring their Arms, which when they have deliver'd, they all fall to work, cutting down Trees, breaking off the Boughs, sticking them in the Ground, and tying them together on the top for Tents, which are built in rows one against another, leaving a broad Path between. Mean while the Women and Children coming with their Baggage, the Men run to Fift and Hunt, or to seek Honey. The old Women dig up Roots, which flamp'd for Bread, whilst the young Women help another to prepare the Meat in the Huts. Moreover the Men spend their time in several Exercises, as Wresting and Running, of which two Women, appointed for that purpose, are the Judges. When the Evening draws on upon them, then the Youths dividing themselves into Companies, go Singing from one Tent to another, and are follow'd by the Maids Dancing and Leaping, every one standing behind him whom she loves best; and this is look'd upon as a singular sign of affection. When a young Man is inclin'd to marry, he carries Honey and Venison to his Mistress's Father, who if he hath more than one Daughter acquaints the Soothsayers with it, who inform the King concerning it; he then caueth all the young Men and Maids to call'd together out of the Camp, leads them into the Woods to Hunt out a wild Beast, which they no sooner see, but they return and acquaint the Multitude therewith, who immediately surrounding the Place, soon catch the Beast, whose Entrails they pull out and throw to the Dogs, and give the Flesh to the Women to roast, which when ready they make merry with, Singing and Dancing after they have eaten; then if the Youth hath behav'd himself well in pursuing of the wild Beast, the King grants him the Maid which he desires for his Wife: Four days before the Wedding they bore a Hole through each of the Bridegrooms Cheeks with a sharp piece of Wood, which done they solemnize the Marriage; at which the King himself distributeth the Meat to every Guest as he thinks fit; after Dinner they extol the Mothers Care, in preserving their Daughters Virginity for the Bridegroom in strange Songs. If a Maid be Marriageable, and no Suitor comes to her, then the Mother draws red Strokes under her Eyes, and conducteth her to the King, who sets the Maid down by him on a Mat, warms his Hands against the Fire, then froaks himself and the Maid, and also blows Tobacco-Smoke on her and himself, which done, he performs the part of a Husband with her. But their making Holes through their Ears and Lips is done whilest they are Children, after this manner: The Boys who undergo this Ceremony, come to the Place appointed, where the whole Multitude Dance and Sing, and the Conjurers (who are the only Priests they have) sit in two rows opposite to one ano-
Chap. VII.  

AMERICA.

"ther; one of them starting up, takes a Boy by the Head, ties him Hand and Foot

"that he cannot stir at all; which done, a second Sorcerer comes to his assistance,

"and with a sharp-pointed Stick bores Holes through his Ears and Lips, whilst

"the Mother of the Boy makes a sad Lamentation. Women refuse to have any

"familiarity with their Husbands as soon as they perceive themselves to be with

"Child; and as soon as any Woman is Deliver'd, she runs into a neighboring

"Wood, where with a Shelf she cuts off the Child's Navel, which boiling the ears

"with the After-birth; then washes her self and the Child every Morning and

"Evening in cold Water; as long as she gives Such her Husband lies not with

"her, unless it be a Man that hath but one Wife. If a Woman commit Adultery,

"her Husband beats her out of his House, but if he takes her in the Act, it is law-

"ful for him to kill both. In the middle of the King's Tent stands a great Calabash

"full of Stones call'd Kebnutrah, cover'd with the corner of a Mat, which none

"dares approach without the King's leave, unless it be to smok the same with

"Tobacco, or to lay Venison or Honey before it.

It is also remarkable how the Sorcerers deal with their Sick; the aforesaid Jacob

Rabbi, an Eye-witness relates, That the King Draroug being extremly troubled

with pains in his Sides and Legs, and finding no help amongst his Sorcerers, who

pretended to be Physicians, went to the neighboring King of the Tapuans, where three

undertook to cure him, which they did after this manner: One of them blew To-
bacco-smoke on his Body, suck'd his Knees, roar'd like a Lyon, and after much

ado vomited a little Eel into his Hand, which he pretended had put the King so

much pain; whilst the second suck'd his Belly, and also roar'd exceedingly, and

vomited forth at last a Stone, on which appear'd a Rose; the third suck'd his left

Side, till he vomited something like a Root; after which the King is said imme-

diately to have recover'd.

There is but little Ceremony of Religion to be found amongst the Tapuans, only

they shew Reverence to the Seven-stars when the Fruits of the Field are ripe, after

this manner: First they spend three days in Dancing and Singing, then the Youths

prepare themselves to Fight with Lances and Clubs, tie tough Twigs about their

Legs, pour Honey on their Heads, tie their Hair behind in Knots after it is pow-
der'd with red Powder, Paint their Faces and Bodies with several Colours, stick a

long Feather in their Necks betwixt their Hair, and on their Heads set Garlands of

red Feathers pleated, down their Backs hang Bundles of Branches like Tails, and

have their Arms adorn'd with the Wings of the Bird Kofung; thus dree'd they

fight three days, at the end whereof the Conquerors shew great joy.

It deserves special observation what the Learned Gerard Vossius relates of them

from the Mouth of Christopher Arcifensky, a Polish Nobleman, famous for his heroick

Exploits for the United Netherlands in Brasile.

"The Tapuans (faith he) are a People that range up and down, never staying

long in one place, between Saro and Meraouthou, a vast Tract of Land, and go al-

most naked, having only a slight Covering about their Middle. When the Hol-
landers gave them Clothes, they admir'd the strange Fashions thereof, and after

two days return'd them again: In their Lips, Nostrils, Ears and Cheeks they

hung Ornamentals of Wood, Bones, Feathers, or Stones; a great Club, and a

strong Bowe made of hard Wood serve them for Arms; Gold and Silver they

eate'm not, wherefore they barter'd whole Chefts full (buried there by the Por-
tuguese and discover'd by them) with the Hollander's for Greyhounds: They judge

themselves to be better than other Man-eaters, because they eat not the Fleth of

their Enemies, but of their own Relations, and those neither kill'd in the Wars,
The Religion of the Tapuyans. Their fore-telling of things to come.

The Tapuyans acknowledge two Deities, the one good and the other bad; to the good they shew no Reverence, because, say they, he is bountiful of himself, and doth them no hurt; whereas on the contrary they zealously call upon their Devil-Deity, because they think he destroys all those who worship him not.

They never Travel nor go to War before they have consulted with their angry God, and that not without great Ceremonies; whereupon they ascribe to themselves the knowledge of future things; and indeed they often foretell future things which are beyond humane apprehension, as a testimony whereof that may serve which Sapo Amama, a Friesland Gentleman, found by experience: for he keeping Guard before Conchua with a Troop of Horse against the Portugueses, had several Tapuyans in his Service, who foretold, That the following day the Lieutenant Amama and a Trooper should be kill’d by a Shot from a great Gun; which, though flighted, was confirm’d by the exact fulfilling of the Prediction. The like Passages hapned daily, and amongst many Artifexsky relates one very remarkable Accident, viz. He remov’d a considerable number of Men out of the Garrison Rio Grande, to surprise the Spanish Fort Bara-Canium, and nothing could more promote the Design than secrecy; but fifty Tapuyans having joyn’d with the Hollanders, Artifexsky fear’d

"nor dying a natural Death; by which they pretend to express their exceeding love to the Deceased, who else would, say they, be eaten by the Worms and rot; wherefore they rather chuse to eat them, that they may receive the nourishment themselves.

The same Author relates also, That he saw a Tapuyans yield up the Ghost not far from the Castle Rio Grande, after which his nearest Relations taking the Body, wash’d the same, together with the Entrainls, and cutting the Corps into several pieces, roasted the same on a Spit, preferring the Fat that dropped from it in Pans, and eat the Flesh with a greedy Appetite. None were admitted to this Feast but his chief Relations; and that which they could not eat, as the Hair, Teeth, Nails, and Bones, they burnt to Ashes, which gathering up they mix’d with their Liquor till it was all drunk up.

The Tapuyans acknowledge two Deities, the one good and the other bad; to the good they shew no Reverence, because, say they, he is bountiful of himself, and doth them no hurt; whereas on the contrary they zealously call upon their Devil-Deity, because they think he destroys all those who worship him not.

They never travel nor go to War before they have consulted with their angry God, and that not without great Ceremonies; whereupon they ascribe to themselves the knowledge of future things; and indeed they often foretell future things which are beyond humane apprehension; as a testimony whereof that may serve which Sapo Amama, a Friesland Gentleman, found by experience: for he keeping Guard before Conchua with a Troop of Horse against the Portugueses, had several Tapuyans in his Service, who foretold, That the following day the Lieutenant Amama and a Trooper should be kill’d by a Shot from a great Gun; which, though flighted, was confirm’d by the exact fulfilling of the Prediction. The like Passages hapned daily, and amongst many Artifexsky relates one very remarkable Accident, viz. He remov’d a considerable number of Men out of the Garrison Rio Grande, to surprise the Spanish Fort Bara-Canium, and nothing could more promote the Design than secrecy; but fifty Tapuyans having joyn’d with the Hollanders, Artifexsky fear’d they
they might discover his Plot, wherefore he charg'd them that they should not stir a foot from his Company, which they accordingly promis'd, and having march'd three days through By-ways, they daily perform'd their Devotion in open view, and Arciflemky declar'd that they would call him when their Devil appear'd, which they granted, on promis that he should not do him any hurt: On the third day the Army being sufficiently refresh'd, he being call'd, found the Tapuyans sitting in a Semi-Circle, with their Feet spread alunder; opposite to them sat their Priest on the Ground, whom they ask'd concerning all manner of Affairs, and he question'd them again, on which they gave their several Answers, but could not be under-footh for want of Interpreters, for those whom the Hollanders us'd spoke only two Languages, one of which is us'd commonly by the Brasilians along the Sea-Coast, and the other by the Portuguese, in which they Interpreted to the Hollanders as much as possibly they could understand of what the Tapuyans said; whose Language differs very much from the vulgar Brasil Tongue, because they live up in the Inland, and are divided into divers Tribes, so that the Interpreters could not understand the Tapuyans, but judg'd their meaning more by nodding of the Head, and the like signs: after the Assembly had done speaking, the Priest rote up and went out of their sights into the Wood, where with a loud voice he call'd three times upon the Devil; but he not answering, the Priest return'd to his Company, who began their Questions and Answers after, which could not be understood by the Inter- preters, and soon after the Priest (seeming to be commanded by the rest) went again to the Wood, but calling still in vain, return'd, then going a third time, and calling as before, was by a small, but thrill Voice, answer'd from the middle of the Wood, from which the Tapuyans concluded that their Business would come to perfection, and that the Devil would soon appear to them: The Priest hereupon going backwards and forwards three times one after another to his Company, they began to talk as before; at last going into the Wood again, they all spoke louder, and with more vehemency than before, whilst the fore-mention'd thrill Voice approached nearer and nearer, and at last the supposed Demon came forth with the Priest, who commanded him to sit opposite to the Congregation, which had a great deal of Discourse, and sometimes the Priest speaking was answer'd by the Devil in his thrill Voice; but some of the People calling aloud, catch'd up their Arms, and threatened to bear the Devil, as they often us'd to do upon the like occasions. At the departure of the Demon, the Multitude conduct'd by the Priest into the Wood, cry'd out in so terrible a manner, that they affrighted the Holl- anders, who judg'd it rather to be Lyons and Tygers that roar'd than Men. During these Transactions, a German Soldier in the Rer quit'd his Arms and fled, but being mif'd was pursu'd, found in a Hedge, and laid Hold on as a Person suspetted to carry Advice to the Spaniards, and being brought before Arciflemky and Examined, gave such ridiculous Answers as increas'd the suspicion, insomuch that he was led to a Tree to be tortur'd; whereas he flood ty'd he solemnly declar'd, That the reason of his running away, was because he had not Pray'd in ten years, so that he was exceedingly afraid, left when he saw the Devil amongst the Tapuyans, he would have known him, and carry'd him away to the Place prepar'd for all such Wretches.

The Learned Gerard Vossius made a particular Enquiry after this Story, whether the Spirit's appearance were a Reality, or an Imposture; and the truth is it was no better than a Subtle Cheat, and so it was apprehended by Arciflemky, who not long after, on a convenient time, ask'd the Tapuyans why they feign'd him to be a Devil that was a Man, whom he had often seen before? which they denying, affirm'd
that it was a real Devil; but Arcisseusky knew their pretended Friend, who spake so thril by reason of a Grapeshade which he held in his Mouth. However, though the main of the Fable was acted by Man, yet the Devil without doubt played his part with them, as appear’d by those Predictions, which no Man could possibly know, viz. That the Portuguese Fort should with the loss but of three Men fall into the Hollander’s hands; for so accordingly it hapned. But because the Devil cannot foresee all things, therefore they often erre: for they said that the Hollander should cross the Moat on Boards nail’d together in head of a Bridge, and that the Enemy should not perceive it; and indeed Arcisseusky had resolved so to do, but was discover’d by the Portuguese, who defended themselves with great Guns, which so affrighted the Tapuyans, not us’d to such a noise, that they ran away and never return’d, so that by Morning the Fort was conquer’d, and all things quieted.

After this Arcisseusky burnt several Portuguese Ships in the River Mungoape, and kept one, carrying ten Demi-Culverins, laden with Sugar and Spanish Wine; which to carry to a Safe Harbor a short Way, he require’d the Tapuyan assistance; but they refuse’d to enter, pretending the Ship would perish by some or other unfortunate Accident, which accordingly hapned as they had said; for the Ship was split against a Rock in the Mouth of a narrow Haven, insomuch that nothing of it was saved; all which the Tapuyans knew beforehand by the Devil’s information, for they never go upon any Business of consequence before they have consulted with him, and done him worship. Yet, it seems, they cannot secure this Devil of theirs from the Stripes of a Mortal, as appears by this pleasant Story: A Tapuyan Priest was promis’d a Shirt from Arcisseusky, upon condition the Devil should pull the same out of his Hand and carry it up in the Air: The Tapuyan liking the Proposal, promis’d immediately to call the Devil; but when Arcisseusky depriv’d leave to drub him with a Stick which he had in his Hand, he could by no means persuade the Priest to call for his Demon; at which every one began to laugh: and to carry on the Mirth farther, Arcisseusky Joking with the Priest, said, I will show you that I am a greater Artist than you; for to Morrow I will bring it about by my Art, that great Horns shall grow on your Head, so big, that you shall not be able to pass these Doors, which so affrighted the Tapuyans, that all of them fled, only the Priest return’d the next day with an Interpreter to Arcisseusky, desiring him that he would give him mercifully, and not cause any Horns to grow on his Head.

At the time when Jacob Rabbi convers’d among the Tapuyans, they were Govern’d by Janduy, a Man of above a hundred years old, whose chief Seat was on each side of the River Ofchanguy, and round about the Lake Leung, in which none durst Swim, because of the many biting Fishes in the same.

The King Prigaba having entred into a strict League with Janduy, War’d continually against the Kings Aragos, Wanefusang, Tjering, and Dremenige; and had not the Portuguese taken the four laft into their Service to aid them against the Hollander, they could never have held out long against the Forces sent by Janduy, who destroy’d Man, Beast, and Horse, sparing nothing they met with; for they murder and destroy all things where er’ they come.

The several Nations that now poiffess Brasile, besides its native Inhabitants, are Portuguese, English, Hollander, Germans, and French, which the Brasilians by a general Name call Ajwujuba; otherwise they call all Strangers Carauiba or Pero. But from the commixing of several Nations proceeds a fifth fort, for one that is born of European Parents in Brasile is call’d Mozambique; of an European Father and Brasilian Mother, Manuela; of an European Father and a Moor, Mithoto; of a Brasilian and Moor, Curiboca, or Cabocles; of two Negro’s, Criolo. But above all others the Portuguese are the
The continual Wars which the Portuguese have maintain'd against the Brazilians, have hindered them from settling any where but along the Sea-side, where their Residences are divided into thirteen Prefidencies or Lordships, by them call'd Capitania's; the Southermost whereof being 1. St. Vincent, hath a City of the fame Denomination, which lies near a River that coming out of the Ocean runs round in the Countrey, and so returns into the Sea.

2. *Sancho los Leyes*; which reckons four hundred Houses and three Sugar-Mills. Here great Ships take in their Lading in the middle of the City.

3. *Fifianhaciu*, the most Southern, is inhabited by the Portuguese. Twelve Leagues from thence up into the Countrey the Jesuits have built the Village *St. Paulo*, near the Gold-Mines that lie in the Mountains, extending from East to West thirty Leagues. This Village, long since containing eighty Houses, is inhabited by Brazilians and a mix'd People; the Way thither is troublesome, over rough Mountains, and Ways overgrown with Brambles.

On the Island *Brigades*, at a sandy Inlet which makes a good Harbor, lies a Fort for defence of the Haven *St. Vincent*; and since the English, *Anno 1582.* sunk a Ship there, a second Fort hath been built to prevent the coming in up the River; yet notwithstanding Captains *Thomas Candifo* ran by both the Forts, and burnt St. Vincent, but sparing *Sancho*.

Before the River which washes St. Vincent, appears the Island *Sebastian*, pretty large, woody, and well flori'd with Venifon; it hath wholesome Water, good Heritage, and a secure Road for Ships against all Winds.

Farther into the Sea appears the high and rocky Isles *Acatracas*, as also *Villarico* des *Bastos*, Porto des Castilanos, Monte de Frigo, Muella, and Quimadas.

The Natives of St. Vincent, which are in League with the Portuguese, are call'd *Tapinokinia*, inhabiting the Mountains which extend above twenty eight Leagues up into the Countrey: They maintain continual Wars against the Caribs, a civilize'd People, and white of Complexion, as also against the Copia Imbar on the North,
and a nameless People bordering on Peru. Moreover, the Miranmundis, a very wild People, range all the Countrey over, but are much lessen'd since the Portugueses Arrival.

Sect. III.

Rio de Janeiro.

The second Lordship Rio de Janeiro, formerly by the French call'd Guanabara, was discover'd Anno 1515. by Juan Dias de Solís; but the French first Settled themselves here forty years after Dias de Solis: for setting Sail from Havre de Grace with three well Mann'd Ships, Commanded by Nicholas Durandus Villegagnon, they arriv'd at Rio Janeiro in November, and at the Entrance into the River, which is about half a League broad, built a woorden Fort of a hundred Foot long, and sixty broad, and giving it the Name of the French Admiral Coligni, put several Guns into the same to secure the Entrance, inclos'd on each side by two steep Mountains. In the River, which is very broad, lie several woody Isles, on one of which, near the Fort Coligni, Villegagnon Setling himself, suffer'd great Inconveniences for want of Water, because he durst not Land on the Main, for fear of being surpris'd by the Natives. Here he stay'd a year and a half in a deplorable Condition, when Philip Corquiileray and Du Pont set Sail with three Ships from the Haven Enfleurs; but they also, though they had many Men, yet were ill fort'd with Provisions, in so much that Hunger increas'd amongst them daily: wherefore Villegagnon return'd home without any farther Exploits.

Jean Leri, who went with Corquiileray, describes Rio Janeiro after this manner:

"The River (as ithe he) lies twenty three Degrees Southward of the Equinoctial Line; the Inlet of the Sea, twenty four thousand Paces broad, and in some places broader, is hemm'd in by hills; the Mouth of the Inlet is somewhat dangerous, by reason of three rocky Isles, beyond the large Bay is a narrow Channel, on the left-hand whereof there rives a high Mountain, which the French call'd Le Pot de Beure; because it resembles a Butter-pot. Somewhat farther lies the Rock Ratier, where Villegagnon thought to build a Fort, but the Water in stormy Weather washing over the Rock, he was forc'd to give over his Defign. Half a League farther is an Island a thousand Paces in length, and a hundred and fifty in breadth, surrounded with Rocks, on which the French resided: at each end of the Isle rives a Hill, and from the middle a Rock sixty Foot high; on the Hill Villegagnon pitch'd his Tent till he had built him a handsome House on a Rock; the other Houses were built in the Valley. Three Leagues and a half farther lies a fruitful Isle nine Miles in circumference, inhabited by a latter People call'd Ternobinambati: there are several other Isles, on which breed good Oysters with little Pearls, which stick so fast to great Stones, that they can scarce be pluckt off. The River Janeiro abounds with Fish.

The French once poiff'd this Island, but were dispoiff'd by Emanuel de Sa, Governor of Brasile, for the Portugueses.

The City Sebastia, which contains three hundred Houses, is built on the Southern Point of Janeiro, opposite to which, on the Northern Point, lies the Fort; a large Church, the Jesuits Clofet, and two Sugar-Mills, give no small luftre to the City, where the chief Trade consists in Brasile Wood and Cotton. The French Storm'd this Town Anno 1581. but march'd off without any Success. Dirk Ruiter, an Eye-witnefs, gives us this Description of Sebastia:

"The
Chap. VI.  

**AMERICA.**

The Town (says he) lies two Leagues up the River Janeiro, in a Bay, about which it is built like a Semi-Circle in a sandy Soil along the Water, and is about a Mile long; at each end rise steep Mountains, besides which it hath neither Walls nor Gates; but its strength consists of four Forts, the chiefst whereof stands towards the East on a Rock in the Mouth of the River; the second towards the West, an Ilse which on the South-East rises with a Mountain from a bling Sugar-Loaf: the third crowns a Rock South-East from the Town; and the fourth, in the North-West, a high Mountain. The Natives, call'd Tenapi, nambutis, are very serviceable to the Portuguse.

Besides the fore-mention'd Towns Calligni and St. Sebastian, some make mention of another in this Prefecture, call'd Angra de los Reyes, twelve Leagues distant from St. Sebastian Westward.

The Burroughs of the Natives are populous, but neither strong by Nature, nor fortified, and so not by any one thought worthy the naming.

**Sect. IV.**

**De Spirito Sancto.**

Next to Rio Janeiro lies the Lordship or County De Spirito Sancto, exceeding fruitful, having divers Woods abounding with Venison. The Rivers Parapora, Munangea, Irapameri, Irigitu, and Guarapari, are flor'd with all sorts of Fish, and amongst others the Fifth Tirapiapa, which in the Winter Month's lives in the Rivers, and against the Summer returns to the Rocks wash'd by the Ocean. This Fish hath a wide Mouth full of Teeth, a reddish Tongue, little Fins, except those on their Backs, divers colour'd Scales, yet most of a dark Red, and generally weighs fifty Pound.

Here is also the Fish Tarn, full of yellow Scales like Half-Moons over a black Skin; it hath long Fins near the Tail, and a little Head.

No less remarkable is the Guébucu, which hath a long Body, a sharp bone Snout, the upper Jaw reaching over the other, no Teeth, a Tail divided in the middle, sharp Fins on the Back, and a Skin full of Silver-colour'd Prickles. This Monster not only devours great Fishes, but also Men; when it is hungry it often runs its Snout through the side of a Ship.

But there is no Fish more deform'd than the Abacatagua, which being oval and flat, hath two long Fins underneath, and one on the top, a divided Tail, green Fins, a smooth Skin, and fiery Eyes; as soon as it is taken it cries like a Hog.

In this County stands a Town of the same Denomination, which contains two hundred Houses, a Sugar-Mill, and a Cloyfler of Jesuits, and drives a great Trade in Cotton and Brazil Wood. Before the City lies an Inlet full of Isles, the Mouth of which is guarded by a Castle. The Natives, call'd Maigias, are in League with the Portuguses, but the Tupayans and Apiapetangas do them all the mischief they can possibly; so that the Portuguse travel in great danger of their lives, when any Buffalos calls them, through the Countrey of these savage People. But besides these People, the Way is pester'd with strange wild Beasts, especially on the Mountain Myfia Atiario, which is seen at a great distance off at Sea; on which, amongst other Creatures, breeds the terrible Serpente Boignacu, whose length is generally twenty four Foot; it is of an Ash colour, with great and small black Spots, with a little white Speck in the middle; when hungry, it leaps out of the Hedges, or from the tops of Trees, raises it self upright on its Tail, and winding about either Man, Beast,
Beast, or what're it be, squeezes it to death, or puts its Tail, which ends in a sharp Point or Sting, in at the Fundament in such a manner, that it kills the Creature on which it feizeth in a moment, and then swallows it up. This Serpent hath strong Ribs inwardly, and more than seventy bonie Joyns; wherefore it turns itself with great ease; the Joyn-bones near the Head are the biggest, and grow smaller and smaller towards the Tail: it also feeds on Pifmires.

This County also breeds the Bird *Jabico-guaco*, which exceeds the Crane in big-ness, and hath a long thick Bill, but no Tongue; on his Head appears a white grify Creft or Mitre; the Wings and Tail are short, and the Feathers most of them white, except the Pinions, which shine like Rubies; their Flesh is of a good relift, but somewhat dry.

Near the River which washes the City *Spirito Sancto*, the *Paraibes* dwell in Huts, not unlike Ovens.

**Sect. V.**

**Porto Seguro.**

Next to the fore-mention'd County borders Porto Seguro, discover'd by Pedro Alvares Capradas, who gave this Countrey the Name of *Terra de Santa Cruz*, but afterwards chang'd it to Porto Seguro, because he found a secure Harbor there. The Town, built on the top of a white Rock, gives its Denomination to the whole Countrey, and harbor'd long since two hundred and twenty Families; and hath five Sugar-Mills. The Land on the North side of the Rock rifes high, but Southwardly a smooth Coast runs along the Ocean, from which two Leagues off at Sea lie several Cliffs, against which the Waves break with a great force.

The Towns Santa Cruz and Amaro are left desolate, because the Portuguese were continually Invaded by the salvage *Aymires*, whom they were not able by any means to reprefs.

Southward from Porto Seguro appear the Shoals Abrolhos, twenty fix Leagues from the Coast; they are of one breadth, but one is longer than the other.

On this Coast the Ship Batavia was cast away Anno 1629, which Accident is the more remarkable for the Murders committed by the Factor, Hieronymus Cornelizoon, who with some Confederates resolv'd to run away with the Ship, and to sail to some Spanish Haven, or Dunkirk, and to pilage the Netherland Vessels; but their Design was frustrated by the Ships running against the Abrolhos: Francis Pelsaert, chief Commander, first caus'd the Sick, with the Women and Children, to be put on an Island, or else on two Rocks about three Leagues distant from the place where the Ship lay, in which remain'd seventy Men, whom Pelsaert in vain endeavor'd to carry away; for the Sea was so rough that a Boat was not able to abide in the same, and also the Storm beginning to increase, beat the Ship more and more against the Sands, and the Seamen venturing towards the Isle on pieces of Timber, were some drown'd, others by the Waves, were driven ashore, amongst whom was Hieronymus Cornelizoon, who preferv'd his Life twenty-four hours on the Bottle, after the Ship was flav'd; but not terrify'd with such an Accident, he continu'd in his fore-mention'd Resolution. On one of the Cliffs were forty Perfons with eighty Cans of Water, but on the Island a hundred and eighty with much less; upon which Pelsaert, who when the Storm ceas'd, thought to have somewhat more out of his Wrack, was necessitated to fetch for fresh Water on one of the said Cliffs, but not finding enough, trimm'd up his Boat and got Sail homeward, from thence to
fetch a new supply of People: During which time Corneliszoon perform'd his Villainy; for he chose David of Zeevang, Gysbrecht Wilderen, Coenraad Huijsen, Cornelis Pieterson, Rutger Frederickzoon, and Hans Heiwerk, for his Assistants, besides several others, and destroy'd all the People on the Island, except five, who escap'd on pieces of Timber to the Rock where Weyber Hays refided with forty Men, who being inform'd what the aforesaid Villains had done, prepar'd for resistance with sharp-pointed Sticks, those People on the second Rock being also slain by Zeevang, who spared only some Women and seven Boys; after which Hieronymus Corneliszoon took Lucretia Fans for his Wife; in like manner Huijsen took Judith Seisfien ; the remaining Women serv'd the rest for Concubines. Not long after twenty of them going in Sloops, fell upon Weyber Hays, who valiantly resisted them: but because Hays's Life was of great consequence, by reason he might give notice of their Actions to the Ship which was expected from Holland, and which they design'd to run away with, therefore they renew'd their Assault with fifteen Men more, and were again beat off; wherefore they resolv'd to make a Peace, which Hieronymus Corneliszoon promis'd to ratifie the next day; nevertheless this Peace was but feigned, for under pretence thereof they deliver'd Letters to several French Soldiers that were under Hays's Command, promising each six thousand Guilders if they would joyn with them; but they shew'd the Letters to Hays, who keeping it secret, that he might draw on Hieronymus Corneliszoon, not mistrusting the Discovery, to come thither at the appointed time, took him Prifoner, and caus'd Zeevang, Huijsen, Wilderen, and Cornelis Pieterson to be put to death; but Wouter Los making his ecape, was cho'en chief of the Rebels, who ventur'd a fourth Assault, but returning without any effect left off making any farther Attempt. Mean while Pelsaert arriving with the Sardam Frigate from Holland, sent a Boat afoore, which by a little Skiff dispatch'd by Hays, was inform'd of all the Passages; whereupon the Boat returning, Pelsaert as he was putting himself into a posture of Defence, esp'y'd a Sloop coming about the Southern Point of the Island, in which were eleven of the Rebels clad in Scarlet with Silver Lace, which making directly towards the Ship, as soon
as they came up, were commanded to throw away their Arms over-board; which having done, and coming aboard the Frigate, they were all put in Irons, as also their remaining Party, and condemn'd to die.

Opposite to the Abralbos on the Main Coaft, a plain County extends itself thirty Leagues in length, inhabited by the Oneataces, a cruel People, who continually either destroy one another, or else make fad slaughters amongst their Neighbours.

The County Porto Seguro belongs to the Spanifh Duke of Aveiro, but is very much decay'd.

The Rivers Mowcrife, Caravelas, and Lucura, breed abundance of Water-Hogs call'd Cabybara, which have short Feet, Briftles and Ears, a thick Body and Head, with a bearded Snout, besides two Tusks, and twenty four fitter Teeth in each Jaw, but no Tail; they feed on Grafs and Buflhes in whole Herds on the Shore, and make a terrible noife; and though they cannot run faft, yet they dive and swim extraordinary quick.

The Tapirete also reSembles a Hog, efpecially in its Head and Feet, but is as big as a Heifer of six Moneths old, hath a Snout hanging over its under Lip, a Mouth full of Teeth, and on its Skin fhort and dark colour'd Hair. This Beafh is very libidinous, and in the Nights spoils the Fruit-Trees, efpecially the Sugar-Canes, but in the Day-time it fleeps in Thickets. The Flesh of a young Tapirete tastes like Beef.

Lafly, the Inhabitants of Porto Seguro are plentifully supply'd with Rabbets, and the more, because there being divers forts of them, (lome fay five) they are taken in great abundance, either in Traps, Snairs, or Gins, or by discovering their Holes; for the Hunters defoping the entrance of them, dig a Hole diretly over the place where the Coneys lodge, and fo kill them with long Pike-flaves in the Ground.

Of thefe five forts of Rabbets in Brasile, the chiefeft, call'd Pacca, hath a thick Head, little Ears, their fore-Feet bigger than their hind-Feet, foft, hard, and brown Hair, Speckled grey on the Sides, but no Tail: The Flesh of this fort of Rabbets is very delicate.

The second fort is the Tapoff, which being like a Hare amongst us, may as well be accounted of that kind.

The Aguti reSembles our Rabbets, onely it hath harsh brown Hair, round Ears, bald Feet, gruntes like a Hog, hath two Toes more on their hind-Legs than on the foremoft.

The Cavia Cobaya, though lefs than the European Rabbets, excell them in soft and divers-colour'd Hair, diftinguifh'd by white, red, and black Spots, their Head and Teeth reSemble thofe of a Rat, but it hath no Tail: No Rabbets can be made tamer than thefe, and if carry'd to any remote Countrey, breed as well there as in Brasile.

The laft of all is the Apera, which differs little in running from a Hare, as also in regard of the Head and Beard, harbors more in rent Cliffs than in sandy Ground.

The Soil of Porto Seguro bears two forts of Palm-Trees, viz. the Tucum and Ari, the Tucum hath small Boughs full of prickly Leaves, and a fruit not unlike the Damask Prune, hanging in Clufters of three or four hundred together; and being excellent Food to fatten Hogs and Apes; alfo when prefs'd yielding a clear Oyl, which is highly esteem'd: the Fruit when ripe grows black without, and, within hath a white Kernel: of the Leaves the Brasilians spin fine and Strong Thread.
The *Ari* grows much higher than the *Tucum*, and hath also longer leaves, a body full of sharp thorns, and a round fruit full of white and oily pulp, but not eatable; the wood hard, heavy and black, sinks in the water, and the *Brazilian* make their clubs of the same.

Along the rivers fly the birds *Cocoi*, resembling herons, though in beauty they far exceed them; they have but little flesh, long sharp bills, of a yellowish green colour, and curious crests of feathers on their heads, which fall back over their necks; their flesh when young is delicate.

**Sect. VI.**

**Los Ilies.**

Next *Porto Seguro* borders the Countrey *Los Ilies*, so call'd from its chief town, which consists of a hundred and fifty houses, (or perhaps by this time many more) eight sugar-mills, a cloyster for the *Jesuits*; and a church. The inhabitants live by tillage, and transporting of provisions in little barks to *Pernambuco*.

Seven leagues farther in the countrey, beyond the town of *Ilies*, lies a nameless lake three leagues long, as many broad, and above ten fathom deep, and full of the *Fish Manati*, which are very large and well rafted, besides abundance of crocodiles; and in windy weather the water is as rough as if it were in the ocean. Out of this lake flows a river by a passage so narrow, that a boat can scarce pass through the same.

Round about this river live the *Guaymures*, the most savage people of all America; they are of a gigantick size, have white skins, carry exceeding great bowes and arrows, live without houses like beasts, devour man's flesh like tygers, never fight in companies or armies, but watch to surprize a single man or beast; they also eat their own children, and poss'd formerly all the land from the river...
AMERICA.

St. Francisco to the Promontory Frio, but beaten from thence by the Tzapinambas and Tzapinachas, they went to the County Los Ijlos, which they Invaded in such a manner, that the Portuguafewere not onely forc'd to leave several Sugar-Mills, but also the whole Country.

Sect. VII.

Bahia de Todos los Santos.

Next to Ijlos borders Bahia de Todos los Santos, belonging to the Portuguafes. The Inlet which borrows its Denomination from all the Saints, gives Name to this eminent County. The Bay great and wide, and in the middle from twelve to eighteen Fathom deep, lies in thirteen Degrees Southward of the Equinoctial Line. The Coast rises white along the Sea side. The Current according to the Course of the Sun runs six Moneths towards the South, and as many towards the North. The opening of the Inlet is on the South, but it flows up Northerly, and contains two Leagues and a half in breadth; several fresh Rivers discharge their Waters into the same: The utmost and biggest Island Taperica breaks off the Waves which come rowling in from the Ocean. Those that Sail into the same must have the Island on their left Hand, and the Main Coast on their right, which is known by a Promontory, on which the Fort Antonio, and the old City Villa Veja are built, near a little Bay with a Foreland on the North, from which the Main Coast circling like a Half-Moon ends near the Point Tapajipe, which juts out from Bahia Todos los Santos. The Castle Tapajipe stands on the utmost Point, where the Country winding towards the East makes the Inlet larger, from whence a narrow Channel runs up into the Country, and there makes a Lake which extends North and South: from the Mouth of the Lake the Coast reaches Northward to the River Pitanga, which comes gliding out of the Eaft, and in its Passage receives several Streams, on whose Banks stand divers Sugar-Mills. From Pitanga the Coast extends a League Northward, then Wetherly with a crooked Elbow, in whose circumference lie two nameless Ijles close under the Shore; this Elbow ends in a blunt Point, about half a League from which lies the Island Mare, a League long, in the Mouth of the River Pitanga. To the Northward from hence a River disembogues in the said Inlet. More Southerly appears Monk's-Ijle, from whence the Coast extends itself Northerly, where several Islands appear at an exact distance from the Coast; the first beyond the fore-mention'd blunt Point, is Birapehara; the next, which lies closer to the Shore, Porto Madera; next comes in view a long Island in the Mouth of a River, from whence the Country extends Wetherward, and fronts the Island De Fuentes, as doth also the River Tamboria, which comes out of the North, but empties itself with a crooked Arm near the rest, from hence the Coast with two little Bays runs North-West to the Stream Gereipe, in whose Mouth, which is pretty large, appear three Islands on a row, the utmost whereof is called Caraibe, the middlemost Pycca, the innermost hath no Name, but divides the River into two Channels; from hence the Coast bends with several Inlets, into which fall divers Rivulets towards the South, from the River Cachorra, full of little Ijles, opposite to which stand several Sugar-Mills. Against Cachorra appears the Island Meye, and more Southerly Taperica, between the sharp Point Tapajipe and the Castle Antonio. Near the fore-mention'd the City St. Salvador was built by Thomas de Seda, who weighing Anchor from Lisbon, Anno 1549. Landed safely near Villa Veja, and about half a League from thence pitch'd upon a Hill, and took order forthwith
forthwith for the erecting of his new City there, giving to each of his Followers a place to build on: the Jefuits chose the large Plain where at present stands the Church Confecrated to the Virgin Mary; the Names of the said Jefuits were Juan Azpiluceta, Antonio Pires, Leonardo Nunnio, Didaco Jacobo, Vincentio Rodriguez, and Emanuel Nobrega; whilst the common People set themselves to the building of Dwelling-houses: But when John the Third, King of Portugal, lent a Brief either to Teach in the new Church of Maria, the fore-mention'd Jefuits remov'd from thence to a high Hill, which they call'd The Mountain Calvarien, whither divers Brasilians came flocking, and pitch'd their Tents about the Cloyfter, admiring their strange Neighbours.

When Sofia Landed on the fore-mention'd Shore, the Portuguese had but little footing on America, for their Plantations at Isles, St. Vincent, Pernambuco, Villa Veja, Itamarica, and Porto Seguro, discover'd by Pedro Alvares Cabralis, Anno 1500. were run all to ruine.

Befide the City St. Salvator and the decay'd Town Villa Veja, the City Paraip lies three Leagues farther into the Country, containing of three thousand Families, and eighteen Sugar-Mills: The Country the same produces plenty of Cotton.

The Island Taperica, which is pretty large, hath a fertile Soil for the production of Tobacco, and Grains to fatten Cattel: The Inhabitants boyl much Train-Oyl of the Whales, which come ahore there in considerable numbers.

Twelve Leagues Southward from St. Salvator appears the Village Cacocheira, formerly belonging to a rich Portuguese, who took great pains in reforming the Salvage People Gnaymures to a civil Life; but seeing he profited but little, he caus'd great Companies of them to be remov'd to Taperica, that they might do less mischief, where the unfault and unwholesom airs kill'd them all in a short time.

The Lordship Babia hath abundance of Sugar-Mills, which are either turn'd by the Water, or drawn by Oxen.

The Sugar-Canes, by the Brasilians call'd Vida or Tumarares grow better in a clayie and fat Soil, over which the Rivers flowing leave their Muds, than on High-lands, Hills, or Mountains; they are Planted after this manner: They first plough their Fields, weed them, and make Holes at an exact distance one from the other, into which they plant their Canes in such a manner, that the tops touch one another. The Holes before mention'd require more Earth to fill them in Summer than in Winter, that the violent Heat of the Sun may not dry up the Root, and that the Rain may the freelier come at them to moisten them, for the more moisture they have, the better they grow; they attain to their full ripeness in ten, or at most in twelve Moneths: Februay and March being the two last Winter Moneths, are account'd the best to Plant in, because the Earth soifted by Rains, suffer's the Root to shoot forth the better. The ripe Canes being cut off, are left in the Field till the following Year; during which time new Canes growing, are often ground in the Mill with the old ones; but if they stand two years, then the sweet Liquor dries up, and the Cane withers. The young Plants carefully planted in good Ground may last forty, nay fifty years; but in a barren Soil they let new every five years. Sometimes in great Droughts and extraordinary hot Seasons, the Canes are colour'd to nothing, which being burnt in the Winter, the Ashes serve to Dung the Ground; and so in like manner when the Water, overflowing the Fields, drowns the young Plants. In moist Grounds the black-wing'd Worm, call'd Guirapeacopa, (by the Portuguese nam'd Pao de Galeuba) gnaws the Roots in such a manner, that the Canes die; and sometimes it happens also that the Weeds chock the young Plants,
wherefore the Ground is to be weeded four times a year, till such time as the Canes are strong enough to bear against the Weeds: they cut off the ripe Canes at the lowermost joint, and, all the Leaves being first pull’d off, tie them up in Bundles, and bring them to the Mills, which consist of three great Iron Bars, between which the Canes are squeeze’d. The Water-Mills are turn’d by the force of the Water, which in great Gutters led from high Mountains falls with exceeding force into Pools made for that purpose; after which manner, though they wind the Canes much faster, yet they get not so much Sugar as when they grind them in the Mills turn’d by Cartel: The places through which the Juice runs must be cleans’d twice in twenty four hours; the Canes put in behind between the first Bar, are turn’d into the second, and thence into the third, which successively squeezes out all the remaining Juice: The Canes thus press’d, serve for Fewel to burn; but they constantly keep such a great Fire both Night and Day, that besides those press’d Canes, they burn forty Fathom of Wood in twenty four hours, in the whole Woods are consumed in a short time: The Liquor, nam’d Caldo, runs along the wooden Gutters into great Kettles, in which it is boyl’d, but if it happen to be over-boyl’d they put Water amongst it, whereby it becomes excellent Food for Horses; then they put the Liquor into a second Kettle, where it is boyl’d afresh, and also scumm’d; and for the better cleansing of it, Lime-Juice and other things are put amongst it; then they strain it through Clothes, and give the Drofs which remains in the fame to the Slaves, which work for half a year together Night and Day like Horses. The Drofs mix’d with Water makes also good Wine. Out of the great Kettles, by the Portuguese call’d Caldero de Meiar, the Caldo runs into the lesser nam’d Tachus, where it is boyl’d a third time, and continually stirr’d till it comes to be thick like Syrup, and at last to the consistence of Sugar: it may be accounted amongst the Mysteries of Nature, that while the Sugar boysl in the Tachus, which are the little Kettles, they must drop Oyl amongst the Liquor, which if they should do, whilst it is in the great Kettel, the Liquor would not turn to the consistence of Sugar: as on the contrary, if they should put their Lye into the little Kettles as they do...
do into the great, the Liquor would be quite spoil’d. In their boiling-houses stand several hundreds of Earthen Pots one by another on Planks full of Holes; which Pots they cover with moist clay, and after fourteen days knocking it out of the Pots, they separate the brown Sugar from the white, both which are laid to dry in the Sun, and put into Chests.

S E C T. VIII.

Pernambuco.

Northward from Cabo de Todos los Santos lie Pernambuco, which extends along the Coast above seventy Leagues, between the River St. Francis and the Countrey of Hamaraca.

Pernambuco, which signifies Hell’s Mouth, is on the East wall’d by the Northern Ocean; in which grows a Weed much like an Oak Leaf, and so thick, that unless it be cut to make their Way, impedes the Sailing of Ships.

The Sea is also very full of Fish, which in calm Weather are visible sixty Fathom deep, and are taken in greater abundance than they are able to spend; for they no sooner let down a Bait, cover’d with Feathers and Tallow, but the Fish immediately swallowing the same, are taken.

Here are in the first place abundance of Hays, a Fish so rank and oily, that they are not eatable, but their Brains are accounted good against the Stone.

There are also hereabouts a sort of flying Fish like Herring, but not so big; they have Wings like Bats, which carry them above Water whilst they are wet; they swim in shoals, and are chafed by all other Fishes, which endeavoring to escape by flight out of the Water, they become a prey to the Sea-pies.

The Sea-Breams are as well tafted as the flying Fish; the Mariners cover them in Salt, or stuff them within full of Salt and Pepper, and so hang them to dry in the Sun.

Pernambuco is self lying in five Degrees Southward from the Equinox, produces abundance of Brasil Wood and Sugar-Canes, which last is no proper Brasilian Plant, for the first Plants thereof were by the Portuguese first transplanted thither from the Canary Islands.

This Countrey was first discover’d by Americus Vesputius, who being sent thither by Emanuel, King of Portugal, to discover the Coast between the Promontory before Olinda and the Island Iamaraca, and finding a Split Rock and some Brasilian Huts, landed, and ask’d the Denomination of the Coast, which he was inform’d was call’d Pernambuco, which he found full of steep Mountains, inaccessible Woods, and in some places Plains and pleasant Valleys; but the chiefest thing he could find to lade his Ship with, was Brasil Wood; but being inform’d that the Soil would bear Sugar-Canes, he caus’d Canary Sugar-Plants to be Set there.

Olinda, formerly the chief City of Pernambuco, had (according to Lopez) above three thousand Houses and seventy Sugar-Mills: It is built on several Hills, which on the North-side are steep and overgrown with Brambles, betwixt which in many places grow Orange-Trees. John Newhof, who arriv’d at Olinda Anno 1642, found a few Netherlanders and Spaniards there, who dwelt in the ruin’d Houses. The Land-side of the City is strengthened by Hills overgrown with Brambles and Thorns, and towards the Sea-side with Earthen Walls, fortify’d by fourteen Bulwarks and a Stone Castle, able to withstand a considerable force: The Out-works towards the South were maintain’d by few, who from the fore-mention’d Hills could.
could see not only a great way into the Ocean, but also the River Biberí, which hath a Stone Bridge leading to the City, and Northerly and Westward the Way lies through great Woods and Forests. Olinda itself is divided into twenty seven large Streets, besides lesser Lanes and several Avenues, and five chief Churches, viz. Misericordia, Nossa Senhora del Esparo, and Nossa Senhora de Guadalupe, San Salvador, and San Pedro, besides two others of lesser note. On the highest Hill stands the Jesuits Cloyflet, built square and high, and surrounded with Walls, on which Segu- lish King of Portugal, by the periwiration of his Uncle Cardinal Henry, spent a great sum of Money, and endow'd it with annual Revenues, Anno 1571. The Capuchins also built a stately Cloyflet towards the East. The Franciscans moreover inhabited a magnificent Building, near which flood the Governor's Palace. The Vanmelites had also a stately Edifice, whose former lufure still appears by the Ruines, where now Cattel graze; from the Hills about which may be exactly discern'd Recifà, the Promontory of St. Augufine, and the Castle before the Road of Recifâ: Along the Shore flood the Dominical Cloyflet, and in the upper part of the City the Minfter, Confecrated to St. Beno, exceeding strong both by Nature and Art; near which flood Conceptio de nifta Senova. The Fort Juan de Albuquerque flood on the South- side, from whence a Way leads you along the Shore to Recifâ, where hard by the Potter's Houfe flood a Beacon. But since Olinda fell into the hands of the Nether- land East-India Company, they built a strong Fortres on the North near the Sea- side, where formerly a great Trade was driven with Sugar, inomuch that forty Ships have been freighted in a day therewith from Olinda, and still as much more remain'd in the Store-houses. The Sugar cannot be made without the help of African Slaves, and that in great numbers; for Angola alone provided fifteen thousand four hundred and thirty Moors for the Sugar-Mills about Olinda.

In the Years 1601, 1602, and 1623, there was sent to surprize this City Henrick Lonque, who a little before with Peter Petterszen Hein took the Spanish Plate-Fleet, and brought it away from Matanca. In the middle of June, Anno 1629. Lonque weighed Anchor from the Gomes Road, and between great Canary and Teneriff he was Engag'd (having but eight Sail) with forty Spanish Ships, Commanded by Fre- derick de Toledo, fought his way through the midst of them, and near St. Vincent (the rest of his Fleet come up to him, which in all made up twenty seven) he stay'd for a farther promis'd Supply of Ships to affift him, and the longer, because the Men rais'd by the Netherland West-India Company were taken into the States Ser- vice, to oppose the Spanish and Imperial Forces, who at that time had gain'd some advantage upon them: But not long after Harzogen-buch being taken by the Hol- landers, the rest of the expected Fleet, with the promis'd Aid, arriv'd at St. Vincent, from whence Lonque, after four Moneths stay, let Sail with these additional Forces, his Fleet then confifting of fifty Sail of Ships, which carry'd above seven thousand Soldiers, besides Seamen; but he was forc'd to lie a considerable time under the Line, being either become or beaten back by contrary Winds, inomuch that many of his Men perished, or were disabled with the Scurvy: At last his Fleet being come to an Anchor upon the Coast of Pernambuco, the first that Landed about two Leagues Northward of Olinda, was Colonel Diederick van Wardeenberg, who by Day- break divided his Men into three Divisions, the Forlorn-Hope confifting of nine hundred and thirty four Men, march'd towards Olinda along the Shore, led by Adolf van der Eltz; the second being a thousand and forty nine, by Stein Caltenfels; the third, confiftling of nine hundred and fifty five, was led by Fonde Edent; thus drawn out, and marching on, they met with no refistance till they came to the River Dolce, where eight hundred Portugufe Charg'd on them from behind a new Sconce; but
but Warenden wading up to the Middle through the River with two Field-Pieces, the Enemy left his Works and ran into the Wood; the Forlorn-Hope approaching the City, march’d up towards the right side, up a Way through the Woods, Seal’d the Walls, near which the Jesuits Clody fill flood, over which he got after some resistance. The second Party march’d in a narrow Path along the Shore, and broke into the City between the Franciscans and Jesuits Clody, towards the Cathedral Salvador, from whence they discharged several Guns, as also from the Castle, which they had taken, whilst Fonque Hont’s Storm’d the Battlements towards the South; but Stein Callesfels and Eliz being already Masters of Olinda, the Defendants surrendered all. Mean while the Colonel’s Skiff brought five hundred Men more ahaore, with which he march’d without any hinderance into the City, where the Conquerors, want with excessive Heat and want of Water, found but little Booty, because the Inhabitants having notice of the Hollanders coming, had convey’d all their Goods and Wealth to Recifá, which the Governor Matthias Albuquerque (Brother to the Lord Duarte Albuquerque, to whom Pernambuco properly belong’d) burnt with all the Store-houses, partly out of revenge to the Inhabitants, who fled contrary to his Commands; and partly because he would not enrich the Hollanders. The Portuguese Captain, Correa de Cafel Blanco, in his Letter to the King of Spain, values the loss at twenty thousand thousand Ducats. But still the Portuguese had possession of several Forts about the Country, whereof the most considerable was St. George, whither Stein Callesfels march’d in the Night with six hundred Men; but his Ladders being too short, and the Hand-Granado’s not easily taking fire, he was forc’d to Retreat; whereupon judging it most convenient to besiege the Castle, he digg’d Trenches about the same; nor was it long ere the Besieged dec’d Quarter, which being granted, they march’d from thence with ninety Men. The Water Castle surrendering in like manner, they found fifteen Brass Guns therein; and in that of St. George four thousand pound of Gun-powder, and twenty four Iron Guns.

When the Netherland Forces Länded on Pernambuco, the Portuguese inhabited eleven Towns, the chiefest whereof being Olinda, was generally Garrison’d by four Companies of Armed Citizens, each containing a hundred Men and three Companies of Soldiers; amongst the Citizens were two hundred Merchants, some of whom were judg’d to be worth fifty thousand Crujados.

Southward from Olinda, between the River Biberibe and the Ocean, was a narrow Cafleway, at the end of which lay the populous Village Recifá, where the Ships lade and unlade. About the middle of the Cliff, being a League long, is the Anchoring place for great Ships, called Pozo. At the end of the fore-mention’d Cafleway against Pozo, appear’d a round Tower of Fire-stone.

The Journal, kept by the English Fleet that came hither under the Command of Captain James Lancaster, Anno 1595, makes mention of a Fort which lay at the Mouth of the Haven before Recifá, which the English valiantly Storm’d, notwithstanding six hundred Men and seven Brass Guns might easily have made it invincible: But they conquering the same, march’d up to Olinda, took the Suburb, consisting of a hundred Houses, without any resistance, as also a great Booty, and the greater, because the Goods of a rich Carak which had some few days before suffer’d Shipwrack, were kept there; they also took fifteen laden Ships, and for thirty days kept the whole Country about Olinda reflesis with continual Alarms. Since this Invasion the Portuguese built a third Fort on Recifá, so that the Ships must pass in between two Forts, where the Channel is also full of Rocks, and consequently the more dangerous.

From Recifá the Goods are sent in Barques or Lighters to Olinda, between which and
and St. Salvador run the two great Rivers Francisco and Real, the first whereof retains its freethird twenty Leagues into the Ocean.

Along the River Potinga stand many Sugar-Mills; and five Leagues farther Northward beyond Olinda the Portuguezse inhabit their Villages, viz. Garaju, Recifia, Moribeça, Antonio de Cabo, Miguel de Poyuca, Gonfalto de Hua, Poyuca de Porto Calvo, Alagoa de Nort, and Alagoa del Zur, besides other Brazilian Hamlets, and above seventy Sugar-Mills.

The County of Pernambuco hath for the most part a good Soil, several Plains, low Hills, and fruitful Valleys, abounding with fair Caneis, which also grow on the Mountains Masurpe, Zebatan, Poyuca, and Moribeças.

The Wilds of El Gran Matao, afford the best Wood, with which they drive the greatest Trade in the Village Laurencio. Whilf't Matthias Alboquerque Intrench'd himself a League and a half Westward from Olinda, by the Sugar-Mills belonging to Francisco Montero, with a hundred Portuguezse, and three times as many Armed Brazilians, Lonque finding that he could not long keep the City Olinda against the Enemy, caus'd the same to be pull'd down and burnt.

Between the Rivers Francisco and Real, lies the Town Sergippe del Rey, up in the Countrey near a small Rivuler, which at Spring-Tydes hath fourteen Foot Water. The Woods round about feed wild Catell, and the Mountains contain Mines of Gold and Silver.

The first Plantation in Brazil was in the Island Itamaraca, three Leagues long and two broad, but extends its Jurisdiction along the Main Coaft, from which it is separated by a narrow River, which runs betwixt both thirty five Leagues. The Countrey is eminent for twenty Sugar-Mills, and abundance of Brazil Wood.

The chief Town of this Island is call'd Villa de Conception near the Sea, which round about the Island is full of Rocks. The French settling themselves here at first, were driven from thence by the Portuguezse. The Town it self, built on a Rock, hath a strong Castle on the one side, erected near a shrubby Moor; to the Northward of which Stein Callenfels found a little Isle, scarce a Musquet-shot long, which at High-water is overflowed, and being full of small Trees makes a Receptacle for Sea-Fowl, which flock thither about five a Clock in the Evening to Roost on the Boughs, from which, when once settled to take their repose, they will not stir till six of the Clock the next Morning, though you discharge Guns at them all Night; but since Stein Callenfels cut down the Wood to make Pallisado's for the new Fort against the Town Conception, they were never seen afterwards.

Sect. IX.

Parayba.

Northward from Itamaraca borders the County of Parayba, whence the French Ships carry'd yearly several Ladings of Brazil Wood, till Anno 1585, the Portuguezse General Martin Leytan drove them from all places, since when they never recover'd any part thereof.

This Territory of Parayba borrows its Denomination from the chief Town, lying five Leagues from the North Sea near the River Parayba, which in the Summer Season hath but little Water, but in the Winter Season increases to that height, that it oftentimes on a sudden overflowing the Countrey sweeps away both People, Castell, and Houses. The City it self, though small, yet hath several fair Buildings, amongst which three Churches and as many Cloysters, inhabited by Francı̈s.
Francois, Carmelites, and Benedictins, are none of the meanest. The Countrey thereabouts indifferently fruitful, hath twenty Sugar-Mills. The Mountain Copagnon, formerly very populous with Natives, being exceeding fertile, produces all manner of Fruit; as present it lies defolate, the Brazilians being all destroy’d by the Portuguese. These Mountains produce also curious green Stones, which the Inhabitants wore in their Lips for an Ornament, and which also cures the Gaping of the Guts, by being laid upon the Belly.

The French under the Command of Captain Dourmiger, discover’d ninety years ago the Silver-Mine Copahoa, and for a considerable time carry’d Silver and Brazil in Wood from hence, till the Portuguese made themselves absolute Masters.

Moreover, on the North-side of Parayba, the Salvages call’d Petignars inhabit sixteen Villages.

Amongst the Birds of prey which breed here, are the Ouryassou, twice as big as a Crane, with curious Feathers, and so bold and strong, that it devours not only Sheep, but Deer and Men. The bird Mayton is no way inferior in beauty to the Peacock, his whole Body being cover’d with white and black Feathers; on his Head grows a Tuft; the Flesh is also very pleasant to the taste.

The Tousan, another Bird, resembles a Turtle-Dove in all parts, except the Bill and Breast; for the Body is ten Inches long and three broad, the Breast of an Orange colour, mix’d with Crimson Spots; the remaining part is white, the Back red, and the Tail and Wings Coal-black.

The Plant call’d Tarammacaron deserves also a peculiar observation, viz. It is the Plane thickest than a Man’s Thigh, grows twelve Foot high, with three Branches of equal length and thickness, which you may easily break; it is green without, white within, and without Leaves, leaving red Blossoms streak’d with blue, from whence grows a Fruit about the bigness of an Apple, crimson without and white within, and tasting like a Mulberry.

The River Parayba produces amongst many other Fishes the Goura-tereba, which hath a thick Body, flat Head, crooked Back, split Tail, and triangular Scales, which laid in the Sun, shine like polished Gold.

The Sea also hereabouts affords a strange Fish with a very long and thin Tail, the Females whereof Lay every day Eggs like Hens: they are full of poysonous Prickles, and divided into several sorts, amongst which the chiefest are accounted the Nadinari and Jabebara.

The Sea-Coast of Brazil from St. Vincent to Spiritus Santo appears as followeth:

Before the Coast of St. Vincent lie the four little Isles Queimadas, and on one side the Atractoles and Bujios; East North-East from which bears the Island Sebastion: Before the Inlet Ubatuba lies the Ile Das Porcos, close under a high Shore, where the Haven runs far up in the Countrey. Fourteen’ Leagues farther the Island Grande, for’d with fresh Water, with Fish-ponds, Woods, and two good Havens. Before the Road of Garatuba appear several broken Isles, the chiefest whereof is Moramboga. The Ships Sailing along the Brazilian Coast view next the Mouth of the wide River Jenero, without fear of Rocks or Shoals. Moreover, a sandy Ground extends from the Western Point to Cape Frio, which riffs out of the Sea like a Rock, with white Streaks, and crack’d on the top, between both which the high Island before Frio makes a safe Harbor. Nine Leagues beyond Frio to the Northward, St. Salvador opens a large Bay, hemm’d in on the South by divers nameless Isles. Lastly, the several Salt-pans along this Coast are very remarkable, as also the Promontory

St. Thomas
St. Thomae and Parayva, the Inlets Mananga and Itapemeri, and the River Guaranapi, famous for the Mountain Pero Cam, towards the North, and Guapé to the South.

The Island Salvago, round and mountainous, lies before the Mouth of the River Guaranapi, where the Main Coast grows uneven and hilly. On the North-East Point of Spiritu Santo a long ridge of Rocks appears above the Sea; and near the Inlet rises three black Hills on the South, and two Leagues up in the Country the broken Mountain Mejico Avaro, which extends along the Sea-Coast. The River Das Rios Magos compasses three Mountains severally, and makes three Illes. The Coast on each side of the River Dolce is very plain and even, but the River Cumarí hath a mixture of high and low Lands. In the Mouth of the River Maranpe lies a great company of white Shelves near together, appearing afar off as if all one. Paraípe is remarkable by the high Trees growing on it. The Mouth of the River Capivilas lies full of Sand-places. Near the Beacon Tauban rises a red Cliff from which a sandy Point reaches to the River Curnabò. Before Porto Seguro lie several dangerous Rocks in the Sea, to the Southward of which rises the High-land Cape Patfual. Not far from hence Santa Cuneg, a good Haven for small Vessels, from whence the Coast extends North North-East, and South South-West, to Río Grande, where the Shoals call'd Baxos de St. Antonio, making a dangerous Entrance, force the Ships for the most part to keep three Leagues from the Shore. Beyond the Arm of Río Grande appear three high Mountains cover'd with Trees; from whence to Ilheos is a safe Passage free from Shelves. Eight Leagues farther, the River Dos Contas runs between two broken Cliffs into the Sea: in the Mouth of it rises a Rock resembling a high Island. Between Ilheos and Contas the Coast rises also; but falls low again in a Bay, where white Sugar-Mills, formerly belonging to Lucas Giraldez, are seen at a great distance. The Country on each side of the River Camamu is plain; the Stream itself hath a wide Mouth, and respects its Northern Shore the Ille Coypa, dangerous for the many Shelves which are about the same. The River Timbaré is known by the Mountain Morro de Santo Paulo, which rises like a Galley on the Southern Shore. Twelve Leagues farther opens the Bay of Todos los Santos, on whole Eastern Point stands the Castle Antonio, and before the Northern Shore the Island Tapiam, to the East and South-East low and strong. The River Das Pedras falls with a wide Mouth into the Ocean. Next you pass by the Streams Tapicur, Real Vafa-baris and Francisco, known by a low Promontory. The Rivers Miguel, Antonio, Camaracili, Porto Caibo, Formoso, and Serinhaem, disembed some also into the Sea. Next the Stream Das Pedras rises the Promontory St. Augustine, all overgrown with Bushes and Brambles. Five Leagues Southward lies the small Isle Aceso. The Coast from St. Augustine to Pernambuco extends North and by East, and South and by West. The Island Tamaraoa lies in the Mouth of the Stream Gajana; and fifteen Leagues farther appears Paragba, between which two the Shelf Pedra Furada extends three Leagues along the Coast, and another from the Shore of the Promontory Blaico, where the Road Porto de Franfes affords Seamen secure Anchorage for Shipping. Next to Paragba follow the Havens Treceano, Pipa, and Bafios, the Stream Siara and Maraguan, which washes the Western part of Braflile, and is taken for the Boundary between the Spanish Indies and the Portuguefes, according to the Division by Pope Alexander the Sixth, Anno 1502. Lastly, there belongs to Braflile the Island Fernando de Noronha, in three Degrees of Southern Latitude. The Capuchin, Claude de Abbeville, going thither, found the same to be six Leagues in circumference, and extraordinary fruitful; besides good fresh Water, Peafe, Beans, Maiz, Potato's, Melons, Cotton, Cattel, wild Goats, and all forts of Poultrie, which this Island affords: but it chiefly abounds with great variety of a fort of Birds which suffer themselves
Chap. VII.  

**A M E R I C A.**

to be caught with the Hand. There grows likewise a namelefs Tree, not unlike the Laurel, being of a strange Nature, for who e’er touches the Leaves, and afterwards rubs his Eyes, lothes his Sight for four hours, with exceeding pain; which pain nevertheless another Tree growing in the same Island cures immediately. The French, who Landed on Noronho Anno 1613. found a Portugefe there, with eighteen Brazilians, Men, Women, and Children, banifhed thither from Pernambuco, whom Baptizing, they carry’d to Maragnan. Near Noronho lies the Ile De Feu.

**S e c t. X.**  

Maragnan.

Maragnan, forty five Leagues in circumference, lies in two Degrees of Southern Latitude, and a considerable distance from the Bay, which appears between the Rivers Aperega and Comajunu.

The Eastern Entrance into this Bay hath before the Promontory Arbres Secs, the Isle St. Anna, by the Brazilians call’d Ilpaonmiri.

Opposite to Maragnan, about half way from the said Inlet, fall three Rivers into the Sea, the most Easterly call’d Monim, hath a Mouth a Mile wide, and discharges its Water into the Sea; the middlemost Taboucowon, is five hundred Leagues long, and ends with two Mouths, half a League distant one from the other; the most Wasterly, call’d Miary, is about six Leagues broad, so falling into the Sea.

The Stream Maracon falls into the Pinare, and thus united they joyn both with the Miary, which runs exceeding swift into the Sea.

Between the Capes Arbres Secs and De la Tortue, the Coast lies full of sandy Banks, some of which extend a League into the Ocean.

On the other side of the Promontory Tapoutapere near Maragnan, towards the River Amazones, lie so many Isles along the Sea-Shore, that no Ship is able to approach the same, because the Spaces between the Isles are overgrown with Trees call’d Apparitiures, whose Boughs shooting down and rooting in the Sea, produce other Trees, which grow so close together, that they seem one entire Tree with many Branches. Besides this Inconvenience there is abundance of drift Sand when the Wind fits from the Shore, which oftentimes swallows the Ships which lie upon the same.

Beyond Maragnan lie two Roads, the first between the Promontory Arbres and the Isle St. Anna, but dangerous; the other, discover’d some years since, reaches to the Fort of Maragnan, and is as dangerous as the first.

This Island hath twenty seven Villages, by the Natives call’d Oc or Taue, each Village consisting of four Hous’es made of great Stakes, and cover’d with Palm-tree Leaves against the Rain, each House being thirty Foot broad, and from two hundred to five hundred Paces long, according to the greater or leffer number of Inhabitants. The first Village, opposite to St. Anna, is call’d Timboha; the second, well known for two eminent Fishing-places, is Itapara; but the two biggest are Juniparan and Eaffiounap, each having about five or fix hundred Inhabitants.

This Island of Maragnan lies under a temperate Climate, being seldom troubled with excessive Colds, Droughts, pestilential Vapors, Wind, Hail, or Thunder, only it Lightens Morning and Evening in fereene Weather. When the Sun returns from the Tropic of Capricorn to the North, then it Rains for fix Weeks together; but when he declines from Cancer towards the Southern Solstice, the Trade-Wind, or Eastern...
Eastern Breezes rise at seven of the Clock in the Morning, but grow fainter to
wards Sun-setting.

The Soil of *Maragnan* is exceeding fruitful, producing abundance of *Brasil* Wood,
Sugar, Cotton, the red Colour *Roucou*, Tobacco, Ballam not inferior to the *Arab-
ian* Peppers, and all manner of Fruits. On the Coast is often found excellent
Amber-greece and Jalper Stones, which the Inhabitants wore in their Lips. In
some places along the Sea-shore appear Rocks of red and white Stone *Diaphanous*,
like Crystal, which (some say) are as hard as Diamonds, and call’d *Allencon*. The
Woods produce Timber, and the Shore Stones and Shells, of which they make
Mortar. There are also several pleasant Fields and Hills, whose Feet are wash’d by
delightful Brooks, along which they pass in *Canoes* from one Village to another.
The Woods confift most of Palm-Trees, amongst which breed all sorts of Fowls
and Beasts.

The chiefest of the Fruit-Trees which grow here is the *Acajou*, which being
much bigger than our Pomewaters, hath Leaves not unlike those of an Oak: and
also a Nut resembling a Sheep’s Kidney, cover’d with a hard Shell, which incloses
an oylie Pith. Out of these the Illanders press a very wholesome and pleasant Li-
quor; as also out of the *Patoeira* and *Bananus*, both excellent Plants, which will
grow in any Ground. This Plant they pluck up by the Roots wild as soon as it
hath put forth three Leaves; which Leaves being rowl’d up hard together like a
Twig, are again Set, and then sprout up each with ten green Leaves, which when
mov’d by the Wind, rattle like Parchment, and tear very easily: the Stalk is an
Inch thick, from which spread several leffer Branches; under the Leaves hang yel-
lowish Flowers of a plesant smell, at whose Stalks are leffer Leaves resembling
little Scoops, full of Juice, in taste like Honey, and in colour like the White of an
Egg: after the Flower follows the Fruit, very like a Cucumber, onely they are
three square, and have a hardish Shell, which incloses a well tafted and whitish
Pulp, which commonly grows in Clutters. This Plant, when the Fruit is ripe,
is pluck’d up, from whence another springs up immediately, which bears the
like Fruit the next year; so that this Plant lives as it were by propagation contin-
ually.

The *Bananus* bear Leaves of a Fathom long and two Foot broad; the Fruit is
very like that of the *Patoeira*.

The *Mangaa* is very like the Apricock both in taste and form.

The Tree *Jaracah* hath a spread Crown, leaves like those of a Fig-Tree, yellow
Flowers, and Pears with Shells, and full of Kernels.

The *Ostierona* is an exceeding sweet-smelling Tree, bears a Fruit much bigger
than the greatest Melons.

The *Junipar*, which is much taller, hath Apples, which whilest they are green
are bdt, yielding a Juice which Dyes Coal-black, and therefore is us’d by the
Natives to paint their Bodies with: The Apples when ripe are yellow within
and without, very well tafted, and melting in the Mouth.

Besides these fore-mention’d Fruit-Trees there are several others that grow on
this Island, amongst which is the *Vuo-pirap*, eminent for its Blossom, which is yel-
low, blue, and red, and bears delicate Apples, which ripen best in the rainy
Season.

Laftly, the *Pekey*, which three Men cannot Fathom, bears a Fruit of two hand-
fuls bigness, having a hard thick Shell, and within four Kidney-like Kernels, each
concealing a prickly Stone, which hurts the Mouths of unwary Eaters.

The Plant *Caronata* hath Leaves an Ell long, and two Inches broad; they are
very
very thick and thisty from the middle, and about two Foot from the Ground grows an exceeding pleasant Fruit, yellow without and within, three square, a Finger long, and hanging oftentimes sixty in a Cluster.

_Vasa_, a sort of Melons, green without, and within full of white Pulp and black Kernels, and hath a pleasant Juice, dissolves to Water, if cut in the middle, sweeter than Sugar, and very refreshing.

_Manich_ a thick Root of the Plant Manicup, Leav'd like a Fig-Tree; being ground to Meal, it serves in stead of Bread.

Besides these already mention'd, there are several other Plants, the most usual are the great flat Beans call'd Commanda-miry, and the long Pease Commanda-miry.

Here are variety of Birds of several sorts, especially of Parrots, which fly in great Companies, most beautiful to the Eye, and very docile to speak, and also good for Food.

The Partridges Namououaffou, in bigness no way inferior to a Capon, have blue Feathers, and also Lay blue Eggs.

The Oion, resembling a Partridge, hath a Combe like a Cock, but mix'd with three Colours, viz., red, black, and white.

The Bats, nam'd Audheura, have a mournful Note in the Night, often biring those they find asleep, and stick their Blood so hard that it can hardly be flopt.

The Offriches here call'd Yandou, being as tall as a middle-sized Man, cannot flye, but run as swift as a Greyhound.

Their Fowl call'd Fatu, with long Bills and Cranes Legs, flies very low, but runs so swift that a Horse can scarce overtake them.

The Ocean about Maragon produces abundance of all sorts of Fish, and amongst others the Pyraon, fix Foot long, thicker than a Barrel, and cover'd with black Scales of a hand-breadth.

The Fifth Camouroupony differs not much from the Pyraon, only in having fewer Scales.

The Onry, four Foot long, hath a broad Head, and two sharp Fins on the Back, which wound terribly. This Fifth also swimming in the River, smells of Musk whilst it stays therein.

The like length hath also the Camboury Oneaffou, whose Hog-like Head, and yellow Sea'd Tail, makes it seem like a Monster.

The Yanbozye is a Foot in thicknes, in length two Fathom, and a Fathom in breadth, and hath a Tail of half a Fathom long, out of the middle of which sticks a sharp and great Bone, which makes such dangerous Wounds, that if any part of a Man's Body be touch'd therewith, it must be cut off.

The Narimuny, which is much less, wounds with its Sting very dangerously.

The flat Fifth Aca-ron hath the length of a Foot, a green Head, thick Scales, a yellow Back, and white Belly.

The Arouona hath a hard Skin, is eight times bigger than the Aca-ron, and hath a three-pointed Sword, with which it kills other Fish.

Another sort of Sword-fish is the Panapans, whose Sword is a Foot less than that of the Arouona.

The Picamo and Caramourou resemble the Pilchard, and are taken in great abundance near the Rocks.

The Rivers and Brooks on Maragon are also very full of Fish, amongst which the Pourake, four Foot long, full of green, blue, red and white Specks and Streaks, the Skin so hard that no Sword can penetrate it; wherefore it regards not a blow, but if it moves, it causes such a pain on the Arm of him that strikes, that he falls down on the Ground.
The *Carimata*, which is very like a Carp, is the most delicious Fish that ever was taffed.

The *Pyraim*, without Scales, colour'd red and yellow, hath sharp Teeth, which cut fwoopingly; as also the *Opean*, *Tarchure*, *Paraty*, and *Jerou*.

The red Crabs *Onaffa*, with hairy Legs, breed about the Roots of the fore-mention'd Trees that grow in the Water.

The white Crabs *Anara-onaffa* carry the Amber-greece; cast on the Shores to their Holes.

They have also good Musles, and well replenish'd Oysters flicking on the Boughs of the said Trees.

During the rainy Season there are generally standing Pools, in which yearly breed many Fishes, which are taken up by the Inhabitants when the Pools begin to dry.

Moreover, this Island feeds abundance of four-footed Beasts, among which their wild Deer, Rabbets and Hares, differ little from the *European*. They have also wild Swine call'd *Tatafou*, who seem to have Navel on their Backs, which caft a sweet Musky smell: besides another sort of Swine, not inferior to the former, but of a stranger shape, being Mouth'd like a Hare, with two long Tusks in their upper Jaws, and two beneath; their Ears like a Mans: the foremost Feet white, and hoof'd like an Ass; the hindermost part of their Body like a Bear, and full of Brills, half white and half black, three handfuls long: when they creep in their Holes their flaring Brills fall: they keep much amongst Brambles, feed on Apples and Roots: In the Winter Season they Styke themselves up in their Holes.

Here are also Pifmire-eaters, call'd *Tamandua*, with a Boars Head, Dogs Ears, sharp Snout, Horses Hair, and Ox Feet.

The *Tapiyre-ete* differ little from wild Cows, only they have shorter Legs and Tails, and wanting Horns, are Arm'd in stead thereof with Teeth; in their Heads are often found a Stone like the *Becar* Stone.

Several sorts of *Armadillo's* here differ much in form each from the other.

The wild Cats *Margaia* are caught for their curious Skin.

The Foxes *Janovare*, and Leopards *Sopafforaran*, both curiously mark'd, are very ravenous.

Here is also a deform'd slow creeping Beast call'd *Ass*, whose Head is like a Mans, and cover'd with rough and grey Hair, on each Foot three Claws close together, and at least a Finger long, sharp Teeth, a smooth high black Nose, little drowifie Eyes, no Ears, a Tail small above and broad at the bottom, long Ash-colour'd Hair over all the Body; and being about the bigness of a Fox, it climbs slowly up the Trees, and comes not down before it hath eaten off all the Leaves; it feeds also on Earth, and sometimes sits on a high Bough without Meat twenty days together; it goes so softly, that it will hardly clear fifty Paces in twenty four hours.

On this Island are likewise all sorts of Apes and Monkies, among which is one most remarkable, call'd *The Zimme Cayon*, hairy all over, with a long white Beard, an old Mans Face, bald Ears, black Eyes and long Tail, which they wind about a Bough, and so hanging, fwing themelves from one Tree to another; they are very fierce as well as sly, for being wounded with an Arrow, they set upon their Enemy without the least fear; when they climb up the Trees, they carry their Mouths and Hands full of Stones to throw at Travellers; and if any one of them chance to be wounded, all the rest that are near come to help him, and stop the Wound with Leaves, and the like; the young ones hang upon the Backs of their Dams, who run very swift with them, and leap from one Tree to another.
Jaan Ardenis relates, That the Coyon play at certain Games with the Natives for Money, and spend what they win in publick Houses.

Joseph de Acosta tells us, That one of these kind of Creatures being sent to a Tavern for Wine, would not part with his Money before his Pot was fill'd, which he defended from the Boys that offer'd to take it from him, by throwing Stones at them; and though it lov'd Wine very well, yet brought it always home without tasting.

It is no less wonderful what Peter Martyr relates of one of these Creatures, viz. That observing one ready to fire a Gun at him, before he could discharge, it leap'd from the Tree and snatch'd up a Child, which he defend'd from the Boys that offer'd to take it from him, by throwing Stones at them.

The Sagovin resembles a Lyon in the fore-part of the Body, with shaggy Hair. They are exceeding dainty and tender, yet so stubborn and sullen, that they take pet at the least affront, and often pine themselves away and die with hunger.

The Serpent Boy-ete, two Fathoms long, without Legs, having a bright speckled Skin and four sharp Teeth, wounds also mortally with its Tail; but is the less dangerous, because at the end of the Tail grows a Bladder, which moving rattles as if there were Peas in it, which gives notice to the Traveller, though unwary, by which means he makes his escape.

The other Serpents call'd Jouboy, Tara-gonyboy, and Tareuboy, serve the Natives for a great Delicacy; as also the great Toads or Frogs, call'd Tourouron.

They have also a sort of Flies call'd Ton, which exceedingly molest them, against which their chiefest Medicine is Palm-tree Oyl, and the Roncon, with which they colour their Skins.

The Natives of this Island of Maragon, driven out of the pleasante Countrye Cayete by the Portuguese, are a sort of the Topinambar, who Setled here about a hundred and fifty years ago. The time of their first coming hither us'd formerly to be solemniz'd with the great Feast call'd Casen; but because a Woman boldly set upon a Commander in his Cups, there arose a great Tumult amongst them, and ever since the Island hath been divided, one Party calling the other Tobaiares, that is, Bb b 2
We are Enemies: They are so inveterate against one another, that who e're they take Prisoners they unmercifully devour: Both are of a middle Stature, have flat Noses, which the Midwives make at the Birth of the Child; they are generally a strong People, and many of them living a hundred years, without being grey, bald, or sick; they live temperate, and under a wholesome Climate: Some of their Women bear Children (as they say) till they are eighty years of age, which being born white, turn to be of a Tawny colour, by being anointed with Suet call'd Roucon, and Oyl; otherwise they are well proportion'd. The Men pluck out all the Hair of their Foreheads, but suffer it to hang pretty long over their Ears, and behind. The Women let their Hair hang down to their Middle, and wear woollen Ear-rings; but the Men hang green Beads in their Lips, and thrust little Bones through their Noses. They go all stark naked; their Legs are colour'd black with the Juice of the Herb Junipar, and upon the other parts of their Body appear Figures of several Representations. Those that will manifest their Valor, and be accounted hardy, gaff their Bodies all over with Wounds, which they heal in such a manner, that the Scars may more plainly appear. They never come to their usual Feasts, but dress'd up in various colour'd Feathers; upon the Crown of their Heads they wear Caps stuck with Plumes, which they call Acanzop, or Coronets, call'd Azangera, about their Necks, the Necklaces Ambacava; over their Shoulders, the Mantles Affajave; their Garters they call Tabescora, at which they hang hollow Nutshells full of little Stones, which gingle and rattle as they go, and about their Arms Armlets call'd Mapouyb-conacebovare; all which are curiously checker'd with various colour'd Feathers.

The Maragnan live not much up in the Countrey, but rather on the Sea-Coast, because of their Fishing, removing every sixtth year, calling the Village where they Settle, by the former Name. They take every Man as many Wives as he pleaseth; but the Women must stick each to one Man, unless she be Divorc'd from him, which often happens upon small occasions.

Their Cotton Hammocks call'd In, on which they sleep, hang between two Stakes, in which they lie. Singular Friends and Relations Feast one another daily; but they are cruel and revengeful against their neighboring Enemies, whom, when they take any of them, they fatten, kill, and eat. The least affront done them, or injurious word spoken to them, or against their Predecessors, makes them take up Arms, which consist of Bowes and Arrows, which they call Onyrapar and Oume.

Here the French have built the Fort St. Louis on an Island, from whence Westward may be seen the Cape Taponytapere, which at High-water seems like an Island, and lies four Leagues from thence; at Low-water they can walk over the Sands from the same to the Main Land.

This fruitful Countrey hath twenty populous Villages. Westward lies Commu, which gives Denomination to the chief Village, the River, and the rest of that Countrey, wherein are sixteen more handful Villages, better built, and more populous than Maragnan or Taponytapere.

Concerning the building of the fore-mention'd Fort on Maragnan, it hapned as followeth:

The French Captain Riffaut, upon the Advice of Onyrapie, who bore a great sway amongst his Maragnan Subjects, fitted out three Ships; but because of a Contention between the Sea-men, and the los of his chiefest Vessel, he was forc'd to Sail to France, and leave some of his Men on Maragnan, under the Command of a young Gentleman.
Chap. VII.  

**AMERICA.**

Gentleman call’d De Vaux, who carry’d himself so discreetly amongst the Indians, that they promis’d to embrace the Christian Religion, if new Supplies came from France to assist them against their Enemies; of which De Vaux advis’d the French King Henry the Fourth, who approv’d of it, and sent Monsieur de la Ravardiere to Maraguan, to make a farther Enquiry into the whole Matter, where he spent six Months; after which returning he found the King murder’d, wherefore the Business lay dead for a while; but at length Ravardiere took with him the Lord Roch, and the Baron of Sayf, defining some Capuchins of the Queen-Mother, for the propagating of the Christian Religion in Maraguan; which being granted, they set Sail with three Ships Anno 1612, with which arriving safely there, and Landing, he built next the chiefest Haven the Fort St. Lewis on a Hill, by whose foot two Rivers glide into the Ocean. After which this new Plantation went on for a considerable time, till the Portugese overpowered them, drove them out of this their new Field, making themselves absolute Masters of the Fort, and also of the great Mountain Ecology yapa, four Leagues high, plain on the top, twenty four Leagues long, and little lefs in breadth. No Champain under the Sun is more pleasant and fruitful than this; for in some places it is shaded with Trees, in others hath brave Pastures, lies under a wholfsom Climate, and abounds with fresh Springs, from whence are deriv’d store of Brooks, and Rivulets full of Fish.

**Sect. XI.**

The Lordships Tamarica, Rio Grande, Siara, and Para.

The Prefecture of Tamarica, not above three Leagues in length and two in breadth, socalld from a little Island lying before it, and part of its Precinct, is counted the first, that is, the most ancient Lordship of Brasil, having otherwise nothing in it that is very considerable, save onely a good Haven or Port, with a Castle for the Security or Command of it, held to be impregnable, and so found by the Dutch, who under Peter Heyns and Stein Callenfels in vain attempted the taking of it, as shall be mention’d hereafter more particularly, but made it usefull to the Portugese, by making a Bulwark at the Mouth of the Haven, and so blocking it up.

This Capatania yielded formerly a Rent of thirty thousand Ducats to the Earls of Montefanto, whose Right it was.

The Prefecture of Rio Grande, a small Precinct, so denominated, as lying on the South-side of that great River which the Portugese call Rio Grande, and the Natives Potingi, where it falls into the Sea, was once poss’d by the French about the Year 1597, who were ou’d by the Portugese, and the Place forsi’d both against them and the Salvages, (of whom they flew and took Prisoners very great numbers) with a Castle, which the Dutch in the Year 1631, found an impregnable piece, and too hard for them to take.

The Prefecture of Siara, so denominated from the Haven; it hath long been in the possession of the Portugese, but they have therein no Towns of note, onely a Castle, and some few Houses for those that attend the gathering of Cotton-Wool, and Manuring of the Sugar-Canes, which are here in great abundance, also the Countrie is said to afford some Crystal and other Precious Stones.

Lastly,
A Relation of the Proceedings of the Netherland West-India Company in Brazil to the Year 1658.

The chief Disturbers of the Portugueses in the possession of the Country of Brazil, were the United Netherlanders: for they having had good success with their first Fleet, under the Command of John Molenaer, John Digumfzon, John Schelinger, Simon Man, and the Merchants Cornelis Woodman, Gerard Beveringen, and Heiner von Hel, Anno 1595. in the East-Indies, where they got such footing, that they took whole Kingdoms, to the great enriching of the Eastern World, where they spread their Trade over the whole Country, were thereupon emboldened to venture also to the West, that thereby they might cut off the Sinews of the King of Spain's Wars, he being continually supply'd with Treasures from America.

The grand Promoters of this Design were the Company of Merchants, who hitherto had Traded to Guinea, and the rather, because Guinea brought them but little Profit. But to set upon the Spanish Power, was a Business of no small Consequence; nevertheless they undertaking it, obtained Letters Patents from the States of the United Netherlands, Anno 1621. for creating of a West-India Company, in which it was declared, That none without the said Companies leave should drive any Trade to Africa from the Northern Tropic, to the Cape Bonne Esperance; nor to America from Terre-Neuf to the Straights of Magellan, or Le Maire; nor in the South Sea to Amian; which if any attempted, they should forfeit Ship and Goods; besides several other Privileges and Immunities granted towards the promoting and establishing of the said Company. After a long Consultation which way to steer their Course, it was concluded upon in the Council for the Affairs of the Company, to Invade St. Salvador in the Inlet Todos los Santos, whether they sent twenty Men of War and three Ketches, Commanded by Jacob Willekens, and Peter Peterszon Ein; the Land Forces being under the Command of Colonel John van Dorp. In the beginning of the Year 1624. the Fleet set Sail out of the Texel and the Maes, and in five Months arriv'd at St. Salvador. As soon as the Portugueses discover'd the Dutch Fleet, they flot without ceasing from the Fort Phillip with three Brass Guns, as also from the Castle Tapage, with four Demi-Canons, but chiefly from the Battlement rais'd three-square out of the Water before St. Salvador, from whence they play'd at them with twelve great Guns, whilst the Vice-Admiral ran within Muquet-flour of the said Battlement with three Ships, and found fifteen Portugueses Vessels lying near the Shore not far from the Castle Phillip, where there began a sharp Conflic't, to the no small advantage of Peter Hein; who thereupon ventur'd with three Boats to Board the fifteen Ships: which resolute Attempt of the Dutch Seamen so amaz'd the Portugueses, that they let their biggest Ships on Fire, and fled ashore: Those Ships that escap'd, being in all ten, the Hollander took and brought them to the Fleet.

A M E R I C A.

This flight of the Portuguese encouraging Peter Hein, he went with fourteen Boats, each Mann'd with two hundred Arm'd Men upon the very Mouths of the Cannons to the fore-mention'd Battlement and took the same, notwithstanding the Stone Wall rose eight Foot out of the Water, and above a hundred Portuguese defended it, whilst the Admiral Willekens sent twelve hundred Soldiers, and two hundred and forty Seamen ashore with Field-Pieces. The Forlorn-Hope confisted of sixty Musqueteers, led by Captain Helmond, who was seconded by Lieutenant La Main, all the Seamen following with Spades and Pick-axes; the Referve was brought up by Captain Kys, Tenach, and William Schouten; thus drawn out, they were led towards the City by the Guides Dirk Colver and Dirk de Ruiter, along a narrow Way, which the Portuguese might have guarded with a few Men, had they not been all struck with a panicke fear, and making use of the dark Night, fled into the Woods. The Dutch found in the City an incredible Booty, because the Governor Diego Mendoza de Furtado had forbid the carrying away of any Goods, that so the Citizens might be the easier persuaded to defend the City; which they might well have done, had they not been surpris'd with the suddenness of the Action; for when Willekens Anchor'd here, there were above sixteen hundred Soldiers, besides a considerable number of Arm'd Citizens in St. Salvador; besides, in the Forts about the City on the Walls lay twenty three Bras, and twenty six Iron Guns.

This Victory was scarce obtain'd, when Colonel Dorth, who had left the Fleet at Point Vincent, arriv'd here after all was done, and caus'd Edicts to be publish'd, in which the fled Citizens were promis'd greater Priviledges under the Netherlanders Protection, than ever they had under the King of Spain. Whereupon a few Portuguese return'd to the City; but the greatest part of them, and those the most considerable, were partly kept back by Command of the Bishop Trixtar, who laid the fault concerning the los of the City on the Governor Furtado, and partly because they judg'd the Netherlanders unable to defend them against the Spanish Power.

About the same time several rich laden Vessels arriv'd there from Lisbon, Janeiro, Spiritu Santo, Angola and other Places, all ignorant of the Conquest of St. Salvador.

Whilst Dorth and Willekens were ordering all things within the City, the ouflaying Portuguese at last taking courage, Storm'd the City from Midnight till the next day in the Afternoon, but fearing they shou'd be set upon behind unawares, Retreatted; after which Dorth thinking he had been free from all fear of Enemies, and with a small Guard riding out of the City to take a view of the adjacent Country, was surpris'd got a Bowe-shot from the Walls, when a great Body of Braflians rush'd forth unexpected from an Ambuscade, and wounded him so mortally, that he fell dead from his Horse, and had his Head suddenly chop't off, and his Body mangled very terribly.

Allart Schouten being chosen Governor in Dorth's stead, took no care to fortifie the City; and after his Decease his Brother William Schouten succeeding him, regarded it lefs, so that all things went to ruine, every one thriving only to enrich themselves. Amongst other Booties, they took the rich laden Vessel which Franciisco de Sarntiauo, Governor of Cili, brought to St. Salvador, with fifty eight thousand Guilders, and a much greater sum of Gold and Pearls, all which was imbezled away.

This City St. Salvador, built by Thomas de Sofia along the Sea-side, runs up broad at the Suburb Carmo, hath four Market-places, into the biggest whereof, being of a long square, run nine Streets, the chief of which being very broad, hath many stately Houfes. The second Market-place is of like form, onely it winds a little towards the Right and at the Entrance stands a strong Prison. The Cloyster St. Francis, inhabited by Jefuits, stands in a Park near the Wall by which the Moat runs.
wards the Sea-side they have a second Structure, much stately than the Franciscan Cloyfters. Near the Prison stands the Armory, and somewhat farther the great Church, which *Anno* 1624. was not quite finifh'd. The Church dedicated to the Virgin Mary appears with a high Spire near the Gate Bento, without which the great Cloyfter Bento is built; but the chief Church is St. Salvador. On the utmost Point towards the South-Welt of the City lies the Fort Antonio, between which and the City stands a very neat Pleasure-house, belonging to the Bishop. Besides Antonio there are four other considerable Forts, viz. Diego, St. Maria, De Gracia, and Vittoria. About half way between Vittoria and the Cloyfter Bento, stands the Castle with four Bulwarks; but on the North-side the City is guarded by the Forts St. Peter, Philippo, and Tapeique.

The Spanish King seeming exceedingly concern'd at the loss of so eminent a Place, fitted out a great Fleet for the recovery of what had been taken from him; but the Netherlands West-India Company having notice of it, put themselves into a posture of Defence, and in a short time made ready eighteen Men of War and seven Ketches, Mann'd with a thousand six hundred and ninety Seamen, and a thousand three hundred and fifty Land-Soldiers, John Dirkzoon Lamb being Admiral: But news coming day after day of the extraordinary Preparations in Spain, it was judg'd convenient to strengthen the Fleet with fourteen Ships and two Ketches more, carrying a thousand four hundred and thirty Seamen, and five hundred eighty Soldiers, under the Command of General Baudewyn Henrickzoon, and Admiral Andries Veron. Moreover, the West-India Company fitted out a third Fleet, consisting of four Frigats and three Ketches, Commanded by Henry Kat, with Orders to Cruise along the Spanish Coast.

In the beginning of the Year 1625, Frederick de Toledo weighed Anchor from Cates with one and thirty Gallions, four Pinnaces, three Tartans, and a Carvel, all carrying seventy five hundred Men. The Soldiers were divided into three Regiments, Commanded by the Colonels Pedro Oforio, Juan Orellana, and the Marquês De Torrelula.

Near St. Jago at the African Cape Verde, Toledo joy'n'd with the Portuguese Fleet, consisting of twenty one Gallions and fourteen Carvels and Barques, Mann'd with four thousand Seamen, two Regiments of Soldiers; Commanded by Antonio Nuñez Barreio, and Francisco de Almeida; but the chief Commander of this Fleet was Emanuel Munefes. Which great Fleet being arriv'd at St. Salvador, Toledo himself Landed at the Fort Antonio, leaving the Command of the Fleet to Juan Fajardo: The first thing he did, was to set upon the Cloyfter Bento; which having gain'd, he left Serjeant Troppani with two Regiments in the same, while he went and Storm'd the Carmelites Minifter, and at last took it; but in the mean time four hundred Hollanders Sallying out, made a furious Onset upon the two Regiments, who had possession of the Cloyfter Bento, where the Spaniards sustain'd considerable damage; for besides the wounding of three Captains, and the loss of a great number of Soldiers, there were slain the Commanders Emanuel Aquitara, Alonzo de Gana, Pedro San Stevan, Diego Effi-nofa, and Colonel Pedro Oforio. But Toledo no whit dismay'd hereat, but taking fresh courage, brought twenty nine Demi-Culverins afoare, which fir'd so vehemently out of the Carmelites and Bento's Cloyfters, on the seventeen Dutch Ships that lay near the Shore, that several of them were funk, and others shatter'd beyond hopes of ever being repair'd. After this the Spanish Army was divided into three several Parties, which continually fir'd on the City from three new rais'd Works; the chiefest Party, which was in the Carmelites Minifter, had twenty three Brass Guns; the second, plac'd on the great Wall of the Cloyfter Bento, fir'd Night and Day with eight Demy-Cannons on the City, in which all things were in a confusion, whilef...
while the Governor William Schouten went unconcern'd from one Tavern to another raling at the Soldiers, who thereupon mutinying and depositing him, chose Serjeant Hans Ersft Kys in his room, who, as he was calling a Council of War, received a Summons from Toledo to deliver up the City, at which Kys being much surpris'd, sent a Drummer with a Letter to Toledo, desiring him to grant the Besieged three Weeks time to repair and make fit their batter'd Vessels to carry them back for Holland; and also that they might, according to Martial Custom, march out with lighted Matches, flying Colours, Bullets in their Mouths, and with Bag and Baggage. To which Toledo return'd Answer, That he was now in his own Country, and had gotten possession of four Fortifications about St. Salvador, on which he had planted thirty seven Cannons, and therefore saw no such necessity to grant the Besieged (who could not possibly expect any fresh Supplies) such advantageous and bold Demands; and only promis'd them their Lives should be at his discretion. Yet at last William Stoop, Hugh Antoniszoon, and Francis van Cerfue being sent to the Carmelites Cloyster, agreed with Toledo on these Conditions: That the Hollanders should surrender St. Salvador in the Condition it was then in, march out unarmed, but with Baggage, and have a free Passage with Provisions and all things necessary allow'd them for their Transportation for Holland. Whereupon on the first of May the City was deliver'd up to the Spaniards in such disorder, that some of them had taken possession of the Gate Bento, before those on the other side of the City knew of any Agreement that was made between Toledo and Colonel Kys. And thus the Place which had a whole year been under the Jurisdiction of the Netherlanders, fell in a moment, and was given over to the Spaniards, by the first of May. For the Ships under Admiral Lam, as also those under Boudewyn Henriczoon, were flay'd a considerable time in their Harbours by contrary Winds, and at last reaching the Line were becalm'd, and through the excessive heat of the Climate many Men loft by raging and mortal Diftemper, in remembrance that they reach'd not the Bay Todos los Santos before the twenty sixth of May, on which they saw the Spaniards Flag stream from the Walls of St. Salvador, and fifty great Ships riding at an Anchor near the Shore.

The Netherland Fleet, divided into four Squadrons, consisting of thirty four Sail, amongst which Lam carry'd the Flag on the Main-top, the Vice-Admiral Adrian Chelfzon on the Fore-top, the Rear-Admiral Adrian Veron on the Main-mast, and the Commander of the fourth Squadron on the Mizne-top: All of them seeing the Spaniards absolute Masters, judg'd it most convenient to put to Sea, but standing a pretty while to the South, they found that the strong Current drove them to the Shelves on the West-side of the Inlet; wherefore Tacking about, they made towards the Enemy, who at first seem'd to meet them with twenty eight great Ships, but returning towards the City, the Hollanders also flud to Sea again, steering Southerly, though without making much advantage in their Way, the Sea going very hollow, and the strong Current setting them towards the Shore, by which means they were in no small danger before the River Francisco, where many of the Men dy'd for want of fresh Provisions, and the number of the Sick increas'd daily, insomuch that some of the Ships were like to perish for want of Men to guide them: It was also judg'd dangerous to lie longer with such a great Fleet near a Lea- Shore, therefore they put into the Inlet Taycian, which lies a League to the Northward of the River Monguagog, from whence a ridge of Rocks extends to Taycian, and being overflow'd
overflow'd at High-water, hath three Openings or Entrances, two for great Ships, and one, the most Northern, for small Vessels to pass through: The Sea also breaking against this Cliff never molefts the Ships whatever Winds blow. The Country is overgrown with Brambles, and hath a Lake two Leagues long, and a quarter broad, on the opposite Shore of which flood a Village, inhabited by Portuguese and Brasilians; but the Portuguese flying from thence left the Brasilians in absolute possession: The Hollanders going thither found thirty Chefs of Sugar in one Hut; after which the Admiral Lam caus'd his sick Men to be brought afore, whileft the Captains Bofwijn, Swart, Dyke, Stapels, and Igzel, march'd up into the Country, where they got plenty of Oranges and Cartel. In the mean time the Ketch Ysken, Mann'd with thirty fix Seamen, Cruizing along the Sea-Coaft of Brazil, took three Ships, one out of the Inlet Tudos los Saullos, laden with Sugar and Tobacco, another with the fame Merchandize from Pernambuco, and the third laden with Wines from Madeira. On the first of August the Fleet set Sail again, to the great sorrow of the Brasilians, who out of hopes of being protected by them against the Portuguese, had joyn'd their Forces with theirs; but now being forsaken, they expected nothing but utter Ruine, which to escape, many of them defir'd to be admitted to go along with the Fleet, which had been granted them, had not the Hollanders wanted Provisions for themselves. The Fleet getting off at Sea, the Admiral Veron ran with twelve Sail to the Coaft of Africa; and Boudewyn Henrickzon kept eighteen Ships under his Command, the rest returning home with Admiral Lam; and thus the Fleet left the unfortunate Haven Trajanon, where above feven hundred Dutch Seamen were bury'd. Boudewyn Henrickzon refresh'd at Cape St. Vincent, set Sail Wetterly, when a Storm (which in twenty four hours blew from all Points of the Compass) surprizing him, broke his Main-maft, separated the whole Fleet, and sunk the Flying Frigate; at last getting beyond the Isle Virgin Gorda, the Fleet meeting again, got to Juan de Porto Rico about the latter end of September; into whose Haven Henrickzon Sail'd with great courage, notwithstanding the narrow Mouth thereof was guarded by a strong Fort full of Bras Guns, which fir'd very fiercely upon him, who on the other side was not idle in discharging his Guns on the Fort; and had not the Shallow Water before the City prevented his Landing that day, he had gotten a far greater Booty than afterwards he met with; for the Inhabitants had, during the Low-water, remov'd all their best Goods: but the next Morning before Sun-rising, the Admiral Landed with eight hundred Men, march'd into the City without any resistance, pitch'd the State Flag on the Governor's House, guarded all Avenues, unhoop'd all the Wine-Casks which he found there, for fear his Men should make themselves Drunk therewith, and so neglect their Duty, fir'd from the Land-side towards the Castle with three Bras Guns, gain'd the Redoubt, built for the security of the Bridge, which unites the small Isle on which Porto Rico is built with the great, rais'd a Platform, from whence he fir'd Day and Night with fix Cannons, guarded by Captain Thyene, whileft the Commander Igzel kept Watch near the Fort; but his Men being most of them sick, he could not do any great Exploits, especially since the Spaniards Sallying out, as they did daily, kill'd many of the Hollanders, and amongst them Captain Igzel, after he had shot down two Turrets from the Castle; which damage the Enemy repair'd by taking several of the Hollanders Boats; by which means they could not prevent fresh Supplies from going to the Castle; the Befiegers in the mean time beginning daily to be in greater want for Ammunition and Provisions: whereupon Henrickzon judg'd it convenient to found a Retreat, after he had set the Ships belonging to the City Porto Rico on fire in four places. In which Retreat he receiv'd so many
Chap. VII.  

**AMERICA.**

farewell Shots from the Fort, that they were forc'd to go to the Leeward to stop their Leaks, and leave one of their Ships to the Enemy, in lieu whereof the *Well-Cap* Frigate took a Barque with four Bras Guns, in the little Haven *Sierra Gorda*; from whence the Fleet ran into the Western Bay of the Island *Porto Rico*, where whilest they repair'd and took in fresh Provisions, Henricksfzon sent the Ships *Hesler* and *Janas* richly laden for *Holland*; the remaining part of the Fleet meeting with strong contrary Tydes at *Porto Rico*, were necessitated to put into the Inlet *Francisco*, where they made several Marches up into the Country, to the los of many of their Men, which were kill'd by the *Spaniards*, lying in Ambuscade amongst the Brambles that grew along by the Ways.

In the middle of January, Anno 1626. Henricksfzon Sailing about the North of *Porto Rico*, fleet'd to *Dominico*, and from thence along the Isles *Martinigo, Luzia*, and the Promontory *De tres Puntas*, towards the Island *Margarita*, where Landing, and Storming the Castle on the Land-fide with fifteen Men, he gain'd the first Breast-works; but the *Spaniards* hopping up the Way along which they were to return, they had without doubt been all slain, had not the Captains *Stapel* and *Eftienne* come to their assistance; for the *Spaniards* seeing them climbing up the Bulwarks, betook them to their Hecls, after they had kill'd nine of the fore-mention'd fifteen, among whom were the Captains *Urk* and *Mofkman*; of those that leap'd over into the Ditch most part escap'd; those few that were taken inform'd the *Hollanders*, That the Way towards the Village, inhabited by *Spaniards*, was every where stopp'd up with Barricado's, through which none were able to pass. Henricksfzon thus become Master of the Fort, sent the Booy which he had gotten there, together with three Bras, and five Iron Guns, aboard of his Ship, blew up the Fort, burnt all the Houses, and ran into the Haven *Muchiha*, to which he gave the Denomination of *Port Maurice*; where, besides a great number of dry'd Fih, he took forty Tun of Salt out of one Salt-pit. After this he taking in fresh Provisions at *St. Fe*, discover'd *Aves*, a low Isle full of high Trees, took above two hundred Sheep, and abundance of red Wood on *Bonaire*, and before the Coast a *Spanish* Frigate richly laden, made Inspections into the Havens of *Hispaniola* and *Jamaica*; from whence he fell back on the Coast of *Porto Rico*, about the Island *Mona*, where discovering four *Spanish* Ships, he took three of them, and burnt the fourth; he also got abundance of Tortoises and Crocodiles on the great *Caiman*, and took a new Ship between the little sandy Isles *Caios*, as also before *Cuba* a Barque, which inform'd him, That the Fleet from the *Honduras*, as also that from *New Spain*, was daily expected at *Havana*; Thence Sailing into the Haven *Cabanans*, he took a new Vesl of a hundred Tun, and abundance of Timber and Carpenters Tools one the Shore; he Landed also with few hundred Men on the East-fide of the Haven, from whence he march'd along a narrow Path a League up into the Country, where he found a running Stream, Palfures full of Catell, and a Village, the Inhabitants whereof being warn'd by the Barking of their Dogs, fled, and left all manner of fresh Provisions to the *Hollanders*, viz. above two thousand Oranges, abundance of Lemmons, *Bananas*, Hogs, Calves, and Bacon; all which having sent aboard, they burnt the Village; After this they took a *Spanish* Barque before *Havana*, as also a Ship laden with Timber, another Barque with Poultrry, *Cochenille*, Money, and Haberdashery Ware, one Vesl of live Tortoises, and another full of Salt, dry'd Fih, and some Merchandise. While the Fleet was thus Cruising up and down before *Havana*, the Admiral Henrickszon dy'd; a Man of most approv'd Valor, and of great Conduct: After which *Adrian Henrickszon* carry'd the Flag; but the Men mutinying about the dividing of the Provisions, which began to grow very scarce, all things fell into great disorder; the
Seamen rebell'd against their Commanders, saying, That they had been out long enough, and that they would not stay waiting any longer for the Fleet from New Spain or Honduras: Wherefore fleeting Home, they all arrived safe at the Texel and other places in Holland.

In our foregoing Relation we have given you an Account of the Fleet which came to assist the City of St. Salvador, divided into two Squadrons; eighteen Sail Bondwyn Henriczoon kept under his Command, and twelve Sail remain'd in the Admiral Veron's Squadron, who Sailed to the Inlet Serie Léona, where he found the Admiral John Dirckzoon Lam with three Ships, which had lay'n there above two Moneths, by reason of the Sicknes amongst the Seamen.

Frambore, King of this Place, granted Lam and Veron free liberty to Hunt, and to gather as many Oranges and Lemmons as they pleas'd, with which the Seamen were so refresh'd, that they set Sail again, and amongst many other things carry'd a Baboon with them from Sierra Léona, which so exactly resembled a Man, that it was wonderful to behold, having a Body, Hands, Eyes, Ears, Feet, and Actions like a Man, smok'd Tobacco amongst the Seamen, made a noise like a Child when beaten. The Inhabitants of Sierra Léona, where these Monsters run in great Companies through the Woods, believe that the Souls of the Deceas'd reside in them.

John de Lact, in his annual Journal of the Transactions of the West-India Company, affirms, That he saw a Female of these monstrous Creatures, which usually had her monethly Flowers.

The Fleet, as is before mention'd, Sailing from Sierra Léona, came to an Anchor at Company, and Landed twelve hundred Men at Paganas, besides a hundred and fifty Negro's; which Regiment Andries Veron and Arend Jacobzoon carry'd to the Caflle Del Mine, whither they before sent a Company, Commanded by Hans Gryf, to prevent the Sallies of the Enemy. The Hollander's tid'd and thirly, Encamp'd themselves, near the Fort, and whilst some of the Men were seeking for Water, others smoking Tobacco, and lying without their Arms and in disorder on the Ground, and the Commanders were taking a view of the Fort from a neighboring Hill, two hundred Negro's fell upon the scatter'd Army with great rage and fury, and so much the greater, in regard the Portinguse had promis'd them great sums of Money for every Hollander they kill'd: never any Army was in such a distraction, they being dispers'd and kill'd like so many Sheep, the Admiral Veron and all the Officers slain, and in a short time four hundred and forty Men cut off; and had not Captain Arend Jacobzoon been in League with the Inhabitants of Company, whither the routed Regiments fled, not one Man had escap'd that bloody Slaughter: Nor was it to much purpose to Besiege the Caflle Del Mine, because the Bullets hitting against the Walls of the Caflle, built all of Rock-stones, did no Execution. But the four Ships inform'd of this miserable destruction, fell down to Company, to fetch those that were left alive, and return'd home with the other eleven.

During the unfortunate Expedition of this Fleet, the Weft-India Company fitted out nine great Ships and five Ketches in the beginning of the Year 1626, under the Command of Peter Peterzoon Heun, to Cruise for the Spani'd Ships that were expected from New Spain and Honduras.

The Fox Frigat being sent before to inform Henriczoon of Heun's coming, reach'd about the latter end of May beyond the Isles Dominicis, Guadalupa, Mavis, St. Christophers, and by Santa Cruz; there not finding a Harbor on the South-side, because of the Rocks, the Sail'd from Mona over to the Main Coast, where seven Leagues Westward of Caracas, he discover'd a high broken Land, whose Mountains seem'd to reach to the Clouds; from thence he steer'd to the Promontory Calera, the Isles Marga-
Margareta and Coche, on which last he took abundance of Goats: not without the loss of forty six Men, killed by the Spaniards and Indians.

Mean while the Admiral Peter Heyn, in the beginning of June, Sail'd to the Southward of Barbados, an Island pretty mountainous, as hath been formerly mention'd, and full of Woods, and by Martinino, whose Hills are very high and overgrown with Trees. Here Peter Heyn could get nothing else but sweet Water, and a Fruit resembling a green Grape, which grew on a round Leave'd Tree, which Juice cur'd the Scurvy. Sailing from hence, and landing on Guadalupa, he found a Canoo seven Fathom long and one broad, and cut out of one Tree. The Inhabitants, a well timbered People, went stark naked, and desired to be excus'd, that they could not furnish the Hollanders with more Provisions, because the French and English, Inhabitants of St. Christophers, had pillag'd them.

Near Mona the Fox Frigat joyn'd with the Fleet, with information, that he could hear no tidings of Henrickzoon; wherefore Peter Heyn judg'd it convenient to Sail along the South-Coast of Hispaniola with a separated Fleet, which was to joyn again near the great Caïman. Near Cape de Corrientes the Dutch took a Spanish Ship laden with Surfaparilla; after that another with Salt and Fish, and on the Shelves before Coche before the Promontory Antonio, a Fly-boat with Tallow and Hides, and at the same places two Vessels more with Ballast, the Men whereof inform'd him, that the Fleet from New Spain had about a Moneth before weigh'd Anchor from the HavenJuan de Ulva, and set Sail to Havana; so that without doubt they were arriv'd there; wherefore Peter Heyn steer'd towards Tortugas, in hopes, if he could, to overtake some of the heavy Sailers. Before the Promontory De Florida he discover'd seven Sail, and coming up nearer, above thirty, which, had Henrickzoon been united with Peter Heyn, had without doubt fallen into the hands of the Netherlanders; but it being judg'd a madness to set upon so great a Fleet with so small a number of Ships, they Sail'd away undisturb'd. Peter Heyn steer'd his Course along Florida, where he met three Canos with strange Men in them, who came aboard of him, their Bodies being naked, were painted with several colours, oney Mats of Rushes about their Middle, and on their Backs long Taffels hanging down: their Merchandise consist'd of a fort of Gum of little value. The Netherlanders in this Place took also a Velsh with Sina Leaves, and some pounds of Ambergris: but the Scourvey increasing daily amongst them, they Tack'd about, and ran to an Anchor at Sierra Leona, where they lay'd till the latter end of January 1627; and then set Sail to Brasile, and overtook a Vessel from Madera laden with a hundred and fifty Pipes of Wine, and other rich Goods, and ran into the Inlet Todos los Santos with undaunted courage, not regarding the Guns that were fir'd from the Fort and Battlements of the City St. Salvador, near which lay thirty Sail of Ships, to which he making up steer'd between the Portuguse Admiral and Rear-Admiral, whom sinking, he force'd the Admiral to surrender, whilst the Hollands and Gelbria Frigates fell upon the rest, which were forswen by the Seamen, who leap'd over-board; then several Mann'd Boats of the Hollanders (notwithstanding the Enemy's continual firing) went and fetch'd off twenty two Sail of the Portuguse Vessels; all which they did in three hours time, only with the loss of fifty Men, besides some that were wounded, amongst whom was the Admiral, being shot with a Bullet through the Arm, and wounded in the Legs with a Splinter; his Ship also was, with the Gelbria Frigate, driven with the Spring-Tide on a Bank, whence, after the Gelbria had receive'd above sixty Shot from the Enemy, they both got off at last; but the Admiral's Frigate being shot in a manner to a Wreck, was set on fire, which Misfortune ended not there, for the Orange-tree Frigate blew up, with sixty Men, fourteen whereof, though misera-
rably scorched, had their Lives fav'd. Soon after which the Admiral sent into Holland the Ship St. Peter, the Hoop, Nostra Senora de la Victoria, and the Black-Lyn, which besides their Lading of Hides, Silver, Gold, and Precious Stones, were most of them full of Sugar; which safely arriving, did not a little encourage the West-India Company. After this Heen took two Ships with Slaves from Angola, which because the Governor of St. Salvador would not redeem, were put ashore on Taperica. On the left of March he sent Sail from the Inlet Todos los Santios, pass'd by Morro Pablo, and on Easter Eve with a strong Gale by the Abrolhos: before the Highland between Cape Frio and the River De Jenero, he discover'd two Sail, one whereof being laden with Sugar was taken, but the other escap'd in the Night; then Sailing on to the meandering Stream Spiritu Santo, he digg'd Pits on some of the River-Isles to get fresh Water, because it was not safe to Land on the Continent on each side, because the Inhabitants shot frequent showers of Arrows from the Thickets, in which they lay ambuscaded. Moreover the Town Spiritu Santo sent off several Fire-ships at the time of Flood, but they being easily quench'd did no harm. Here also a Vessel laden at Lisbon with Wines and Piece-Goods, was taken by Heen, who setting Sail again divided the Fleet into three Squadrons, the Vice-Admiral Cornelis Oole keeping three Ships to Cruize withal before the River La Plata, Henrick Bej had one Frigart, a Ketch, and a Carvel, to guard the Mouth of the Stream Jenero, while the Admiral himself Send with four Frigats, three Ketches, and a Barque, towards the Inlet Todos los Santios, where two Ships riding near the Shore by the Fort Tapetipe, were by him fet on fire. Also taking a Barque he was inform'd, that six laden Vessels lay in the River Tapetipe, whither he sending some Boats to explore the truth, they found a great Ship without Men in the Mouth of the Stream, and half a League farther six Portuguese Vessels lying near the Shore, bringing back news thereof to the Admiral, he went aboard of the Fox Ketch the next Morning, and taking two Ketches and several Boats with him, Sail'd up the River, and perceiv'd that the fore-mention'd six Ships were gotten up higher, and were Mann'd with a hundred and fifty Soldiers, Commanded by Captain Padilha; the Portuguese Admiral lying in Ambuscade, no sooner perceiv'd the Netherlanders Boats, but he let fly a whole Volley of small Shot at them, insomuch that it made them Retreat, and their whole Design had been fruitless, had not Heen animated his Men to board the Vice-Admiral, which encouragement prov'd so successful that they master'd the same, killing all those that fell into their hands; which so amaz'd the two Vessels that lay by, that all the Men swam ashore, and left their rich Lading to the disposal of the Hollanders, besides which the vanquish'd Party loot above a hundred and fifty Men, and the Conquerors but fifteen. Somewhat farther up lay three Ships more, but the River being dry there at Low-water, and so narrow that the Trees on each Shore could touch one another, Heen judg'd it convenient to prosecute the Design no farther, but to return with the three fore-mention'd Prizes, which he did not without great difficulty; for the Portuguese had rais'd Battlements on each side of the Mouth of the River Tapetipe, and stopp'd the same with a sunk Vessel, which Heen himself set on fire at Low-water, and return'd untouch'd through thick Volleys of Shot, which flew about his Ears to the Fleet, leaving the three Ships to be fetcht off afterwards; to which end he commanded that they should hang some of the taken Hides about the Fox Ketch's Pinnacle, the Carvel and Boats, that so the Men which were in them might stand secure from the small Shot, and the rather, because the Ships could not be got out of the shallow and narrow River but by Towing. Mean while the Governor of St. Salvador lay with a considerable number of Citizens and Soldiers behind the fore-mention'd Battlements, not doubting but to
take revenge for the Loffe's sultain'd by Heyn; who nevertheless coming down thither Toed out the three Prize-ships with Boats hung about with Hides, firing into the Enemies Battlements with his great Guns, which he had put aboard of the Fox Ketch. About the middle of June he took in the Prize-goods in view of the City St. Salvador, where feven Netherland Ships from several places lay at an Anchor. Setting Sail from hence on the fourteenth of July, and reaching Noronbo, known by a Mountain which appears like a Steeple, he met with Cornelis Oole's Fleet, (who had been Cruifing before La Plata) with whom he arriv'd safe in the Texel, having in their Way thither from Noronbo taken a Prize, laden with Sugar, Tobacco, and Brafie Wood.

During Peter Heyn's Expedition Thomas Sickers, fitted out by the West-India Company, weighed Anchor out of the Texel with two Sail, and coming to St. Vincent he found a Spanish Veffel burnt down to the Hulk, took a Portuguese Pink with Slaves from Angola: Near the Inlet Todos los Santos he funk a Barque, having First taken several Pots of Oyl and Packs of Linnen out of the fame: Before Pernambuco he took a Carvel with a hundred and eighty Pipes of Wine, and a Veffel with Sugar and Hides, and drove another afofe againft the Promontory St. Augufline. But Sickers being supply'd and strengthened by three Ships from the Texel, and four taken Veffels, ran with four to Todos los Santos, sent two to Cruife about Cape St. Augufline, and two more to the North of Pernambuco: At the Ifle Noronbo they were order'd to lay a Moneth one for another, from whence, after much hardfhip, they return'd home with fo many rich Prizes, that they pay'd their Charges ten times double; which fo encourag'd the Adventurers, that the Chamber of the West-India Company in Zeeland fitted out three more to under the Command of Henric Lewis; who weighing Anchor from Flushing Anno 1627. steer'd along the Coast of Africa to the Amazon River, and from thence North North-West to the Stream Wispafo, to settle a Colony there; to which purpofe Rowing up the River with Sloops, they came in the Night to two empty Houses, built at a place call'd Wagogenive, which they judg'd fit for their purpofe; wherefore they carry'd all things afofe which they had brought out of Zeeland with them for the new Planters, who while they were all busy building of Huts, a Negro was taken Prisoner, who being ask'd why the Inhabitants fled? reply'd, That it was occasion'd from a guilty Confequence; for two years before a Barque and two Sloops with Christians coming thither from the Amazon River, had lay'd thirty days on Wagogenive, when unawares they were fet upon by the Natives, and all kill'd except three, who were yet living. Upon which Lewis, having four Indians, three Men and one Woman, aboard of his Veffel, threatened to put them all to the Sword, unlefs they would produce the three foremention'd Christians: Whereupon the next day a German came to the Water side, of whom they could get little Information, he having in a manner forgot his native Tongue; but at length the other two coming thither, the eldest of them, nam'd John Hendriejzen, related to him, That the Portuguese in great numbers fell upon the Plantations near the Amazon River, Govern'd by Captain Oudaen, who after he had fought valiantly a whole day, being overpow'r'd by number, retreated to his Barque, and Sail'd into the Creek inhabited by the English, whither the Portuguese following in Canoes, cut off not only Oudaen, but the English also, forty fix Men only escaping in a Barque under the Command of Lieutenant Peter de Bruyne to the River Wispafo; where they had lay'd about three days, when Sergeant Mattrin treachcrously shot Lieutenant Bruyne: after which the forty six divided themselves into four Parties; but the Inhabitants to rid themselves of these Strangers, under the fhew of great friendship, made them Drunk with the Liquor call'd Pernau.
and then murder'd them all, except himself and two Germans. Which villainous act, Lucifer judg'd worthy of punishment; but his Orders being to shew Kindness and Civility to the Inhabitants, he suffer'd the Murder to go unpunish'd, but built a triangular Fort near the River Wiapeco, on a Hill eight Fathom above the Shore, to prevent the palling by of Sloops; which done, he went to visit the Island Blanca, where he caught three hundred Goats. From thence he went to the Bay of Honda, the Inhabitants whereof are a valiant People, tall of Stature, having long Beards, and wearing Copper Rings through their Ears. Near the Sea-side is a Salt-pan, of which the Inhabitants make great benefit. Lucifer setting Sail again from hence, met with three Ketches sent out by the West-India Company at Amsterdam, before Corientes. The Commander Dirk Simonzoon van Hietgeef, steering his Course towards the Promontory St. Anton, took a Frigate laden with Meal, Silk, and other rich Goods, and within view of Cuba near the River Poros, defenting two brave Gallions from Honduras, bore up to them with his three Ketches; one of which, call'd The Lyon, being got betwixt both the Gallions, was in no small danger, the Netherlanders not being able to get up out of their little Vessel into the high Gallions, in which the Spaniards stood pullying them down with their Pikes; but no sooner did the Netherlanders throw their Hand-Granado's amongst them, but Hietgeef got aboard of the Gallion, and carry'd her off, while the other by nimble Sailing got away. With this Prize Hietgeef thinking himself sufficiently enrich'd, steer'd homewards.

Joost Johnzon and Claes Henrickszoon, Commanding each of them a Ketch, took a Ship coming from Lisbon before Pernambuco, laden with Meal, Salt, Wine, and thirty Monks; and not long after a Pink with fix hundred Negro's, a Barque with Salt and Iron, a Ketch with Wine, and a Frigate with Brazil Wood, Sugar and Tobacco: Before America they took two Prizes more; with all which they return'd to the Texel.

The West-India Company thus enrich'd by the Spoil taken from their Enemies, fitted out twelve Ships again under the Command of Peter Adrianzoon Iza, which set Sail in the beginning of the Year 1628, and anchor'd first before Blanca, an Isle abounding with Goats, the Ground ftony, and in some places Rocky, and having a small, but very convenient Haven, from whence Iza ran beyond Porto Rico, where he took a Vessel with seven thousand weight of Ginger, and Landed opposite to Elspaniola on the ftonic Isle Catalina, where he took in fresh Water, and then Cruiz'd to and again before Cuba, took fix Barques, the Prisoners whereof inform'd him, that the Honduras Traders were on their Way coming thither, and that they had two small Men of War for their Convoy: Not long after Iza discover'd them Sailing along the Shore towards the Haven of Havana, but before they could get in, Captain John Peters, whose Ketch carry'd two Bras, and fourteen Iron Guns, boarded the Vice-Admiral, but having no Grapplings to take hold with, the Spanish Ship ran aground, as likewise John Peterszoon in the pursuit of him; which the Admiral seeing, came to assist his Vice-Admiral, and ran aground on one side of John Peters, which drove the Netherlanders Ketch in great danger, the not being able to do Execution with her small Guns, whilst the Spaniards with their Demy-Cannon play'd vehemently upon her; neither was Iza, by reason of calmeifs and contrary Tide, able to come up with them, but was forc'd to stand Northerly, that so he might get an Easterly Wind, which about Noon always blows fresh here, and so by degrees got near the Spanish Fleet, till at last coming up with the Vice-Admiral, call'd St. Jago, he threw Fire-pots into her, and presently after boarding her, enter'd with that Valor, that of three hundred Spaniards above a hundred and fifty were slain; for
for thofe that leapt over-board were kill'd in the Water, whilst Joachim Guizzeg, John Brauns, and Anthony Gonde fell upon the Admiral Senora de los Remesos, and took her. In both thefe Ships it took Two thoufand five hundred Chefs of Indigo, above Six thoufand Hides, Two thoufand five hundred Packs of Saffaparilla,feveral Potts of Baflam Oyl, Seventy thoufand Pound of Ginger, One and twenty Bars of Silver, Twelve Bras, and Twenty eight Iron Guns; all which having taken out, he fett fire in both the Ships.

A little before this Victory, the Fortune Frigat weighed Anchor from Flying, with fixty three Men of War, to be Landed on the Illand Tabaga. At St. Vincent they found two Men that were left of feven, who having fettled along the River Wapoo, under Captain John Van Rjen, were forc'd by the salvage Natives to remove, two whereof dyed by the way, the remaining five landing on the Ille Trinidad, had three of their Companions kill'd by the Indians of Granada, they being Frenchmen, to whom the Natives bore an inveterate Hatred, fo that they left only the two Hollanders alive. The Fortune affifted by the South-star Ketch, took a rich Barque near the Illes des Virgines.

Not long after the West-India Company fet out twelve Ships more, under the Command of Derick Simonjon Wijgeef (who had the year before brought home the two fore-mention'd great Prizes,) who fettling Sayl and getting into the large Bay of the Rocky Illand Vincent, catch'd feveral Goats and Tortels. Before the Coaft of Brifife he took two rich Carvels, one from Pernambuco, and another from the Illet Todos los Santos; which Prizes having fett home with three Ketches, he fayl'd towards Sierra Leona, known by high and thick Woods, which grow on a high Coaft; from whence returning again to Pernambuco, he took fivc rich laden Veafels, amongt which was one Gallion from Goa, with a great Treasure of Diamonds.

These fucceflul Expeditions of the Fleets fet out from time to time by the West-India Company, enabled and encourag'd them to undertake Matters of greater confequence, viz. They fitted out one and thirty Sail, which carried four thoufand Men, one hundred and thirty Bras Guns, and five hundred fifty eight Iron Guns; of which Peter Peterszon Hein being Admiral, took near the Soundings of Tortuga, two Barques from Havana, the Men whereof inform'd him, that the Plate-Fleet was not yet arriv'd there, nor that from Terra Firma, but were both expected every day. The ftrong Current drove Peter Hein farther Eastward beyond Havana than he expedted, infomuch that he got sight of Matanca, where he overtook a Barque fent out by Landrouce de Cabrera, Governor of Havana, to give notice to the Plate Fleet of the Hollanders Ships, which he had feen from the Castle Morro before Havana: Mean while John Van Hoorn took a Veafel which was fent out before by the Plate Fleet, the Men whereof inform'd him that the Fleet it felf was near at hand, which Peter Hein found to be true, when the next Morning before Sun-rifing he defcry'd ten Sayl, of which some had ignorantly fayled to Leeward, and others to Windward of the Dutch Fleet; nine of them which were Laden with Hides, Meal, Campeche-Wood, Cochinele, Indigo, and other rich Goods, were taken by feveral Mann'd Sloops, because the Ships were not able to come up to them by reafon of the Calm. About Noon Peter Hein discovering nine Gallions more, made sudden Chace after them; which they perceiving, made toward the Shore, and about Twilight in the Evening they ran aground in the Bay of Matanca, where the Commanders Landing faved themselves, each carrying with him what Jewels they could. About Break of Day Peter Hein made all the Sayl he could poifible to come up with them, and feeing them falt aground, leapt into a Boat and Rowed up.
up to the Admiral, who fired eight Guns, whilest his Men got ashore: Heins, proaching the Gallion, saw no way to get up, till at last one of his Men spaying a Rope, climb'd up the same, and made fast other Ropes for his Companions to get up by; the Spaniards standing still gaping upon him, as if their feet and hands had been ty'd, which made Peter Heins grant them their Lives; which the other Gallions seeing, surrender'd themselves upon promise of Quarter; by which the Spanish Crown loft, besides the Musk, Bezoar, Ambergreece, and the Cargo of two Gallions and a rich Prize, above One hundred and fifty Tun of Gold.

The Night succeeding this great Victory being somewhat Tempestuous, drove the Gallion from the Bank on which they stuck the Day before, into deeper Water: Five Days they spent in unlading of the taken Vessels, after which Peter Heins sent Sayl with four Gallions, a new Spanish Merchant-Man, and his own Fleet, out of the Bay of Matanza, on the Seventh of September, Anno 1628. for Holland, where in a short time he safely arriv'd.

The Tyger Frigate sent from Zeeland, and Commanded by Lucas Pol, Anchor'd before Blanca, where he brought away above five hundred Goats: This Island which is six Leagues in circumference, hath on the West a Sandy Inlet, fit for great Ships to Ride at Anchor; Moreover, it is steep and Rocky, in the Valleys the Greens grow above half a Man's length. The Woods are overgrown with Thorns; the Soyl also would produce much more fruit, did not the Rats, Leguanes, Hedge-hogs, and other Animals, devour and spoil the Plants.

Pol leaving this Island ran to Tortuga, a low Isle, except on the West side; it produces Guanacum, or Pock-wood, in great abundance, and nourishes great Flocks of Goats, and hath an eminent Salt-Pan; in all which things it is parallel'd with the Island Orchilla, known by its high Mountains on the East and West; the other part thereof not being above six Foot above the Water: Pol Landing here, carry'd off above two hundred Goats near the Western Shore, whose bryny Soil produces neither Grain, nor Greens. The Trees which are on the same are so dry and weak, that they may be pulled down with one hand; Neither are there any Birds to be found there, except Owls; nor Beasts, except Goats and great Hedge-hogs. Pol sayling from hence, steer'd by the nine Woddly Isles call'd Rocos, and the three call'd Aves, to Bonaire, a pretty large rising Isle, which on the North-West hath a convenient Road, a fresh Water-spring, store of Sheep, on which the Spaniards live; Pock-wood, and Cotton Trees: Then steerling to the Isle Mona, he found the same to be surrounded with Rocks, and full of Horned Cattel difficult to be catch'd because of the thick Woods, in which grow exceeding good Oranges. Pol leaving this Isle, set Sayl and steer'd for Flemish, where he safely arriv'd without having perform'd any remarkable Exploits.

Mean while the West-India Company fitted out twelve Sayl more; under the Command of Adrian Johnson Pater, who set Sayl in the middle of August, and Cruised in vain about the Flemish Isles for Spanish Ships: About the beginning of the Year 1629. he sent away three Ships under the Command of Martin Landrode, from the Island of Sta. Vincent, whilest he himself ran with the rest of the Fleet into the Inlet Todos los Santos, within a League from the City Salvador, where there lay onely seven Barques near the Shore, which he judging not worth the while to hazard his Ships and Men for, steer'd to Pernambuco, took a rich Laden Barque in his Voyage, and was inform'd by a Brazilman that came aboard of him on floating Pieces of Timber, that three Sayl of Ships full of Goods were return'd to Recife, so soon as they heard of the Dutch Fleet: But Pater judging no good to be done there, return'd back to the Caribbee Islands, where near Granada he found three Dutch Vessels.
fels, which had likewise Cruis'd in vain before the Coast of Brazil. Moreover, the Pegasus, Raven, and Hart Frigates, parted from the Fleet to Cruife about Monges, touching at Blanca, they took above a thousand Goats, and between the Cliffs of the little Illes Monges, abundance of Fish; but defecting no Spaniards, they Sall'd to the Island De Vacca, which hath a brave Harbor, delightful Woods, pleasant Pature, fresh-water Brooks, and abundance of wild Horses, Hogs, and Lyons, of which the Sea-men took an infinite number. Before the low Promontory Corientes, overgrown with Trees, they got two Prizes laden with Campeche Wood.

These three fore-mention'd Frigates, as also the Walcheren and South-star from Zealand, joy'n'd with Peter's Fleet, when he receiv'd Information, that a considerable number of Spanish Ships were suddenly expected from Campeche: Whereupon Peter's divided his Fleet into three Squadrons, whereof the Forth confined of three Sails, the Referve of the like number, and the Admiral kept five under his own Command: Thus divided, they Sall'd to and again before Cape Corientes, when Captain John Stapel brought three, and John van Hoorn four Netherland Ships to their assistance.

Hoorne having set Sall from the Texel about the latter end of April, was beaten off from Granada with poylon'd Arrows, and took a Prize before the Promontory St. Anthony, the Men whereof inform'd him, that the Governor Gabriel de Chaves Oforia, an old Soldier, had great trouble in repairing the Walls, Forts and Houses in the City, which two years before had been blown down by a great Storm, and that six great Ships were lading to go for Carthagena with the Gallions for Spain, because they durst not Steer by Porto Rico for fear of the Netherlanders; moreover, that abundance of Ginger was spoyl'd for want of Vessels to carry it away; and that the Citizens were in great want for Stuffs, none having come in a long time from Spain; in like manner there went none but Copper Coin, so that nothing was to be got there. The Silver and Gold-Mines were not look'd after, the Spaniards not caring to work, and the old Natives were long since cut off, in so much that if the Imperial Court was not kept in St. Domingo, to which belong'd Cumanà and Coro, that City and Island, and Hispaniola it self, would soon be left desolate. Hoorne therefore Sall'd by the Promontory St. Cruz, being a low Point overgrown with Trees, into the Bay, twenty Leagues from the Mouth whereof lie the Illes Jardin de la Reyna. Before Corientes he took a Barque with three hundred and six Guns, seng from Havana, the Men whereof inform'd him, That the Governor of Havana, call'd Lawrence de Cabrera, having Intelligence of the Dutch Fleet's approach, raise'd many Men, and gave notice to the Ships in all the Harbors thereabouts; after which he took another rich Prize, and joy'n'd at last with Peter's Fleet, which now consist'd of twenty Sall, with which he Steer'd for the Soundings of Tortugas, where the Fleet met with a dreadful Tempest, wherein a Thunderbolt splitting the Main-Yard of the Hunter Frigas, fell down by the Maft, and rowl'd out at one of the Port-holes, kill'd the Purfer, and wounded two more in the Head; great flowers of Rain fell daily, when Samuel Lucas and Captain Outger Minie brought seven Sall of Ships more to the Fleet, with which Peter's put in for fresh Provisions into the spacious and secure Haven De Cabannas, where several Illes lie, formerly inhabited by Shepherds and Carpenters.

From hence Peter Sall'd by Havana, mended the Port-holes of his lower Deck, and took off the Top-gallant Mafts, because in September the usual Storms begin here; and seeing that he could not do any Exploit with so great a Fleet, he sent nine Ships home, and with the rest went to Barbados, where at that time there were about fifteen hundred English that Planted Tobacco.
Peters Sailing from hence, ran to the Main Continent of America, inspected the River Oroge, where he quenched the Town St. Thomas, that had been set on fire by the Inhabitants, and brought aboard all what they had left.

During his fruitless Expedition, the West-India Company Rigg'd out twenty seven Sails under the Command of Henrick Longue, Peter ita, and Joes Bankart; the Land-Soldiers being Commanded by Diedrick van Waerdenberg. Longue coming to St. Vincent, lay'd a long time at Anchor there; for in regard the Spaniards in the Low Countries rang'd on the Veluwe, and had taken Amersfoort, the States of the United Netherlands were forc'd to keep those Men in their Service which the West-India Company had rais'd; but so soon as Wefel was re-taken, and the Hartogen-Bofch won by Frederick Henrick, Prince of Orange, thirty six Sails were sent to Longue's assistance; of which some came sooner to him than others at St. Vincent, where he had lay'd four Mencheps without doing any remarkable Exploit. On St. Steven's Day he set Sail with fifty two Ships, thirteen Sloops, and two Prizes, all Mann'd with seven thousand Men, which meeting with contrary Winds and Calms, lay a great while under the Line, the Survey began to encrease amongst them daily, insomuch that above twelve hundred lay sick, and three hundred lay'd since they set Sail from St. Vincent; yet at last Longue getting sight of Olinda, sent Waerdenberg on the fourth of February with sixteen Ships, carrying three thousand Men to Pavo Morelo, a Wood, lying two Leagues Northward from Olinda, where he suddenly Landed, notwithstanding the Portuguese guarded the Shore with two thousand Men, whom Waerdenberg, after a short Skirmith, putting to flight, was the whole Night in Arms, and the next day became Master of Olinda, by breaking in on the North at the same time, when Colonel Schütte Storm'd on the South. Moreover, the Enemy surrendered the two Forts on Recifia, and forsook the Island.

About the middle of March nine Ships which were wanting to make up Longue's Fleet, came to an Anchor by him, having brought him above six hundred Soldiers, many Guns, all manner of Ammunition under the Command of Lieutenant Colonel Alexander Seton, and the three Adjutants John de Braine, Philip Serooskerken, and Horatius Calandry, who immediately order'd the Cloyfter on Antonio Vás to be terti'd, and built a Fort with four Bulwarks at the Entrance of Pazo in the Country Recifia. Seton also set fire on the Suburbs of Olinda, in which the Enemy had Lodg'd the Night before, and endeavor'd to poyfon the fresh Water on Antonio Vás, when a sudden the Netherlanders fell upon them; two which drank of the Water dy'd, and others fell into great Fits of Sicknesse, and it wanted little but that the Admiral: Longue, with a Company of fifty Mufquettiers, had been kill'd returning from Recifia to Olinda, he being unwares set upon by two Companies of Portuguese and Bragians, who kill'd above thirty six of his Men, and dangerously wounded six more, so that he brought off but eight Men unhurt. The like Misfortune befell the Wood-cutters on Antonio Vás, surpris'd by the Portuguese from an Ambuscade.

Whilst Affairs stood thus about Olinda, there first arriv'd two Ships from the United Netherlands at Recifia, not long after four more; Commanded by John Walbeck, and eight more under the Admiral Dirk van Hitzfeld, who was follow'd by the Noabs Ark.

About the same time Dirk de Ruiter set Sail with six Ships, and Peter ita with ten, to Cruise at Sea.

About the beginning of February, Longue having put all things in good order, prepar'd to return home, and weigh'd Anchor with nine Ships. But ita going from Recifia to Olinda, to take his leave of the Council there, was suddenly surpris'd after
after a strange manner; he had ninety Musketeers for his Guard, whose Matches were all put out, and their Arms all wee by a great shower of Rain, which they receiving from their Ambuscades, immediately got cross the River, and kill’d thirty of the Netherlanders, the rest running away, left Iza to defend himself, which he did for some time with his Sword, but had absolutely been slain, had he not received Aid from Olinda.

Because the Portuguese made several Attempts upon the Netherlanders, not without damage on both sides, the West-India Company often sent Ships to their assistance; and likewise many Brazilians defecting the Portuguese, join’d with the Netherlanders, who built a five-corner’d Fort with Bulwarks about Antonio Vies; which to prevent, the Portuguese ventur’d many a Sally, though not without considerable loss on their part. They also reported, that Frederick de Toledo was making nothing with a great Fleet, to drive the Netherlanders out of Brazil; at which they taking the Alarm, put themselves all into a posture of Defence, rais’d new Works about the Castle on Recife, while left the Ships which Cruis’d on that Coast brought in several Prizes.

John Walske being chosen General by the West-India Company over Brazil, had a Design on the Promontory St. Augufline; but it came to no effect, because the Sea beat so vehemently against the Shore.

The Report of the great preparation of a Fleet which was making ready in Spain, mov’d the West-India Company to raise more Men, and to send out Admiral Peters with seventeen Ships, which all arriv’d safe, except the Black Lyon Frigate, which carrying the Lieutenant-Colonel Eltz and Captain Hiltgeist, was never heard of.

John Bankart was also sent out in March with eight Ships to St. Helena, to Cruife there for the rich Caracks which us’d to Water there; but though he stay’d till August before this fruitful Island, yet saw not one Ship at Sea, nor a Man on the Island; but great numbers of Sea-pies, which are so tame, that they suffer themselves to be taken up with the Hand, or knock’d on the Head with Sticks.

Near this Isle Iza took a Ketch Prize, and rallying his whole Fleet together, steer’d for the Caimans; the most Eastern Isle whereof being about three Leagues long, is full of Rocks, with a high Point on the East; the other part thereof is plain. Then dividing his Fleet into seven Squadrons, he made them all ready for an Engagement, when he was inform’d by an English-man before Corrientes, that Frederick de Toledo had sail’d with eighty Ships from Havana to Spain, of which he had sent back eight Gallions to Carthagena: Hereupon bending his Course near Havana, he put the whole County to an Alarm, burnt a rich laden Vessel, and another that carry’d a Flag on the Fore-top, and a third laden with Ballast.

Joachim Gysen being made Commander of the Dolphin Frigate, and sent to join with Admiral Peters’s Squadron, was driven below Jamaica, and at last crook against the great Caiman, where his Vessel was all shatter’d to pieces; but all his Men and Goods being fav’d, he spent sixteen Weeks in making a Ketch of the pieces of the Dolphin, and brought a hundred and twenty Men, four Bras, and two Iron Guns to the Fleet, having buried the rest on Caiman.

Five Leagues beyond Havana, a Spanish Ship laden with Campeche Wood and Sarsaparilla, being chased against the Shore, was fire on fire by her own Men, which the Hollanders attempted twice in vain to put out.

After this Iza’s Fleet lay long upon the Coast of Cuba, but finding no Spanish Vessels, and their Provisions growing scarce, return’d back to the Texel, where they arriv’d without doing any farther Exploits.
In the mean while Pater lying before Punta del Gallo, intending to invade the City, built on the Shore of the Island Trinidad; but the Fort built at the Mouth of the River, and contrary Current preventing his Design, he ran through the middlemost Hole of Boccon to Blanca, where he caught two thousand Goats and a Bonaire, set several Towns on fire, whilst the Spaniards made a Smother of dry Stubble all along the Fields, through which the Hollanders were to return, so they might be choak'd with the Snoak; which their Invention had prov'd successful, had not the Hollanders forc'd a Way through a Wood. At last the Fleet leaving Hiispaniola, Steer'd for St. Martha, a Town built on the Main Coaft between Carthagena, and the River La Hucha, being insigilated thereto by a Letter (taken by the Hollanders in a Prize) writ by the Governor Hieronymo de Quero to the Spanish King; which Letter set forth the present Condition of St. Martha, whereby they conceiv'd great hopes of a possiblity of taking it; and of the Advantages that would accrue thereby: nor did it happen contrary to their expectation; for the Admiral Landing his Men, took the City without the least resistance; and though the great Fort fir'd some Guns, yet it soon surrendred on promise of Quarter; the City also was fav'd from being burn'd, by paying fifty five hundred Pieces of Eight, after they had plunder'd the same, and carry'd away whatsoever they thought good. Mean while the Provifions growing scarce in the Fleet, Pater judg'd it convenient to return home, where he arriv'd safely with all his Prizes.

Notable Exploits were perform'd by John Lichthart, one of which, amongst others ought not to be omitted, viz. he setting Sail homewards from Reiffa about the beginning of October Anno 1650. chance'd to fall with his Ship, the Overijssel, amongst five Biftcyan Pyrates, Cruising between the French and English Coaft, which thought to clap him aboard on a sudden; but they seeing him bear up to them, were afraid to venture, and Tack'd about: after which he was set upon about three Leagues to the Northward of the Lizard, by three Frigats belonging to Dunkirk, the biggest whereof carry'd thirty six Guns, the second twenty eight, and the last twelve; with which three he maintaine'd a Fight eight hours, in which he had fourteen Men kill'd, and thirty two wounded; his Ship resembled a Wreck, the Main-mast being shot overboard, the Rudder hung by pieces at the Stern, and the Tackling all shatter'd and torn, besides leven Shot under Water, and not less than four hundred through the sides above, but without sufficient marks of retribution on the Dunkirkers Side; but Lichthart getting into Plymouth, mended his Ship, and from thence Sail'd to Amsterdam, where he was Presented with a Gold Chain in recompence of his Valor.

The Expedition of the Brown-Fish Frigat is also remarkable, which Sailing beyond Cape de Verdi, Steer'd by Cape Roso along the Shore to the River Catchien, at whose Mouth lie two Shelves, and between them ran a Channel through which the Ships passe'd. The Brown-Fish sailing about a League up the River, which is a Mile in breadth, took a Portuguese Barque. The Seamen also Landing on the Isle Bifos, spake Portuguese with the Natives, who are Coal-black, and have strong Bodies, go Arm'd with Darts, Bowes, Arrows, Sarmetiers, and were Baptiz'd by a Priest sent thither from Portugal, who with a few Country-men had built a Chappell and some Houses there.

From hence the Brown-Fish Sail'd to the most Northern Isle Bifos, which is continually at Wars with Bifos. The King of this Isle receiving some Prefents from the Netherlanders, gave leave to his Subjects, to go aboard of them.

Steering from hence to Norhobo, they found the Inhabitants carry'd away, and their Gardens and Houses ruin'd, so that they could get nothing but wild Pum-
Chap. VII.  

**AMERICA.**

pions to refresh themselves with; therefore leaving the Isle they anchor'd at Recifà.

In the interim, whilest these Expeditons were carry'd on as hath been related, Captain John Boon-ester (who parted from the Admiral Sea's Fleet with eight Sail of Ships) Cruis'd to and again before Hispaniola till May Anno 1631. near Mona he took a rich Vessel coming from Porto Rico, another before the Island Vaca, and a third full of Ginger, with which he Steer'd to the Tortugas, being seven in number, resembling rather sandy Flats than Isles. Before Havana he also chaf'd several Vessels, but lost sight of them in the Night. Mean while their Provisi ons growing short, the Seamen were desirous to return; which Boon-ester would no way yield to, because the time began to approach in which the Spanish Ships came from all places to Havana; but the Men mutinying forc'd him to Steer to the Texel, where they arriv'd without doing any considerable Exploit advantageous to the West-India Company.

But at the same time fourteen Ships, three Sloops, and seven great Pinnaces, weighed Anchor from Recifà with a thousand two hundred and sixty Men, divided into twelve Companies, under the Command of Hartman Godsrid and Stein Callenfeld, who Landing on the Island Tamarica, march'd along a bad and narrow Path, partly craggy and partly sandy, to a Fort built on a high Ascent overgrown with Brambles in such a manner, that it was impossible for them to break through, whilest they in the Fort fir'd continually upon Stein Callenfeld, who judg'd it convenient to draw off, and Storm the Castle on another Side.

The Admiral Pater newly come from the Texel to Olinda, sent three Ketches, a Sloop, and two Pinnaces, beyond the Town Tamarica, to prevent the Enemies crossing over to the Main, and keep off their Fire-ships. They also receiv'd Information from three Portugese and five Brazilian Prisoners, That the Castle, surrounded with Fens and Brambles, had sixteen Guns; and that Algarterque had sent eight hundred Men to assist the three hundred that lay in Garrison there before. The Captains Le Grand and Arciffesky found two other Ways that led to the Fort, but altogether unfit to march along with their Men and Guns. Pater also Row'd round the Island with Sloops, and fathom'd the Water, whilest Arciffesky Sailing up the River to Garabu, suppos'd that he had found a much better place to make a Onset on the Castle in, than had been found out yer; but the Council of Olinda and Stein Callenfelds look'd upon it as too great a hazard to Storm a Fort, to which the Ways lay so much to the Enemy's advantage, a small number in the same being able to beat off a considerable Party; therefore it was judg'd beft, and concluded upon, to build a Fort on a little Isle near Tamarica, at the Mouth of the River; to which purpose the Engineer Buuren contriv'd a Square Castle with a long Horn-work, which was call'd Orange; in which the Captains Arciffesky, Möllingen, and Breyer, were left in Garrison with their Companies, whilest the rest of the Regiment return'd to Recifà.

Mean while Antonio de Oquendo brought a great Fleet to St. Salvado; and Callenfelds drew four Companies of Mufquettiers, and a great company of Seamen with Pick-axes and Spades out of the Fort Frederick Henrick into the Field, and marching Southward along private Ways, he found the River strongly forti'd near the Forts Affogados, having above and below a row of strong Pallisado's; yet the Portugese that guarded these Works after a small reftistance fled, and left all: But because a general Alarm drew many People in Arms out of Real, and several other places, Callenfelds drew off in good order, and was inform'd by a Prisoner call'd Peter Alves, that the Fort Affogados receiv'd that Denomination from the River on which it was buildt; that
that there lay generally a hundred and fifty Men in Garrison there; that about a Mile farther was the Fort Pirango; that Peter de Aemena bore the chief Command next to Albuquerque over the Militia, who us'd few Musquets but what had Fire-locks; and that they wanted no Ammunition, for six great Carvels loaden with the same had not long since for'd them with great plenty thereof. The Netherlanders also understanding by Letters which they had taken, that the Tapuyans were very much incens'd against the Portugueze, who stood in great fear of these Salvage People, it was judged convenient by the Council at Olinda, to invite the Tapuyans to be their Friends.

On the eleventh of September Anno 1631. Admiral Pater and Vice-Admiral Martin Thyszoon, whose joint Forces were fifteen Men of War and three Ketches, carrying nine Companies of Foot, Commanded by Captain Engelbert Schatte, describ'd the Spanijf Fleet about an hour before Sun-set, animated all the Officers and Captains to regard their Honor and Oath which they had taken; telling them, That on this Engagement would depend the Welfare or Ruine of the West-India Company. But his Men were not so much hearten'd by his Speech, as daunted at the sight of the Spanish Fleet, which consisted of twelve Dutch and five Portuguese Gallions, and twenty-six other Vessels, as Pinks, Fly-boats and Carvels, all well Mann'd and full of Guns, the Gallions carrying whole and Demi-Cannons; the Admiral, call'd Antonio de Oquendo, carrying forty-eight great Guns in his Galion, call'd St. Jago; whereas they had receiv'd Information but of four Gallions and eighteen lesser Vessels; nevertheless Pater no whit discourag'd, boarded him about an Clock the next Morning, whilst Captain John Maft board'd him on the other side, which occasion'd a bloody Engagement; and it would have prov'd fatal to the Spaniard, had not Pater's Stern taken fire, which he endeavoring in vain to put out, and none coming to his assistance, after he had hung a good while by a Rope at the Spanish Admiral's Bowe, he was forc'd through faintness to let go and fall into the Water, whilst his Ship was blown up, a few of his Men only being sav'd by Oquendo. In the mean time Martin Thyszoon board'd the Gallion Antonio de Padua, Commanded by the Vice-Admiral Francisco de Vallezilla on one side, and the Vice-Admiral Frigate on the other, which after half an hours Engagement lost her Main-mast, and after a Sharp Fight of four hours the Fire took hold of her Sails; which the Netherlanders not being able to quench, leap'd desperately over into the Spanish Vice-Admiral; but he having two hundred and sixty Men aboard, beat them off, forcing them to leap into the Water, or sell their Lives at a dear rate. But Captain Thyszoon had better success, for he not only sunk the Vice-Admiral, but took the Bonaventura Gallion, and likewise gave the Gallion John Baptista so many Shot under Water, that the muck likewise. The Night approaching ended this bloody Engagement; and the Netherlanders Fleet much damnif'd stood Northwards, with intention to return to Recifia. The next Morning Oquendo had lost Fight of them, but describ'd them again on the fifteenth of September, and kept in view of them the following days, five Leagues from him to the East, or East South-East, Martin Thyszoon coming to an Anchor before Recifia on the twenty second of September.

About the same time the Amsterdam Frigat set Sail from thence for St. Salvador, with intention to join with Pater's Fleet there, but not finding the Admiral, return'd, and near Cape St. Augustin discover'd the Spanish Fleet; wherefore running close behind them the receiv'd four Guns from Oquendo, which the answer'd, and kept at a distance from them the whole Night, in hopes to meet with one single Vessel or other belonging to the Fleet; but the Spanish Vice-Admiral bearing little Sail, guarded the Rere, and for'd continually at the Amsterdam Frigat, who fear-
ing an unlucky Bullet, made all the Sail she could possible, and brought news of the approach of the Spanish Fleet to Recife. Soon after which the Elephant came from the Dutch Fleet thither, with a full Account of the fore-mention'd Engagement, viz. That besides the Admiral Peter, there were slain Captain Thomas Sickes, Cormillon, and Lieutenant Steenbergen, also that two Ships, the Prince William and the Province of Utrecht, were sunk: In lieu of which they had taken the Gallion call'd The Bonaventura, with twenty six Bras Guns, weighing above sixty four thousand Pound, two hundred and forty Carillions, and a great parcel of Sugar and Tobacco; Amongst the Prisoners was one call'd Francisco de Fuentes, who being Examined, gave this Information, viz. That the Fleet carry'd two Regiments of Spaniards and one of Italians; in which three Regiments were four thousand Men, under the Command of Conde del Bangniola; and that upon the setting out of Ferdinand, the King's Brother, to the Netherlands, all the chiefest Gallions and Dunkirk Ships were sent for, and English Vessels hired, to convey him safe to the Flemish Coast, which made Oquenda set Sail with so much the less Number to St. Salvador; that the sunk Gallion, call'd Antonio de Padua, had fourteen Bras Guns in her Hold, besides twenty six that were mounted.

Soon after a Brasilian that had pass'd by Albuquerque's Army to Olinda, brought Information, That he was sent by Jandui and Oquenou, two Kings belonging to the Tapuyans, to enquire if the Topatingas (for so they call'd the Netherlanders that belong'd to the West-India Company) did yet reside in Pernambuco, with Proffers to assist them with their Forces. Moreover, he inform'd them, That since his departure from Boudewyn Henrickzoon, a great many of the Tapuyans Petivares were kill'd by the Portugese near the River Grande and Inlet Trajician, because they had assist'd Henrickzoon, who had left them helpless at his departure. He added also, That if the West-India Company would give the other Brasilians any assurance to assist the Tapuyans, it would be necessary to Consult about it near the River Grande.

This Proposal was found to be of so weighty a Concern, that Ellert Smient being sent with the Ship call'd The New Netherland, and a great Sloop, to Siara, to make further enquir'y into the Busines, was accompanied by a Renegado Portugese call'd Samuel Cochín, and several Brasilians (whom Henrickzoon upon their Request carry'd with him from the Inlet Trajician to Holland) who went, under pretence of visiting their Relations at the River Grande and Siara, to invite their Country-men to join with the Netherlanders.

During Smient's absence many Consultations were held about the demolishing or defending of the City Olinda, about which there had formerly been many Contests; but at last the Voices carry'd it, which were for the demolishing thereof, in regard it was of little Consequence; and could not be kept without many Men and great Charges, because of its bad Situation, whenas their Men might do greater Service in other places: Wherefore they began to carry all things necessary from Olinda to Recife, and on the twenty fourth of November the City was set on fire with Barrels of Pitch and Tar, being in a light flame at every corner, whilst Stein Callenfels drew off the Garrison in good order to Recife; and immediately sixteen hundred Men under his Command were put aboard of sixteen Vessels, with intention to go to Parayba; but the Enemy having a fortnight before had notice of this Design, had fortify'd himself all along the River. Callenfels approaching, espy'd twelve Portugese Standards, and the Men ready on the Breast-works to prevent his Landing; yet nevertheless he not regarding their Bullets, press'd in amongst them, and forc'd the Enemy from his Works.

Near the Water stood a Stone Castle, and on one side of it a large Store-house;
on the Mountain near the City appear'd the Franciscan Cloyler; the Fort rais'd of
Earth had four Bulwarks, and twenty six Guns, according to the Information of
the Eye-witnesses Drevis and Berther, who were sent thither as Spies.

Callenfels Landed not so carefully but that he left forty Men, either kill'd from
behind the Breastworks, or out of a neighboring Wood. Being inform'd by a Por-
tuguefe Prisoner, of the ill Condition of the Town, and how slenderly it was provi-
ded, he immediately rais'd a Sconce, two Watch-houses, and a Pallifado, from
which he fir'd with two Guns on the Catle, and made several Trenches; but the
Besieg'd were stronger in People and Guns than the Besiegers, being scarce
able, by reason of their small number, to keep Guards in all places, were also tir'd
out under a hot Climate, and fainted for want of Provisions, infomuch that in
two days there dy'd and fell sick above two hundred; wherefore Callenfels judg'd it
best to draw off in time; which that they might do securely, they made a Redoubt,
and the six Companies Commanded by the Captains Redinepren, Moppel, Choppens-
burg, Scheuk, Byma, and Cook, resolv'd upon a desperate Attempt, as followeth:
Marching privately through a Wood behind the Enemy's Works, they fell in at
one side upon the Portuguese Trenches, from whence they drove them after a small
resistance, and forc'd them to fly towards the Fort, whither they were pursu'd with
such eagerness, that thofe who were in the Fort, left the Hollanders might get in with
them, lock'd up the Avenues against their own Men; at which they were so amaz'd,
that some of them clim'd up by the Walls of the Fort, but were either kill'd by the
Affailants, or knock'd on the Head by their own People, because several Hollanders
went to climp up amongg the Portuguese; the rest running about the Fort, fell into
the midft of the Netherlands, where they were all cut off, being in number above a
hundred. The Hollanders also in this resolute Defign, had about twenty Men kill'd,
and fifty wounded; after which they put lighted Matches on Sticks in their En-
emy's Works, as if they had never made any Attempt on the City Parayba.

Whileft this Expedition fell out fo unfortunately, Smient performing his Voyage,
found in the Inlet Trajiciaan a Portuguese Veffel hal'd near the Shore under the
protection of two Pallifado's; wherefore supposing it bell not to make any Attempt
on the fame, he ran to an Anchor before Ubraminda, twenty Leagues below the
River Grande; where the Natives Marcial, Tacou, Ararava, and Matauwe, who had been
in Holland, Landing, went to fee, and speak with their Country-men to joynt with
the Netherland West-India Company: and some days after the Seamen Landing again
in the fame place, met with Tacou, together with eight more stout Men, and seven-
teen Women and Children, who carry'd a plain Portuguese call'd Juan Peruca, to the
River Grande, about whom they had found Letters containing the whole Condition
of Siara; which the Brazilians imparting to Smient, he sent a Ketch thither before, and
follow'd after himself; they Steer'd along the Shore beyond the Shelves Guamare,
by the Mountains Sallinae and Porto de Mel, the Haven De Ones, and River Juagnarive,
to the White Point, where the Brazilians Landing Spake with their People, and towards
the Evening brought good tidings, and defir'd that they might be Landed at Siara,
where they would put their Defign in practice: Smient following their Advice,
receiv'd them aboard the New Netherland, and Sail'd along by the iquare Fort Siara
towards a smooth Shore on each fide, hedg'd in by thick Woods, where the Brazili-
ans intended to Land; but the Portuguese, and Brazilians belonging to their Party,
being gotten into the Wood before, fir'd so vehemently, that they were forc'd to
Retreat, and Sail five Leagues farther beyond the Cape Opefe, made dangerous by
the many blind Cliffs that lie about the fame. Smient anchoring here, Landed the
Brazilians, on promife that they would return in two days; but the Seamen seeing
sometimes ten, sometimes fifteen Arm’d Portugueses ahoire, judg’d that the Brazi-lians had been slain by them, and therefore weighed Anchor to the great dislike of the Weft-India Company.

Since this unsuccessful Design on Parayba, the Council at Recifas were no white discourag’d, but resolv’d to make an Attempt on the River Grande with twelve Ships and two Sloops, carrying ten Companies of Soldiers, besides Seamen; but by reason of the difficulty of Landing (because the Coast being very Rocky, makes the Sea go very hollow) the Strength of the Place, both in respect of its Fortification and number of Defendants, and the joyning of the Brazi-lians with them, they were forc’d to return without effecting their Design.

About the same time eight Sall arriv’d at Recifas from Holland, and Jonathan de Nekker, Cornelis Cornelis/zoow, alias Houte-been, and Reinier Peterfzon, set out with three Frigats from the Texel to the Ile Vasca, where with Hunning, Fishing, and gathering of Fruit, they refresh’d themselves, and afterwards steer’d to the River Magda-lema, discernable at three Leagues distance by the thick yellow Water it discharges into the Sea through three Mouths. Between the Westerm and middlemost Mouth lies an Ile in the middle of the River, behind which Houte-been came to an Anchor, whilst Nekker and Peterfon kept Guard near Punco Verde; whereas the Wind blew very fresh in the Night, yet the Water remain’d smooth: About Day-break Nekker discovering a Sall, made chafe after the fame; but not able to come up with her, left her the following Night, and in the Morning saw a Barque, which running ahore was set on fire by Peterfon; after which Nekker chafed two other Ships, which likewise getting from him, he stood off as Sea out of sight of the Ills Zamba, which are low on the Weft; and Hilly at the Eastend, where the Sea beats vehemently against a Promontory, and chafed a Barque ahore, whither he sent a Boat with eight Men, which being beaten to pieces by the Waves, drowned four of them, and the rest getting ahore were kill’d by the Spaniards. Soon after which four Spanish Ships set Sall after Nekker and Peterfon, and had not the Night favor’d them they had been but in a bad Condition; for they were not able to get their Sea-men aboard, who having taken some Wine ahore, had made themselves Drunk; about Day-break they decy’d the four Spanish Vessels, which were gotten so far from them, that they could but just discern them from the Main-top. Not long after they took two Barques, and came to an Anchor behind Zamba by Houte-been, who being driven by a Storm out of the River Magdalenam to Jamaica, had chafed a Barque ahore there, and a Ship with four hundred Negro’s against St. Martha, and since took a rich laden Barque near the River Magdalenam. In like manner Nekker and Peterfon took a Ship coming from Carthagena, leaving Houte-been alone before Magdalenam, who not long after discover’d eighteen Spanish Ships near the High-land St. Martha, which were Steering to Carthagena; one whereof belonging to Carthagena he made Prize of, but was forc’d to forsake her in a great Storm; after the ceasing of which he took another Frigat, the Men whereof inform’d him, That the Admiral Thomas de Caffane was going with eleven Ships from Cape Antonio to Porto Bello, to lade the Permian Silver there. The Ship with Angolan Negro’s, taken by Houte-been, he fet free, but kept a Frigat laden with Tallow, Hides, Tobacco, and Flesh, which he had taken jut before the Coast of Rio Grande, and thus he went Privateering up and down, when the Plate-Fleet from New Spain weighed Anchor from Juan de Lasa, the like of which in Riches had never set Sall before; for it carry’d 2169140 Ryals of Eight for the Merchants, an unvaluable Treasure for the King; besides many rich Commodities which several bought upon their own Accounts, that were not entred in the Custom-house: all which Treasure, laden in nine Gallions, be-
sides a considerable number of Frigats and small Vessels, was committed to the Charge of Miguel de Escacaret; but he dying before the Fleet set Sail, Manuel Saravo de Ribera was chosen Admiral; but a dreadful Storm arising as they were sailing before the Coast of Campeche in their Way to Havana, the whole Fleet was in a manner utterly destroy'd, with a most unvaluable Treasure: The Admiral, Vice-Admiral, Gallion, Terefa, and several other Gallions, sunk, with at least two thousand Men, a great number of Persons of Quality, and amongst the rest the Marques Salinas, who was most treacherously slain by thirty Persons, who made themselves Masters of a Sloop, into which he went for safety out of the sinking Admiral Josepe: That which infringed them to this horrid Act, was the fight of a small Trunk of Jewels which he carry'd into the Sloop: Not long after falling out amongst themselves about dividing the Spoil, several of them were discover'd, apprehended, and put to death.

This Fleet weighed Anchor the day after their Admiral Miguel de Escacaret was buried, who dy'd so suddenly that he could make no Will. A few days after the departure of the Fleet, a hundred and seventy Houfes were burnt at Juan de Luna. It appears that the Spaniards out of fear of the Netherlanders, set Sail on the tenth of October, notwithstanding it was at an inconvenient time, because about that Season the Hurricanes rage most terribly in the Bay of Vera Cruz.

By a Letter from the Treasurer Francisco Suarez it appears, that the two Regiments in the City St. Salvador, the one Commanded by Christopher Mexia Bocanegra, consisting of nine Companies, each of fifty Men, and the other Commanded by Vasco de Mascarenas, consisting of thirteen Companies, cost the King of Spain yearly 21515 l. to maintain them.

The Netherland Council at Recifia no way discourag'd by their successlesse Attempts made the last Year on Rio Grande, sent thirteen Companies of Soldiers aboard of seventeen Vessels, to build a Fort at the River Formosa, where the Portuguese being too weak to refti't them, set fire on a Store-houfe with three hundred Chefts of Sugar, and fiel'd Walbeck was Commander in Chief in this Design, who Lading on Formosa found no fit place to build a Fort in, because the Shore, not being above a Musquet-shot broad, was inclos'd with Woods, behind which lay high Mountains that Commanded the Shore; therefore marching to Scribain he burnt several Houfes and a new Sugar-Mill, near which in a Store-houfe he took twelve hundred Chefts of Sugar, which for want of Carts he could not carry to his Ships. Also before Porto Calvo he burnt a Carvel, and took a great number of Carts on Camarigibi, and return'd without any farther Exploits to Recifia, where the Cruizers had brought in several Prizes during his abfence.

The Council resolving not to fit idle, let out another Fleet of eighteen Ships under the Command of Martin Thyszoon, with a Regiment of fourteen Companies under Stein Callefeels.

This Fleet approaching Cape Anguilan, they found a ridge of Rocks along the Shore, against which the Sea beat with great vehemency; at length they came before a small Inlet, at whose Mouth lay a small Fort from which the Enemy fir'd upon the Man's Boats which Row'd by the fame; at some distance they discover'd two Breathworks, one rais'd above the other near the Shore; on which when the Hollanders thought to Land, three hundred Portuguese fir'd at once upon them; and on a Hill not far from thence appear'd more Men, which amaz'd the Council of War, for the Inlet was so narrow, that not above six Boats could Land at once; and it was evident, that though the Enemy should chance to be beaten from behind his Breathworks, yet the Hollanders would lie expos'd to the Enemy's Guns from the
Fort Nazareth built on the Mountain; besides, Nazareth, if gain'd, could scarce be defended, unless the whole Mountain were Intrench'd round, which would not only be very chargeable, but also impossible, because of the red Earth, altogether unfit for Fortifications; and the barren Mountain afforded neither Wood, nor any thing else; besides, the Storming of it would be very dangerous: The Entrance into the Haven was difficult, because a flonic Bank before the same suffer'd no Passage but betwixt small Openings; the chiefest whereof was guarded by a Water-Castle, and farther within by the Fort Puntacu. Along the Sea-shore their Landing was prevented by the violent beating of the Waves, and a great square Tower on the Way up to the Fort Nazareth, whose Church is seen at a great distance off at Sea. All which consider'd, they judg'd it best to draw off their Men again, and so they return'd without having effected any thing to the purpose, only Captain Schuppe took two Carvels with five hundred Chefs of Sugar in the River Formosa.

Soon after Martin Thyszon being sent out with twenty two Sail, sent four Ships for Holland with the Lieutenant-Colonel Stein Callenfels, and the Councillor Srooskerken; yet thirteen Sail remain'd still before the Coast of Brazil, under the Command of Captain John Maft, who whilst he floated to and again from the Shore, and Cruising up and down, the Governor of Recifia and Colonel Rembach march'd with five hundred Men and forty Negro's, from Recifia about fix a Clock at Night, by Olinda along the Shore; Whereupon the Portugese Horse-watch ran instantly to Real, two Leagues from Olinda, to give notice thereof to Albuquerque; but they surmounted all the Difficulties they met with by the Way (which were the greater in regard of the abundance of Rain that had lately fall'n,) and on the first of May 1632., came to the City Garafu about Noon; where whilst Rembach float still in good Order with three Companies, the Governor of Recifia fell upon the Town with three Companies. The Inhabitants had not the least thoughts of being molested by the Dutchmen there, because they judg'd the Ways which led thither could not be pass'd in that rainy Season. In the first Onset a hundred Portugese, most of them great Merchants, were slain, they being come thither with their Goods from Olinda; and amongst the Prisoners which they took, were fix Franciscons.

This Victory the Hollander obtain'd with the loss of eight Men, and twenty five wounded, besides Captain Rembach, who was also wounded. The Governor of Recifia entering the City, flav'd two hundred Pipes of Wine, to keep his Soldiers from over-drinking; and because there were many fair Women there, he caus'd them all to be lock'd up in the Church of St. Cosme, to prelere them from the Soldiers outrages.

The Priet Duarte Mendez Serrao (a Letter of whose John de Laet quotes) values the Booty carry'd away by the Hollander from Garafu, at 9000 I. Sterl. besides the damage which the Place suffer'd, being almost ruin'd. He relates farther, That the City call'd Villa de Santa Cosmo de Garafu lay five Leagues to the Northward from Olinda; and that in it were three Churches, viz. Cosmo, Misericordia, and Hermitage de Santa Cruz; as also two Clowseters, viz. Invocation de Antonio, inhabited by Capuchins, and another dedicate to Franciscons, inhabited by Perons of his Order; That the chief Church Cosmo, built like a flat-roof'd House, had a fair Entrance, before which stood two Turrets, and in them hung Bells; That the Franciscon Clowseter was inclos'd within a great Wall in the middle of a plesante Garden, and had on each side a Tower; That most of the People who kept the Feast of St. Philip and St. Jacob, were at Maft when the Hollander came thither, and though they saw the Soldiers out of their Windows, judg'd them to be Portugese, who (as it was reported) had a Design upon Tamarina.
The Governor of Reciffa marching with his Booty from Garufa, set several Houses on fire, and marched towards the Fort Orange, on the Island Tamarica. Albuquerque informed thereof, dispatched a Spanish Regiment, Commanded by Colonel Ferdinand Ludovico Barboallo, and Paulo de Ferade, with a considerable Body of Volunteers; but they all came too late: Whereupon the Portuguizes, being thus kept in continual Alarms ashore, and suftaining every day more and more Losses at Sea, began to desire Peace, and the rather, because they could not hear of any Fleet coming from Spain to their assistance; and hearing a Report, that the West-India Company were making great Preparations. To which purpose Peter Alvares (acquainted with the Dutch Commanders, as having been their Prisoner) was sent by Duarte de Albuquerque (to whom the Lordship of Pernambuco properly belonged) and by his Brother (being General of all the Forces in Brazil) to Reciffa, to Treat about the deciding of the Differences between them and the Netherland Weft-India Company: But the Council in Reciffa weighing the many Disadvantages that would ensue, if they should upon eafe Terms patch up a Peace with the Portuguizes, return’d Alvares this Answer: "That the West-India Company was resolv’d, to the utmost of their Power, to keep all those Places which they had taken by force of Arms; but that if he could move Albuquerque to deliver up the Countrey to them, he should be bountifully rewarded.

After this the Hollanders Landing at Barra Grande, took great quantities of Wine and Tobacco, and burnt two Villages; as also the Sugar-Cane Fields, and Sugar-Mills on Catuaianha, also one at Barra Grande, and three at Porto Francisco.

At the same time the Hollanders also scatter’d Letters amongst the Portuguizes, signifying their trouble for the great effusion of Blood in those Parts, which was occasion’d by their own stubborn and unreasonable Proceedings; likewise intimating the great Preparations that were making on their own part, and on the other side the great unlikelihood, and indeed impossibility, as things then stood, of receiving farther Succors from Spain.

These things being powerfully urg’d, had perhaps taken greater effect with the Portuguizes, had not the secret Counsels of the Netherlanders been betray’d by Leonard van Lom, Overseer of the Prizes, and Translator of the Portugalse Letters, who confess’d that he was perjur’d to that villainous Action in Amsterdam by a Portugalse Merchant, call’d Duarte Rodrigues Delves, with whom he had made some Agreement; and for the better confirmation had receiv’d the Sacrament upon it of an Amsterdam Priest: His Agreement was, "That he should go to Reciffa, enquire after all Concerns, and give speedy advice thereof to Rogez de Barros; which he did by a Mulatto, who carry’d Letters between them.

This Villain the Council judging worthy of Death, first caus’d his two fore-fingers to be cut off, next his Head, and afterwards his Body to be divided into four Quarters. The Mulatto was likewise Beheaded.

About this time the Treasurier Celen viewing the Isle Mayo, found the same to be surrounded with steep Rocks, abounding with Horfes, Alhes, Partridges and Goats, besides two Salt-panes. The Inhabitants, which go Arm’d with Half-pikes and rufiy Hangers, are said to be a fort of out-law’d Portuguizes, to the number of thirty; amongst whom was one Woman. They had a Governor, call’d Amaro, to whom they gave yearly eight thousand Goat-skins.

Celen Sailing from hence Steer’d by the Island Del Fago, known by a great Mountain, whose high top vomits Fire. Not far from which he took the Ship St. Peter laden with Wine, with which he return’d safe to Reciffa, where a while after Coffelling arriv’d also, and was no sooner Landed, but four Ships, two Sloops,
six Cock-boats, a Barque and a Hoy, set Sail under the Conduct of John Mail with four or five Companies of choice Musketeers, Commanded by Colonel Schuppe, who Landed behind the Stonie Bank of the River Alexia, surpris'd some Portuguese and Negro's in their Houfes, and march'd in the Night sotfaft, that by Day-break they were got to the Shore of the River Formoza, where they took two rich laden Fly-boats and a Carvel; and afterwards Landing in the Road Camarigibi, they took fifty Portuguese in a Village, as also a Store-houfe full of Chefts with Sugar and Tobacco, burnt all the Buildings thereabouts, and amongst others a brave Sugar-Mill: Captain Byma burnt also an eminent Sugar-Mill near the Brook Maria Farinha. Martin Thyfzon lay a long time under the Line; but at last getting to the Ile Vecca he gave each Captain his Orders, and divided the Fleet, which joynd again before Havana, paft'd through the Straights Bahama (where he met with great Storms, and many other Inconveniences) to Holland. But Gales van Stapels, who parted with a Frigat from Thyfzon's Fleet near Bonaire, Steer'd by the Promontory Cotoche to Sifal, which Village having plunder'd, he set it on fire, fetch'd a Barque in the Night from the Road of Campeche (where City is fett at a great distance off at Sea, by the white Cloyfle Francisco) and fett Sail for Zeeland. Eftime been arriv'd also about the middle of June with a rich Booty in the Texel.

Not long after Eftime been weighing Anchor with the Otter Frigat, return'd to Recifia, and in his Way thither took a Ship laden with Wine. Colonel Schuppe immediately upon his arrival had a Command given him of five hundred Men, and John Lichtbart of three Sail of Ships, a Pinnace and five Sloops; with which they fett to the River Formoza. Schuppe Landing his Men there, march'd up to the Fort Formoza, fortifi'd with Moats, steep high Walls, and four Guns, Storm'd and took the fame, killing all thofe that were in the Garrifon, except the Governor Peter Albuqueque: In which Victory neverthelefs the Hollander loft the valiant Captain Poilier du Baffon, who being shot in at the Throat with a Bullet, which came out behind the Ear, dy'd of the fame, the Wound immediately feftering, to which all Wounds are very fubject in Brufiel. The Hollander also burnt four laden Barques, a Store-houfe full of Sugar, and pull'd down the Fort they had taken.

Setting Sail again, they Landed to the Northward of the River Antonio Grande, where they gain'd a Platform with five Guns, deftroy'd six Ships, and took two more in the Haven Camarigibi; from whence they return'd to Recifia, after having spoil'd and taken thirteen of the Portuguese Ships, feveral Sugar-Mills, Store-houfes, and a Cafle.

The Swol Frigat came also in a fatter'd condition to Recifia, having been Engag'd with a Spanifh Gallion carrying twenty eight great Guns, and full of Men, which neverthelefs she would have matter'd, had not an unfortunate Shot spoil'd all her Rigging.

About the fame time the Captains Byma, Everwyn, and Rinfeld, set Sail with their Companies in three Ships to Porto Francisco, where Landing, they burnt three Sugar-Mills, besides feveral other brave Buildings, and brought away a rich Carvel, whileft Laurence van Rembach was made Colonel in Waardenberg's place; and Sigifmond Schuppe Lieutenant-Colonel.

The Proffers which the Tapuyan Agent made to the Hollander had been very advantageous, had not the Summer Season been too far spent: for he had promis'd, That if they would Land a coniderable Party of Men two Leagues Southward from the River Grande, all the Tapuyans should joynt with them, and affift them in driving the Portuguese out of Brufiel.

After this Schuppe and Lichtbart went with thirteen Companies of Soldiers, and
two hundred Seamen, to fall upon the Enemy’s Camp at the Afogados, where Albu-
querquè had rais’d several Works, partly for the securing of Verga, the best Spot of
Land in all Pernambuco, where there are likewise more Sugar-Mills than in the
whole Country, and partly to keep an open Way between Arryal and the Promont-
ory St. Augustin: To which purpose they march’d by the Fort Ancilia along the
plain Country, to the Stream Capivaribi, which they had cross’d before the Portu-
guese knew any thing of their approach, who being but a hundred and thirty, for-
sook their Works and ran into the Woods; but assisted with four Companies of
Italians, they Sally’d out of Real, and fell with great eagerness on the Seamen, who
being guarded by forty Musqueteers were raffing of Works in the Road which
leads to Real, and put them to flight; but being rally’d, and seconded by Colonel
Redburgh, they drove the Enemy into a By-way, guarded by Byms and Bongarson;
where being flopt, and Captain Cloppenburgh from another side falling in amongst
them with his Musqueteers, they became encompass’d, and had been all slain, had
not Le Grande, by making way for Cloppenburgh, given them an opportunity of get-
ting away between them.

The Council at Recifà, to secure the footing which they had got on the other
side of the River Capivaribi, took order about the building of a Fort, which requir’d
the greater Labor, because the Earth was very flonic: not far from whence Cap-
tain John Smith walking, was shot by a Party of Portuguefe lying behind some Chefs
of Sugar; the Blow whereof giving notice to his Ensign, he speedily march’d ther-
ther, and surprizing the Portuguefe, kill’d most part of them. The like success had
Le Grande, Cloppenburgh, and Bongarson, who marching out upon a Deign; surpris’d
unawares in John de Mendoza’s Sugar-Mill, two Companies of Portuguefe, who hav-
ing watch’d there the whole Night, and composing themselves in the Morning to
sleep, were set upon, and most of them kill’d, and the old Commander Antonio Or-
tiga de Mendoza taken, who not long before came thither with a Regiment of Portu-
guese; the Sugar-Mill was also set on fire.

Thee successful Expeditions still adding to the Hollanders’ fresh Courage, they
follow’d the career of their Successes, and placing three Companies in the Works of
the Afogados, drew their Army into three Divisions; Colonel Rembach was to Com-
mand the Forlorn; Schuppe, the main Body; and Byms, the Reserve; in which Or-
der they waded through the River Capivaribi, placing some Musqueteers in a House
built near the High-way, to secure their Return that way, and came without any
resistance to the Arryal; where they found a long Street, with Shops on each side
full of all sorts of Goods; which they pillag’d, notwithstanding the Enemy fit’d
furiously from the Castle upon them; and wounded Colonel Rembach and Captain
Redburgh. To the Northward before the Castle lay a Redoubt with two Guns;
which Schuppe masterly, kill’d all that were in the same; but being too weak to
carry away the Guns, he nail’d up the Touch-holes, and march’d off with his Men,
but in such disorder, that the Portuguefe Sallying out of their Garrison, fell in
amongst them in that manner, that they were not able to bring away their woun-
ded Men, amongst whom was Captain Redburgh; and it had been worse, had not
Rembach (who though he was shot in at the Shoulder, under the Blade-bone whereof
lay the Bullet) kept them off till such time as the Hollanders were got over the River
Capivaribi, near the formention’d House, guarded by a Company of Musqueteers,
who kill’d above fifty of the Portuguefe, besides fifty that had been slain in the for-
mer Skirmishes; the Hollanders themselves also had lost a hundred and thirty Men:
yet notwithstanding they ceased not, but march’d in Parties through all parts of
Verga, where they met with no opposition, but found the Sugar-Mills full of Sugar,
left to be kept by a few Negro's. Rembach also sent a Drummer to Real, to demand the Wounded, especially Colonel Redburgh, with a Letter from the Prisoner Antonio Mendosa, requesting the Governor Albuquerque and Duke of Bagyola, that they would be pleas'd to release the Hollanders on Exchange, or else upon Ranfom. The Drummer being civilly Entertain'd by Albuquerque, brought back with him a strange Oyl call'd Arcy, for the wounded Mendosa; with which a Wound made by a Bullet being anointed about three Fingers breadth, it draws out the fame. Bagyola afterwards sent it to Rembach, in requital for his kindness in sending Mendosa in a Hammock to Real. Mean while the Hollanders still fortif'd their Works at the Afogados with Pallafado's and Platforms, on which they put five Guns. They likewise work'd daily on the fore-mention'd Castle, whilst Schuppe march'd with four hundred Men in the Night over the River Jangada to Moribeca; which approaching, he perceiv'd the Way fopt up with fell'd Trees; wherefore he march'd about to the Village, which he found forfaken by the Inhabitants, and all the Housies left empty, one hundred Chefs of Sugar that had been brought thither from Verga, which Schuppe Commanded to be fett on fire with the Village, leaving only the Church, and at his Return burn't also a Sugar-Mill.

The Governor Albuquerque having formerly never fpar'd any Hollanders which fell into his hands, began now to be better advis'd; and it was also Agreed upon between the King of Spain and States of the United Netherlonds, That they should burn no Church, unlefs the one, or the other Party made refiftance in the fame; That the Victor should be oblig'd, upon requif't of Quarter, to spare his Enemies, and release the Prisoners for an indifferent Sum of Money; That both Parties fhould forbear to ufe chew'd or poyfon'd Bullets.

Schuppe being chosen Chief over the Militia in Rembach's Place (who dy'd of his Wound,) lay not long still, but letting Sail with eleven Ships to the Ifle Tamarica, Landed seven Companies before the Castle Noft'a Senora de Conception; which, though well provided and fortif'd, the Governor Pigniuro surrender'd, on Condition that he might depart with all his Men and the Church Ornaments.

Matthias van Ceulen and Schupre Rowing up the Stream Goiana with Sloops and Boats, put to flight Laurence Cavalcanti, burnt divers Sugar-Mills, and took abundance of rich Merchandize: Ten days they made havock in the middle of their Enemies Countreys without any refiftance; for all of them fled to the Atlas, (to they call the Brazilian Villages:) At laft they return'd home with great Booty, especially of Sugar and Brifto Wood; whileft those at Recufa were not idle, doing the Portuguese great mischief by their continual Sallies, Tourlong burning a Fitlers Village, and Bongarfon a lately Banqueting-houfe belonging to Cavalcanti near Arraj, as also Pedro Acmuna de Andada's Sugar-Mill, from whence he took great Booty.

About the fame time the Portuguese of several Parts, terrify'd by continual Alarms and Lofses, began to incline to the West-Indie Company, believing that they should utterly be ruin'd, if they continu'd to joyn with Albuquerque's Party (who claim'd Pernambuco wholly to himself;) and therefore car'd not whether he or the Hollanders were Masters, fo they might live peaceably. Mean while the Hollanders march'd from the Afogados to Arraj; Schuppe marching before with two hundred and fifty Seamen, was follow'd by the Lieutenant-Colonel De Vries, and he by a Company of Negro's that carry'd Provisions; next Byma march'd with the Referve. The Treafurer John Gjeeling also accompanied the Army, which Encamp'd near Francisco Brito Machado's Wind-Mill, and Garrison'd the half-finith'd Fort near the Sugar-Mill belonging to Marcus Andre, whilst three Companies Commanded by Captain De Vries march'd
A M E R I C A.

Chap. VII.

March'd to Moneros Mills to take the same; but the Portuguese lying in an Ambush, had given them a shrewd Rebuke, had not Schuppe, hearing the Guns, sent away the Captains Picaud and Garsman, who coming out from amongst the Sugar Canes, put the Enemy to flight; yet the Portuguese began to increase daily, insomuch that they got above two thousand Men together at Argyal, whilst the Dutch Army began to want Provisions; wherefore Jacob Huigen was order'd to fetch a Supply from Recifsa, but as he was coming up the River with the Exeter Ketch, and a Boat hung about with Hides to secure his Men from the Bullets, and being within Mufquete-flot from the Works where Captain Schuppe lay, the Enemy's whole Power shot so vehemently upon him from the top of a Hill, that both the Ketch and Boat were funk; Huigen himself receiv'd two mortal Wounds, and most of his Men were kill'd, a few wounded only escaping with Life. Schuppe therefore was forc'd to return for want of Provisions, and the rather, because he was inform'd that Bagnola was coming with a Supply of seven hundred Men.

Mean while the two Captains, Smient and Dunkiken perform'd a valiant Exploit: viz. they went with a few Men in a Boat, and took a great Portuguese Vessel richly laden, having no more than four Blunderbusses and their Swords in the Boat with them.

Byna also fell upon the Village Mowiere, where he found most of the People at Church. Albuquerque inform'd thereof; sent two hundred Men immediately, Commanded by Francisco Almeda, to intercept him in his Return; but he marching on to Tamaraia, they pursu'd him; he marching but slowly, because the narrow Way was stopt up with fell'd Trees, they overtook him half a League beyond Garafu, near Peter Rocha's Sugar-Mill; where after a sharp Encounter between them, a great slaughter was made amongst the Spaniards, Almeda and many other Persons being slain, and the rest put to flight. Byna having obtain'd this Victory, march'd to Garafu and burnt the same, sparing only the Churches and Cloyfiers, according to the Articles made between Albuquerque and Rembach.

Schuppe prevented from crossing the River Jangada by the many muddy Creeks return'd back to Recifsa with great Booty, which he had taken out of a Storehouse. The Dutch Cruisers also brought in many Prizes.

The Exploits perform'd by John Johnfsoum van Eloorn, with four Ships, three Ketches, and a Sloop, are likewise very remarkable; for with this Fleet in the first place he took the City Truxilla, and from thence Sailing towards the City Campeche, and Storming the same valiantly, soon became Master of it; the Booty of which two Places being brought aboard, increas'd considerably the West-India Companies Stock.

In regard Albuquerque understand'd the Situation of Pernambuco better than the Hollanders, and had all the Natives to affift him, and by consequence was the better able to defend himself against their continual Alarmes, the Council at Recifsa therefore judg'd it convenient to make a farther Voyage to the South, that the Portuguese, who were highly discontented about the Losses which they had sustain'd, might be the sooner induc'd to submit to their Government: To which purpose ten Ketches, Mann'd with seven hundred Soldiers, besides Seamen, set Sail on the tenth of October, under the Command of John Gyfeling, Schuppe, and Servaes Carpentier, who first ran into the River Porto de Piedras, where they took a considerable number of Chells of Sugar, out of Mills, Barques, and Store-houses, waded through the little Stream Tawon Manfa, burnt a Village of the fame Denomination, and Sail'd to the River Camarigibi, which they Rowing up in the Night, were got not above four Leagues by Day-break, the contrary Tide, and the Plants call'd Mangues having hindered
hindered them from getting farther: but being inform'd by certain Portuguese Prisoners, that abundance of Sugar lay in Porto Françoifo, they marching thither, found under a Straw Roof in a Wood, seventy four Chefs of Sugar, and a great deal more in several Store-houses. They also pillag'd the whole Countrey towards Alagoa do Noort, St. Miguel, and Alagoa del Zor. Not far from which Schuppe falling upon the Village Senoraf de Concepcion, burn'd the fame, as also a Ship upon the Stocks, the Houses at the Mouth of the Stream Alagoa, and the Tackling belonging to the two Ships, and carry'd away with them a very great Booty.

Tourlon also march'd with four Companies from Tamarica to Mangianqua, where the Garifon from Garfiman; and some Jefuits lay, to diflindle the People from submitting themselves to the West-India Company, to which they were much inclin'd. But Tourlon march'd not so privately, but that the Enemy had notice thereof, and fled; wherefore he finding Mangianqua empty, offer'd the fame to the Flames, as also several Sugar-Mills, but fpar'd the Lives of all thofe who begg'd Quarter.

Byma about the fame time with a hundred and forty Mufquettiers, besides two Companies of Seamen, leaving the Afgados in the Night, march'd to Amaro by Day-break, which he fet on fire, with a Sugar-Mill and a Store-house full of Sugar, after every Soldier had taken as much as he could carry: upon which the Enemy taking Alarm, plac'd their Ambufcades fo cunningly, and fell upon them fo furiously, that they had undoubtedly kill'd every Man of them, had not a Party come in timely to their affiftance, and forc'd the Portuguese to fly to a neighboring Sugar-Mill built on a Hill, from whence they fir'd with great eagerness, and made a mighty noife, blowing their Trumpets and beating their Drums. Byma being for- ced to pafl' by the Mill within the reach of the Enemy's Guns, refolv'd upon a bold Attempt, and commanding his Men to throw away their Sugar, and other Booty with which they burthen'd themselves, on a sudden ran up to the top of the Hill; which Action fo amaz'd the Portuguese, that they fled without offering the leaft Refi- stance. Byma thereupon proceeded on his Way to the Afgados, leaving behind him above feventy flain, and divers wounded.

During thofe Exploits on Shore, the Commander Swient Cruif'd with fix Sails before Paraiba; two Ships belonging to his Fleet fleering towards the Haven of Formosaf, discover'd five Carvels, a Pink carrying twenty fix, and a great Fly-boat eighteen Guns, both Dunkirkers; one of the Carvels ran aground, and was flav'd to pieces, two of them got into Rio Grande, and the other two were taken.

About the fame time Lichtburt with two Sloops pafl'd into the River Conayon, fet upon seven Barques of the Portuguefe, Mann'd with feventy Seamen, and ply'd them with his Brafs Guns after fuch a manner, that few eflap'd with their Lives: he took what he thought fit out of the Barques, and afterwards fet them on fire.

The Treasurer Matthiafs van Ceulen weighed Anchor with four Ships and feven Ketches, Mann'd with eight hundred Men, with which he fet Sail to Rio Grande, with intention to fall upon the Fort Tres Reyes. In the River he took two Carvels, though they lay clofe under the Caflle, Landed a Company of Soldiers, and a hun- dred and fifty Seamen on the Southern Shore, guarded the fresh River with Boats, march'd directly to Tres Reyes, and Encamp'd himfelf near the Redoubt which lay before the Caflle, being follow'd by Byma, Garfiman, and Clappenburgh, who in their Way took a Houfe built on a Hill, and confiderable Booty in it. Byma getting about Noon to the Village Natall, left fome of his Men there, while left he march'd with the reft to the Caflle Tres Reyes. Ceulen fending to demand the Caflle, receiv'd at firft a refulute denial from the Governor Peter Mendez de Govea; but when the Besieg'd
Beseiged saw the Hollander resolutely bent upon a Storm, they sent to desire a Treaty, and after some small Capitulation the Castle was surrendered upon Articles: Garfield being made Commander of the Castle, had a hundred and fifty Soldiers allow'd him. The Fleet set Sail again, after they had pull'd down and destroy'd all the Works which had been rais'd, and made the Inhabitants take an Oath to be faithful to Garfield, who charg'd the Name of the Castle from Tres Reyes to that of Ceulen, being the Name of the Treasurier, who bore the chiefest Command in the Siege, and when the Brazilian King Jandui came with a great Train to congratulate the Companies success, receiv'd him with great civility.

In the beginning of the Year 1634, twenty fix Sail weighed Anchor from Reciffa, to Cruise up and down in Squadrons before the Inlet Todos los Santos, the Promontory St. Augustine, the Rivers Francisco and Paryba. Schuppe and Lichtbart also set Sail with two Ships, a Ketch, two Pinnaces, and a Sloop, carrying two hundred Soldiers besides Seamen.

Mean while fresh Forces were sent from the Texel, the Maes and Zeland, to Reciffa, where the Council undertook another notable Design, viz. to surprize the Forts along the River Parayba: whither coming with twenty Sail, they divided themselves into two Squadrons under the Command of the Treasurier John Gyseling, Schuppe, Servaes Carpentier, and Lichtbart. Having receiv'd some repulse at the Fort Nazaretta, they resolv'd upon Action in some other place, and to that purpose Steer'd towards the Point St. Augustune; by Day-break a part of the Fleet ran into the Mouth of the Haven, notwithstanding the Portuguefe fir'd upon them with great Guns from the Castle, and all their Works, without doing any considerable damage, onely the Star-knight Ketch running aground was scatter'd all to pieces; whilest the Hollander Commanded by Captain Lichtbart Landed near Panuel, and fell upon the Portuguefe in such a manner, that they forc'd them to forfake the Place, burnt above two thousand Cheifs of Sugar, several Store-houses, and a great Ship, besides twt Barques.

Lichtbart being Master of the Puntel, was very busie in finishing a Stone Redoubt which the Enemy had begun, and seat'd it by a Wall and Pallifado's. Here he plac'd two Companies, and rais'd several Works, whilest the Portuguefe receiving Aid from all the neighboring Places, set upon the recovery of the Puntel, being the rather encourag'd thereunto, in regard the Hollander Forces were still in their Ships. Fifteen hundred Portugueses were divided into two Parties, the greatest of which came through behind the adjacent Morasses, and forc'd in on the fide of the place near which the fifteen Ships taken by Lichtbart lay at an Anchor, whilest the other Party fell upon the Out-works; where though the Hollander defended themselves valiantly at firft, yet they were forc'd to Retreat to the Redoubt, where both Parties fought with great eagerness; but the Hollander Ketches haling near the Shore, and firing in amongst the Portuguefe with their great Guns, forc'd them to fly, and contrary to their Cullom, to leave their dead Bodies behind them.

Soon after, whilest Gyseling, Schuppe, and Lichtbart lay'd at the Puntel, the Portuguefe, designing to take Reciffa, kept the Aflogados and the Fort on Antonio Vass in continual Alarm; which made the Hollander fend most of their Militia thither, and to fortifie yet more strongly than before. The Castle De Bruin first discovering the Portuguefe wading through the Water, fir'd great Guns at them, upon the hearing of which Waardenburgh and St. George fir'd also. The Treasurier Ceulen and Lieutenant-Colonel Byma march'd with a Company of Soldiers to the Stone Redoubt, from whence they fir'd floutly upon the Enemy; yet thirty of them got by the Pallisado's and Stone Redoubt: wherefore Ceulen march'd in with some of his
Men to affift the Citizens, and keep the wooden Battery, where the Portuguese were ftopt, and with great and small Shot put to flight. The Prisoners which the Hollanders took infurn'd them, That Martin Sauers, chief Commander over the Portuguese that made this Attempt, had divided his Men into three Parties; the Reserve, which consisted of three hundred Men, was to march on upon the making of a sign when the other Parties were past, one along the River Bibirbe, and the other along the Shore by the Stone Redoubt into Recife, to burn the Place, as also all manner of Provision and Ammunition.

Whileft this Design of the Portuguese fell out so unfortunately, being discover'd to Ceulen by a Renegado, the Hollanders at Recife receiv'd two Companies from their Regiment at the Puntael, and a considerable number of Men rais'd in Holland by the West India Company. Ceulen and Byma thus supply'd, went continually out in Parties, burn't in view of the Garrison in Arroy the Sugar-Mills belonging to Francisco Montero and Lewis Ramirez, and were inform'd by five Italian Renegado's, That there were not three hundred Men in Garrison in Arroy; which so encourag'd Byma, that he resolving to fall upon the fame, march'd thither in the Night with a thousand Men from Recife, and by Day-break shot sixteen Granado's from a neighboring Hill, of which seven fell into Arroy, but did little Execution; besides, the Strength of the Place was such, and the number of Men fo considerable, that his Design had no other success, than that a Hand-granado falling short amongst the Houles before the Fort, set fire on them, and in a short time burnt a whole Street with rich Shops, and the Habitations of the Italians.

The Portuguese at the Puntael being inform'd, that Byma had Besieg'd Arroy with a thousand Men, judg'd that most of the Hollanders were gone thither from the Puntael, which they were the apter to believe, because the Hollanders coming but little abroad stay'd within their Redoubts, which Lichthate had joyn'd to a Battery; wherefore they made another Attempt with a hundred and twenty Men on the Puntael, but a Carvel with two Brass Guns, and a Company of Soldiers lying at Anchor near the Place by which the Portuguese were to pass, and they not expecting to meet with any refistance there, they were, as soon as they approached the Carvel, fir'd upon by the Hollanders, who killing several of their Men, so affrighted them, that they return'd without making any farther Attempt.

Whileft every day more and more Prizes were taken by the Hollanders, and brought into Recife, and fresh Supplies sent them from Holland, there began to be some Overtures of Peace from the Portuguese; wherein also the King of Spain, by reason of the several Damages he had sustaine'd from the Dutch, began to concern himself, and to menace them with the great Forces he was able to raise, by reason of the late safe arrival of two rich Plate-Fleets, if they came not to reasonable Terms. But answer was return'd from Byma, "That if they were minded to "Treat about giving of Quarter, or any such like Point in difference between them, "they should find him ready," but that the West-India Company would never re-"sign those Places taken in Brazil with the Sword, either for Money or Goods, "but would defend them to the utmost of their Power.

The Hollanders also chang'd the Names of several Places taken from the Portu-
gefe; for the Caflle near the Promontory St. Augustine was call'd Gyffeling, the "Town on Tamarica, Schuppen-fate; the Fort at the Afgados, Prince William; and the "Puntael, the Fortrefs Vander Duffen.

Notwithstanding the Requests of the States of the Netherlands and West-India Com-
pany, to the Commissioners Ceulen and Gyffeling, to stay longer in the West-Indies, yet they prepar'd for their Voyage home, and the speedier, because they expected e e great
great scanty of Provisions, unless a sudden Supply came from Holland. During their two years Government here, they had taken five thousand five hundred and nineteen Chefs of Sugar, a hundred fifty nine thousand nine hundred thirty and nine Pound of Brazil Wood, one and thirty Ships laden with several Goods, which amounted to 23,000 l. besides the value of the Ships and Guns, the taken Forts, destry'd Sugar-Mills, and other Buildings. They left at their going away above four thousand Soldiers, divided into thirty two Companies, to guard Brazil, under the Command of Schuppe and Arcissensky, and carry'd with them a hundred Soldiers, besides one and fifty sick and maimed. Moreover, thirty two Sail of Ships, Mann'd with a thousand and eighty seven Seamen, were order'd to Cruise up and down before the Coast of Brazil, besides four Ketches before the Promontory of St. Augustine, and six Ships in the Haven of Pernambuco.

After Ceulen and Gyffeling had set Sail for Holland, divers Prizes were brought into Recifia, as also several Ships arriv'd there from the Texel and the Maes. The Hollanders went out continually in Parties, while Schuppe and Lichtbart set Sail also with eight Ships, Mann'd with six Companies of Soldiers, besides Seamen, to plunder and pillage all the Havens to the South, where several Portuguese Vessels lay laden with Sugar. But Janduy, who with his Subjects the Tapuyans, joynd with the Governor Garfman, kill'd at one time thirty seven Portuguese, and not long after two hundred and forty more; taking his leave of Garfman, went home with six Hollanders, leaving his Son, the young Janduy, and his Brother Caracara, together with his Nephew Copun, to his care.

Janduy made it his Business to persuade the adjacent Tapuyans to joynd their Forces with his, and so by the Hollanders assistance to fall upon the Portuguese. Mean while the young Janduy and Copun went to Recifia, which was the rather permitted, that they might be able to damp the Reports which the Portuguese had spread amongst the Tapuyans, viz. That the Hollanders were very ill provided, and therefore made all possible Preparations to defend Recifia, and consequently the whole Country of Brazil, and so leave those Tapuyans that joynd with them to the mercy of the Spaniards.

Not long after were dispatch'd from thence the Councillors Jacob Stachhouwer, and Colonel Arcissensky, with the Interpreter Antonio Parapauvo, to Treat with Janduy about the Design which they had upon the Portuguese, and also what Advantages he should receive, if he would assist the West-India Company with his Forces, whenever he should be sent to.

King Janduy bore Command over sixteen hundred Men, whose Wives carry'd their Hammocks after them to keep on in the Night, having no settled Habitations, but ranging in Parties up and down from place to place to get their Food; the young People went commonly along with Beretiana, and the old with Janduy; round about whose Country dwelt the poor Natives Achi, as also Juckerijou, Oconiecon, Pajake, and Aprornijou: the first are Commanded by King Cetaculy; the second, by Makau, a Friend of the Portuguese; the third, by Noub; the fourth, by Kidou; and the last, by Jarepo: which two last are no way inferior in Power to Janduy, but the others much weaker.

Four forts of People continually Warr'd against Janduy, viz. the Jenho, who live so far up in the Country, that no Christians ever came to the knowledge of them; the other three are the Wayana, Carivy, and Caririwifia, who assist the Portuguese.

The fore-mentioned Interpreter Parapauvo was sent in his Journey by a Company of Tapuyans, led by Commandaura, Janduy's Sitter's Son, who was to succeed him after his death, according to the Custom of the Tapuyans, whose Sons do not succeed
Chap. VII. A E R I C A.

Succeed their Fathers in the Throne, but their Sifters Sons. Commandemont told him, that he was impow'd by his Uncle to Treat with the Hollanders; to which pur-
pose coming with forty Men before the Castle Ceulen, he inform'd them, That Jandouy could not come to them with his whole Power, because there was no fresh Water in the Mountains Mitiapa, in the Summer; Moreover, that he Mount'd for his deceased Wife. Jandouy was also requested to go to Parayba, where he should get great Store of Booty, and that the Hollanders would follow them with a con-
derable Power.

Arciffensky being inform'd of the Condition of Conayou by two, who having been taken Prisoners by the Portuguefe, leap'd over-board from a Carvel, bound from thence to Portugal; and swam ashore, march'd from the Fort Ceulen in the Night with two hundred Men, besides forty Tapuyans, who kill'd more Thanison for the Hollanders than they were able to eat; and coming within two Cannons-shot of Co-
ayou, he divided his Men into four Parties, that so they might Storm the four Corn-
ers of the Fort at once; which having done by swimming over the Moat, and climbing up the Walls, which were a Pikes length, they got into the Fort, in which they found eleven dead Bodies, ten Iron Guns, two Hooks, and several Chefs of Sugar; and amongst other Prisoners they took the Captain Alvares Fragoso d'Al-
buquerque.

Stackhower also setting Sail when Arciffensky left the Castle Ceulen, intending to meet him again at an appointed-time before Conayou, was kept back by contrary Winds.

After this Arciffensky set Sail to Mongoangape, where Rowing up the River, he took a Ketch with two hundred Chefs of Sugar, as also a Carvel and a Boat, and Landed where the River bends about a Mountain, which so affrighted the Portuguefe, that they quitted Antonio Marinos Sugar-Mills. Soon after the Fleet took a Barque with Wine, and returned to Reciffa.

Mean while Schuppe was not idle, for going up the River Camarigibi, he burnt di-
ers Houses, as also on each side of the River Alagoa; where he also took four rich Sugar-Mills, whilst many Vessels from the United Netherlandes brought several Ships into the Haven of Pernambuco, which they had taken on the Coast of Brasil.

About the latter end of November 1634, thirty two Sail, divided into two Squa-
drons (the first carrying in one and twenty Ships, a thousand nine hundred forty and five Soldiers, the second on eleven Ketches, four hundred and nine) under the Com-
mand of Schuppe, Arciffensky, Carpenter, and Stackhower, weigh'd Anchor to go to Pa-
rayba; where Schuppe landing first with six hundred Men, fell upon the Enemy in such a manner, that he put them to flight, and forc'd them to leave a great part of their Arms, Hats and Coats behind; and it wanted little but the Governor Antonio d'Albuquerque had been taken in the pursuit: Mean while the rest of the Hollanders Landed, and Casper Ley march'd along a Cart-Road with three Companies directly to the Fort Santa Margretta, and Encamp'd himself behind a Hill, about a Musquet-
shot from the Walls of the Fort. Schuppe going along the Shore, found divers for-
saken Works, and Intrenched along the River on the East-side of the Castle. Arci-
iffensky march'd on the Right-hand along the Sea-shore in view of the Portuguefe in Garrison. In the River lay an Isle, on which was built the Castle Refringa, which could receive constant Aid from the Castle Margretta on the Main.

Lichthart going in between the Island and the Castle Margretta with six well
Mann'd Boats, took two Barques and a Boat behind the Island, and march'd through a Wood to Refringa; where he found that the Fort separated from the Island, was surrounded with Water, wherefore he withdrew into the Wood till
the Water was fall’n down, and then Storm’d the Fort Reftrings, and notwithstanding the Portuguese fir’d continually upon him with two Brafs Guns, he soon became Master of it, and cut off all those whom he found had born Arms; whileft Schuppe fir’d upon the Fort Margarita from a Platform, and also threw Granado’s into the same. Aricifhesly likewise approach’d nearer, and nearer with his Trenches, on which the Portuguese discharged many Guns; but after the Breastworks were most of them spoil’d, the Governor, Simon de Albinazarque, surrendered the Fort to Schuppe, who permitted a hundred and fifty Men that were in Garrison there, to go to their several Dwellings up in the Country, the rest were Tranported to other places, on promise that they would not bear Arms against the West-India Company during the space of six Months. In the Castle the Hollander’s found six Brafs Demi-Culverins and fifteen Drakes, besides other Ammunition, with which the Victors purf’d their Conquerd, putting themselves in a posture to go up a Creek, which runs two Leagues along a River to Parayba, and to fall upon that City, when two French Renegado’s coming from the northern Fort, Antonio brought information, That that Fort was guarded but by a few Men, and had but little Gun-powder, and if the Hollander’s would but once make a shew of Storming the same, it would soon be deliver’d to them, though for its Situation it is invincible; but Schuppe suppos’d that there might be a Plot in this Information, and the rather, because he heard that the Duke of Bagghie was coming thither with fift hundred Men; nevertheless, to be better assured thereof, he sent a Drummer to demand Antonio: The Governor thereof, call’d Magagnanes, desir’d three day’s time to confider, which was utterly deny’d him, and he had only leave to carry away the King’s Standard, and his Request granted. That the Hollander’s should make a shew of Storming the Castle, that it might not be said he had surrender’d such a Fortress without a Gun being fir’d; after which Lichhart went into the Castle, wondering at such a Victory; for the Fort, on which no Charges had been spar’d, lay upon an inaccessible place, and had five Brafs Culverins and nineteen Iron Guns.

The Hollander’s encourag’d by their good Success, went the Same Night up the River Parayba to the Creek Tamba-Grande, where Landing, they found all the Works empty; three Iron Guns lying dismounted on the Ground, the City Parayba without People, and the Guns about the same either made useless, or sunk in the Haven. A Hamburgher that had liv’d a considerable time in Parayba, otherwise call’d Philippas, inform’d the Hollander’s, That Baggha seeing no means to defend Parayba, was gone to Goyana with two Companies, one of Italians; and the other Spaniards, who were march’d into the Woods, after they had burnt three Ships, and two Store-houses full of Sugar, in which there were confum’d near upon three hundred Cheifs.

Before this Design upon Parayba was undertak’n, the West-India Company sent out four Vessels under the Command of John Walbeck, to the Ille Curacao; the Situation of which John Orange knew exaftly, having been a long time a Prisoner there: Walbeck getting through a narrow Mouth between several Rocks into a convenient Harbor before Curacao, Landed seventy five Musqueteers who were Encountred by seventy Braflians Arm’d with Clubs; which the Spaniards had animated to fight, by making them half Drunk. The Hollander’s having march’d all over the Island, burnt the Village Maria, and at last agreed with the Governor Aloya Lopes de Merlo to leave the Ille.

Schuppe chang’d the Name of Parayba, or Nofa Senvora das Nieves, or Philippas, into Frederick’s-Statte, in honor to the Prince of Orange, nam’d Frederick Heinrick.

This City hath two great Market-places, twelve Streets, and a large Francifcan Cloyfler,
Cloyfter, built near a Lake, and inclo'd within a Wall by a broad Bay, which the River Parryba makes before the City; the Country about which is mountainous: In other places, especially along the River, lie many fruitful Plains, abounding in some places with the Grain Mandihoca, which is ground to Meal, Potato's, Lemons, Cabbages, Cucumbers, Bananas, Cocoa-Nuts, Ginger, Araba, very delicious when Prefer'd with Sugar, and Cacians, somewhat like Chestnuts, of which the Natives make an intoxicating Liquor.

Whilest all things were put in good order at Parayba, Colonel Picard march'd with eight Companies to the Houle Validars, if possible, there to take the Governor Antonio Albuquerque Prisoner; but he being forfaken by all the Brazilians (who came back with Picard and their Commander, the Jesuit Emanuel de Morais) absconded himself; not long before which a Proclamation had been publish'd in the Name of the States of the United Netherlands and the West-India Company, promising great Civilities and Advantages to all the Inhabitants of Parayba, whether Natives or others, that would come in and submit to their Government.

This Invitation was so well receiv'd, that many who were kept back so long as Albuquerque appear'd, as soon as they heard of his obsessing himself, came in to the Hollanders, as Duarte Gomez, and several eminent Portugueses, with a considerable number of indifferent quality; also the Inhabitants of the Province of Rio Grande came to Frederick-Stadt, to claim the benefit of the Proclamation.

Arciffenwky and Stackbrewer marching to Goyana with seven hundred and fifty Men, took up their Quarters in the Village Capiwaribi, lying at a River of the same Name; where all the Inhabitants of Goyana being fully satisfy'd with the Hollanders Proposals, own'd their Government, and fell off from the King of Spain. But the Spanish Captain Rebilino, animated by the Jesuits in the Village Mosnick, got three hundred Soldiers together, besides a considerable company of Brazilians, Commanded by Camaron, and burnt all the Sugar-Canes and Brasile Wood in Goyana; whither Arciffenyky marching, soon put them to flight, and burnt the Village Mosnick, with the Church and Jesuits Cloyfter, from whence the Enemy ran to the strange Mountain Miribi, which in the rainy Seazon, especially when great Showers fall, makes a noise like claps of Thunder, or like great Guns. The same Wonder is observ'd of the Mountain Pafaya, in a Wood behind Giraldo Barro's Sugar-Mills; the mystery whereof we leave to Philosophers to enquire into. Arciffenwky follow'd Rebilino, who had ambush'd himself about half a League from Mosnick; from whence he being alfo driven, his Men began more and more to desert him, while Schuppe with a considerable number of Men came to Arciffenwky; Encamping themselves about Masphere, they sent eighty Mufqueteers, Commanded by Lieutenant Metting, to an adjacent Wood, where Rebilino Quartering, Engag'd with Metting, till Schuppe coming to his assistance, he fled to Nazaretta. After which the Countrie thereabouts enjoy'd the happiness of Peace.

Arciffenwky playing to settle all things in good order in Parayba, took up his Quar- ters near the Caifie Real, about a Cannon-shot from the River Aforados, and a League and a half from the Hollander's Fort so call'd; yet his Design was not to lay close Siege to the same, but to prevent all manner of Aid from coming to it, the rather, because he was inform'd, that there were not above fixy fix hundred Cans of Meal, and fixy five Head of Cattel in the Fort, for three hundred Portugueses and seven hundred Brazilians; to which purpose he built severall Redoubts, Batteries and Platforms: after he had lay'n before it three Moneths it was surrender'd upon the following Articles, viz. "That the Befieg'd should march out with lighted Matches, Bullets in their Mouths, flying Colours, and with Bag and Baggage, 

E c c. 3
and be Transported either to Terra or Madre. The Church Ornaments they had also leave to carry away with them, but the Guns and other Ammunition were to remain in the Fort. Hereupon the Governor Andre Marini march’d out with five hundred choice Soldiers, besides a hundred and fifty which he had out of the Country, and two hundred Families that dwelt about Read, ranfom’d their Goods for 5,000 l. In the Fort the Hollander found fifteen Brals, and five Iron Guns.

Mean while Liecbhart set Sail with fix Ships and five little Ketches, carrying five Companies; with which Landing on Bara Grande, he march’d two Leagues along the Shore to the Church of St. Bento, built on a high Hill, round about which he Encamp’d himself, and forfand’d the fame with Pallifado’s.

Hither the Inhabitants of Porto Calvo came in great numbers to take the Oath of Allegiance to the Wifs-India Company.

Liecbhart assisted by Captain Cornelis Est’s Company, march’d directly to Porto Calvo, notwithstanding he had but three hundred and twenty seven Men, with which he went along a troublesome Way, up Hill and down Hill, and coming near Porto Calvo, was inform’d by a Portuguese, Tha the Duke Bagnola posses’d a Church there full of Port-holes, with two hundred choice Men, besides a Company newly arriv’d there from Serinhain; and that he had a strong Fortification near the River; nevertheless Liecbhart marching towards him, discover’d his Forces rank’d on a steep Mountain, whether he running with his Men, force’d Bagnola to quit the Church, as also those that lay in Ambuscade near the High-way, whilst eighty Braflians, some Portugeus, and a Company of Neapolitans, thought to have fall’n upon the Barques of the Hollander; but seeing the States Flag upon the Church, and Bagnola routed, they soon Retreated. This Victory cost the Hollander but seven Men, besides eighteen wounded; for which the Portugeus lof’d many more.

The Inhabitants of Camarghi, Antonio, and about Porto Calvo, accepting of the Articles propos’d in Paragba, took the Oath of Allegiance to the Hollander.

In the interim after Arcieffusky had taken the Fort Real, and given Command thereof to Verderes, he set forth with ten Companies and three hundred Braflians, to joyn with Schappe, who Befieg’d the Fort Nazaretta near the Promontory St. Augustin; but the Governor Albuquerque fearing he should be surpris’d, fled from thence with three hundred Men, and left Peter Correa de Gamba, and Lewis Barbabio Bizerra in his stead. But Schappe approach’d so near with his Trenches and Granado’s, that Correà inform’d of Arcieffusky’s coming, surrendered the Castle upon advantageous Articles.

After this Success Schappe march’d along the Shore, and Arcieffusky up into the Country, both with intention to fall upon the Enemy in Serinhain. Arcieffusky marching along a troublesome Way, came to Miguel de Posaça with fix Companies, where the Councellor Schatte had forfand’d a Church, and somewhat farther he met with a brave Francois Cloyster, where he was inform’d, that the Governor Albuquerque had again surpris’d the Fort Porto Calvo, which prov’d too true; for Schappe hastening to his assistance through Serinhain, Hina, and Barra, raid at Fuécofo, a League from Porto Calvo, for Arcieffusky, who was coming thither with seven Companies over the deep and crooked Stream Serinhain; and before Villa Fomofa, a pleasant Village, in which stood an old Jesuits Cloyster and a little Church, both their Forces joyn’d together, making up seventeen Companies of Foot, and one Troop of Horse; but they came too late: for after a long and stout Assault, and no lea Raffinment from the Befieg’d, the Place was surrendred to Albuquerque, who caus’d Domingo Calabar to be Quarter’d, a Man not inferior for Strength and Activity to that Milo Crotoniates, so famous amongst the ancient Grecians: Amongst other proofs of his...
Strength it is related, that he took a Stag running full speed by the Horns, and turning its Neck, pull’d the Tongue out of its Mouth. The reason why Albuquerque caus’d him to be put to that death, was because he had once join’d with the Hollander, and done the Portuguese much hurt. But Schuppe and Arcinensisky marching to Porto Calvo, to Engage with Albuquerque, who was eight hundred Portuguese and a thousand Brazilians strong, found the Place ruin’d, and about a hundred Hollander unbury’d, and Albuquerque march’d away, driving the Inhabitants about Porto Calvo before him, with three hundred Prisoners: The Hollander following him, built a Fort at Paripuera, to prevent the Portuguese from returning to Porto Calvo. Schuppe also demanded three Companies more to supply the places of the sick and slain Men, as also those who were so miserably plagued by the Bisyers, that they were not able to go. These Bisier are little Animals, which creeping in at the Pores, cause an insufferable pain. Schuppe’s Request was the sooner granted, because the Council at Recifia judg’d it convenient to pull down the Forts Real and Nazaretta, being already much decay’d and unserviceable, and that those who were in Garrison in them, shoud Encamp in the Fields. Schuppe had long before this time fall’n upon the Enemy in the Afogados, but that he wanted Provisions, and little Vessels, which were requir’d for that Expedition. But marching up into the Country, he left the Command to Arcinensisky, who much forwarded the building of the Fort on Paripuera.

A great Fleet of Spaniards appears before Recifia.

The Year 1635, being almost expir’d, one Morning about Day-break thirty-two Sails were seen to Steer directly towards Recifia: two Ships of an extraordinary bigness were follow’d by nine Gallions, and these by the rest of the Fleet, consisting of Pinks, Carvels, and Barques; all which approaching, were known to be Spaniards, which struck no small amazement to the Inhabitants of Recifia, most of their Ships being Cruising abroad before the Coast of Brasil, and their Men a great distance off in the Field; only five Ships fitted for an Engagement being at Anchor, and five more deeply laden: Mean while the Spanish Admiral approach’d within a Cannon-shot of the Fame Ketch, discharg’d one Gun, and stood off to Sea again, being inform’d that Real and Nazaretta were taken by the Hollander. On the other side, all the Places in their possession had notice of this Fleet, which Licthart follow’d with six Ships and two Ketches, carrying two Companies of Soldiers, besides Seamen, and keeping just within sight of them, law them at last come to an Anchor before Paripuera (where a part of the Dutch Forces lay under the Command of Arcinensisky,) and make preparation to Land their Men: Whereupon Licthart Landed also, with the Councillor Carpenter, and joyning with Arcinensisky, took up a valiant Resolution, to Sail close up to the Spanish Fleet with his eight Ships, while Arcinensisky march’d in the Night with six hundred Men to Jaragao, to prevent the Enemy’s Landing, but having a Portuguese for his Guide, was led a wrong Way: wherefore returning, he secure’d the Way to Paripuera, whilest the Portuguese Inhabitants, contrary to their Oath, refused to carry or bring Provisions to the Dutch Forces, and joyning together combin’d with the Spanish Seamen, and kill’d all the Hollander which they could meet either on the High-ways, or in their Houses, making use of the Negro’s to carry the Spaniards what Intelligence they could give them of the Hollander Proceedings: Wherefore they thought it the best way to be rid of such Villains, to destroy them all that dwelt in the Country between Paripuera and Porto Calvo, and for the space of ten Leagues burnt all their Sugar-Canes in the Fields, their Mills and Houses. Arcinensisky caus’d Edicts to be put upon every Church Door, That all the Inhabitants should remove from Porto Calvo, where the Dutch Army was to Encamp, to keep them from the Spanish Oppression.
That Summer having been so dry, that no man ever remembered the like, had dry'd up all the Morasses, so that the Spaniards marching over them and high Mountains, got a back Way into the Country. In the mean time John Wallbeck made a Fort with five Bulwarke on the island Caraco, near the Haven Santa Cruz. 

Hunteken also ran with two Ketches, the Otter and Brack, to Anchor before Caraco, and from thence to the Haven St. Jago de Cuba, where the Watch made no Alarm, because he carry'd Burgundy Colours, by which alfo several others, both Portuguefe and Spaniards were deceiv'd. Not long after he burnt one Barque with Torfofes, fink another, and fet a third a Drift; after which having refresh'd at Jamaica, he Engag'd with feveral Spanish Men of War and took them, besides a great number of Prizes, in one of which he found fuch abundance of Copper, Indigo, Money, Cames, Tobacco, and Piece-Goods, that the two Ketches were not able to load the fame; but at anf Steering for Holland, he was fet upon by feven Dunkirke, Commanded by Colart, and after long and ftrong refiftance was taken. 

Captain Abraham Roffendael letting Sail from the Texel, met with a Frigate carrying forty six Chefs full of Ryals of Eight, being in number eighteen six thoufand, design'd to pay the Forces at Porto Rico; besides a quantity of Plate, which amounted to a conliderable fum of Money; with all which he arriv'd safe in his defired Port.

Arciffenky fortif'd himf elf along the crooked River Pariperna, full of Crocodiles, which hurt none, unlefs provok'd. This River runs five Leagues to the Northward of Panta de Jaragoa, where the Spanish Forces Landed. 

Southward from Jaragoa lie the Alagao del Norte and Zul, diftinguifh'd by a high Track of Land; where the Spanish General Lewis Rochas Borgia left his Guns and a thoufand Men, under the Command of the Duke Bagnola, whileft with three times as many more he went to Porto Calvo to be there before the time which the Hollanders had in their Edicts let the Inhabitants for their removal. 

Arciffenky had by this time built on the North part of the Mouth of Pariperna a Redoubt like a Caftle, out of the middle whereof rofe a woodden Tower, fill'd with Earth, and fecur'd by a Half-Moon; on one fide whereof he lay Encamp'd with fifteen Companies. On the South side of the River flood alfo two ftrong Forts. Arciffenky having not the leaft thought that Borgia would come over the Mountains, and through inaccellible Woods and Morasses, a back Way into Porto Calvo, receiv'd news on the thirteenth of January 1636. by a Renegade Negro, that the Spanish Army, confiftiug of three thoufand Men, werecome to Rodrigo de Barros his Sugar-Mills, about five Leagues from Pariperna, and wasuddenly expected to fall upon Colonel Schuppe in Porto Calvo; wherupon Arciffenky immediately fet forth with twelve hundred Men and two Field-pieces, burn'd all the Houfe, Sugar-Mills and Canes he could meet with. Mean while Borgia (upon whose Approach Schuppe had left Porto Calvo) observing by the Smack in the Country, that Arciffenky had put his Edicts in Execution, leaving a conliderable Garrifon in Porto Calvo, went to meet Arciffenky with the choijeth Men. Arciffenky being got between Camargibi and Porto Calvo, without having any notice of the Enemy's being fo near, and his Forlorn being unawares Engag'd, and running back in great diforder, drew up his Men into a polture of Defence about a Mulquet-shot from the Enemy; but the darknefs of the Night made a great confusion in both Armies, being as it were mingled pell-mell one with another. Arciffenky was much inferior in number to the Spaniards, but conidering it was impoffible to march back, in regard the Enemy was as well behind them as before, and that thousands of Brazilian men watching for them in the Woods, in cafe they fhou'd be dijpers'd, he faw there
was no way but to stand to the hazard of Battel. About Day-break both Armies 
floud an hour looking upon one another; the place where they stood being 
rounded with Woods and deep Valleys. Borgia drew out his Men on a Hill, 
overgrown with Bushes. Arcifesky had drawn out his Men on somewhat a lower 
Ground. Borgia at last sent some of his Musketeers down the Hill, who fir’d with 
a full Volley upon the Dutch, whilst Arcifesky only discharg’d a Field-piece at a 
Tree, under which Borgia stood to take a view of the Hollanders Forces; upon the 
shing of which Gun Borgia began to come down the Hill with all his Army, against 
whom Arcifesky drew out his first and second Division, whilst Captain Vanden 
Brandt led his Companies within two Pikes length from the Enemy, before he dis- 
charg’d, which was no sooner done, but contrary to Order they broke into the left 
Wing of Borgia’s Army, and put his Musketeers to flight, who were soon fol- 
low’d by the whole Spanish Army, some running into the Woods, others into the 
Morasles, but most of them along the narrow Way which leads to Porto Calvo. Among 
the Slain was Borgia himself, who was Descended from the greatest Families of the 
Dukes of Lerma and Borgia; he was about forty eight years of Age, and had serv’d 
the Spanish King a considerable time in the Netherlands. This Victory cost the 
Hollanders about forty Men, besides as many more wounded. Amongst the Spanish 
Prisoners was a Neapolitan Gentleman, call’d Hector de la Calce, who upon Examination 
inform’d the Hollanders, That with the last Spanish Fleet there Landed two thousand 
four hundred Men in Algosa, with twenty Bra’s Field-pieces, abundance of Wheel- 
barrings, Spades and Pick-axes, which cost in Portugal eight hundred thousand 
Cru- 
sado’s; with which great warlike Preparations Borgia made no doubt to have got 
fast footing in the Country, and to have cut off all manner of Assistance from the 
Hollanders; That the Spanish King rais’d a great many Men both in Spain, Italy, and 
Germany, that with the first opportunity he might fit out a Fleet, which was to be 
conducted by four thousand two hundred Seamen, to whom the Cupilians were to 
add eight thousand five hundred Soldiers and two hundred Seamen, and the Portu- 
guese the like number, to serve ashore, and to drive all Strangers out of Brazil; 

That this Design had long since been put in Execution, had not the Albuquerque 
continually deceiv’d the King of Spain, under pretence that Brazil was in no danger; 

That Albuquerque would be forc’d to resign up the Interest which he had in Brazil, 
for which the King would give him a Dukedom in Portugal in exchange. 

Schuppe and Arcifesky judging it no way convenient to fall upon the Enemy in 
Porto Calvo, Garrison’d Pariquera with four hundred Men, under the Command of 
the Captains Day and Philip Andrews, whom they furnish’d with Provisions for five 
Months, and left Order to defend the Country against the Incursions of the En-
emy; which done, they went aboard with eleven hundred Men, and took in two 
Companies of Brazilians at Barra Grande; with whom Landing behind the Isle Al- 

cia, they came to Serinhain before Day-light, and found all the Inhabitants fled into the 
Woods, fearing they would take Revenge on them for murdering of their Sick 
which they had left there. They were no sooner Encamp’d here, but they receiv’d 
Information from John Talibon, that the Spanish Army intended to Besiege the Red 

doubt in Barra Grande, which therefore, as lying on an ill place, and not able to re-

sift long, they flighted: After which being furnish’d with Provisions out of some 
Ketches Commanded by the Admiral Lichthart, they return’d, with Intentions to 
take up their Quar ters in Serinhain during the Winter Season, whilst the Enemy 
lay in cockpit, on one side of Una and Serinhain, and kept private Correspondence 
with some of the Portuguese that had taken the Oath of Allegiance to the Hollan-
ders; but Arcifesky fell so fiercely upon them, that they all fled to Porto Calvo, and 

took
took three Monks Prisoners, who had been the chief Authors of this private Correspondence.

Soon after twenty eight Ships arriving at Recife, brought fresh Supplies of Men thither from the Maes and Zeeland, with Ammunition and Provisions, which was much wanted; also two Councillors, Henrick Schild and Pandus Serooskerken.

This Fleet was scarce got in, when in the Evening news was brought, that eight hundred Spaniards were broke in through Poyoca, and had taken John Parz Barretto's Sugar-Mill, and destroy'd all they came at; but that the Hollanders defending the Church with great Valor, obtain'd Quarter upon the surrendering of it.

This raging Army, led by Colonel Rebellino and Maduras, march'd to Lawrence and Mafopi, whither there reforted daily more Men to them, which put the Council at Recife to a great Dilemma, foreseeing, that if they should send for Schuppe from Seringhain, the Enemy from Hua and Porto Calvo would hem him in, neither had they sufficient Forces to withstand Rebellino; therefore it was judged convenient to send to Arcifensky to joyn with Schuppe's Army, that they might both unawares fall upon the Enemy. In the interim a hundred and twenty Tapuyans, sent by Sandby, came to Recife, with information that Sandby was coming himself, with several other neighboring Kings, to their Assistance. Schuppe, according to the Councils Order, march'd in the Night through the Sugar-Mills of Rio Formoso, refled the next day in the Valley Orekinda, and guarded all the Avenues: Whilest he went about to Storm the Village Una, Manfield was to Engage with a hundred Spaniards on one side of Itata's Sugar-Mills, and Arcifensky was to fall upon the Village, whither marching early in the Morning, they faw onely a few of the Inhabitants, the Enemy being gone with his Forces over to Manbuncara, nor could they pass any farther, finding the River too deep to wade through: But it had like to have gone worse with Stackbourn and Litchhard, who with Maulpas making twelve hundred Men, were surpris'd by Rebellino, ruthing forth of an Ambuscade near Lawrence, where Maulpas receiving a Wound dy'd of the fame. This rough Entertainment at first much daunted the Hollanders; but regaining their Courage, they press'd upon the Spanish Army in such a manner, that Rebellino being wounded in his Shoulder, fled in great disorder through the Sugar-Fields to Porto Calvo, and of fifteen hundred Men fay'd not above four hundred, the rest being either kill'd, or scatter'd up and down the Country; twelve taken Hollanders were also released by this means. The Portuguese Design on Paragua also succeeded not much better.

Arcifensky receiving Letters of Advice from the Councellor Serooskerken, that Camaron lay Encamp'd with fifteen hundred Men about the Fortresses Capavaribi in Guyana, and that the Besieg'd could not hold out above four days longer, and that the Enemy had also taken two Barques full of Provisions and Ammunition, sent thither to relieve the Besieg'd, march'd with excessive toil through uncouth and intricate Ways, which were rendred unpassable by the great Rains that had lately fall'n, and came about an hour after Sun-set to Capavaribi; from whence Camaron being fled two hours before, had left Ammunition in three Carriages, secure'd from small Shot by thick Planks, which were drawn close under the Walls; also a Bur- guardian Flag, two Field-pieces, and two Barques which he had taken with Provisions. The Enemy fled to Tapifesica, and from thence to Terra Nova. Whilst Arctifensky view'd the Works, and his Men stood in good order, great numbers of Brazilians Sally'd out of the Redoubt, took the Provisions which Camaron had left, spread themselves up in the Country, robb'd the Portuguese Houses, and kill'd the People. As soon as Arcifensky had put all things in good order, he left the Brazilians in Guyana under the Command of the Councellor Effens, and pursu'd the fled Enemy,
Chap. VII.

**AMERICA.**

359

Enemy, notwithstanding there fell great Showers of Rain, rest'd a little in the deserted Village *Tapasieca,* formerly inhabited by three thousand People, who possessed several fair Structures, brave Walks, a large Jesuit's Cloyster, and a Church. The sweet Water and pleasant Pastures invited the *Hollander* to stay here a Night. The next Morning marching forward to *Terra Firma*, they saw a strong Fortification newly rais'd, but without People, and heard the Enemy's Sentinels fire; whereupon Arcizsky appointing part of the Army to follow at a distance, March'd before with the rest, and being fir'd upon from an Ambuscade by Camaron's Party, he order'd Captain *Talhobon* to pres in upon the Ambuscade; but because it was perform'd in great disorder, he fell in himself on the right-hand of the Enemy, whilest *Lichtmarck's* second Division fast fill'd, which foon affrighted the Enemy, that without making the least resistance he fled into the Woods, leaving many dead behind him. The next day Captain *Bohart's* Party tracking the flying Enemy, fell in amongst them, and gave them a total Rout.

Arcizsky resolv'd to stay some time in *Terra Firma* to wait for Camaron, but he not appearing, he laid waste the Country thereabouts.

Rebellino and Lewis de *Soja* falling upon the Councillor *Eysens,* Governor of *Parayba,* routed him, and set fire on the Sugar-Mills belonging to *Emmanuel Pires,* which forc'd them with their Swords in their Hands to break through Flame and Smoak upon the Enemy, who kill'd nine of them upon the Spot (amongst whom *Eysens* and his Secretary) the rest being either taken or fled.

Immediately after Arcizsky being inform'd by two Prisoners, that the Spanish Forces Commanded by *Soja,* *Dia,* and *Rebellino,* were all joyn'd together in the Wood *Antonio,* where Camaron was also expected, he March'd away presently with half his Army, and as soon as the Captains Metting and *Tourlon,* whom he command'd to follow him the next day, were come up to him, he fell upon the Enemy, who lay on a Hill, at whose Foot was a deep Valley, through which he clim'd to the top; which valorous Attempt so amaz'd the Spaniards, that without firing a Gun they fled into the Wood: After which Metting and *Tourlon* went back to *Lavenlo,* and Arcizsky destroy'd the Fossas, of which the Farinha is made, that so by Scarcity of Provisions he might prevent the Enemy from so often joyning together in Parties: In the mean time ten Ships from Holland arriv'd with fresh Forces, Ammunition, Provisions, and two taken Prizes, at Recifaa.

Houte-been being releas'd from his Imprisonment in Dunkirk, set Sail from Holland with three Ships, and took ten Iron Guns out of one Ship, and several Pipes of Wine out of another before Matanza; after that a Tartan from Havana, two Frigats with Meat, one full of Wood with two Guns, two Barques carrying Bananas, a rich laden Pink, two Ships with Hides, and one with Sugar. Near the Island *Baru* he heard several great Guns shoot off, whereupon making thither, he found the Zealand Privateer *Martina* Engag'd with a Ketch carrying ten Brails and six Iron Guns, which was run ashore; whereupon Houte-been went to his assistance with a well Mann'd Boat; which the Spaniards seeing, set fire on their Ketch and fled; but the Flame having only hurt the Stern, fifty Men were order'd to get her about, who having begun to unlade the Tobacco, and to take out the Brails Guns, the Gun-Room took fire, and blew up both Men and Goods; of which twenty four being badly hurt, dy'd, the rest escaping miraculously. Not long after Houte-been took a Ship with Hides, frighted the *Elmara* Pink with his Prizes for the Texel, ran close by Katthagena, and kept a considerable time in sight of the Plate-Fleet, of which he carry'd one of the heaviest Sailing away with him; Being thus enrich'd, he return'd home.

Whilest
Whilest Business were carry'd on after this manner both by Land and Sea in Bratia, the Weft-India Company resolver'd to fende some Person of Quality thither as President of Supream Governor; and after no long Conftitution who should be the Perfon, Grave Maurice of Nassau was pitch'd upon, as being not only eminent for his Noble Alliance by Marriage to Emperors and Kings, but also for his excellent skill in Martial Affairs, the proofs whereof were known to all Men, as his marching to the Paltz against Spinola, his being in the great Siege of Grol, Hertogen-Bosch, Maftricht, Venlo, Rynherk, and Schenkenchamps, at all which he receiv'd great Honor; all which consider'd, they made him chief Governor of Bratia, giving him a Commission Sign'd by the States of the United Netherlands and Weft-India Company, to Govern with abolute Power, as well in Civil as Martial Affairs, to the beft advantage of that State. At first they resolver'd to fende a Fleet of thirty two Sail thither, but they afterwards reduc'd that number to twelve, which they Mann'd with two thousand seven hundred Men. Grave Maurice fet Sail on the twenty fifth of October 1656, owen with four Sail, whereof the Admiral Ship call'd The Zafzen, carry'd but three hundred and fifty Men: about the Sallies they met with blustering Weather, infomuch that the Fleet was forc'd to put in at Falmouth, and after forty days stay there, weigh'd Anchor, and Steer'd for Cape Ver'd, and refeth'd at the Ile of May, famous for Salt-pan's, and inhabited by a few Negro's, and banish'd Portuguefes.

On the twenty third of January 1657, Grave Maurice arriving at Recifia, was by every one receiv'd with great joy; as alfo Adrian vander Duffen; and loon after Matthias van Ceulcn, Servas Carpentier, and John Gysfeling, were chosen to be of his Priy Council, whose first Work was exactly to know their Forces, which were either Inhabitants that were to guard Towns and Fortrefles, or Soldiers that march'd into the Field; two thousand fix hundred whereof were appointed to defend Recifia, the Afgadors, the Promontory St. Augustine, Tamarica, and Paraga: the greateft Party, which lay in the Field, confisfted of two thousand nine hundred Men, and another leffer Party of fix hundred; which last flying Regiment was to be continually employ'd to make work for the Enemy. They alfo took an Account of what Provifion and Ammunition they had in Store, and found that there was want of both, especially of Match. Next he enquir'd after the Enemies' Condition and Power.

From Porto Calvo the Portuguefe made continual Sallies out into the Countrey, which they spoil'd and pillag'd, infomuch that the Braflians being oppreft by them, deferted their Villages, and came for refuge to the Hollanders. The Garrison in Serinbain was alfo much too weak to withftand the Incurfions of the Enemy, the rather, because the Portuguefe came along private, and to the Hollanders unknown Ways. All which Grave Maurice consider'd, caus'd a Paft-day to be proclaim'd, on which they deñ'd Gods affifftance in the carrying on of their Designs. After which he march'd with the Army to Serinbain, from thence crofs the River Mga to Barra Grande, and thenceto meet with Bagnola, who though he was four thousand Men strong, besides Negro's and Braflians, had flop'd up all the Ways with fell'd Trees, and fortifi'd others. On a Mountain; a League from Porto Calvo, Bagnola kept his Station. At the foot of the Mountain flow'd a Brook, whose Shore was overgrown with Rice and young Trees, before which lay a high Bank; oppofite to which Grave Maurice Encamp'd himfelf towards the Evening, with intentions to fall upon him the next Morning, notwithstanding his Army confifted not of above fifteen hundred Men, of which there were fix hundred Braflians. Grave Maurice's Guard marchling before were follow'd by Schuppe and Aciifemelry, and they by Liechbart, whose
whose Men were all Seamen; all of them firing their Guns amazed the Enemy, while two Companies of Brazilians, and three of Hollander crept through the overgrown part on the right-hand of the Mountain, and as many more on the left, fell unawares upon him; but Maurice's Guard Engaging with a thousand Portuguese, ran through the Water up against the Works with such undaunted Courage, that Bagnola Retreated, leaving four hundred Men slain, besides three Brafs Guns, and a great number of Prisoners; those which escap'd fleed to Porto Calvo: But Bagnola fearing to be Besieged there, left Povacon, which Castle, built on one side of Porto Calvo, lies twenty five Leagues from Recifca, on a Plain, partly surrounded with Mountains and Pastures. The River Porto Calvo runs fo crooked, that it almost surrounds the Castle and Town. The Countrie hereabouts is full of Pools. Two Forts, each built on a Hill near Povacon, Bagnola had caus'd to be undermin'd and fill'd up with Gun-powder; but they taking fire, were blown up before the Hollander's came thither, who found them smoking, and lying like a heap of Rubbish. Maurice marching forward, Besieg'd Povacon, and Encamping himself below the Hill where one of the Forts had flood, he rais'd a Redoubt, and with Trench approach'd the Moat. Whileft Schuppe lay along the Town from the Church, Lichtbart made a Battery to the North, and somewhat farther Arciffevity another; then firing from four Batteries on Povacon, the Besieged answer'd them again from their Walls, and on the thirteenth day the Governor Michael Giberton surrendered the Castle upon honorable Articles: for those in Garrison being Italians, Portuguese, and Castilians, to the number of five hundred, besides the Wounded and Sick, were to be Transported to Tercera. Maurice entering the Castle, took two and twenty Brafs, and five Iron Guns, four Mortar-pieces, a great many Bullets, Matches, Gun-powder, and other Ammunition, this being the King of Spain's Magazine.

Near Maribeca, and before St. Lawrenço, the Enemy receiv'd a shrew'd Repulse by the flying Regiment, led by Stackhouse; but Lieutenant Helmich obtain'd some Honor herein.

Grave Maurice after these Exploits took Shipping in Barra Grande, at a great Inlet near Porto Calvo, and Landed again at the Promontory Sergoa, from whence he pursu'd the Enemy to the River Francisco; the Inhabitants about which desir'd, and obtain'd free Conduct. Bagnola lay on the other side of the River Francisco, in the Town Openeda; wherefore Schuppe, who was sent to the Alagados to be near the Enemy, was afterwards commanded to go to Openeda to secure Grave Maurice's Passage over thither; but he coming thither after him, Maurice cross'd to the Shore on which Openeda lay with Boats, and got great Booty; and the more, because the Natives had not secur'd any thing, Bagnola assuring them that the Castle Povacon could endure at least a Siege of four Months.

Openeda belong'd properly to the Lord Melchior Albes. Near the Town rofe a stone Rock out of the deep River Francisco, eighty Foot high; from which Rock there jutted out like Redoubts five Points, and it was call'd Maurice Castle. Along the Shore of the fore-mention'd Stream lay several very pleasant Isles. Bagnola escaping privately from hence, was follow'd by his Men kneeling on floating pieces of Timber, which with Sticks they Row'd over to the Northern Shore, notwithstanding the Stream glides so swift, and is so broad, that a six-pound Bullet cannot be shot over the same; at the Mouth thereof Maurice built another Castle. A League from his Camp seven hundred Tapuyans (a great Salvage and strong People, whole Language the Portuguese, Brazilians, and Tapuyans that belong'd to Tundhi, could not understand) had Ambuscado'd themselves, and with Signs and Motions of their Bodies
they gave the Hollanders to understand, that they would kill the Portuguese if they offer'd to cross the Rivers.

Maurice advising Prince Frederick Henry of his Transactions, desir'd that he would send over Planters thither, whether they were banish'd Germans or Vagabonds, out of their Houses of Correction; for without them the fruitful Countrey of Brazil would render but a slender Account to the West-India Company, nor be able to prevent the Invasions of the Spaniards.

The fruitfulness of this Tract of Land was not inferior to any Countrey in the whole World, Cattle grazing up and down in Herds of five, six, and seven thousand. Moreover, Maurice advis'd them about the Scarcity of Provisions, without which they were not able to maintain War. He also settled the Traders in a good Order, dividing all those free People which bore no Offices, into four Companies, under Captains, Ensigns, and Lieutenants. The Customs and Tributes were Earm'd, Marriages were order'd to be perform'd by the Netherland Priests, the Jews had leave not to Watch on their Sabbath, all manner of Debotheries were strictly forbid from being act'd on the Lords-Day, and Punishments ordain'd for Drunkards and other Debotheries; several Schools were also erect'd for Youth, and for the instruction of the Brazilians in the Christian Religion; and lastly, it was permit'ted to any that would, to build in the ruin'd City Olinda, or else to repair those Houses that were fall'n to ruin.

Some of the Portuguesees fill'd Maurice his Ears with a Report of the Silver-Mines at Conhaou, Copaou, Terra Nova, and about Cape St. Augustin; but he not regarding them, plac'd Sheriffs over the Villages, and Overseers over the Alms-Houses and Hospitals, issuing out Orders also for the delivering of the Provisions, which being very scarce, every Man had a certain Allowance, that so it might last the longer; but when in this Distribution the meaner sort began to be scanted, the Peoples Complaints were such, that an Insurrection was like to ensue; if not carefully and speedily prevented: whereupon the decay'd and derelict Sugar-Mills of the Portuguese were put to Sale, and sold some for three, others for six and seven thousand Pound,
Pound, infomuch that the West-India Company got above 20000l. for them all. Soon after they fortifi'd their Castles and other strong Holds, and broke down those that were judg'd useless. The Brazilians obtain'd liberty also to inhabit their Villages and till their Land, that they might make Provision for themselves, and not oppress the Planters that liv'd near them. The Portugese that had submitted themselves to the Government of the Hollanders, had free leave granted them to exercise the Roman-Catholic Religion, only they were not to lend for any Priests from St. Salvador, which if they did, they should be dealt with as Plotters of Murders and Treasons: Moreover, they were promis'd that they should live free from all Oppressions of the Hollanders. There was also order taken about paying the tenth part of the Sugar and Farinba. The Income also of Fishing and Fowling, amounted to a considerable sum of Money. And to prevent deceit in Trade, Measures and Weights were made according to those of Amsterdam. For the Converting of Pagans, Jews, and Roman Catholicks, able Teachers were sent into the Country to promulgate the Gospel.

About this time there went a Report, as if the West-India Company were inclin'd to remove their Seat from Reciffa to the Island Tamarica; but Maurice advis'd them that it would not be so convenient for them, they chang'd their Resolution.

Whilest Liechtart Cruis'd a considerable time before the Haven Todos los Santos, he Crain'd his Ship in the Bay of Comanin, took the Town Ileas, with a hundred and fifty Men. In the Town, which is built on a Promontory, he took but little Booty, and sav'd the Houses, which were built most of Stone, as also the four Churches and Jesuists Cloyter, and return'd to Reciffa.

About this time the invincible Castle Mina, afterwards call'd St. Joris, was taken by the Hollanders, upon the Advice of Nicholas van Yperen, Commander of Guinée, who sent word to Grave Maurice, that the said Castle might easily be conquer'd, if any Forces could be sent him from Recifia: Whereupon Maurice immediately sent
Colonel  

sent John Coin thither with nine Ships, which set Sail on the twenty fifth of June,  

Anno 1637, who in the Road Commando joining with Iperen, soon after he was set down  

before it, and was preparing to Storm, had it surrendred to him upon Terms no  

less advantageous to the Hollanders, than dishonorable to the besieged, yet not  

without the los of many Men; for in their March thither they were fiercely set  

upon by the Negro’s inhabiting the Village near the Castle; in which Confliet Co-  

lonel Latan amongst others was slain. The Fort might very well have endure’d a  

longer Siege, it being surrounded with double Moats, each twenty five Foot deep,  

and high Bulwarks, which could not be undermien’d because of the Rocky Ground  

on which they were built; and to make it yet more stronger, Coins after he had taken  

it rais’d a Fort on the Hill, from whence he had fir’d on the Castle, in which he found  

thirty Brazs Demi-Culverins; and leaving Walraeven Malburg as Governor, he re-  

turn’d to Reciffa.

During thefe Proceedings of the Dutch in Guinee, the Duke of Bagnola ranfack’d  

the Countrye about Sergippa del Rey; Maurice not able to go himself, having had a  

Feaver three Moneths, sent Schuppe and Gyfeling with two thousand three hundred  

Soldiers, four hundred Brafilians, and two hundred and fifty Seamen, whileft Lich-  

chart Steer’d to Todos los Santos, that fo he might draw the Enemy down to the Sea-  

Coalt. Bagnola flying to Terra Gracia d’ Avila, Schuppe demolish’d the Town Sere-  

gippa, the Sugar-Mills, and all manner of Fruit-Trees, and march’d with incredible  

speed to the Stream Francifco; where Encamping on the Southern Shore, he drive  

three thousand Head of Cattel before him, that fo he might havre the Enemy.

In the interim the Brafilians in Siera defir’d Aid against the Portugife, offering,  

That if the Hollanders could conquer the Fort there, they would loon destroy all  

the Portugife; that the Charges of the Siege might easily be made good, the Coun-  

trye producing abundance of Amber-greece, Cryftal, Cotton, Pearls, Salt, and  

other Merchandife. In confirmation of this their Resolution, the Brafilians left two  

eminent Perfons Children of Siera in Reciffa: Whereupon George Garfman being  

sent thither, was no looner Landed, but he made his Arrival known to the Brafilian  

Governor Agodoi; who came to meet him with two hundred Men, bearing white  

Flags in token of Peace: Thus affihed, he fet upon Siera, which is a square Fort,  

built at the foot of a Hill, hath within its Walls six Housé, two Redoubts full of  

Port-holes, one on the North, and the other on the South, jutting half way out  

from the Wall; as also two Gates, fcur’d with large Portcullizes: without the Fort  

appears the Governor’s Housé, about which were feveral Huts for Portugifes.

This Lordship, already fpoken of, is reckon’d amongt the Northern parts of  

Braflie, and hath onely twelve Leagues in circumference. The Haven before the  

Castle, which the River Hau makes, is of little confequence: The Ground in  

some places rifes with high Mountains, in others, especially on one fide, it is over-  

grown with Wood: hath alfo feveral brave Pfatures, especially along the River.

Garfman approaching the Castle Siera, found little resistance, fo that he took it  

with small expence of Blood, most of the Portugife being taken Prifoners, a few  

onely escaping by flight.

After this Grave Maurice took great care of the Civil Affairs, building a Guild-  

Hall at his own Cotf and Charge; fent all manner of Minerals, digg’d out of the  

Braflian Mines, to the Netherlands; laid great Penalties on thofe that ftole the Cu-  

ftom of Goods, and punish’d with Death Murders, Robberies, and fuch like Capital  

Offences, besides feveral wholofm Laws relating both to the Civil and Ecclefa-  

ftical Government; and as soon as he was recover’d from his tedious Sickness,  

he march’d up into the Countrey to the Rivers Grande and Paroja, to take care to  

furnihs
AMERICA.

furnisht the Forts with Provision and Ammunition. Near the Castle Culeen he was receiv'd by the Tapuyan Agents, and Prefented by them with Bowes, Arrows, and brave Oftrich Feathers, us'd by them when they go to the Wars: in return for which they receiv'd Linnen Shirts, Knives, Shells, Bugles, Filehooks, and Nails. Maurice caus'd a deeper and wider Moat to be digg'd about the decay'd Castle Cabo Delo, rais'd the Works, and call'd it by the Name of his Sister Margaret: he also pull'd down the Fort Antonio, keeping only a Tower to defend the High-way. Recifings was likewise strengthened with Pallisado's, and the Cloyfter near the Town Paragua fortif'd against an Assault, and Elias Barkmans made Governor of the same.

While these things were tranfacted on the Land, Captain Schuppe at Sea Engaging alone between Todos los Sanflos and Terre Garce d' Avila with three Spanish Ships, drew one of them aground, and brought another away with him to Recifas. The Letters found in the taken Veffel made mention, that in the River of Lisbon lay ten Galleys, and twenty more before Cales, to which were to join thirty Pinks, which Fleet some suppos'd was coming for Brife; others, that it was only a Plot of the King of Spain to get Money from his Subjects, according to the Cuftom of several other Princes.

Hereupon Maurice wrote to the West-India Company, that they would Rig out a Fleet with all possible Speed, which might fall upon the fore-mention'd Spanish Fleet, and fetch thofe Sugars which lay ready in Brife to be Laden.

About the fame time a Party of the Portuguese crossing the River Francisco, came to the Stream Miguel, whither Picard marching, put them all to flight.

Greave Maurice having a Design on St. Salvador, the Portuguese Metropolis in Bra-file, formerly taken by Peter Hein and Jacob Willekes, and not long after loft by the faint-heartednes of William Schouten and Hans Koff, though in all likelihood not strong enough to undertake fo weighty a Design, yet considering if he should stay longer, the Seafon would not permit him, therefore he went aboard, hoping that he should receive fome Aid from the Netherlands; his Army confifted of three thousand four hundred Netherlanders, and a thousand Brasilians. He had the greater hopes of Victory, because he receiv'd information from St. Salvador, that the Soldiers in Garrison there mutiny'd for want of Pay, and that the Governor and Duke of Baguala were at difference concerning the management of the War. But before he fet Sail he had receiv'd all Places against any Invasion, and got ready twenty two Sail, furnifh'd with Ammunition and Provision, with which on the eighteenth of Au-gust Anno 1658. he weigh'd Anchor, and met with fix Ships at Sea, which he took, and arriv'd on the fith day following before the Mouth of the Inlet Todos los Sanflos, which he could not enter by reafon of contrary Winds, but Cruis'd up and down before the River Vermelho and the Ifle Tapuam; whereupon the Governor of St. Salva dor and Baguala drew the Portuguese Forces down thither to prevent his Landing: About Noon the Wind coming about fair for the Hollanders, brought Maurice within Shot of the Ships, Forts, Walls and Batteries of the City St. Salvador, fo that he thund'd with his Cannon againft them, and Landed on a Promontory near the Scone Barbolone, without the leaft refiftance, in a convenient place about a League and a half from the City; where Encamping himself, he was inform'd by the Prisoners which he had taken, that about half a League farther was a narrow Bank, border'd with Moraffes, fo that none could pafs along the fame but at Low-water, and then only at a certain time. Tourlon being sent before with three hundred Mufqueteers to difcover the Place, found the Way not onely as the Prisoners had inform'd, but also fortifi'd by the Enemy, against whom Maurice draw out his Men, ordering Captain John vander Maff in the mean time to run with ten Sail.
Sail directly upon the City, and to drop his Anchors just without shot of it. Having beaten the Enemy from his Works, he broke through all the Paths, Hedges and Banks, till at last he came and Intrench'd himself near the Out-works of the City, by which his Army was secure'd from any Assauls from the Sea-side. Colonel Brand also with little trouble took the Fort Phillip, built on the Shore, and fortifi'd with five Guns. The next day Maurice Storming the Castle Phillip, soon became Master of it, notwithstanding it was well Garrison'd, and had thirteen Brafs Demi-Culverins. The taking of this Castle afforded the Besiegers a free Passage to their Fleet. They also rais'd two Batteries, from one of which they shot night and day with seven great Guns, and from the other with the like number of Field-pieces, on the Castle Rosario, which the Portuguese forsook; but going about to take a Horn-work on the top of the Carmelites Cloyster, he loft many Men in the Attempt, and amongst the rest the Captains Howin, Eckbrecht, Bevard, Hollinger, and the Engineer Berchem; and in the end, after many bold and resolute Attaques, what with the strength of the Place, both for number of Defendants, and well fortifi'd thereof, and what with the want of his expected Supplies, and lastly the sickliness of his Army, by reason of the extraordinary Rains that fell, to the loss of many Officers of note as well as common Soldiers, besides what were slain by the Enemy, he made as honorable a Retreat as he could, so that this Expedition prov'd altogether unsuccessful.

Mean while the Provincial States of Holland and Zealand differ'd about allowing of a free Trade to Brafsle, and sending of Colonies thither: Whereupon Grave Maurice writing to them his Opinion, demonstrated with good Reasons, that a free Trade, and fresh Colonies, would be much to the Companies advantage; which was approv'd of by the States of the United Netherlands and West-India Company, who openly engross'd the Trade of Negro's and Brafsle Wood; and on the Import'd and Exported Goods they put a certain Custom.

The West-India Company considering what Treasure Peter Hein had brought from Mutanca to Holland, they resolv'd to venture another Expedition thither; and to that purpose set our fourteen Sail under the Command of Cornelius Houten-been, who weigh'd Anchor out of the Texel on the fourteenth of August Anno 1638. and arriv'd safe at Reciffe; where Houten-been having spent some days in Consulting with Grave Maurice, went aboard again, and at his entering into the Ship, bruised his Leg between the Boat and the sides thereof, which some superstitious Persons look'd upon as very ominous, but this Wound was not so great as to keep him back from whatsoever Service came in his way: for discovering the Spanish Fleet from Terra Firman near Cuba, before the Rocky Isle Oranges, which consis'd of eight great Gallions, and six Leffer Ships, whose Lading was valu'd at two hundred Tun of Gold, and Commanded by Carel Dievero, he clapt the Admiral aboard, threw in his Grapling-Irons, and made him self fast, with a Resolution either to take him or die, whilest the Dutch Vice-Admiral Abraham Michaelzoon Rosendael boarded the Spanish Vice-Admiral, and the Rear-Admiral John van der Maist the Enemy's Rear-Admiral; and doublets, had not the Vice-Admiral and Rear-Admiral been slain, together with Verdoof, Captain of the Orange-Tree, and other eminent Officers, and those that surviv'd fail'd in their Duty to him for want of Courage, he had given them a signal Overthrow; but whilest with much ado he had prevail'd with his Captains to renew the Combat (having been for'd by the coming on of the Spanish Vice and Rear-Admirals to quit his hold) and was preparing for a second Onset, the Sea began to be rough, and the Enemy was gotten to the Windward. Some few days after being inform'd, that the Spanish Fleet lay before the Flats of Cuba and
and the Rocky Organs, Steer'd thither, resolving to venture once more; but when he came there, the Spaniards were gone; whereupon he sent some of his Ships to Brazil, others to Cruise before Cuba, whilst he himself went for the Netherlands.

Whilest this Expedition fell out so unfortunately, Cameron, General of the Brazilians, sent three Agents to Grave Maurice, desiring to enter into League with the West-India Company, upon some Differences that were riven between him and the Duke of Bagnola. Grave Maurice fearing much inclin'd to his Offer, treated the Agents very nobly, who not long after, oblig'd by his Civility, inform'd him, that Cameron, an inconstant Man, had made Peace again with Bagnola. But that which chiefly obstructed Grave Maurice's Designs, was the want of Provisions, Ammunition and Men, notwithstanding his continual Complaints to the Company.

About the beginning of the Year 1639. the Spanish Fleet, consisting of twenty eight Sail, most of them Gallions, appear'd in sight of Recifà, but Steer'd Southwardly; Grave Maurice hereupon sent out the best Sailers to follow them, and see whither they were bound, or if they intended to Land, whilest himself march'd along to Porto Calvo, but inform'd that they were gone into the Inlet Todos los Santos, he return'd to Recifà, after he had for'd the Forts Porto Calvo, Una, Serinhain, and that at the Promontory St. Augustine, with all Necessaries.

About the same time Arcifensky arriving from Holland with a Commission to be General over the Forces there, imparted to some Friends the Copy of a Letter that he intended to send to the Amsterdam Burgomafter Albert Conradtz/son van der Burg, containing many Accusations against Grave Maurice and his Council; of which he being inform'd, call'd a general Assembly, to whom he makes a large Speech, wherein he declar'd how faithful a Servant he had been to the States of the United Netherlands for the space of twenty years, complain'd of the malice of Arcifensky in wrongfully aspersing him, both in the aforesaid Letter and otherwise, answer'd particularly to every thing which was laid to his Charge, (as he did afterwards in a Letter also from himself to Vander Burgh) and lastly made it his peremptory Request, that he might return home, and leave Arcifensky in Power, or that Arcifensky might be sent home, and he remain undisturb'd in his Government; and so withdrew, leaving them to their own Conclustions. It exceedingly perplex'd them, and took up a long Debate what Judgment to give in this Matter, which before they concluded on, they propos'd several Expedients of Reconciliation between them; but seeing it was all in vain, they unanimously judg'd it convenient, that Arcifensky should return, who not long after accordingly weigh'd Anchor from Parayba for Holland.

Arcifensky arriving in Holland, appear'd unexpectedly before the States of the United Netherlands and West-India Company, where several Judgments were pass'd upon him; some said he deserved severe punishment, for his misbehavior to Grave Maurice; others seem'd to have compasion of him, because he had done so many noble Exploits; most laid the blame on the Company, who rashly sent him with a Commission as Chief over the Militia, not without impairing Grave Maurice's Power; but thee Difcourzes fell amongst those who were not call'd to give their Opinion of this Cafe.

John Coen was chosen Field-Marshall in Arcifensky's stead, whilst the Councillors Matthias Ceulen, Adrian vander Dussen, John Guifeling, and Servaes Carpentier, were ready to come for Holland, and on the twenty ninth of October 1639. they set sail from Parayba, Vander Dussen bringing with him an exact Relation of the Condition of Brazil, so far as concerns the West-India Company, which being material, we shall reserve it for a more fit place.

It being fear'd that the Spanish Fleet in the Harbor of Todos los Santos might undertake
undertake some Design or other against the Hollanders, Grave Maurice kept a watchful Eye upon them, repair'd all decay'd Forts, rais'd new Forces, sent out some Vessels to watch the Fleet, and prohibited the Transporting of Provisions, animated the Brazilian Commanders to fight against the Portuguese, and forc'd the Owners of Sugar-Mills to Plant flore of Mandiboka, that so his Provisions might last the longer.

A Party of the Enemy, consisting of about twelve hundred Men, having pass'd the River Francisco, was soon after oppos'd by Colonel Dunker. The Spanish Fleet having lay'n a whole Year before St. Salvador (because they had lost near three thousand Men, who on the Coast of Africa dy'd of several Distempers, and therefore waited for a fresh Supply) set Sail on the nineteenth of November Anno 1639, with eighteen seven Sail, carrying sixteen thousand Men, of which thirty seven were great Gallions. Ferdinand Mascarenhas, Duke of Torre, being chief Admiral, carry'd the Flag and sixty Brass Guns in the Ship Domingo; the Portuguese Admiral, Rodrigo Lobo, carry'd fifty two Guns in the Gallion Bernardo; of all which, with the number of the Enemy's Forces, Grave Maurice was inform'd by a Letter taken out of a Pink laden with Sugar; and also that the Spaniards were in great hopes of the Portuguese defecting the West-India Company, with whom they were forc'd to joynt; that this great Fleet was order'd to Cruife two years before the Coast of Brazil, and to Land divers Men under the Command of Bagnola, Francisco de Mora, Antonio Rodrigo, Nuno de Mello, Jacob Pizexio, Francisco Pezam, and Lopes Barbalo; all which made Maurice write continually for Aid, "Which the West-India Company must fend speedily, unless they were resolv'd to lose what they had gotten in Brasile, as also the People, who had hitherto defended the same with the "lois of their Lives and Fortunes.

A Negro that serv'd a Spanish Captain, call'd Henrick Dias, being taken, inform'd the Hollanders, That the Spanish Fleet was much weaken'd by a poyfonous Air on the Coast of Africa; and that they had left a considerable number of their Men in the Hospital at St. Salvador; that the Admiral was resolv'd with divided Forces to burn all Places he came at, and to receive the Negro's, Mamelucks, Mulatto's, and Brazilians, under his Jurisdiction. But Grave Maurice gave little credit to this Relation, because the Spaniard doubted not in the least, but that he should take Brasile from the Netherlands with his fore-mention'd Forces, why then should he ruine what he hop'd to poffess? None knew whither the Spanish Fleet intended to go; for setting Sail under the Command of Antonio Oyendo, under pretence of falling upon the Netherlands, they Steer'd their Course to Brasile, and at last from the Inlet Todos los Sanchos to Goyana; but four days before they weigh'd Anchor, William Corthelfzoon Loos, who had some time been Cruising before the said Inlet, came back to Reciffa with thirteen Sail of Ships, which wanted all manner of Necessaries.

The West-India Company had now been in a mean Condition, had there not happily arriv'd first eight, next two, and at last nine Ships from the Texel, the Maes, and Zeeland, with Provisions, and a Supply of Men; which Maurice had no sooner taken out, and unladen the Ships, but he fitted them for an Engagement, and made up the number of forty one Sail, who yet were not to be compar'd to the Spaniards, whose smallest Vessels carry'd more Men and Guns than the biggest of the Hollanders, which in all had but two thousand one hundred and ninety five Men, and one Ship with another under twenty Iron Guns: With this Small Power the Admiral William Corthelfzoon Loos went to meet the Enemy, and before the River Michael took four Spanish Ships, which carry'd Ammunition and Provisions for the Army, which Lopes Barbalo commanded aholre. On the twelfth of January, Anno 1640,
he defcry'd the Spaniish Fleet between Itamaraca and Guyana; not far from which Maf-  
carenbas thought to Land seven thousand Men at Paamarello; and they were already  
gotten into little Vessels when the Hollander Fleet made towards them, and about  
three a Clock in the Afternoon began a bloody Engagement for four hours, in  
which Loos Engaging with the Spaniish Admiral and four Gallions, was kill'd in the  
middle of the Fight, which ended in the Evening. Jacob Huigens carrying the Flag  
the next day in sight of the Promontory Blance, clearing up his Men, went to re-  
new the Fight with Mafcarenbas, and with a few small Ships Engag'd several great  
one, of which they had an advantage onely in their nimble turning and wind-  
ing. In this Engagement Huigens loft the Ship call'd The Sun, which sunk with  
Colonel Mortimer and forty four Men, thirty four being save'd in the Boat. The  
Hollander's Loos was the lefs, because the Spaniish great Gallions fir'd over Huigens's  
Ships, which fir'd in the midft of the Spaniards Vessels. Huigens not being tir'd  
with two days Engagements, fell upon them a third time before Parayba, and firing,  
at the Spaniish and Portuguefe Admirals, pursu'd their Fleet to the Northermoft Coaft  
of Brazil, where by a strong Current they were driven Wefterly, and the Swain,  
Commanded by Jacob Alderick, loosing her Main-maft, was cut off from the Fleet  
by twelve Gallions, and three hundred Spaniards were already Masters of the Deck,  
when Alderick breaking from the Enemy, drove towards the Shore, and either kill'd  
the Spaniards that were in his Ship, or forc'd them to leap overboard, whileft Anto-  
nio Cunha de Andrada, not knowing that Alderick was agrav'd, making up to him,  
rain alfo agrav'd, which occasion'd a new Fight, and at laft Andrada was made to  
surrender his Gallion, and with it three thoundand Pound of coin'd and uncoind  
Silver, besides other rich Goods, and two hundred and thirty Men, who were all  
sent Prisoners to Recife.

January the seventeenth Huigens ventur'd a fourth Engagement between Rio  
Grande and Guyana, where approaching the Spaniish Fleet, a sudden Calm prevented  
him from coming within Shot of them, till against the Evening the Wind began to  
rife, but the Night approaching, it was not judg'd worth while to Engage for fo few  
hours, therefore they refer'd the bloody work till the next day; when about Day-  
break Huigens ran through the midft of the Enemy's Fleet, and fir'd so fiercely on  
Mafcarenbas, that he Tacking about, ro'd away right before the Wind, and not be-  
ing able to get beyond the Shelves Baxios de Rechos, nor to get Water on the Coaft,  
because the Hollander's Ketches guarded the fame, he Sail'd into the Offin towards  
the Line with a South-East Wind. After which Huigens lay eight days before Rio  
Grande to refresh and ref't-himself, and on the firft of February he arriv'd at Recife,  
where Maurice caus'd a Thanksgiving Day to be kept for this wonderful Victory,  
whileft the Enemy was exceedingly abash'd.

Several Disadvantages occurred towards the overthrow of the Spaniish Fleet; for  
first it was much weaken'd by the Diseafe which rag'd in the fame on the Coaft of  
Africa, infomuch that it lay ftil a whole year in Todos los Sauños to gather fresh For-  
ces, whileft Maurice put himfelf in a posture of Defence: Secondly, they lay be-  
calm'd, and met with contrary Winds for better Moneths, whenas the Voyage be-  
tween St. Salvador and Pernambuco is commonly not above twelve days; which tedious  
Passage occasion'd also a Diftemper and faint-heartednes amongst the Spaniards,  
whileft divers Ships arriv'd at Recife from the Netherlonds, without which it had  
been impossible to have Engag'd with the Enemy, in regard till then all manner  
of Ammunition and Provisions were wanting. Huigens also had continually the  
advantage or benefit of the Wind, and lod in the Engagement but two Ships, a  
hundred and twenty four Men, besides twelve wounded: Moreover, but twelve  
Ships
Ships only of the Dutch Engag'd with this great Spanish Fleet, the rest never coming within shot; wherefore the two Commanders, John Coopman Ryk, and Peter Jacob, were condemn'd to be Beheaded; Cornelis Johnsson and Peter Dirksoon had their Swords broke over their Heads by the common Hangman; Cornelis Lucsfer, Dirk Eger, and Jacob Clarus, were banish'd; and others came off by paying great Fines: but the Spanish Fleet lost in the four Engagements twenty Ships, and some thousands of Men, the Joseph alone having four hundred slain in her. Lastly, anchoring near the Island Tamaran, the Portuguese Admiral Cisio de Conto, and the Captain-General Francisco Pimentello, falling out, the Spaniards Steer'd to Tercera, and from thence to Cates, where there Landed but few Men, most of them dying of Hunger and Thirst in their Return home: Four Gallions, with two Pinks, got into the Spanish Harbors, the rest being either stranded before New Spain, sunk, or return'd to the Inlet Todos los Santos.

Before the foremention'd Fleet weighed Anchor from St. Salvador, two thousand Portugese, besides Tapuyans and other Brasilians, march'd under the Command of Cameron, Vidal, and Barbalio, with divided Forces into the Country, partly to get Provision, and partly to do what mischief they could to the Hollanders, far and near: their Orders were to join in the Village St. Lawrence, seven Leagues beyond Pasmarelo, that there they might make way for the Seamen to Land, if the Netherland Forces should chance to guard the Sea-Coast thereabouts, and to join with them as soon as they were Landed. But Grave Maurice encourag'd by his late Victory at Sea, immediately sent the Field-Marshall Coin against Cameron, who dividing his Army into small Companies, had distributed them through the Woods; in which Coin follow'd his Example, and with divided Forces pursu'd Cameron's Army, and overtook his Captain Tak and two hundred Men at Poyneas, (whereof Lopes Barbalo was Governor) who fled, notwithstanding he Commanded six hundred Men.) Soon after which the Muller-master Manfved met him near the Village St. Lawrence, Engag'd him, and putting him to Flight, found several Papers of Concern that he had left behind, and amongst other a Letter, in which Barbalio was commanded to spare neither Brasilians nor Netherlanders alive, but to kill all, without regard either to their Age or Quality, except the Portuguese. Moreover, Andries Vidal urg'd the Owners of the Sugar-Mills in the Netherlanders Brefile, immediately to take up Arms, to regain their ancient Freedom, as soon as Macanetas appear'd with the Spanish Fleet on the Coast of Brefile: Thus Vidal, by Letters and private Conferences, prevail'd so much, that most of the Portuguese were ready against their Oaths to root out the Netherlanders: The sign when they should be ready, was the burning of some Sugar-Mills; Vidal imagining thereby to have drawn the Netherlanders from the Sea-side, and so made the Sea-Coast free for the Spaniards to Land securely in. But the Garifon under Coin along the Sea-shore near Alexis, not ignorant of the Enemy's Plot, kept their Stations, and sufferr'd the Mills to burn. The like did Craey at the Promontory of St. Angulina, Picard at Pasmarelo, Captain Day at Cantolaria, and Donker on Goyana; Hooigreth kept Guard up in the Country; Tavern also sent out by Maurice against Francisco Soja and Flennis Dias, who had pillag'd all the Country about the River Conuol, fell upon them in such a manner, that he destroy'd eighty seven of them, and wounded a considerable number more of them, made the rest flee to St. Salvador.

Two Moneths before the Spanish Fleet set Sail from Todos los Santos, three thousand Tapuyans came to Rio Grande with their Wives and Children, from an unknown Country remote from the Sea. Grave Maurice requested their King John de Wy, that he would please to keep Watch along the Sea-Coast, and prevent the Landing of
the Spanisb Seamen: Whereupon De Wy sent his Son to the Castle Ceulen, making solemn Protestations, that he was ready to lose his Life and Fortune for the Nether-landers, in helping them to drive the Portuguefe out of Brasile. Maurice also joy'd two thousand Brazilians, and Colonel Garfman with fifty Netherlanders, to the Tapu- yans, that so he might train them up in Martial Discipline, while the Tapuys Wives and Children were plac'd on the Island Tamarica.

About the beginning of the Year 1640, Houte-been and Lichtbatt brought a considerable Fleet from the Netherlands to an Anchor at Recifia, where a Confu- tation was held, whither these Ships might be sent to do most Service: every one had an Eye on St. Salvador, not long since Storm'd in vain; but Maurice judg'd that they had not Forces enough to undertake so grand a Design, but thought it would be better to Land some fresh Forces near St. Salvador, that there they might burn the Sugar-Mills, and destroy all things they could find, in revenge of what the Enemy had done at Parayba. Whereupon Tourlon and Lichtbatt set Sail with twenty Ships, Mann'd with two thousand five hundred Men, to the Inlet Todos los Sanctos, where they burnt all the Portuguefe Sugar-Mills, Houses and Villages; neither did their Swords spare any alive but Women and Infants: The Cattel which they found they carry'd aboard of their Ships, and burnt all other Provisions.

In the mean time Houte-been and Coin fell upon Porto Franco, where they ruin'd all things, to no other end, but that the Enemy might call home his Forces out of the Netherlands Brasile, to defend the Province Todos los Sanctos. But Captain Brand going up too far into the Country with his Army, was suddenly set upon, had a hundred of his Men slain on the Spot, and was himself taken Prisoner, together with many more. Alfo the Storming of the Town Spirito Sancto by Coin prov'd un- successful, because he led an undisciplin'd Company, and wanted little Veffels to Land in on a sudden; for the Enemy having had timely notice, immediately rais'd a Sconce about the Town, and with five Bras Guns fir'd stoutly on him, who endeavou'd to climb up the Hill, but was forc'd to found a Retreat, his Men failing in their Courage; yet at laft breaking into the Town, he set some of the Houses on fire, which being built of Stone, refil'd the Flame; fo burning onely four hundred and fifty Chefs of Sugar, he left fifty Men kill'd, and brought back eighty wounded. Lichtbatt in the mean time made great havoc about St. Salvador.

In this Conjuncture the Weft-India Company suffer'd much by Robberies and Spoils committed up and down the Country, by the setting their Woods of Bra- file on fire by a company of Negro's, the chief Ring-leader of whom was one call'd Peter Vifj, who from Caves and almost inaccessible Ways came forth in the Night, and set fire on whatever places he came to, notwithstanding a hundred Negro's of his crew were soon after caugh'p, which he at several times had by force taken out of their Mafters Sugar-Mills, which Grave Maurice prevented as much as po- sible, by keeping Soldiers up and down in Arms. He alfo us'd the Portuguefe very civilly, who though they promis'd Obedience, because they liv'd under the Ju- risdiction of the Weft-India Company, yet were ready on all occasions to fwear the contrary; wherefore Grave Maurice lending for the chief of them to Recifia from Pernambuco, Itamaraca, and Parayba, told them before the Privy Council, that they might easily fee how vainly they expected that the Spanisb Crown should take Brasile from the Netherlanders; that formerly they depended on the Spanisb Fleet Commanded by Mafcareñas, but that being destroy'd by a small Force, that hope was loft; therefore if henceforward they would Trade on their own Accounts, they might be affur'd they should not suffer in the leaft, either in their Goods, Religion, or Perfons.

The
The Neapolitan Field-Marshal Hector de la Calce, setting Sail from the Haven Todos los Santos with an old Ship carrying fix hundred Men, was force’d to run aground in the Haven of Paragua, where he and the chief Commanders were taken Prisoners, while the Common Soldiers by reason of the scarcity of Provisions, were set at liberty.

Houtte-been and Lichhart weigh’d Anchor with twenty four Ships, carrying two thousand Soldiers and seven hundred Seamen to Havana, to Cruise for the Plate-Fleet, but the Spanish Ships keeping within their Harbors, and their own being dispers’d and scatter’d by ill Weather, their Voyage prov’d in vain.

Not long after Grave Maurice sent some Ships under Lichharts Command to Cruise before the River Jangarins, and others for the same purpose to Angola; but he effected little, for he only took two Ships, one whereof being laden with Wine, was sold for 9,400 l. Sterl.

The news of the Portuguese Crowning the Duke of Braganca, and casting off the Castilian Yoke, which very much chang’d the face of Affairs in Brazil, was about this time brought over by the Jesuit Francisco Vilhent, and the Under-Field-Marshal Peter Corera de Gama, who were by Braganca sent to St. Salvador, not only to bring the tidings of the Portuguese Revolt, but also to take the Oath of Allegiance from Montalvan to the new King, which he made no scruple of; so that from thenceforth all but the Castilian and Neapolitan Soldiers, cast off their Obedience to the Crown of Spain. Whereupon Montalvan desir’d Grave Maurice to allow a cessation of Arms, till such time as they might both receive information what Tristam Mendoza, in the new King of Portugal’s Name, had Treatied with the States of the United Netherlands about; and to make the Request seem the fairer, several Dutch Prisoners were set at liberty, and the Companies with which Paulo Acunas was matching to Pernambuco, were call’d back.

Grave Maurice desiring in his Letters to be releas’d from his Employment in Brazil, receiv’d for Answer from the States, “That it would be very disadvantageous for the States for him to come home, now he thoroughly understood the Ingeugiousness of the New World, in which he might do much good, especially since the Portuguese being revolted, would in all probability assist them in destroying the King of Castile’s Forces; therefore it was now the most proper time to prepare for Action.”

To this Request of the States was added that of the West-India Company, who also sent earnest Letters to the same purpose, which made Maurice defer his Return, and prepare himself for some grand Undertaking: And first he joyn’d the Province of Sergipe Del Rey to the Netherlands Brazil, built a Fort and Armory in the same, and built a Wall about the Town, which Work was the more follow’d, because Sergipe, which border’d upon the Province of Todos los Santos, fed abundance of Castel, and gave great hopes of Silver-Mines.

Grave Maurice likewise observing what great Profit proceeded from the Angolan Negro’s, and that the Spanish Sugar-Mills could not work without them, undertook to ingross that Trade wholly into the West-India Companies hands, to which purpose Laando St. Paulo being judge’d a fit Place for a Factory, Houte-been was sent thither with twenty Ships, Mann’d with nine hundred Seamen, two thousand Land-Soldiers, and two hundred Brazilians: the Land-Men were Commanded by Hinterdon, who arriving with the Fleet on the twenty fourth of August 1646, before Laando St. Paulo, ran in between the Enemy’s Castles, St. Crux, Bento, Sibylla, Vincent, Velho, and against five Batteries along the Water side, all full of Guns, and fir’d to vehemently upon the Enemy, that being force’d to leave his Works, he made room for
for *Hondebeen* to Land; who immediately march'd to the Town, which *Peter Cesar Meneses* defended with nine hundred Portuguese, and some thousands of Negro's, who stood the first Onset; but *Hondebeen* falling upon them again, so affrighted them, that they fled; which *Meneses* perceiving, soon follow'd, and left him Master of the City, in which he found onely a few drunken Soldiers, decrepid old People, twenty-nine Brave Guns, besides several Iron ones, and great plenty of Provisions and Ammunition. Mean while *Hondebeen* took thirty Ships hal'd near the Shore.

This City is built on a Hill, and hath several fair Buildings and Cloysters, amongst which the *Jesuits* and *Capuchins* are the best. Along the Sea-shore, at the foot of the Mountain, stands also a long Row of Houfes, near which *Hondebeen* immediately call'd up Bulwarks against any Assault, and likewise two Sconces, the biggest whereof is on the utmost Point of *Loando*, near the Fort *Sibylla*.

Twelve Companies being left here in Garrison, quite contrary to *Meneses* his experience, who thinking that the *Netherlands* came only for Booty, and not to take or keep the City by force of Arms, made his Complaints therefore by Letters to *Hondebeen*, alleging, That there was Peace made between the King of *Portugal* and the United *Netherlands*, and that the former Acts of Hostility were chang'd to friendly Correspondences. But *Hondebeen* answer'd, "That he knew not of any such Agreement between *Portugal* and the *Netherlands*; and if he had known it, how should he be sure whether *Meneses* held with the *Cafilians* or *Portuguese*? If *Meneses* knew of this Agreement, and was of the *Portuguese* Party, why did he receive those as Enemies, whom he must acknowledge as Friends? His Complaints were now too late; since the *Hollands* had obtain'd the Victory with the loss of their Blood.

*Meneses* therefore seeing no hopes to regain *Loando*, either by Complaints or Force, desir'd eight days Ceffation of Arms, that in that time he might fit himself to go from hence to another Place, which the *Netherlands* in Garrison would not hearken to, but commanded him to march away immediately sixteen Leagues from *Loando*.

Mean while the *Angolan* Princes joyn'd with the *Netherlands*, fell upon the Portuguese where 'er they met them. Moreover, several Citizens return'd to *Loando*, and proffer'd half their Negro's, if they might but have liberty to be Transported to *St. Salvador* with the other half; but it was judged more convenient to keep them, and by fair means also to invite the rest, because it appear'd by the *Angolan* Accounts, that the profit of the *Negro-Trade* amounted yearly to sixty-six Tuns of Gold, the Charges of the Garrison, and firing out of the Ships being deducted from it. The Spaniard King had yearly above fifteen thousand Negro's from hence to employ in his *American* Mines.

*Hondebeen* Sailing over from *Loando* to the Isle of *St. Thomas*, Landed some of his Men over against the Sugar-Mills of *St. Juan*, and ran with his Fleet to an Anchor near a squire Castle, with intention to use no Hostility, unless provok'd; which the Portuguese did by firing their Guns, and were answer'd by *Hondebeen*, one of whose Ships call'd the *Emenjén* was blown up; those that Landed also met with some resistance from divers Negro's; yet at last they gain'd the Fort, in which they found six Guns, and soon after march'd into the Town *Parnosa*, where the Inhabitants had left nothing but empty Houfes; the great Castle they were forc'd to let alone, because the Scaling-Ladders would not reach to the top of the Walls, which were twenty-eight Foot high; But *Hondebeen* coming ashore, rais'd a Battery behind the Church, from whence he fir'd with six Demi-Cannons, and threw fifty-five *Granado's* amongst the Besieged, twenty whereof burst with such violence, that all things
things about them were beaten to pieces; and those in Garrison march'd out, notwithstanding they might easily have endured a long Siege, having twenty Brats, and sixteen Iron Guns, besides all manner of Ammunition. *Haut'-beau* thus became Master of all things on the Island of St. Thomas, sent for the fled Portuguefs into the City, on reasonable Proffers, embrac'd by many of the Inhabitants and Netherlanders'. But whilest Haut'-beau put all things in good order here, the Country Disaffe began to rage amongst the Seamen, for those who but a little before climb'd up the Walls courageously, grew faint, and fell down in a Swoon; those who fought valiantly against their Enemies, were now put into their Graves; in short, of a thousand Men, a hundred were scarce left in health, the rest being departed, or lying Bed-rid: the unwholom Air without any difference infected both great and small; for the Commanders *Maffmker, Valett, Dammert, Claudius, Teer, Tack*, and the chief in this Expedition, *Haut'-beau*, were all taken off, and Inter'd in the chief Church of *Pavon*a, after the finifhing of so much bloody Work. Most complain'd of intolerable Head-ache, even to Disftraction, others also of horrible Gripings; and all those who were afflicted either of these two ways, most certainly dy'd in four days time.

The occasion of this deadly Distemper was by divers, according to their different Judgments, imputed to several Accidents; but doubtless it was chiefly to be acrib'd to the poysonous Damps or Fogs, which often rife in this Island, at which times every one us'd to keep close in their Huts or Houfes; which the Netherlanders being ignorant of, neglected.

The Portuguefs that dwell on this Island inform'd the Netherlanders, that few liv'd above fifty years there, yet notwithstanding the great Gain temped them to tarry, several of them having two or three hundred Negro's that work'd in the Sugar-Mills; that John the Third, King of Portugal, sent a Colony thither above two hundred years before, whom though the unwholom Air deftroy'd, yet the Place was not left desolate; for he sent new Inhabitants, who first Seated in Guinee, next in Angola, and laffly on the Island St. Thomas, that so they might be the better us'd to the Air; that the said King fold all those Jews for Slaves, that refus'd to embrace the Roman Religion, and cause'd their Children to be Baptiz'd, from whom (coming thither in great numbers) most of the present Inhabitants were defended.

Twice a year, viz. in March and September, the Sun is in the Zenith here, being right perpendicular, and by that means makes no Shadow at Noon; but the Heat is somewhat mollifi'd in these two Moneths by the Rains which fall, and in the Summer by a Weft, or South Wind; for there never blow neither East nor Northerly Winds.

The white People that dwell here have commonly a Fever every eighth day; first they grow chill, next cold, and at laft very hot, which lafts onely two hours. They commonly Let Blood four times a year to prevent this Distemper. The Negro's generally attain to a great Age, many times to above a hundred years. The Island bears the Name of St. Thomas from the Saint on whose Day the Portuguefe discover'd the fame. From the middle of it rifes a Hill, overgrown with Trees, and cover'd on the top with Snow, which dropping down into certain Brooks, runs through the Woods, and moistens the Cane-Fields. The Ground it self is tough, and Ash-colour'd; in it breed blue Crabs like Moles, which hurt all manner of Roots and Plants. The City of *Pavon*a is the Metropolis of the Island, and a Bishop's See; it lies near a clear and pleasant Brook, and is flank'd on one side with Hills, fruitful in the production of Sugar-Canes, but partakes of the unwholom Air of the Island, which therefore can scarce be defended by Netherlanders, because they being unaccustom'd to the Climate, generally die: Wherefore *Grave Maurice* advis'd
advis'd the States to people this Place with Malefactors, who might either live here to the Publik good, or die with less Disgrace than in a Prison.

Towards the latter end of the Year 1641. Lieutenant and Coin weigh'd Anchor with eight great, and six lesser Ships, and Sailing towards the Island of Maraguan, where Coin Landing near the City St. Lodowick, march'd immediately to the Fort, wash'd on both sides with one River, which there divides it self into two Branches: the Governor of it being too weak to hold out a Storming, sent two eminent Persons to Coin, with Proffers that they would surrender on reasonable Articles: whereupon Coin granted them their Lives, and free possession of their Goods, and gave leave to the Soldiers to play in the City St. Lodowick, provided they had no Arms, till Orders came from Grave Maurice and his Council at Recifla. The Hollander's entering the Fort found fifty five great Guns, abundance of all manner of Provisions, and left six hundred Men in Garrison. But the new King of Portugal complain'd by his Agent Mendoza to the States of the United Netherlands, concerning the Transactions of the West-India Company, who had taken the Loando, and the Isles St. Thomas and Maraguan, from him. But he was answer'd, That those Places were taken either before the ten years Peace was concluded with the Portuguese, or before the King approv'd of it, or at least before it was publish'd.

Grave Maurice finding that he could not prevail by fair means with the Portuguese in Brafle, fought to do something by force of Arms, because the welfare of the West-India Company depended solely upon the fortune of War; his Design lay towards the South Sea, whither the Ships might the easier Sail from Brafle through the Straits of Magellan or Le Maire, because in the Summer there blow for the most part Northern Winds along the Coast of America. There were likewise many good Conveniences in the Southern Ocean, not only to surprize the rich Manilha Traders, but also to meet with the Persian Plate-Fleet, besides which, Enquiries might be made with little Charges, if any Place were fix to Settle on for Trade in the unknown South Land.

This Year 1641. was not only remarkable for the Portuguese revolting from the Spaniards, but also for a great Deluge, which did much hurt in Brafle; for the Rains fell so exceeding hard without ceasing, that the Swoln Rivers every where overfow'd their Banks and Dams; the Plants were either wash'd away, or were eaten up by little Worms, which bred as soon as the Water began to fall. Besides this Plague, the Small-pox also rag'd amongst the People, of which many dy'd, and others lay lingering a great while. The Sugar-Mills likewise stood still for want of Negro's, which the Dis TEMPER had for the most part destroy'd, and the Sugar-Canes rotted in the Ground.

Man while Grave Maurice receiv'd news of the Agreement between the King of Portugal and the States of the United Netherlands, according to which every one was to keep what they had gotten by the War; Trading was free for all; against all the Caflles and Fortresses in America, under the King of Spain's Dominion, Hostility was to be act'd alike by both; the Country which lay between the utmost Borders of the Portuguese and Netherlands, were to be divided, that each might know their jut Limits; all manner of Trade to the Spanish America was forbidden to both; each Owner was to remain in possession of the Goods which he had on the Day when this ten years Peace was proclaim'd.

Grave Maurice seeing he could not get the States Content to return home, sent his Secretary Tohner to Holland, to inform the West-India Company of the Condition of Brafle, and to request such things as were wanting there: Tohner accordingly arriving in Holland, acquainted them with the Extent of their Dominions in Brafle, which
which reach'd from Maragnan to the River Real, with the necessity of keeping the Soldiery undisbanded, in regard the Portuguefe were ready to take all advantages, notwithstanding the Articles of Agreement; with the discontent of their own Men, and their readiness to mutiny upon the report that they were to be Disbanded; with the great Inconveniences of altering the Government of the Indies Company: with the number of Soldiers wherewith every Place belonging to the Company was at that present furnish'd, which amounted in all to near five thousand Men; and with the impossibility of keeping those Places, unless a speedy Supply of Men and Provisions were sent.

Grave Maurice receiv'd a Letter from Mascarenhas, wherein he made great complaint of the Netherlanders Actions on Loando, St. Thomas, and Maragnan, during the time of the Treaty, and us'd many Arguments for the delivering back of the Places then taken; but Maurice took little notice of the said Letter, being busie about settling all Affairs in this quiet Juncture of time: He freed all new Planters from the paying of Tenths for seven years, sold several Fields to be Cultivated, repair'd all decay'd Forts, kept the Catholics in strict awe, ordain'd good Orders for Schools, Alms-houses, and payment of Money, and gave particularly Liberty to the Portuguefe both in Spiritual and Temporal Affairs.

In the mean time sad news was brought, viz. That the Maragnans, asfifted by the Portuguefe and Brafilians, had taken the Fort of Calvaria near the River Tapiroa, destroy'd all those that were in Garrison, and Storm'd the City Lodowick: Whereupon Enferfion was dispatch'd thither immediately with three hundred Netherlanders, and two hundred Brafilians from Siara; which the Enemy hearing, though there were seven hundred Portuguefe, and three thousand Brafilians, left the Island Maragnan, and went over to the Main Continent.

The occasion of this Plot was imputed to the fault of the traitifh Governor of St. Lodowick, and his Secretary William Negenton, who by their Folly and Misgovernment provok'd the Natives to Rebellion.

In the interim Grave Maurice had a Design upon the City Buenos Aires in the Southern parts of Brafiel, near the River La Plata, where a Way leads by Land to Peru; and whither the Silver and Negro's were often brought, especially when any Ships were suspected to block up the Channel of Panama.

Whilst Maurice was preparing for this Expedition, news was brought that two Ships had Landed their Men on the Island St. Thomas, under the Command of Laurence Pirez, who had driven the Netherland Garrison out of Parya, and Besieg'd the Fort, out of which many for want of Water ran to the Enemy; and it was fear'd that the same Misfortune would suddenly befal the City Loando and Seregippe del Rey; which prevented Heinrick Bowes's Expedition to Chile, and Lichthart's to Buenos Aires, and so alarm'd Grave Maurice, that he thought it expedient to give speedy notice thereof, to warn the Netherlanders on Angola, that they should keep strict Watches, and beware of the treacherous Portuguefe, who affirm'd, That it was lawful for them during the ten years Peace, to retake those Places which had been taken from them during the Treaty of Peace in the Hague.

Thefe Proceedings forc'd Grave Maurice to Disarm most of them; and because the Negro's did much mischief from the Palmares, especially to the Husbandmen in the Alagos, Maurice gave order to destroy their Habitations. The Palmares were two Villages, built along the River Gungobubby under close Woods, fix Leagues Northwardly from Parya: The Inhabitants of them, being then about fix thousand in number, were most of them fel'd Negro's, who gathering together in a Head, destroy'd all the Countrey thereabouts: They dwelt in Huts of Boughs and Straw interwoven,
interwoven, behind which were Gardens and Orchards of Palm-Trees, and conform'd to the Religion and Government of the Portuguese.

Whilest three hundred Musqueteers, a hundred Mamelucks, and seven hundred Brazilians were fitting to go to the Palmares, there arriv'd Agents at Recife from the King of Congo, who brought as a Present to Grave Maurice, two hundred Negro's, a Golden Collar and Pot, besides many Negro's for the West-India Company. These Agents deir'd Aid against the Duke of Sonba, who treacherously Plotted to drive the King out of Congo; which Plot was discover'd by scatter'd Letters, Sign'd by the Governors and Bishop at Louando, a little before Louando was taken by the Hollander. Maurice courteously Entertaining the Agents, proffer'd himself to be a Mediator to decide the Difference, and gave them a long Velvet Coat Laced with Gold and Silver Lace, a Silk Coat and Scarf, and a Beaver Hat with a Golden Edging.

Not long after there came Agents from Sonba, to beseech Grave Maurice that he would not affift the King of Congo; one of whom went to the Hague, and was follow'd by two from the King of Congo, who open'd their Letters before the Prince of Orange.

The two Agents from Congo were strong and black Men, very active, and having grim Countenances; they Danec'd after a strange manner; and showing the Picture of their King fitting in great State, acted the Polliures in which his Nobles and other Subjects shew'd him Reverence: their Strength was such, that they were able with ease to carry each of them two hundred thirty five Pound weight; their Ornamentals consist'd of Elephants Tails.

In Louando the Governor for the Dutch, nam'd Cornelis Nieuwan, and the Portuguese Governor Peter Cesar de Menifes, came to this Agreement, That since the ten years Peace was concluded on between the Portuguese and Nederlanders, Menifes should propose the Countrey wash'd by the River Benza, and call in the ancient Natives to live and Trade as formerly; all which was faithfully perform'd: nay, Menifes furnish'd Nieuwan with as much Meal as he requir'd, towards the maintaining of a thousand Negro's, whom he had bought, and the Hollander and Portugueses began now to be every day more and more friendly and familiar with each other, when on a sudden Nieuwan, not onely remembering what was done lately on the Islands Maragan and St. Thomas, but also stir'd up by other later Actions, which gave him occasion of jealousy, sent two hundred Musqueteers in the Night from Louando, to take the Governor Menifes, with some others, who he fear'd might make an Insurrection. The Soldiers accordingly about Day-break fell unawares upon the sleeping Portugueses, kill'd forty of them, and carry'd Menifes and many other Persons of Quality away Prisoners, together with a Booty valu'd at above ten thousand Ducats, and sent a hundred and fifty Portugueses in an old leaky Vessel to St. Salvador; but they being tosl'd to and again at Sea for a considerable time, eight of them dy'd, the rest almost starv'd, Landed on Pernambuco, where Simon Alves de la Beno being amaz'd to see his Country-men thus hardly dealt with, complain'd of Nieuwan, Mols, and Croes, who were the chief of Louando, that they had broke the Laws, and the sworn Articles of Peace; urging that it would be very unjust that the poor Portugueses should not have Satisfaction for the Wrong which they had sustain'd, as also for the loss of their Goods. To which Grave Maurice answer'd, "That Louando belong'd to the West-India Company, and that for his part he had nothing to do with that City, but that if the States were acquainted therewith, they would without doubt be highly concern'd at it."

Christopher Sanchez, a free Negro, gave information of the sad Condition of the Island St. Thomas, viz. That the greatest part of the Hollander that had been left

G g g
upon that Island being dead, F迭re hereupon with the King's Consent fitted out two Ships, and setting Sail from Lisbon about the beginning of July 1642, first refus'd to pay the usual Custom at the Island St. Thomas, afterwards fell upon the Fbaflanders, whom he Besieg'd in the Castle, and against the Law of Arms payfon'd all the Waters.

To prevent the future Inconveniences that were likely to arise from a Famine which about this time afflicted the whole Countyre of Bfaflie, Grave Maurice judg'd it convenient to sell the Lands in the Alagoas to new Planters; to which purpose Henrick Mouncheron was chosen Overfeer, to take care that all the Fields about Porto Calvo, and along the River Francifco, as also in the Alagoas, should be Sow'n with Bread-Corn.

Grave Maurice obtaining leave at laft to go home, took Leave by Letters of the Governors of Serinhain, Porto Calvo, Ignarazua, Isamaraca, Parayba, Rio Grande, and in Perfon of the Council at Retiffa, who all thank'd him for his prudent Government, manifesting their hearty forrow for his departure, Which without doubt would produce many Inconveniences. But though the Council of the West-India Company had order'd him to return home about the beginning of March 1643, yet he went not so soon, because he was to reduce the number of Militia to eighteen Companies, and also to the fettle Revenues, and dispofe of Offices, in which he found much trouble; wherefore before his departure he wrote to the States of the United Netherlands, affuring them how impofible it was to defend Bfaflie, which extended some hundrefs of Leagues, with fo small a number of Men, since the Portugufe cover'd inward malece under a feigned frew of kindness, and at the fame time watch'd all opportunities to drive the Netherlanders from their Plantations, being very much exasperated by the priviledge of Religion granted to the Jews, whileft their Monks and Jesuits were bani'h'd. Moreover, in regard they ow'd the West-India Company above fifty nine Tuns of Gold, they fought to cancel that Obligation, by making themselves Masters of whatsoever their Creditors had in Bfaflie, fo that there was no way but to keep them under by force of Arms.

After Grave Maurice had sent this Letter to Holland, he left the Government of Bfaflie to the chief Council, the Militia to Henrick Hoes, Captain of his Life-guard, with Directions for Governing after his departure. Having fetted all things in good order, he went from Maurice-foad through Paratibi and Ignarazua to Parayba; where Sunday sent him three of his Sons, with twenty Tappays, defiring him not to go away; two of them with several Carapates and Waypebarans, (a People who made themselves Masters of the great Palmarcs) and five other Bfaflians went aboard with him on the twentieth of May 1644.

The Fleet, confifting of thirteeen Ships, and Mann'd with fourtteen hundred Men of all Sorts, was laden with fo many Merchandizes as were valu'd at twenty fix Tuns of Gold; with which Grave Maurice arriving at the Texel, Landed at the Elilder, and gave an Account of his Government in Bfaflie, and of the then prefent state of that part of it which belong'd to the West-India Company.

After Grave Maurice's departure, Hamel, Balff, and Buflftraet, bore the chief Command in Bfaflie: The Charges made by the War were mitigated, and the number of the Soldiers in Garrillon reduc'd to sixteen hundred; some Forts lay without a Man in them, whileft the King of Portugal watch'd for such an opportunity; for he seem'd to be as much concern'd for that Countrey, as for his Kingdom of Portugal, and the rather, because his Predecessor Sebuftian receiv'd above forty hundred thousand Ducats yearly out of the fame, besides the Presents and other Gains made by the Portugufe; wherefore he gave order to the Governor of St. Salvador to be very
very vigilant, and affur'd him, that in a short time he would send him both Men and Provisions. A Mulatto call'd John Fernandes Viera, did not a little affist the Portuguefe in their Design; for he having liv'd a considerable time in a Councillors House in Recife, had narrowly observ'd all Passages, and insinuated himself into several State-mens Affairs, by Presenting them now and then with some Rarities, infor-much that he came in time to Farm the Rents which the West-India Company receiv'd from the Sugar-Mills; but at length being discontented because the Coun-cil would not make any abatement upon the same, when he complain'd that he lost by Farming the fore-mention'd Tax, he held private Correspondence with Andreas Vidal, that when a convenient opportunity prelented it self for the Portuguefe to fall on the Hollanders, he might be affisting; to which end he had gotten several Arms and Ammunition together.

In this Plot a few nam'd Mafes Accoigns, living in Viera's Houfe, a League from Recife, to keep him from Arrests, was perfwaded to go, which he seemingly promis'd to do, but went away by Day-break, and discover'd the Design to the Privy-Council, who being rock'd asleep by the Portuguefe fair Pretences, gave no credit to the Relation.

For the better carrying on of this Design, Cavalcante, Provost-Marshal in Maurice-Jladt make a great Wedding for his Daughter in Viera's Houfe, to which the chiefef Persons of Quality, both of the Portuguefe, and also all the Privy-Coun-cellors and Military Officers belonging to the West-India Company were invited: and the Plot was to contriv'd, that whilst they were all at Dinner, the Portuguefe were sudenly to fall upon the Netherlanders and kill them, both Servants and Ma-fers; this done, some were to go to Recife or Maurice-Jladt, with news that the Wedding People were coming, whereupon part were to pref into the City, others to keep the Gates, till all their Forces were come thither, which then might easily secure and seize upon the Magazine; some Barques alfo under pretence of loading Sugar, were in the mean time to fe upon the Haven and Fort near the Shore. All things were accordingly prepar'd for the Wedding, nothing being wanting that could be purchas'd with Money; and near the Forts of Rio Grande and Paraguay were Stage-plays to be Acted in publick, it being concluded that the Soldiers in Garri-son would certainly be there to fee them; the Actors being privately Arm'd with Piñols and Ponyards. And to oblige one another the more for the carrying on of this bloody Design, Viera had caus'd the chief Conspirators to take an Oath before the high Altar. The twenty fourth of June 1645. was the Day on which this Tra-gedy was to be act'd; but a few days before two Portuguefe and five Jews, who had been sworn Confederates, their Consciences checking them for so villainous an Undertaking, made an ingenious Discovery of the Plot. The Councillor Munrion was also inform'd, that the Portuguefe Colonel Camaron and Dixo were coming with great Forces from St. Salvador.

The Council when they might easily have apprehended Viera, sent for him by a Jew call'd Abraham Coing, under pretence of TREATING about some Business concerning the West-India Company; he promis'd to come in the Evening, but suspecting he was betray'd, fled into the Woods, and gave speedy notice to all his Accomplices, who follow'd him in great numbers. The Soldiers sent to search Viera's House, found none but old Men and Children.

The Councillor Van Hottent went immediately with seven Sugar-Veiftels to Paraguay, fortifi'd the Forts Margarita, Restringa, and Antonio, and made room for the Brazilians that had remov'd thither from their Villages, in the Houses deferted by the Portuguefe in Frederick-Jladt. On the other fide, Amador da Rouge, one of the Con-
spirators, went with a Company from Poinca through the Countrey, kill'd seven Dutch Seamen, with three Jews, and erected Gibbets, on which he threatened to hang all those who did not take up Arms for the King of Portugal. Colonel Hous inform'd hereof march'd with five hundred Men to Poinca to meet the Portuguese, who were scatter'd up and down the neighboring Woods. He also publish'd an Edict, in which every one was Licens'd to return to their Habitations, with promise of pardon for their Rebellion, if they would take the Oath of Allegiance anew, only Viera, Cavalcantea, and Da Rouge, were excluded, and nine thousand Guilders promises'd to those that brought them dead or alive, which made two hundred Inhabitants in Recif a march into the Countrey under the Command of Captain Blur, to find the fore-mention'd Traitors; and at last joyning with Hous, they pursu'd the fled Portuguese.

In the mean time the Council sent the Captains Vander Poot and Hoogvenstraet, to Antonio Silva, Governor of St. Salvador, to acquaint him with the treacherous Inurrection of the Portuguese, and of Camanon and Diez coming from St. Salvador to their assistance, urging, that these treacherous Proceedings and breach of Oath, could not but redound to the dishonor of the Crown of Portugal. Whereeto Silva answer'd, "That Camaron and Diez were not under any Obligation of Oath, but that he would check the Inurrection in Pernambuco, and take care that the Authors thereof should make Satisfaction to the West-India Company. Notwithstanding which fair Pretences, he so wrought with Hoogvenstraet, that after a private Conference between them it was agreed, that for a certain sum of Money he should surrender him the Promontory of St. Augustine, of which he was Governor; but at his Return to Recif a being made chief Commander of the Castle there, and being jealous what might follow his private Treating with Silva, he declar'd to the Council, that Silva had desir'd him to surrender the Fort St. Augustine, which he had granted, for no other end, but to catch the false Portuguese in their own Nets, and to trapan all such as should be sent to take possession of it; and that if the Council had any suspicion of him, they might make use of his Service in some other place.

About this time a hundred and fifty Tapuyans, led by a German Soldier call Jacob Rabbi, Sallying out of their Woods, fell upon the great Village Conyabon, under the Jurisdiction of Rio Grande, broke into the Church, murder'd all the Portuguese, and eating their raw Fleth, demolish'd the Place.

Hous also unfortunately Storm'd the Mountain Santastan, where the Enemy lay Intrench'd, being forc'd to Retreat with the loss of above a hundred Men, amongst whom was Captain La.

The Privy Council caus'd a part of Maurice-Flads to be pull'd down, as also the lofty Palace Freiburg, for which the Jews proffer'd Grave Maurice 6000 l. together with the lofty Garden, which were thought to exceed the famous Gardens in Theffalia, but on the other side they kept Men at work Night and Day in repairing the decay'd Castle at Recif a.

About the same time the Admiral Salvador Corre do Bonaydes, brought thirty four great Sails of Ships to an Anchor before Recif a, the Gallion which he Commanded carrying sixty Brafs Guns. The Admiral Lichtbeart ran to meet him with five Vessels, and sent him word, that if he fell down to Leeward, since he was got to the Windward, he should soon find, that five Ships durst Engage with a Fleet six times as strong. Whereupon Bonaydes sent two Messengers to Lichtbeart to tell him, that he came as a Friend to damp the Portuguese Inurrection in Pernambuco; to which purpose he had already Landed some Companies at Tamandera. Lichtbeart sending the two Messengers to the Council at Recif a, they sent two of their own Mem-
The Names of the Ships both of the Dutch and Portuguese Fleet.

A. The Portuguese Admiral.
B. Their Vice-Admiral.
C. The rest of their Ships.
D. Three of their Barques.
E. Three Carvels, which lay to watch in the Bay.
F. The Enemy's Battery.
G. The Utrecht, being the Dutch Admiral.
H. The Ter Veer.
I. The Zealand Vice-Admiral.
K. The Over-Issel.
L. Salt-Land Pink.
N, O. The Leyden Pink, and Unicorn Frigate.
P. Q. A Dogger and three Netherland Barques.

While the two Commissioners went with the fore-mention'd Orders to the Portuguese Fleet, a Netherland Vessel endeavor'd, notwithstanding the Wind was contrary, to get out to Lichthart's assistance; which Bonavides observing, stood away Northerly before the Wind: but Lichthart overtook a Ketch belonging to the Portuguese Fleet.

Mean while the Portuguese upon Land being two thousand strong, under the Command of Vidal, Diaz, Camaron, and Agonier, Storm'd the Fort Serinhain, where the French Captain Montague could make but little resistance, not having above forty Men, and being unprovided of Ammunition and Provision; yet he resisted nine days, and at last got two Barques to convey him to Recifia.

Soon after this the Portuguese Fleet falling out amongst themselves, Bonavides steer'd back for Lisbon with a few Ships, the rest coming to an Anchor again near Recifia; where the Seamen whom Lichthart had taken inform'd him, that their Fleet came the first time to Recifia for no other end, but to flir up the Portuguese by their
their Presence to take up Arms, according to a private Contract, having to that purpose Landed twelve hundred Men at Tamandera, besides the Army led by Camanvon and Diez, from St. Salvador to Pernambuco.

Colonel Euse about this time being sent for back to Recifas, and staying with five hundred Men for Captain Black's coming, who was sent to fetch all the Portugese Women within three Leagues about Recifas, was set upon in the Night by Vidal with two thousand Portugese; the Brazilians, who were above half his Forces, flying into the Woods, leaving onely two hundred Netherlanders to fight with Vidal, by whom being so much over-power'd, they were forc'd to submit to his mercy, and suffer themselves to be all carry'd Prisoners to St. Salvador.

By this time at Recifas all things were in a confusion, the Pits digg'd about Maurice-Florida afforded nothing but brackish Water, which occasion'd Sicknes.

Vidal encourag'd by his Victory, march'd to St. Augustine, where without doubt he had ftopt, if Hoogenstroet, who had the chief Command of the Fort, had not been Disloyal; for this Traitor thought it not enough to surrender this invincible Fort to the Enemy, but also bare'v'd Recifas of Provisions and Ammunition, which he did very subtilly, sending earneftly thither for Souldiers, Bullets, Powder and Shot, in lieu whereof he sent thither two Barques full of old Men, Women and Children, that so he might deprive Recifas of stout Men, and supply their room with un-able People. For this treacherous and villainous Act the Portuguse were to give him 1800 l. and make him a-Colonel: Moreover, all the Soldiers in Garrison, consisting of three hundred Men, receiv'd 3 l. a Man, and were sent to join with a Regiment of fix hundred and fifty Men, over which Hoogenstrae was made chief Commander.

The day before this eminent Castle was to be deliver'd up to the Enemy, Admiral Lichtbart obtain'd a brave Victory at Sea; for the Portuguse Fleet (consisting of seventeen Sail, the rest being gone with Benavides to Portugal) anchoring before Tamandera, were valiantly set upon by Lichtbart, who Engag'd with them on the ninth of September 1645, with the Utrecht, being the Admiral Ship, the Zeeland, Ter Vee, Over-Ijel, the Pinks Salt-Land and Leyden, a Dogger and three Barques. In the Hole of the Haven Tamandera three Portugese Carvels kept Watch, and near a Battery full of Guns lay three Barques, and the other Ships a little farther nigh the Shore. The Enemy at first fhot very fiercely from the Battery, whilst the Ships drove to the Shore, and the Men leaping overboard swam a-shore, onely the Admiral Jeronimo Serra de Pajova made some Restistance, but at last surrender'd up his Ship, the Netherlanders in their Barques killing above seven hundred Portuguse in the Water. Lichtbart burnt the whole Fleet, except the Admiral and Vice-Admiral, which he carry'd to Recifas.

But this Victory was not comparable to the Loos which the East-India Company sustaine'd by the setting of the Promontory of St. Augustine, and the taking of the Forts Porto Calvo and Rio Francisco; to the left whereof the Barques coming too late to carry the Soldiers off, they were all made Prisoners by the Portuguse, as also the Planters, in all to the number of five hundred.

Vidal marching to Tamacica, Storm'd Schuppen-flatt, but found such Restistance from George Gurlman (who supply'd the Prisoner Euse his Place) that he lofs three hundred Men: After which he endeavor'd by means of Fernandes Boulloux, to purchase the Fort Margarita for 1500 l. Sterling of the Governor of Parayba, who immediately without any farther Examination, caus'd Boulloux that propos'd the Money to be put to death.

A Dutch Sergeant in Olinda dealt very treacherously, for he sold the Fort to a
Chap. VII.  

AMERICA.

Portugefe Ensign for 100 l. and also most basely betray'd all his Soldiers Lives to the merciless Enemy.

By these means Recifsa was round about in jeopardy, as also within; for the great Thrift of the Inhabitants under a scorching Climate, augmented by the Hollanders felt Meat, could not be quench'd with brackish Water, for fresh was not to be had; Famine also increas'd daily, insomuch that the Poor threatened to fall upon the Rich, which made the Magistrates go Arm'd from House to House, to enquire what Store every one had, which being writ down was carry'd away and put into the Store-houses, where each receiv'd alike share, without respect of Persons. Fewel also grew very scarce, which made many eat their Meat raw, or half dress'd. In the interim every one that was able, was forc'd to work at the Forts of Recifsa, which were beaten down by the Rains; and the Soldiers continually alarm'd by the Enemy, were forc'd to be Night and Day up in Arms. The People dy'd more and more daily, when two Fly-Boats arriv'd there with Provisions, and News, that a Fleet was coming to their assistance.

The Captains Rhynbag and Montague went in the Night, each with a Company, to fall upon the Enemy, who being two thousand five hundred strong, drove them back, and pursu'd them within shot of the Afogados, where forty Portugefes were kill'd.

About the same time a Terra Ninf Sailor, laden with the dry'd Fifs Brookilla, came to Recifsa.

In Parayba three hundred Netherlanders Sallying out of the Forts, fell so valiantly upon nine hundred Portugefes, that they forc'd them to flye, not without a considerable loss. After which a Party of Brazilians surpris'd eighty Portugefes, as they were at Maf in Andreys Diaz de la Figuereda's Sugar-Mills, where they statt'd none but Figuereda's Daughter, whose Beauty so charm'd them, that they comforted her mourning for her Father's Death, and deliver'd her undefil'd to the Governor of Parayba.

Vidal raging for madness because now and then some of his Prisoners escap'd, caus'd severall of them to be cruelly murder'd, tying some of them Back to Back, and then cutting them in pieces; others he threw with Stones ty'd about their Necks into the Rivers; others he ty'd by their Privities, and hung them upon Trees; and also knock'd out the Brains of others.

In Recifsa the Soldiers, consisting of divers Nations, began likewise to mutiny, crying, They should be all free; and saying, They had better be slain in the Field fighting against the Enemy, than die of Hunger in the City. They also complain'd, The Commanders themselves betray Brafile, and threatned by force to fetch the Provisions out of the publick Stores, saying, They had long enough endured Thirst and Hunger.

These Transactions in Brafile were very ill resented in Holland, the common People in the Hague being ready to pull down the Portugese Amassador's Houfe, in revenge of the Cruelties exercis'd upon the Netherlanders in Brafile, had they not been hindered by the Prudence of Prince Henrick. The Amassador pretending to be ignorant of the fore-mention'd Passages, proffer'd to make what Satisfaction the West-India Company should require. But the States not satisfi'd with Excuses, when the Actions plainly manifest what their Intentions were, Complain'd to the French King of the unthankful and malicious Dealings of the Portugese Crown; and meeting but with small Redress, they prepar'd to right themselves by force of Arms, and to that end rais'd several Regiments of Land-Soldiers, besides Seamen to send to Brafile. The Fleet desig'n'd thicker, consisting of twenty two Sail, after it had been frozen up before Flying three Moneths, see Sail at laft in the beginning of
of February, Anno 1646. with the Lord Schovenburgh, a Member of the States, the
Councelour Goch, and Treasurier Beuamond, Men very well experienced in Governing
of Countreys: To these were added the eminent Merchants of Amsterdam, Flecks
and Trovire, to keep the West-India Companies Accounts, and Le Hereniet for their
Secretary. Sigismund Schuppe bore the chief Command over the Milicia, and the
Admiral Bankert over the Fleet, which suffer'd the greatest hardship imaginable;
for being driven by tempestuous Winds into the Downs, two of them driving from
their Anchors were cast away on the Flate. The Fleet getting out again, was once
more forc'd by a Storm to put in at the Isle of Wight, from whence by reason of con-
tinual Gulls they could not steer in nine Weeks time. During this tedious waiting
for a fair Wind, the Brafte Frigat, valued at 20000 l. was split in pieces against a
Rock of the Island, and of three hundred Men thirty only were sav'd. A Pink,
which came in two Months from Recifja, brought also sad tidings to the Fleet,
viz. That the Town was in such a Condition, that without doubt the Fleet would
come too late to their assistance: whereasupon they making the more haste, endeav-
or'd, not without great trouble, to weigh Anchor again, while the Wind rose
higher and higher, and the Waves going very hollow, drove the Ships down towards
Portland Coast, full of Rocks, to which they were so near, that they saw a Scotch-
man split in pieces against them; and had not the Wind come about, and abated of
its fury, the Fleet had undoubtedly perish'd. No sooner was this Danger past,
but another succeded; for the Soldiers in the Admirals Ship complaining of the small
allowance they had of Cheefe, Brandy, and Tobacco, had made themselves Masters
of the Store-room, and threatened to kill the Lords Goch and Beaumond; but they,
affisted with Men from the other Ships, who came in at the Cabin Windows, to
order'd the Mutineers, that they ask'd forgivenes, which for many Reasons was
granted, only they were distribut'd by seven in a Ship throughout the whole
Fleet. After a great Confeft between Goch and Beaumond about carrying the Flag,
which could not be decided, Goch was left by the rest of the Fleet, who Steer'd an-
other Course, and getting near the Line, lay becalm'd six days; in which time he
lost very many of his Men by a strange kind of Scorbute, which rag'd amongst them;
at last Sailing along the Promontory of St. Augustine, he came to an Anchor before
Recifja, which he found in the greatest Exigency imaginable, insomuch that it was
resolv'd upon, the next day to surrender the Place up to the Portuagef, on promife
of Quartar only: which Resolution none oppos'd more than the Jews; for the
Portuagef swore that they would burn them alive, if ever they became Masters of
Recifja, which made them resolv'e to die with the Sword in their Hands, and sell
their Lives at a dear rate. Six Weeks after Goch's Arrival, the remaining part of the
Fleet, escaping many dreadful Storms, in which, besides the two that were lost in
the Downs, they lost five Ships and five hundred Men, arriv'd also at Recifja, where
the Commissioners appointed Officers to distribut'e to every one their certain allow-
ance of Victuals. The prime Councellor Schovenburgh also decided the Difference
between Beaumond and Goch, as also between Haeks and Trovire, about their Places
in the Assembly, viz. that they should sit above one another by Turns. The old
Governors, Hamel, Baft, and Bulletre, were blam'd by every one for the decay of
Brafle; and being lent to Holland, were receiv'd with frowning Looks, and rail'd
against in Pamphlets as faithlefs Perfons, who sought nothing but their own ad-
vantage, and were threaten'd to be call'd to an Account. It was also laid to their
charge, that they had not given a true Account of the State and Condition of Brafle;
that the State was much more decay'd than they had made known, by which means
the present Power prov'd too weak to do any thing to the Enemy.
Chap. VII.  

Amongst other Misfortunes which befell the Woff-India Company, the Revolt of the Tapuans, and other Brazilians was not the leaft, which hapned upon the occasion of Gartfman's putting to Death of Jacob Rabbi, a German, and indeed their chief Ringleader in all Robberies and Villanies; but Dary their then King alleging that Rabbi was wrongfully Executed by Gartfman, and that his Tryal belong'd to him as King, prosecu'ted Gartfman fo vigorously, that he and his Ensign Jacob Budan, his Accoflary in the Fact, had their Goods and Salary confiscated, and they themselves were sent home in disgrace.

Mean while the Council feeing that there was not much good to be done by force of Arms, endeavor'd by mild ways to invite the revol'ted Portuguefe, who were all promis'd Pardon for their Infurrection in an Edict which was publifh'd in all places, only Viera, Almado, De Rouche, Antonio Calvantesca, and Hoogenftraet, for whom great Sums of Money were offer'd, were excepted. The Portuguefe, on the contrary publish'd, That they would receive all those Netherlanders into favor that would come over to them, and pay the Debts which they ow'd to the Woff-India Company, and also Transpofr them whither they pleas'd. These Promifes, written in English, Dutch, French, and Portuguefe, and hung every where on the Boughs of Trees, and other publick Places, operated much more than the Privy-Councillors Edicts; for in Read of one Portuguefe that came to them, several ran to the Portuguefe from Recifia, notwithstanding a strict Guard was kept to prevent them, besides the great mortality among the Soldiers and Inhabitants through ferval raging Diftempers, and want of fresh Provisions: Which general Calamity, it feems, very much cow'd the Spirits of thofe that were left; for in a Sally meeting with five hundred Portuguefe, notwithstanding they were equal in number, yet they made a Shameful Retreat; yea, though Schuppe came with eight hundred Men to their afliance, yet he could not prevail with them to face about either by fair means or foul, for with his own hand he Ran through an Ensign, Sergeant, and two Soldiers, who ran away fift. Yet notwithstanding this base and cowardly Retreat, it was resolv'd on to fet upon Olinda and the Promontory St. Augustine; and at the fame time Henderson was fend to make himself Master of Rio Francisco with fifteen hundred Men, and to harrafe all the Countrey thereabouts with Fire and Sword, that he might force the Portuguefe to leave Recifia.

Though John Dary, King of the Tapuans, feem'd well enough contented with the punishment of Gartfman, yet a great Party of his Subjects were not fatis'd, but went and joyn'd with the Portuguefe, because Gartfman had not been deliver'd to them in Siera, where they kill'd all the Netherlanders they could meet with, and fend Prests to their King Dary, if possible, to oblige him to joyn with the Portuguefe; But he reply'd, That he had more reason to punish them for their ill usage of the Inhabitants in Siera, than to have anything to do with the Portuguefe.

The Council inform'd hereof, fend the Interpreter Ralph Baron, who had a long time Convers'd with the Tapuans, with a Present of Axes, Knives, Looking-glaflces, Shirts, Combs, and the like Trifles, to King Dary, defiring him to continue his former kindness towards the Hollanders; which Dary promis'd, provided he might receive Affiance from Recifia against thofe whom he had made his Enemies for the Netherlanders sake; which Baron promis'd should be done as soon as the fresh Forces which were daily expected from the Texel, Maes, and Zeeland, came to Brafitle.

Henderson Landing at Rio Grande, took the Fort without firing a Gun, the Portuguefe at his fift coming flying into the Woods. He found here abundance of Cattel; for no place in the World breeds more than this, ferval Husbandmen having fifteen thoufand Head of Beasts, of which many were taken to supply the want of Provi-

\[ \text{H h h} \]
sions at Recifia. As soon as he had taken the Fort, he caus'd it to be pull'd down to the Ground, because it flood in an inconvenient place, and immediately rais'd another, which was much better to be defended, by reason of the rising Ground; but he could neither bring that Work, nor any other Design to any perfection, because of the treachery of his Soldiers, who being most of them Roman-Catholicks, were so inclin'd to the Portuguese Interests, that they daily more and more defect the Companies Service, and gave Intelligence to the Enemy of their Transactions. Amongst others, an Auerper was apprehended for an Intelligencer, and being hang'd on a Gibbet, fell three times one after another on his Feet, the Halter breaking like a burnt Thread, which gave him so many times of respite and opportunity of supplicating for Life, but his Crime was too hainous to admit of Pardon. Mean while the fled Portuguese being supply'd with fresh Supplies from all Places, especially from St. Salvador, to the number of twelve hundred Men, they kill'd the Out-watches, consisting of twenty Men: The next Sentinel being warn'd by the Noise, alarm'd the new Fort, which was scarce finish'd, because a mighty Shower of Rain had wash'd away the Walls. Hinderfon being wounded in the Leg, sent Captain Montague against the Enemy, of whose Power he was sensible; yet going to the place where the Watch that was kill'd had kept their Station, he met with two hundred Portuguese, divided into three Companies, and drawn out for Battle, who running away were pursu'd by Montague, till coming up to their Regiment, which consist'd in all of a thousand Men, divided into five Companies, they fell on all sides upon Montague, who fighting valiantly, was overpower'd and kill'd, with three hundred of his Men, and almost as many more taken Prisoners; amongst whom was the Minifier Aftette, four hundred onely escaping into the Fort, where Hinderfon stay'd expecting the event of Montague's Exploits.

This Defeat spoil'd Schuppe's Design, who by his marching to Rio Francisco thought to draw the Enemy from Recifia; but now being forc'd to think of some other way, he thought it convenient to invade St. Salvador by Sea, as the Enemy had done Recifia by Land. Wherefore Hinderfon receiv'd order to stay with six hundred Men (being all that were left of fifteen hundred,) on Rio Grande, whither a Barque with Provisions being sent, was taken, and the Men in cool Blood kill'd by the Portuguese.

At the same time it was given out, that Schuppe was going with the Admiral Bankert to Hinderfon's assistance; and to delude the Portuguese the more, Schuppe went with two thousand five hundred Men to Rio Francisco, where he lay some days at an Anchor; upon which the Governor of St. Salvador sending several Companies thither, Schuppe Sail'd with all speed to St. Salvador, and Landing on the Island Taperica, four Leagues in circumference, he got a rich Booty, and spare'd none whom're he met with, insomuch that two thousand were destroy'd, some by the Sword upon the place, others by their haffle to get over to St. Salvador; for most of the Vessels being too full, sunk with them. Amongst the Prisoners that were taken and sent to Recifia, were two Monks, who were design'd the same Entertainment as the Minifier Aftette should receive in St. Salvador; whereupon they immediately wrote to their Fraternity, to take care that Aftette should not be burnt alive, as the Portuguese had threaten'd, because they were to expect the same usage: Whereupon Aftette was set at liberty, and had leave to walk up and down the Streets of St. Salvador. Schuppe forthwith himself on Taperica, near an Inlet under the new Works, and together with Lichtenhart watch'd for all Portuguese Vessels: But Lichtenhart dying here, was carry'd to Recifia, and there bury'd. On the other side, the Governor of St. Salvador sent fifteen hundred Men in the Night to the other side of Taperica, where
where with all speed they Intrench'd themselves, and Sally'd daily out of their Works upon Schuppe, so that many Men were lost on both sides; but Schuppe was in the worst Condition, in regard his Soldiers ran over in great numbers to St. Salvador, where they were well Entertain'd; of which he advertis'd the Privy-Council, who were the less able to give him Redress, as having the same cause of Complaint.

Amongst others there hapned a sad Accident of a young Soldier, scarce sixteen years old, and born at Roan, who having robb'd his Father's Cash, went in a Ship to Holland; where he lavishly spending the Money, was forc'd at last to Lift himself in the West-India Companies Service, and coming with the fore-mention'd Fleet to Recifas, endeavor'd with two Companies to run to the Portuguese; but overtaken, was Try'd for the Fact, and Condemn'd to be Hang'd, for none of his Excuses he made, of going over the River onely to fetch some Oranges and Lemons to refresh himself, would save him, nor his protesting that he had no intention of going to the Enemy, nor the Promise that his Father should release him for ten thousand Crowns, nor his Minority, which ought chiefly to have been consider'd, but that Necessity stopt the Ears of the Compassionate; so that his Execution drew pity from the Beholders a few Weeks after.

A very astonishing Passage hapned at Recifas upon another Sentence of Death pronounc'd against a Portuguese, who after the publication of the Act of Pardon came to Recifas, and there hir'd a Seaman for two hundred Crowns, to carry a Letter, made up in a Leaden Box, to the Governor of the Promontory of St. Augustine, with order that if he was set upon any where, he should throw the Box into the Water. The Letter written in strange Characters, contain'd a Declaration of the small number of Men in Recifas, most of the Netherlands Forces lying on the Island Taperia, so that if Recifas were Storm'd along the Bank, and from Maurice's Isle, it might easily be taken. This Letter being intercepted, the Portuguese was taken and Condemn'd, and as he was carrying to the Place of Execution cry'd aloud, You People take delight in my Death, but you shall be interrupted; and indeed it hapned ac-
AMERICA.

The Admiral Baukert had better success; for Cruising up and down before the Inlet Todos los Santos, after the taking and sinking of several Ships as they came in his way, he at last set upon the Portuguese Fleet, consisting of seven great Ships, of which one got to St. Salvador, another was sunk, and the other five were taken, being valud at twenty Tuns of Gold, or 20000 l. Sterl. In this Engagement were kill'd above four hundred Portuguese, besides two hundred and fifty who were taken Prisoners, and sent Shackled to Recifsa. Amongst them was the new Vice-Roy of Brazil, the Admiral, Vice-Admiral, three Monks, and several other Persons of note.

This Victory began to give some Breath to Recifsa, when at the same time Marshal Hos arriv'd there with seven Ships, Mann'd with five hundred Soldiers. This Hos on the seventeenth of August, Anno 1645, had been taken Prisoner at the Engano, having fought so long till all his Powder was spent, so that he was forc'd to surrender himself upon promisie of Quarter to Vidal, who after he had taken an Oath upon the Bible, to spare the Lives of all the Hollander's and Brasilians, fell upon the Brasilians and flew them, being a hundred in all, in Cold-blood, who yet told their Lives at no easy rate. Being car'd Prisoner, together with Captain Brislaw, Lishy, Wildschut, Blar, and two hundred more, by Vira to Casa de Prugor, he was thence sent to Portugal, where being releas'd, he brought News to the States of the mean Condition of the West-India Company, and that all things must needs be loif, if they did not speedily take the Englishmen into Consideration: Whereupon he was furnish'd with a Supply of Ships and Men, with which he set Sail for Brazil; where being arriv'd, most part of the Soldiers he brought with him were Transported to Taperica, to assist Schuppe; who as soon as they came to him, merr'd into the Country, where being set upon by a thousand Portuguese, he lost sixty Men.

Soon after Hoogenstraet receiving Orders from the Governour of St. Salvador, who was inform'd by some Prisoners, that Schuppe had not above twelve hundred fighting Men, to fall upon him with three thousand, made a furious Assault upon the

Sconce
Sconce in two places, and Storming the fame for four hours together, lost four hundred Men, which made him draw off a little before Day-break.

In the interim nine Privateers, fitted out by several Merchants of Holland and Zealand, came to Cruife up and down before the Coaft of Brazil; which the States the rather allow'd of, because the West-India Company was not able to send any more Supplies thither: Nor was it long ere they took five Portuguese Prizes, and afterwards (joyning with Bankert) four more laden full of Sugar, in the Haven Todos los Santos, where they threw a hundred and twenty Portuguese, and fifty revolted Hollanders overboard.

Recifa being at that time reduc'd to very great Straits, earnestly implor'd Aid from the States, but to little purpose, by reason of the Differences amongst themselves, which hapned on this occasion: The Spanish King by his Agent in the Hague made Overtures of Peace, and propos'd to fall upon the Portuguese in Brazil: to which Proposition, when as the ref of the States seem'd inclinable, thofe of Zealand would no ways hearten, being resolv'd not to do anything with Spain. The news of this Differtation exceedingly perplex'd the Council at Recifa, especially when to that news was added, that Bankert, the onely terror to the Enemy at Sea, was Commanded home by the States of Zealand, which yet the General States strictly forbade. Whereupon they thought fit to send one of their Assembly to the Hague, to make the States acquainted with the miserable Condition of Brazil, and to Exposè with them for their infenfibilitie of their Condition, and to let them understand, that ten thousand Men would not restore Brazil to its former Condition: Every one frove to be the Messenger of these sad tidings, but especially their President Schonenbergh, with'd it might be his lot to leave the unhappy Country of Brazil; but because his departure would not have been without great murmuring of the People, Hacks was sent in his stead. Together with him went Hinderfon (who was in no esteem since the Deftitution on Rio Grande,) they both Embark'd on Bankert's Ship and five others, which in Read of being laden with rich Commodities, and ballasted with Sugar, as heretofore, were fraught with discontented Seamen, decrepid and fick Soldiers, unserviceable Jews, poor Travellers, Portuguese Prisoners, and only ten Weeks Provisions, whereas all other Veffels at their Return from Brazil us'd to have Provison for three Moneths, which at this time could not be exp'd. The Council also made Orders what Perfons should go with the fore-mention'd Ships, viz: None but thofe whose Names were written in the Lifts which had ftock'd six Weeks at every Church Door, that by that means no Creditor might fuffer by his Debtors going away, nor any Criminal ecape his deferred punishment. Bankert had scarce been a Week at Sea, when he dy'd of the Paffie: he was a Man, who for his valiant Exploits was from a Fore-maft Man prefer'd to be Captain: which Office he perform'd with great Prudence and Valor: but that which firft made him moft eminently taken notice of, was his Engaging with thirteen Dunkirkers, of which he funk three, and being boarded by three more, and fir'd at the ref, he refus'd to surrender his Ship on promise of Quarters, but plac'd his eldest Son with a Lighted March in the Powder-room, commanding him on pain of Death to blow up the Ship with the three Dunkirkers as loon as he gave the Word; which valorous Resolution so amaz'd the Enemy, that they let him go. He also behav'd himself bravely in the Downs against the Spanish Admiral Oquendo.

His two Sons that were prefent when he gave up the Ghost, would not have his Body thrown overboard, notwithstanding it flunk fo intolerably, that all the Provisions in the Ship were taint'd by it; therefore taking out his Entrails, they Salted the Body, wrap'd it up in four Sail-cloths, and nailing the fame up in a pitchy

H h 3

Chefl,
Chiefs, bury'd it under the Ballast. Mean while the Fleet approaching the Flemish Isles, was surpris'd by a terrible Storm, in which the Vice-Admiral's old Ship spire founder, but most of the People were sav'd. Between Calice and Dover they met with eight Offenders, against whom they made themselves ready to Fight; but they, according to the King of Spain's Order, instead of Hostility shew'd them Friendship. All their Provisions were spent, when they happily Anchor'd before Flossing, where Banker's Body was inter'd with great Solemnity.

In the interim the United Netherlands had fitted out another Fleet to assaile Recifia, the West-India Company having first demanded of the King of Portugal two hundred and eighty Tuns of Gold, to the value of which they affirm'd themselves to have been damag'd by the Insurrection of the Portuguese. On the other side, the King of Portugal was in a quandary about the Business of Brazil; for first, he had no other thoughts but that Brazil would have fall'n into his hands within the space of three Moneths, because the Plot there was so subtly laid; neither did he think the States would have concern'd themselves with the West-India Companies Business, which now it was manifest they did. Besides this, there was a third Inconvenience, viz. that the Spanish Crown endeavor'd to conclude a Peace with the United Netherlands; wherefore that he might put a stop to the sending of the Fleet to Brazil, he dealt with the French Ambassador to make very advantageous Proffers in his behalf, viz. That he would surrender all the conquer'd Places, and make good all the Damages that had been sustain'd thereby. The Fleet appointed to go to Brazil was hereupon stopp'd, till the States had Consulted about an Answer on the fore-mention'd Propositions; but when Fleets brought news of the fallhood of the Portuguese, the Scale was immediately turn'd, inomuch that the Portuguese Ambassador went in danger of his Life, till the Mutineers were put into Custody. Moreover the Fleet was order'd to Sail with all speed possible to Recifia, with promise that another Fleet should soon follow with fix thousand Men; but the many disconfortate tydings that had been brought of late, of the hardships and sufferings of those that went before, through the unwholsomeness of the Climate, the want of Provisions, the Strength and Cruelty of the Enemy, made the Seamen and Soldiers very unwilling to go so fatale a Voyage, inomuch that as many as could, made their escape; yet at last, on the last day of December, Anno 1647, the Fleet set Sail under the Command of Commodore de Wit; some Weeks before which Schuppe was force' to defeate the Island Taperica, to go and aid Recifia, which the Portuguese from a rais'd Battery on the other side of the River Biberib tho' so incessantly, that none were safe either in their Houlces or in the Streets.

Mean while the Portuguese Agent, Francico de Sousa Contino, proffer'd the States to go to Brazil himself, and caufe to be reftor'd all thofe Places which had been taken from the West-India Company, particularly the City St. Salvador and Tercera, besides Reparation for all other Damages.

At the same time Grave Maurice was Treated with to go to Brazil again, but his Demands were fo high, that it came to nothing; for he requir'd 4000 l. yearly to spend at his Table, and 5000 l. besides during his Life; also 2000 l. to fit him out, and twelve thousand Men to Besiege St. Salvador, which was always guarded by four thousand, and thirty Carvels lay ready before Lisbon to carry four thousand more thither.

All things went very ill on the Hollanders side at this present; for besides that the fore-mention'd Fleet had not its with'd success, most of the Men being destroy'd by the immoderate Heat of the Climate, Angola and Laando were also taken by the Portuguese.

These...
Chap. VII. 

**AMERICA.**

These Misfortunes made the West-India Company begin to be very forward to come to a Treaty with the Portuguese Agent, who before seemed rather to court them, having offer'd to Engage for the reformation of whatever they possessed at that time, when the ten years Peace was concluded; but when they came to insist upon that Point, heanswer'd, That he must expect new Orders from Lisbon concerning Loando, because the taking of that Place caus'd an alteration in the State of Affairs, But the States no way satisfi'd with Delays, that were like to prove both hurtful and disgraceful, resolv'd to put into Execution what they had before agreed upon, viz. The East-India Company was impower'd to make Prize of all Portuguese Ships towards the payment of the fifteen Tuns of Gold ordain'd for the West-India Company, to help them against the Portuguese Oppression. The West-India Company also receiv'd Commissions to Cruise for Portuguese Vessels before Brazile.

On the seventeenth of February, Anno 1649. three thousand Soldiers that came over in the fore-mention'd Fleet, besides two hundred Negro's, and as many Seamen, marching to Besiege Garavapes under the Command of Schuppe and Coche, were so furiously set upon by the Sallying Enemy, that they were forc'd to break up the Siege in great disorder, whilst the Portuguese being in number two thousand five hundred, fell upon the Ree, and though the Dutch Officers us'd all the care they could possibly to bring their Men to face about, yet they were not able to keep them from running away, in which flight great slaughter of them was made by the Portuguese Horse, configning of a hundred and thirty, Arm'd with Lances; infor-much that in the flight and the pursuit, a thousand Netherlanders were slain, and nineteen Ensigns or Colours were left behind as Trophies for the Portuguese; the chief of the Slain were Colonel Brink and Honteryve.

The Zealanders were much concern'd at the improsperous Affairs of Brazile, in regard a fifth part of the West-India Companies Stock belong'd to Middleburg, Flushing, and Veer, infor-much that the Complaints of Widows and Orphans that shar'd in the common los's, mov'd the States to fit out six great Ships, and as many Ketches, Mann'd with two thousand eight hundred Men, for Brazile, where all things ran to ruine, the Grandees both of the Council, Army, and Fleet, being at variance, and impeaching one another.

The rest of the Provinces, especially Friesland, being less inclin'd to the West-India Company, were somewhat colder in the pursuit of this Business; nevertheless, upon a fresh Letter of Complaint from Walter Schonenbergh, President of the Brazillian Council, they held a Conference together, how to raise Moneys for the fitting out of twenty Ships and five Ketches for the Relief of Brazile.

The Admiral De Wit returning home, was, upon the accusation of the Council in Brazil, and the General, Sigismond Schuppe, made Prisoner in the Hague, and together with him the other five Captains that went with him were Committed by the Admiralty, for returning without the Consent of the Council; but they were soon releas'd by the Magistrates of Amsterdam, who upon the Admiralties refusing to deliver them, commanded their Provost-Marshal to break open their Prison Doors. De Wit after his Release was justifi'd what he had done before a full Assembly of the States, and alledge'd that it was according to the Orders he receiv'd when he undertook this Expedition.

The Portuguese Agent, Sousa Macedo, obtaining Audience of the States, told them how ready the King his Master had been to come to a perfect Agreement of Peace with them, but that their own Acts of Hostility had been the occasion of the breach of that Treaty of Peace that had been concluded on; that the Robberies and Infringe-ments committed by those Portuguese under their Jurisdiction, was not any way authorize'd
Afterwards or countenanced by him; lastly, he offer'd them free Trade to Brazil, eighty Tun of Gold to the West-India Company, 80000 l. to the Orphans and Widows in Zealand, and payment of all private Debts. But making no mention of restoring the Places in Brazil, he seem'd to mock the States; who refer'd it so much, that they would admit of no farther Conference with him.

Mean while the West-India Companys Business in Brazil went daily more and more to ruine, insomuch that in the Year 1654, they lost all their Forts and Places of Strength and Habitation, and amongst them Recifia, the chief Residence of the Council of Brazil, who returning home, brought nothing but a doleful Relation of their unhappie Proceedings. Schappe, Hak's, and Schonenbergh, made each of them a long Oration, setting forth the sad Condition of the Place, and the Miseries they had endured a long time before they left it; also excusing their total quitting thereof to the Enemy by the great want of Provisions and other Supplies, which they so often had written for in vain, at least receiv'd short of what their Necessities requir'd, and by the Clamours of the Soldiers, who were ready upon all occasions to Mutiny or Revolt, as appear'd by their crying out upon the discovery of a Fleet of Portuguese upon the Coast, Behold our Deliverers from the Netherlanders Tyranny; lastly, by the growing Power of their Enemies, which they could not have resifted, though they themselves had been much stronger than they were.

But the West-India Company sensibly touch'd at the thoughts of their Losses, were not satisfy'd with the Relation of Schonenbergh, Hak's, and Schappe, but require'd a Journal of every days Transactions, or Testimonies to confirm the truth of their Relation: They also demanded an Account of the Condition of the Store-houses when Recifia was surrender'd, and fell upon them with several Interrogatories, viz. Why the Fort Afigados was forfaken? Why the Garrisons were not drawn in from the North to Recifia? Why they did not keep footing on the Land, and guard thefe Places they had left when Recifia was left? Why they made such ado for want of Provisions and Ammunition to dishearten the People? Why the Money proffer'd by several Citizens was not taken? Why they did not burn the Enemy's Fleet, since, according to the opinion of several, it might easily have been done? How they could testify the Sedition of the Soldiers, since none of their Commanders complain'd of it? Whether they us'd any Means to encourage the Besieged? Who did, and who did not consent to the Surrender: Whether no better Terms could have been made? In fine, they prevail'd with the States to secure Schonenbergh, Hak's, and Schappe, in their Houfes, and on the ninth of September, Anno 1654. brought them before a Council of War in the Hague, where the chief things objected against them were, That the Portuguese had gotten by the Conquest of Recifia, above two hundred Bras Guns, moft of them Demi-Culverins, and four hundred Iron Guns, valu'd together at ten hundred thousand Reydollars; That the Store-houses were sufficiently stock'd with Provision and Ammunition; That they took care to secure their own Goods, but left what belong'd to the West-India Company as a Prey to the Enemy.

Schappe on his part alleg'd, that he could do nothing of himself, as being under the Command of the Brazilian Council. Hak's and Schonenbergh pleaded the want of Men, by reason of the many that daily dropout from them, either by Death or Defection, to the Enemy, and those that remain'd unsafe to be trusted, as consisting of so many different Nations, alfo their being block'd up at the Sea by the Portuguese Fleet, the great want of Ammunition, efpacially Infruments of Fortification; lastly, the head-strong Resolutions of the Soldiers, to deliver up the Place, whatever their Officers should determine to the contrary; notwithstanding which,
Chap. VII. A M E R I C A.

393
to shew that it was not quitted upon disadventagous terms, they produced the Articles of Agreement upon which it was surrendered to Francisco, Governor of Pernambuco. In conclusion, the Council of War pass'd their Sentence on Schuppe, viz. That he should lose all the Sallary that was due to him from the West-India Company since the twenty sixth of January 1654. when he sign'd the Agreement with Bareto for the delivering up of Recife.

Thus the Portuguefe recover'd full and absolute possession of Brafifle, yet notwithstanding an after-clap of War; wherefore the Portuguefe Agent, upon condition of an absolute Peace to be concluded, proffer'd the States General in the Hague, Satisfaction for the Damages which the West-India Company had sustained in Brafifle, eighty Tun of Gold, a free Trade to Brafifle, and payment of the Debts due to them from several Portuguefes in Brafifle; but told them, that to surrender them any Places there, was not in the power of the Portuguefe Crown. On the other-side, the Spaniard proffer'd to affift them in the total Conquest of Brafifle, and to restore them those Places they formerly possess'd, as soon as they had subdu'd the Portuguefe; to which the Zealards began to hearken, who being great Lovers by the Portuguefe Treachery, wish'd for nothing more than Revenge; but Holland having a great Trade to Portugal, was more inclin'd to Peace. Whereupon His Majesty of great Britain proffer'd him'self to be Mediator between the Portuguefe Crown and the United Netherlands, and accordingly on the sixth of August, Anno 1661 a Peace was concluded with Portugal on these Terms:

I. That Portugal was to pay to the United Netherlands eighty Tun of Gold, either in ready Money, Sugar, Tobacco, or Salt, or dedicat the same out of the Customs payable in the Portuguefe Harbours.

II. That the Guns on Reciffe were to be restored to the West-India Company.

III. That the Salt-Trade at St. Uves and other Places under the Portuguefe Jurisdiction, whether in Africa or Brafifle, should be granted to the Netherlands, paying the Customs as the Portuguefe do themselves.

IV. That the conquer'd Places gotten on both sides, should remain in the hands of the present Possessors.

V. That the King of Portugal should not lay an Embargo on any Nederland Vessel, on any pretence whatsoever, though they should carry all manner of Ammunition to his Enemies, provided it were not out of any of the Portuguefe Havens.

VI. That no Netherlander should ever be call'd before any Judge about any Difference in Religion, but should have freedom thereof granted him, either in his House or Ship, and also a convenient Burying-place.

VII. That if any Difference should chance to arise between Portugal and the Netherlands, they should not extend it to prejudice the Trade, but every Merchant should be free to call in his Debts, and send Ships without hindrance.

VIII. That this present Agreement should not be broken by any Misdemeanors acted by any Subjects, either in the East or West-Indies, who were to be punish'd by their lawful Judges.

IX. That the Havens belonging to both Parties were to be free for either Men of War or Merchant-Men.

X. That the Netherlanders Trading in Portugal, might go Arm'd, take Houses and Store-houses.

XI. That the Goods laden in an Enemy's Ship might be declar'd free Prize.

XII. That the Portuguefe in Brafifle should pay their Debts which they owed to the West-India Company, or any other Person or Persons, to which purpose three appointed Commissioners were to Sit at Lisbon, to hear and determine the Causes that should be brought before them, and without
A few days after this Agreement was concluded, the Portuguèse Ambassador, Henrico Souna Tóvares, went for Lisbon, where he arriv’d on the last day of September. Not only Guelderland and Zealand, were much dïsâppoi’d with this Agreement, but also Groningen accus’d their Deputy Schutenbergh, that contrary to Orders he had been too forward in concluding the Peace with Portugal, and that he had consented to that which the States of Groningen had not permitted him; for they resolv’d to make Peace on no other account, but that Portugal should pay the eighty Tun of Gold in ready Money, and that in a short time; whenas on the contrary, he had allow’d of the payment in Merchandize, and that in a long time. Wherefore the States of Groningen (who for this Fact and several Accusations brought against Schutenbergh, condemn’d him to be Beheaded, which Sentence had been Executed upon him, had he not made his Escape) together with those of Omeland, and others, who disapprov’d of the Peace concluded with Portugal, drew up many Reasons why they disdïmented, and look’d upon it as both dishonorable and disadvantageous; however, the Articles being Sign’d, and the States General, taking into consideration how impossible a Work it would have been to have gone about to renew a War with the Portuguèse in Brasil, being at that time in firm possession of all, and that for the Interest of a few, in respect of the whole Common-wealth, they were forc’d to rest satisfi’d, and together with the West-India Company, to fit down with the los of those Places in Brasil, which had cost so much Blood and Treasure to gain.

Nevertheless the West-India Company put in a Memorial at the Hague, of all that had been done by them from time to time, wherein they themselves had been great Sufferers, and the Common-wealth very much advantag’d, as namely, That at first they put in a Stock of seventy four Tun of Gold, sent out divers Fleets under the Admirals Willickens, John Dirkzoon Lam, Boudewyn, Henrickszoon, Peter Heijn, Adrian Peter, Henrick Loun, Dirk Mitrgesz, Peter Ita, Loos, Cornelis Houte-been, Lichhart, Bankert, and others, at several times, which had much weakened the Spaniish Power, to the great advantage of the United Netherlands, because the Spaniard was not onely forc’d to disperse his Power to defend America, but also loft great Riches on the Coast thereof, which being the Sinews of his War, prevented him from oppressing that State; That to their los of they suffered their Forces to drop the Enemy, when he broke into the Veluw, at that time when the United Netherlands seem’d to hang by a slender Thread; That it would probably have been the ruine of Holland, if the mighty Spaniish Fleet which Engag’d with Marten Tromp in the Downs, had been assisted by sixty six Sail, which La Torre was forc’d to send to the Coast of Brasil, against the West-India Company; That this Companies Concerns was so great a Nurtury of Mariners in the Year 1629, that they had above a hundred Ships at Sea, and fifteen thousand Men in their Service, which the United Netherlands considering, and judging that Charge too great for the Company to maintain, had resolv’d to contribute a certain Sum towards it yearly, which had not yet been paid; which made them take up Money upon Interest, and put in a Supply of thirty Tun of Gold for the payment of the same; That the Expedition of Henrick Brewer to Chili had put them very much behind-hand, because the Enemy having notice of it, secour’d himself, yet was often terrifi’d with it; for Brewer having found out a Way to go from Reíssa to the Province of Chili in two Months, and accordingly to do great mischief to the Spaniish Power, whole Riches lay bare all along the South Sea; this and many
many other things fo'd to make that honorable Peace with the Netherlands, concluded on in Müfter, Anno 1648; That their Losses, computed and deliver'd in to the States General, amounted to fixty fix Tun of Gold, and forty three thousand two hundred and ninety Guilders, which fo'd them to take up Money to pay Interest for what they had before, yet that they still kept fifty great Ships at Sea, and were resolv'd to prosecute their Trade with fresh vigor, as soon as Satisfaction should be given from the Portugues Crown, as was promis'd them in the Articles of Agreement, and they could obtain of their Lordships, to have their Patent prolong'd for a considerable time; That they were still indebted to those Orphans and Widows who furnish'd them with Money to set out their Forces, which in the first twelve years did the Spaniard so much hurt, that the Damage is reckon'd to amount to one thousand one hundred and eighty Tun of Gold.

These things being taken into consideration by the States General, they granted the Company their Request, and gave them a new Patent, by virtue of which they now Trade to Africa and the Caribbean Islands, since they were fo'd to quit all they had posse's'd in Braille.

Sect. XII.

The Journey of Rodulphus Baron, with the Description of the Customs and Manners of the Tapuyans.}

Rodulphus Baron, to make a Discovery of the Country, upon the Encouragement of Grave Maurice, who allow'd him to that purpose a yearly Revenue, undertook a remarkable Journey; accompany'd with three Tapuyans; who going out of the Village Caneri without any Store of Provisions, left the Mountains Capara on the right-hand, and went seventy Leagues into the Country, without meeting with any People, only he found one Mountain of Fosile Glass; from whence he went Southward to the Villages of the Waripheares and Caripati, who having courteously Entertain'd him, appointed certain Persons to accompany him from one Village to another, with Orders to Complement Grave Maurice, who sent them home with several Gifts.

The Waripheares and Caripati inhabit fourteen Villages on the Mountains which Bound Brazil Westward, live by Hunting and Fishing, eat wild Honey and all manner of Fruit, and maintain continual Wars against a mighty People which inhabit the Western Plains.

As for the Tapuyans, they range up and down between the Rivers Grande, Quauaguba, Ociro, Upameoma, and Poirangua, without having any fixed Abodes; they are a strong People, born of Countenance, and black Hair'd: In stead of Circumcising their Children, they cut them, which is done after this manner: The Priests stand on a row, Dancing and Singing, whilst one of them swings the Child round about his Head before all the Multitude, and then runs away with it; at last returning, sets it in his Lap, whilst another Priest cutting a Hole in the Ears and Lips thereof, puts little Bones into the fame, and the Mother cries and howls after a terrible manner. At these Ceremonies, which end with Dancing and Singing, their King is always present.

The Virgins are kept by their Parents till the Mothers perceive them to have their Monethly Courses, which they immediately reveal to the Priests, who acquaint the King therewith, before whom the Maid, being Painted red, is brought; whom having smoak'd with Tobacco, he throws an Arrow at a Garland, which flie
Strange kind of Fogno- 
fle wears on her Head, and if he chances to hit it, he gives her his Benedic- 

tion, by licking certain parts of her Body, from which she hopes to receive long Life. 

So soon as a Woman is gotten with Child by her Husband, she lies no more with him, but he is permitted to enjoy his other Wives, whose number is either more or less, according to every one's pleasure. The Women after Delivery eat their After-birth.

Adultery is free for Men, but if Women be taken in the Act, they are immediately put to Death.

After they have done Sowing and Planting, the King calls all his People and Subjects together, and appears to them hung round with Garlands and all of them have their Bodies Painted and stuck full of divers colour'd Feathers.

The Priests when they go about to foretell future Events, either Sing or Pipe, and at the same time hold up their Heads towards the Sky, and stand gazing, as if they saw some strange Vision in the Air; on some of their Backs hangs a Bundle of Ostriches Feathers, some throw Feathers in the Air, to see which way the Wind blows. When the Waters overflowing Brasil did much harm, Anno 1641, the Priests being Consulted, brought forth the King's Calabash, in which lay their Sacred Stones call'd Cobuterak and Tscheynab, and began to Dance and Sing; next six Priests were plac'd in a row, which were to Prognosticate: whereupon the first taking up a Stone, said, The Dutch have given Battle to those in St. Salvador, but are now about an Agreement: The second held up a Blossom of Indian Wheat, and foretold that there would be plenty of that Grain: The third holding a white Pebble-stone, promised store of Milk: The fourth grasp'd a Stone like Bread, telling them that the Country should produce much Bread: The fifth holding up a Bow and Arrow hung full of Feathers, cry'd aloud, This is a Gift of the Angels, Birds shall sit thicker than these Feathers hang together: The sixth, having a lump of Wax, foretold that there would be plenty of Honey made by the Bees that year.

They worship the Constellation Ursae Minor.
They observe a very strange way of Purging; for with a Stick they thrust sharp Leaves down their Throats into their Stomach, which they turn so long till they vomit Blood.

In the Summer they have a general Meeting for Wrestling, and other Exercises, which last three days. The Wrestlers are strangely attir'd; for they are all over their Bodies beset with divers sorts of Feathers, and in stead of Boots or Buskins, wear the Barks of Trees about their Legs; their Hair bein'm'd with Honey, and ty'd in a Tuft, hangs down behind; on their Crowns they wear a Plume of Feathers, about their Necks a Band or Garter of Feathers; at their Arms they tie the Wings of the Birds Kebity, and on their Backs a green Bough; their whole Bodies Painted with divers Colours, and their Hair all Red: Thus accoutered, they Engage one with another, and if there be an old Grudge between them, then they Fight in earnest, and often kill one another: The Victor with strange Actions upbraids the Vanquish'd with Cowardise, and ever after enjoys his Wife and Children.

They eat the Serpent Mannab, being four Yards long, and on the Tail having a Horn, which with a pufh it thrusts into Man or Beast, as it lights, then winds it self about the Body, and sucks it hath suck'd the last drop of Blood.

Here are also Serpents which are so-poytous, that the leaff Wound receiv'd by them is mortal, unless the part bitten be either immediately cut out, or off.

The Priests cut the deceas'd Bodies into pieces, which are roasted by old Women, the Bones are taken out, and at the next publick Feast are stamp'd, mix'd with Water, and Drank: But the Bodies of Noblemen are to be eaten by none but Persons of that Rank.

They also Crown their Kings after a strange manner, viz. The Priests, who are beset with Feathers, anoint him with sweet-smelling Oyl, or Balsam, and put a Crown of divers colour'd Feathers on his Head, after which they all fall a Singing and Dancing; but if any one happen to speak a word of the deceas'd King, they all begin to howl and cry. The Kings Authority confints more in Advising than Commanding.

They believe that the Souls of those who die a natural Death are immortal; but those that are kill'd by their Enemies, devour'd by ravenous Beasts, or poiyon'd, are totally extingui'sh'd both Soul and Body for ever. They say likewise that Hell is Westward near a dark Pool, where the Devil Examines every Soul how they liv'd on Earth, and what Death they dy'd; the Good are Ferry'd over to a delightful Valley, where there is plenty of Fife, Honey, and Fleth; but the Wicked are miserably torment'd.

The Natives live peaceably amongst themselves, their Law being for those that have not, to ask, and for those that have, to give.

They never Travel in the Night for fear of Serpents and other ravenous Beasts, neither do they go any whither till the Sun has dry'd up the Dew.

King Janduy before-mention'd, being above a hundred years of age, defir'd the Prince of Juckers fair Daughter to Wife, but being deny'd, contriv'd a subtil Plot, viz. he invited Jucker, with his Courtiers, to a Wrestling; whither he coming with his whole Train, was earneftly minding the Sport, when a considerable number of Janduy's Women falling upon Jucker's Men, destroy'd a great many of them, and got the defir'd Maid for Janduy, who at that time had fourteen Wives and sixty Children, but had formerly enjoy'd fifty Wives and Concubines.

Not only amongst the Tapuyans, but generally amongst the rest of the Brasilians, their Arms are great Clubs call'd Tacapes, also sharp Darts, and strong Bowes call'd...
call'd Orapares, with Shields, which are made of the Skin of a Beast call'd Tapirons.

The Women wear long Chains of Snail-shells, which hang down over their Shoulders; their Faces are Painted with divers colour'd Rings, surrounded with Specks; their Necks and Arms they adorn with Necklaces and Armlets of little Bones: They carry their Husbands Provisions in time of War.

Their Army they order by blowing on the Horn Inabia; others play on Mens Bones kill'd a little before: for going by Water they use Boats made of the Barks of Trees, each whereof being able to carry fifty Men, go exceeding swift: The strongest Men always march before, and as many as they take, whether Men, Women, or Children, they are all kill'd and roasted in their Bouians.

Their Villages confit of Houses of eighty, ninety, or a hundred Paces long; those that lie near the Enemy are fenc'd with Walls and Pallifado's against any Attempt. Their Field-Battels are very terrible; for as soon as they get sight of one another, they howl like Wolves; which Tone they raise as they approach nearer and nearer, and with their Horns and Pipes make also a mighty sound: then shaking their former Enemies Teeth (which they wear about their Necks) at one another, they cry, That they shall immediately fall into each others hands for Food: whereupon they throw their Darts at one another, which are adorn'd with all sorts of Feathers, and if any one be wounded, he pulls out the Dart, and bites the same like a mad Dog; next falling to their Clubs, they knock one another's Brains out: which manner of Fighting lasts commonly some hours before the one or other Party leave the Field. All their Prisoners they fatten, and eat them at a Merry-meeting; at which when they have Dan'd seven hours together, three Men lead the Prisoner, ty'd with a Rope made of the Bark of a Tree call'd Jua; through their Village, whilst the Prisoner looking to and again, faith in a scornful manner thus unto them, Ton, do ye hear? I have eaten your Fathers: and to others, I have roasted your Brother; your Nephew also tasted very well; my Death will be sufficiently reveng'd: Having carry'd him about for some time, they put the Rope so strait about his Middle, that
that he can neither flir one way nor other; then they give him Stones in his Hands, and lay others at his Feet, saying, Now take Revenge for your Death before you die: then he immediately throws at those who are nearest him; and when Stones are wanting, he throws with Earth: at last comes the Executioner, adorn'd with Feathers, with a black Club in his Hand, and asks, Have not you at several times eaten of our Relations? to which the Prisoner undauntedly answers, Paco tan tan, aijucu, atoupave, that is, Yes, I am he that have eaten several of your People, and laying his Hands upon his Head, cries out, O how valiantly did I behave my self therein! The Executioner replies, And therefore shall you be kill'd by me, and serve for Food for the Spectators: Then the Prisoner answers again, What care I, since I know my Death will be reveng'd: which said, his Brains are dash'd out, and falling on the Ground, he is carry'd away by his Wife (for the Conqueror commonly betroths his Sister or Daughter to the Prisoner,) who seemingly bemoans the Body, of which she hath the first Cut when it is Dress'd; then the old Women put the Corps into scalding Water, in which they let it lie till the Skin comes off; then the Owner of the Prisoner quartering the Body, distributes it amongst the Guests; the pieces laid on their Gridirons called Boneats, are turn'd by the old Women, who lick up the Dripping, deflating the By-standers to bring more such Food, and with the Blood anoint the Children's Faces; the Meat being broyl'd every one takes a piece, and eats it up to the Bones, which are kept as Trophies.

The Braflians do not only thus plague one another, but they are likewise tormented by an evil Spirit, which they call Agnan and Caagerel, if credit may be given to John Levisius a Burgundian, who relates, that he hath often seen them sweat out of fear; and t'eking their Hands upon their Thighs, cry out, Mair autorasjap, accquerye, Agnan atoupave, that is, O my Fool, my Companion, 1 fear the Devil above all Evils.

Amongst several Diseases to which Brafle is subject, there is one call'd Pians, being as malignant as the French Pox, proceeding from libinoufnefs, the whole Body being full of Carbundes, each about the bigness of a Man's Thumb.

Strangers in Brafle are also much troubled with a Giddines, occasion'd by the extreme Cold in the Night; as also with with fore Eyes, which they get by going abroad before Sun-rising, or after Sun-setting.

The Palsie is also very common there, taking People so suddenly, that falling down stifl on the Ground, they are often in danger of losing their Breath.

Besides these there are several other Dishtemps that very much infect Brafle, as the Bloody-flux, Dropfie, Rising of the Gall, Worms, Measles, and St. Anthony's Fire.

The aged Braflians have for the most part great skill in Herbs, which they gather in the Woods, and apply them to the Sick both inwardly and outwardly; and chiefly they know how to expel Poylont. None can persuade them against the Medicines which they have learnt from their Predecessors; nay, they will rather chuse to lose their Lives than use any other: and indeed they do not always succeed amifs, but often manifest that they understand the Vertue of Herbs better than our European Physicians. The Learned Guillelmus Pifo relates, That he hath seen several times in the Army which Grave Maurice sent against the Portugueze in Brafle, that the Braflians in a Flor trime cur'd thole Wounds with fresh Gums and healing Herbs, which the Netherland Chirurgeons judging palt Cure, presently advis'd the cutting off either the Arm or Leg of the wounded Perfon. Pifo adds moreover, That he himself us'd some of Hippocrates's and Galen's Prescriptions in Wine, for the curing of Cancers and Swellings, which the Braflians have made well only with the Juice of Tobacco. They also in a moment recover'd a Perfon given over by all European Physi-
Physicians, with the Juice of the Root call’d jaborandi: wherefore he always desired their Company when he went to visit sick or wounded Men.

The Distempers in America differ much from the European, not only in the Signs of any Distemper, but also in the Cure; for when a Distemper cannot be cured by the prescribed Medicines, a Father or Mother sends for the Neighbors, to know if they can find any means to cure the Disease: which Custom was anciently observ’d amongst the Greeks. They also strictly observe a Rule in their Diet, and take care to keep the Patient out of the Sun in the Day, and cold Winds in the Night: however, if their Fathers and Mothers be sick, nevertheless they leave not off their usual Dancing and Singing; but if the sick Person die, especially a Father, they lament and cry over the Corps like Wolves, calling to one another with a quavering Voice, and uttering these Expressions, The strong Man is deceas’d, who carry’d so many Prisoners for a brave Dinner to his House. Oh what a quick Hunter and jesting Fisher hath Death bereav’d us of! we shall see him no more till our Souls are carry’d beyond the high Mountains, where our valiant Predecessors Dance in Rings. The Women make the greatest noise, and in the midst of their howling embrace another another, which last six hours; and then they put the Body upright into a Grave made like a Hoghead, hanging about it divers colour’d Feathers, and other things in which the Deceased delighted most when living; upon the Grave the nearest Relations place Dishes of Meat, both Fleth and Fish, and the Liquor Canon-in, that their evil Spirit call’d Aygnan, may be reconcile’d by these Offerings, and not carry away the Body; but when they remove from thence they cover the Grave with the Herb Pindo. This Custom is not observ’d by all Bresilians, for some eat up their deceased Relations.

Sect. XIII.

Grave Maurice his Account of Brasile, so far as it concern’d the West-India Company.

Brasile, so far as it concerns the West-India Company, extends from the River Rial, which divides Seregippa and the Lordship of St. Salvador, to Maragnan: Seregippa it self reaches along the Sea-Coast thirty two Leagues, and was first brought under the King of Spain’s Jurisdiction by Christovan de Barros Cardoso, who being order’d by the King of Spain to Plant this new Countrey, invited many People from St. Salvador, who built four Sugar-Mills, and a Town confisting of a hundred Houses, and four hundred Sheds for Cattel: but the Town being destroyed, hath nothing left but Heaps of Rubbish; and the Cattel either fell into the Netherlanders hands, or were devour’d by Tygers; the Inhabitants fled back to St. Salvador: Many troubles have prevented the rebuilding of it.

Pernambuco may for its fruitfulnefs stand in competition with any Place in the World, except in those parts where the Soil is sandy and stony. The Fields feed abundance of excellent Cattel; the Woods, Deer and Fowl; the Ocean and Rivers, all manner of good Fish. It is inhabited but eight Leagues into the Country, because the nearer the Sea, the more convenient it is for Importing and Exporting of Goods; neither could the Portuguese, by reason of their small number, spread themselves farther, as also in regard they found great resistance from the Bresilians. The Negro’s that work in the Sugar-Mills between the River Grande and Francisco, amount to four thousand. The Cape Verde, Mina, Angola, Ardea, and Calabar, generally provide three thousand in a year, to supply the number of the Sick, or those that run away.
Chap. VII.  

SECT. XIV.

The Councillor Duffen's Relation of so much of Brasile as concerns the West-India Company.

That part of Brasile which the West-India Company have subdued by force of Arms on the Continent of America, is divided into six Counties; viz. Sergigia, Pernambuco, Itamarica, Paraiba, Rio Grande, and Siara.

The Expedition undertaken by Gjesling and Schuppe made Sergigia desolate, the inhabitants whoof remov'd to the Coast Todos los Santos.

Also Siara, which the Portugese formerly posses'd, was thinly inhabited, and had a mean Fortrefc there, whither some few Brasilians came now and then to the Netherlanders assistance.

Pernambuco, lying between the Rivers Francisco and Tamarica, excels the other Countrey in fruitfulnefs and pleafantnefs. The Brasilians compare it to a hollow Rock, under which fresh Water flows.

Moreover, Pernambuco hath several Havens, viz. the outermoft Road before Recifia, which being in the open Sea, is somewhat dangerous, but the innermoft is secure againft all Storms; also at the Promontory St. Augufine, where the Mouth of the Haven is narrow and dangerous, by reafon of the Rocks and Shallow Grounds, the Island Alexio is very fit to Carin Ships in; Barra Grande hath a large and safe Inlet, convenient for all manner of Veffels, yet it is inferior to Coropio; laftly, the Havens Baraga and Franco are very eminent.

Amongst the Rivers, the chief arc Jangades, Serinhain, Formosa, Porto Calvo, Canas, Pirigiba, Antonio, Michael, and Francisco.

Pernambuco also is divided into fix Jurifdictions; the first and moft ancient is Igarazu; the second and biggest, Olinada; the third, Serinhain; the fourth, Porto Calvo; the fifth, the Augos; and the sixth, Rio Francisco, which is the Boundary of Pernambuco on the South.

Pernambuco also boasts five Towns, viz. Garafu, Olinada, Maurice-Salet, to which also belongs Recifia, Bella Pojoca, and Formosa. The Villages Moribeca, St. Laurence, Antonio, Amaro, and others are also not inferior to little Towns.

The Countrey is for the moft part Hilly, but is exceeding fruitful in the Valleys, and near the Rivers, especially in Sugar-Canes.

Here are also a hundred and twenty Sugar-Mills, of which a great number fland full for want of Negro's.

Next Pernambuco lies Tamarica, which hath onely one Haven, one City, and twenty three Sugar-Mills, of which thirty are onely employ'd. This Island produces excellent Grapes and Melons, yet is for the moft part barren, by reafon of the Pifmires.

The Countrey Paraiba hath its Denomination from the River which waftleth it, being deep, and without any Rocks or Sands; on the Banks thereof fland twenty Sugar-Mills, two of which are flill standing.

In the Lordhip of Rio Grande flands the Town Parental, whose Buildings were ruin'd in the Wars; after which the Inhabitants had leave to build them another City on a fruitful Soil.

The Countrey hereabouts us'd formerly to be very full of Cattel, but was not onely bereav'd thereof by the Hollander and Portugese, but also for the moft part made desolate.
The River which washes the Castle Ceulen, affords a convenient and safe Harbor for all sorts of Vessels.

This Lordship of Rio Grande boasts once two Sugar-Mills, of which one is decay'd; so that in all those Parts in Brazil which belong to the West-India Company, are a hundred and sixty Sugar-Mills constantly employ'd, besides forty six which are about repairing. It is scarce to be reckon'd how much Sugar they make yearly, in regard, through the alterations of the annual Seasons, as also the more or less fruitful Fields, they produce one year, and in one place, more than in another.

The Inhabitants are of two sorts, viz. free People, and Slaves; the Slaves are African Negro's, and the others, Netherlanders, Portugueses, or Brazilians; which latter came in of their own accords, or else were abfolv'd from their Oaths, and acquitted from their Martial Offices; yet are ready to venture their Lives and Estates, and to Serve either on Foot or Horseback for their Freedom against their Enemies. Thofe that went from the Netherlands to Brazil on their own Accounts, drive a Trade, or Serve the Traders, or else keep Inns, and follow Handicraft Faculties; some of which, when grown rich, buy Parts in Sugar-Mills, others live on Tilling; by all which several sorts of People Recifas is very well inhabited, and full of Houses, which yield great Rents, and are held at high Prices: wherefore Grave Maurice thought good to mark out pieces of Ground on the Ille Antonio Vaeus, which were fold for a considerable Sum of Money, infomuch that in a short time a new City called Mauritius was built on the fame, and inclovd within strong Bulwarks; yea, notwithstanding the Rumor of a great Spanish Fleet in some measure abated the Courage of the Builders, yet the City was extended down to the Fort Frederick Heinrick, and a brave Bridge laid over the Stream Biheribi, cross which they go from Recifas to Antonio Vaeus, where no People were in greater eftem than Handicraftsmen, who could get their ten or twelve Shillings a day. The Labor which is requir'd in the Sugar-Mills, no Men are able to undergo but the Negro's. Of the Portuguese some have liv'd here a considerable time; others lately came hither, being moft of them Jews, of whom there live a great many at Recifas, and are very diligent in promoting of Trade: They possess several Sugar-Mills, and are kept very much under; their whole Study and contrivance is for Gain; they conceal their Hatred against the Christians, as also their Covetousness, yet are mortal Enemies to the Hollander. The Brazilians, who are the ancient Inhabitants, live apart from other People in their Villages, constituting of long Straw Huts, forty or fifty of them under one Roof sleeping on woven Hammocks; they eftem no Houfhold-Huff but Nets and Cabalofles, using the firft to fish with, and the other to drink out of; about their Huts they plant Mandibahka and Brazilie Trees; when they are not employ'd in the Wars, they fpend moft of their time in Hunting, but many in Idlenes; they eftem wild Fruits better than thofe which are Planted; they Drink night and day, making their Liquor of the chew'd Root Mandibahka, or the Apples Tajuva; they eftem nothing fo much as Strong Drink, and to wear Linnen next their Skins; they would not value Money, could they but get Brandy and Spanifh Wine without it; if they are not promis'd a Reward, they will not work. Each Village, nay Houfe, hath its peculiar Governor; but besides him there is a Hollander, who firs up the Idle to work, and takes care that the Owners of the Sugar-Mills do them no injury: They never suffer themselves to be Hir'd for above twenty days, at the end whereof they demand their Wages; they are commonly employ'd to chop Wood to boil the Sugar with; but by reafon of the fearcity of Negroes, they are often made use of for other Busineses, which to avoid they hide themselves; as also when they are to go to Fight; they are hard to be kept in Ranks, for they will run
run out of their own Fyle into another on the least occasion; but if they put their Enemy to flight, they pursue him, and spare none alive. They little regard the Christian Religion, yet some of them have learnt the Lord's Prayer and the Creed of the Roman Priests. The Minifter Davit having learnt the Brasilian Tongue, converted very many of them, and Baptiz'd them in their Villages.

The Brasilian Women and Children usually go to Wars with their Husbands and Fathers.

The Brasilian Slaves were some years since bought of the Tapuyans, or made Slaves, because they affifted Boudewyn Henrickzoon, when he Landed in the Inlet Tralufon; but they have since obtain'd their Freedom of the Portuguese. The Angola Slaves can undergo greater Labor than any other.

The Brasil Wood grows generally ten or twelve Leagues up in the Countrey from the Sea, not in particular Woods, but amongst other Trees.

The Negro's, when the Sugar-Mills work not, are employ'd in pulling off the white Bark, three Fingers thick, from the Tree, which bears dark-green Leaves, small and prickly at the ends, and hanging on thin Stalks, but bearing neither Blossoms nor Fruit.

Osnabrig Linnen is highly esteemed amongst the Brasilians, as also colour'd Wax, Copper, Tin, Wine, Beer, Butter, Cheese, Meal, Stockfish, Pork, Hung-beef, and Gammons of Bacon.

The Papifts Teach and obferve their Religion in publick, their Spiritual Men being divided into Priests and Monks; the Monks confist of Franciscaus, Carmelites, and Benedictines; the Franciscaus being the moft eminent, poftefs fix fair Cloyfters, besides which they have neither Land nor other Revenues, but live on what is given them daily; their Cloyfters stand in Frederickfadt, Ignaraca, Olinda, Pojuc, Serinhaina, and Antonio Vae.s. But the Carmelites have three Structures at Parayba, and as many more in Frederickfadt and Olinda, where they live plentifully on what they reap from Tillage, Rents of Houfes, and Legacies of deceased Persons. The Benedicts, though they poftefs only two Cloyfters, one in Frederickfadt, and the other at Olinda, yet they have the greatest Income from the Sugar-Mills of Muserap, and the Countrey about Parayba, as also Cattel and Cane-Fields.

Recifsa, the Seat of War, hath two Horn-works towards Olinda; the ftrift raif'd with Stone, defends the Haven with feven Bras Demo-Culverins; the other lies oppofite to the River Biberi, and hath five Bras and two Iron Guns. Recifsa alfo hath a strong Rail about it, and many Guns plac'd in good order. Near the Powder-houfe stand two Batteries with Guns.

On the Shore towards Olinda, lies the Stone Caftle St. Joris, on a Hill oppofite to the Haven, fortifi'd with a Bulwark and thirteen Iron Guns.

The Water-Caftle, built round, rifes out of the Sea, and stands at the end of the Stone Cliff, which makes an Inlet, through which the Ships Sail that come to, and go from Recifsa.

The Fort Bruine hath four Points, feven Bras Guns, and Pallifados round about.

Somewhat farther is the Redoubt call'd The Lady Bruine, which hath two Bras Guns.

The Caftle Waardenbergh, built before the Mouth of the River Capivaribi, in the Bay made by the River Biberi, hath three Points, each raif'd square, because the fourth Bulwark towards Antonio Vae.s, cannot be finifht, by reafon the Earth is fink away.

The Fort Ernfsus stands on the North-side of Mauricefadt, on the Island Anto
That part of the City which respects the Fort, lies open, with five Points and a double Horn-work; it is the more secure from any Invasion, because the Coun trey round about is overflow'd at High-water. On the Horn-work stand eight Brafs Guns; but the four Redoubts along the River Capivarib are decay'd.

The square Fort Prince William, standing in a low Ground not far from the River Afogados, hath four Bulwarks, and is inclos'd with a high Wall and strong Pallisado's: the Church appearing above all other Houfes in the Castle, may be seen at Olinda.

Maurice's flade lies pleasantly along the River Biberibi, and is wash'd behind by the River Capivarib: It hath a large Wharf, a brave Magazine, a French Church, and a Guild-hall: The Buildings are not altogether so high as those in Reciffa, where they are commonly three Stories, because the Ground is very dear.

Grave Maurice's Court lying opposite to Reciffa, on the Shore of Biberibi, rises from the middle of a Garden with two high Towers.

Not far from the Castle Ernestus is a Potters Kiln, and on the other side, near the Fort Frederick Heinrick seven Wells, and some Morasces, and towards the Water-side, a Stone Battery.

The Fort Orange at the Southern Mouth of the Haven, hath, by reason of its dry Moats, a strong Pallisado, four Bulwarks, and twelve Guns. The Bulwarks about the Church, and the Battery before the Haven, also secures Schuppen-flade against the Portugueses. On the Battery stand nine Iron and two Brafs Guns. At the Northern Entrance of the Haven appears a Tower with three Guns.

The Fort Margaret hath two Brafs and forty Iron Guns.

Reftringa, surrounded with Pallisado's, rises near a sandy Point in the middle of the River.

The Castle Antonio, wash'd by the Sea, hath only one Tower, but that sufficiently strong to defend it against an Enemy.

The Francifcan Cloyster, strengthened by a Wall and Earthen Works, serve in stead of a Castle to Frederick's flade, and is the more secure by reason of a Half-Moon, Moats, Rails, and a Battery at the Mouth of the Haven.

The sion Fortification of Ceulen lies near the Sea. All these are the Fortresses of the Northern Brafsfe.

To the Southward of Reciffa appears the Promontory St. Augustine, where the Haven is sec'd by the Forts Vander Duffen, Domburlgh, and a Stone Battery.

Porto Calvo is fortified by a Castle, built on a steep Hill forty Foot high.

The Fort Maurice Commands the Ferry of Rio Francesco, and is built on a high and steep Hill, with five Bulwarks; the lowermost Plain is overflow'd by the River in the Summer Seafon. The Store-houfes hereabouts are ill furnif'd, and if not suddenly supply'd, 'tis to be fear'd, that a great Famine will follow, as already it is begun, and we may thank the saint-heartedness of the Enemy that it hath increased no more.

The Militia is distributed into all the Forts or Villages, that so they may the better procure their Provisions, watch the approach of the Spaniards, and prevent all Incroach-ments of the Enemy. In Maurice Castle are five hundred and forty Men in Garrison; in the Afogados, two hundred ninety three; in Camarigibi and Porto Calvo, four hundred and eighty; in Servinha, seven hundred and eighty; in Pojnea, twenty five; in the Mills Panterra, ninety seven; at the Promontory Antonio, two hundred and forty; in the Castle Vander Duffen, a hundred and seventy; the like number is in Amaro and Moriba; in the Village St. Lawrence, four hundred and twenty; in the Fort Prince William, two hundred and fifty three; in Frederick Heinrick,
A Description of the Palace Freyburgh, two Bridges, and a Banquetting-house, all built by Grave Maurice.

Grave Maurice before his coming away from Brazil, built a pleasant Palace along the River Biberibi, before the Fort Ernestus on Antonio Vies; the utmost Work whereof was shaded by a double Row of Coco-Trees, and had a Pond full of all sorts of Fish; and not far from thence, on one side, a second encompass'd a Coney-Warren, which respected a Pell-mell, near it a Garden, curiously divided into round Parterres, which led into a long Park of Bakken-Trees; and at the end a great Dove-houfe. Next the River stood a large Stable, on one side whereof was a Field to whiten Linnen in, and a Kitchin-Garden, wherein was a large Spot full of Orange-Trees, a row of Vines, which bore Grapes every third Moneths, and a delightful Walk, beset on each side with Lime-Trees. On the other side of this Palace stood a Banquetting-house, near a row of Pome-granate-Trees, and another of Fig and Citron-Trees. Behind the Palace was a Fift-pond with two Iles, for the Swans. A Dove-houfe also appeared near the Fort Ernestus, where the Negro's watch'd the Horses, and led them to Water in a Fishpond in a large Wood. Before the Palace appeared a Stone Pallisado, which like a Half-Moon ran into the River. The Palace itself rose with two Towers, one of which serv'd for a Sea-mark.

Moreover,
Moreover, Grave Maurice extended his new City to the Fort Frederick Henrick, divided the Morassie Grounds by several Moats, and laid a Bridge cross the River Biberibi, between Recifia and the City Maurice, and another cross the Stream Capivaribi, between the said City Maurice and the Main Land.

In the time when Albuquerque Govern'd Brazil for the King of Spain, it was disputed among the Portuguese, whether it were not requisite to desert the City Olinda, and caus'd the Inhabitants to remove to Recifia, joyn the same with a Bridge to the Isle Antonio Vaes, because those Places are almost invincible, and much more convenient for Ships than Olinda! But the Hollanders surpris'd them on a sudden, before they could bring the Buinefs to pafs, and after a while profecuted the same Defign themselves.

Grave Maurice spent twenty four thound Guilders in laying a Bridge over the River Biberibi, between Recifia and Antonio Vaes. Having rais'd juft fifteen Stone Columns from the Ground, they came to the deepest part of the River Antonio Vaes, when the Architect began to defpair of accomplishing the fame, because the Ground lay deep under Water, and the Stream ran very swift: Those which dwell at Recifia cry'd, That they had undertaken a Business which was not in the power of Man to effect, and that there was above ten thousand Pound already spent in vain on fifteen Pillars: in this fort they began to clamor against Grave Maurice, espeially the Owners of Houses in Recifia, who foresaw that many would remove from thence to the pleafant Isle Antonio Vaes, as soon as the Bridge was finifh'd, after which the Houses in Recifia would be at low Rates. But Grave Maurice judging that the Disgrace would fall upon him, if the Bridge should be left half finifh'd, caus'd at his own proper Charge, huge pieces of lafiting Timber to be cut, forty and fifty Foot long, and fo ramm'd into the Ground, some freight, others floaping, to support the reft, and in two Moneths finifh'd the fame. On the fift day after this new Bridge was compleated, there went fo many People over it, that the Toll which they paid, amounted to above 60 l. Sterl. and was after that Farm'd for twenty eight thoufand Guilders yearly, a Citizen that pafs'd over the fame being to pay 2 d. and a Negro or Soldier 1 d. but a Horfeman paid 4 d. and a Cart or Wayn 7 d.

Since this Grave Maurice built a second Bridge cross the River Capivaribi, which joyn'd Antonio Vaes to the Main Continent. This Bridge being eighty fix Rods long of durable Timber, was finifh'd in feven Weeks.

Moreover Grave Maurice built a pleafant Banquetting-houfe, call'd Bonavifia, at his own Charge before the faid Bridge, from whence he could fee the Palace Freg-burgh, Olinda, the Fort Erneflus, Maurice-stadt, Recifia, the French Church, the Ships in the Harbors, and also the Castle Frederick Henrick. This Banquetting-houfe hath at each corner a Turret, and in the middle thereof a spacious Room, crown'd with a fair Terrace.
CHAP. VIII.

Guiana.

Northward of Bragafe, over against Maranagn, lieth the Countrie of Guiana, not improbably suppos'd to be so call'd from the River Wa, one of the principal Rivers of the Province, which yet is said to have more and fairer than any other part of America besides: It is by some call'd The Wild Coast, for what reason is uncertain, it being found to be a very fruitful and pleasant Countrie: It is Bounded on the East, with the Atlantick Ocean, or Mare del Nordi; on the West, with some undiscover'd mountainous Countrys, which lie on that side of the Andes; on the North it hath the great River Orenouque; and on the South, that of the Amazonas, or Orellana; which last Name, as we have said before, it derives from Francisco Orellana, who is said to have first discover'd it in the Year 1543. It was ancintly call'd Toto, Topoi, and Tapera.

This Countrie lieth on both sides of the Equator, extended from the fourth Degree of Southern Latitude, to the eighth Degree of Northern, yet enjoyeth a temperate and good Air, not oppresed with any excessive Heat; which is chiefly attributed to the Breezes, or Easterly Winds, almost perpetually about Noon blowing upon it. Towards the Sea-side it is for the most part a flat and level Countrie, in the more Inland parts mountainous and swell'd with Hills, but in all it is generally of such a rich and fertile Soil, that for Fruits, or any outward Commodities of the Earth, it yields not to any other Province of the New World, but rather far excelleth the most, having as it were a continual Summer, without Winter or Autumn, the Trees never uncloth'd or made bare, Fruits always ripe, or growing to maturity, the Meadows and Pastures always verdant and green, and, as we said, so excellently well water'd with Rivers, that no Countrie in the World seems comparable to it in this respect. But since the several Occurrences of Orellana's Expedition will give much light to the more particular knowledge of these Parts, we thought good to insert this following Relation thereof.

SECT. II.

A Relation of the Journey of Francisco Orellana.

Francisco Orellana travelling with Gonsalvo Pizarro from Quito, to find out the Countrie Caudirnunaca (where the Natives, according to the information of a strange American, went Arm'd with Golden Plates) he came after a great deal of hardship to the River Maranow, where Pizarro building a Brigantine, put all his sick and maimed Men into the same, as also all his Baggage under the Command of Orellana, whom he commanded to forage for some Provisions, of which the Army, that was to follow along the Shore, had great want; but Orellana was in few days driven down so far, that he saw no hopes of getting up again in a years time, and Engag'd daily with the Indians, which came aboard of him in little Boats; at last he went ashore and conquer'd a Village, in which he found Provisions, some Gold, and Gems of great value: not long after which he was in great danger, by reason of a River, which with great force fell into the Channel in which he Sail'd, and
and for the space of two hundred Leagues saw neither Man nor House: Next Landing at a Village, he was by the Governor thereof presented with Turtles, Partridges, Fitch, and other Provisions, and also forewarn'd of the valiant Women, the Amazones, which they, call'd Camapurya. Going from hence, he met for eighty Leagues together, nothing but steep and craggy Mountains on each side of the Shore, infomuch that he could not Land any where for Provisions. Next coming to the inhabited Province Machiparo, he was fiercely assaulted for two days and two nights, by the Cafiique Amagua, who pursu'd him with several Boats: Not long after having conquer'd a Village, out of which ran several trodden Paths into the Country, he came to a River, in the Mouth whereof there lying three Isles, he gave it the Denomination of La Trinidad, which wafteth a fruitful Coast, along which Sall'd divers small Vessels. Somewhat farther in the River Trinidad stood a Village and Banquettting-houfe, where Orellana took abundance of Provisions, Silver, Gold, and Earthen Ware curiously Glaz'd and Painted, but judg'd it very hazardous to travel far into the Country by the common High-ways, in regard of the multitudes of People that frequented them, to whose Civility he durst not trust; therefore Sailing from hence a hundred Leagues farther, he came to the Country belonging to the Lord of Pagana, who civilly Entertained him, and Presented him with Sheep, not unlike the Peruvians, and all manner of good Fruit, which the Country affords in great abundance. After this on his Lar-board side he discover'd a River, whose being black like Ink, and disemboying into another, discolour'd the Water thereof for the space of twenty Leagues; he also saw several Villages, and at last found the Stream to be so broad, that he could not see from one Shore to the other: he took one of the Villages without any refistance, there being none but Women in the Huts, whither the Men came towards the Evening. Near another Village he esp'y'd seven Heads flicking upon Poles, from whence the Province receiv'd the Denomination De las Picotas, from whence ran several pav'd Ways, on each side planted with Trees, into the Country; where Landing, he furnish'd himself with Maiz, Turtles, Geese, and Parrots, and at Can Island took an American Prisoner, who inform'd him, that he was in the Amazones Jurisdiction, and that up in the Country liv'd a People not unlike the Spaniards, amongst whom were two white Women, brought thither up the River by a Lord. Going farther he saw divers Villages on each side of him, and at last Landing in a little Town, he found plenty of Oats, Liquor made of Oats, Cotton, Linnen, a Temple hung round about with Arms, and two Episcopul Miter's of divers colours. Near a Promontory jutting out into the River, the Tide went so strong, that he was not able to Land; upon the Point stood several fair Buildings, where were also white Women, of a big Nature, with long Hair, who animated the Men to fight. This Country, which extends it self a hundred and fifty Leagues along the Shore, with Hills, Pasture-Grounds, and Champain, and well inhabited, being discover'd on St. John's Day, was call'd The Province De San Juan; which leaving, he came to several Isles, the biggest whereof extended fifty Leagues in length, all of them standing on high Ground, pleasant, and full of People, who in Boats, by them call'd Periguies, valiantly Engag'd with the Spaniards; but one of them not long after being taken Prisoner, inform'd them, that the Amazones dwelt in Stone Houses, Wall'd Towns, had plenty of Silver and Gold, and four flately Temples enrich'd with Plates, Dedicated to the Sun. But Orellana Sailing a hundred Leagues farther, along a Coast belonging to the Lord of Caripana, according to the Prisoners Relation, the Inhabitants hereabouts shott abundance of poyslon'd Arrows at the Spaniards, but they made a shift to escape them, and Sailing within sight of Land into the Bay of
The Expedition ofOrtiz, which he anchored three times and spent the Cas there weak Span-ardants, He died with Grief. He left a Harem with all the walls, called a separate fort by several Leonard to Kelch, Governor. 

The four hills of the town.

Dias confided with the same.
of Paria, they came to an Anchor before the Island Cubagua, Anno 1541. after they had been eight hundred Leagues.

Orellana informing the Spanish Court of his Adventures, defir'd the chief Command of the Province of the Amazones, which after earnest Solicitations he obtain'd, and accordingly setting Sail from St. Lucar, he went to the Island Teneriff with three Ships and five hundred Men, where he stay'd three Moneths, and two on Cape de Verd. On Teneriff several of his Men ran from him, and on Cape de Verd he bury'd ninety eight, and left fifty sick behind him; yet he Steer'd to Brazil, where, meeting with contrary Winds, he had undoubtedly perli'd for lack of Water; if the great Showers of Rain had not supply'd his Wants, one of his Ships carrying seventy Men and eleven Horses, was never heard of, with the other two he Sail'd by Baxos de San Rogue, and from thence a hundred Leagues Northwardly beyond Maragnan, where a great way off at Sea they found fresh Water, in which Orellano Steering, got between the Isles into the River De las Amazones, where he Barter'd for Provisions, Sail'd two Leagues up the River, and came to an Anchor before a few Huts, but slenderly fort'd with Provisions, where he spent three Moneths in breaking up one of his Ships, and building a Ketch. In the mean time fifty seven of his Seamen dy'd. Sailing twenty Leagues farther, he loft his best Ship, whereupon he gave order to build a Barque of the Wreck. Thus he spent thirty days in vain to find the fore mention'd Arm of the River Amazones: the Barque being finifh'd in ten Weeks, and going beyond the Isles Maribique and Copan, found the three great Rivers to disembogue into the River Amazones, which there was twelve Leagues broad; but wanting Provisions, and the Men being too weak to go farther, they came back to the fruitful Island Comoa, where a hundred Spaniards fetled themselves; the rest going down with the Barque to find out Orellana, who, as his Wise inform'd them, dy'd with Grief.

The English and Netherlanders, who Sail'd hither after the Spaniards left off, ascribe a Breadth of fifty or sixty Leagues to the Mouth of the Amazon River, which discharges its Water with such force into the Northern Ocean, that it keeps its colour and taste above thirty Leagues, according to the ocular testimony of Captain Hackett. The Western Point, by the Netherlanders call'd The North Cape, runs with a long Slip of low Land into the Sea, into which more North-Westly fall the Streams Taponnowyn, Arowary, Arpyary, Cauffpouri, and Wapoco; some of them wash great Wildernesses full of Trees; others glide between pleasant Meadows.

Eighty Leagues up the Amazon River the Pluflingers have built a Fort call'd Nauafan, on the narrow Island Cogenines, which is twenty Leagues long, and separated from the Shore by a Creek, and seven Leagues farther, on another Ile, the Fort Orange; from which two Forts they Trade with the Natives, Arowaccas and Apbome, bartering European Trifles for Tobacco, Cotton, Sugar, Gums, and several Tinctures.

Sir Walter Raleigh, Anno 1595. sending Captain Fisher from Wapoco to Leonard Regaro, some years before Baptiz'd in England, and then Governor of the Province Coophebery, lying between the Amazon River and Wapoco, he receiv'd Fisher very civilly, and conducted him fifty Leagues up into the Country, to the Mountain Cowob, on whose top is a deep Pool, full of well tafted Fish, and surrounded with the glittering Stones Topaz; which Raleigh took the more notice of, because the same Ground in the East-Indies where thes Stones are found, incloses all Diamonds. Moreover, the Province Coophebery rifes with pleasant Hills, but confists most in delightful Fields and Woods.

The River Arowacc, falling into the Inlet Wapoco, disembogues also with the
fame between the Capes Orange and Comariboo, into the Northern Ocean.

Most of the Rivers in Guiana lie full of Isles, and cannot be Navigated far, by reason of the great Water-falls.

The Yaros, who inhabit on the Banks of the fore-mention'd River, are People of a good Disposition, and go naked: they catch Fish after a strange manner; for they only throw the strong smelling Wood Ayam in the Water, which works so upon the Fish, that they suffer themselves to be caught with the Hand. The well-known American Root Caffavi serves them for Bread, being bak'd in round Cakes on hot Stones: of the Cakes they also make the Liquor Perrino, which tastes almost like flaie Beer, and is prepar'd by old Women and little Children, which chew the Caffavi, and spit the same into a Pot full of Water, which having stood a while, they strain the same through a Cloth, and set it a working with Potato-Roots.

They are troubled with no Vermin, not so much as the little Fleas Nigae, by the Spaniards call'd Chigas, which creep in between the Nails.

On the Sea-Coast are many Tortoises, whose Flesh is of a delicious taste, but heavy to digest.

Sheep and Oxen will not thrive here, but Swine would thrive exceedingly, if their Dugs were not bit off in the Night by the Bats.

The River Wiapoco hath many dangerous Water-falls, the one much higher than the other; a little way beyond the first of them the Stream Army falls into Wiapoco.

Three days Journey Wetterly dwell the Marahewacases, whose Ears hang down on their Shoulders; they worship for their Deity, an Image representing a Man, who sitting flat on the Ground, with his Legs stretch'd out, leans with his Elbows on his Knees, and holding up his Hands, gapes and stares up towards Heaven.

North-West from Wiapoco rives the Mountain Comeribo, which produces Maiz, Tobacco, Cotton-Trees, and Vines.

In the same place the Creek Wainary runs Westwardly with fresh Water a days Journey into the Country; and from the said Creek a high Mountain, fit for the production of Sugar and Tobacco, extends it self to the River Apermaca, where the Wiapocaries inhabit a great Tract of Land.

North-West from Wiapoco flows the River Apermacque, whose mountainous Shores bear Brasile Wood and wild Cinamon. The Stream it self takes its original out of a large Lake, in the middle whereof lies a three-corner'd Isle. South-East from the Lake dwell the Harrithiahs, beyond whose Country are the Rivers Cauvo, Wiwa, and Cajani. On the Banks of the first dwelt, Anno 1596, according to the Relation of Lawrence Keymi, a People call'd Jaws, driven by the Spaniards from Moruga, and who formerly possessed the greatest part of Guiana; they distinguished themselves from other People, by prick'ing their Faces full of Holes with the Tooth of a Beast not unlike a Rat: But at present, the Jaws being departed from hence, the Country lies defolate.

The Wiwa, which springs a great way up in the Country, hath a wide Mouth, and near several Islands convenient Harbors: The biggest of the Isles, inhabited by the Shelves, is full of Provisions, viz. Fowl, Fish, excellent Fruit, wild Hogs, and other Beasts.

The triangular Isles, lying more Wetterly, are also very fruitful, but not comparable to Coasters. So far as the Coast extends it self with high Mountains, it is overgrown with Brasile Wood, but the lower Grounds produce Cotton, Pepper, Silk, Balsam, and the Root Wiapassa, tasting like Ginger, and exceeding good against a Lask, or the Head-ache.
Before the Mouth of Cajani appears the high Island Matto-roy, surrounded by the leffer Illes Samanwony, Epeneferi, and Eponegeregemere.

Between the Rivers Cajani and Maccara, lies the low Island Maccumbro, out of whose Center rise two Mountains, and which is inhabited, as the Main Coast by Caribbeams, whose General Arraricy they'd great friendship to the Netherlanders: They observe no certain Laws for Government; Adultery and Murder they punish with Death; they are very tyrannical towards their Wives, who for the least act of incivility have their Brains beat out; they esteem one another according to the number of their Wives, the eldest of which performs all Houthold Offices.

The Caribbeams are accounted to have been the first Inhabitants of this Country, for the Taos, Sappatos, Arwaccas, and Paragotos, were driven hither by the Spain. as before.

The wild Caribbeams live farther up into the Country, and often fall with great rage upon the other; but since the Netherlanders have furnish'd them with Arms, they have not been so much molested by them.

Beyond Macavia lies the River Caruora, which is very narrow and deep; and next River, in order the Rivers Manamonary, Sinamary, Cuanama, Jaraca, Mawry, Amara, and Marawyn, full of Illes, and four Leagues broad at the Mouth: along the Shore grow little Trees, whose Leaves wither as soon as touch'd by Mankind, but revives again within half an hour.

Next follow the Rivers Sirenam, Sorenamme, Copanama, Marateca, and Cureiny, where the Netherlanders, by virtue of a Patent granted by the States General, drove a Trade for several years.

Somewhat farther the Berbie, Apari, Maycaumini, Mabeica, Mirara and Effebeke, discharge their Waters into the Ocean, twenty days Journey from their Spring-Head, where a great Lake (by the Taos call'd The Rapunowini, and by the Caribbeams, Parime) spreads itself, a great way; and on its Northern Shore hath the Town Manon.

Along the River Effebeke is an excellent fort of Wood, the Dye call'd Orellano, and abundance of Caftati: In the Mouth of the River also lies the Isle Ottone.

Lastly, between Effebeke and the great River Orinoque, glide the leffer Streams Iwapi, Paurom, Gayni, Moruga, Ammacora, and Partima, before which lie several nameless Isles.

Christopher Columbus, in his third Voyage to the West-Indies, discover'd the great Island Trinidad, where before the Mouth of the Bay Vallena he was in great danger, as also the Ship Commanded by Alonso de Ojeda, by reason of the Waves, with which the great River Iwapor, otherwise call'd Orinoque, coming out of the High-lands of Paria, falls into the Sea, which made him call the said Mouth Bosca del Dragó; so that Columbus, Anno 1599, discover'd the Main Coast of America to the Northward of Guiana, as far as the Promontory De la Pela, before Americus Vespucius; whither Diego de Ordas Steer'd with three Ships, Mann'd with four hundred Castilians, in the Year 1251, and before Guiana took four Caribbeams Prisoners in a Canoe, and finding an Emerald about them as big as a Man's Hand, they inform'd him, that up the River was a Rock all of Luch Stones, and a Mountain on which grew high Trees, yielding flore of Myrth; but the strong contrary Tides and Water-falls prevented Ordas from going thither; and being troubled at the loss of one of his Ships, he ran along the Shore to Paria, and took the Fort which Antonio Sedenno, Governor of Trinidad, had call'd up there, and left the Command thereof to Juan Gonzalvez, Ordas pretending that Sedenno had built it contrary to the Emperor's Order, and that he had made Slaves of the Natives. Martin Jamez Tafur stay'd in the conquer'd Fort according to Ordas his appointment, who went up the River Orinoque not without
without great hardship; for his Provisions were not only short, but he was tormented in the Day by the Muschinot, and in the Night by the Bats; at last coming to a Village Commanded by Viapari, he was kindly Entertain'd, which made Ordas contrary to the will of his Men, who would willingly have gone farther into the Country, stay there all the Winter; but as soon as the rainy Moneths were over, Ordas went farther up the River Orinouque, where his Ship was flay'd against a Sandy Shelf, which forc'd him with two hundred Foot and forty Horse, to travel along the Shore, where he was much feared of Provisions, and for forty days together met none but a few poor wild Fishermen, and at last flopt at an unknown River, which fell into the Orinouque. The Guianian Guide which Viapari had given Ordas, advis'd him to go along the Shore of the new Rivers, because it would lead them to a well Cloth'd and rich People: But Ordas went along by the River Orinouque till he came where the Water falling from the Mountains makes it so terrible rough, that Ordas his Vessels, which were Toed along, were not able to be got any farther, so that after two hundred Leagues advance, he was necessitated by reason of the fore-mention'd Water-falls, to go aboard and Sail down the Stream: His Men being weary'd with so troublesome a Journey, forsok him on the Island Cabagua, which made him return over Hispaniola to Spain, where not long after he dy'd with Grief.

This unsuccessful Expedition of Ordas no way daunted Eteronomo Ortall from prosecuting the same Design; for letting Sail from St. Lucas, Anno 1533, to the Fort which Ordas had taken from Juan Gonzales, he Steer'd from thence over to Cabagua, to fetch some Men, and sent the Lieutenant Alonfe Elterera with five Ketches, carrying two hundred Men, the same way which Ordas had been. Elterera coming to the fore-mention'd Water-falls where Ordas return'd, caus'd his Vessels to be unladden; then Toed them by meet force over the Water-falls, where he discover'd plain Fields without any Inhabitants, extending themselves to the Mouth of the River Meta, where he quitted his Vessels, and with no small trouble got over Morasses and Pools to the fruitful Countries of the Xaguanas, a People both cruel and valiant; whom after a sharp Conflict vanquishing, he became Master of their Village, in which he found plenty of Provisions, as also in another neighboring Town, where his tir'd, and almost starv'd Army began to take Breath, being exceedingly refresh'd with the delicious Meat of a force of wild Dogs, which were here in great abundance. Having spent the Winter Seazon here, they were often set upon by the Caribbeaus, by whole poyn'd Arrows several of them being shot, dy'd Distracted, and amongst the rest Elterera himself; after which his Successor Alvaro Ordas return'd to the Vessels, which were left at the Mouth of the River Meta, from whence he Sail'd back without any other success, the Design being to find out the Golden City Manoa, on the Banks of the great Lake Parina.

Not long after Peter Hernandez de Serpa undertook the same Work with three hundred Spaniards, several Brasilians and Negro's; but before he could reach the River Orinouque, he was destroy'd by the Salvage People Wikiri, eighteen of his Men only escaping to bring the News of this sad Dis aster.

Peter de Orsua following the footsteps of Gonzalez Pizarro, went to seek for Gold in Guiana; but being kill'd by Lopes Agira near the Amazon River, that Expedition also prov'd fruitless.

With the same desire of finding Gold in Guiana, Antonio Berrero went from New Granada thither; but being taken by Sir Walter Raleigh, was interrupted in his Design; however, he gave him an Account of his Adventures, so far as he had gone, viz. That he went to find out a Way along the River Caffacom, between New Granada and
and New Guinea, went from Caffiano to the Stream Meta, and from thence to Orinage, where he was in great danger, by reason of sharp Rocks, over which the Stream flowing, waftes severall Isles; That he spent a whole year before he came to the utmost Borders of Amapia; near which he loft severall of his Barques, and on the Shore, not onely divers Horfes, but alfo many of his Men, who either dy'd of hardhift, or were kille'd by the Natives with poifyonous Arrows, fo that fixty of his Men were kille'd in the Countrey of Amapia, which extends along the River Orinage, besides a great many that dy'd there by drinking the Water, which was full of poifyonous Animals, and glided over a fliny and muddy Ground, which made it thick and troubled: Six Moneths he staid in the Countrey Amapia, where he made Peace with the Inhabitants of Anicas, who gave him ten curious Images of maflie Gold. The River Orinage is about four Leagues broad here, and about feven hundred Miles long, before it fall into the Ocean, and is every where enrich'd with the Waters of many Rivers which fall into it from the North and South; He added moreover, that he endeavor'd to go down Southerly to Gniusa, but was prevented by steep Mountains, and therefore went on Easterly till he came to the Countrey Emeria, where he found a courteous People, and plenty of Provisions; that the Governor of Caripana, being about a hundred years of age, had a long time Convers'd with the Christians on the Islands Trinidad and Margareta, and learn'd a Form of Civil Government; that Sailing down the River Orinage between many Isles lying at the Mouth of the River to Trinidad, and from thence to Margareta, he took fixty Men into his Service; but that he himfelf, being tir'd with fo great a Journey, and staying to refresh himself at Trinidad, fell into the hands of another Party of the English; that before he was taken he fet severall of his Men to Caripana, to find the King of Morequito, who three years before had been with abundance of Gold at Amuna and Margareta, and inform'd a Spaniard call'd Vides so much concerning the Golden Countrey Gniusa, that he obtain'd a Patent at the Spanish Court to difcover Gniusa; but that Vides, jealous that he might be there before him, had not onely incens'd Morequito againft him, but fo in structed him, that he suffer'd his Men to pass through the Countrey to fetch Gold from the City Mania, and as they return'd, fet upon them and flew them on the Borders of Aromaia, together with a Monk that was in their Company, one Man onely escaping; by whom being inform'd of the Murder, he immediately fet divers Soldiers to take Revenge of Morequito, who flying to the Governor Vides, was neverthelesf, upon his demanding him in the King's Name, deliver'd to him; and notwithstanding he proffer'd a great Sum of Money for his Ransom, was cruelly put to Death; but not satisfi'd with that Revenge, he over-run all the Countrey of Aromaia, took Morequito's Uncle, call'd Topiaipari, Prisoner, who bought his Life for a hundred Plates of Gold, and some Precious Stones; That Lifting many Men in Spain for the Gold which he fent thither, he Row'd with Barques up the Rivers Barrosa, Patrons, and Desfqueye, where he barter'd Trifles for Men, Women, and Children, of whom he made great Sums of Money on the Island Margareta.

This Information which Sir Walter Raleigh got from his Prisoner Berrea, made him defirous to make an Expedition to Gniusa; to which purpose he fent Captain George Gifford with a Ketch and a Barque to the River Capuri, where the Water fell before the Veffels could get beyond the Sands in the Mouth of the River.

John Douglas had better Succes, being likewise fent out by Sir Walter Raleigh, for he with his Boats found that Orinage had nine Arms to the North Sea, and even to the South, which embrace divers Isles, of which thofe on the right fide are call'd Pallamos, and thofe on the left, Horetonmoca. The Mouth of the River gapes a hun-
dred Leagues. On the fore-mention'd Iles dwell the Titiricas, a modest People, who speak a bald Language; in the Summer they live under the open Skie upon the bare Earth, and in the Winter (being there between May and September) on the tops of the Trees, because during that time the River Orinoque rising thirty Foot higher, overflows all the Iles therabouts, which are very high and mountainous. But Raleigh himselfe Rowing up the River Amata, endured great hardship, his Men being most of them sweated with the Heat, and great want of Provisions; and had not their Indian Pilot faw'd them another Stream much easier to Navigate, he would have been forc'd to return uselesly; but being forc'd with Provision out of a Village built along the Shore, he chaffed four Canoes, of which he took one, and also an Aruacas, which in fifteen days time brought him into the River Orinoque, where he saw the high Mountains of Guiana; afterwards Anchoring before a fair sandy Bank, which lay near the Mouth of three Rivers; he took abundance of Tortoiles, and was furnish'd with plenty of all sorts of Provisions, sent him from the Governor Toparimaca, who inhabited the pleasant Village Aruowey, built on a little Hill, surrounded with delightful Gardens, and Fields till'd by the Negro's; who accommodating Raleigh with an experienced Pilot, he set Sail with a fresh Easterly Wind, and Weftward saw the Iles Assapana, twenty five Leagues long, and fix broad, and Iwana, of the fame bigness. The River Orinoque hath here thirty Leagues in breadth, and receives the Rivers Arrawpana and Europa: He Sailed next by the Iles Ociwyita and Putayma, opposite to which on the Main Land appears the Mountain Oeope, whose top reacheth the Clouds; on the right side a Plain Country discover'd it fell a vast way, which the Pilot said was call'd the Plain of Sayma; extending Northerly a hundred and twenty Leagues to Cumana and Caracas, inhabited by four sorts of People, viz. the Saymas, Assaways, Wikeries, and Aroras; which left, being a Coal-black People, us'd poiyon'd Arrows. Raleigh passing between the two Mountains Aramo and Do, came to an Anchor near the Island Murcolima, and from thence into the Haven Mareaquita, where the King Topiawari, a hundred and ten years of age, brought all sorts of Fruit, Poultery, Fish and Flesh, and gave him an Account of the Condition of Guiana, viz. That the whole Country from the Mountains Waccarima to Emeria,borne the Name of Guiana, the Inhabitants calling themselves Orinoque Poni, on the other side of the said Mountains lies the spacious Valley Amaroacapana, where the Guionitas reside. Southerly the Oreiones and Epurenes, who coming out of a strange Country, have destroy'd the ancient Inhabitants, leaving only the Aruanvagueri and Casisapagos. The Epurenes built the fately City Maraquara there. But Raleigh going on his Journey saw the Island Caiama, and came to the Mouth of the River Carlos, whose current was not able to steem, wherefore he desir'd Aid from Wanaretora, Governor of Canavia, who furnished him with Provisions, and Men to Toche him up the fore-mention'd Stream; and inform'd him that the River Carlos, which springs out of the Lake Casipa, was inhabited on one side by the Maraawakeri, and the Lake Casipa by three powerful People, viz. the Casisapagos, Epapaggos and Aruowegos, all mortal Enemies to the Spaniards: whereupon Raleigh sent some of his Men thither, who return'd with great hopes of finding rich Gold-Mines. The fore-mention'd Lake also produces the Rivers Asi, Nica, and Caara, near which dwell the Ewaipanoma, who have neither Necks nor Chins, but their Mouthes just upon their Shoulders. Towards the North the River Cari falls into the Orinoque, and on the West the Stream Limo; between both which the Cannibals reside, whose Metropolis call'd Acam仓位 is very famous for their strange way of Trading; for there the Women are brought to Market, and bought by the Aruacas: But because great Showers of Rain fell daily, and the Stream
Stream Caroli glided downwards with extraordinary force, Raleigh return'd to Morequiro; from whence Putina, King of Warapana, conducted him to a rich Golden Mountain in his Country, and along the Rivers Mana, Oiana, and Cunaca, to the place where the Orinoco divides itself into three excellent Streams, the chiefest whereof, call'd Casaropana, washes the Province Emveria, out of whole Mountains the Rivers Waracyari, Corama, Akariri, and Iparran, glide to the Northern Ocean; as also the Atrari, Amacura, Barima, Wana, Moroca, Paroma, and Wyne, all Branches of the River Orinoco: from whence Raleigh return'd home to England.

Not long after he sent Laurence Keymes and Thomas Maffham back to Guiana: Keymes found out all the Rivers between the Amagones and the Orinoco, and Maffham the Stream Wapoco; from whence both return'd without any farther success.

After this the Business lay still for a while, in regard Sir Walter Raleigh being (together with Grey, Cobham, and the Romanish Priests, Watson and Clark) found guilty of High Treason, was condemn'd to die; but being reprieve'd by the King, was kept a Prisoner in the Tower for the space of fourteen years; during which time he wrote a Description of Guiana, which the King perusing, was so well pleas'd with it, especially since he undertook to make out by several Reasons, that England might make it a Matter of divers Gold-Mines there, to which Spain could lay no manner of Claim, that he discharg'd him out of Prison, and permitted him to make a second Expedition: Whereupon with ten Ships, Anno 1617, he set Sail for Guiana again, being to'd and divers Storms, he at last came with five Sail to the River Calliana, where he fell dangerously sick, and therefore sent Captain Keymes with five Sail to the River Orinoco, to conduct the Men to the Gold-Mines; each Ship carrying fifty Men, and the other Captains being Parker, North, Thornap, and Sir Walter Raleigh's Son. The Spaniards having a Garrison at Orinoco, fir'd very fiercely at the English, who suffer'd great damage, and amongst divers others, Captain Raleigh himself was slain, whilest the other five Sail lay near the Island Trinidad, under John Pennington's Command, who daily fear'd the Spanish Fleet. But Keymes found it very difficult to Land in Orinoco, by reason of the Banks along the Shore, which Diego de Palanque from Puerto Rico kept strongly guarded; therefore going to an even Shore with intention to Land, he was so sharply receiv'd by a Body of Spanish Musqueteers, that divers of his Men were mortally wounded; yet breaking in amongst them, he went towards the Gold-Mines, to which the Way led through a Wood where the Spaniards lay in Ambuscade; but he judg'd himself too weak to do any good upon the Mines, one of which belong'd to Peter Rodrigo de Parana, a second to Herriano Frontino, and the third to Franciscó Falshardo: The English also were fearful, by reason of the Spaniards Cruelties, who not long before had flay'd several Merchants alive; so that Keymescontented himself with pillaging and burning the Town St. Thomas, which the Spaniards had defec'd. Soon after which Captain Whitby ran away with a Ship from the Fleet, whilest Keymes return'd back to Raleigh, who laid several things to his Charge concerning the unnecessary ExpenSe and shame of such an unsuccessful Voyage; which so wrought upon Keymes, that he offer'd to lay violent hands on himself in his Cabin. At length Raleigh returning to London, was accus'd by the Spanish Ambassador Guadamor for the burning St. Thomas, urging that his Mafter refell'd it so ill, that he threatened to wage a War with England if Raleigh was not Executed, who notwithstanding he allledge'd, That the Spaniards shew'd the first Acts of Hostility against the English, who only defended themselves; and that St. Thomas was burnt without his knowledge or Order; and that Keymes had not observ'd his Command in the discovering of the Gold-Mines, (which Apologies were generally look'd upon as real Truths) yet the
the King esteeming the Peace with Spain of more value than one Man's Life, without taking notice of Guannmor's Accusations, commanded that the Sentence formerly pass'd on him for Treason should be Executed, and accordingly in the sixtieth year of his Age he was Beheaded, discovering himself, by his Christian Behavior and Profession at his Death, to be a far other kind of Person than what the World had censur'd him to be.

Since this last Expedition of Sir Walter Raleigh, we find not that there hath been any great Reform or Trade unto this Countrey, except by a few Netherland Merchants, who have yearly sent eight or nine Ships to the River Orinoke for Tobacco.

As for the Air or Climate of Guiana, it is very differing, for about the Amazon River, dry Weather begins about August, and the windy and rainy Season about February; but Westward towards Orinoke, the Summer takes beginning in October, and the Winter in April; the Days and Nights are almost of an equal length, and the difference of Heat and Cold is but little.

Burning-Feavers, Dropfe, and the Jumoes, destroy many People here; which last is not unlike the POX, and proceeds from carnal Copulation with the Guanian Women, who are naturally subject to this Disease.

The Inhabitants are divided into several sorts, the chiefest whereof being the Caribbees go naked, covering only their Privities with a Lappet. The Women, though yellow, are very comely; and both Men and Women paint their Bodies with Netto, which grows on little Trees in Cod's: They make Holes through their Noses, Lips and Ears, and hang Glasses, Bells, pieces of Copper, or any other Trifles that they get from the English and Netherlanders, in them: About their Necks, Arms and Legs, they wear Strings of Beads, or Cockle-shells.

Their Houses with low Roofs, serve them only to sleep in the Night upon Cotton Hammocks, for in the day-time they sit under high Arch'd open places, that the Wind may blow full upon them. Their Household stuff consists of Earthen Pots and Dishes neatly painted. They live in Tribes or Families together in a Town, which is Govern'd by the eldest of them; and their Militia is Commanded by one that is able to endure most Stripes with Switches without any shew of pain.

The chiefest of their Families have commonly three or four Wives, whereas others are contented with one. The Men seldom do any toilsome Work, but make their Wives do all, in so much that as soon as a Woman is Deliver'd of a Child, she must immediately go about her usual Employment, whilest her Husband lies lozelling out his Moneth on a Hammock.

Their Language sounds not unpleasantly, but is hard to learn, because many words differ but little in the pronunciation, and yet have quite another signification.

When they march into the Field against their Enemies, then the General sends a Stick to all the Villages under his Jurisdiction, on which are cut so many Notches as there are Days appointed before he intends to set forth, which they cut out again as the Days expire, and on the last they repair to the appointed place.

A not much unlike Custom they observe in all Promises and Bargains, for they give one another as many Sticks as they desire Days to perform the same in, and so throw away every day one, till they have only one remaining, and then they begin to think of performing their Promise or Bargain.

They know no word whereby to express any greater number than Ten; Twenty they express by laying their ten Fingers on their Toes, and all that exceeds Twenty, they compare to the Hairs of their Head, crying onufa awara.
Chap. VIII. A M E R I C A.

Some of the painted Canoos made of the Trunks of Trees, will carry five or six Tuns.

In their Wars they use Bowes, poyson'd Arrows, short Truncheons of Speckled Wood, and Shields full of carv'd Images, and Fight without any Order. They go upon no Design but in the Night, and upon certain advantages. All Women and Children which they take Prisoners, are sold for Slaves, but the Men are cruelly put to death.

There is but little of Religion that can be ascrib'd to these People, only that some shew Reverence to the Sun and Moon, which they believe are both living Creatures; but they make no Offerings to them.

Their Funeral-Feasts for great Persons are strangely kept, viz. all the Men making themselves Drunk with the Liquor Parranora, Dance three or four days one after another, and he that drinks most, and is worst Drunk, gains the greatest Honor, whilst the Women lament and mourn for the Deceafed.

Their Priests, call'd Pecatos, are in great esteem amongst them, because they pretend that they Converfe with the Spirits Wattipa and Tarakin, which the Guianians exceedingly fear, apprehending themselves often beaten black and blue by them.

The Pecatos also profess themselves to be Chirurgeons and Doctors, but if they cure not their Patients, they go in danger of their Lives, unless they speedily get away.

They burn their dead Bodies, together with those things the Deceafed affected most in his Life-time. A Prince or Governor also hath his Slaves put to death at the time when he is burn'd, that they may serve him in the other World.

The Caffavi-Root pres'd, boy'd with Pepper, dry'd and bak'd on hot Stones, serves the Natives for Bread.

Each Grain that is Sow'n here produces in Harvest above fifteen hundred.

Their Corn makes wholesome and well tasted Beer, call'd Paffia, and of their flamp'd Caffavi they make the Liquor Parranona.

In hollow Trees, and Caves under Ground, they find abundance of Honey; and their Vines afford them excellent Grapes twice a year.

No Plant is ever seen here without either Leaf, Blossom, or Fruit, except the European Apple-Tree, which never changes its nature, but blossoms and bears Fruit at the same time of the year as in Europe.

The wild Hogs Pokkiero, whose Navel's grow on their Backs; and the Pango, not unlike our Swine, afford the Inhabitants excellent Food.

Here are also Water-hogs, of a very delicious taste; but because they are very apprehensive, and dive at the least noise, they are seldom taken.

The Woods are full of Baboons and Apes, as also the slothful Beast Ai.

The Hares here, being of a brown Colour, with white Specks, and the red Rabbits, are accounted great Delicacies.

There is no Country in America, which breeds greater Armadillo's than Guiana, some of them weighing eighty Pound.

Here are also Bears, which live on nothing but Pifmires; they have long hairy Tails, with which they cover their Bodies in rainy Weather; they put their Tongues a Foot deep into the Pifmires Nets, and so pulls them out.

The Tygers here are either black, spotted, or red; but the black exceed the other in cruelty, yet are seldom seen near inhabited places; the spotted and red devour abundance of Cartel, but will seldom set upon a Man, especially in the day-time.

The Woods are also full of Land-Turtles, which the Inhabitants take, and keep till they have occasion to make use of their Flesh.
The Eagles that are here with their Claws, Engage with those that go about to take them.

The Catamountains make such an exceeding noise at a certain hour, both in the Night and in the Day, that it is heard two Leagues off.

The Marmozets, a little Beast, biting the Catamountains and Apes in the Ear, forces them to leap from one Tree to another.

The black BeastsQuotto hath a Face like an old Woman, and hanging by the Tail, flys from one Tree to another.

The Cufcary is a brown four-footed Creature, about the bigness of a little Dog, but hath the shape of a Lyon.

Moreover, Guiana produces Teal, Geese, Crains, Phefants, Partridges, Pigeons, Marlins, Snipes, Falcons, Plovers, and Parrots of all sorts, besides many other strange Fowls, amongst which the chiefest are a sort whose Feathers glitter like Scarlet, and walk along in Rank and Fyle like Soldiers.

The Sea produces abundance of Turbots, Soals, Thorntack, yellow Salmon, Sturgeon, Black-fish, Gurnets, Crabs, and Oylers.

Amongst other Fishes, the Cafficorn, which is somewhat bigger than an Eel, is very strange, having two Sights in each Eye, of which it always holds one above, and the other underneath the Water when it swims.

Here are also the great Fishes called Manatis and Nam-ceil, by which if any part of a Man be touch’d, it immediately becomes stiff.

There are likewise divers Vermine, which trouble the Country Guiana, among which are Serpents, of thirty Foot long, that come out of the Water and feed on the Land; they do little hurt, as not being poyzons; but there are many of a lesser size, whose biting is so venomous, that it causes the Flesh of a Man to rot in twenty four hours time; others there are which have forked Tails, and Tusks in the Roof of their Mouthes.

The Crocodile’s here also devour abundance of Cattel.

The Scorpions, which are black, and resemble a Lobster, breed under dry Wood or Corn; their Stings are hid in their Tails, with which if any one be touch’d, he is sure to endure an intolerable pain, but without danger of losing his Life for the present, yet nothing can perfectly cure the same, except the Scorpion kill’d and laid on the Wound.

The Bats here are as big as Pigeons, and they suck the Blood of Men and Beasts so gently, that they seldom perceive the same.

The Pilmires also do great mischief, especially in sandy Grounds; and likewise the Muskoto’s, whose Stings cause painful Swellings, but these most of all trouble them that inhabit near the Sea side on low Lands, inasmuch that the Fisher-men bury themselves in the Night in Sand, leaving only Holes to breathe at.

Frogs and Toads also make a terrible noise here, and especially after Rain.

The Soil is inferior to none in the World, for the production of Sugar; but the general Commodities of the Country are Flax, Cotton, Hemp, the Berry Amoto, which Dyes an excellent Orange colour, another Berry which Dyes a deep Blue, a Tree whose Leaves Dye a Red, and the Wood of another Tree whose Juice Dyest a Purple and Crimson.

Moreover, Guiana produces the Gums Lennia, Baratta, and Carriman, which being black and prickly, smells very pleasantly, and cures the Head-ache, Bruifes, Pains in the Limbs, Gouts, and green Wounds. The same operation hath the Gum Baratta.

Here are also good Senna, Bula Armenius, Cassia-Fistula, Terra-Lemma, the Berry Kelete.
Chap. VIII.  

**AMERICA.**

Kettle, very effectual against the Bloody-flux, the Juice of the Leaf Upee, which cures the Wounds of poiyon'd Arrows, and a sort of somniferous Apples, whereof the leafe bite occasions a deadly Sleep.

There is also a Tree, generally growing about the Houses of the Natives, the Boughs whereof bruised between two Stones, and thrown into the Creeks of deep Water full of Fish, caufe them to swim above Water upon their Backs.

The Letter-Wood, call'd Piracaimutre, turns also to a good account; much more the excellent Stones, Jasper and Porphyry.

Nor are there wanting Gold and Silver-Mines, which doublest would yield great profit, were they open'd.

The Grain of the Countrey grows on Stalks seven Foot long, on the tops whereof hang two Ears full of Kernels as big as Peafl, which ripens in four Moneths.

The Sugar-Canes, being of the bigness of a Man's Arm, and about six Foot long, are at the years end cut off, broken and press'd in a Mill; after which the Juice boyled in Copper Kettles to a certain Subftance, is put into wooden Tunnels, square at the top, and narrow at bottom, with a small Hole, which is open'd as soon as the Sugar is sufficiently hardned, to let out the Syrup; after which it is put into Hogfheads, and to Transported.

The Negro's which are brought from Angola and Guinea, are fo cruelly us'd, that they oftentimes through defpair of destroying themselves.

The whole Countrey of Guinea is by several modern Writers methodically divided into these inferior or leffer Provinces, 1. Rio de las Amazones. 2. Wiapoco, or Guinea, properly so call'd. 3. Orinouque; and 4. The Islands of Guinea.

Rio de las Amazones, or the Countrey of the Amazones, contains all that part of Guinea which lieth on both sides of the River Orellana, of a rich and good Soil, generally, abounding with all sorts of Fruits, and especially with those which the Americans call Totok; and love it extremelie, out of their opinion, they say, that it excites them to Venery, whereunto they are of themselves but too much inflin'd; and another which they call Pita, of a taste far more delicious and pleasing, and not so hurtful as the other. The Countrey was first discover'd by the fore-mention'd Francisco Orellana, a Spaniard from Quito, but it was onely by the River Orellana; and though he be credibly reported to have Sail'd no lefs than eighteen hundred Leagues down the Stream, and to have discover'd a rich and fair Countrey on both sides the River, well peopled with Natives, and giving in divers places no small Arguments of greater Wealth and Riches more within Land; yet such was the bad success of his second Endeavors, and likewise of those that follow'd him, as is evident from what hath been before related, that, as yet, there seems no farther Report to be given, at leaft nor of any thing special, concerning that part of the Countrey.

Wiapoco, or Guinea, properly so call'd, taketh up the middle part of this Province, being divided, as the other, almost into two equal parts, by the River Wiapoco, which runs through the middle of it. The Countrey on both sides of the River is very rich and fertile, and so naturally apt, both for Sugar-Canes, Cotton-Wooll, and Tobacco, that they are said to grow here (all of them very good) without Planting, or any art of Husbandry. In this Countrey likewise should be the famous Dorada, as the Spaniards call it, or City of Gold (if it could be found) with the reports and hopes whereof some of our own Nation seem to have been not a little poiffes'd as well as the Spaniards: nor can we much blame them; for if the Stories of it had prov'd true, it must have been one of the goodliest and fairest Cities in the World (not to speke of the Wealth.) *Diego de Ordas,* the Spaniard of whom we have lately
lately had occasion to make frequent mention of, being reported by some to have
travell'd one whole day, and half another in it, before he could arrive at the King's
Palace; which yet must be suppose'd to have stood but in the midst of the City.
Places of its Magnificence, but more Certainty; are 1. Carips, which was once a
Colony of English, settled there by Captain Robert Harcourt, Anno 1608. upon the
Banks of Wapoco, and not far from the Mouth of it; being a place, by the advan-
tage of a Rock, which it hath on the one side of it, of great Strength and very dif-
ficult access; the Air about it sound, and said to be very agreeable to English Bodies.
2. Gomarinbo, a Colony formerly of the Dutch, on the North, West side of the Bay of
Wapoco, but since deferted by them. 3. Woyemun. 4. Crewingey, both of them Towns
of the Natives, not far distant from the other.

Orinoque, or the third Division of this Province, comprehendeth the most Nor-
therly parts of Guiana, lying upon, or towards the Banks of this famous River: a
Countrey like-wise reported to be very rich, and comparable to Peru it self for hid-
ten Treasure, which, they say, is not yet discover'd, onely for want of diligent and
industrious searching. The Places in it already known are onely 1. Conolaba, as
they call it, which seems to be some Town of the Natives, lying a few Leagues di-
istant from the Orinoque, towards the South. 2. Morequis, a known Port or Haven-
Town upon a Branch of the Orinoque, much frequented, and of great use to the Eng-
lishe when they discover'd these Coasts. 3. Wencespura: and 4. St. Thomas, the onely
Town which the Spaniards hold upon this part of the Continent, situate upon the
principal Channel of the Orinoque, and consisting of two hundred Families; or there-
abouts: It is now a strong Place, and was taken by Sir Walter Raleigh, in that
unfortunate Action of 1617. above related more at large.

The Islands that belong to, and are commonly reckon'd as parts of Guiana, are
either such as lie scatter'd about the Shore of the Province, or such as are found at
the Mouth, and sometime far within the Channel of those great Rivers, which em-
pty themselves at several parts of this Countrey into the Sea, viz. Orinoque, Wapoco,
Rio de las Amazones, &c. There are many of them, but of any great name or esteem,
onely two, viz. Trinidad and Tabago, the Description whereof we shall here omit,
as having already taken notice of them amongst the Sotaventi and Caribbee Islands.

Chap. IX.

Paria, or New Andalusia.

Westward of Guiana lieth the Countrey of Paria, so call'd from its chief
River; It hath also the Denomination of New Andalusia, but for
what resemblance with Andalusia of Old Spain, they do not tell us.

This Countrey lying as it doth, brings us back again by the Eastern Coast to
the Isthmus or Strait, which, as we have often said, joyns the two parts of the Con-
tinent of America together, at least to those Countreys that lie next upon it to the
South, viz. the Kingdom of Granada, &c. It hath on the East Guiana, and those
Islands which lie about the Mouth of Orinoque; on the West, the Gulf or Bay of
Venezuela, with some part of the new Kingdom above said; on the North it is
washed with the Atlantic Ocean, and on the South hath some Countreys yet un-
discover'd, toward the Andes. The whole consisteth partly of Continent, and
partly
partly of Islands near adjoyning to it, and is commonly divided into five several Precincts or Parts, which are. 1. Cumana. 2. Venezuela, being upon the Continent. 3. Margarita. 4. Cabagua, two Islands above-mention’d, famous for Pearl-fishing; and lastly, some islet Islands.

Sect. II.

Cumana.

Cumana is bounded Eastward with the Gulf of Paria and the River Orinoko; on the West, with Venezuela; Northward it hath the Atlantic; and on the South, those undiscover’d Countreys above mention’d, extending along the Northern Ocean, over against Margarita, two hundred Leagues or more, as some say, in length, and not much less than a hundred in breadth.

The Coast of this Country, as well as of the Islands Margarita and Cabagua, hath formerly been much fam’d for the rich Trade of Pearls and Pearl-fishing; which failing, its principal esteem now is for an excellent Vein of Salt, which they dig here as out of a Mine, and gather it naturally made ready to their Hands, not half a Mile from the Sea side, on the back side of the Promontory or Cape, by some call’d Punto de Araya, and by others for this reason Cape de Salinas.

Places of chiefest consideration here, are 1. Cumana itself, a Colony of Spaniards seated on the Banks of a little River two Miles distant from the Sea, where it hath a good Harbor.

2. St. Jago, a very strong Fortreß, which the Spaniards of late years have built, for the defence and security of the Salt-works against the Dutch, who began to Trade much that way, and in the Year 1622. had a Design to have made themselves Masters of the Place.

3. St. Michael de Nayeri, another Fortreß of theirs, standing upon a River bearing the same Name.

4. Guaniba, a Town of the Natives.

This Countrey of Cumana, being generally infested with terrible Crocodiles, hath a large Inlet call’d Carico, which flows fourteen Leagues into the Countrey.

The Men of this Countrey wear Cotton Cloaks, and anointing their Bodies with Gum, stick the same full of Feathers.

When they go to Wars, or to a general Fear, then they have their Hair off above their Ears, pull out their Beards, and black their Teeth with a certain Herb.

Their Princes and Grandees take as many Wives as they please, and give to those of their Guests whom they intend most to oblige, their choice of the fairest of them to lie with.

Whoring is accounted no Shame, except amongst Marry’d Women, who generally live very Chaste, unless their Husbands consent to their Adultery.

The Women also Hunt, Fish, Shoot, and Swim, and are diligent in Tilling their Lands, and other Household Affairs. Most of them have fore Eyes, occasion’d not so much (as some wrongfully suppose) by their drinking of the Water out of the Stream Cumana, but proceeding rather from their unwholesom Food, as Spiders, and the like.

Amongst the several sorts of Trees that grow here, there are some that yield a white well scented Gum, or delicious Juice like Milk, and produce a Fruit not unlike a Mulberry, which may be boil’d to an excellent Syrup; the Wood also strikes Fire: There are others, whose Timber is good for Shipping.
The Soil also produces Cofita-Fihlal, Roses, and other strong smelling Flowers and Herbs.

For Beasts, besides Lyons, Tygers, and wild Hogs, there are several strange kinds here, as the Lappa, which is bigger than an Alfa, having flabby and black Hair; it runs away from Mankind, but devours whatsoever else it meets with.

The Aracata, which hath a Goats Beard, and is of the bigness of a Greyhound; it howls very dreadfully, and feeds on Fruits.

The wild Cats which breed here, leap, though great with Young, from one Tree to another.

In the Evening a Beast like a lean Dog comes to their Huts, cries like a Child, and devours all those it meets abroad; wherefore every one that goes out in the Night carries a lighted Stick with him, for this Beast dreads the sight of Fire.

The Trees give Harbor to great numbers of Parrots, and other fine Feather'd Birds.

The Bats here are very large and hurtful, sucking the Blood from Men and Beasts.

The Mufchet's also do very much plague and vex the Inhabitants.

The Spiders, much bigger than those of Europe, and of divers colours, make very strong Cobwebs.

Along the Sea-Coasts, and in the Rivers is plenty of delicious Fish.

Anno 1513. two Dominican Fryers went over from Terra Firme to Cumana, where the Natives kindly Entertain'd them, till a Spanish Ship Anchoring there for the Pearl-Trade, carry'd away by violence the Governor and seventeen of his Servants, whereupon the Natives threatned, that unless their Lord was restor'd, they would put the two Dominicans to death; the Spaniards promising restauration of him in four Moneths time, inform'd the Council at Hispaniola of it, who not confenting to his Releasement, the two Monks were, according the former threatning, presently put to death. Yet after this the Francifesians and Dominicans built each of them a Cloyster in the Province of Chiribichi, where they kept friendly Correspondence with the Cumana's, till Anno 1520. when Alonso de Ojeda coming to an Anchor before Maracapan, under pretence of bartering Maiz for Spanish Goods with the Tagaraz, who came about fifty from the Mountains on which they liv'd, being three Leagues up in the Country, and brought Maiz down to the Shore, the Spaniards took thirty six of them Prisoners, and kill'd or wounded the rest: Whereupon the Governour Gonzales being complain'd unto by the neighboring Prince Maraguy, and his assistance desir'd in taking Revenge of the Dominicans and Francifesians, who had urg'd and persuad'd Ojeda to the fore-mention'd Act, Gonzales hereupon made an Agreement with Maraguy, that he should destroy the Monks, while left he himself would kill Ojeda, which they accordingly perform'd. The Council in St. Domingo inform'd herof, immediately sent three Ships, Mann'd with three hundred Men, under the Command of Gonzalo de Ocampo, who Anchoring in the Haven of Maracapan, feign'd as if he came newly from Spain, and that he knew nothing of the Business between Ojeda and Gonzales, that so he might entice the Natives into his Ship, and accordingly when divers of them came aboard, the Armed Spaniards start't from under the Decks, and hung them up at their Yard-arms, burnt the Village Maracapan, and ruin'd the Country far and near with Fire and Sword.

Ocampo also built the Town Toledo, about half a League farther into the Country, where the Bishop Bartolomew de las Cofas, making his Visitation, commanded Ocampo to forbear his cruelty against the Natives, he having daily either burnt, hang'd, beheaded, or made Slaves of some or other of them. Cofas also caus'd a
little Fort to be built at the Mouth of the River Cumana, to be near to prevent the inhumane Murders and Oppressions committed by his Countrie-men; but because the Inhabitants of Cabagua besev'rd him of his chief Builder, his Fort was left half unfinish'd; wherefore Cajaf leaving the Command of this Countrie to Francisco de Soto, went back to Espaniola, where in St. Domingo he made his Complaints to the High Court of Justice of the Spaniards Cruelties; but being little regarded, he went into the Dominicans Cloyster, till he was call'd out and made Bishop of Chiapa. Mean while Soto, contrary to Cajaf's order, had fitted out two Ships to Trade along the Coast of Paria; but the Expedition prov'd very unsuccessful, for he and all his Men were destroy'd by the Natives; not without just reason, for the Spaniards (according to the Relation of Cajaf from an Eye-witnes) destroy'd this Countrie after such a manner, that a Ship Sail'd between Lucago and Espaniola sixty Leagues without any Compaefs, finding the Way only by the floating of dead Bodies, thrown out of the Spanish Ships. Moreover, the Prisoners fainting, were set a'board on Espaniola, and divided into Companies, each Company consistifg of twenty; Parents separated from their Children, and Husbands from their Wives, and Lots cast for them: those that had either sick, decrepit, or old People fall to their share, us'd to cry (as Cajaf testifies he hath often heard,) What do I do with this sick, decrepifd old Dog? give him to the Devil; I will not put my felf to the trouble to kill and bury him.

But Soto's Death was not left unreveng'd; for not long after Jacob Castellan setting Sail from St. Domingo, left several Companies on Cabagua, to re-build the Town Cadiz, and rais'd a Fort at the Mouth of Cumana, which hath ever since been kept by the Spaniards, who made great slaughter amongft the Natives.

E X A M P L E

Heronymo Ortall Sailing up the Stream Negeri, sent his Lieutenant Augustine Delgado through the populous Provinces Guacharuno and Parimatuou to the River Unare, where, not without a sharp Conflic, he took abundance of Provisions in a Village. In the mean time Ortall travell'd to Meta, acting inhumane Cruelties all the way; but approaching Guiana (where Delgado was kill'd) he was deferted by his mutinous Men, who ran over to Nicholas Federman; so that he was forc'd to return back to the new Fort Miguel de Nevérì, and from thence to St. Domingo with ten Soldiers, fearing that Antonio Sedeno (who judg'd himself wrong'd by Ortall, because Cumana belonged to his Lordship) would fall upon him.

Sedeno being five hundred Men strong discover'd the Sea-Coff all along to Paiguearo; where Setting himfelf, he regarded no Discipline; which the Natives oberving, kill'd many a Spaniard, and others the Tygers also devour'd, especially in the Night, they being forc'd to keep lighted Fires about them against the wild Beasts.

About the beginning of the Year 1537. Sedeno travell'd to the Countrie Anapuja and Oroconay, to the Province Coinguracy, where the Inhabitants defended themselves very valiantly in a wooden Fort, before which many Spaniards were kill'd with pofton'd Arrows, and those who were not mortally wounded, had no way to escape but by burning the Poyfon out with hot Irons; yet at last the Defendants were forc'd to flye with their Wives and Children up to the Mountains, overgrown with Brambles. Sedeno marching through barren Fields, and over troublesome Rivers, came to the mountaineus Countrie Cataperaro, where he found abundance of Mus; and some little pieces of Gold, and was advance'd about a League and a half in Cumana, when dying, he made room for his Successor Juan Fernandez, who surviv'd him not long; yet the Expedition was not left unprosecuted: for Sedeno's Men, after the Deceale of him and Fernandez, went farther, and discover'd a low
Land, which in the Winter being overflow'd, forc'd the Inhabitants to remove to the Mountains: But at last the Spaniards, being weary with travelling, fell out amongst themselves, and dividing into several Parties, went several ways, some to Venezuela, others to Maracapana, and the rest to Cubagua.

Sect. III.

Venezuela.

The principal part of the Province of Venezuela is border'd on the East with Cumana; on the West, with a great Gulf or Bay, call'd The Bay of Venezuela, with the Lake Maracabo, and some part of New Granada; Northward it hath the Ocean, or Atlantick Sea; Southward, some undiscover'd Countries, which, as we said, lie between the Andes and it. It stretches out in length from East to West, a hundred and thirty Leagues, or thereabouts, but in breadth little more than half so much; it was nam'd Venezuela, or Little Venice, by Alfonso de Ojeda, a Spaniard, who at his first discovery of the Country fell upon a Town of the Natives, which rood like another Venice, all upon the Water, and having no passage to it but by Boats. It is a Country extraordinary rich in all sorts of Commodities, affords good Pasture for Cattle, and abundance of fair Herds of them, Oxen, Sheep, Swine, &c. plenty of Corn, and other Grain, great Store of Venison in the Woods, of Fish in the Rivers, Gold in the Mines, and therefore not likely but to be well peopled and inhabited, especially by the Spaniards, whose Towns and Places of chief importance are these, 1. Venezuela, at the most Westerly Confinies of the Country, built upon the Sea, with the advantage of a double Haven, in a temperate and good Air, and the Soil round about it the best in the whole Province: It is now a Bishop's See, who is Suffragan to the Arch-bishop in Hispaniola, and the ordinary Residence of the Governor.

2. CaraValleda, call'd by the Spaniards, Nuestra Senhora de CaraValleda, fourscore Leagues distant from Venezuela towards the East, upon the Sea.

3. St. Jago de Leon, in the Country of Caracas, four or five Leagues Southward of CaraValleda, and six or seven distant from the Sea.

5. New Xeres, a Town but lately built, fifteen Leagues Southward of New Valentia.

6. New Segovia, but one League distant from Xeres.

7. Tucuyo, a Place well known and frequented, for the abundance of Sugar that is made there, and in the Country round about it.

8. Truxillo, or our Lady de la Paz, eighteen Leagues Southward of the Lake Maracabo, a Place of great refor, and much frequented for Trade both by Spaniards and Natives.

9. Laguna, a Town lying more towards the bottom of the Lake, said to be much haunted with Tygers; and more than this, not much is said of it.

According to the ancient Division of the Natives, this Province contains the Countreys Curiana, Cuyas, Caracas, Bariquicueto, Tucuyo, and Carora; in which there are estimated to be about a thousand Inhabitants that pay Taxes; which Charge, according to a Law made at the Spanish Court, all Men above fifty, and Youth under eighteen, are freed from: yet this Country had formerly much more People, great numbers of them being destroy'd by the Germans, Anno 1529, for the Bishop Bartholomeus de las Casas relates, That above fifty hundred thousand of
of the Inhabitants were kill'd by them; nay, they rooted out whole Countreys, notwithstanding the Natives were ready to Entertain them with all Civility imaginable; the Particulars of the Story are as followeth:

When the Emperor Charles the Fifth Marry'd with Isabella, Daughter to the King of Portugal, Anno 1526. the Welfares, being Dutch Gentlemen in Angsburg, made an Agreement with him for a Sum of Money, to Conquer Venezuela; whether they sent Ambrasius Alfinger, and Bartholomews Saglar, with four hundred Foot and eighty Horse: These Forces Landing at Venezuela, drove away Juan de Ampuenes, who Sailing from St. Domingo thither, had discov'red the Coaft along Coriana, and already made an Agreement with a mighty Prince of that Country, call'd Manaure. But Alfinger Marching to the Lake Maracabo, destroy'd all the Inhabitants of the Country Axaguas, though they came to meet him Dancing, with rich Presents of Gold; which he not regarding, kill'd them, drove some into a House, and there cut them in pieces, and burnt those that were got upon the Roof. From hence going towards the Pocahutes, who dwell on the West side of Maracabo, amongst high Mountains, was he entertain'd by them a considerable time very courteously, and present'd with rich Gifts, for which at his departure he fluit up both Men, Women, and Children, into a high Wall'd Park, where they were all to perifh, if they did not every one pay a certain quantity of Gold to be releas'd, which not being able to raise, they all dy'd for want of Food. After the same manner he dealt with the neighboring People Alcoholados, of whom he got much Gold, but not without unheard of Cruelties; for he burnt all their Villages and Houfes, ruin'd the Country with Fire and Sword from Thamaque to the River Lebrixa, carry'd away many of the Natives coupl'd together with Chains about their Necks, and each of them loaded with at least a hundred pound weight of pillag'd Goods; and as soon as any of them began to faint under their Burthen's for want of refreshment, their Heads were immediately cut off. But Alfinger coming to certain cold Mountains, was receiv'd by a valiant People, in which Conflict he receiv'd a Wound, of which he dy'd at his return to Coro, Anno 1532. Upon which the Welfares sent John Aleman to succed him; but he also dying, made place for George de Espoire, and Nicholas Federman, of which two Espoire, being the chief, spent three years in ranging up and down the Country, without any remarkable Transactions, being continually at variance with his Lieutenant Federman.

The afore-mention'd City Venezuela, otherwise call'd Coro, and by the Natives Corana, was Anno 1539. taken and burn't by the English.

Northward from the City, the Promontory St. Roman, in the Province of Paragaona, runs into the Sea, opposite to the Islands Aruba and Qvaraco.

The Country Paragaona is low and full of Venison; out of the middle of it rises a high Mountain, the Inhabitants whereof are very hobitable and courteous.

The Lyons that breed in this Country run away from Men; but on the contrary, the Tygers are exceeding cruel.

From Coro there leads a Way up into the Country over the Mountain Xingazaeras, to the Province Bariquicemto.

Between both these Provinces very fruitful Valleys, which produce Mex in great abundance, are surrounded by woody Mountains, inhabited by Man-eaters, call'd Axaguas.

Anno 1552. Juan de Villegas discovering the Province Tucuyo, he found several rich Gold-Mines near the Mountain Pedro, out of which springs the River Buria. Near this place he built the Town Segovia, which, by reason of the unwholfoam Air, was soon after transplanted, and built on the Shore of the River Bariquicemto, so call'd because...
because the Water when touch'd, turns to an Ash-colour. The Plain Countrey round about would be intolerable hot, did not the cool Winds that blow from the Mountains temper the same.

The Natives divided into Tribes that understand not one another, live on Calli-bathers, Deers-flies, Rabbits, and the Juice of the Cosy. In the Rivers Flacartagua and Boraute, they throw the flamp'd Root Barbofa, which causes the Fish to appear above the Water, and suffer themselves to be caught with the Hand.

In the Summer they all store themselves with Venison, which they catch after this manner: They set the dry Buffes and Brambles on fire, which makes the wild Hogs, Goats, Deer, Armadillo's, Tygers, the great Serpents Bobas, and other wild Creatures, to leap forth from their Holes and Receoptacles to flium the fame, whileft the Hunters flanding ready with their Bowes and Arrows, seldom miss one of them.

In the hollow Trees near the Rivers, the Bees make abundance of Honey for them.

Most of the Rivers here fall into the Stream Huriapari, which glides from the Peruvian Mountains to the Northern Ocean.

The Province Chiosa produces plenty of Gold.

The Natives about Segovia go naked, are very ignorant, and much addicted to Drunkenness; in which humor they kill one another: They live without care, feeding on Roots till their Maiz is ripe, which in some places comes to its full maturity in forty days time, and in others in three Moneths.

Close by Segovia glides the Rivulet Clara, whose clear Water goes but a small Course from its Fountain Head, before it links into the Ground; in the Summer it is very high, and in the Winter almost deftitute of Water.

This Countrey breeds all sorts of Fowls, but especially Quails and Turtle-Doves.

Cattel, Sheep, Goats and Hogs, increafe wonderfully here, insomuch that many of them are driven to be sold at New Granada.

The Cotton-Clothes that are woven here, also turn to a good account.

From Segovia runs a Way through a Valley twelve Leagues long, to the Town Tucuyo, which stands low, but in a healthful Climate, and surrounded with Mountains.

The Countrey hereabouts produces plenty of Corn, Pot-herbs, Sugar, and Cotton; and feeds Oxen, Cows, Horses, Sheep, Deer, and Goats, to which the Tygers and Lyons do great mischief. Here are Gold-Mines, but they are not open'd by reason of the great want of Men.

There is likewise plenty of the Begoar-Stones to be had here.

The Cuycas, in whose Countrey stands the Town Truxillo, are a valiant, but very cruel People.

The Lake Maracabo, running forty Leagues up into the Countrey, is ten Leagues broad, Ebbs and Flows, and feeds the great Fish Manati.

Westward dwell the Pecabuyes, and Alcobolados, both quiet and rich People.

The Province Xurunara lies towards the South behind high Mountains, inhabited by the valiant Cormochus; and towards the North from Xurunara, the Bobores, hard by the City Merida; the Countrey about which is unhealthful and Mortally, and the Inhabitants exceedingly plagiu'd by the Moschito's.

The Haven Maracapan is the best in Venezuela, and lies in the Eastern part of the Province,
Province, where the Mountains are inhabited by the wild Chingatos, who kill and eat all the Spaniards they can get.

The other Havens Westward, not comparable to Maracapana, are Fletchado, Sardinia, and Burbarana, where some Spanish Families have a Salt-Pit.

Six Leagues up in the Country you come to the fresh Lake Tocarigua, full of little inhabited Isles; the People thereof live quietly, and barter Gold.

Towards the North-West the Ocean makes the great Inlet Trifle, before which lies the Island Bonaire, very full of Cattel, and on each side appear the Aves and Quaraco, which abound with Fowl.

The Promontory St. Raman runs twenty Leagues into the Sea, and the Cape Coquibocoa extends farther. Between both these runs the Channel of Venezuela, which touches the Lake Maracaparo.

Before Coquibocoa are seen the four low Islands Monjes, with white sandy Creeks, and full of Trees: out of the middlemost rises a high Mountain.

On the Main Continent also the Mountains De Azteco appear with raggy tops beyond the Point: And the Bay Honda affords a safe Road.

The Cape De la Vela hath on one side the Inlet Portete, and on the other, the Villages Rancheria and Nostra Senhora de los Remedios; between both which runs the Stream La Hacha.

The German Commander, Nicholas Federman, intended to have built a City on Cape Vela, Anno 1555. but finding the Ground too low and unfruitful, the Pearls hereabouts very small, and the Natives living only on Fish and wild Herbs, he chang'd his Resolution.

The Islands Margarita, Cubagua, and Coche.

Notwithstanding we have already spoken something of the Islands Margarita, and Cubagua, in regard they are by some reckon'd amongst the Isles of Northern America; yet because they are by many accounted to make up a part of the Division of New Andalusia, we shall add in this place what we have found most worthy of Remention, though much to the same purpose as before.

The Island Margarita, discover'd by Christopher Columbus, Anno 1498. contains thirty two Leagues in circumference, hath many Woods and Pastures, yet little fresh Water. To the Eastward of it lie the Cliffs Tejigos, where it is very mountainous, as also on the East. Round about the same are delicious Fish, without which the Natives could not live, because the brackish Soil produces but little Provision.

The chiefest thing for which this Island Margarita is famous, is the Pearl-Fishing, for which in times past a great Trade was driven, though of late it is come to little or nothing. The Spaniards, with inhumane cruelty, taught the Negro's to Dive for the Pearls, for those that were not nimble or dextrous enough, they beat unmercifully, drop scal'd Wax or scal'd Oyl upon them, or higmatiz'd them with hot Irons. The Pearl-Banks were cover'd with five, six, seven, or eight Fathom Water; from whence the Negro's pull'd the Oysters with such force, that the Blood gush'd out of their Mouths and Noses when they came above Water to breath; after which, to refresh them, they receiv'd a Glass of Wine and a Pipe of Tobacco. The Spanish Kisy receiv'd a fifth part of the best Pearls that were taken here; but whether the Oysters have forfaken this Place, or their
their growth hinder'd by often Filling for them, we know not, but however it is, few Pearls are found here of late years, which makes Margaretta to be more and more deferted.

Between the Main Continent of Paria lie the Islands Cabagua and Cocob the first whereof hath an unfruitful and sultry Soil, without either Trees, Birds, and four-footed Beasts, except Puck-Wood, Sea-Fowls, or Parrots; and Caflilian Hogs being carry'd thither, change their Nature strangely, for in a short time their Claws grow long and crooked.

The King of Spain us'd formerly to receive fifteen thousand Ducats yearly for his fifth part of the Pearls that were taken; which Gain invited many thither, who built the Town Nova Cadiz on Cabagua in the Year 1531. but when the Aragans demolish'd the Monks Cloyster on Paria, the Spaniards, being three hundred in number, fled from Nova Cadiz to Hispaniola, where the High Court, displease'd at their cowardly deserting the Place, gave them but cool Entertainment, and sent five Ships under the Command of Jacomo de Castellan to Cabagua, to build new Store-houses in Nova Cadiz, which was afterwards re-inhabited; but when the Pearl-Fishing ceas'd, the Island and Town was at once deferted.

Opposite to Margaretta lies the Promontory Araya, behind which lies aSalt Lake, in which is found abundance of Salt, not onely above, but under the Water; with which the English, Spanish, and Dutch Ships are freighted.

Ifaac du Verne describes the Salt-pan's on Araya thus: "Round about the same (iaith he) the Ground is craggly, barren, and of a brackish taste, and destitute of fresh Water, which is therefore fetch'd three Leagues farther out of a Brook, flowing from the Mountain Bordones into the Bay of Comena; likewise all manner of Provisions are brought from other Parts. Westward from the Point Araya there is a convenient Harbor where the Ships take in their Salt. Three hundred Paces from the Shore lies a great Salt-pan, where the Salt being first beat in pieces, is carry'd in Wheel-barrows to the Ships. The little Salt-pan produces less Salt, and lies alio out of the way, which makes few Ships take in their Lading from thence.

The Country is every where overgrown with Brambles and Buffles, in which breed Tygers and very poyslous Serpents. There are likewise abundance of Stags, Bucks, Hares, and Coney's, besides other strange Beasts.

Till Ann: 1605, the Netherlands came hither unmolested for Salt, when eight Spanish Gallions falling unawares upon them, strangely misus'd their Seamen; but afterwards the United Netherlands having made an Agreement with Spain for a certain time, renew'd their Trade to Araya, till the King of Spain, having for the better security of the Place, built the Fort St. Jago, which Commanded the great Salt-pan, forbade the Netherlands from lading any more Salt; who thereupon Storm'd the Fort, though to their cost, for severall of them were kill'd, and the rest return'd home empty.

S E C T. V.

Of the Islands of Southern America.

The chiefest Islands of note in the Southern part of America, that is to say, those that lie remote from the Continent in Mare del Zurr, are Los Ladrones, and the Islands Fernandelinas; for the rest being, as we may call them, Mediterranean Islands, fall naturally under the Description of the Continent.
Chap. IX. \ AMERI CA. 629

1. Las Ladrones, in English, The Islands of Thieves, lie as it were in the mid-way betwixt the Main Land of America and the Philippine Islands, but some hundreds of Leagues distant from either, in the fourth Degree of Northern Latitude; so nam’d by Ferdinand Magellan, from the pilfering disposition he observ’d in the Natives, when he Sail’d that way for the Molucca Islands. They were a nimble and active sort of People, yet light-finger’d, tall of stature, and going for the most part naked, excellent Swimmers and Divers, and have not much more to be said in their commendation.

2. The Fernandine are onely two Islands of no great bigness, lying over against the Coast of Chile, in the three and thirtieth Degree of Southern Latitude, and about a hundred Leagues, or three hundred English Miles from the Continent, yet well stor’d with some lesser sorts of Cattel, as Goats, &c. good plenty likewise of Venison in the Woods, and Fishe upon the Coasts; for which reason, though lying at some distance, yet are they not a little frequented by the Spaniards of Peru, who find many good Harbors and Roads for Shipping belonging to, and about these Islands.
An Appendix,
CONTAINING
Partly a farther prosecution of the Descriptions of some Provinces already treated of in the foregoing Book, partly an Account of some other Discoveries than what have hitherto been deliver'd in any Description of the \( \mathcal{N} E W \ W O R L D \).

CHAP. I.
Rio de la Plata.

He River *De la Plata*, by the Natives call'd *Paranaguazu*, is next to the River of the *Amazons*, the greatest in the World, and falls into the Northern Ocean between the Capes *Antonio* and *Maria*, lying thirty Leagues one from another: It receives from East and West divers Rivers as far as the Lake *Xarayt*, lying three hundred Leagues up in the Country from the Mouth of *La Plata*. Also into the forementioned Lake fall several Streams, which spring out of the Peruvian Mountains *Andes*.

The first that Sail'd into this great River, *Anno 1515*, to an Island lying in the middle of it, was *John Dias de Solis*, who rashly going ashore, was kill'd and eaten, together with several Portuguese.

Eleven years after this Accident, *Sebastian Gabottus* set Sail from Spain to go to the Spicy Islands through the Straights of *Magellan*, but was forc'd, for want of Provisions, and the unwillingness of his Seamen, to put into the River *La Plata*; in which being advanced thirty Leagues, he Anchor'd near an Island, which he call'd *St. Gabriel*: from whence going seven farther, he discover'd a Stream which fell into *La Plata*. This River he call'd *St. Salvador*, and cast up a Fort at the Mouth of it, where an Inlet afforded a convenient Harbor for Shipping; he found the River *La Plata* to be generally ten Leagues broad, and full of Isles; and to the Westward of it, the River *Zaracarana*, inhabited on the South side by a subtle People call'd *Diagnitas*. At the place where *Zaracarana* disembogues into *La Plata* he built a Castle, and calling the same *Castello di Santo Spirito*, went up farther, leaving on the West side the People *Tenantes*, *Megaretas*, *Mepenes*, and *Aigais*: to the Eastward, the *Quilocas* and *Santana*, and struck up out of the River *La Plata*, North-East into
the Stream Parana, in which he had gone two hundred Leagues, and pas'd by many isles, when he went out of the same into the Stream Paraguay; where being set upon by the Countrey People, who were busy in Tilling the Ground, he left so many of his Men, that he was for'd, without any farther Exploit, to return with the Portuguese Pilot, Diego Garcia, who Sailing up the same River, had met with Cabotus in Pari; and because both had gotten some Silver, they call'd the River, from that Metal, De la Plata. The farther Discovery whereto lay neglected nine years, when Peter Mendoza Sailing with eleven Ships, carrying eight hundred Men, to the Island Gabriel, built the Fort Buenos Ayres, on the South side of it, where many People dying of Hunger, little was done.

Avares Cabeza not long after following Mendoza's footsteps, discover'd and peopled the Province Rio de la Plata. The Mouth of the River La Plata Laurence Bikker describes thus:

"Beyond the Cape Santa Maria (saith he) lies the flat Island Cartillo, having scarce a Tree upon it; but on the North side a Rock, not unlike a decay'd Caffle; to the Southward of which appear two other Cliffs; directly before the Mouth lies the ftonic Island De Lobos, on which nothing is to be found but Sea-Wolves; towards the Eaf t a ftonic Bank runs a good way into the River, known by the breaking of the Water upon the fame.

The Promontory Maria is low and barren, but within the same the Land rises high before the Illes Flores and Maldonado, which left hath a good sandy Shore, Harbor, and fresh Water between the Rocks; but Flores rising with two Hills, produces nothing but Brambles.

The Stream Solo also discharges its Waters in La Plata, near the Place where the Mountain Serado lies.

The left Shore of La Plata begins at the Promontory Antonio, and is cut through by the Rivers Ortis and Los Santos, where the Town Buenos Ayres is built on a smooth Shore.

Martin del Barco proceeding in the Description of La Plata, saith that it is dangerous, by reason of the many Shelves that are in the same. The Illes in the River are as followeth: those that bear the Name of St. Gabriel are five in number; Garcia Isle is full of Trees, and for its fertility was peopled by Peter de Mendoza, and afterwards by Juan Ortiz, Carate. But less fruitful are the Illes De Legaro, where the River Vrayg unites with La Plata, being before full'd with the Waters of Salvador, which receives the black Stream Negro, which gliding lowly from Moraffes, is very full of Fish. Moreover, La Plata hath eleven Arms, each very deep and full of Illes, inhabited by the Guaranimi.

About a hundred Leagues farther the Cheraandies have settled themselves on pleasant Illes, lying not far from the City St. Fe, built on the Point which makes the River Bermeio, where it falls into La Plata.

Farther up lies the Province Ana, partly well inhabited for its fertility, and partly overflow'd.

Next appears the Rock Pennapobre, and not far from the Town Guagca, La Plata falls very high from the Rocks.

But as concerning the Natives of this Countrey, it is inhabited by divers forts of People, differing from one another both in Customs and Language. On the South side of the fore-mention'd River, from the Promontory Antonio to Buenos Ayres, dwell the Querandies, a stout, but cruel People, who with the Fleth of many a Spaniard oftentimes keep a merry Feast. Farther into the Countrey run the furies and Diagnatas. Along La Plata lie also scattered the Tenbues, a civil People, who live by
by Fishing. Near the River Paraguay the Ameguates observe the same manner of Life; but the Caroeres keep Cattel, and Till their Lands. A hundred Leagues farther dwell the Payaguazes; and yet farther into the Countrey the Chames and Caroeres possess much Gold and Silver, with which Juan d’Ayola having enrich’d himself here; was destroyed with all his Men by the Chames, Anno 1541.

Alvaro Nunnez Cabaca came from Spain to be Governor here, but was not able, by reason of contrary Winds and Tydes to reach La Plata; wherefore Landing at the River Itabuc, and spending nine days in cutting a Way through thick Brambles, he came to the Jurisdiction of Armiriri, and a days Journey farther to Gipayy; and not long after to Tocanguzir, where the Guaranes, who are the Natives, have two Harvests every year of Maiz and Caffavi, and breed and keep Geese, Hens and Porrrots in their Houfes: They are Man-eaters, and very revengeful. Cabaca having given this Countrey the Name of Vera, he proceeded on his Journey over the Rivers Ignazu, Tibag, and Taquari, on whose Shore appears the Village Abangobi, and somewhat farther Tocanguzir. The Countrey hereabouts is very fruitful, and hath many delightful Plains, pleasant Rivers, and Woods; but beyond appear Hills, Mountains, deep Moralles, dangerous Cane-Fields, Receptacles for wild Beasts, and great Wildernesses. Cabaca having pass’d through them all, came into the fruitful Countrey of the Guaranes, who are a wild People, and possess many large Fields of Maiz and Potato’s, also several Silver Mines. From hence travelling Westwardly over the River Piqueri, he spent eighteen days before he came to the Stream Ignazu, which falls into the Parana, and at last came to the River Paraguay; along whose Shore he found a People of a gigantick Stature, call’d the Agazes, who regarded no manner of Husbandry, but went out continually a robbing in their Canoes. These People, as Martin del Barco relates, were not long after all destroyed by the Spaniards.

Not far from the Agazes dwell the Gnaecurus, a valiant People; and somewhat farther the Cacoves, whose Countrey produces Gold and Silver; and yet farther in the Countrey reside the Gnaecurapes, who remove yearly to the Paraguay to Fisher there when the Water is low; for in the beginning of January the River swells so exceedingly, that the Countrey about it being overflow’d, is cover’d with above six Fathom Water. The Paraguay discharges its Waters into the great Lake Xarayes, full of Islands.

Amongst other Rivers that spring out of the Mountains Andres, the Ignazu, along whose Shore the People Xacoves, Xaguefles, and Chamoses dwell, falls also into the forementioned Lake. Somewhat farther lies a great piece of drown’d Land, beyond which the Xarayes have convenient Habitations, plant Maiz, and spin Cotton: Their Countrey borders a great Wilderness, which ends about the Province Tapanagua, the Inhabitants whereof, call’d Tarapocos, are furnish’d with plenty of all sorts of Provisions. The Payguazes, dwelling on one side of them, are not well known as yet.

Beyond the Town Assumption dwell the Mayaes, in the Way to Peru, and border at the Tamacoaes, both which possess Silver-Mines.

Between Buenos Ayres and Cordoba lies the Plain Countrey Desiploade, ninety Leagues long, without Trees or Houses, but is most Pasture-Ground, which feed many thousands of wild Horses. From hence glide the Streams Luchas, Los Arredhioes, Arrec, Zaracarana, and others, into La Plata. It is very dangerous for a small Company to travel through this Countrey, because the ranging Juris spare none alive they meet with.

Moreover, the River Grande flows with a wide Mouth into the Sea, and spreads...
Theirfor the Lake Allegas, disembogue into the Ocean.

North-East beyond Allegas lie the Islands Catharina and Gale; and in the Bay Tujigua appear several Isles.

The Streams Tajahu and Itabua spring out of high Mountains, inhabited by the People Anmiriri and Cipayo.

Lastly, the Country washed by the Stream Ararupara, produces all sorts of Provisions.

CHAP. II.

Chili.

The Camel-Sheep.

Here are in this Country both tame and wild Sheep; the tame ones are called Camel-Sheep, being cover'd with long fine Wool, having Necks four Foot long; their fore Feet cloven into four parts, their hindermost into two, their Mouths very wide, which open at those that vex them, and make such a Hink, that no body is able to abide near them; when t'ir'd, they fall under their Burdens, and will not rise, though beaten never so much. Their Flesh is tough like that of Horses. The wild Mountain-Sheep are red, and have soft glossy Wool, which makes a Stuff like that of a Chamlet. These Sheep run fierfer than a Horse; the Chilifes lead them by a Rope put through their Ears.

This Country of Chili not only produces Wheat, Barley, Maiz, and all manner of Fruit, but also the Teca, which growing half a Yard high, is not unlike Barley; the Grain thereof being dry'd in the Sun, is threfh'd, and parch'd in hot Sand, then ground on a square flat Stone with a round Rowler. This Meal, which is both exceeding wholsum and very nourishing (for a small Measure thereof sufficeth a Man a whole Week,) serves also both for Meat and Drink; for being infusion'd in a greater quantity of Water, it becomes a pleasant Drink, and kneaded with a lefer proportion, is made into Cakes or Loaves.

The Fruit Umi, by the Spaniards call'd Martilla; is like a little red Grape, and hath a tart taste. The Winepress'd out of this Fruit is clear to the Eye; pleasing to the Palate, and good for the Stomach, never causing any Head-ache: It also makes good Vinegar.

But the chiefest Benefit of Chili is the rich Gold-Mines. The Country for the most part lies defolate, occasion'd by the continual Wars which the valiant People Arauco maintain'd against the Spaniards after such a manner, that in no place of America they met with such refitance, or sulfaing'd such Losses. They speak an elegant Language, according to the testimony of Elias Herkmans, who having committed to Writing all the most significant Words thereof which were taught him by the Chilifes, it will not be altogether amiss to set down some of them, which are these following:
A View of the Chilean Language.

Epanto, A Year.
Ten, A Moneth, or the Moon.
Tunaco, A Week.
Ante, The Day, or Sun.
Puu, The Night.
Tabon, The Evening.
Eppon, The Morning.
Rangante, Noon.
Eppoe, The next Day after to Morrow.
Vya, Yesterday.
Putey, The Day before Yesterday.
Buchante, To Day.
Mintay, Now.
Westiva, At that time.
Wanturle, In the Morning betimes.
Biliante, When.
Chemchen, Also.
Haenu, The Heavens.
Qereby, The Air or Wind.
Tomo, The Clouds.
Wangeln, The Stars.
Pillan, Thunder.
Gnalo, Lightning.
Puta que qereby, A Storm.
Muni, Rain.
Piren, Snow.
Peaquamao, Dew.
Pillingei, Ice.
Quetal, Fire.
Ro, Water.
The, The Earth.
Mappo, The Land.
Pele, Clay.
Curu, Stone.
Mavel, Wood.
Aluven, Timber.
Miclia, Gold.
Lien, Silver.
Pala, Brals.
Titi, Tin.
Pavillier, Iron.
Quatalcura, A Pebble-Stone.
Chahi, Salt.
Lyl, A Rock.
Mills-mappen, A Golden Vein.

Aliquen, A Tree.
Cahb, Herbs.
Nebo, Nuts.
Pino, Grafs.
Caron, Hay.
Wento, A Man.
Domo, A Wife.
Quiduagen, A Youth.
Techo, A Maiden.
Penien, A Boy.
Domo-penien, A Girl.
Clou, A Father.
Nenque, A Mother.
Cocche, A Grandfather.
Domo-coche, A Grandmother.
Weneo, Mothers Brother.
Mama, Mothers Sister.
Pelechabans, A Stepfather.
Caulia, A Stepmother.
Botum, A Son.
Neaque, A Daughter.
Penn, A Brother.
Lamen, A Sister.
Guempo, A Father-in-law.
Vilca, A Mother-in-law.
Choupa, A Son-in-law.
Weneo-penco, A Kinman.
Boytba, An old Man.
Cude, An old Woman.
Caneuna, An Hospitall Child.
Penceinboe, A Guardian.
Apo-curaca, A Governor.
Curaca, A Lord.
Apo, A supreme Commander.
Nentoque, A Ruler.
Umen, A Person of Quality.
Palmen, A Gentleman.
Machi, A Chirurgeon.
Cuna, A Soldier.
Retave-camany, A Smith.
Entowok, A Weaver.
Challo-camany, A Fisher-man.
Nilla-caboe, A Merchant.
Turntave, A Dyer.
Chumpiro-camany, A Cap-maker.
Tulmance-camany, A Drummer.
Inchetaniweni, A Servant.

M m m 2
Voerguin.
Voerquin, A Messenger.
Langancbooe, A Murderer.
Chiquiboee, A Thief.
Illiuiboee, A Beggar.
Alice, The Devil.
Rica, A House.
Holin, A Door.
Chagana, A pair of Stairs.
Pylea, A Wall.
Wana-ruce, The Roof.
Pitie-ruce, A Hut.
Colcura, A Cupboard.
Camyo, A Bedhead.
Depotaria, A Prison.
Weltelve, A Gibber.
Pengal, A Grave.
Longuen, The Sea.
Buts-wambo, A Ship.
Aliuen, A Malt.
Mou, Ropes.
Dolo, A Canoo.
Wambo, A Boat.
Vela, Sails.
Wita, An Oar.
Tubquen, Alches.
Cuja, A dead Coal.
Ale, The Flame.
Aspel, A burning Coal.
Wietum, Smoak.
Catila; a Candle.
Wyno, A Knife.
Witi, A Spoon.
Gnidi, A Pot.
Lepuborumu, A Tooth-picker.
Pavilla-looco, An Helmet.
Waiqui, A Pike.
Pylqui, A Dart.
Pulque-tuboi, A Bowe.
Tulunnea, A Trumpet.
Mecane, An Iron Club.
Cachal, An Awl.
Wita, A Spade.
Jufjue, A Sieve.
Chilea, A Letter.
Charavilla, A pair of Breeches.
Iba, A Womans Garment.
Domoroida, A Coat.
Couchon, A Bag.
Pino-chompiro, A Straw Cap.

Congi, Food.
Cobyue, Bread.
Nul-cobque, The Crumb.
Liquangue, Light.
Dumingei, Darkness.
Queimiquen, Dainties.
Medda, Pap.
Core, Broth.
Ilon, Fleth.
Cuichalon, Mutton.
Wara-ilon, Beef.
Chuqui-ilon, Pork.
Chuqui-chain, A Gammon of Bacon.
Chadimies-ilon, Salt.
Caucan, Roast-meat.
Avaun, Boyld-meat.
Poyficha, The Guts.
Curam, An Egg.
Quecutram, The Yolk of an Egg.
Lycram, The White of an Egg.
Iwun, Butter.
Iua, Milk.
Poulos, Drink.
Vine, Wine.
Chiche, Beer.
Cutan, Pain or Sickness.
Aren-cutan, A Feaver.
Towogen, The Head.
Cancoitames, The Head-ache.
Vemaren, Scabs.
Abnugien, A Wound.
Molben, Blood.
Toama, A blind Man.
Cawinto, A Meal.
Colchou, The Small-pox.
Wocubu, A wild Beaf.
Pangy, A Lyon.
Nagual, A Tyger.
Cudy, A Swine.
Michun, A Calf.
Dewe, A Moufe.
Waren, A Rat.
Twe-deve, A Mole.
Tewa, A Dog.
Pulpeo, A Fox.
Guetaltuange, A Hare.
Noquen, A She-bear.
Lame, A Sea-Dog.
Leno-suchi, A wild Swine.
Chunam, A Bear.

Chinua pruua mi, When shall you go?
Ale pruigi tamruca, Is your Habitation far from hence?
Pichereugei, It is hard by.
Alepruugei, It is farther.
Inchi quiparam camappunu, I intend to go into another Country.
Chemubla qui pari camappunu, Why will you go into another Country?
Meryla tiva mappunu, Here is no Provision.
Ailebay tuachi tipanto, beneblia de geniep ayn, The year hath been unfruitful, and therefore we want.
Cheo mappungam tamichau, In what Province dwells your Father?
Ala ei ei, The Devil hath fetch'd him away.
Ai eimi ruaju incho, Will you keep him company?
Adan, No, I will not.
Bien, I will.
Chubuen quecken nieimi tania, Have you anything to give us to eat?
Cancan achawal, Yes, I have roasted Hens.
Mu wy, How many?
Munalei enchiravia, There will be enough for us.
Chubuen pusueyn, Where shall we Drink?
Aile Mangunameini, I thank you.
Chubuen domo trivo, What Woman is this?
Inchi tan curi, It is my Wife.
Ni nave, My Daughter.
Ni domo, My Concubine.
Alei teminigei vei domo, It is a handsom Woman.
Qii pangnei, Come hither.
Amotunge, Run away.
Umatuyn, Let us go to Bed.
Utajuc, Let us rise.
Wira cucbhai compay tan mappunu, The Spaniards are fall'n into this Country.
Quipa waicha laimi, Shall we Fight together?
Waiquenagelan, I have no Arms.
Ima ny pea in Waiqui, Follow me, and I will get Arms.
Ali teum inche, I am contented.
The Seamen who went under Hendrick Brewer’s Command, Anno 1643, from Brazil to Chili, brought the fore-mentioned Vocabulary along with them.

Chili is look’d upon as no way inferior to any Countrey in America, enjoying a wholesome Air, fruitful Soil, and abundance of Inhabitants, who often furnish Peru with Provisions; which are the speedier convey’d thither, because the South-Winds always blow along the Coast.

The Peruvian Vice-Roy keeps a Deputy to Govern here. It hath two Bishops, viz. St. Jago and L’Imperial.

Some of the Chieftes are under the Spaniards Jurisdiction, and live in Huts; others being wilder, defend their Freedom with the Sword. They have great Heads and flat Noses: The Men continually pull out the Hair on their Faces and Privities with Shells, which they carry about their Necks for that purpose, having beforehand rubb’d the Hair with warm Ashes; the Hair of their Heads hanging downwards is cut close as far as their Ears, the rest growing long, is ty’d with the Ribbon Tarvedono, to which Persons of Quality fix Silver Plates and Turquoises: Some also cover their Heads with the Skins of Weazels, or the like Beasts, putting the Head over their Foreheads, and the Tail down their Neck; which kind of Covering they call Maniewelono: Others wear Caps made after some strange manner or other.

The Chieftes are not the tallest, but strong and well set, betwixt a white and yellow colour: Those that are in the Spaniards Service, wear long Hair, by which they are distinguish’d from the thorn Ucais, who do the Spaniards all the mischief imaginable. The Women are for the most part low of stature, but of a strong Constitution; they go bare-headed, letting their Hair hang loose over their Shoulders, except when they are indispos’d, and then they tie it up: But those that dwell about Castro wear Locks like our English Ladies. In Coquimbo and Logumbo they go after the same manner as the Peruvian Women: All of them have thick black Hair.

Their Apparel, though mean, is neat: The Men wear wide Breeches girt about their Waists, and a piece of woollen Cloth, three Yards long and two broad, which having
having a Hole in the middle, they put over their Heads, and so let it hang on their Shoulders, leaving their Arms and Legs bare; but on Festival Days they wear curious embroidered Stockings. The Women likewise cover themselves with the same piece of Cloth, but after another manner, tying it first about their Middle, then let it down to the Ground, pinn'd before with Silver or Golden Pins; their Heads, Breasts and Legs are uncover'd; the Cloth itself is stripp'd with red, white, blue, and yellow, and fring'd at the edges. For an Example of their quick and easy Labor, Hendrick Brewer relates, That a Woman being Delivered in his Ship, within an hour after walk'd up and down the Deck, and gave the Child suck. Some of them have such great Breasts, that throwing them over their Shoulders they flucke their Children, being ty'd at their Backs.

Their Huts being low, are made of Straw, Canes, and Boughs, and not built for one single Family; for often thirty, fifty, a hundred, or a hundred and twenty dwell under one Roof, and have a Governor, by them call'd 

Their Houeholdstuff is little and mean, viz. two or three Cans to keep their Liquor Chicks in, Horn Cups, a Stone whereon they grind their Corn, and one or two woollen Stools: The chiefest of them also use Sheep-skins, which they spread on the Ground before their Guefts. They live without care, for they neither Sowe nor Plant any more than will serve them a Year.

Their Riches consist in Cattle, of which they have no great plenty.

About the beginning of October a whole Town meets together to Plough and to Sowe, which the Men perform in two days time, the rest of the Work being left to the care of the Women; for the Men never meddle with Reaping or Harvest.

They eat and drink from Morning to Evening, when they do not travel, for then they eat at set-times. Their Liquor is made of Barley-Meal, or Wheat boy'd in Water. On Festival Days they drink Chicks, Brew'd of Maiz, chew'd by the Teeth of old Women. They likewise make a Liquor of the Fruit Home, which tastes like Madera Wine.

Every Man Marries as many Wives as he can buy and maintain, for Maids and Widows must be sold by the Parents, who set not a Price upon them according to their Beauty or Quality, but their skill in managing Household Affairs. Their Marriages are perform'd after a strange manner: A Son having no Inheritance, lives on the Charity of his nearest Relations, who Present him, one with a Hog, another with a Cow, a third with a Sheep, and a fourth with somewhat else: thus enrich'd, he goes to his Mistress' Father, and hangs some Turquoise and Plates of Silver about his Neck, and acquainting him with what Estate he can make his Wife, he agrees as well as he can with his intended Father-in-law, to whom he gives ten, fifty, or a hundred Sheep, Oxen, Cows, Hogs, Horses, Poultries, a Coat, and some Vessels full of Chicks; which done, the Father leads his Daughter to the Bridegroom's Horse, where he is Entertain'd with Meat, but finds the Drink at his own Cost. Some days after the Celebration of the Wedding, the nearest Relations come to congratulate the young Marry'd Woman, and at Dinner sing an Epithalamium to their Nuptial Deity Maruapeante, all of them sitting on the Ground on Sheep-skins. The Allies often take away a Woman from her Husband, especially when he misuses her; and if a Man kill his Wife, her Death is reveng'd by her Relations. Persons of Quality build a Hut for every one of their Wives, sending word to her whom they have a mind to enjoy: They respect one above the rest, who are in a manner but Slavefes, being forc'd to do all the Drudgery. The Men are exceeding jealous and choleric, cruelly beating their Wives, if they chance but to look on another Man, and if they take them in the Act of Adultery, they immediately
mediately kill them; yet for all this they are not Chaste, but very Libidinous. As soon as a Woman is Deliver'd of a Child, she washes her self and the Child in cold Water; then kills a Lamb call'd Chilurague, and makes a Feast, at which she her self eats and drinks freely amongst the rest, and the next day goes about her usual Employment.

The Spaniards tell us, that their Women, if they continue long in this Country, are more and more hardned by the Air, and are as little concern'd at the Birth of a Child as the Natives.

A Widow hath free leave to Marry again, provided she hath given to her Children part of what she hath; but if she Marry not, but return to her Parents, then she is highly esteem'd of.

Both Men and Women wash themselves in the Rivers in the coldest Weather.

They adore chiefly their Deity Pillan, and the Devil, who doth them much hurt. They acknowledge no Resurrection, accounting long Life in this World the greatest Good; wherefore when any one dies, the Friends and Relations make a doleful Cry, and suffer the dead Body to lie three, four, five Months before they bury them, stuffing them full of strong smelling Herbs, to keep them from putrifying: Three days before their Interment the nearest Allies meet, kill a Sheep, make Merry, and throw the Body into a Hole near the Hut in which the Deceas'd dwelt, putting also a piece of the flain Sheep, and a Jug full of the Liquor Chica, into the Grave.

Concerning their Idol Pillan, to whom with strange Gestures they Sing divers Songs, they believe that he is a Spirit of the Air, and Governs all things on Earth. Some suppose him to be Thunder, and therefore they worship him in a most particular manner when they hear it Thunder; for then they flie an Arrow and Stone Ax into the Ground, and take Arms into their Hands, putting themselves into a posture as if they should suddenly be set upon by a mighty Enemy, and look'd upon it heretofore as a fore-running of the Spaniards approach, whose Cruelties they exceedingly dreaded.

They call all their Hero's Pillan, and ascribe Divine powers to them.

They take very much strong Tobacco, the Smoak whereof puffing in the Air with strange Gestures, they cry, Receive this, O Pillan.

When they return home Conquerors from any Victory, they put a Stone Ax into the Ground, and standing Arm'd round about the same, Drink exceedingly, and sing a Song in honor of Pillan. They use their Prisoners very cruelly, for forcing them to Dance and make Merry amongst them, they on a sudden cleave their Heads with an Ax, pull their Hearts out of their Bodies, and bite the same with their Teeth. After the same manner they punish their Robbers and Treasurers, but those that have good store of Chica to Prevent the Governors with, escape the Execution: Yet this cannot buy off Sorcerers or Witches, who are without mercy burnt alive, with all they enjoy'd.

They have no Priests, nor any that pretend to any religious Function; only those that can Sing the Paumary well, are in great esteem amongst them.

Their second Deity Marnapeante (they say) informs them in a Dream when they must Marry; but he doth not do them this kindness before they have made themselves Drunk, and sung Sonnets to his praise.

This Country is Govern'd by prime Perions, call'd Ulmen, or peculiar Lords, call'd Cuarces. The Ulmens and Cuarces Command twenty five, sometimes fifty, a hundred Families: Their Power consists in calling all the People together, and consulting with them about State Affairs, which they dare not do with any particular
cicular Person, nor Levy any Tax without extraordinary occasion. They are bound to march in the Front of their Subjects against an Enemy, and are under a Governor-General call'd *Apocras*, or under a *Nentoque*. Other lesser Offices are disposed of by the *Curaces*, or *Palmes*; but their *Nentoques* are chosen after this manner, viz.:

When that honorable Place is vacant, then whoever aims at it, computes with himself whether his Means will extend so far as to treat the *Curaces* and *Palmes* with a noble Treat; which if he is able to do, then he sends for them to an appointed place, whether they all go Arm'd, and whilst they are eating and drinking, he that desires the Place begins to tell them of his noble Extract, valiant Exploits, Riches, and eminent Relations, and therefore desires the Place of the deceased *Nentoque*:

then the *Curace* rising, the intended *Nentoque* hangs a Chain of Turquoises, or Cockleshells about his Neck; whereupon the *Curace* moves the rest to the Election, without any Articles, the new *Nentoque* solely promising to Govern all things for the best advantage and benefit of the common State: which done, the *Curace* takes the Chain of Turquoises, and distributes them amongst the primest Persons of Quality, and so they end the Day in Drinking, Dancing and Singing.

After the same manner they choose an *Apocras*, or prime Governor; which of late the *Heads*, that they may enjoy the more Privilege themselves, have not elected.

The Chiloes Arms consist of Lances as long again as the Europeans, made sharp at the Points. They also use Clubs plated with Iron, and Spanish Swords. The *Pulches*, who dwell behind the high Mountains *Cordilbra*, use poyn'd Arrows, make Helmets and Breastplates of Ox-hides, which neither Sword nor Arrow can enter: they all know how to manage a Horse, and the use of a Lance, but are very much afraid of Mufquets or Fire-locks.

Because they can neither write nor read, the Governor by a faithful Messenger sends to his inferior Officers such Commands as he judges may tend to the most advantage of the Publick both in Peace and War. This Messenger carries an Arrow with a Ribbon; as a Sign of his Employment; the Arrow is held in the Right-hand, and if he who receives it will answer the Message, then he sends back the same Arrow with another; but if he judges it convenient to acquaint any other *Curaces* and *Palmes* with the same Message, then he sends one of his own Servants to them with the same Arrow.

As touching the Climate and Production of Chilis, this Account is given by an Eye-witness: *'The Winter Season (faith he) is so tempeffuous, that sometimes the Trees are not onely blown up by the Roots, but the Earth itself is rent aunder; some Valleys being fill'd with Snow, dwell the Rivers exceedingly when it melts, which overflowing part of the Countrey, makes the same very fruitful.*

*'It is also extremly cold here, because such sharp Winds blow from the Mountains, that they pierce through the Skin and Fleth of a Man: and indeed these Winds would make the whole Countrey defolate, were not the Mountains overgrown with great Oaken Trees, against which the Wind breaks. Moreover, the Valleys produce Coals, which serve the Inhabitants for Fuel. The Winter beavers the Trees of Leaves; but not those which grow in the Wilderness. In March the Fields are full of innumerable sorts of sweet-smelling Flowers; out of some whereof are boil'd the Angel-Water, so call'd for its smell and wholsome taste. The Grass grows in November and December as high as our standing Corn. Turnips, Mint, Clover, and Mustard-seed, grow naturally for several Leagues together. Likewise excellent Physical Herbs grow here, whose power and operation their Doctors, call'd Maci, keep from the Spaniards. These Maci are in great esteem*.
and Chap. II.

The Water of the fore-mention'd Brook put into any Vessel, immediately turns to Salt, and all along the Shore lie greater or lessier pieces of Salt ; so that the Way from Peru to Chili through Atacama is very troublesome : but that which leads thither over the snowy Mountains Andes, is much worse, because it is farther about, and threatens the Traveller with Diftrustion, if he observe not the right Season of the Year ; for in the Winter there blows such a cold Wind on these Mountains, that a Man, being suddenly numm'd, falls down dead on the Ground, and grows stiff against all Purgation. Joseph de Acosta tells us, that Bodies have been found there as firm and sound, as if they had been living, which had some years before breath'd their last on the said Mountains.

But Diego Almagro, who first discover'd Chili, Anno 1536. went thither with two Companies of Horse, and five hundred Foot, through the Countries Chacra, Chicacas, Nuñeges, and Chaquinas, and having pass'd over a craggy Soil and the snowy Mountains Andes, he entered into the first Chilean Valley Copayapo, having left no small number of Men and Horfes with Hardship and Cold; the inconvenience therefore of both the fore-mention'd Ways between Peru and Chili, forc'd Travellers to go along the Shore wash'd by the Southern Ocean. Copayapo bears that Denomination from the Turquoise which a Mountain produces there in great abundance. The Valley itself is the fruitfullest of all Chili, for in no place the Maize grows better, and in greater abundance than here, the Ears being half a Yard long, and the Stalks the length of a Lance; each Grain that is Sow'n, yields at least three hundred in Harvest. All Spanish Fruits grow better here than in Spain.

Through the midst of Copayapo runs a River of the same Denomination, and twenty Leagues in length from the Andes, and at its Mouth hath a convenient Harbor before the South Sea.

The South part of Copayapo borders the Valley Guaco, which is least fruitful than the first, but hath a convenient Haven, into which falls a fresh River, penn'd in by Sluices for the watering of the Cane-Fields. Moreover, there are plenty of Partridges ; also wild Sheep and grey Squirrel-skins are of a great value. To the Southward flow also the Rivers Mapo, Chacha Pool, Loro, and Moule.
Chap. II.  

Beyond these Streams Eastward, the Pronouncing's dwell near the Mountains Andes.  

In the Valley Chili, which gives Denomination to the whole Country, were formerly the famous Gold-Mines Quillatias, from whence Valdivia, Anno 1544, carried an invaluable Treasure. The South Sea makes here a large and convenient Harbor for all manner of Vessels, built two Leagues below the City Serena, at a little River, which so moistens the low Country, that it produces all manner of Plants. It rains here not above three times a year.

From the Entertainment which Sir Francis Drake met withal here, may sufficiently be conjectur'd the Power of Serena, for when the English Landed here for Water, they were driven away not without great loss by three hundred Castilian Horses, and two hundred Foot that Sally'd out of the City. The Mines, though they inclose much Gold, yet they produce but little, because the Spaniards, according to the testimony of a Chilean Pilot, whom Oliver van Noort took Prisoner, destroy'd all the ancient Inhabitants that should have help'd them to dig the Gold.

The City St. Jago, lying near the Stream Topocalma, receives great benefit by the Haven Valparaso, which makes the fore-mention'd River, because in that Haven all Goods that come from Lima are unladen, and the Goods shipp'd aboard. The Country about the same produces plenty of Wines, Apples, Corn, and all sorts of Cattle, and especially Horses in such abundance, that thousands of them run wild.

In Valparaso Sir Francis Drake took a Ship from Valdivia, laden with two thousand five hundred Bars of fine Gold. But the Dutch Admiral, Joris Spilbergen, had not such good success; who Sailing thither with five Ships, Anno 1615, discovered a Spanish Ship in the Harbor; where sending his Boats well Mann'd to fetch off a Vessel that lay hald on the Shore, they found it burning, and thereupon Steer'd their Course into a little Inlet full of Rocks, which serv'd the Spaniards in stead of Breast-works; for lying behind them, they fir'd continually on the Hollanders; yet Spilbergen Landing with two hundred Men, met a considerable number of Spanish Soldiers, and Horses drawn out on the Shore, from whom they soon fled.

Before the City La Conception lies the Island Quiriquyn, whose Straw Huts Spilbergen laid in Ashes.

At the time when Oliver van Noort came to an Anchor here, the Governor Franciscus de Quirones Commanded seven hundred Spanish Soldiers to reduce the revolted Chileans.

Four Leagues from Conception lie the rich Gold-Mines Quilacoya, which formerly produc'd great Riches.

Over against the Valley Arauco, which rises out of the Sea, lies the Island Maria, in a large Inlet made by the force of the Waves.

Here grows abundance of Wheat and Barley. The Rivers also afford plenty of Fish, amongst which there is one call'd The Lake-Spider, in whose Eyes are to be seen little Specks, which would exceed Pearl, if they were but hard enough.

Two Spaniards Command forty Natives on Maria, and keep them in such slavery, that they may neither eat Apples, Pears, Grapes, Poul'trey, or Sheep, though they are there in great abundance.

Elías Hakkmans was once in probability to have taken possession of this Island for the Netherlands State, had he not been prevented by an extraordinary occasion.

Between the Towns Conception and Imperial lie the Provinces Arauco, Tucapel, and Puren, inhabited by a valiant People, that often alarm the Spaniards. In each Province Valdivia built a Fort in the Year 1551, eight Leagues distant from one another. He also discover'd the rich Gold-Mines De Ongol, and build the Fort Confines there.

The Natives hereabouts being exceedingly oppreft by the Spaniards, fell upon

N n n the
the Fort in Puron, where those in the Garrison, unable to defend themselves, went to Tucapel, and from thence to Arauco, to settle there. Valdivia marching with three hundred Men to the Castle in Tucapel, was so fiercely assaulted at the River Leto, that all his Men were kill'd, and he himself being taken Prisoner, had melted Gold pour'd down his Throat: One Boy only escaping, brought the news to those in Garrison in the Fort Arauco, who fled to La Conception, as those from Puron to Imperial. Not long after the Lieutenant Francisco de Villagra went with a hundred and sixty Soldiers to Ragutta, a Promontory against the South Sea in Arauco, to take Revenge for the Death of his General Valdivia; but he also had like to have follow'd the same fate, for he left ninety six Men behind him, and with much ado recover'd La Conception: By which means the victorious Chieftes came to be so much fear'd, that the Spaniards forsook the Towns Rica, St. Jago, and Confines, and forsook themselves strongly in Imperial.

Concerning Arauco, it is a small County, twenty Leagues long and seven broad. The Inhabitants thereof are strangely valiant; those that inhabit the Mountains are call'd Palches, and are generally of a duller Spirit than those that dwell in the Valleys; all of them use long Pikes, Halberds, Bowes and Arrows, Helmets, and Breastplates of Deer-skins, in the Wars; they know how to close and open their Ranks, and stand in good order according to Martial Discipline, which makes the Spanish King receive little benefit from Arauco, though it is full of rich Mines, because those in Garrison being five hundred in number, dare not come out of their Fort.

To Arauco belongs the Island La Mocha, low on the North side, and rocky on the South; against which the Ocean breaks its Billows: in the middle of it rises a Split Mountain, out of whose Gap flows a fresh Brook; the fruitful Soil produces abundance of Pumpecos, Maiz, Potato's, and all manner of delicious Fruit; as also Oxen, Sheep, and other Cattle, which go grazing up and down in great Herds; the Village that is upon it boats about fifty Huts, built long of Straw, with a Door in the middle, and round like an Arch on the top.

Sir Francis Drake and Candelis were formerly somewhat roughly Entertain'd here by the Inhabitants: but they threw'd themselves somewhat more civil to the Dutch Admirals, Oliver van Noort and Jan van Spilbergen: The first coming to an Anchor here Anno 1600, put one John Claeszoon (Condemn'd for some great Crime to be Landed on some Strange Place) ashore on La Mocha, with a few Trifters; for which being kindly Entertain'd, the Seamen resolv'd to go ashore the next day, who were likewise civilly Treated. The Governor of Mocha coming aboard, Lodg'd a Night in the Ship, and afterwards conducted the Admiral through the Village, but forbade the Seamen from entering any of the Huts; out of which the Women upon the hearing of a sudden noife, came running out, and kneel'd down on the Ground in three Parties, whilest an old Matron came forth with a Pitcher full of Chica, and gave each of the Netherlanders a Cup full to drink, sitting on Blocks in the Fields.

A Man Marries as many Wives here as he can maintain. They all live peaceably one with another, and go Cloth'd with a pair of Breeches, and Frock without Sleeves. The Women tie their Hair in Braids about their Heads, but the Men let it hang down carelessly.

Fifteen years after Spilbergen Landing here with four well Mann'd Boats, found the Shore full of People, who had brought all manner of Provisions to batter against Axes and Knives. The Islanders going aboard, wondered to see the Soldiers drawn out in order, and much more when a Gun was fir'd: They furnish'd the Hollanders with a hundred Sheep, amongst which was one with an extraordinary long Neck, and Legs, Hair, Mouth, and Back like a Camel.
AMERICA.

The Netherland Admiral, Hendrick Brewer, coming to an Anchor on the Coast of Guadaloupe, Anno 1643; was inform'd by the Chilifes, that about four years before they had burnt Baldovia, murder'd the Spaniards that were in Garaffon, and pour'd melted Gold down the Governor's Throat and into his Ears, and made a Drinking-Cup of his Scull, and Trumpets of his Shin-bones. Brewer also found some Ruines of the City, which formerly boast'd four hundred and fifty Houses, and was not yet so utterly defac'd, but that the two Markets and crofs Streets were plainly to be seen, and the Walls gave sufficient testimony of its ancient lufure. The Countr...
tween both these Rivers the Inhabitants get plenty of Honey, Wax, Cotton, and Cochenile. Cattel also increases in abundance, as likewise Deer, and other Venison; and for Fowl, Partridges, Pigeons, and the like; but the Tygers and Lyons do much mischief to the Inhabitants. Their chief Commodities for Trade and Merchandise are Cloth, Cotton and Salt.

Garcias Mendosa built the Towns Neva Londres in the Province Calchaqui, and Goruba in the Territory of the Jurires, but they were both of them soon deserted.

Behind Peru and La Plata the Plains Omagnaza extend themselves along the Rivers Paraguay and Bermejo, under a temperate Climate, where the Inhabitants go Clothed, and keep abundance of Cattel.

In most places hereabouts breed wonderful large Baboons, with long Tails and Beards; which being wounded, pull the Arrows out of the Wound, and throw back the flame with a grim Countenance at those that shoot them.

The Serpents are likewise so big here, that they swallow whole Deer.

The Rivers breed horrid Crocodiles, and the Woods, Lyons and Tygers.

The Inhabitants differ both in their Customs and Language: the generality of them are continually Drunk. They keep yearly a great Feast, to reconcile the Souls of their Predecessors to them; to which purpose they bring as many roasted Ostriches as they have Souls to Offer up; then Drink three days after, and on the last they carry the Head of a fair Virgin (who freely offers her self to be kill’d) about the Town, making a sad and lamentable noise for the space of an hour; at the end of which they all begin to laugh, and oftentimes fall a killing one another: which Custom is most obser’d amongst the Matarani.

The Abipones go naked in Summer, and in the Winter Clothe themselves with Furs; they Paint their whole Bodies with Spots like the Tygers, Carve their Bodies all over, making Cut-work of their Skins, into which they stick Ostriches Feathers, as also through their Noftrils, Lips, and Ears, and account Baldnefs the greatest Beauty. They honor thofe for their Gods, who patiently endure unfeatable Tortures. The Women hang their Faces and Breasts full of Pearls: They never bring up above two Children, for they kill all above that number.

The Planiers range up and down without Habitations under the open Skie.

The Giants Tobae speak a curious Language, but are very salvage and cruel. Anno 1571. Erouaca, a prime Man amongst them, devour’d his own Sister, Wife, Mother, and Childen. When they design to go a Journey, they roast their Sons and Daughters, to serve them for Provisions in stead of other Fleth; and their Sick are upon the least Complaint bury’d alive.

The Cauguiares, who dwell in Huts in great Woods, feed on Woorms, Mice, Apes, Tygers, and wild Honey; most of them are bunch-back’d, and go clad with the Skins of wild Beasts.
CHAP. III.

Magellanica.

Northward against Chili and Rio de la Plata justs the Countrey, which from Ferdinand Magellan is wrongly call'd Magellanica; to which several Voyages have been made by sundry People from the North-Sea to the Southern Ocean, divers Steering still new Courses: for some follow'd the Straights of Magellan; others Sail'd more or less South-West: By which means Le Maire open'd a new Passage between Mauritius and the States-Island; and H. Brewer, a Way below the States-Island; yet all Steer'd their Course Wetherly, so that none of them return'd the same Way, except Elias Herkmans and Capt. Ladrillero, the last of whom coming from Chili to go to the North-Sea, met with such Storms; that he was forc'd to Tack about, and fland back again to Chili, as Herkmans did from Chili to Bafifle.

Anno 1579. Peter Sarmento weigh'd Anchor with two Ships, and Sailing from Callao de Lima through the Straights of Magellan to Spain, ran by the Isles Felix and Amber, discover'd in one Inlet eighty five Isles, most of them desolate, founded all the Havens, found abundance of Oysters with Pearls in them, call'd an Inlet Francisco, and a Mountain on the right-hand, Punta de la Gente Rubra, because the Inhabitants thereof painted their Bodies red, found the Havens Misericordia and Candelaria, and the Island Satoynes, where five of the Natives gave him an Account of Sir Francis Drake, for whom he Cruis'd, and had sight of a snowy Mountain, whose top vomited Fire. On the Promontory Anu he erecte'd a woodden Cross, and laid a Writing under the same, wherein he advertis'd all Persons to take notice, that Pope Alexander the Sixth had freely given the King of Spain all the Countreys thereabouts. Not long after he Steer'd through the Straights of Magellan along the Coast of Bafifle, to Spain.

Concerning the Sea-Coast, which extends from Chili to Magellanica, it is as followeth: Next to the Promontory Felix lie Cyprian; Clara, Cabo de las Islas, the Island Socora, the Haven Domingo, the Point Gallego, the Road Stevan, the Cape Andres, and Oehavario, and the Valley Nuestra Senora, between two Hills. Along the Southern Ocean lie Abra de San Guiller, Punta del Gada, Los Reyes, Innocentes, Angels, Roa, Catalina, Amaro, and Victoria; before which the three Isles call'd the Solings, are seen in the Mouth of the Straights against the South Sea.

Magellanus Steering hither, Winter'd within the Straights in an Inlet call'd St. Julian, stay'd two Moneths before the Mouth of the River Santa Cruz, where he took abundance of Firth, and from thence ran along the Shore to the Promontory Las Virgenes, which receiv'd that Denomination, because it was discover'd on the Day Consecrated to St. Ursula and her eleven thousand Virgins: Going a League up into the Countrey, he found a Hut, in which above two hundred dead Bodies were bury'd after a strange manner, and on the Shore a great Whale, driven on the Sands by a Storm. He nam'd the Countrey to the Southward, Terra del Fuego, because from the Promontory Severino in the Night he Elpy'd several Fires. He was exceedingly delight'd with the pleasant Coasts on each side of the Straights, which were the more pleasant, by reason of several Hills overgrown with sweet-smelling Trees, whose tops lay cover'd with Snow.
Magallanus was follow'd, Anno 1525. by Garcia Loysfa, who Sailing into the Straights near the Promontory Virginis, endur'd great Colds; in the Haven St. George he found store of green Cinnamon: The People he reported to be of so monstrous a stature, that they might well be accounted Giants; some of whom went naked, others wore a Net of Feathers made fast about their Waists, and others a loose Garment all over their Bodies. Loysfa gave this Country, inhabited by Giants, the Denomination of Terra del Patagoni. He judged the Straights of Magellan to be a hundred and ten Spanish Miles long between the two Promontories, Virginis at the North Sea, and Defeated at the Southern Ocean. Within lie three Inlets, which have seven Leagues in breadth.

Simon Alcazara Sailing hither nine years after Loysfa, shunn'd the Land on the left-side of the Straights, because it lay most under Water, and was forc'd by his Men to return to the Haven Leones, where he and all his Seamen were put to death.

Not long after the Bishop of Placentia fitted out three Sails, which entering the Straights, Anno 1540. loft their Admiral; the Vice-Admiral Wintering at the Inlet Las Zorras, (to call'd, because they took many Foxes on a Champaign Country without Trees) return'd to Spain without any farther Succes: the third Ship with much ado arriv'd also at Arequipa.

The English Captain, Richard Hawkins, also Sailing hither, found the Land on the South side of the Straights, most broken, and in some places a few Huts.

Anno 1578. Sir Francis Drake Sailing hither along the Coast of Brazil, Landing on an Island in the Mouth of the Straights, kill'd above three thousand Birds. Sailing from hence he was miserably toss'd in the South Sea, and discover'd about the middle of the Straights, that the Current out of the Southern and Northern Ocean met at the place where a great Bay bends Southwardly: To three Isles he gave the Name of Elizabeth, Bartholomew, and George, and drov'e three Weeks without making any Sail, in snowy, misty, and rainy Weather, falling amongst dangerous Rocks, and at last Anchor'd in the Haven Health, which he so call'd, because his sick and wearied Men being refresh'd there, he fet Sail from thence and return'd home.

Captain Thomas Candish following Sir Francis Drake eight years after, found near a Creek within the City Philip-flasts, built there by the Spaniards, to secure the Passage out of the Northern to the Southern Ocean for themselves; to which purpose they held four hundred Men in Garrison in the said City, which lying near a pleasant Wood, was defended by four Bulwarks, each fortified with a Bras's Gun: But the Spaniards not being able to endure the Cold, nor get in their Harvest, which was continually spoil'd by the Natives, were so pinch'd with Hunger, that after three years flay many of them dy'd in their Huts, which caus'd a filthy Stink, and consequently a vile Distemper, not unlike the Small-pox; at last twenty three of them, amongst whom were two Women, judg'd it convenient to bury their great Guns, and march away with their Muskets; a whole Year they travell'd in great want, feeding on the Leaves of Trees, wild Roots, and Fowls which they now and then kill'd; at last they resolv'd to travel by Land to Rio de la Plata, but never any news was heard what became of them, only one Spaniard, call'd Ferdinando, being stray'd from the reft, was taken by Candish, to whom he gave the foregoing Relation. Candish entering Philip-flasts, found a Gibbet, on which hung a Malefactor in Chains, a Church, the Huts full of famish'd Bodies, and four Bras's Guns, which he digg'd out of the Ground. From hence he ran to a fresh-water River (which disembogues into the Straights,) whose Banks are inhabited by cruel Cannibals, and the Countrey all about plain Pasture Grounds, whereas most part
part of the Shore in the Straights is very mountainous. Candish Landing, found.

*Spanifh* Knives and Stilletto's amongst the Man-eaters, and lay a whole Moneth at Anchor in the western Mouth of Magellanica, by reason of great Storms, feeding on Musles, Cockles, and Fowl; and from thence Sail'd about the World, returning home at last with a Booty of twenty Tun of Gold.

Anno 1599. Simon de Cordes Commanding five Netherland Vessels, entering the Straights of Magellan, found in the green Bay, Musles of a Span long, abundance of Ducks and Geese, and a great many Trees not unlike Laurel, they being onely bigger, and had a sharp biting Shell. The Wind blew exceeding hard here over the Rocks, insomuch that they were sometimes driven from four Anchors.

A few Moneths after Oliver van Noord follow'd Cordes, and Anchor'd near the Pinguyn Isles, the biggest whereof is call'd Caftrimme, and the least Takes, the Inhabitants thereof dwell in Caverns under Ground, and feed on the Birds Pinguyn, of whose Skins they make Mantles. These Birds weigh generally fifteen or sixteen Pound, have black Backs, white Bellies, very thick Skins, long Bills like Ravens, short thick Necks, two plum'd Fins in stead of Wings, black Feet like a Goofe; and delicate Flesh, notwithstanding they feed on Fish, after which they swim very swift with the fore-mention'd Fins, which hang down on each side along their Bodies when they walk upright on the Shore; they fit generally four together in their Holes, made after such a manner, that a Man which knows not of them, may cre be aware, sink up to the Knees in the same, and be bitten terribly by the Legs. Cordes his Seamen got in two hours time above nine hundred of these Birds, whilest he discover'd the salvage People Euso, which inhabit the Countrey Costi, and are divided into the Families Lemenettes, Keneaka, and Caraika; the first inhabited the Territory Carry, the second Caramay, and the third, Morine: all of them Paint their Cheeks and Forehead. Farther into the Countrey dwell the Trimenes, a gigantic fort of People, eleven Foot high, who maintain continual Wars with their Neighbors.

Moreover, Noord discover'd several Inlets full of Ice and fresh Water in the Straights of Magellan, whither the United Netherlands have since sent the Admirals William Schouten, Joris Spilbergen, and Jacques le Heremite. The common opinion, that the Countrey on the South side of Magellan is of the Main Continent, Experience hath manifefted; for Schouten found the same, Anno 1616, who Sailing from Porto Defire, left the Straights of Magellan on the right-hand, and Sail'd Southerly through whitith Water, and in fifty four Degrees discover'd a Channel eight Leagues broad, through which ran a strong Current. The Coast rose with high Mountains, whose tops were cover'd with Snow. The utmost Point was call'd Mauritius, from the Prince of Orange; the broken Coast on the other side, The States-Island; and the Straights it self, Le Maire, upon the Request of the Merchant Jacob Le Maire, whose Father Isaac was chief owner of the two Ships of which Schouten was Commander, who found so many Whales here, that he could scarce Steer clear of them, they swimming by hundreds in a Shoal. The Sea-pies, much bigger than Swans, suffer'd themselves to be caught by the Hands of the Sea-men. Moreover he call'd the barren grey Rocks, and others lesser, lying North-East from the Promontory Hoorn, Barnevields Isles. Sailing beyond the Point Hoorn, he was toss'd by the vast Billows that came rowling out of the West.

It was no sooner nois'd abroad, that the Netherlanders had found the Straights Le Maire, but the Spainifh King Philip immediately sent two Carvels thither, under the Command of Garcias de Nodal, who took an exact Account of the Heads,Roads, and Inlets belonging to the fore-mention'd Straights, and return'd without performing any other Exploits.
Diego Flores Steer'd four years before Cansift to the Straights of Magellan with twenty three Sail of Ships, Mann'd with three thousand five hundred Seamen, besides five hundred old Netherland Soldiers, with which he unhappily weigh'd Anchor from Cales; for before he got out of sight of the Spanish Coast, he lost five of his Ships and eight hundred Men; yet prosecuting his Voyage, he lay'd during the Winter Season on the Coast of Brazil, and was surpris'd by so vehement a Storm, near the Island Catalina, that a company of Women, sent under the Charge of Peter Sarmiento to Settle in the Straights of Magellan, were all cast away, with the greatest part of the Ammunition and Provisions. The English Admiral Fenton took three Ships of this Fleet from Flores, two were cast away in the River La Plata, and one ran back to Spain, whilst Flores came into the Straights of Magellan on the last day of March, at which time the whole Countrey lay cover'd with Snow; wherefore seeing no hopes of finding out any place to Settle Sarmiento upon, he hlood back with eight Sail to Brazil, and in his Return burnt three French Ships, took two more, and Sail'd home. But his Lieutenant Diego Ribera, and the Governor Peter Sarmiento, Landed the Year after Flores his departure, with four hundred Men, thirty Women, and Provisions for eight Moneths, in the Straights of Magellan; from whence Ribera Sail'd back, whilst Sarmiento built on the North side of the Mouth of the Straights, the Town Nombre de Jefus; and fifty Leagues farther in the narrowest place, Philip-fjade, with four Bulwarks; the Inhabitants of which (as before related) were destroy'd by Famine.

Terrâ del Fuego, already mention'd, opposite to the Countrey of the Patagones, ly-in the South between the Straights of Magellan, is a broken Countrey, with high Mountains full of Trees, and wash'd by pleasant Rivuler's; four Foot deep in the Ground it begins to be all Rocky. The Air is troubled with exceeding great Winds out of the West. The Inhabitants are pale Countenanc'd, but Paint their Bodies with divers Colours; they have long, thick, and black Hair; and very sharp Teeth; the Men go stark naked; the Women cover their secret Parts with a piece of Leather, and wear Strings full of Shells about their Necks; some also Mantle themselves
themselves with the Skins of wild Beasts, which afford but little warmth against the Cold that is here in Winter. Their Huts confift of Trees, and are made round at bottom, and sharp on the top like a Tent, having only a Hole for the Smok to go out at; they are digg'd three Foot deep into the Ground, and also heap'd round with Earth; within the Huts nothing is to be found but Baskets with Fishing Utenfils and Stone Hooks. Their offensive Arms the Men always carry about with them, because they always maintain Wars with their Neighbors. They handle a Quarter-staff very dexterously, are good Slingers and Bowemen; they also use Lances with sharp Stone Points. Moreover they make Boats of the Bark of Trees, which they first cut out into a Form, then lewing it together, bow the fame after the manner of a Boat, which rises before and behind, and being fifteen or sixteen Foot long, can carry eight Men, going exceeding swift. These People are not only beaftial in their Practices, but also Murderers.

Lastly, besides the Straights of Le Maire, Henrik Brewer hath found a new Passage to the Eastward above the States-Ifland, out of the Northern Ocean to the South Sea.

CHAP. IV.

The unknown South-Land.

The unknown South-Land extends with several Points to the Southern Ocean, which have been more seen than discover'd by divers Nations. Oppofite to the East-India Ifland Gilolo, lies Terra des Papous, to which Jacob Le Maire gave the Denomination of New Guinea.

The English Commander, Richard Hawkins, Sailing to the Southward behind Papou, found the Inhabitants black like Negro's; round about appear feveral Ifles and convenient Harbors. Herrera places here on the East, the Countrey Agnada, the Road St. Jago, the Ifland Los Crepos, the Haven Andrea, the River Virginiun, and the little Ifle La Pellena, before the Mouth of the Stream Augustin. Next you meet Eafterly with the Rivers St. Peter and St. Paul, the Havens Hieronymus, the Ifles Ponta Saüda, Abrigo, Malagente, and Malure de Dios, inhabited by white People.

The firft that discover'd New Guinea, Anno 1529. was Alvarez de Saavedra, who, Difcovering a little North of the Straights of Le Maire, gave it the Name of New Guinea.

Eighteen of the many Solomon Ifles exceed the ref, of which fome are three hundred Leagues in circumference, fome two hundred, others one hundred, and fome fifty: All that are inhabited have a fruitful Soil, producing all manner of Provisions, particularly Hogs and Poulterey. The Natives differ very much one from another, for fome are black, others white or tawny.

The fore-mention'd Hawkins in his Voyage towards the Straights of Magellan, fupposing it by estimation to be fifty Leagues from the Main Coast of America, discover'd forty Degrees to the Southward of the Equinoctial Line, with a Wetterly Wind, the unknown South-Land; which he found to confift of low Land, and to be inhabited, by reafon of the many Fires which he faw afore in the Night.

The Spanish Commandeur, Peter Fernandez de Quiro, and the Admiral Lodevrirck Pae de Torres, have made a farther Discovery of this Countrey; for Landing on the
South-Land, they met with several People, some whereof were brown, others white, and others fallow; some had long and lank, others short and curl’d Hair: They acknowledg’d no King or supreme Governor, nor were Govern’d by any Laws, neither had they any Wall’d Towns or Forts; but being divided amongst themselves, they continually Encountred one another with Darts, Clubs, and Staves. Their Houses built of Wood, were cover’d with the Leaves of Palm-Trees. Their Houtholdstuff consist’d in Earthen Dishes, Pots, Ropes, Fifth-nets, Flutes, Drums, and varnish’d Spoons. Their Gardens were neatly kept. Near their Temples were Burying-places. They Row’d very swift in little Boats. Their Bread, well tafted, was made of long thick Roots, either roasted or boy’d.

Here also grow fix sorts of Platanos, great abundance of Almonds, Oranges, Citronns, thick Sugar-Canes, Palm-Trees, which yield Wine, Cocoa’s, and Obis, in taste not much unlike Quinces; but the greatest benefit which they receive, is from the Cocoa Nuts, the Pulp whereof is delicious Meat and Drink; the outermost Shells whereof serve for Cups or Dishes, the inner for Ropes and Cordage; of the Leaves they make Sails and Mats, and cover their Houses with the same; of the Body, Oars, Clubs, Pikes, and Props for their Houfes.

Besides several sorts of Pot-herbs, here grow very high Coleworts and Bledis. The Country also abounds with Pigeons, Partridiges, Ducks, Goats, Hogs, and other ordinary Cattell and Fowls.

The Rivers afford them Souls, Salmon, Thornback, Sea-Cocks, Eels, Gurnets, and several other unknown Fishes, very delicate and wholesome.

This Country also produces Nutmegs, Maltick, Peppers, Ginger, Cinamon, Gold, Silver, Pearls, Silk, Sugar, Anniceed, Honey, Wax, Ebony-wood, Turpentine, Lime-pits, and Marble.

Philips-Bay bends twenty Leagues into the Country, hath a safe Harbor, and excellent Ground, confenting of black Sand. Two great Rivers discharge their Waters into the said Bay, round about which are pefiant Woods, full of Quails, Parrakito’s, Parrots, Nightingales, and Bulfinches, which Sing very sweetly. The Blossoms, especially of Orange-Trees, and the Herb Alpaca, yield an odoriferous smell. The wholsom Air adds vigor to aged People.

Fernandes de Quir delivering the fore-mention’d Account to Philip the Second, King of Spain, mov’d him to Plant the unknown South-Land, and the rather, because he had not found any snowey Mountains, drown’d Land, Crocodiles, Mufchito’s, or any hurtful Creature, yet was not regarded; so that no Spaniard hath since that time set Foot on the unknown South-Land. But the East-India Company undertaking the Design with great eagerness, sent thither two Ships, viz. the Hemskerk and Sea-Cock, under the Command of Abel Tafman, to make a farther Discovery of the said South-Land: Anno 1642. on the twelfth of August, they weigh’d Anchor from Batavia, Sail’d through the Straights of Sunda to Maurice-Island, where they Anchor’d in the North-Weft Haven before the Castle Frederick-Henrick, on the fifth of September in the fore-mention’d Year. On the eighth of October Tafman stood over to the South-Land, near which he was surpris’d by a violent Storm; afterwards, on the twenty fifth of November, he discover’d a barren Shore, against which the Sea beat very furiously; and Steering along this Coast, he found a convenient Inlet, but was forc’d by the hard Weather to stand off to Sea again; yet not long after approaching the Shore, he faw great hollow Trees, and round about them abundance of Musfe-shells, and from the Wood heard a thrill noise of People Singing: Going to the same place again, he put the Orange Flag on a Pole, Carv’d with the East-India Companies Arms, and call’d the Inlet Frederick-Henrick,
the whole Coast, Anthony van Diemen. Sailing from hence Eastward, he on the
eighteenth of December discover'd a convenient Haven, where sending his Sloop to
discover the Shore, he came back in the Evening, being follow'd by a Boat, which
approch'd nearer and nearer, but Night coming upon him, he could not well
discern what they were that pursu'd him, but heard the cry of hoarse Voices, and a
shrill noise like that of a Trumpet, which the Netherland Seamen answer'd by
hollowing, and blowing on their Trumpets, and at last firing a Gun, the South-
landers made a hideous noise, and blowing their Horns, return'd ashore. Tasman
hereupon call'd his Watch, laid Hangers, Pikes, and Mufquets ready Charg'd, up
on the Decks. The next day the Southlanders came in several Boats, two and two
fy'd together, and cover'd with Planks, towards the Ships; the Gunner of the
Hemskerk going with fix Men in a Boat to help mount some Guns in the Sea-Cock,
were betwixt both Ships set upon by the Southlanders, who approach'd with a hideous
noise, kill'd four of the Hollanders with long Poles, and forc'd the other three to
save themselves by swimming; which they had no sooner done, but they Row'd
with incredible swiftness towards the Shore, insomuch that they were out of
reach of their Guns before they could make ready to fire at them. Tasman finding
that there was no good to be done here, since he hazarded the Lives of his Seamen
against a company of wild People, he set Sail, but was follow'd by divers Boats,
at which he fir'd his After-Guns with pieces of Iron and Stones, which killing some
of them, made the rest return. In the midst of the Boats, which were fy'd two and
two together, sat the Commander, who encourag'd the Rowers; they all us'd
Clubs without Points.

These People were gros of Body, undaunted, strong, and of a tawny colour; the
Hair of their Heads broak'd up round, was fy'd up on their Crown, on which
fluck a stiff white Feather; about their Necks hung a square Plate, they wore in
head of Cloaks, square pieces of Cloth, made fast before on their Breasts.

Tasman, by reason of his rough Entertainment call'd this Harbor, Murderers Bay,
and afterwards Sail'd along the Shore till the fith of January 1643, on which Day
he dropt Anchor near a little Rocky Island, from which fell two Streams, with a
great noise into the Sea. The Inhabitants, a strong People, beckon'd to the Seamen
to come on Shore; some lean'd on thick Clubs, others Fenc'd one with another. Tas-
man sending his Sloop ashore for Water with two Drakes, return'd without any,
not being able to Land, by reason of the hollow Sea near the Shore; wherefore
Sailing from hence he discover'd two low Isles, which were full of Woods of very
tall Trees, from the biggest whereof came a little Boat, sharp before and behind,
in which three felloW Men, sitting behind one another, Row'd with great swif-
tness towards the Hemskerk; whereupon Tasman commanded all his Men to go un-
der the Hatches, that the three Southlanders might not be afraid to come aboard;
he also threw a piece of Linnen out of his Cabbin Window, which one of them,
leaping into the Sea, took up, and as a sign of thankfulness, laid the same on his
Head, and being hereby emboldned, they came nearer the Rudder, where they took
up a Knife, ty'd to a piece of Wood, out of the Water, and return'd the Seamen
a Fihhook of Mother-Pearl, ty'd to a Cotton Line. Approaching the Shore, they
saw abundance of People running along, with two little Flags on Sticks.
Some of the Natives came in their Boats close up with Tasman's Ship; and one more
bold than the reft enquiring the same, was found to be a tall Man with a broad
black Beard, and green Leaves about his Neck, who sat down on the Deck with
his Legs under him, and bow'd down his Head oftentimes very low: Tasman re-
turning his Civility, took him by the Hand to Treat him in his Cabbin, but a
Dog which was in the Ship Barking, he grew fearful, and went into his Boat again. Several other Southlanders swam aboard, and others brought Pifang and Clappes in their Boats. Against the Evening a great Vessel, surrounded with lesser Boats, came Rowing towards the Heemskerk, the Men making a great noise; the Seamen fearing some Design, ran all to their Arms, but were convince'd of their Friendship by the Gifts they presented them with from the Governor of the Island. The next day a strange Boat came near the Sea-Cook, viz. two Sloops, which being ty'd together, and cover'd with Boards, carry'd severall Men, Commanded by a Captain, by them call'd Orangkay: On the midst of the Boards which cover'd the two Boats, stood a Hut made of Rushes, and cover'd over with Pifang Leaves; the Sails being made of Mats, caus'd it to Sail very swiftly. Round about this Sloop Row'd lesser Boats, out of which loud Acclamations were heard, every one crying out, Hael, Hael: during which noise, those Southlanders which were already come aboard, sat still on the Decks, which made Tafman think that their King himself was coming to give him a Visit, which accordingly fell out, for he came and presented him with several Hogs, Poultries, Clappes and Pifang, all cover'd with white Cloaths.

This Southlandish King was Habited in a Suit, the Stuff whereof resembled Chinese Paper, doubled and pasted together, and was attended by a great Train of Men, Women, and Children, all of them as black as a Coal; some of them swam after, and others follow'd him in Boats.

These Southlanders barter'd their Clothes and Necklaces, which consist'd of Mother-of-Pearl and white Cockles, and Fishhooks made also of Mother-of-Pearl, against Nails, Knives, and the like Trifles.

Tafman caus'd a Shirt, Breeches, Doublet, and Hat, to be put on an old Orang-kay, who being thus Cloth'd, stood a considerable time admiring of himself, and was also much wonder'd at by his Subjects; but going into the Country, he came back without his Clothes.

Another Orangkay being Present'd with a Rummer of Wine, pour'd out the Wine, and setting the Rummer on his Head, went away with great joy.

Some of the Governors view'd the Ships, not only above, but also below the Decks, and being brought to the Guns, they desir'd to know the use of them; whereupon one being Diischarg'd, it so affrighted them, that had they not been held, they had all leap'd overboard.

Provisions were daily brought by the Southlanders to the Hollanders in great Vessels, surrounded by many lesser; still as they put their Oars into the Water, they made a hideous noise.

Tafman bringing some empty Vessels upon the Deck, thereby to make them understand that he wanted fresh Water, the Orangkays pointed to the Shore; whither they went with two Boats, which return'd without Water, the Inhabitants themselves being forc'd to dig Pits to get the same.

Mean while other Southlanders coming aboard, the Pilot and Boatswain's Boy blow'd on their Trumpets, another play'd on a Flute, and a fourth on a Violin, while left some of the the Seamen Dancing, so amaz'd the Natives, that they stood like senseless Creature, gaping with open Mouth upon them.

Tafman looking into a Grammar which contain'd the Language of the Solomon's Isles, found that many words which were us'd by these People, had a great similitude with thole of that Language.

Besides these Men, there came likewise a great many Women aboard, all of them extraordinary tall, especially two, who might justly be stil'd Giantesses;
one whereof had Mustachio; both ran, and embracing the Chirurgeon Henrick Haeltos, desir'd carnal Copulation with him; and seem'd to quarrel one with another about him: Others confidently put their Hands into the Hollanders Breeches, their Husbands giving consent thereunto: All of them had thick, curl'd, black Hair, which they colour'd red, and comb'd with ten little round Sticks ty'd together on the top, and left wide like Teeth at the bottom; yet some of them let their Hair hang down in long braided Locks; they shave their upper Lips, but keep a square Beard on their Chin; yet amongst the old People there were some whose Cheeks were overgrown with Hair: Their manner of shaving is with the Teeth of certain Fift made fast to a Stick; they all went bare-headed, except some few, who ty'd a square piece of Stuff, wrought of Leaves or Feathers, above their Eyes against the Sun; the upper parts of their Bodies were all naked, but about their Middle some wore a Girdle, others a Mat of Clappes Leaves, others a Cloth not unlike Chine Paper, about the lower parts of their Bodies. The Women Apparel differ'd little from the Mens, excepting that their Aprons reach'd farther down, viz. to their Knees. They barter'd their Clothes against Nails. Some of the Orangkays, being Entertain'd in the Cabbin, wonder'd to see a Bullet that was Discharg'd from the Quarter-deck, fall into the Water at so great a distance. They wore about their Necks Mother-of-Pearl, white Cockles, sweet-smelling Flowers, green Leaves, or the Nails which they had gotten of the Hollanders; Some of the aged Women wanted both their little Fingers, and the young ones the upper Joyses of them, which the old Men also wanted: Haeltos pointing at the Stump, ask'd the reason of it, but one of them laying his Hand under his Chin, made strange Signs, out of which he could apprehend nothing.

On the twenty third of January, a second time Tafman went ashore for Water, carrying Spades and Pick-axes with him, to dig Pits with. Two of the Hollanders Boats going close together, in each of which were three Southlanders, Tafman call'd to his Rowers to pull swiftly; which the Southlanders in Tafman's Boat observing to tend to their Rowing the swifter, laugh'd and hooted at their Countrey-men that were in the Sea-Cocks Boat, when they chanc'd to get beyond them. Tafman in his going ashore discover'd several Isles at a distance, was kindly Entertain'd, and towards the Evening carry'd by four Men through the Water, on a Mat made fast between two Poles, to his Sloop, whither they also brought nine Hogs, and fresh Water digg'd out of Pits.

Tafman being got about the Point of the Island, saw the Hemskerk under Sail; wherefore Rowing aboard the Sea-Cock, he was inform'd that she had flipt her Anchor; whereupon following her, he got sight of another green Island the next day, along the Shore whereof ran several People with Sticks, on which hung white Cloths; some of them came aboard, and brought with them what Provisions the Island afforded. The Inhabitants barter'd Clappes, Pifang, Foals, Hogs, Mother-of-Pearl Fish-hooks, Stone Axes, little Stools, great Clubs, with a black Point as long as a Man's Arm, and hooked, against Trifles. The Hollanders were also for'd here with fresh Water. The People both in Language, Habit, and Customs, were very like those of the first Island, but were not altogether so courteous. One of the Southlanders stealing a Half-pike out of the Boat was forc'd by his Companions to restore the same.

The fore-mention'd Haeltos relates, That going ashore with some Soldiers, he saw their Hous'es, which he found to be built after a strange manner, viz. some of them were round like Towers, Wider at top than at bottom, and without any Holes for Air, but all built close of Canes, which were fluck in the Ground; other
Huts were cover'd with a long Roof of Pifang or Clappes Leaves, resting on Posts; under which kind of Building Halahtes shelter'd himself against a mighty Shower of Rain, found divers young Men and Women sitting on Mats, and an old Woman, blind through Age, lying by them on the Ground, and Fanning her Self with Pi-fang Leaves: The Men going away, signifi'd thereby a kind of Invitation to the Hollanders to go to the Women, who not receiving the Entertainment they expected, rofe altogether on a sudden, and Singing, Danc'd about the Hollanders. The Men had on their Shoulders and Breasts, Scars of half an Inch deep, and an Inch long; upon some of which, being fresh and bleeding, the Flyes fat. They eat after a strange manner, for stripp'd off the outmost Kinds of the Clappes with their Teeth, and breaking the hard Shell against their Elbows, they pull out the Kernel, and eat the same. Whatever Fleth-meat they eat, they never throughly boil or roast it, but make it onely just warm. They sleep on the Ground upon Mats, and lay their Heads on a little wooden Cricket with four Feet. They take great pride in their Hair, and those that have not long Hair of their own, use Perukes.

Tasman steer'd his Course towards the high Coast that lay before this Island, was follow'd by several small Vessels from the adjacent Shore, of which some carry'd a Bough of Clappes or Pifang, with white Veins at the ends; but seeing the Ships Sail from them, they threw the same overboard. Tasman standing Weasterly, discover'd three Isles, near the laft whereof the Sea brake exceedingly, which the Hollanders not without great danger had approachi'd in the Night; after which they discover'd to Leeward of them, a high Coaft, which extended it self a great way, but the Sea went so rough, that they durft not venture near the Land; besides, the Sea went very high on a Bank, first ten, then five, three and a half, and again ten, fourteen, and seven Fathom deep; and at times a Man might fee the Ground, insomuch that they kept out the Boats belonging to the Hemskerk, which was in most danger, to carry them aboard of the Sea-Cock, if the fiift should chance to split. Laftly, getting over the Bank, they saw very high Land to Windward, and many hilly Isles to Leeward; the Sea also was full of blind Rocks and Shelves, so that they were in danger every hour, and the rather, because the Wind blew hard every day; yet at laft losing sight of Land, they steer'd their Course Wefterly in five Degrees Southward of the Line, towards New Guine. On the two and twentieth of March they discover'd low Land full of Woods of tall Trees; surrounded with a company of Isles, against some of which the Sea brake with great violence, insomuch that they were again in great danger, especiallly when they were got amongst eighteen Isles, between which the Water being shallow, and the Current running very strongly, drove the Ships towards the Shore: Whilst they were Tackling to and against to get beyond the Shelves, a little Vessel, carrying a great Weather-cock on her Star-board, came from the Shore, Row'd by seven Men, who fat on Boards which lay over the fame; they were of a brown Complexion, only girt about with a hairy Girdle, made fast on the top of their Heads; under their Feet they also wore something in stead of Shoes, about their Necks hung Flowers, and their Bodies were Painted black: Among the feven, one who was very fat, and whose Head was adorn'd with two Feathers, stood up and proffer'd the Seamen two Clappes, in return whereof Tasman gave them a Box of Nails and a piece of Sail-cloth, which sinking under Water, an aged Man div'd for the fame, and bringing it up, gave it to his fix Companions, who made no shew of thankfulnes. Their Arms confifi'd in Bows and Arrows. Their Clappes they call'd Anicua, as the other Islanders had done.

Sailing
Sailing from hence, they discover'd two low Islands full of Trees; and three
Leagues from them, on their Star-board, a high Coast, and on the other side a great
Island, whither they drove with a small Gale; approaching the same, two very
small Boats came towards the Hemdkerk; the biggest of the two carry'd six Men,
and the least three, all of them very deform'd; they went stark naked, only their
Yards were ty'd up with a String on their Bellies, and about their Arms hung
Chains of Mother-of-Pearl; they were Coal-black, only red about the Mouth,
which redness was occasion'd by the chewing of Pifang; in their Hair fluck wooden
Combs, and on their Foreheads green Leaves; but in each Boat was one who
had a bruised Reed made fast in his Neck like a Plume; the biggest Vessel was
Painted with strange Shapes of Men and Beasts; they us'd red Bowes and Ar-
rows, and having call'd to the Seamen, they Row'd back again to the Shore; which
Tafman left a Stern of him, and ran between the Main Coast (by all suppos'd to be
New Guinea) and several great Islands, that lay scatter'd along before the Main
Coast; from whence came four small Boats, adorn'd with Imagery like Serpents,
but kept without Gun-shot from the Ships; at last one leaping overboard, swam to
the smallest Boat, out of which one swam back in his Pool to the other, and after-
wards came to the Hemderskerk side; he was a black Man, wore Leaves before his
Privities, and Armlets about his Elbows; through the Griffe of his Nose fluck a
white Bone Bodkin, sharp at the ends, and of a Fingers length, and about his
Neck a String full of Cockle-shells.

Tafman Sailing on along the Main Coast, met with eighteen Boats more, the
Rowers whereof laid their Oars upon their Heads, and not without strange Ge-
stures call'd aloud, and invited the Hollanders to come ashore: On the Sterns and
Heads of these Boats were likewise divers Shapes Painted, upon a white Ground;
in some were two, and in others three, four, and five Men; eight of them going
into the Hollanders Boats, were made Drunk with Arack. These Southlanders went
stark naked, some only covering their secret Parts with Leaves; their skins were
black, only on their Foreheads they drew a red Stroke, which reach'd to their
Ears; their brown curl'd Hair was by some colour'd grey, by some red, some let
it hang loose over their Shoulders, others ty'd the same in a Tuft on their Crown,
cover'd with a Cap of Pifang Leaves, others wore their Hair scarce two Fingers
long, and through the Griffe of their Nose, a piece of Cane or Quill, and a broad
Beard without Mustacho's; they had nothing to barter but large Snail-shells, on
which they made a strange noise; and whatso'er they receiv'd, they first smell'd
on it like Dogs: they fancy'd not Nails, as all the other Southlanders had done.
Their manner of Fishing was thus: They ty'd several half Clapper-shells, made
fast like a Chain, to a long Reed, shook the same to and again on the Water, to ga-
ther the Fish together. In the Boats lay Planks of an oval fashion, which by Ropes
ty'd in the middle they held before them in stead of Shields. When these South-
landers went from the Ships, one of them threatened to beat the Seamen, shaking
his great Club at them; whereupon they all Row'd with great speed to the Shore,
whilest one in every Boat knocked with a Staff against the sides, just as if they had
beat an Alarm. Amongst them one had barter'd for an old Doubler, with which
he shew'd many antick Tricks, putting it on the wrong way, sometimes on his
Head, then his Feet into the two Arm-holes, and anon the Button-holes behind on
his Back.

The Ships Sailing from hence, ran along a broken Coast, and on the twelfth of
April were so terribly shaken by an Earthquake, which lasted an hour and a half,
that they seem'd shivering to pieces in the Water, as if they had ran against a

O o o

Rock,
Rock, notwithstanding they could not fathom Ground with their longest Line. Somewhat farther they discover'd a burning Mountain on an Island, between which and the Main (on which ffood also a very high Mountain) they fleet the Course, came into a white Water, mov'd by a strong River from the Continent; and coming to an Anchor before the Island Janna, they faw the Isles Moa and Arimoa before them. The Jamnæans calling New Guineæ by the Name of Belah, inform'd the Hollanders, that they Warr'd continually with the Inhabitants thereof. These People being also Coal-black, some of them had loose curl'd Hair, hanging down over their Shoulders in long Braides, and others had only two thick Locks, which cover'd their Ears: all of them wore four Feathers on their Heads: the Men pull'd out their Beards, and hung a great Bone Ring through their Ears, at which also hung a Shell like a Spur; most of them had red Koles ty'd about their Heads, and a Necklace of Hogs Teeth about their Necks; under their Navel they wore Girdles, a handheld and a half broad, and about their Waftes Strings full of Shells, or Sea-Cockles, to which a small Lappet was ty'd, and hung down before their Privities: but because it was but two Fingers broad, and mov'd to an again by the Wind, their Nakednefs appear'd to thofe that took notice thereof: through the Griffe of their Nofes they wore a Hogs Tooth, or the Splinter of a Cane. Upon the Stern of their small Boats was the Shape of a little Lyon. One of thofe Ílanders imitated the Hollanders when they fpoke, endeavoring to repeat their Words after them, and therefore was call'd Parrot.

Tafman Sailing from hence to Moa, came to an Anchor before the Coast, ten Leagues beyond Janna, where a great Boat, carrying seventeen Men, coming near the Ship, let flie a great many Arrows at the Seaman; but the next Morning being better reconcil'd, they came aboard, where the Chirurgeon of the Ship gave a Cap to one of the Jamnæans, who, as a testimony of his thankfulness for the Prefent, requifited him to fit down; which done, he began to braid his Hair from his Forehead to his Neck, tying the fame with a String.

Tafman weighing Anchor, Sail'd between New Guineæ and the Island Infou, having got nothing but a few Jamnæan words from the Ílanders, who call'd a Bone, Ver-tilla; a Hog, Paro; a Knife, Sappro; Beads, Saffera; a Nail, Tortor; Sleep, Moeni; and a Rat, Affho. So fleet the Course along Arimoa, which is both higher and larger than the neighboring Amoa, and refembles a Seaman's Cap, he left New Guineæ a Stern of him, and Steering on Northerly, Sail'd by Schoutes-Island, where eight large Boats came within Gun-Shot of him, each of which had on each Side a Wing, under which sat four Roweres, two and two together, with their Feet hanging in the Water; at their approaching near the Ship they put out a Long Pole, with a white Flag upon it; wherupon Tafman alfo commanded his white Ensign to be put forth, and threw a String of Beads, ty'd to a piece of Wood, out of his Cabbin Window; which the Southlanders had no sooner taken up, but in testimony of thankfulness they all broke their Arrows over their Heads, and kept near the Sides of the Ship, till fuch time as the Boatswain thereof founded a Trumpet, up on the hearing of which the fmall Row'd away with as much Speed as they could possibly. These People were of a fallow Complexion; they broke their Arrows with great Ceremony; for fift they pointed with them towards the Skin, then put them into the Water, and breaking each Arrow in two Pieces on their Heads, they threw one over the Larboard, and the other over the Starboard; he that broke the Arrow, made a long Speech to the Hollanders, who took the fame for an Oath of their Fidelity toward them. In every one of these Boats were twenty eight or thirty Men.

Tafman
Tasman prosecuting his Voyage farther, discover'd the following day another Island, and a crooked Arm of New Guinea, near which he judg'd might be an Opening betwixt New Guinea and Gilolo; then leaving on his Starboard a great many blind Cliffs, dangerous Shelves, and uneven Grounds, he cast Anchor near a Rock, which at high Water was overflow'd. A Boat coming near the Ship, in which were six Men, whose long Hair hung down their Backs, one of them amongst the rest standing up, call'd to the Hollanders in the Ternaren Language, saying, What People? to which a Seaman, who understood and spake the said Language, answer'd, Spaniards: whereupon he ask'd, From what Country, and whither bound? to which he was answer'd, From Moa to Ternata: The Southlander hereupon reply'd, You are Deceivers, the Ship is not Spanish, but Holland made; whereupon Tasman caus'd the Prince of Orange's Flag to be put out, which the Southlander no sooner saw, but he cry'd, It appears by your Flags that you are Hollanders, who are always more welcome to us than Spaniards: However, though the Seaman acknowledg'd his mistake, in saying they were Spaniards, yet the Southlanders would not stay within shot of them, but at their Rowing away cry'd aloud, Here is abundance of Tifang, Clappers, Potato's, Sugar-Canes, and other Fruits on Shore.

From hence Tasman Sail'd Northerly between many Isles, and a Channel that separates New Guinea from Gilolo, by Cerami, Maniipe, Bolao, and Burro, to a narrow Opening, where Pangsane being on his Starboard, rose with exceeding high Rocks, as Bottom on the Starboard. These Rocks are most of them overgrown with Trees and Brambles. In the middle of this Channel also lies a Rock, for its shape call'd A Galley, by which Tasman Sailing, bent his Course homeward, and at last, on the fifteenth of June, Anno 1643, cast Anchor before Batavia.

C H A P. V.

Terra Borealis, or The Artick Region.

Having spoken something of the Terra Australis Incognita, or Unknown South-Land, there remains something to be said of the opposite part, namely, the Terra Borealis, or the Artick Region, which is call'd Incognita in like manner as the Terra Australis, in regard, though very much, as well of the one as of the other, hath been search'd into, and in part discover'd by several Voyagers, yet doublets there is a very vast Tract of Land, in the Artick Region especially (if it be not rather Sea,) which is altogether unknown, and those parts which have been discover'd, as Groenland, Iceland, Nova Zembla, Spilbergen, Hudson's Straights and Bay, &c. so imperfectly known, that they may well deserve the Title of Unknown.

The several parts of this Artick Region are, 1. Terra Subpolaris Incognita, or that part which lies directly under the Pole, and is otherwise call'd Orbis Articus. 2. Groenland. 3. Spilbergen, or Nieuwland. 4. Iceland. 5. Nova Zembla.

The Terra Subpolaris is describ'd by a certain Seaman of Bosledue, to be a great black Rock, about thirty five Leagues in compass, and of an extraordinary height, through the Land adjoyning to which the Sea violently breaking, makes four great and violent Euripis, or Whirlpools, whose Waters driving Northward with so forcible a Stream, that no Ship, though carry'd by nester so strong a Gale, is able to stem the Current, are at last swallowed up in the Earth. It is also reported.
ported, that between two of these Earips, namely that made by the Scythick Ocean, and that on the back side of Greenland, there liew an Island Northward of Lappia and Biarnia, inhabited by Pygmies. Much more to this purpose is related of the Subpolar Region, but since it is very improbable that any one could come so near as to make any discovery thereof, to say more of this matter, would be but to insinuate things favoring more of Fables than Reality.

Greenland is that part of Terra Septentrionalis, which winds about from South to East, and decline Northward from Cape Fareul, in the Dunciadonian Sea; however, Greenland hath been generally taken for an Island; yet many late navigators think it joyns with the Continent of Tartary, and others leave it in doubt whether it be Island or Continent: It is bounded towards the East with the Dunciadonian Ocean; towards the West, with Hudson's Straights and Bay, which separate it from America; and towards the North its Bounds are altogether unknown, and is not without reason supposed to be the utmost part of the World towards the North Pole. There are who believe it to be one Continent with America, and that upon this ground, because several who have attempted to pass through the Straight commonly call'd The Straight of Davis, into the East-Indies, affirm, that they found it to be a Gulf; but one Captain John Monk, who was also a great Undertaker in the North-West Passage through this Straight, or Gulf of Davis, alludes great Probabilities of this Lands being divided by Sea from the Continent of America.

This Country hath anciently been divided into two Regions, East-Greenland and West-Greenland; answerable to which Division Errick, furnam'd The Raddy, the Son of Tovvalde, is reported by the Dunciad Chronicle to have built two Forts or Lodges, Ofsterbug and Woftrebug, in the Eastern part. The first Planters of Christianity builde the City Garde, which became, as the said Chronicle mentions, a City of great Repute and Traffick, and not long after, the Town Albe, and towards the Sea-Coast, a Monastery, dedicated to St. Thomas. The City Garde was a Bishop's See, to which belong'd a Cathedral Church, by the Title of St. Nicholas, built in the same City, though a certain Island Chronicle makes mention of the Church of Strefnes, as the chief Metropolitan and Bishop's See of Greenland. The Bishop assisted oftentimes in the Assembly of the Estates of Denmark, and held of the Bishop of Nidrosia or Dramthen in Norway, as the Temporal Estate of Greenland held of the Crown of Norway, the Norwegians being the only known Planters of this Country, deriving their Original from the aforesaid Errick, according to the testimony of Mr. Vormius, and also of Angrimus Jonas, in his Specimen Islandicum, and the Vice-Roy of Norway, the Nomophylax (as the said Angrimus calls him,) or Sovereign Judge of the Country. The Inhabitants of Woftrebug, or the Western Coast of Greenland, are by some call'd Skrederlings. According to the Island Chronicle, the Towns and Places of chief note are Stakoford, in the most Eastern part; a little farther West, the Port of Funchefuder, so call'd from a Page of St. Olus, King of Norway, who together with several others were cast away upon that place; a little higher, the Roaten, full of white Bears, and other wild Beasts. In the Western Coast, Kindelford, an Arm of the Sea; on the right Shore whereof stands Kongshirk, i.e. a Church built crossways; also the Town Vundalexbug, and not far off a Monastery, dedicated to St. Olus and St. Augustine; the next Place is Rumpesfiford, where there is a religious Convent, and divers little Islands, in which are Springs of Water, warm in the Winter, and temperate in the Summer, which are accounted Medicinal, and of great Vertue in the curing of divers Maladies; upon the same Coast lies Esnealfford; between which and Rumpesfiford is the Palace Fos, and a great Church, dedicated to St. Nicholas; near the Promontory Clining is another great House call'd Daller,
Chap. V.  
A. M. E. R. I. C. A.  

Daller, and beyond Erricksfiord, a great island denominated Reykafon, from the abundance of Reindeer which breed there: In the same island is a Quarry of the Stone Talgusfin, not consumable by Fire, and yet soft enough to be cut into any form; innumerable that Veils have been made of it, containing twelve Tun. More Weftward lies the island Langen, and another Royal House call’d Heedfjad, then Erricksfiord, another Arm of the Sea, and at the Entrance thereof, the island Herrievon, part whereof belongs to the Dome, or Cathedral, and the other part to the Church of Dunes, the principal Church of Greenland, next to the Cathedral, North-West from Erricksfjord is Midfjord, and farther Northward, Bondefjord, near which are several little Iles and Ports. Between Ofrefjord and Wefrejord is a large Desert, altogether uninhabited.

This Description of the Country, Extracted from the Island Chronicle, is look’d upon by a late French Writer of note, as the most particular and faithful; however, the Danish Chronicle differs in many things, and amongst others in this, that not the hundredth part of Greenland is possess’d by the Norwegians, but that there inhabit several different forts of People, of different Fashions and Governments, altogether unknown to the Norwegians.

Greenland, notwithstanding its Northerly Situation, is reported to be a Country not unfertile of Corn, and other Productions of the Earth; and in respect of its verdant Aspect at some Seasons of the Year, above the rest of those Septentrional Regions, it is concluded to have merited the Name of Greenland, i.e. Greenland; nay, so great is the Heart that is said to be there during the Moneths of June, July, and August, by reason of the reverberation of the Sun-beams from the Rocks, that many times there is but six Weeks space betwixt Seed-time and Harvest.

The Beasts, which are said to breed here in great numbers, are Horses, Deer, Foxes, Hares, Bears, both black and white, common Wolves, and a sort of Beast between a Deer and a Wolf, besides great store of Beavers and Martins, as the Island Chronicle testifies, whose Furr in fineness may compare with the Sables of Russia. There are also Gerfalconis in abundance, both white and grey, so delicate a kind, that they were in ancient times sent to the Kings of Denmark as Presents of great rarity.

The seas about Greenland abound in very many sorts of Fish, as Sea-Wolves, Sea-Dogs, Sea-Calves, and above all, incredible numbers of Whales of a vast bigness.

But the most remarkable Commodity of this Country, is a kind of Horn, commonly call’d the Licornes, or Unicornes-Horn, which is found there in great quantities, and great store of it is to be seen in Denmark, some whole, some in great pieces, sometimes only the Ends or Stumps; but since it appears very different from all other kind of Horn, there is great Question made amongst Naturalists, whether it be Horn or Tooth; and if Horn, whether the Horn of a Beast or Fish; but it is discover’d of late to be the Horn, or rather Tusk of a certain Fish, which the Islanders call Narhual, being indeed a kind of Whale, as the Name seems to imply; signifying a Whale which feeds upon Carcafees.

This Country is call’d by the Natives, Secanunga; who was the first Discoverer thereof is not certainly known, but the first chief Voyagers thither were, of the Dutch, William Barents, or Barentsoyn, of Amsterdam, who set forth towards those Parts in the Year 1594. and before him, Ditmar Blaffens, in the Year 1563. of the English, Mr. James Hall, who set out from Copenhagen in Denmark, Anno 1605. and in a second Voyage was slain by a Salvage of the Country.

The Coaflings, Courses, Havens, and Creeks of Greenland, according as Barentsom receiv'd

The Coafl.', havens, and Creeks of Greenland.
receive'd an Account of them from Iver Boy, a Greenlander, written in the North Language, as it is call'd, are as followeth: From Stad in Norway, to Hornesf, the East part of Greenland, it is seven days Sailing. Between Iceland and Greenland lieth a Riff call'd Gombonf-Jare, the Ice lying upon which, hindreth the Passage. Tho'th that Sail from Bergen in Norway South of Rokensf in Iceland, come under Swaffier, a Promontory, or high Land in the East part of Greenland, and within fight of the high Mount Whitfark, between which and Greenland lieth a Headland, call'd Heroldus Hook, not far from Sound-Haven, formerly much frequented by the Norway Merchants. Tho'th that Sail from Iceland to Greenland, Steer to Snaffesf, West of Roknuf, and after South-West. East of Heroldus Hook lieth the Village of Skagenford, the most Easterly Village of the Iland; East of Skagenford, the Haven Bearford, inaccessible by Ships, by reason of a great Riff lying at the Mouth thereof. This Place is chiefly remarkable for the Whale-fishing, the Whales upon the going back of the Tide running into a great Swaleth, as they call it, which is in the Haven. East of Bearford is the Haven call'd Allabong Sound, full of little Isles. East from the Icy Mountain, the aforemention'd Haven Fendabothes. Farther East is the Highland Cape Hought, where they Hunt white Bears. West from Heroldus Hook is the Village Codsford, and hard by the Sea-Coast, a fair Church, which we conceive to be the same with Korferefpk above spoken of, as Codsford may also probably be the same with Kindsfjord. A little farther West lieth the Boy, or Town of Wartsfale (for in the North Language Boy signifies a Town,) belonging to Peteisfik, or Peterswike Church: Near this Boy or Town standeth a Cloyfter, or Abbey of Canons Regular, dedicated to St. Olaf and St. Augustyne. Next to Codsford is Rupmsesford, the fame queftionless with the above-mention'd Rupmsesfjord, where there is a Cloyfter of Nuns of the Order of St. Benedict: In this Ford lie many small Isles. Between Rumpusf and the next Sound lieth a great Garden call'd Vofe, belonging to the King of the Counrrey, as also St. Nicholas Church before mention'd. At the entrance into Emelisasfjord is the Inlet Southwodefike, and somewhat higher on the fame side, the little Cape Blomeng, beyond the Inlet Granwike: above that, the Garden call'd Daleth, belonging to the Cathedral Church; and on the right-hand to those that Sail out of the said Sound, a great Wood belonging to the fame Church, where they feed their Oxen, Kine, and Hoftes. The Highland lying by Emeliasfjord, is call'd The Ramas Hayth, from the Rain-Deer which use to be there. Hunted: And hereabouts is that fort of Stone of which they make large Fats or Clifterns, as hath been before intimated; it is by some call'd the Zervell-Stone, being a fort of Marble, or (as some will have it) Lead-stone, of all colours. West from this lieth another Highland, call'd Long-Highland. The next Sound is call'd Swaltsford, having a Church belonging to it of the fame Name, and where there is also a Garden belonging to the King, call'd St. Hentelfjard. Next to that lieth Erricksford, and at the entrance thereof the Highland Erricks Hought, belonging to Deverskirk, the first Parochial Church in Greenland. North-West from Erricksford, is Megenford. Farther out is a Church call'd Stogekirk; and farther in the Sound, Leadenkirk. Beyond Erricksford is another Ford or Sound, by the Name of Poffa, belonging to the Cathedral Church; and to the North of it, two Villages, Iver-boy and Forther-boy. From thence farther North lieth Bredaford; and after that Lormonsfjord; and from thence Westward, Icedep. To the North of the Westland lieth a spacious Wildernefs, call'd Hemel Hatsfelt, and Edg'd with massive Rocks and Cliffs towards the Sea side; beyond which the Sea is innavagable, by reason of the many Swalgen, or Whirlpools thereabouts.

In Greenland there are divers Hills, wherein are Silver-Mines, multitudes of white Bears,
Bears, with red Patches on their Heads; also white Hawks, and all sorts of Fowl. There are moreover in the Countrey divers Rivers, frozen up for the most part of the Year, and cover'd with Ice; yet it is generally affirm'd, that it is not so cold there as in Norway or Ireland. On the Hills are said to grow Acorns and Nuts, very well tasted, and as big as Apples; also as good Wheat as is commonly produc'd in other Parts.

In the Journal of Dibmar Blefken's Voyage, mention is made of a certain blind Monk, brought up in the Monastery of St. Thomas, who reported several memorable things concerning this Countrey, as that it was call'd Greenland antiphrastically, or by contrariety of Speech, as appearing seldom or never green; and that it abounded with Bears and white Foxes, and was not without Pygmies and Unicorns, which never appear'd till after the Sun was enter'd into Aries; that in the said Monastery of St. Thomas there was a Fountain of fælding Water, which was convey'd through Pipes of Stones to the Monks several Cells, and serv'd them not only for Stoves, but for the dressing of their Meat, which was as well boil'd by means of this Water, as if it had been over a real Fire, and that the Walls of the Monastery were made of a kind of Pumice-stone, upon which if Water were pour'd, it would produce a flamy Matter, commonly us'd in stead of Lime for Mortar, like the Stone of Mount Etna in Iceland; that two of these Pygmies, a Male and a Female, were kept by the Abbot, and were both endu'd with perfect humane Shape, and over-grown with Hair, even to the outermost Joynts of their Fingers, the Male especially, who had a Beard reaching down to his Knees, but that they seem'd wholly devoid of Reason and Understanding, nor had any distinct use of Speech, only made a semblance of Hissing of the manner of Geese; lastly, he reported the duration of the Lives of these Creatures to be answerable to the shortness of their Statute; but that concerning their Wars with the Cranes, he had no other knowledge than by Tradition.

The Description of Greenland left by Mr. James Hall, renders it a high, mountainous, and craggy Region, sufficiently water'd with Rivers, and provided with good Harbors, of a Soil not unsalient in all places where he came, having between the Mountains fruitful Valleys and pleasant Plains, abounding with several sorts of Fowl, as Partridges, Pheasants, Sea-mews, Gulls, Crows, &c. but of Beasts, chiefly black Foxes, and (as was conjectur'd by the plenty of Harts-horns found about their Tents) Rein-Deer, yet not deftitute of other Beasts, the Vestigium of one thereof was found to be not less than eight Inches over.

As for the Manners and Customs of the Natives, they are by the said Description represent'd to be a kind of Samoid, or wandring People, still moving from place to place, warlike and active, using Sling and Darts with marvellous dexterity, of a brown Complexion for the most part, and of an indifferent Stature, eating their Meat either quite raw, or onely a little parboyl'd, Clothing themselves with the Skins of such Beasts, or other Creatures, as they kill, especially Seals, or some of the largest size of Fowls, which they Dress very smooth and soft, turning the Feather or Hair side outwards in Summer, and inward in Winter. Their Weapons Bowes, Slings, and Bone or Iron-headed Darts; their Religion Idolatrous, but chiefly Sun-Worship, as was gather'd from their manner of Accost, when any of the English first approach'd them, for they us'd to point up to the Sun, as chief Author of their felicity, and then beat their Beasts, crying, Ilios, which feem'd to signify as much as I mean no harm, and would not come near till those that met them did the like. Their Houles built of Whales Bones, and the Baulks thereof with Whales Ribs, and cover'd with Earth, but the best fort with Seal-Skins, having Vaults or Rooms.
Rooms under Ground, four-square, and two Yards deep in the Earth. Their manner of Burial, a Pile of Stones thrown over the Corps, being first wrap't up in Seal-Skins.

Spilberia, so call'd by the Hollanders, from Spilbergen, whom probably they reckon to have been the first Discoverer of it, is the fame that we vulgarly call Greenland, and which Sir Hugh Willoughby (if not the first of all, yet at least the first of the English that discover'd any thing of these Parts) nam'd King James's New-Land. The said Sir Hugh Willoughby set forth Anno 1553: in the Bona Esperanza, accompany'd with two Ships more, viz. the Bonaventure, Richard Challoner Captain, and the Bona Confidential, and after some time of Coasting up and down those Northern Seas, he Landed with his Company upon the Place, where staying a few days, he sent three Men three days Journey into the Country South-West, and three more as far full West, who all, after much hardship in their Travelling, return'd without having met any People by the Way, or seen the least appearance of any Habitation. Sailing hence back for Lapland, they were all frozen to death in the Haven Argus.

A Description of Greenland by one Mr. Robert Fatherby, represents the Nature of this Place contradictory to its Name, as before was observ'd of Greenland: "For certainly (faith he) no part of the World, yet known and discover'd, is left Green than this, both the Mountains and Low-lands being cover'd with Snow till the beginning of June. The Country, which is for the most part mountainous, bearing neither Gras nor Tree, save only Heath or Ling, as it is call'd in the North parts of England, which grows upon the Moors or Heathly Grounds when the Snow begins to melt, and on which in Summer the Deer feed themselves fat in one Moneth; but how they live in the Winter, is a thing beyond any Man's skill to comprehend, especially during the Sun's absence under the Horizon, which in the Latitude of seventy seven Degrees continues from the eighteenth of October to the fourth of February.

This Country is by many surmized never to have been inhabited by Men, yet not altogether uncapable of affording Habitation to such as would bring with them sufficient defensive Weapons against Hunger and Cold: For other Animals, it is found, by the testimony of those that have been upon the Place, not to be destitute; for besides Deer before mention'd, there have been seen Bears and Foxes; and of wild Fowl, Catibert Ducks, Willocks, Stints, Sea-Pigeons, Sea-Parrots, Gulls, Noddies, &c.

The Southermof't part of Greenland, call'd Point Look-out, stands in seventy six Degrees and thirty Minutes. The West side of the Land was discover'd by the first Voyagers Northward as far as eighty Degrees and odd Minutes, and in that compass fix or eight good Harbors for the Whale-fishing; the East side as far as seventy eight Degrees, with divers Islands, both great and small, yielding good Harbors, and store of Whales and Sea-Horses.

In the Year 1610. Jonas Pool, Master of the Amity fell in with this Land in May, and continued upon the Coast, discovering of Harbors, and killing of Morses, till June following: and he is said to have been the first that gave this Country the Name of Greenland. The next year he set out again, accompany'd with Thomas Edge, Commander of the Mary Margaret; and since many other Voyages have been made as to a Place known, and a great Trade driven in catching of Whales, not without several Contests with the Dutch and Danes, but nothing of late discover'd considerabl more than in the first Voyages. The Harbors, Sounds and Coaftings most taken notice of, are Fair Foreland, Cape Cold, Black-Point, Horn-Sound, Knotty-Point, Bell-Sound, Lawpole, Cross-Road, Deer-Sound, Fowl-Sound, Clofe-Cove, Gurnet-Nife, Ice-Sound, and Green-Haven.
There are few that have Sail'd to Greenland, but make great mention of that Island, so call'd, as having been first discover'd at the Charges of Sir Francis Cherry, an eminent Merchant, by others Bear-Island, from the multitude of Bears found there; it lies in the Latitude of Seventy four Degrees, and is noted for Fowls, Foxes like Dogs, and upon the Coasts great Fowls of Whales, Sea-Horses, and Morfes: It is also said to be furnish'd with Lead-Mines, and Pits of Sea-Coal.

Iceland, so call'd from the continual Ice which is upon it, is a craggy mountainous Countrey; and not only the Hills, but a great part of the Low-land cover'd with perpetual Snow: It is of a Form somewhat oblong, lying between the fifty fourth and fifty ninth Degree of Northern Latitude, having Norway on the East, the Orkades and Scotland on the South, Greenland on the West, and the Hyperboreans or frozen Sea on the North. It is by Olus Magnus supposed to be twice as big as Sicily, that is to say, about a hundred Leagues in length. It is the most known, and most thoroughly discover'd of all the Countreys of the Arctick Region, and is said to have been first found out and peopled in the Year of our Lord 900; by certain of the Nobility of East-Frisia in the Countrey of Breme, in the time of AEbrand, Bishop of that Countrey; but whether or no utterly unpeopled till that time, is a Question not easy to be determin'd, though in all probability so obvious a Place to be found out, could not lie so long totally uninhabited. Not long after several Colonies of Norwegians Setled themselves, some in Estland, some in Ferow, others (following the Example of these Bremers) in Iceland. The Countrey is full of Rocks and Stones, and (as is credibly reported) not a cultivated Field or Garden in the whole Island, and by consequence no sort of Corn, yet the People living without either Bread or Salt, are very strong, and of a good Complexion: Neither is there a Tree to be seen, except the Birch, which likewise grows but in one place, and exceeds not the heighth of a Man, by reason of the violence of the Winds; yet there is said to be great plenty of Butter, the Grafs being so fat, that the Oxen are not suffer'd to stay long at a time in the Pastures for fear of bursting. Till of late there was neither Town, nor any thing that could be call'd a Village, in the whole Island, but stragling Cottages here and there, not above three or four together in a place, most by the Sea side for the convenience of Fishing; they were built pretty deep in the Ground, but artificially fram'd of Whales Bones, with Seats, Benches, and other Utensils of the same; now sometimes they use Fir to the same purpose, which is cut upon the Coast by the force of the Sea from Fartary or elsewhere. For want of Vessels, they lay their Butter in Heaps in the Corners of their Houses like Mortar. In the Winter, wanting Fodder, they feed their Cattle with Fith. Besides these Cattel, which are Kine without Horns, Horses only fit for carrying of Burthens, and very large Sheep, there are fowls of white Foxes, and huge Bears of the same colour, and a sort of rough Dogs, very well known, and frequent amongst us by the Name of Shocks, which the Islanders esteem not a little, and will part with their Children at a far easier rate: They keep neither Hogs nor Poultrey, for want of Grain to feed them.

The Rivers belonging to this Island are many, and those not unpleasent, affording to the Inhabitants plenty of Fith, especially Sturgeon, Trouts, and Salmons; and one is especially remarkable for a Bridge made over it, which being the onely Bridge of the Countrey, is made of the great Bones of a Whale. The whole Island is one continu'd Delfart, without any trodden Path or Road from one end to the other; so that all that have occasion to travel to any part thereof by Land, make use of the Compas, as if they were Voyaging by Sea.

The Coast of Iceland hath many strange and monstrous Fith worth observation,
as ifst the Orea, which though nothing near so big as the Whale, yet is able to be the death of it; for being of the shape of a Ship turn'd upside-down, and having sharp long Fins on its Back, it pricks the Belly of the Whale therewith till it kills. The next is the Blackfall, which is very fast, and about twelve Inches long.

Then the Dog-Fish, which lifting up its Head out of the Sea, Barks, and letting forth its young ones, receives them into her Belly again, when they have sported a while in the Sea.

Lastly, another Monfter, of a most frightful shape, mention'd by Olaus Magnus, but not by any particular Name.

In divers parts of the Islard are Fountains of scalding Water, which as soon as taken from the Fountain begins to cool, and when cold, hath a fulphury Subftance swimming on the top.

At the Weft end is a smoaky Fountain, very cold, and turning all that is caft into it into Stone.

At the place upon the Sea call'd Turlocks Haven, are two Fountains of different quality, the one hot, the other cold, which by Pipes being brought together into one place, make a Bath of an excellent temperature, and of a medicinal Vertue.

Not far from Haven Flahsford is a Cliff in a Rock of an unknown depth, and no Water to be discern'd by tho' that look down into it, but if a Stone be caft in, it shall make a noise for half an hour together, as if it were striking against a Brazen Veffel, and all this while the Water will be rifting till it comes up to the brink, and then will be so long finking again as the Stone was falling.

There are also three Mountains in Iceland not to be left unmention'd, the Mountain of the Crofs, the Moutain Stenulflock, and the Mountain Efecla; the two firft are chiefly con siderable for their wonderful height, and for the dreadful noise of Thunder which is heard on the top of them, when in the adjacent parts below, the Air is calm and clear; the third lying in the North of the Iland, and not very high, is one of the moft prodigious Vulcans in the World, for the casting forth of Flames, black Ashes, and Pumice-Stones; insomuch that there is no possibility of Habitation within fix Miles of it round about; and it is a receiv'd Opinion of the Inhabitants, that it is the place of Torments for the Souls of the Damned; from whence there hath rifen such a company of strange Stories and Fables, that it would make up a Volume of it self to relate them. The occasion of the great Eruption of this Mountain is not without much reafon imputed to the inflammation of the Sulphur, of which there are several Mines or Pits in the Countrey, though none of any fort of Metal.

Woldemarof, King of Denmark and Norway, being confequently Mafter of this amongst the other Norwegian Colonies, Planted the Christian Religion in this Iland in the Year of Chrift 1398. and Ordain'd two Bifhops, one in Schalbolden, in the East part, another in Hollen, in the Weft; and after the Reformation was begun, Christianus, King of Denmark, took care to propagate the Reformed Doctrine there, as well as in other parts of his Dominions; and to that end sent over a Printer thither, that the BIBLIE, together with the Works of Philip Melancthon and Urbanus Regius, might be publish'd in the Vulgar Tongue of the Countrey. But those Proceedings were mainly oppos'd by the Bishop of Schalbolden, who animating the People to Rebellion, they flew the King's Lieutenant: Whereupon the next Year Paul Holfelt, a Knight of the Danifh Order, being sent over with an Army, overthrew the Rebels, and taking off the chief Heads of the Rebellion, committed the Charge of the Government to another Nobleman of Denmark, whom he left upon the Place. But one Tadde Bende, a great Man of the Countrey, meditating a Revole, drew
drew divers Persons of principal note into Conspiracy with him, and was advancing to a formidable Power, had not the Bishop given continual Intelligence of their Proceedings to the King’s Lieutenant, who thereupon employ’d Agents to the chief Accomplices of the Faction, and what with fair Means and threatenings so wrought with them, that they return’d to their Obedience, and forsook Trade, infomuch that he flying with a small Party, betook himself to a fastness at the Foot of Heckelveld, where being hemm’d in, those about him were slain, and he himself taken Prisoner; and because no Man to whose safe custody he was offer’d durst receive him, so much dreaded was his Power, one Jonas, a bold courageous Fellow, flew him with his own Hand, and thereby put an end to all farther Tumults and Seditions.

So much have the People of this Island been ever addicted to Sorcerie and Superstition, that notwithstanding the Profession of Christianity, and the frequent Preaching against those Sins, especially since the Reformation, the generality of them are still wedded to many of those old diabolical Customs, which were practis’d there in time of Paganism; and amongst other things they are said to be serv’d, many of them, by Spirits, which constantly attend them, and (as Olaus Magnus writes of the Finlander’s, they are oftentimes deal’d with by Strangers, to sell them prosperous Winds for Money, and (doubtles by the help of the Devil) perform the same; as also on the contrary, they are said by their Enchantments to stop the Course of a Ship, and make it as it were immovable, though in the Stream of never so prosperous a Gale. They are a proud, haughty People, and for the most part endu’d with vast Strength of Body; their Habit so promiscuous, that neither Sex can be distinguis’d by it. They are not only forward to prostitute their Daughters to those Germans that Trade with them at Hafnefords, but that Virgin who hath had to do with a German, shall be sure to be so much the more efeem’d and Courted.

The onely Towns and Buildings of note here, and those erected but of late Ages, are 1. Hafnefords, a Haven Town, chiefly frequented by Dutch Merchants for Traffick with the Natives.

2. Bedfede, the Residence of the Lord Lieutenant or Governor for the King of Denmark.

3. The Bishops See of Halsar, having four Monastryes belonging to it, viz. Pangore, Remesfede, Moler, and Monkeniere.

4. The Bishops See of Schalboth, to which also doth belong four Monastryes, viz. Vede, Pernebar, Kirkebar, and Schirde.

The Nobles of Iceland are call’d Bonden; their Justiciaries or Judges, being twelve in number, Lochmaderes, that is, Men of Law or Justice, who are said to meet once a year on the twenty ninth of June, to administer Justice in a place ordain’d for that purpose in the midft of the Island, appearing like some feign’d Paradise, so pleasant a place it is represented to be at that time of the year, being (as the Tradition goes) from a high burning Mountain like Eteca, conun’d to a Plain, and so environ’d with Rocks, that there was left but a small Passage for one at a time to enter. Here the Governor having first given the Charge, leaves the Trial of all Matters to the Lochmaderes, who having diligently heard every Case argued on both sides, withdraw for a while to Consult together, and then proceed to Sentence, the fame Persons being both Jury and Judge; but if any Case of difficulty or scruple arise, they consult the Governor.

**Angrius Jonas’s Relation of Iceland differing much from what hath been deliver’d by Blefvens, is not to be omitted. He saith it was first discover’d by one Nadoces, a Pyrate,**
Pyrate, who going towards the Faeroes Islands, was cast by Tempest upon the Shore of Easte-Iceland, near the Mountain Reidarfjördur; and as he departed from the Coast, perceiving the tops of the highest Mountains cover’d with a very deep Snow, call’d the Island Snelandia, that is, Snowy Country.

Upon the fame of Naddocus’s Discovery, one Gardarus, the Son of Snorrius, a Swede, was devisous to make a Voyage thither, and arriving near the Eastern Shore, Winter’d in the Bay of Skiafsandur, or North-Island, in the Year of our Lord 864, and call’d the Haven Husfjall, from the Houles or Wintering-places built there, as the next Haven to it was call’d Nattaravik, from Nattrar, an eminent Mariner in this Expedition. Gardarus returning home about the beginning of the Spring, call’d the Country from his own Name Gardafjöll.

The next that follow’d his Example, was one Flocco, a famous Pyrate, whose Daughter Geirhilda being drown’d upon the Coast of Schetland (anciently Eilleland,) gave the Name of Geirhildarmata to the Sea thereabouts: Not having the use of the Mariners Compas, he made use of Ravens for the steering of his Course, and having sent forth two without success, by the guidance of the third he had fight of the Eastern side of the Island; and Steering Southward, he found a very wide Bay, between the Promontories Runkanes and Snaefjells; which Bay, from Fassa a Scottish Mariner that accompany’d him, he nam’d Faxos, that is, The Mouth of Fassa, though from its many Havens it came afterwards to be term’d Hafnarfjörur. Sailing along the West side of the Island, he entered the Bay Brydgosard, and took up his Quarters at Wanesfjordur, a Haven in the Province Bardafjördur (for by these Names these Places came afterwards to be known: ‘Having they’d here two Winters, he return’d back into Norway, and is said to have been the first that gave this Country the Name of Iceland, from the great quantities of Ice which fill’d the Seas thereabouts, he also gave it the Name of Rænfjöll, from the Ravens which serv’d him in stead of a Compas.

The last and most considerable Adventurer was Ingulfus, the Son of Orn, Duke of Fyrdafjæle in Norway, who, together with his Cousin Eriolfeis, that Marry’d his Sister Helga, being adjudg’d to Banishment by Hafsten (to the Award of whose Judgment they had submitted themselves) upon the slaughter of his two Brethren, Holmsten and Hærfsten, (these three Brethren were the Sons of Atlas, one of the prime Noblemen of Norway) in a Quarrel, wherein Hærfsten was chosen Umpire; and also defenting the Tyranny of Haraldius Palvricomus, King of Norway, went over Gonzalione, or chief Leader of a great Colony of People, whom he rais’d for the settling of a Plantation in some foreign Country: Accompany’d with his Cousin Eriolfeis, he took Shipping for Iseland in the Year of our Lord 854, having been over to visit it about four years before; he Landed at a Promontory on the South Shore, which from him took the Name of Ingulfholde, and at Reykarvick settled his Habitation, while Eriolfeis seated himself at the Promontory by him call’d Hvarolfholde, where he built two very large Houes, each being about a hundred and thirty Foot long; then he set himself to Manure and Till the Ground, employing in that Work ten Slaves, whom he brought with him for that purpose out of Norway; but it was not long ere they traiterously set upon him and flew him by an Ambuscade which they had laid for him, after which they betook themselves to certain little Isles, which were nam’d Wefmarfjær, where before they had well settled themselves, the whole Race of them were rooted out by Ingulfus, in revenge of his Kinman’s Death. After this the Island grew daily more and more populous by the coming over of new Families from Norway; so that at this day it is a Place not the least considerable belonging to the Kings of Denmark.

The
The ancient Inhabitants of this Place (for it is to be supposed that there were
People here before the coming over of Ingulsus) were call'd Pape or Pappe, and the
Eaft side of the Island, Papo, which agrees very well with the Names of two little
Islands on the Coaft of Scotland, Pappe and Westrepappe, from which many conjecture,
as also from several Crofles and Bells found upon the Place, that there had been
in former Ages a resort of the Irish, and of the People of the North-West parts of
Scotland.

The Eastern Bound of Iceland is call'd Afiurhorn, the Western, Randesandur,
the Northern, Langanes; and the Southern, Reisanes. The Island being divided ac-
cording to the four Quarters of the World, North-Island is sever'd from Eaft-Island
by the aforesaid Promontory of Langanes; from West-Island by Rutafjordur Bay; 
from South-Island, by vaft and unpassable Defarts. Between South-Island and Eaft-
Island runneth the River Joculfi, through the Defarts of Solfeimafande. Between
South-Island and West-Island a famous River nam'd Albis, which empieth it self into
the Bay of Bargarfjord.

'Tis a vulgar Opinion, that this Island is the fame which the Ancients call'd
Thule; but upon consideration it will appear, that by the Ultima Thule taken notice
of by Virgil, Claudian, Statius, Pythias Mosiliensiu, Pliny, Senea, Solinus, Tacitus, and
others, is meant one of the Britifh Isles, amongst which were comprifed the Ifles on the North of Scotland, as the Orcades, and some others, the utmost of
which we call Scotland, and is very probable to be this Ultima Thule of the Ancients.

Nova Zembla, lying under seventy fix Degrees of Northern Latitude, and a hun-
dred and twelve Degrees and twenty five Minutes of Longitude, and being rec-
k'on'd above two hundred Miles in length, was, together with the River Pora, and
Straights of Weggats, discover'd, (and as it is thought, first of all) by Stephen Bar-
rough, who was sent out by the Muscovia Company in the Year 1556, to find out a
Way to Cathay by the North-Eaft.

Afterwards one Oliver Bund, a Dutchman, mov'd with the hope of Gain, went
from Enkhuissen to Pora; where (having first discover'd Costofara in Nova Zembla)
he loft all by Shipwrack.

The States-General nothing discourag'd with the little success of these two Voya-
gers, sent forth two Ships under the Command of Hugo Linschat, to the Straights of
Weggats, and two others under William Barrents, who were to go directly Northwards
for Nova Zembla: Linschat went fifty Miles beyond the Straights, but the Nor-
therly Winds and late Seafon of the year forc'd him to halfe back with all possible
speed. William Barrents and his Company were necessitated in the Year 1596, being
not able to get off, in regard the Ice increas'd upon them more and more, to take
up their Winter Quarters there in a Cottage, which they made a shift to caft up
for their present necessity, having much ado to defend themselves against the Bears,
that continually assaulted them.

This Countrey is generally deliver'd to be a barren and defart Countrey, full
of Wood indeed, but the Boughs as bare of Leaves, as the Ground of Grafs; also
very incommodious to be travell'd through, by reason of its desartness, and the
danger of Bears, great fierce Foxes, and fuch like ravenous Beasts, which feed onely
upon Fleth, and which are the only Beasts this Countrey harbors.

In a Journal of Mr. Henry Hudson, there is to be found a much more favorable
Description of the Countrey: "Generally (fait he) the Land of Nova Zembla
"that we have seen, is to a Man's Eye a pleafant Land, much Main High-land
"with no Snow on it, looking in some places green, and Deer feeding thereon,
"and the Hills partly cover'd with Snow, and partly bare.
It should seem to have been a receiv'd Opinion from the first Discovery of Nova Zembla, that it was inhabited by Pygmies, it being several times, in the Journals of some Voyages, mention'd particularly by the Name of The Land of Pygmies, but upon what certain Ground cannot in the least be discover'd; for we find not from the Russians (to whom the Place, by reason of its Vicinity, is probable to have been first known) any other Account of the Inhabitants, but that they are a People wholly deftitute of civil Manners, and unlimited by Law or Religion, saving that they seem to give some kind of Adoration to the Sun, Moon, and North-star, and have some Qualities which speak them rational Creatures; whereas the Pygmies (if there be any such Creatures) are thought to have nothing of Humane but their Shape only.

Besides Nova Zembla there is not far from it another Island, known by the Name of Willoughby-Island, from Sir Hugh Willoughby, the first Discoverer; they both are of the Dominions of the Czar of Russia.

Several Attempts for the discovery of the North-West Passage.

What hath been discover'd of Sea in the North or South parts of the World, is of no less Consequence than what hath been discover'd of Land, and the Straight of Hudson Northward, is no less considerable than the Straight of Magellan South; we shall therefore compleat this Discourse of the Artick Region with a brief Mention of what Capes, Bays, Sounds, &c. have been found out by those that have attempted to find a Passage by the North-West to the East-Indies.

Not to infall upon the fabulous Stories of King Arthur's first conquering Ireland, and then Sailing into the Northern Seas, and subduing Scantia, Iceland, Greenland, and (as the Story saith) many other Islands beyond Norway even under the Pole; or of Malgo's subduing Ireland, Iceland, the Orkades and Norway, or Other's Reports to King Alfred of his Voyages to the North-East parts beyond Norway, or the Voyages of the two famous Venetian Brethren, Nicolò and Antonio Zeni, or of Marcus Paulus Venetus, Odoricus and Verronanus; the first Englishman we hear of, that made an Expedition into those Northern Seas, was Sir Hugh Willoughby, before taken notice of for the Discovery of King James's Newland and Willoughby-Island, in the Year of our Lord 1553.

Stephen Burroughs (as hath been intimat'd) discover'd amongst other Places, about the Year 1556. the Straight of Vaigats.

In the Year 1576. Sir Martin Frobisher setting forth with two Barques, after he had been out about five Weeks, had sight of a High-land, which he nam'd Queen Elizabeth's Foreland: Thence Sailing more Northerly to the heighth of about sixty two Degrees, he defery'd a great Sea or Inlet, which he entered, and thence it took the Appellation of Frobisher's Straight. About two years after proceeding to a farther discovery of it, he entered a good way into it, and took possession of the utmost Place he went to for Queen Elizabeth, who thereupon gave it the Name of Meta Incognita.

Anno 1580. Arthur Pett and Charles Jackman were sent out by the Russian Company, to make a Discovery of the River Ob, and passing the Straight of Vaigats, took particular observation of the Islands and Places there, but not being able to pass much farther, by reason of the Ice, towards the latter end of the year they return'd.

In prosecution of this Discovery to the North-West, Captain John Davis of Sandrige in Devonshire, made three Voyages; his first Anno 1585. his second, 1587. in which he met with many strange Adventures; but the main thing that accr'd from
from these Voyages, was the finding of a mighty Through-let between vast and
defsert Islands, to which his Name gave the Appellation of Baffin's Bay, or Baffin's
Straight.

The next that went upon this Design was Captain George Weymouth, who from
the Year 1585 to 1602 made several Expeditions, which produced large Relations
of strange Accidents that befell them, but little of Discovey farther than what had
been made before.

Mr. James Hall, very noted for his Voyages to Groenland, (which before was by
Captain Davis call'd Desolation) at his falling in with that Place nam'd a Head-land
from the then King of Denmark, Cape Christianus, which some think to be no other
than Cape Farewell.

Anno 1606. Mr. John Knisley was sent out by the King of Denmark, of the Pacages
of whose Voyage little of nothing memorable is recorded.

The next and most famous Attempter in the discovery of the North-West Passage,
was Henry Hudson, who is said to have discover'd farther Northward to the Pole
than any before him. From the Year 1607 to 1610 he made several Voyages, be-
ing fet out by Sir Thomas Smith, Sir Dudley Digges, and Mr. John Wostenholme, with
others that were his great Friends, and Advancers of such publick Designs. In his
last Voyage the Isles of God's Mercy, Prince Henry's Foreland, King James's Cape,
Queen Annes Cape, Digges's Island, Cape Wostenholme, The King's Foreland, Mount Charles,
Cape Salisbury, &c. were first taken notice of and nam'd, and, which were his principal
Discoveys, and therefore worthily retaining his Name, Hudson's Straight and Bay; but in his return homeward he was fet upon in his Cabin by one Green, Wil-
son, and others of their Conspiracy, and together with his Son John Hudson, Two
Widdows. Arr. Ludlow, Sidrah Paner, and two or three more, was put over into a
small Shallop, in which they were forc'd to seek their Fortune, and in all likeli-
hood perish'd, for they were never heard of after. Not long after Green going on
Shore upon a strange Island, was shot from an Ambuscade of Salvages into the
Heart; the like End had Wilson, and three more of the Conspirators dy'd of their
mortal Wounds, the rest with much ado got home in a very sick and weak Condi-
tion, through the Hardships they had sufTain'd, and want of Provisions.

There was also another Hudson, who Anno 1608. went to the height of eighty
one Degrees, and gave Names to certain Places, which continue to this day, as
Whale-Bay, Hackluyt's Headland, and Hudson's Touches.

By the Assistance of Prince Henry, and thole other Noble Persons above men-
tion'd, Captain Thomas Button set out in the Year 1612. and is said to have pafs'd
Hudson's Straight, and leaving Hudson's Bay to the South, to have Sail'd two hundred
Leagues South-Westward over a Sea above eighty Fathoms deep, which at length
he discover'd to be another great Bay, since call'd Button's Bay: He is said also to have discover'd a great Continent, which he call'd New Wales.

Several other Voyagers there were in this great Attempt of the North-West Pas-
sage, as Captain Gibbons, Robert Bylot, William Boësins, and Captain William Hawkrige,
who though they all came short of the main Enterprize, yet every one found out
some new Cape, Bay, or Promontory, or open'd a farther Passage than had been
before, as Bylot made known Cape Comfort; Boësins the Inlet call'd from him Boësins Inlet,
Bay, as also Sir James Lancaster's Sound; Hawkrige, a farther Passage into Lundy's Inlet.

From the Year 1616. to 1617, the Buinenfs lepf, and then a Voyage was under-
taken by Captain Lake Fox, who at his Return gave very good hopes and encour-
gagement, that the Work, so long in profection, was not impossible to be effected;
neverthelafs, by reason of the late troublesome Times it was again wholly laid
aside.
A brief View of what Places are poss'd at this day in the West-Indies by the English, Spaniards, French, Portuguese, and Dutch.

The English possess in Northern America, New England, the Bay of Trinity, Chincet, and a part of Terra Nova, or New-found Land; Virginia, part of Florida, now call'd Carolina, the Bermudas, or Summer-Islands, New Holland, which they took from the Dutch An. 1664. with New Amsterdam and Fort Orange; Terra Marica, or Mary-Land, part of the Isles call'd Lucayes; among the Antilles or Caribbee-Islands, Barbadoes, Anguilla, part of St. Christopher's, Montserrat, Nieves or Montserrat, Antego, Dominico, and St. Vincent; the Isle of St. Catherine, otherwise call'd Providence, Jamaica, the Isles of Curacoa and Trinity, several Colonies at Surinam and Sinamari, with several Forts upon the Coast of Guiana; and lastly, the Haven Porto Bello, once the Spaniards.

The Spaniards posses the greatest and best part of America, wherein they have a vast number of very considerable Towns. In Northern America they have 1. New Spain, in which are the Audiences of Mexico, Guadalajara, and Guatimel. 2. The Islands Cuba and Hispaniola (excepting some parts towards the West, which are in possession of the French) Boriquen, &c. also St. Augustine and St. Matthew in Florida, and a part of New Mexico. In Southern America, Castilla d'Oro or Golden Castile, otherwise call'd Terra Firma, in which are the Audiences of Panama, and the new Realm of Granada; next Peru, in which are the Audiences of Quito, Lima, and La Plata; lastly, Chili and Paraguay, which comprehends the Countries of Tucuman and La Plata.

The French have in Canada, or Nova Francia, Montreal, the Rivers Quebec, Tadoussac, and some Places upon the great River of St. Lawrence; also Acadia, or Nova Scotia, the Isle of Cape Breton, with the Fort St. Peter, from whence they Traffic to Nootkam, with the Salvages of that Coast; part of the Isle of Terra Nova, Pempeague, St. Jean, Port-Royal, and other Fortresses. Among the, Caribbee-Islands, part of St. Christopher's, St. Bartholomew, St. Cruz, St. Martin, Guadalupe, Deudes, Marigotlante, Islands for Sanfncia, Martinico, St. Anfifie and Granada; likewise some Colonies on the West of Hispaniola. Upon the Continent of Southern America, on the Coast of Guiana, the Isle Cayore, where stands the Fort of St. Michael de Cepo, now Fort Louis; also the Colonies of Mattooni and Armire, Conron, Cononama and Comaribo.

The Portuguese possess all the Coast of Brazil in Southern America, with the several Capitania's or Prefectures thereof.

The Dutch have only the Isles of St. Eustacie and Saba, the Town of Coro in Terra Firma, the Colonies Boron, Elsqui, Beraebie, Aperuaque, and others, on the Coast of Guiana.
